Agreement No. OTGP-2024-WhCoPW-00054**ONE TIME GRANT PROGRAM AGREEMENT****BETWEEN****THE STATE OF WASHINGTON DEPARTMENT OF ECOLOGY****AND****WHATCOM COUNTY PUBLIC WORKS**

This is a binding Agreement entered into by and between the state of Washington, Department of Ecology, hereinafter referred to as “ECOLOGY,” and Whatcom County Public Works, hereinafter referred to as the “RECIPIENT,” to carry out with the provided funds activities described herein.

GENERAL INFORMATION

Project Title:	Floodplain Integrated Planning Support
Total Cost:	\$2,738,000.00
Total Eligible Cost:	\$2,738,000.00
Ecology Share:	\$2,738,000.00
Recipient Share:	\$0.00
The Effective Date of this Agreement is:	07/01/2023
The Expiration Date of this Agreement is no later than:	06/30/2025
Project Type:	Ecology Grant

Project Short Description:

The RECIPIENT will develop and evaluate mutually beneficial water resource and habitat management actions that address climate change and extreme weather events through their Floodplain Integrated Planning (FLIP) process in the 2023-2025 biennium. This work will include technical analyses, facilitation, and communications assistance to support the FLIP Team in developing long-term local solutions and projects in the Nooksack watershed.

Project Long Description:

In November 2021, flooding in the Nooksack River basin damaged thousands of homes and businesses, and cut cities and the Lummi Nation Reservation off from essential services for days. The resulting damage threatened the long-term viability of some small communities. Additionally, Nooksack River floodwaters flowed north into Canada and contributed to widespread flood damage in British Columbia. Separate funding outside of this agreement will support facilitation of the Nooksack Transboundary Flood Initiative (NTFI) working to create a collaborative framework

Agreement No: OTGP-2024-WhCoPW-00054
Project Title: Floodplain Integrated Planning Support
Recipient Name: Whatcom County Public Works

focused on reducing flood risks for collective benefits on both sides of the border in a manner consistent with ecosystem restoration and preservation. Work supported by this agreement and developed through the County's FLIP process will be shared with NTFI, informing actions to reduce flood hazards while increasing coordination among state, provincial, local, and Tribal governments.

A portion of this funding is to expand and sustain Whatcom County's FLIP Team planning process, including communication, outreach, community participation, coordination, technical studies and analysis, and development of local solutions. The other portion of this funding is to support dedicated Whatcom County staff capacity and/or a contractor for floodplain planning and technical support.

The RECIPIENT will coordinate and participate in the FLIP process to advance the concepts generated at the design charrettes for the Flow Split and Reach 2 Teams and will initiate the FLIP value-planning process in other reaches as time and resources allow. The FLIP Steering Committee (FLIPSC) will continue to plan and orchestrate meetings with the FLIP Reach Teams at key times to keep them informed and obtain feedback. These meetings will be facilitated by the current consultant team supporting the FLIP. The primary focus will be to maintain the momentum for the work on the Everson flow split, but as resources and time allows, the FLIPSC may elect to start the detailed reach planning for another reach of the river.

The RECIPIENT will use the Nooskack River hydraulic model to evaluate mitigation scenarios, developing concept designs for alternatives to reduce flood hazards and improve habitat, and evaluation of those alternatives considering potential impacts of climate change. In addition, sediment transport modeling and analysis will be conducted to address the uncertainties associated with how potential mitigation actions may affect the transport of sediment to downstream reaches. This work will include collecting new river bathymetry through blue-green LIDAR and boat-based survey, and the incorporation of that new data into the hydraulic and sediment analyses to understand how sediment moves through the system and how it impacts flooding. The RECIPIENT will develop and evaluate mutually beneficial water resource and habitat management actions that address climate change and extreme weather events.

Overall Goal:

This grant will integrate Nooksack basin floodplain projects with mutually beneficial water resource and riparian habitat management actions that address climate change and extreme weather events. This grant will also support the RECIPIENT's floodplain integrated planning team planning, technical review, local solutions, and project development.

SCOPE OF WORK

Task Number: 2 **Task Cost: \$1,975,000.00**

Task Title: 2. Floodplain Integrated Planning Process Support

Task Description:

The RECIPIENT will advance the technical work needed to evaluate integrated flood hazard reduction strategies in Reach 2 and Flow Split Reach where design charrettes have resulted in a suite of actions to be evaluated and to initiate the value-based planning process in other reaches as time and resources allow .

The RECIPIENT will complete the following subtasks:

A. The RECIPIENT will refine and calibrate the hydrology for the Lower Nooksack and Sumas basin and update the technical memo. This task will include collection of 2024 LIDAR and boat-based survey of the voids, and incorporation of this new dataset into the hydraulic model to evaluate any changes to the thresholds for overtopping. The approach for modeling the anticipated impacts of climate change will be revisited after consultation with the University of Washington Climate Impacts Group(CIG). This task also includes hydrologic and hydraulic technical support and coordination to address the needs of the FLIPSC, the NTFI, and the various partners.

B. The RECIPIENT will continue to develop, refine, and evaluate alternatives for the Everson overflow corridor. This includes conceptual design, hydraulic modeling, planning-level cost estimates, and comparison of impacts and benefits for each of the alternatives.

C. The RECIPIENT will perform reach-scale geomorphic analysis to evaluate how potential actions could affect sediment movement to downstream reaches and how that may affect downstream flooding, habitat, and geomorphic processes. This task includes documentation of this work.

D. The RECIPIENT will submit an Ecology-approved Hydraulic and Hydrologic QAPP to meet Ecology's QA standards. Ecology will provide a template for this documentation.

Prior to each public meeting, the RECIPIENT must request and receive approval by ECOLOGY's Project Manager for light refreshment reimbursement(s). The ECOLOGY Project Manager can send a copy of the light refreshment request form. Approved request forms must be submitted with the corresponding Payment Request/Progress Report (PRPR).

Task Goal Statement:

To advance the technical work needed to support the FLIP process, develop and evaluate suites of actions to mitigate flood risk and increase community resiliency throughout the Nooksack and Sumas basins with a focus on the Everson Flow Split, and involve interested parties and keep the community informed. This ultimately will lead to selection of a preferred strategy for flood risk reduction in the Everson overflow and improvements to habitat and an understanding of the impacts of future development throughout the basin .

Task Expected Outcome:

Significant progress in the FLIP process, including evaluation of alternatives, engagement of the FLIP Team, interested parties and coordination with the Canadian efforts for flood risk reduction and maintaining ecosystem services .

ECOLOGY may exercise any of these options with no notification or restrictions, although ECOLOGY will make a reasonable attempt to provide notice.

In the event of termination or suspension, ECOLOGY will reimburse eligible costs incurred by the RECIPIENT through the effective date of termination or suspension. Reimbursed costs must be agreed to by ECOLOGY and the RECIPIENT. In no
