THE STATE OF WASHINGTON DEPARTMENT OF ECOLOGY

AND

WHATCOM COUNTY - PUBLIC WORKS DEPARTMENT

This is a binding Agreement entered into by and between the state of Washington, Department of Ecology, hereinafter referred to as “ECOLOGY,” and Whatcom County - Public Works Department, hereinafter referred to as the “RECIPIENT,” to carry out with the provided funds activities described herein.

GENERAL INFORMATION

Project Title:	Whatcom County MRC Olympia Oyster Restoration in North Chuckanut Bay
Total Cost:	\$50,000.00
Total Eligible Cost:	\$50,000.00
Ecology Share:	\$50,000.00
Recipient Share:	\$0.00
The Effective Date of this Agreement is:	07/01/2026
The Expiration Date of this Agreement is no later than:	07/01/2028
Project Type:	Restoration or Enhancement

Project Short Description:

The Whatcom County Marine Resources Committee (RECIPIENT) is committed to restoring Olympia oysters in North Chuckanut Bay, with the goal of establishing a self-sustaining population exceeding 2 million individuals. Olympia oysters play a crucial role in the marine ecosystem, increasing habitat structure and complexity, improving water quality, and supporting food webs. However, natural populations of Olympia oysters have been largely decimated due to overharvesting, habitat loss, and pollution.

Project Long Description:

The Olympia oyster (*Ostrea lurida*) is the only oyster that is native to Washington State. Not only are Olympia oysters an important cultural resource, but they also play a crucial role in the ecosystem, increasing local habitat structure and complexity, improving water quality, and supporting local food webs and other economically and culturally important marine species. Over the past two centuries, natural populations of Olympia oysters in the Salish Sea have been largely decimated due to overharvesting, industrial pollution, and habitat loss. Washington

Agreement No: SEATHA-2026-WhCoPW-00029
Project Title: Whatcom County MRC Olympia Oyster Restoration in North Chuckanut Bay
Recipient Name: Whatcom County - Public Works Department

Department of Fish and Wildlife (WDFW) estimates that less than 5% of historical Olympia oyster bed habitat remains in Washington. Olympia oysters have been listed by WDFW as a State Candidate species since 1997, are identified as a Priority Species under WDFW's Priority Habitat and Species Program, and are listed as a Species of Greatest Conservation Need under the State Wildlife Action Plan. WDFW published the 1998 Olympia Oyster Stock Rebuilding Plan and subsequent 2012 Plan for Rebuilding Olympia Oyster (*Ostrea lurida*) Populations in Puget Sound with a Historical and Contemporary Overview, kickstarting restoration efforts throughout the Puget Sound (WDFW 2012).

In response, Marine Resources Committees (MRCs), in partnership with multiple organizations, have been working to enhance and restore populations of native Olympia oysters in their historic range within the Northwest Straits region. Building upon these efforts, Whatcom MRC aims to restore a population of Olympia oysters in North Chuckanut Bay, a priority site identified in WDFW's 2012 Plan for Rebuilding Olympia Oyster Populations in Puget Sound. Based on WDFW's expertise and extensive review of historical Olympia oyster populations, Whatcom MRC piloted Olympia oyster restoration at six sites within North Chuckanut Bay from 2018-2025. The test plots were not initially intended as restoration sites, but to provide information on the feasibility of restoration within the identified locations. In 2018, a small amount of Olympia oyster seed was distributed at each of the pilot restoration sites (about 5,000 per site). After seven years of monitoring, the pilot restoration study identified three sites with high potential for Olympia oyster restoration success. Evidence to support suitable Olympia oyster habitat conditions included presence of surviving adults after seven years, evidence of past recruitment, retainment of organic material and shell within the plots indicating ideal hydrodynamic conditions for larval recruitment, and absence of Japanese oyster drills, a main predator of Olympia oysters. In June 2026, The Puget Sound Restoration Fund (PSRF) provided 200 bags of Olympia oyster cultch to allow the MRC to enhance the three most successful Olympia oyster test plots with additional seed, adding an estimated 240,000-480,000 oysters across the three sites.

The RECIPIENT will partner with PSRF and WDFW to enhance the three identified sites with additional Olympia oyster seed in 2028. Leveraging eight years of work completed during the pilot Olympia oyster restoration project and the seed enhancement planned for 2026, the RECIPIENT will monitor the restoration sites in 2027 and 2028. The RECIPIENT will purchase additional Olympia oyster seed for 2028, which is expected to add an estimated 150,000 to 375,000 Olympia oysters across three sites. Restoring Olympia oysters in North Chuckanut Bay will help enhance local water quality and support the health of several other economically and culturally important marine species that depend on this habitat.

Overall Goal:

The goal of this project is to establish of a self-sustaining population of Olympia oysters, exceeding 2 million individuals, to support wider regional recovery of Olympia oysters and to strengthen long term ecological resilience. This project will support the addition of seeded cultch to existing restoration plots, enhancing restoration potential.
