Rec-2	<b>23.30.010 – Ecological Protection</b>	Ecological protection of shoreline environments shall be achieved through compliance <u>with the applicable provisions of</u> WCC Chapter 16.16 (Critical Areas) and (B) and (C) of this subsection	Recommended Change – This change clarifies that that not all of WCC 16.16 is applicable within the SMP.	Done.
Req-8	<b>23.30.010.C – Ecological Protection</b>	To provide for flexibility in the administration of the ecological protection provisions of this program, buffer modification and alternative mitigation approaches as provided for in WCC 16.16 may be approved within shorelines where such approaches provide increased protection of shoreline ecological functions and processes over the standard provisions of this program and are scientifically supported. <u>Use of 16.16.261 (Alternative Mitigation Plans) and 16.16.262 (Watershed-Based Management Plans) within shoreline jurisdiction shall require review of a Conditional Use Permit.</u>	Required Change – This change maintains the existing requirement for a CUP for use of select alternative mitigation approaches outlined within the CAO. This change is necessary due to the fact that the impacts from such future proposals using these provisions cannot be reasonably identified at the time of the amendment consistent with the SMP Guidelines at 173-26-201(3)(d)(i)(E)(iii). The CUP requirement maintains the flexibility sought by the proposed language without prohibiting the use of these CAO provisions.	Done.
Rec-3	<b>23.30.030.B – Views and Aesthetics</b>	To protect views of the shoreline from existing structures, setbacks may be modified pursuant to WCC 23.400.020(D) (Shoreline Bulk Provisions, Setbacks).	Recommended Change – Scrivener’s error at code citation.	Done.

ITEM	PROVISION	BILL FORMAT CHANGES (underline = additions; strikethrough = deletions)	RATIONALE	W/C Response
Rec-4	<b>23.30.030.1 – Views and Aesthetics</b>	Fences, walls <del>other than retaining walls</del> , hedges, and other similar accessory structures, excluding those associated with agricultural uses, <u>and retaining walls necessary to protect existing primary structures from erosion, landslides or other geologic hazards</u> , shall be limited to four feet in height between the ordinary high water mark and structures, and within shoreline view areas as defined in WCC Chapter 23.60 (Definitions); provided, that, within shoreline view areas, the Director may approve a greater height where a fence or other features is parallel to the right-of-way and does not extend above a line of sight between the ordinary high water mark and a point three and one half feet above the centerline of the road.	Recommended Change – This change clarifies the intent of Whatcom County Planning & Development Services Staff in Scoping Document Item 17e to allow for increased walls in situations where structural mitigation in the form of a retaining wall is the appropriate solution to stabilize an existing primary structure subject to unforeseen hazards. The language as amended provides no context and is vague as to what the difference is between a retaining wall and a wall.	Done.
Rec-5	<b>23.30.40.2 – Vegetation Management</b>	Vegetation management within the shoreline buffer shall adhere to the <u>applicable</u> regulations of WCC Chapter 16.16.(Critical Areas)...	Recommended Change – This change clarifies that that not all of WCC 16.16 is applicable within the SMP.	Done
Rec-6	<b>23.30.040.2 – Vegetation Management</b>	Shoreline development shall conform to natural contours and minimize disturbance to soils and native vegetation as feasible. Feasible shall include incorporation of trails or stairs from parking areas on steep slopes, and other design elements to lessen the need to alter natural contours and minimize soils and native vegetation disturbance. <del>Tiered</del> Foundations shall <u>be tiered incorporate with earth retention incorporated</u> into the structural design.	Recommended Change – This change maintains the existing requirement that tiered foundations be utilized to meet the objectives of this provision.	Done.
Req-9	<b>23.30.060.A.2 – Public Access</b>	<del>The parcel is separated from the water by an existing developed road or an additional parcel that serves to create a distinct break in connectivity to the shoreline.</del>	Required Change – This change deletes this new exception to consideration of public access as it is overly prescriptive and inconsistent with the SMP Guidelines at WAC 173-26-221(4). Direct connectivity is not a requirement to accomplish proportionate public access. Public access includes the ability of the general public to reach, touch and enjoy the water’s edge, travel on the waters of the state, <u>and to view the water from adjacent locations [WAC 173-26-211(4)(a)]</u> . Visual access to the shoreline is not necessarily precluded due to the presence of a developed road or additional parcel between the subject development and the shoreline.	Done.
Req-10	<b>23.30.060.A.3 – Public Access</b>	<del>Other reasonable and safe opportunities for public access to the shoreline are located within one quarter mile of the proposed development site.</del>	Required Change – This change deletes this new exception to consideration of public access as it is inconsistent with the SMP Guidelines at WAC 173-26-211(4). Increased development within shoreline areas can provide a nexus for the need for increased locations and forms of public access proportionate to such impacts.	Done.
Req-11	<b>23.60.060.A.4 – Public Access</b>	<u>The proposed development has already been considered as</u> site is part of a larger development project that has previously provided public access as part of the development permitting process.	Required Change – This change is necessary to ensure consistency with the SMP Guidelines at WAC 173-26-221(4) and clarifies the applicability of this exemption only if it had previously been analyzed through a broader development review such as a Planned Unit Development or other similar process.	Done.
Req-12	<b>23.30.060.A.9 – Public Access</b>	The proposal consists solely of a new or expanded utility crossing through shoreline jurisdiction serving development located outside shoreline jurisdiction, <u>provided that no adverse impacts to existing public access result.</u>	Required Change – Utility development is not specifically exempted from the requirement to consider public access in the SMP Guidelines. The proposed change modifies this new exemption to require public access considerations if impacts to existing forms of public access provide such a nexus.	Done.

ITEM	PROVISION	BILL FORMAT CHANGES (underline = additions; strikethrough = deletions)	RATIONALE	W/C Response
Req-13	<b>23.30.060.A – Public Access</b>	<p><u>Prior to deciding public access is not required pursuant to 23.60.060.A.above, the county must determine that all reasonable alternatives have been exhausted; including but not limited to:</u></p> <ol style="list-style-type: none"> <li>1. <u>Regulating access by such means as maintaining a gate and/or limiting hours of use;</u></li> <li>2. <u>Designing separation of uses and activities (e.g., fences, terracing, use of one way glazing, hedges, landscaping, etc.); and</u></li> <li>3. <u>Providing for access at a site geographically separated from the proposal such as a street end, vista, tideland or trail system.</u></li> </ol>	Required Change – This additional language added to the end of 23.60.060.A restores existing language proposed for deletion. The change is necessary for consistency with the SMP Guidelines at 173-26-221(4)(d)(B) which requires consideration of alternative methods of providing access when potential conflicts are identified with traditional forms of access.	Done.
Req-14	<b>23.30.060 – Public Access</b>	<p><u>I. Public access shall incorporate the following location and design criteria:</u></p> <ol style="list-style-type: none"> <li>1. <u>Where open space is provided along the shoreline, and public access can be provided in a manner that will not adversely impact shoreline ecological functions and/or processes, a public pedestrian access walkway parallel to the ordinary high water mark of the property is preferred. The walkway shall be buffered from sensitive ecological features and provide limited and controlled access to sensitive features and the water’s edge where appropriate. Fencing may be provided to control damage to plants and other sensitive ecological features and where appropriate. Trails shall be constructed of permeable materials and limited to five feet in width to reduce impacts to ecologically sensitive resources.</u></li> <li>2. <u>Public access shall be located adjacent to other public areas, accesses and connecting trails, connected to the nearest public street; and include provisions for differently-abled persons where feasible.</u></li> <li>3. <u>Where views of the water or shoreline are available and physical access to the water’s edge is not present or appropriate, a public viewing area shall be provided.</u></li> <li>4. <u>Design shall minimize intrusions on privacy by avoiding locations adjacent to windows and/or outdoor private open spaces or by screening or other separation techniques.</u></li> <li>5. <u>Design shall provide for the safety of users, including the control of offensive conduct through public visibility of the public access area, or through provisions for oversight. The administrator may authorize a public access to be temporarily closed in order to develop a program to address offensive conduct. If offensive conduct cannot be reasonably controlled, alternative facilities may be approved through a permit revision.</u></li> <li>6. <u>Public amenities appropriate to the use of a public access area such as benches, picnic tables and sufficient public parking to serve the users shall be provided.</u></li> </ol>	Required Change – This change restores existing standards necessary for meaningful implementation of the public access requirements as required by the SMP Guidelines at WAC 173-26-222(4)(d)(iii).	Done.

ITEM	PROVISION	BILL FORMAT CHANGES (underline = additions; strikethrough = deletions)	RATIONALE	W/C Response
		<ol style="list-style-type: none"> <li>7. <u>Commercial developments that attract a substantial number of persons and developments by government/public entities may be required to provide public restrooms, facilities for disposal of animal waste and other appropriate public facilities.</u></li> <li>8. <u>The minimum width of public access easements shall be 10 feet, unless the administrator determines that undue hardship would result. In such cases, easement widths may be reduced only to the extent necessary to relieve the hardship.</u></li> <li>9. <u>The requirement for public access on a specific site may be fulfilled by:</u> <ol style="list-style-type: none"> <li>a. <u>Participation in a public access plan incorporated in the program; or</u></li> <li>b. <u>Provision of facilities specified in a permit approval.</u></li> </ol> </li> <li>10. <u>Required public access sites shall be fully developed and available for public use at the time of occupancy of the use or activity or in accordance with other provisions for guaranteeing installation through a monetary performance assurance.</u></li> <li>11. <u>Public access facilities shall be maintained over the life of the use or development. Future actions by successors in interest or other parties shall not diminish the usefulness or value of required public access areas and associated improvements.</u></li> <li>12. <u>Public access provisions shall run with the land and be recorded via a legal instrument such as an easement, or as a dedication on the face of a plat or short plat. Such legal instruments shall be recorded with the county auditor's office prior to the time of building permit approval, occupancy or plat recordation, whichever comes first.</u></li> <li>13. <u>Maintenance of the public access facility shall be the responsibility of the owner unless otherwise accepted by a public or nonprofit agency through a formal agreement recorded with the county auditor's office.</u></li> <li>14. <u>Public access facilities shall be available to the public 24 hours per day unless specific exceptions are granted though the shoreline permit process subject to the provisions of subsection (B)(1) of this section.</u></li> <li>15. <u>The standard state-approved logo or other approved signs that indicate the public's right of access and hours of access shall be installed and maintained by the owner. Such signs shall be posted in conspicuous locations at public access sites.</u></li> <li>16. <u>Incentives for public access improvements such as density or bulk and dimensional bonuses shall be considered through applicable provisions of zoning and subdivision regulations.</u></li> </ol>		
Rec-7	<b>Table 1 – Shoreline Use by Environment</b>	Add the following general footnote: <u>In the event that there is a conflict between the use(s) identified in Table 1 above and the applicable written policies or</u>	Recommended Change – This change restores an existing footnote that prescribes a solution when the table conflicts with the written text. Due to the	Not done. This language is already

ITEM	PROVISION	BILL FORMAT CHANGES (underline = additions; strikethrough = deletions)	RATIONALE	W/C Response
	<b>Designation</b>	<u>regulations of this Program, the text within the policies and regulations shall prevail.</u>	difficulty in capturing all of the detail of regulatory text within a matrix such as Table 1, the footnote provides clarity in the event a conflict is identified during implementation.	included in 2.40.010(B).
Rec-8	<b>23.40.020.D.2 – Common Line Setback for Single-Family Residences</b>	<b>Common-Line Setback for Single-Family Residences.</b> For the purpose of accommodating views <u>to be adequate and similar, but not necessarily equivalent,</u> for new residences while protecting predominant shoreline views of the water from legally existing primary residences in developed residential areas, the shoreline buffer (setback) may be modified for primary residential structures in the Urban, Shoreline Residential, and Rural environments (only), consistent with the following. The presence of nearby shacks, sheds, or dilapidated structures does not constitute the existence of a residence, nor can such structures be used to determine a common-line setback.	Recommended Change – This change restores existing language that clarifies that the common-line setback provisions do not guarantee the exact same view as existing residences adjacent to a development site. This is reflected in the standards that follow at 23.40.020.2.a through 23.40.020.2.d that limit reductions in this scenario to 25% of the standard buffers per WCC 16.16 or 50-feet from the OHWM, whichever is greater.	Done.
Req-15	<b>23.40.020.D.2.a – Common Line Setback for Single-Family Residences</b>	<p>a. Where there are legally established single-family residential primary structures within <del>±</del>50 feet on both sides of the proposed residence, the setback shall be determined as the greater of either:</p> <ul style="list-style-type: none"> <li>i. A common line drawn between the nearest corners of the foundation closest to the sideyard property line of the proposed residence to each adjacent residence, or</li> <li>ii. A common line calculated by the average of both adjacent residences’ existing setbacks.</li> </ul> <p>b. Where there is a legally established single family residential primary structure within <del>±</del>50 feet only one of the proposed residence, the common line setback shall be determined as the greater of either:</p> <ul style="list-style-type: none"> <li>i. A common line drawn between the nearest corner of the foundation closest to the sideyard property line of the proposed residence to the adjacent residence and the nearest point of the standard buffer on the adjacent vacant lot, or</li> <li>ii. A common line calculated by the average of the adjacent residence’s setback and the standard buffer for the adjacent vacant lot.</li> </ul>	Required Change – This change restores the existing language to apply the common-line setback provisions only to existing structures within 50-feet of a proposed residence. The amendment record contains no justification to extend this distance to 150-feet, which is most cases is two to three times the width of most existing lots where view these provisions would apply. The No Net Loss analysis related to this change does not take into consideration the increase in applicability if these setback reductions county-wide by increasing the distance from 50-feet to 100-feet.	Done.
Req-16	<b>23.40.020.D.2.d – Common Line Setback for Single-Family Residences</b>	In no case shall development be located waterward of the common line setback or a minimum of 50 feet from the ordinary high water <del>mark, unless approved to be closer as part of a constrained lot review WCC 23.40.170(c) (Residential)</del>	<p>Required Change – This change clarifies the appropriate point of measurement of buffers/setbacks under the SMA which is ordinary high water mark.</p> <p>Required Change – This change is necessary for consistency with the referenced constrained lot provisions found at WCC 23.40.170.c.4. This section states that consideration shall be given to view impacts in accordance with the common-line setback standards of 23.40.020.d.2. The change eliminates an endless loop to where the two provisions continue to refer to one another without resolve, and clarifies that new residential development should not be allowed waterward of existing development through either process.</p>	Done.

ITEM	PROVISION	BILL FORMAT CHANGES (underline = additions; strikethrough = deletions)	RATIONALE	W/C Response
Req-	<b>23.40.020.D.2 – Common Line Setback for Single-Family Residences</b>	<u>e. The lot is not subject to landslide hazard areas, or riverine or coastal erosion hazard areas or associated buffers (see WCC 16.16.310).</u>	Required Change – This change adds the same standard found in the constrained lot provisions at 23.40.170.B.5. In no case should the common line setback be used that would place a single-family residence within a hazardous area.	Done.
Rec-9	<b>23.40.020.G – Uses Allowed in Buffers and Setbacks</b>	9. Where permitted, fences, walls other than <del>retaining walls</del> <u>those allowed by 23.70.020.G.8 above</u> , hedges and other similar structures shall be limited to four feet in height within shoreline setbacks and six feet in height outside of shoreline setbacks; provided, that the Director may exempt security fencing from this requirement as required by federal or state regulations.	Recommended Change – This change clarifies the difference between a wall and a retaining wall that may exceed this height limitation. See also Rec 4	Done.
Rec-10	<b>23.40-020.G – Uses Allowed in Buffers and Setbacks</b>	12. <del>Accessory structures as allowed by 16.16.720(G)(4) Habitat Conservation Areas – Use and Modification</del>	Recommended Change – Consider copying or moving 16.16.720.G.4, as amended in Req 27, to this location for clarity as the provision only applies within shoreline jurisdiction.	Done.
Rec-11	<b>23.40.030 – General Shoreline Use and Modification Regulations</b>	G. Accessory uses/ <u>structures</u> that do not require a shoreline location shall be sited away from the land/water interface and not placed waterward of the principal use <u>unless otherwise allowed by this Program.</u>	Recommended Change – See <b>Rec X.</b>  Recommended Change – The added language clarifies that there are exceptions to this general regulation (See 16.16.720.G.4 as modified in <b>Req-27.</b>	Done.
Req-17	<b>23.40.100.A.5 Flood Hazard Reduction and Instream Structures</b>	Structural flood hazard reduction works shall be permitted only when it is demonstrated by engineering and scientific evaluations that: a. They are necessary to protect health/safety and/or existing development; b. Nonstructural flood hazard reduction measures are infeasible; and c. Measures are consistent with an adopted comprehensive flood hazard management plan that evaluates cumulative impacts to the watershed system <del>or otherwise approved by Whatcom County Public Works' River and Flood Division.</del>	Required Change – There is nothing within the SMP Flood Hazard Reduction Guidelines (WAC 173-26 221(3)) that allow a local government entity to override when new structural flood hazard reduction measures should be allowed within shoreline jurisdiction.	Done.
Req-18	<b>23.40.100.A.12 – Flood Hazard Reduction and Instream Structures</b>	Flood hazard reduction works <del>should</del> <u>shall</u> provide access to public shorelines whenever possible, unless it is demonstrated that public access would cause unavoidable public health and safety hazards, security problems, unmitigatable ecological impacts, unavoidable conflicts with proposed uses, or unreasonable cost. At a minimum, flood hazard reduction works should not decrease public access or use potential of shorelines.	Required Change – The consideration for public access associated with new flood hazard reduction measures is a requirement of the SMP Guidelines at WAC 173-26-221(3)(c)(iv).	Done
Rec-12	<b>23.40.150.B.1 – Dimensional Standards for Freshwater</b>	Where a pier or dock cannot reasonably be constructed under the area limitation above to obtain a moorage depth of <u>5.5</u> feet measured below the ordinary high water mark, an additional 4 sq. ft. of area may be added for each additional foot of pier or dock length needed to reach <u>5.5</u> feet of water depth at the waterward end of the pier or dock; provided, that all other area dimensions, such as maximum width and length, have been minimized	Recommended Change – This change makes this provision consistent with the maximum length standards listed later within this same table at 5.5 feet. The change is consistent with other changes the county made to this section based on comments received by Bill Haynes of Ashton Engineering on April 22, 2021.	Done.
Req-19	<b>23.40.150.B.2 – Dimensional Standards for Marine Waters</b>	<u>Maximum Width</u> <ul style="list-style-type: none"> <li>• For moorage structures accessory to a residential use</li> <li>• 4 feet <del>for a single use or 6 feet for a joint use</del> for pier or dock walkway or ramp</li> <li>• <del>For a joint use structure – 8 feet</del></li> </ul>	Required Change – This change removes the ambiguous reference to an 8-foot maximum associated with joint use structures. After consultation with Whatcom County PDS staff, these changes clarify the original intent that the 8-foot width maximum applied to joint-use residential moorage structures. Staff also	Done.

ITEM	PROVISION	BILL FORMAT CHANGES (underline = additions; strikethrough = deletions)		RATIONALE	W/C Response
				suggested limiting the maximum width of such structures to 6-feet.	
Rec-13	<b>23.40.150.B.1 – Dimensional Standards for Freshwater</b>	<b>Maximum Length</b> o Marine Rails o Floats	<ul style="list-style-type: none"> <li>20 feet <u>waterward from the ordinary high water mark</u></li> <li>20 feet <del>for float decking per user (e.g. single user – 20 feet, 2-users – 40 feet, etc.)</del></li> </ul>	<p>Recommended Change – This change clarifies that the 20 foot maximum length requirement for rail systems is measured waterward of the ordinary high water mark and not landward.</p> <p>Recommended Change – This change would provide flexibility for maximum float length for Joint-use docks which are preferred over single-user docks within the SMP. The changes are consistent with the proposed float length maximums for marine joint-use docks found in 23.40.150.B.2.</p>	Done.
Rec-14	<b>23.40.150.D.4 – Additional Standards for Individual Moorage</b>	b. Alternative moorage, such as mooring buoys or a dock <u>or marine rail</u> sized to accommodate a tender to provide access in conjunction with a mooring buoy, are not adequate or feasible; and		Recommended Change – Now that the SMP allows small marine rail systems, they should be considered for tender moorage accessory to a mooring buoy prior to permitting a new dock.	Done.
Rec-15	<b>23.40.150.E.2 – Additional Standards for Shared Moorage</b>	e. On marine shorelines a dock or pier may be approved only if it is not feasible to provide mooring buoys with an adequate landing area or a dock <u>or marine rail system</u> sized to accommodate tenders.		Recommended Change – Now that the SMP allows small marine rail systems, they should be considered for tender moorage accessory to a mooring buoy prior to permitting a new dock.	Done.
Rec-16	<b>23.40.170.B – Standards for Single-Family Residential Use on Constrained Lots</b>	3. The building area shall not exceed 2,500 square feet. The building area means <u>the proposed residence, normal appurtenances (except drainfields), and any proposed residential accessory structures.</u> <del>Sidewalks and similar structures (except the single path allowed for shoreline access, parking areas, normal appurtenances (except drainfields).</del> Additionally, another 500 square feet of low-impact development (LID) landscaping, including any lawn, turf, ornamental vegetation, or gardens is allowed, provided that it is set back as far as feasible from the shoreline.		Recommended Change – This change clarifies that the house itself is also part of what constitutes the building area. Other changes simplify this provision without changing its meaning. A single footpath to access the shoreline is already allowed within buffers elsewhere within the SMP.	Done.
Rec-17	<b>23.40.170.B – Standards for Single-Family Residential Use on Constrained Lots</b>	4. <del>Consideration shall be given to view impacts in accordance with</del> <u>In no case shall the proposed residence be located waterward of the common-line setback as determined in applicable sections of WCC 23.40.020(D)(2) (Common-Line Setback).</u>		Recommended Change – This change clarifies that the intent of this provision is to protect views from existing adjacent residences.	Done.
Rec-18	<b>23.40.170.B – Standards for Single-Family Residential Use on Constrained Lots</b>	7. Appropriate measures are taken to mitigate all adverse impacts, including but not limited to locating the <del>residence</del> <u>building area and landscaping allowance</u> in the least environmentally damaging location relative to the shoreline and any critical areas and their buffers.		Recommended Change – This change clarifies that the entire 2,500 square foot building area and the additional 500-square foot allowance for lawn/landscaping is required to locate in the least environmentally damaging location.	Done.
Rec-19	<b>23.40.170.B – Standards for Single-Family Residential Use on Constrained Lots</b>	8. All reductions to side yard and/or frontage setbacks are pursued, <u>Such reductions may be approved administratively without a zoning variance,</u> when doing so will not create a hazardous condition or a condition that is inconsistent with this program and WCC Title 20.		Recommended Change – Without the proposed change, every application to use the constrained lot provisions will require a concurrent application for a variance to WCC Title 20 – Zoning. For many years, the Zoning Ordinance contained a “shoreline flip” provision that allowed for administrative reduction of the roadside setback down to five-feet when it was determined by Whatcom County Public Works that such a distance met applicable development standards for site distance, etc. This change would restore this administrative option and result in	Done.

ITEM	PROVISION	BILL FORMAT CHANGES (underline = additions; strikethrough = deletions)	RATIONALE	W/C Response
			more expeditious review of new residential development in this scenario.	
Req-20	<b>23.40.170.B – Standards for Single-Family Residential Use on Constrained Lots</b>	10. The shoreline jurisdiction shoreline area outside of the approved development is <u>retained if fully functional, and/or enhanced with native trees, shrubs and groundcovers through development of a mitigation plan, including monitoring and maintenance contingencies per 16.16.260.G.</u> <del>optimized to provide the maximum shoreline ecological functions and ecosystem wide functions;</del>	Required Change – It is unclear what the term “optimized” means but this change restores the exiting requirement that the remaining buffer areas are enhanced with trees, shrubs and groundcovers and maintained in perpetuity.	Done.
Req-21	<b>23.40.170.C – Additional Standards for Multifamily Residential Development</b>	3. Multifamily development <del>with more than four units and</del> shall incorporate public access to waters of the state as provided for in WCC 23.30.070 (Public Access) unless the site is designated in a shoreline public access plan for a greater component of public access or public access is demonstrated to be infeasible or inappropriate. The amount and configuration of public access shall depend on the proposed use(s) and the following criteria:	Required Change – This change restores the existing language that requires consideration for all multifamily development. There is nothing in the public access standards of the SMP Guidelines that exempt multifamily developments under a certain unit size [WAC 173-26-221(4)]	Done.
Rec-20	<b>23.40.170.D – Additional Standards for Accessory Uses and Development</b>	Restore the following language: 2. Shoreline permits shall be required for accessory development that does not meet the intent and definition of an appurtenance as defined in WCC 23.100.010(16).	Recommended Change – This change would restore an existing clarification that comes up often in SMP implementation that explains the difference between a residential appurtenance which can be exempt from the requirement to obtain a shoreline substantial development permit and a residential accessory structure that may require a substantial development permit.	Done.
Req-22 Rec-21	<b>23.40.190.A – Shoreline Stabilization</b>	5. Alternatives for shoreline stabilization shall be based on the following order of preference: a. No action, <del>increase building setbacks, relocate structures;</del> b. Nonstructural shoreline <del>stabilization</del> <u>stabilization, including building setbacks, relocation of structures to be protected and groundwater management;</u> c. Other Soft shoreline stabilization treatment; d. Hybrid shoreline stabilization; e. Hard shoreline stabilization.	Required Change – This change clarifies that increased setbacks are a form of nonstructural shoreline stabilization. In addition, the change restores existing language that requires consideration of structure relocation when feasible to avoid the need for stabilization and lists additional forms of nonstructural stabilization measures per the SMP Guidelines at WAC 173-26-231(3)(a).  Recommended Change – Scrivener’s error (spelling).	Done.
Rec-22	<b>23.40.190 – Shoreline Stabilization</b>	12. Revetments <del>are prohibited, except for use in water dependent and public infrastructure projects, which</del> may be permitted as <u>a</u> conditional use.	Recommended Change – It is unclear why a revetment would be a prohibited form of shoreline stabilization when determined to be the least damaging and most appropriate choice for protection of primary structures. This change retains the conditional use requirement which will bring added scrutiny to these types of proposals to determine whether a revetment treatment is appropriate.	Not done. Should not normally be allowed.
Rec-23	<b>23.40.190 – Shoreline Stabilization</b>	15. Minimize disturbance pertaining to beach access by avoiding trails <u>that may be subject to loss or damage by erosion</u> <del>require hard stabilization.</del>	Recommended Change – This change clarifies that trails are not primary structures allowed to be protected with hard stabilization per the SMP. The provision has been reworded to leave the intent while removing language that could be perceived as allowing hard stabilization to protect accessory developments/structures.	Done.

ITEM	PROVISION	BILL FORMAT CHANGES (underline = additions; strikethrough = deletions)	RATIONALE	W/C Response
Rec-24	<b>23.60.030 – “C” Definitions</b>	Restore the following condition of “Clearing”: <u>“Clearing” means the removal of vegetation or plant cover by manual, chemical, or mechanical means. Clearing includes, but is not limited to, actions such as cutting, felling, thinning, flooding, killing, poisoning, girdling, uprooting, or burning.</u>	Recommended Change – While this term is defined in WCC 16.16 and incorporated into the SMP by reference, the term could apply outside of critical areas within shoreline jurisdiction. In such cases, a definition within the SMP could be helpful for implementation purposes.	Done.
Req-23	<b>16.16.225.B – General Regulations</b>	7. Alteration of Type III or IV wetlands, <u>within exception of shoreline associated wetlands subject to WCC Title 23</u> , that have a habitat area score of less than 6 when associated with an approved commercial development within an Urban Growth Area; or	Required Change – This change is based on conversations with Whatcom County clarifying that this exception does not apply within shoreline jurisdiction.	Done.
Req-24	<b>16.16.230 – Activities Allowed without Notification</b>	The following activities do not require authorization from Whatcom County. However, this chapter shall not be construed to grant authorization for any work to be done in any manner in violation of the provisions of this chapter or any other laws or ordinances of this jurisdiction. <u>Activities within the shoreline jurisdiction (WCC 23.20.10) may require a shoreline permit or statement of exemption.</u>	Required Change – This change is required for consistency with minimum procedural requirements for permit review in WAC 173-27. There may be instances where a shoreline permit or statement of exemption are required for developments that may otherwise be exempt outside of shoreline jurisdiction. The required language mimics that included in WCC 16.16.235.1 – Activities Allowed with Notification	Done.
Req-25	<b>16.16.235.A – Activities Allowed With Notification</b>	1. The applicant provides a written notification to the Director on a form provided by the Department. Activities within the shoreline jurisdiction (WCC 23.20.010) <del>shall</del> <u>may</u> require a shoreline permit or statement of exemption.	Required Change – This change clarifies the fact that some actions allowed through this process may not meet the definition of “Development” as defined by the SMP. In such cases, a shoreline permit or statement of exemption would technically not be required. In such instances, any applicable standards of the SMP would still apply but the process outlined within this section could still be utilized. For example, removal of a single hazard tree would not require a development permit or exemption per the SMP, however mitigation would still be required consistent with the SMP, including applicable sections of the CAO.	Done.
Req-26	<b>16.16.270.C.12 – Reasonable Use Exceptions</b>	a. <del>On lots outside of the shoreline jurisdiction, w</del> hen an extended driveway is necessary to access a portion of a development site with the least impact on critical areas and/or buffers, those portions of the driveway shall be excluded from the 4,000-square foot maximum impact area; provided, that the access road or driveway meets the standards of WCC 16.16.620(D) or 16.16.720(D), as applicable.  b. <del>On lots within the shoreline jurisdiction, when an extended driveway is necessary to access a portion of a development site with the least impact on critical areas and/or buffers, the applicant shall demonstrate that the size and location of the driveway is the minimum necessary to access the development site.</del>	Required Change – This change removes any reference to the SMP as 16.16.270 is not incorporated by reference as part of the SMP at 23.05.065.A.	Done.
Rec-25 Req-27	<b>16.16.720.G.4 – Accessory Uses</b>	Accessory <del>Uses</del> <u>Structures</u> . When located in the shoreline jurisdiction, residential <del>water-oriented</del> accessory structures <u>including a boat equipment storage shed, an uncovered small boat storage rack, a fire pit, and a pathway leading to the shoreline,</u> may be permitted in an HCA buffer; provided.  a. <u>Such structures are located as far from the shoreline as feasible and on previously-impacted buffer areas, and</u>	Recommended Change – This change clarifies that this section is related to accessory structures rather than uses.  Required Changes – These changes are required for consistency with the SMP Guidelines governing principle that SMP regulations must be designed to achieve no net loss of ecological functions (WAC 173-26-186(8)). The changes add	Done.

ITEM	PROVISION	BILL FORMAT CHANGES (underline = additions; strikethrough = deletions)	RATIONALE	W/C Response
		<ul style="list-style-type: none"> <li>b. <u>The maximum area, inclusive of existing lawfully-established accessory structures, They</u> shall be limited to 10% of the buffer's area or 500 square feet, whichever is less; and,</li> <li>c. No more than 20% of the linear length of shoreline is occupied by a building or structure; and</li> <li>d. <u>Individual structures shall be limited to a total footprint area of 100-square feet and 10-feet in height, and</u></li> <li>e. The shoreline is 75% planted (or replanted), <u>or at ratios outlined in 16.16.760 whichever is greater,</u> with native vegetation to a minimum depth of 15 feet landward from the ordinary high water mark.</li> <li>f. <u>This provision shall not apply to residential developments authorized using the constrained lot provisions outlined in 23.40.150.B.</u></li> </ul>	<p>appropriate sideboards to allow a limited and predictable list of common residential developments that may be located within regulated buffers. The changes include more emphasis on the required mitigation sequence including avoidance, minimization and mitigation of impacts to buffers [WAC 173-26-201(2)(e)]</p>	
Rec-26	<b>16.16.730.A – Habitat Conservation Area Buffers</b>	<p>1. Buffers shall be established for activities adjacent to habitat conservation areas as necessary to protect the integrity, functions, and values of the resource. Buffer widths shall reflect the sensitivity of the species or habitat present and the type and intensity of the proposed adjacent human use or activity. Buffers shall not include areas that are functionally and effectively disconnected from the <del>wetland</del> <u>habitat conservation area</u> by an existing, legally established road or other substantially developed surface.</p>	<p>Recommended Change – Scrivener's error correction. It appears this language was copied from the wetland section without changing the reference to HCAs.</p>	Done.
Rec-27	<b>16.16.740. C – Habitat Conservation Area Buffer Modification</b>	<p>2. In all circumstances when the buffer between the area of reduction and the <del>wetland</del> <u>habitat conservation area</u> is degraded, this degraded portion of the buffer shall include replanting with native vegetation in order to achieve a dense vegetative community.</p>	<p>Recommended Change – Scrivener's error correction. It appears this language was copied from the wetland section without changing the reference to HCAs.</p>	Done.

## MEMO

Date: Oct 19, 2021  
To: Whatcom County Council  
From: County Executive Satpal Sidhu  
RE: Mid-Biennium Adjustment

---

The County Administration is pleased to present our recommended mid-biennium budget adjustment for your consideration.

As you well remember, the pandemic brought great economic uncertainty as we treaded into uncharted territory. In 2020 as we put together the biennium budget, we expected significant impacts to our County's finances as the economy sharply contracted due to public health measures to control the pandemic. County Council was proactive and took the necessary precautions, cutting spending, tightening budgets and implementing employee furloughs to conserve resources. Thank you for your prudent fiscal policies which helped us remain on stable footing through the uncertainty.

Fortunately, our worst expectations were not confirmed and Whatcom County, along with our State and Nation, survived the economic downturn reasonably well. I credit the prompt actions taken by Federal Government in the form of economic stimulus to individuals and CARES Act funds to local governments.

Earlier this year, Whatcom County was allocated \$44.5 million under the American Rescue Plan Act (ARPA) as well as an additional \$17 million for rental and utility assistance. In the budget adjustment Additional Service Requests (ASRs), you will see the creation of new fund accounts outlining the ARPA fund allocation as suggested by the Council. I am seeking final allocation approval as part of this budget adjustment.

Currently we have a Capital Facilities fund, which is usually expended for maintenance, repairs and additions to the current facilities. County Administration is suggesting to open a new reserve fund called the County Buildings Fund under the Capital Facilities fund to serve as a vehicle to accrue funds annually for future new facility needs. Some such needs include new facilities for Planning & Development Services, Public Works, Sheriff's Office, a new justice and public safety facility, and a new 911 dispatch center. Such projects take time to develop and implement over a 20- to 30-year cycle, which is beyond the tenures of individual County Executives and Council Members. This will be of great benefit to future Councils and Executives, providing flexibility to undertake such projects with reserve funds available. We suggest that every year the budget lapse be allocated by the Council to this County Buildings Fund.

There are more than 100 ASRs being presented as mid-biennium adjustments to the County budget for FY 2022. Most of these ASR's are related to decisions already taken by the Council such as COLA, criminal justice backlog relief, return of frozen positions, affordable housing projects, COVID testing at the jail, and public health projects. Additionally, I am pleased to report that sales and property tax receipts in the General Fund came in \$4.8 million higher than anticipated during budget planning in 2020.

While the overall economic picture is brighter, it is important to recognize that the pandemic continues. Over the past three months we have seen a prolonged surge in hospitalizations and deaths unlike any to date. We cannot let up on our public health response, and you will find a number of ASRs related to continuing the Health Department's efforts to keep our community safe.

You will also see a request for expenditure authority for dedicated grant funding from the State for Foundational Public Health Services, which provides support for 5 new FTE and 4 current positions to support Communicable Disease services, Environmental Public Health programs, data and assessment, epidemiology, communications and administrative functions. Additionally, we are requesting resources to build capacity within the Health Department to support key childcare initiatives and ARPA distributions related to childcare capacity planning, partnerships and service expansion.

Housing security continues to be a significant issue throughout our community. The Health Department is coordinating the delivery of state and federal funds to expand shelter capacity, provide rent and utility assistance and increase case management capacity with the aim of reducing and preventing homelessness. The Council has consistently supported these efforts in the past and I hope you will approve the requested allocations for FY 2022.

Our Human Resources Department has faced a significantly increased workload due to the pandemic, particularly with respect to recruitment and employment for COVID response positions, interpretation and application of new federal and state leave laws and benefits, leave of absence administration due to COVID exposure/illness and school closures, pandemic-related contract amendments, telework policy revision and workplace safety compliance. I support the department's request for an additional FTE, returning a position lost during the Great Recession, to more effectively handle our organization's needs. We are also asking for budget authority to upgrade our recruitment software and move to electronic timesheets, a step that is long overdue.

Finally, I would like to bring to your attention my request to create a new position in the County Executive's Office to provide project management and administrative oversight for the County's strategic initiatives. As you know well, the pandemic has disrupted our community in many ways and exacerbated longstanding problems. The COVID-19 Community Health Impact Assessment identified some of the most acute: an emerging child care crisis; social, racial and economic disparities in school readiness; accelerated erosion of housing affordability; heightened expression of behavioral and mental health issues such as anxiety, depression, and substance use; and a sharp surge in homeless families with children.

Simultaneously, new funding streams have emerged to address both immediate COVID impacts (ARPA) and long-term issues (other state and federal programs for child care, housing, climate resilience, broadband, etc.). I believe it is important that my office increase its capacity to respond commensurately to emerging and longstanding needs and to meet the public's rising expectations for proactive problem-solving. I hope you will support the creation of this new position.

I appreciate your taking the time to review and consider our proposed mid-biennium budget adjustment. There were too many additional service requests to address them each specifically in this memo, so I hope that if you have any questions you will not hesitate to reach out to my office for clarification.

Barry Buchanan  
Tyler Byrd  
Todd Donovan  
Ben Elenbaas  
Carol Frazey  
Kathy Kershner

### **CLERK OF THE COUNCIL**

Dana Brown-Davis, C.M.C.

## Call To Order

Council Chair Barry Buchanan called the meeting to order at 3 p.m. in a virtual meeting.

## Roll Call

**Present:** 7 - Rud Browne, Barry Buchanan, Tyler Byrd, Todd Donovan, Ben Elenbaas, Carol Frazey, and Kathy Kershner

**Absent:** None

## Announcements

### Special Presentation

1. [AB2021-608](#) LEAD and GRACE Annual Community Impact Report

The following people presented:

- Vanessa Martin, Prosecuting Attorney's Office
- Malora Christensen, GRACE & LEAD Program Manager
- Eric Richey, Whatcom County Prosecuting Attorney
- Tommy McAuliffe, LEAD Program Supervisor

They answered whether the Law Enforcement Assisted Diversion (LEAD) program is still grant-funded, whether there are only four case managers doing the work for each program, and supporting more case managers in the County.

Satpal Sidhu, County Executive, thanked the speakers for their work and stated a lot is happening behind the scenes.

**This agenda item was PRESENTED.**

### Committee Discussion

1. [AB2020-219](#) Discussion and update on strategies and other items related to COVID-19 (Council and Health Board)

The following people presented about COVID-19 trends and testing:

- Erika Lautenbach, Health Department Director
- Greg Thompson, Co-Health Officer

**This agenda item was REPORTED.**

2. [AB2021-395](#) Discussion and periodic update of the Shoreline Management Program

The following people briefed Councilmembers on the "Staff Memo for 10-26-21" (on file) and answered questions about proposed changes:

- Cliff Strong, Planning and Development Services Department
- Ryan Ericson, former Planning and Development Services Department

**This agenda item was DISCUSSED.**

3. [AB2021-209](#) Resolution regarding permanent affordability of childcare in Whatcom County Buchanan referred to the "CFWB Task Force Letter for 10.26.2021" (on file).

Judy Ziels, Health Department, briefed the Councilmembers.

Browne shared a spreadsheet (sent to Councilmembers via email during the meeting) in which he tried to quantify the cost of the proposed programs, and Councilmembers and staff discussed the information, whether programs that require an ongoing source of funding should be started, using the tool to work out what they want to allocate the non-recurring funding to then trying to find permanent funding for the other programs, and whether the Child and Family Well-Being Task Force is working on a parallel worksheet on financial impacts.

**This agenda item was DISCUSSED.**

4. [AB2021-610](#) Discussion with County Executive on options for aid to Point Roberts The following people briefed Councilmembers and referred to a memo (on file) and possible actions steps:

- Satpal Sidhu, County Executive
- Tyler Schroeder, Executive's Office

The speakers discussed the options with Councilmembers and answered how the situation is different in Point Roberts than in other border communities, what the people in Point Roberts say would be most beneficial to them, and what applications they would use for grant applications if they went with option three (Grants to impacted businesses ineligible for state grants).

**This agenda item was DISCUSSED.**

5. [AB2021-482](#) Presentation and discussion regarding Whatcom County's proposed American Rescue Plan Act funding priorities

Tyler Schroeder, Executive's Office, briefed the Councilmembers.

**This agenda item was REPORTED.**

**Committee Discussion and Recommendation to Council**

- 1. [AB2021-611](#) Discussion and possible motion to recommend rescinding a previous action of the Council that established a no shooting zone in Drayton Harbor

This item was not discussed.

**This agenda item was NOT ACTED UPON.**

**Items Added by Revision**

There were no agenda items added by revision.

**Other Business**

There was no other business.

**Adjournment**

The meeting adjourned at 4:45 p.m.

## COUNTY COUNCIL

### CALL TO ORDER

Council Chair Barry Buchanan called the meeting to order at 6:01 p.m. in a virtual meeting.

### ROLL CALL

**Present:** 7 - Rud Browne, Barry Buchanan, Tyler Byrd, Todd Donovan, Ben Elenbaas, Carol Frazey, and Kathy Kershner

**Absent:** None

### FLAG SALUTE

### ANNOUNCEMENTS

The Council is accepting applications to fill vacancies on the Business and Commerce Advisory Committee. Applicants must represent the food processing industry or manufacturing industry. If you are interested and meet these qualifications, please let us know at 360-778-5010 or email the council at Council@co.whatcom.wa.us.

### COUNTY EXECUTIVE'S REPORT

Satpal Sidhu, County Executive, reported on the following:

- A memo sent to Councilmembers regarding mid-biennium budget adjustments
- The Intalco plant reopening

### MINUTES CONSENT

***Donovan moved*** to accept the minutes consent items. The motion was seconded by Frazey (see votes on individual items below).

1. [MIN2021-079](#) Committee of the Whole for October 12, 2021

**Donovan moved and Frazey seconded that the Minutes Consent be APPROVED BY CONSENT. The motion carried by the following vote:**

**Aye:** 7 - Browne, Buchanan, Byrd, Donovan, Elenbaas, Frazey, and Kershner

**Nay:** 0

**Absent:** 0

2. [MIN2021-080](#) Regular County Council for October 12, 2021

**Donovan moved and Frazey seconded that the Minutes Consent be APPROVED BY CONSENT. The motion carried by the following vote:**

**Aye:** 7 - Browne, Buchanan, Byrd, Donovan, Elenbaas, Frazey, and Kershner

**Nay:** 0

**Absent:** 0

3. [MIN2021-081](#) Special Committee of the Whole Executive Session for October 19, 2021

**Donovan moved and Frazey seconded that the Minutes Consent be APPROVED BY CONSENT. The motion carried by the following vote:**

**Aye:** 7 - Browne, Buchanan, Byrd, Donovan, Elenbaas, Frazey, and Kershner

**Nay:** 0

**Absent:** 0

### **PUBLIC HEARINGS**

Council staff played a short instructional video about how to speak at the meeting.

1. [AB2021-572](#) Ordinance amending Whatcom County Code 12.20 Road Vacations to update procedures for processing petitions

Andrew Hester, Public Works Department, stated he is available for questions.

Buchanan opened the Public Hearing and, hearing no one, closed the Public Hearing.

**Donovan moved and Byrd seconded that the Ordinance Requiring a Public Hearing be ADOPTED. The motion carried by the following vote:**

**Aye:** 7 - Browne, Buchanan, Byrd, Donovan, Elenbaas, Frazey, and Kershner

**Nay:** 0

**Absent:** 0

Enactment No: ORD 2021-065

2. [AB2021-576](#) Resolution adopting the 2022 Annual Construction Program (ACP)

Jim Karcher, Public Works Department, stated he was available for questions.

Buchanan opened the Public Hearing and the following person spoke:

- Ken Domorod

Hearing no one else, Buchanan closed the Public Hearing.

**Frazezy moved and Donovan seconded that the Resolution Requiring a Public Hearing be APPROVED. The motion carried by the following vote:**

**Aye:** 7 - Browne, Buchanan, Byrd, Donovan, Elenbaas, Frazey, and Kershner

**Nay:** 0

**Absent:** 0

Enactment No: RES 2021-045

3. [AB2021-590](#) Ordinance imposing a second interim moratorium on the acceptance and processing of permit applications for new or expanded recreational cannabis growing and/or processing facilities which are proposed to operate outdoors or in greenhouses

Mark Personius, Planning and Development Services Department Director, briefed the Councilmembers and answered a question about when Council will get recommendations from the Planning Commission.

Buchanan opened the Public Hearing and the following person spoke:

- Ken Domorod

Hearing no one else, Buchanan closed the Public Hearing.

Councilmembers voted on the ordinance and Dana Brown-Davis, Clerk of the Council, clarified that the ordinance voted on was a substitute.

**Donovan's motion that the SUBSTITUTE Ordinance Requiring a Public Hearing be ADOPTED carried by the following vote:**

**Aye:** 5 - Browne, Buchanan, Byrd, Donovan, and Frazey

**Nay:** 2 - Elenbaas, and Kershner

**Absent:** 0

Enactment No: ORD 2021-066

### **OPEN SESSION (20 MINUTES)**

The following people spoke:

- Katherine Telford
- Robert Bystrom
- Rob Viens
- Jennifer Durant
- Shannon Wallace
- Ken Domorod

- Cynthia Thompson
- David Spring
- Markis Dee Stidham
- Nancy Hill
- Rebecca Wilson
- Sam Kloes
- Misty Flowers
- Melissa Wisener
- Kelley Bouma
- Nancy Eklund
- Christie Duque

Byrd stated he rises to ask a question and the Council Chair granted it.  
Donovan stated he rises to ask a question and the Council Chair granted it.  
Elenbaas stated he would answer questions after public comment.

The open session continued and the following people spoke:

- Mary Stidham
- Shean Halley
- Sarah Rose
- Natalie Chavez
- Jean Purcell
- Megan Wiseman
- Rosemary VanBeek
- Mark Ambler
- Hannah Ordos
- Chad Butenschoen

Hearing no one else, Buchanan closed the Open Session.

Browne responded to comments made during the open session.

## **CONSENT AGENDA**

**(From Council Finance and Administrative Services Committee)**

***Browne*** reported for the Finance and Administrative Services Committee and ***moved*** to approve Consent Agenda items one through four. Councilmembers discussed and voted on those items (see votes on individual items below).

1. [AB2021-585](#) Request authorization for the County Executive to enter into an interlocal agreement

between Whatcom County and U.S. Department of Justice Drug Enforcement Administration for Cooperative State and Local Task Force Agreement FY2022

**Browne reported for the Finance and Administrative Services Committee and moved that the Interlocal be AUTHORIZED BY CONSENT. The motion carried by the following vote:**

**Aye:** 7 - Browne, Buchanan, Byrd, Donovan, Elenbaas, Frazey, and Kershner

**Nay:** 0

**Absent:** 0

2. [AB2021-586](#) Request authorization for the County Executive to enter into an interlocal agreement between Whatcom County and U.S. Department of Justice Drug Enforcement Administration for Program-Funded State and Local Task Force Agreement FY2022, in the amount of \$38,744.00

**Browne reported for the Finance and Administrative Services Committee and moved that the Interlocal be AUTHORIZED BY CONSENT. The motion carried by the following vote:**

**Aye:** 7 - Browne, Buchanan, Byrd, Donovan, Elenbaas, Frazey, and Kershner

**Nay:** 0

**Absent:** 0

3. [AB2021-588](#) Request authorization for the County Executive to enter into an interlocal agreement between Whatcom County and San Juan County for Whatcom County Veteran Service Officer support services to San Juan County resident veterans, in an amount not to exceed \$10,000

**Browne reported for the Finance and Administrative Services Committee and moved that the Interlocal be AUTHORIZED BY CONSENT. The motion carried by the following vote:**

**Aye:** 7 - Browne, Buchanan, Byrd, Donovan, Elenbaas, Frazey, and Kershner

**Nay:** 0

**Absent:** 0

4. [AB2021-604](#) Request authorization for the County Executive to enter into a contract between Whatcom County and National Service Office for Nurse-Family Partnership to provide technical support and training, in the estimated amount of \$42,444

**Browne reported for the Finance and Administrative Services Committee and moved that the Contract be AUTHORIZED BY CONSENT. The motion carried by the following vote:**

**Aye:** 7 - Browne, Buchanan, Byrd, Donovan, Elenbaas, Frazey, and Kershner

**Nay:** 0

**Absent:** 0

## **OTHER ITEMS**

**(From Council Finance and Administrative Services Committee)**

1. [AB2021-447](#) Resolution accepting the 2021 Whatcom County Comprehensive Economic Development Strategy (CEDS) and amended Appendix and approving submittal of the draft to the United States Department of Commerce Economic Development Administration

**Browne** reported for the Finance and Administrative Services Committee and ***moved*** that the SUBSTITUTE Resolution be APPROVED.

Donovan read the substitute title into the record.

**Browne's motion that the SUBSTITUTE Resolution be APPROVED carried by the following vote:**

**Aye:** 7 - Browne, Buchanan, Byrd, Donovan, Elenbaas, Frazey, and Kershner

**Nay:** 0

**Absent:** 0

Enactment No: RES 2021-046

2. [AB2021-582](#) Ordinance amending the 2021 Whatcom County Budget, request no. 16, in the amount of \$411,953

**Browne** reported for the Finance and Administrative Services Committee and ***moved*** that the Ordinance be ADOPTED.

The following people answered questions about the \$385,466 to fund amendment to Opportunity Council CDBG grant to fund services to counter COVID-related community impacts.

- Tyler Schroeder, Executive's Office
- Satpal Sidhu, County Executive

**Byrd moved** to table the agenda item. The motion was seconded by Kershner.

Councilmembers discussed the motion and Sidhu answered how the Opportunity Council came to be the steward of this grant.

The motion failed by the following vote:

**Aye:** 1 - Byrd

**Nay:** 6 - Kershner, Browne, Buchanan, Donovan, Elenbaas, and Frazey

**Browne's motion that the Ordinance be ADOPTED carried by the following vote:**

**Aye:** 6 - Browne, Buchanan, Donovan, Elenbaas, Frazey, and Kershner

**Nay:** 1 - Byrd

**Absent:** 0

Enactment No: ORD 2021-067

3. [AB2021-583](#) Resolution amending the Flood Control Zone District & Subzones 2021 budget, request no. 4, in the amount of \$855,502 (Council acting as the Whatcom County Flood Control Zone District Board of Supervisors)

**Browne** reported for the Finance and Administrative Services Committee and **moved** that the Resolution (FCZDBS) be APPROVED.

Councilmembers discussed whether they had gotten a presentation from staff.

Tyler Schroeder, Executive's Office, briefed the Councilmembers.

**Browne's motion that the Resolution (FCZDBS) be APPROVED carried by the following vote:**

**Aye:** 7 - Browne, Buchanan, Byrd, Donovan, Elenbaas, Frazey, and Kershner

**Nay:** 0

**Absent:** 0

Enactment No: RES 2021-047

4. [AB2021-593](#) Request authorization for the County Executive to enter into an interlocal agreement between Whatcom County and Island County to provide COVID-related isolation and quarantine to Island County residents, in the amount of \$200 per resident, per day

**Browne** reported for the Finance and Administrative Services Committee and **moved** that the Interlocal be AUTHORIZED.

Councilmembers discussed the item.

Tyler Schroeder, Executive's Office, responded to a question about whether

the \$200 a day covers the cost that Whatcom County is putting out to have that facility open.

**Byrd moved** to amend the interlocal to approve this tonight with the expectation that if it comes back to us in three months that it either has full funding by FEMA, by the State, or it is a cost share agreement with the other counties. The motion was seconded by Kershner.

Councilmembers discussed the motion and Satpal Sidhu, County Executive, and Tyler Schroeder answered questions.

Buchanan suggested they approve this interlocal now and then do a motion (like Byrd's) for going forward with any new interlocal agreements that are created with other counties.

**Byrd withdrew** his motion and Kershner withdrew her second.

Councilmembers discussed the main motion and Schroeder and Sidhu answered whether other counties have their own facilities or are dependent on our facility, whether other counties would be shutting their facilities down if ours became a regional facility, whether it is less likely to be reimbursed from FEMA if Whatcom County shares the cost with other counties, whether FEMA usually gives only 80% of the cost back to the County, how the number of \$200 a night was derived, how many rooms there are, and what the current cost is per room.

**Browne's motion that the Interlocal be AUTHORIZED carried by the following vote:**

**Aye:** 6 - Browne, Buchanan, Byrd, Donovan, Frazey, and Kershner

**Nay:** 1 - Elenbaas

**Absent:** 0

5. [AB2021-595](#) Request authorization for the County Executive to enter into a contract amendment between Whatcom County and Opportunity Council to administer the Housing and Essential Needs Program in the amount of \$503,370 for a total amended contract amount of \$2,540,694

**Browne** reported for the Finance and Administrative Services Committee and **moved** that the Contract be AUTHORIZED.

Tyler Schroeder, Executive's Office, answered what this cost includes.

**Browne's motion that the Contract be AUTHORIZED carried by the following vote:**

**Aye:** 7 - Browne, Buchanan, Byrd, Donovan, Elenbaas, Frazey, and Kershner

**Nay:** 0

**Absent:** 0

6. [AB2021-600](#) Request authorization for the County Executive to enter into a contract between Whatcom County Flood Control Zone District and Geneva Consulting Services for the coordination of the Whatcom Lead Integrating Organization (Council acting as the Whatcom County Flood Control Zone District Board of Supervisors)

**Browne** reported for the Finance and Administrative Services Committee and **moved** that the Contract (FCZDBS) be AUTHORIZED.

Tyler Schroeder, Executive's Office, answered a question about the scope of work for the Lead Integrating Organization (LIO).

**Browne's motion that the Contract (FCZDBS) be AUTHORIZED carried by the following vote:**

**Aye:** 7 - Browne, Buchanan, Byrd, Donovan, Elenbaas, Frazey, and Kershner

**Nay:** 0

**Absent:** 0

7. [AB2021-602](#) Request authorization for the County Executive to enter into an agreement between Whatcom County and Greg Dibble for the lease of 600 Dupont Street, Bellingham WA

**Browne** reported for the Finance and Administrative Services Committee and **moved** that the Agreement be AUTHORIZED.

Byrd explained why he abstained on the vote in the Finance and Administrative Services Committee and Councilmembers discussed why the space is needed, and whether the monthly and annual amount is in line with renting other commercial space.

Tyler Schroeder, Executive's Office, answered how big the whole building is and how much the County will spend over three years.

**Browne's motion that the Agreement be AUTHORIZED carried by the following vote:**

**Aye:** 7 - Browne, Buchanan, Byrd, Donovan, Elenbaas, Frazey, and Kershner

**Nay:** 0

**Absent:** 0

**(From Council Public Works and Health Committee)**

8. [AB2021-598](#) Discussion and request for motion regarding community requested revision to the Birch Bay Golf Cart Zone boundary

*Frazey* reported for the Public Works and Health Committee and *moved* to extend the current Birch Bay golf cart zone to Gemini Street.

Dana Brown-Davis, Clerk of the Council, clarified whether the motion from committee was to have the Public Works Department create an ordinance to extend the zone to Gemini Street.

Frazey stated *that should be the motion*.

The motion carried by the following vote:

**Aye:** 7 - Kershner, Browne, Buchanan, Byrd, Donovan, Elenbaas, and Frazey

**Nay:** 0

**This agenda item was DISCUSSED AND MOTION(S) APPROVED.**

**(From Council Committee of the Whole)**

9. [AB2021-611](#) Discussion and possible motion to recommend rescinding a previous action of the Council that established a no shooting zone in Drayton Harbor

Buchanan briefed the Councilmembers about why the item is on the agenda.

Dana Brown-Davis, Clerk of the Council, briefed Councilmembers on the best process and type of motion for this item. She stated the best way to bring this back is to rescind the motion that adopted it on October 12, 2021.

Byrd gave his analysis on the procedure and stated a new ordinance should be brought forward.

Brown-Davis clarified that the County Executive has ten days to sign after presented to his office and the former ordinance was not taken to his office until Thursday of last week.

Karen Frakes, Prosecuting Attorney's Office, stated the procedure the Clerk of the Council is recommending is appropriate and legal.

Councilmembers discussed the options and whether they should reconsider or rescind the motion to adopt.

Brown-Davis stated a motion to reconsider can be presented at the same

meeting (in which the ordinance was adopted), but because this was adopted in a past meeting it has to be a motion to rescind.

*Elenbaas moved* to rescind the motion that adopted Ordinance 2021-061 on October 12, 2021 (the no-shooting zone in Drayton Harbor). The motion was seconded by Donovan.

The motion to rescind carried by the following vote:

**Aye:** 7 - Browne, Buchanan, Byrd, Donovan, Elenbaas, Frazey, and Kershner

**Nay:** 0

**This agenda item was DISCUSSED AND MOTION(S) APPROVED.**

### **ITEMS ADDED BY REVISION**

There were no agenda items added by revision.

### **INTRODUCTION ITEMS**

Buchanan stated that AB2021-594 is a substitute.

*Donovan moved* and Frazey seconded that agenda items 1-5 be introduced.

The motion carried by the following vote:

**Aye:** 7 - Buchanan, Byrd, Donovan, Elenbaas, Frazey, Kershner, and Browne

**Nay:** 0

Councilmembers started to give committee reports but Dana Brown-Davis, Clerk of the Council, stated that the AB2021-606 was recommended for withdrawal from introduction in committee.

*Donovan moved* to reconsider the motion to introduce items 1-5 so that item number 4 can be removed. The motion was seconded by Elenbaas.

The motion to reconsider carried by the following vote:

**Aye:** 7 - Byrd, Donovan, Elenbaas, Frazey, Kershner, Browne, and Buchanan

**Nay:** 0

*Donovan moved* and Elenbaas seconded to introduce all introduction items except for AB2021-606 (see motion and votes on individual items below).

1. [AB2021-594](#) Ordinance amending Whatcom County Code Chapter 2.02 (County Council) to define absence and temporary disability

**Donovan moved and Elenbaas seconded that the SUBSTITUTE Ordinance be INTRODUCED. The motion carried by the following vote:**

**Aye:** 7 - Browne, Buchanan, Byrd, Donovan, Elenbaas, Frazey, and Kershner

**Nay:** 0

**Absent:** 0

2. [AB2021-599](#) Ordinance establishing the Ferry Fare Capital Surcharge Fund

**Donovan moved and Elenbaas seconded that the Ordinance be INTRODUCED. The motion carried by the following vote:**

**Aye:** 7 - Browne, Buchanan, Byrd, Donovan, Elenbaas, Frazey, and Kershner

**Nay:** 0

**Absent:** 0

3. [AB2021-601](#) Ordinance amending the 2021 Whatcom County Budget, request no. 17, in the amount of \$4,967,500

**Donovan moved and Elenbaas seconded that the Ordinance be INTRODUCED. The motion carried by the following vote:**

**Aye:** 7 - Browne, Buchanan, Byrd, Donovan, Elenbaas, Frazey, and Kershner

**Nay:** 0

**Absent:** 0

4. [AB2021-606](#) Ordinance adopting amendments to the Whatcom County Code Title 20, Zoning, to provide additional affordable housing options, including allowing and regulating tiny homes and allowing duplexes in planned unit developments

**This agenda item was WITHDRAWN.**

5. [AB2021-609](#) Ordinance amending Whatcom County Code Title 3 (Revenue and Finance), specifically Chapters 3.06 (Grants) and 3.08 (Purchasing System)

**Donovan moved and Elenbaas seconded that the Ordinance be INTRODUCED. The motion carried by the following vote:**

**Aye:** 7 - Browne, Buchanan, Byrd, Donovan, Elenbaas, Frazey, and Kershner

**Nay:** 0

**Absent:** 0

## **COMMITTEE REPORTS, OTHER ITEMS, AND COUNCILMEMBER UPDATES**

Councilmembers gave committee reports and other updates.

## **ADJOURN**

The meeting adjourned at 9:49 p.m.

### TITLE FOR AGENDA ITEM:

Resolution approving the 2021 Whatcom County Climate Action Plan

### SUMMARY STATEMENT OR LEGAL NOTICE LANGUAGE:

The Climate Impact Advisory Committee is excited to present the final draft update to the Whatcom County Climate Action Plan as required in Whatcom County Code 2.126.030. This Climate Action Plan represents several years of work by the committee including significant input and support from numerous members of the public as well as County staff. This final 2021 Whatcom County Climate Action Plan and accompanying resolution is presented to the County Council for review and adoption.

## MEMORANDUM

**TO:** The Honorable Members of the Whatcom County Council  
The Honorable Whatcom County Executive Satpal Sidhu

**THROUGH:** Jon Hutchings, Public Works Director  
Gary S. Stoyka, Natural Resources Manager *GSS*

**FROM:** Chris Elder, Senior Watershed Management Planner *CE*

**RE:** 2021 Whatcom County Climate Action Plan

**DATE:** October 27, 2021

---

The Climate Impact Advisory Committee requests that Council approve the Climate Action Plan and the accompanying resolution to support implementation of the Climate Action Plan. The Committee has been working for the past several years to achieve the mandated task, as described in Whatcom County Code 2.126.030, of updating the County's Climate Action Plan. The committee held an open public review and comment period on the draft Climate Action Plan for the month of July and received numerous comments and suggested edits from members of the community. The committee presented a draft of the plan to Council on August 10, 2021 and received input from members of County Council as well as from staff and leadership within the administration. At the request of Council, a work session was held with Council on September 28, 2021 to review an updated draft and to receive additional input from Council. All comments received and suggested edits have been incorporated into the final Climate Action Plan. Upon approval, the administration looks forward to working with Council to implement the plan including submitting a mid-biennium budget request for a new climate action position.

Please contact Chris Elder at extension 6225, if you have any questions or concerns in advance of the discussion.

- 2021 Whatcom County Climate Action Plan
- Resolution to adopt the 2021 Whatcom County Climate Action Plan

PROPOSED BY: \_\_\_\_\_

INTRODUCED: \_\_\_\_\_

RESOLUTION NO. \_\_\_\_\_

Adopting the 2021 Whatcom County Climate Action Plan

WHEREAS, the recent Intergovernmental Panel on Climate Change's 6<sup>th</sup> Assessment report found that climate change is already affecting nearly every part of the planet, human activities are unequivocally the cause, net zero emissions is required by mid-century to avert very costly and damaging climate impacts; and

WHEREAS, our 2017 greenhouse gas assessment (Whatcom County Greenhouse Gas Inventory 2017) showed that Whatcom County has a per capita greenhouse gas emission that is almost three times Washington state's per capita emissions; and

WHEREAS, Whatcom County's employment and economy are seriously threatened by climate change and the required energy transition and the County must be proactive in developing and attracting the clean energy jobs of the future; and

WHEREAS, The Whatcom County Council, through Ordinance No. 2017-080, has charged the Climate Impact Advisory Committee with the task of updating the County's Climate Action Plan every 5 years; and

WHEREAS, The Climate Impact Advisory Committee completed a Community Outreach effort in 2019, conducting over one hundred interviews with community stakeholders to determine strategies and actions needed in the updated Climate Action Plan; and

WHEREAS, members of the Climate Impact Advisory Committee 1) continued to seek advice from community experts over this last year and a half, 2) incorporated the latest climate science specific to Whatcom County (Whatcom County Climate Action Plan: Summary of Observed Trends and Projected Climate), and 3) followed recommendations from the Washington 2021 State Energy Strategy and sought advice and review from the authors of this plan; and

WHEREAS, the revised Whatcom County Climate Action Plan incorporates the climate targets passed by the 2020 State Legislature and is consistent with state and federal climate mitigation and adaptation approaches, thereby facilitating Whatcom County's ability to compete for state and federal grants; and

WHEREAS, as instructed by the County Council, the Climate Action Plan incorporates adaptation strategies and actions, that combined with greenhouse gas emissions reductions, will build climate resilience to avoid the worst impacts of rising temperatures on our economy, environment, and quality of life; and

WHEREAS, the Climate Action Plan acknowledges that low-income, BIPOC, and vulnerable communities within the County have and will continue to bear disproportionate impacts of climate change and that a just transition to a low-carbon future will require public investments that promote equity; and

WHEREAS, the Climate Action Plan acknowledges Whatcom County's obligation to honor and uphold tribal treaty rights, as guaranteed by the 1855 Treaty of Point Elliott

between the United States government and the Lummi Nation and the Nooksack Indian Tribe.

NOW, THEREFORE, BE IT RESOLVED by the Whatcom County Council to commit Whatcom County leadership to:

1. Establish the Office of Climate Action with dedicated staff to ensure climate action that is transparent, equitable, urgent, and accountable to the Whatcom community.
2. Acknowledge, protect, and enhance the people’s right to clean air, water, land, and food, and access to education, jobs, and shelter; and
3. Execute the 2021 Whatcom Climate Action Plan and work diligently to prioritize and incorporate key strategies and actions; and
4. Ensure that the County actions are rooted in equity and respect for the cultures and traditions of our diverse population; and
5. Act with urgency and intention to address the climate emergency and build climate resilience.

APPROVED this \_\_\_\_ day of \_\_\_\_\_, 20\_\_.

# **Whatcom County Climate Action Plan**

**2021**

## A Note about our Land

The Whatcom County Climate Impact Advisory Committee respectfully submits this Climate Action Plan in acknowledgement that our County is built on the ancestral homelands and waterways of the Lummi and Nooksack, who have lived on, cared for, and protected these lands since time immemorial. Their culture, values, and teachings are intertwined in the waters, lands, and resources that sustain their life ways. We acknowledge the Tribes' treaty rights, as guaranteed by the 1855 Treaty of Point Elliott between the United States government and the Lummi Nation and the Nooksack Indian Tribe, and commit to honoring and upholding the Treaty as the supreme law of the land.

The Committee also recognizes that the historical and present-day rights and livelihoods of Native peoples are particularly relevant to climate action, as rising temperatures and other effects of a changing climate disproportionately threaten the well-being and prosperity of Native peoples. As we face the uncertain future of a changing climate and its effects on land, water, natural resources, economy, and livelihood, we stand committed to climate change mitigation and adaptation actions that will enable us to live and prosper together on this land.

## Letter from the County Executive

Climate change presents two distinct and important challenges. The first is that the impacts of climate change are not manifested overnight. They are gradual – the recession of glaciers over the decades, the warming of waters in our creeks and declining salmon runs, the hotter and smokier summers. It is like the parable of the boiling of the frog, we don't see much difference from day to day, but it becomes clear that things are different when we take the perspective of several decades. This slow creep makes it difficult to convey the urgency of addressing climate change, both its causes and impacts. People are inclined to be more worried about the transitory problems of tomorrow than the big problems of the next decades and centuries. However, that's how we create legacy problems, such as superfund sites and urban sprawl, which are passed along to our children.

The second challenge is the fact that there is no single solution to climate change. It's going to require action across a very broad spectrum of areas and levels of government. This includes our transportation choices, how we manage land use and heavy industry, how we farm sustainably, rebuild connectivity in our watersheds and enhance forest health. We need to change our thinking and behavior in all of these areas and also to make significant investments. The enormous scope of the problem seems overwhelming, and it's too easy to sit back and say, "What can one county government do in the face of this global problem?" This sense of futility is not easy to overcome.

The proposed Climate Action Plan for Whatcom County addresses, in part, both of these challenges. First, it draws attention to the urgency of the situation and why we need to act today as responsible stewards of this beautiful corner of the world. It provides a compelling call to action. Second, it sets specific and attainable goals which are within the purview of county government. It outlines what actions should be taken, when and what they are going to achieve. It's a realistic roadmap and it will have tangible, positive impacts.

I am very appreciative of the Climate Impact Advisory Committee for their time and dedication over the past two years. Working with climate experts and County staff, they've created a plan that is supported by science, supported by community members and very much supported by me. I look forward to discussing it with County Council and staff as we prepare for its adoption and implementation.

Satpal Sidhu  
Whatcom County Executive

## Preface

***The Climate Impact Advisory Committee was created in 2017 by the Whatcom County Council under Ordinance 2017-080, Whatcom Code Chapter 2.126. The Whatcom County Council established the goal of 100% renewable energy use within County operations and the larger Whatcom County community.***

The Whatcom County Climate Impact Advisory Committee (CIAC) has been tasked with revising the County’s Climate Action Plan (CAP) at a minimum of every five years. The CIAC is entirely composed of volunteers from our community who have spent many months researching, writing, and editing this Climate Action Plan. As requested by the County Council this plan provides recommendations for both reducing and/or mitigating greenhouse gas emissions and adapting to the inevitable changes occurring from climate disruption.

The recommendations in this Whatcom Climate Action Plan were informed by key background reports from Cascadia Consulting Group that included Whatcom Climate Trends and Projected Impacts, Whatcom County Greenhouse Gas Inventory 2017, and Vulnerability Assessments. In addition, the recommendations or strategies in this Climate Action Plan are aligned with the Washington 2021 State Energy Strategy.

The CIAC has also drawn heavily on the knowledge of stakeholders in Whatcom County. In 2019 volunteers from the CIAC and the local League of Women Voters interviewed over 120 community leaders and stakeholders in the County to ask them what they would like to see in a revised climate action plan. This Climate Action Plan incorporates many of the ideas from this early community outreach effort.

Additionally, numerous subject area experts in the community helped develop the recommendations and/or review draft content. The CIAC is grateful for the support it has received in compiling this report as well as the support from Whatcom County staff and the County Council during the development and publication of this Climate Action Plan.

# Executive Summary

We write this executive summary soon after our County experienced a record-breaking 3-day heat wave that exceeded 100°F in many areas of the Pacific Northwest including Whatcom County. The effects of this heat wave are still being assessed, but it is estimated that a billion small sea creatures – including mussels, clams, and snails – died along the coastlines of the Salish Sea and 25 to 30% of the raspberry crop in Whatcom County was likely destroyed. In addition, the snowpack in the North Cascades, which was measured at 130% of normal in March, contained no available water by July 6<sup>th</sup>.

The recent heat wave in the Pacific Northwest is just the latest in a long list of similar extreme weather events becoming more commonplace around the world. Although we are often told that we cannot equate an individual weather event with climate change, 27 international climate scientists in the World Weather Attribution group have found that this heat wave could not have occurred if the planet had not already warmed by about 2°F. A sobering finding from their models was that this event, previously expected to occur about once in 1000 years, can be expected every 5 to 10 years within the next 20 years with continued warming. The rate of global warming is alarming and our climate models to date have frequently underpredicted the impacts because of this rapid pace of change.

## Organization of the Climate Action Plan

This update of the 2007 Climate Action Plan was two years in the making and much of the writing was completed by a dedicated group of community volunteers who drew heavily on the knowledge of County staff and stakeholders in the County. These volunteers also spent untold time researching the science and the best approaches for reducing greenhouse gas (GHG) emissions and adapting to the inevitable warming and associated climate impacts that are currently occurring and will continue with or without action at every level of government.

This Climate Action Plan covers both the Built and Natural Environments in Whatcom County. Although the plan is long, it provides a detailed roadmap of the actions that need to be accomplished in order to avoid the most devastating impacts of climate change and do our part to meet state emission targets.

The organization of this Climate Action Plan is largely dictated by the way greenhouse gas emissions are assessed and reported in the Built Environment, by designated sectors. The strategic planning terminology of goals, strategies, and actions are used. A **Goal** is a statement of a policy objective that specifies the desired outcome by a specific date. **Strategies** are the approaches that are used to achieve a goal. **Actions** are documented events, tasks, or activities needed to fulfill a strategy.

The success of this action plan will ultimately be measured by 1) the reduction in GHG emissions that occurs over time, 2) an increase in ecosystem health, and 3) an increase in climate resilience. It is important to note, however, that many of these sectors and natural systems are interrelated, so coordination of the strategies and actions across these sectors and natural systems is critical. Increasingly, we will need to employ systems-level solutions to many of the challenges posed by climate change. We start this systems approach in this plan by combining electricity and buildings goals, strategies and actions, since a clean, modern grid is the core of decarbonizing the economy.

This plan is organized as follows with the primary authors listed in parentheses:

**Section 1** – “Climate Change in Whatcom County” discusses climate impacts, terminology, our 2017 greenhouse gas assessment, recent State legislation, and the guiding principles for our strategies and actions. (Ellyn Murphy)

**Section 2** - "The Built Environment" Electricity & Buildings (Cynthia Mitchell, David Hostetler, Ellyn Murphy), Industry (Sue Gunn), Transportation (Phil Thompson, Alec Howard), and Waste (Ellyn Murphy). These sectors represent the main sources of emissions, and we present solutions to reduce emissions.

Land Use (Kaylee Galloway) is also discussed in this section because three of the four strategies in land use concern the built environment.

**Section 3** - "The Natural Environment" Water Resources and Fisheries (Chris Elder, Ellyn Murphy, Stevan Harrell), Agriculture (Stevan Harrell), Forestry (Ellyn Murphy, Chris Elder) and Ecosystems (Katherine Kissinger). This section discusses the impacts of climate change and how this collection of ecosystems can be part of the solution.

**Section 4** - "Implementation" This section offers the best approach to coordinate and implement the strategies and actions in Sections 2 & 3 and provide accountability (Stevan Harrell). Good management oversight of climate actions includes community engagement, a stepwise process for defining individual projects, coordinating project execution, assessing outcomes, and adapting next steps based on current circumstances.

**Section 5** - Appendix – A listing of technical contributors and reviewers and additional information on strategy implementation.

We would like to thank the numerous stakeholders in the community that participated in strategy development and reviewed sections and chapters of this report. Without their expertise and willingness to help, we could not have completed such a comprehensive plan and are grateful for their support. These participants are listed in the appendices for the various sectors covered in this report.

### **The Pathway to Climate Resilience**

Our committee is in consensus that the most important recommendation to the Whatcom County Council and Executive is the necessity to establish an Office of Climate Action. This office would house staff dedicated to coordinating implementation of climate action efforts across multiple County departments and between other governmental agencies, providing critical information to County departments and the public, and promoting community engagement in projects that boost climate resilience. Without such an Office the County will miss multiple opportunities to implement the specific recommendations for climate mitigation and adaptation detailed in the following sections of this Report. Without an Office of Climate Action, the County will also miss the growing opportunities for funding from private, State and federal agencies, as well as opportunities to participate in the emerging clean fuel economy. The Office should be headed by a Senior Climate Advisor/Manager with wide knowledge of climate policy and science, in addition to experience in public service. The office should also include a data analyst/information specialist dedicated to providing and publicizing information relating to local climate and its effects, as well as monitoring the progress of our efforts toward mitigation and adaptation.

This Climate Action Plan closely follows the science and technology recommendations that are widely accepted by policy experts across the globe. Experts agree that the key to reducing greenhouse gas (GHG) emissions is the electrification of systems that currently use fossil fuels with clean electricity (defined as electricity that is generated without emissions). This is the only way we can reduce emissions rapidly in the next three decades. It is also clear that if we do not start immediately, this mountain of emissions will be too steep to climb. New technologies are rapidly evolving, and all levels of government need to continue to support research, development, and deployment, but we cannot wait for a silver bullet to save us. We must act now with the tools we have.

Electrification of buildings and transportation, combined with accelerated conversion to renewable sources of energy, could alone reduce emissions by 70 to 80% across the US and create a much healthier environment for our families, both indoors and out. Minor contributors to emissions such as gas stovetops and fireplaces are not the issue. Instead, we need to encourage a transition away from space and water heating with gas, a major source of CO<sub>2</sub> emissions in buildings. Washington's Clean Energy

Transformation Act puts utilities on the pathway of decarbonizing their electricity, achieving 100% clean electricity by 2045.

The State's 2021 Clean Fuel Standard legislation requires fuel suppliers to reduce the carbon intensity of their fuels 20% by 2038, and the 2021 Climate Commitment Act effectively imposes a cost on GHG emissions from burning fossil fuels. These actions will raise the cost of fossil fuels, creating greater incentives to buy electric vehicles, which have lower operating costs than gasoline-powered vehicles. Electric vehicle technology is accelerating so fast that many major car manufacturers will curtail production of gasoline-powered vehicles by 2035.

Providing the required amount of electricity for transportation will take major investments in infrastructure, from large-scale renewable energy installations to transmission capacity to EV charging locations. Collaboration and planning among governments, utilities, businesses, and communities will be essential. The 2021 Legislature directed the State Building Code Council to adopt codes for electric vehicle charging infrastructure at new residential buildings, and the Clean Fuel Standard legislation provides a mechanism for funding charging stations in underserved areas. The State also provides up to \$2,500 in sales tax rebates for electric vehicle purchases.

In addition to electrification of transportation, we need to greatly reduce the amount of single occupancy vehicle travel. Residents, businesses, municipalities, and the County should all work together to significantly expand interconnected multimodal transportation, especially non-motorized trails that are separated from busy and congested thoroughfares, to provide the public safe options for commuting.

Point-source emissions from industrial manufacturing processes are the County's largest source of emissions, contributing 51%--a fact we did not know until the greenhouse gas assessment for 2017 was completed in June 2020. The cap-and-trade system for greenhouse gas emissions in the 2021 Climate Commitment Act will effectively attach a cost to each ton of industrial GHG emissions and generate funding for uses such as industrial energy efficiency and affected worker assistance. Since the largest emission source for the state is transportation, the state, Whatcom County, and the refineries should work together on win-win solutions to reduce transportation-related GHG emissions while securing long-term economic benefits for the County. Our petroleum refining industry and its highly skilled workforce have the opportunity to become part of the statewide solution for reducing emissions through the production of low-carbon fuels and development of other clean energy sources. The State's Clean Fuel Standard will create a demand for alternative fuels such as biofuels and green hydrogen fuels.

The County's effort to restrict the growth in industrial emissions (i.e., Cherry Point Amendment) is a good example of using the County's authority over land use to address climate change. Climate smart land use practices can reduce GHG emissions and also help us better adapt to the inevitable changes that are already occurring. We view land use as the bridge or fulcrum that can balance emissions from the built environment with storage or sequestration of carbon in our natural environment. Changes in zoning codes and regulations are also an effective way to reduce the amount of single-occupancy vehicle transportation by requiring emphasis on density, giving commuters alternative transportation options in existing and new neighborhoods, and preservation of green spaces.

Climate smart land use can also increase climate resilience to drought, flooding and wildfires. For example, wetlands not only store large quantities of carbon, but are also a critical component of our overall hydrologic system for water storage, filtration of contaminants, habitat for many different plant and animal species, and as a collection point for flood waters. Likewise, preservation of estuaries protects against storm surge in coastal areas and is a critical link in the food chain for saltwater and freshwater species. Stronger codes and regulations in wildland-urban interface, in addition to the overall reduction in development potential in those areas, can reduce the frequency of wildfires and the resulting economic damage as well as enhancing the forestry economy.

The diverse and vast ecosystems in our forests, foothills, lowlands and flood plains can significantly increase carbon storage and build resilience to climate impacts. Climate adaptation efforts are essential so that our natural ecosystems can continue to thrive under a changing climate. When healthy and intact, natural systems can sequester and store large amounts of carbon. Adaptation to changing climate conditions will be extremely impactful on some ecosystems and will likely require significant help from us to maintain ecosystem health and build long term ecosystem resilience.

Climate impacts are nowhere more visible than on our water supply. Whatcom County faces the challenge of too much water in the winter and early spring, combined with too little water in the later summer and early fall. Continued increases in the frequency of flooding and drought are very visible signs of our changing climate. Over the last 150 years or more, development and land use changes have reduced the floodwater storage capacity of our river systems. In addition, natural water storage systems (snowpack, glaciers, and even our shallow groundwater aquifer) that would normally feed our river systems in late summer have been directly impacted by climate change or development or both. Projected future impacts indicate these changes will continue over time and will further exacerbate future water supply and availability issues.

Resolving uncertainty in our current and future water supply under climate change is the first step in understanding and dealing with this contentious issue. Restoring and protecting our streamflow levels and temperature to ensure year-round salmon migration and survival is the greatest climate challenge currently facing Whatcom County. Fortunately, there are many tools we can employ to adapt to climate change such as incentivizing efficiency in water consumption systems, rebuilding the connectivity of our fragmented hydrologic system, and protecting and enhancing estuarine, marine shoreline and coastal wetland habitats for fish and shellfish.

Agriculture can also play an important role in water use efficiency, increasing soil carbon storage, and also building food security and enhancing the local agriculture economy. Regenerative farming practices have been shown to enhance carbon storage, increase soil moisture, and reduce the amount of fertilizer needed. These practices can be economically incentivized by establishing a carbon market to reward farmers for increasing their soil carbon. The County also needs to change codes for renewable energy siting so farmers can benefit from the additional income generated from these installations.

Forested land in Whatcom County provides a significant sink for atmospheric carbon and needs to be actively managed for climate resilience and carbon storage while enhancing the forestry economy. A baseline for carbon sequestration by forests was recently established using information from 2000 to 2010. Our forests were found to sequester, on average, 4 million MT CO<sub>2</sub>e per year, roughly equal to half of the emissions in the County. This important carbon sink should be monitored every 5 years as an indicator of forest health and land use changes. Revising Washington State Forest Practice Rules and Whatcom County development and land use codes will also be necessary to preserve our working forest lands, maintain our forest economy and reduce destruction from wildfires and disease.

Our local ecosystems provide clean water, clean air, soil productivity, water storage, flood control and many other services that are necessary for life on Earth. Climate change is occurring faster than our ecosystems can adapt therefore we must do everything we can to preserve and stabilize these systems. This includes revising land use codes based on current and future climate conditions, promoting community education on the importance of preserving ecosystems such as wetlands and wildlife corridors, and providing technical, logistical, and financial support for community organizations that are restoring and enhancing ecosystems. A long-term monitoring program of ecosystem health is also essential to track changes and progress over time and inform any needed improvements.

The longer we delay climate action, the more difficult and expensive it will be to preserve the natural systems that support life as we know it on Earth. The need to combat climate change and prevent

irreversible damage to our County and planet is urgent and we must rise to the challenge facing us, for our own sake and for that of future generations.

### **Guiding Principles for Prioritizing Climate Solutions**

**1. Act with Urgency, Intention, Transparency and Accountability.** To address the existential climate crisis, aggressive reduction targets must be accompanied by demonstrated action, investments, and accountability.

**2. Lead with Racial Equity, Social and Environmental Justice.** Climate change disproportionately impacts communities of color and low-income communities, so the County must prioritize social justice and equity in investments that mitigate and adapt to climate change. The County must also honor Tribal treaties and sovereignty.

**3. Respond to Community Needs and Economic Concerns.** Community outreach, communication, and workshops are key to achieving climate resilience. The projected decline in fossil fuel use over the next few decades, in particular, will require the County to also focus and invest in creating job opportunities for our skilled workforce.

**4. Establish Financial Incentives and Mechanisms.** The initial cost of energy efficiency upgrades can be steep for homeowners and businesses. Many funding opportunities are currently provided by federal and state government and utilities for both the built and natural environments. Creative mechanisms for financing energy upgrades and restoring ecosystem health have been employed by communities and could be duplicated in Whatcom County.

**5. Prioritize Health, Safety and Preparedness.** Many of the impacts of extreme weather events directly impact health and safety and the County needs to develop dual-use resilience centers that can protect and shelter people during these events.

**6. Increase County Leadership through Action Partnerships, and Influence.** County efforts to combat climate change are largely invisible to Whatcom residents. Therefore, the County needs to establish an Office of Climate Action and hire a manager to coordinate and communicate efforts within County government and with other governments and entities. Outreach and advocacy at the local, regional, and state levels are critical.

**7. Seek Cross-Cutting Systems-Level Solutions.** There are many cross-cutting issues that impact multiple areas of the built and natural environments. In these cases, the County must employ a systems-level approach so that the solutions benefit multiple sectors.

**8. Use the Best Available Science and Data Management Practices.** Access to data is essential for planning, executing, and measuring the success of climate strategies and actions. Many organizations across the County, through science projects and routine field testing, collect data and information that is valuable for understanding trends in the built and natural environments. Yet, there is no centralized data management system for the County.

**9. Support Research, Development and Demonstration Projects.** Many available technologies that would reduce GHG emissions are not widely deployed and are unfamiliar to the public. Local demonstration projects are a very effective way to test new technologies locally and educate the general public and businesses on their advantages.

---

### County Implementation

---

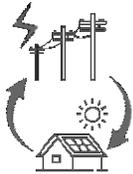

To accomplish climate resilience in Whatcom County through the many strategies and actions recommended by this plan, the County needs to establish and staff an Office of Climate Action.

- Establish an Office of Climate Action & Senior Climate Advisor who reports quarterly to the Executive and Council.
- Appoint an interim manager from within current County staff while pursuing funding to hire a permanent head of the office.
- Hire a data analyst/information specialist to begin compiling relevant climate data and making them available to staff and the community.

---

### Electricity and Buildings

---

Electrification of buildings is one of the most important strategies for quickly reducing emissions, especially if electricity generation comes from clean, emissions free sources. Climate resilience occurs when buildings can operate at times without utility power & can provide services to the grid. In essence, buildings become grid assets to help manage the electricity load on the grid.

- Commit to net zero carbon emissions for government buildings & create resilience hubs for emergencies & community benefits.
- Accelerate deployment of distributed energy resources & broadband while ensuring equity & energy resilience.
- Develop an equity-based financing plan to expand energy efficiency upgrades and electrification of space and water heaters.
- Promote leadership at the state and county levels through support of climate legislation and demonstration projects that promote climate resilience.

---

### Industry

---

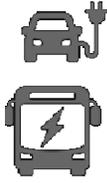

Because industry is the largest GHG emitter in Whatcom County, rapid reductions in industry emissions are essential. The state, County and refineries need to work together to successfully transition to the production of clean fuels and ensure a strong long-term manufacturing base and the skilled jobs that come with it.

- Facilitate a solutions-focused collaboration with *bp's* Cherry Point plant manager and energy experts in academia, state, and federal governments to discuss ways to reduce 50% of refinery emissions by 2030.
- Promote the research, development, & collaboration needed to build a hydrogen electrolysis facility to create green hydrogen in Whatcom County.

---

## Transportation

---

Transportation is already on a rapid pathway to decarbonization with the growing transition to EVs. The County can make this transition equitable with new programs, & updates in regulations and codes that accelerate EV charging infrastructure and provide multimodal transportation options for County residents.

- Accelerate adoption of EVs through pooled EV purchases, charging stations at all government buildings and parks, and building codes that promote EV charging at businesses and homes.
- Implement the regional trails plan for commuting and recreation and provide safe active transportation routes for schools.
- Explore and encourage electrification of buses throughout the county.

---

## Waste

---

Waste is an expanding problem for disposal & consumer expense, but information on the magnitude of this problem is unavailable. Nevertheless, much can still be done through codes to reduce the amount of waste we generate and encourage recycling.

- Collect the necessary data through expanded audits to evaluate the success of existing programs & the benefit of new programs.
- Encourage the elimination of single use plastic containers & utensils.
- Expand the Food Recovery Program to add a food kitchen to reduce food waste.

---

## Land Use

---

Land use zoning and codes are perhaps the most important tools that the County can use to mitigate emissions in industry, buildings, transportation, and waste. These tools also help us adapt to climate change and ultimately create climate resilience.

- Create a climate-resilient regulatory framework for new County development.
- Use regulations to enhance active & public transportation systems & infrastructure.
- Require a climate-focused risk assessment for all County infrastructure & private developments in climate impact zones.
- Protect ecological areas that provide climate resilience such as riparian areas, floodplains, shorelines, wetlands & migrations corridors.

---

## Water Resources and Fisheries

---

No climate impact is as predominant as its effect on Whatcom's water resources and fisheries. Water availability also impacts agriculture, forestry and our important plant and animal ecosystems. It is currently the most important and contentious issue in the County. Fortunately, there are approaches we can employ now to help these important ecosystems adapt to climate change.

- Resolve uncertainty in current & future water supply under climate change.
- Restore and protect watersheds that enhance streamflow and reduce water temperature to ensure year-round salmon migration & survival.
- Incentivize efficiency upgrades to water consumption systems and new augmentation approaches.
- Rebuild connectivity of our fragmented hydrologic system to increase natural water storage on the landscape & reduce flood damage.
- Enhance estuarine, marine shoreline and coastal wetland habitats for fish and shellfish.

---

## Agriculture

---

Farmers have long been recognized as stewards of our land and can play an important role in efforts to adapt to our changing climate. Low till or no till management practices increase soil carbon and moisture content. Irrigation efficiency and improved management of drainage can also enhance soil water storage. Development of heat- and drought- resistant crops will be essential under a changing climate.

- Promote adoption of climate smart farm management practices that maximize soil carbon storage and increase water and nutrient availability.
- Preserve a minimum of 100,000 acres of farmland for agriculture by rezoning the Rural Study Areas to Agricultural zoning.
- Reduce agriculture emissions & increase renewable energy, while providing farmers with new income opportunities.
- Promote use of climate research including drought- and heat-resistant crops.

---

## Forestry

---

Our forests are an important part of our economy providing recreation, wood products, and cultural identity. We must adapt our decades old forest management practices to the drier and warmer conditions today and in the future or suffer the economic and health impacts of more wildfires and disease. This starts with measuring the health of our forests & adapting our forest practices to maximize health.

- Protect, enhance, & monitor carbon storage and sequestration in forest ecosystems through implementation of carbon credit projects and other mechanisms.
- Increase forest health, survival & climate resilience using improved forest management practices that reduce wildfire risk, increase soil moisture, streamflows, & preserve wildlife habitat.
- Promote climate resilient planning & programs to maintain our forest economy for recreation and wood products.
- Reduce development pressure on rural forestry and other forested lands through review of zoning code and increase acquisition of voluntary conservation easements

---

## Ecosystems

---

Although many ecosystems are already covered above, this chapter emphasizes the crosscutting issues necessary to adapt to climate change that are common across natural environment systems. The common themes are community education, revising land use codes, financial support for restoration, and implementing a long-term monitoring system for ecosystem health.

- Develop and implement zoning regulations that protect wildlife climate migration corridors.
- Revise land use & development codes based on current & projected climate impacts to reduce damage & enhance resilience.
- Provide technical, logistical, and financial support for community efforts to restore & enhance ecosystems.
- Implement long-term monitoring to assess the impact of climate on ecosystem health.

**SECTION 1 - CLIMATE CHANGE IN  
WHATCOM COUNTY**

***Much has changed since Whatcom County released the 2007 Climate Action Plan and the window of opportunity for avoiding the worst impacts of climate change has narrowed.***

The climate crisis is like a slow-moving pandemic impacting the world's ecosystems, those systems upon which all life on earth depends to survive and thrive. There is no climate vaccine, but we have the tools to control the climate pandemic if we choose to use them.

Whatcom County's challenge is straightforward but by no means easy. To avoid irreversible damage to these natural systems, it is estimated that the global community needs to reduce greenhouse gas (GHG) emissions by about 7.6% every year until 2030 to meet the Paris target of no more than 2.7°F warming.<sup>1</sup> Today we live in a world where the global average temperature already has risen almost 2°F above pre-industrial levels.

The Intergovernmental Panel on Climate Change's (IPCC) latest findings<sup>2</sup> are alarming and paint a grim picture for the world and Whatcom County. Carbon dioxide (CO<sub>2</sub>) concentrations in the atmosphere are at the highest level recorded in the last two million years. About 85% of CO<sub>2</sub> emissions are from burning fossil fuels and as we have recently experienced, extreme weather events are becoming more frequent and intense. Some climate-induced damage cannot be reversed within centuries or even millennia. Changes occurring to ice, oceans and sea levels will be irreversible for centuries and we can no longer rule out "tipping points" where a small change leads to a dramatic change. Earth's temperature will continue to increase until at least 2050 and we can only stay below 3.6°F (2°C) warming during this century if CO<sub>2</sub> emissions reach net-zero around or after 2050. In summary, the IPCC's 6<sup>th</sup> Assessment is alarming and should be a wakeup call for public action in Whatcom County.

Governments at all levels, many global corporations, and millions of private citizens are acting to reduce their GHG emissions. Many of the giants of US industry, such as Apple,<sup>3</sup> Amazon,<sup>4</sup> and Microsoft,<sup>5</sup> which were built on science, have committed to net zero or net negative carbon by 2030. These are aggressive plans to decarbonize in a relatively short period of time. But this is what the scientific evidence and modeling tells us is needed.

*All greenhouse gas emissions contribute to worldwide impacts from climate change, but only we can act locally to do our part in solving the problem.*

In fact, utilities and fossil fuel companies are adapting – acknowledging that fossil assets such as coal-fired power plants are becoming cost inefficient to operate. Government policy shifts in favor of cleaner energy are hastening the stranding of some in-ground fossil fuel reserves. British Petroleum (*bp*) and

<sup>1</sup> Cut Global Emissions by 7.6% Every Year for Next Decade to Meet 1.5°C Paris Target – UN Report, Nov 26, 2019.

<sup>3</sup> Apple commits to be 100% carbon neutral for its supply chain and products by 2030, July 21, 2020.

<https://nr.apple.com/dE9n5d3o7T>

<sup>4</sup> We are all in on The Climate Pledge: net zero carbon by 2040, June 23, 2020.

<https://blog.aboutamazon.com/sustainability/we-are-all-in-on-the-climate-pledge-net-zero-carbon-by-2040>

<sup>5</sup> Greene, Jay. "Microsoft pledges to remove more carbon than it produces by 2030," Jan 16, 2020, *The Washington Post*.

<https://www.washingtonpost.com/technology/2020/01/16/microsoft-climate-change-pledge/>

Shell wrote off billions in such assets, citing Covid-19 and climate change.<sup>6</sup> *bp* itself set a net zero carbon target for 2050<sup>7</sup> and recently, went even farther and committed to reducing oil production by more than 40% by 2030 and emissions from refining by nearly 30%. In the next decade, *bp* plans to invest \$50 billion in renewable energy.<sup>8</sup> How these reductions and/or investments will impact Whatcom County, home to two large refineries, is still unknown.

Fortunately, we already have the cost competitive technology needed to reverse our current climate trajectory.<sup>9</sup> Just as we mobilized the entire US economy to win World War II, we can do the same today with significantly smaller shifts in economic activity.<sup>8</sup> The renewable energy sector has become a major US employer with over 3 million workers and outnumbers fossil fuel workers by 3-to-1.<sup>10,11</sup> One recent estimate suggests that as many as 15 to 20 million jobs would be created over the next decade through a serious decarbonization effort.<sup>12</sup>

Seventy to 80% of US carbon emissions could be eliminated by 2035 using the following five commercially available technologies: wind and solar power plants, rooftop solar, electric vehicles, heat pumps, and batteries (Fig. 1.1).<sup>8</sup> Eliminating fossil fuels in the electricity system and widespread use of EVs would address more than 70% of total emissions. It's time to get started.

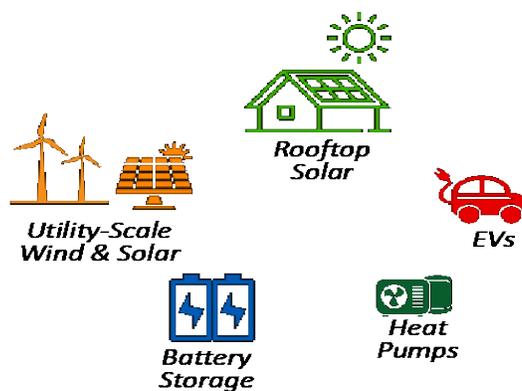

Figure 1.1. Five available technologies to reduce carbon emissions by 70 to 80%.

## Important Climate Concepts

**GHG emissions** are anthropogenically-produced heat-trapping gases in the atmosphere that result in global warming. The impacts of these emissions are dependent on where you live, even where you live in Whatcom County. For example, if you live on the coast, sea level rise and storm surge are a concern; if you live near the Nooksack River, flood intensity and frequency are a concern; and if you live in a wooded area, wildfires are a concern. Whatcom County must do its part to reduce emissions while addressing the impacts already occurring at the County level.

*Greenhouse gas emissions are reported in metric tons, MT, “carbon dioxide equivalents,” written CO<sub>2</sub>e. This reflects that there are additional GHGs, such as methane and nitrous oxide that are important. Expressing these gases as carbon dioxide equivalents allows for more valid comparisons.*

A **GHG assessment** is a detailed inventory of the GHGs released to the atmosphere during a given year. This assessment is divided into the major categories of GHG sources. **ClearPath**, a leading online software platform, was used for this report. ClearPath adheres to international protocols for GHG assessments and is available through Whatcom County’s membership in Local Governments for Sustainability.

**Climate resilience** is our ultimate goal (Fig. 1.2) in planning for, and responding to, climate change. Resilience is “the capacity of a system, be it a person, a forest, a city or an economy, to deal with change and continue to function.”<sup>13</sup> Resilience is especially important given the uncertainty about the timing and magnitude of climate change impacts. In advocating for climate resilience, we acknowledge that change will continue to occur, and when it does, our built and natural systems can recover with proper planning and policy decisions.

*Figure 1.2. Climate resilience relies on implementing both mitigation and adaptation strategies.*

Actions to combat climate change and its effects fall into two broad categories in this Climate Action Plan. **Mitigation** is the avoidance, reduction (and when possible, the total elimination) of heat-trapping emissions usually associated with human activity. **Adaptation** is altering human behavior and/or systems to reduce or avoid the climate change impacts likely to occur despite any mitigation. Climate resilience requires both mitigation and adaptation. This Plan’s climate adaptation strategies focus on these more localized effects in Whatcom County.

The content of this revised climate action plan has necessarily evolved since the 2007 Whatcom County Climate Action Plan.<sup>14</sup> Nearly 15 years have passed with increasing impacts and damage of climate

<sup>13</sup> “Resilience is the New Sustainability,” March 25, 2019, *HydroPoint*. <https://www.hydropoint.com/blog/resilience-is-the-new-sustainability/>

<sup>14</sup> Whatcom County Climate Protection and Energy Conservation Action Plan, September, 2007. <https://whatcomcounty.us/DocumentCenter/View/36617/Whatcom-County-2007-Climate-Protection-and-Energy-Plan>

change requiring more adaptation coupled with mitigation. Economic and environmental impacts of climate change will inevitably worsen without more ambitious action at every level of government.

**Climate vulnerability assessments** are used to rate the susceptibility of a natural or human system to damage from climate change. Vulnerability is a function of exposure, sensitivity, and adaptive capacity. Vulnerability assessments were completed for transportation, land use and agriculture, freshwater, and ecosystems and species and are discussed in more detail under those topic areas in this report.

While the vulnerability ratings tend to be qualitative in nature, the underlying technical data demonstrates that the County government and its residents are facing severe and costly climate-related impacts. Adaptation planning and investment can avert much of the economic toll. Climate strategies and actions are designed to minimize disruption of Whatcom County's economy and environment, while increasing community resilience and improving long-term economic and public health. However, to succeed, the County will need to devote substantial resources now to avoid much higher climate-related costs down the road.

This updated Climate Action Plan reviews the current and projected climate impacts for Whatcom County and provides a roadmap of strategies and actions that are necessary to avoid or alleviate the most devastating impacts of climate change.

## Observed Trends and Projected Impacts in Whatcom County

Cascadia Consulting Group's full climate science summary for Whatcom County is briefly summarized here.<sup>15</sup>

### Temperature

- By the 2050s, the average year in Washington will likely be warmer than the hottest year of the 1900s.
- By the 2050s, average annual temperatures in Puget Sound are projected to increase by 4.2 °F to 5.5 °F under low- and high-emissions scenarios, respectively. By 2100, they are projected to be 5.5 °F to 9.1 °F warmer.
- Heat waves have increased in frequency every decade since the 1960s and are projected to continue to do so.<sup>16</sup>

### Precipitation

- Average annual precipitation in Puget Sound is projected to increase by 4% to 5% by the 2050s under low- and high-emissions scenarios, respectively, and another 2% by the 2080s under both emissions scenarios.
- Wetter conditions are anticipated in spring, fall, and winter, while summer will likely continue to get drier and warmer in Puget Sound. By the 2050s, summer precipitation is projected to decrease by 50% under a high-emissions scenario.

<sup>15</sup> Whatcom County Climate Action Plan: Summary of Observed Trends and Projected Climate Change Impacts.

<https://www.whatcomcounty.us/DocumentCenter/View/53837/Whatcom-County-Climate-Science-Summary-2020?bidid=>

<sup>16</sup> Climate Change Indicators: Heat Waves. <https://www.epa.gov/climate-indicators/climate-change-indicators-heat-waves>

- Under a high-emissions scenario, heavy precipitation events west of the Cascades are projected to increase in intensity by 22% by the 2080s—meaning events will bring 22% more rain and a higher frequency.

### Hydrology

- Mountains draining into Puget Sound are projected to have 29% less snowpack by the 2040s.
- By the 2040s, 40 miles of the Nooksack River basin will exceed the thermal tolerance of adult salmon, compared to zero miles currently.<sup>17</sup>
- The Nooksack River basin is anticipated to transition from being a mixed snow and rain-dominant system to a rain-dominant system in the future. By the 2080s, peak streamflow in the Nooksack River is projected to shift approximately 27 days earlier in the year.
- Flooding in the Nooksack River is expected to become more intense and frequent. Under a moderate emissions scenario, streamflow in the Nooksack River during a 100-year flood event is projected to increase by 27% by the 2080s.
- Under a moderate emissions scenario, summer minimum streamflow in the Nooksack River is projected to decrease by 27% by the 2080s.

### Sea Level Rise and Storm Surge

- By 2100, relative sea level rise in the Bellingham area is projected to be between 1.5 and 1.9 feet with a 50% likelihood of exceeding those values.
- Puget Sound coastlines, including Whatcom County, are expected to experience increased storm surge and high tide flooding due to sea level rise.

### Wildfire

- By the 2050s, Western Washington is projected to have 12 more days per year with very high fire danger.
- By 2100, the time period between wildfires in the North Cascade ecoregion will shorten by a factor of 2.2 to 2.5.
- The median area burned annually from wildfire across the Northwest is projected to increase by 0.6 million hectares (1,482,000 acres) by the 2080s.

### Air Quality

- In the future, Whatcom County's air quality is likely to decline during periods of increased wildfire activity in the Pacific Northwest, especially during the summer and early fall.
- Warmer temperatures and increases in ozone pollution may reduce Whatcom County's air quality and can affect sensitive vegetation and ecosystems.

---

## Whatcom County Greenhouse Gas Challenge

Largely because of the industries at Cherry Point, Whatcom County emits almost triple the GHG per capita compared to the state as a whole. We have 3% of the state’s population but generate almost 8% of its greenhouse gases. Even if we leave the industrial emissions aside, our per capita emissions are still 30% higher than the state average, because well over half our electricity is generated from fossil fuels.

*Whatcom County’s per capita emissions, 35 MT CO<sub>2</sub>e/person, are almost three times the state-wide per capita emissions of 13 MT CO<sub>2</sub>e/person.*

### Communitywide Emissions

Overall, our communitywide emissions grew 35% between the 2001 inventory that was the basis of the 2007 Climate Action Plan and the 2017 GHG assessment we use here, while population grew only 27% during that interval (Table 1). Because of our high emission rates, a rapid transition to clean energy here is imperative. It is a crucial element in the state’s effort to cut statewide emissions of GHG in half by 2030 and requires Whatcom’s rapid transition to a clean energy economy.

*Table 1. Total Communitywide GHG emissions and County government emissions for 2000-2001 and 2017.<sup>18</sup> Emissions are reported in MT of carbon dioxide equivalent (MT CO<sub>2</sub>e). FTE is Full Time Equivalent.*

<b>Communitywide Inventory</b>	<b>2001</b>	<b>2017</b>	<b>% Change</b>
Population	170,980	216,300	+27%
Residential Households	75,740	96,271	+27%
Total Emissions	2,750,728	7,583,578	+176%
Total Emissions (without Industrial point source emissions)	2,750,728	3,721,230	+35%
<b>County Government Inventory</b>	<b>2000</b>	<b>2017</b>	<b>% Change</b>
County Staff FTE’s	759	813	+7%
County Government Total Emissions	10,318	9,950	-4%

Our communitywide distribution of GHG emissions is very different when compared to statewide emissions. The categories in Figure 1.3 were previously established by the State Department of Ecology. Transportation is the largest emitter of GHGs in Washington State, followed by burning fossil fuels (principally natural gas) for buildings and water heating. The third category of emissions results from electricity generated by fossil fuels, biomass, and waste. The fourth category is somewhat of a catch-all, including industrial point source, waste, and agriculture.

In Whatcom County, industrial emissions from manufacturing processes, categorized as point source emissions, constitute 51% of this combined category of industry, waste and agriculture that together represents over half of Whatcom’s GHG emissions. GHG emissions from electricity generation is the

<sup>18</sup> Whatcom County Greenhouse Gas Inventory 2017, prepared in 2020 by Cascadia Consulting Group: [https://www.whatcomcounty.us/DocumentCenter/View/48029/WhatcomCountyGHGInventory\\_DRAFT\\_June2020](https://www.whatcomcounty.us/DocumentCenter/View/48029/WhatcomCountyGHGInventory_DRAFT_June2020)

second highest category in Whatcom County because almost 60% of our electricity is generated using fossil fuels.

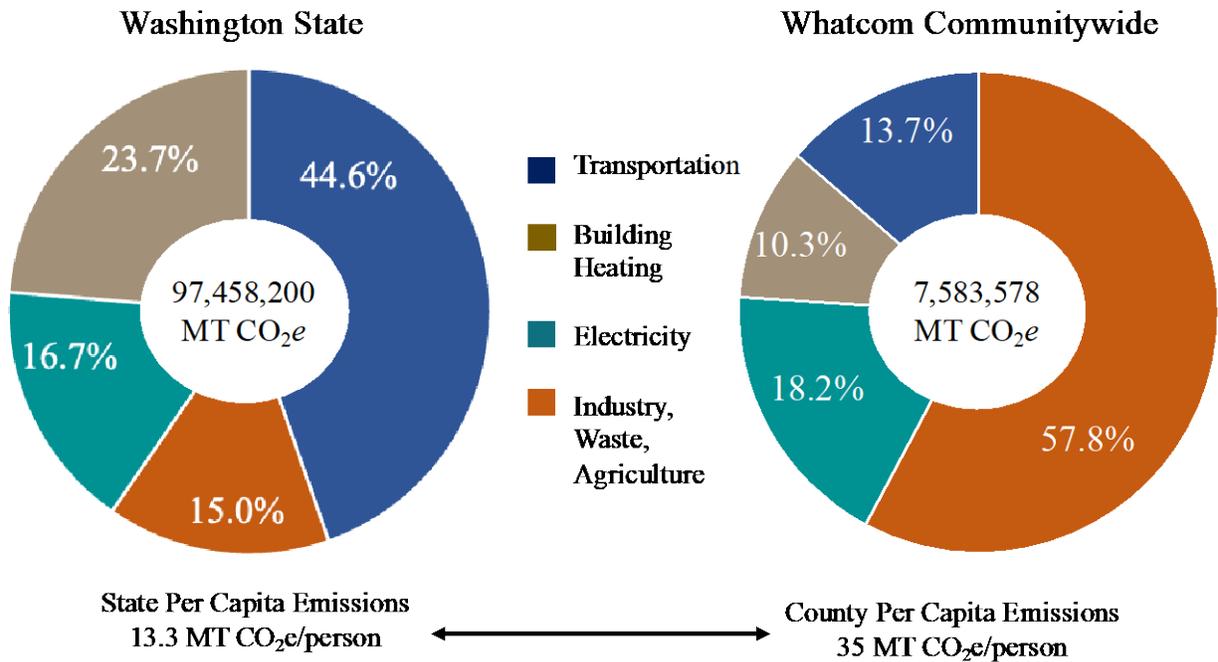

Figure 1.3: A comparison of 2017 statewide and Whatcom communitywide GHG emissions. Building Heating includes all residential, commercial, and industrial buildings use of fossil fuels for heating buildings and water (does not include heating by electricity). The state adds fugitive emissions from refrigerants to the Industry, Waste, Agriculture category, while ClearPath includes these fugitive emissions with Buildings.

These simplified categories help explain the state’s basic energy strategy – electrify all possible end uses in the transportation, space and water heating, and industry sectors and eliminate fossil fuels from electricity generation. At the same time, electrification is not enough unless we decarbonize the grid itself. Removing fossil fuels from the electric grid is the focus of the 2019 Clean Energy Transformation Act (CETA). Here in Whatcom County, electrification of buildings and transportation, decarbonization of the grid and severely reducing industrial emissions, are thus the three legs of our climate mitigation actions that will be explained in the following sections of this Climate Action Plan.

The 2021 Washington State Energy Strategy provides an overarching roadmap to guide reduction of sector emissions where city and county governments have influence. In developing climate strategies, the CIAC is aware that there are areas where the County has direct control and areas where the County has indirect influence. The strategies and recommendations in this report will follow, where possible, the state energy strategies and policies.

**County Government Operations Emissions.** The Whatcom government operation’s GHG emissions in 2017 show a slight decline from 2000 (Table 1). Like the communitywide emissions for Whatcom, the approaches for data collection and evaluation have changed, making it difficult to derive any insights from this trend. For example, in 2007 it was assumed that carbon dioxide was trapped in landfill waste, leading to no or negative emissions. In contrast, the 2017 GHG inventory includes emissions from waste

generation and emissions from closed landfills within Whatcom County (Fig 1.4), comprising almost a fifth of the overall government operations emissions.

Some information is available on the implementation of recommendations in the 2007 Climate Action Plan for the County’s government operations. One recommendation was to hire a staff member to coordinate the climate strategies, a position that was eliminated during the 2009 economic recession and never replaced. Another recommendation to purchase renewable energy for all County buildings through PSE’s Green Direct Program was only fully instituted in 2019.

County purchases of hybrid vehicles and improvements in facilities energy efficiencies since 2007 are reflected in the 2017 GHG inventory, but no evaluation has been done by the County on cost and energy savings from these upgrades. Finally, although the County continues to support “SMARTrips,” a program to encourage reduction in staff vehicle miles traveled, there is no data to indicate that the program has changed overall staff commute behavior. Only 10% of County staff participated in this program in 2019. So, the decline in staff commute emissions may be due to any number of factors including the method of data collection, higher fuel efficiency of vehicles, more staff living closer to work, or other factors.

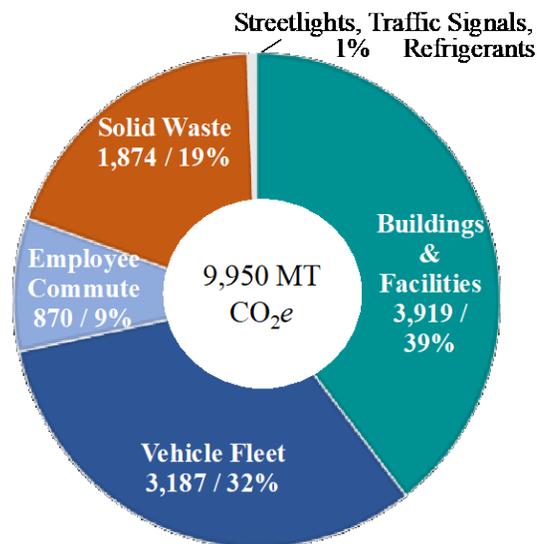

Figure 1.4: 2017 Whatcom Government Operations Emissions (in MT CO<sub>2</sub>e)

#### Comparison with the Most Recent GHG Assessment.

The last time Whatcom County did a GHG inventory was in 2006 and the assessment was based on calendar years 2000 and 2001 (Table 1). This inventory was the basis of the first Whatcom County Climate Action Plan (CAP) published in 2007. As stated previously, the actual trends in GHG emissions are difficult to interpret because methods of data collection and analysis have changed over this long time period. Ideally, these inventories need to be done every five years to make valid comparisons and measure the effectiveness of mitigation and adaptation strategies.

The significant increase in communitywide GHG emissions in 2017 is because the earlier report did not include industrial point-source emissions from two large petroleum refineries (~3 million MTCO<sub>2</sub>e) and aluminum production (~1 million MTCO<sub>2</sub>e) at Cherry Point. This industrial emissions information was not available in 2007.

Even if industry point source emissions were excluded, GHG emissions in Whatcom County still increased at a greater rate than population growth. Any number of reasons or combinations of reasons could account for this increase but evaluating trends or the effectiveness of strategies and actions in the 2007 Climate Action Plan is problematic for the following reasons:

- The model used for the 2000-2001 inventory was a precursor to the current ClearPath model and less sophisticated.

- Methodologies for collecting data have changed. Data source and collection process are not uniformly documented in the 2000-2001 inventory.
- Information that was not available in 2006, is now available for the 2017 GHG emissions inventory.
- A significant lack of history and data on the implementation of climate recommendations due to County staff employment turnover.

Overall, our high emission rates call for a rapid transition to clean energy in Whatcom County, in tandem with the state’s effort to cut statewide emissions of GHG in half by 2030. Transportation is the state’s largest emitter, while industrial point source emissions from refineries is the County’s, creating a strong rationale for the two levels of government to work together.

## GHG Emissions Targets

In order to meet the 100% renewable energy goal established in Whatcom County Ordinance 2017-080<sup>19</sup> and to analyze strategies for GHG reductions, the CIAC proposes the following timelines for communitywide and County government emissions reductions (Fig. 1.5):

### **Communitywide (Whatcom County) Targets:**

- A 45% reduction below 1990 levels by 2030
- A 95% reduction below 1990 levels and net zero emissions by 2050

### **County Government Targets:**

- An 85% reduction below 2000 levels by 2030
- A 100% reduction below 2000 levels by 2050

*In March 2020, the Washington Legislature modified state GHG emissions limits based on current climate science. This law sets a goal of reducing state-wide emissions by 45% below 1990 levels by 2030 and 95% below 1990 levels by 2050, with net zero emissions achieved by mid-century.*

**The Communitywide targets for the County are simply the same GHG emissions targets set by the State of Washington. The County government targets are more aggressive to demonstrate leadership and are consistent with GHG targets established by the City of Bellingham, including an 85% reduction below 2000 levels by 2030 to 1,500 MTCO<sub>2e</sub> or a reduction of ~8,400 MTCO<sub>2e</sub>. These estimated reductions do not include the County’s participation in PSE’s Green Direct wind energy program that started in mid-2019.**

The United States has a moral responsibility to reduce emissions because our country has contributed more to anthropogenic climate change than any other country; nearly twice as much as China and about eight times as much as India.<sup>20</sup>

Based on County Council guidance, the CIAC will be updating the GHG inventory and Climate Action Plan every five years, making future comparisons of progress feasible.

<sup>19</sup> <https://www.whatcomcounty.us/Archive/ViewFile/Item/14045>

<sup>20</sup> <https://lb-aps-frontend.statista.com/statistics/723163/g20-carbon-dioxide-emissions/>

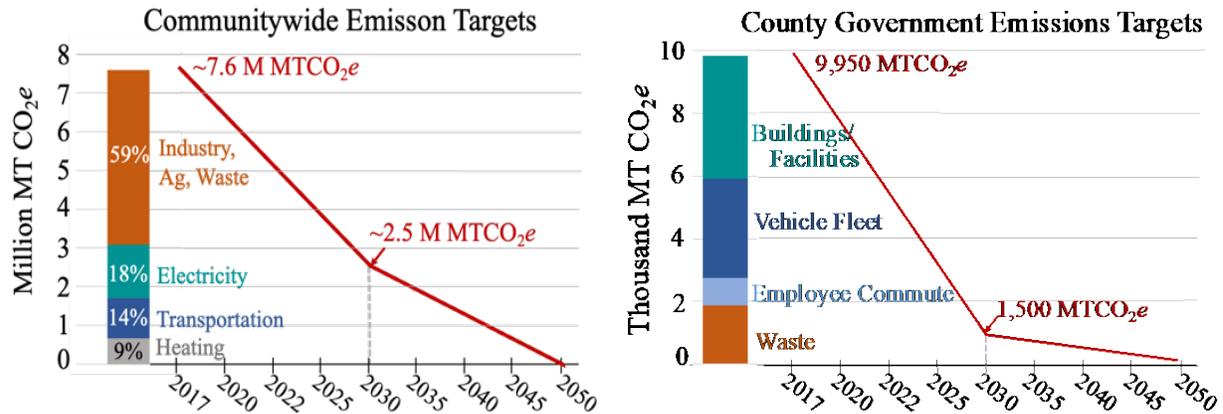

Figure 1.5: Communitywide emissions targets and County government emissions targets

### Recent Washington Climate Legislation

Whatcom County’s GHG targets are daunting and will be a significant challenge. However, the Washington State government has enacted legislation that will make it easier for our community to meet these aggressive targets. Two very important pieces of legislation were passed by the Washington State Legislature and signed into law by Governor Inslee in 2021. Both the [Climate Commitment Act \(SB5126\)](#) and the [transportation fuel carbon intensity bill \(HB1091\)](#) use variations of a cap and trade approach to set a price on the carbon content of energy used in Washington State.

Generally speaking, under cap-and-trade regulation an overall cap on emissions is set and allowances equal to the emissions cap are issued, which can then be traded among participants. The market price of the allowances becomes the price of emitting another unit of the pollutant, with emitters who can lower their emissions at a relatively low cost will do so and sell their extra allowances to emitters who face high emissions reduction costs. The result is that emissions are reduced to the desired limit—the “cap”—at the lowest possible cost of doing so through allowance “trading.” This approach also provides incentives for emitters to discover better and cheaper ways to achieve the desired emission reductions. An important feature of cap and trade is that limits are not placed on individual emitters or even (usually) on economic sectors—reductions are undertaken primarily by those emitters with the lowest reduction costs, regardless of their industry or location.<sup>21</sup> Existing examples of cap and trade systems for carbon emissions include the [California-Quebec](#) market, the [Regional Greenhouse Gas Initiative](#) in the eastern U.S., and the European Union’s [Emission Trading System](#).

The most important feature of these bills is that the caps (reduced gradually over the next twenty to thirty years) are effectively placed on carbon emissions consistent with emissions reductions goals set out in [RCW 70A.45.020](#), on which the reduction goals in this action plan are based. One result is to increase the cost of carbon-emitting activities thereby discouraging them. But the legislation goes beyond requiring a price on carbon emissions. Revenues collected through the sale of allowances (in SB 5126) or carbon intensity credits (HB1091) are earmarked for a variety of possible programs and projects to reduce carbon emissions, increase carbon sequestration, and improve environmental

<sup>21</sup> There are dozens of references that explain cap and trade in more detail; a basic one is provided by the [Environmental Defense Fund](#)

resilience to the impacts of climate change, all while lessening the climate impacts on overburdened or low-income communities and of the policies designed to reduce those impacts.

Both of these bills call for a series of rulemakings to be conducted by state agencies, which will yield the detailed regulations implementing the legislation. HB1091 is targeted almost entirely at transportation fuels, but SB5126 caps emissions from nearly all sectors for the entire state, which makes it difficult to predict the extent of reductions that will occur within specific sectors in a single county. Both bills will use revenues they generate to fund programs in all economic sectors. Emissions related transportation projects are first in line for funding under SB5126, but the remainder of expenditures will occur across sectors through the climate commitment account, including funding the working families tax rebate, the deployment of renewable energy and grid modernization, increasing industrial energy efficiency, increasing energy efficiency in and the electrification of buildings, assisting workers who lose jobs in fossil fuel related industries, and carbon sequestration projects. SB5126 also establishes a natural climate solutions account, which will fund projects promoting climate resilience and adaptation through flood programs, healthy forests, and natural carbon sequestration.<sup>22</sup>

## Guiding Principles for Advancing Climate Resilience

Ultimately, this Climate Action Plan should protect the County’s citizens, businesses, environment, and governments from the detrimental impacts of climate change by achieving optimal climate resilience. This Climate Action Plan (CAP) provides guidance on how the County can achieve climate resilience to ensure long-term economic and social prosperity.

The CIAC’s role is to recommend strategies based on commercially available technology that will lead to the greatest reductions in GHG emissions and address the natural and human-built systems that support life and are at greatest risk of damage from climate disruption.

To enhance climate resilience the following guiding principles should be considered when prioritizing strategies and investments.<sup>23</sup>

**1. Act with Urgency, Intention, Transparency, and Accountability.** The far-reaching consequences of climate change dictate that we can no longer wait to take bold action. We must also accept the fact that actions taken today won’t bear fruit for at least a few years. Many local governments within the County, as well as the County government itself, have not focused enough on the contribution of climate change to storm surge, flooding, salmon survival, or air quality. To address this existential crisis, aggressive emission reduction targets must be accompanied by

- | <i>Guiding Principles</i>  |
|--|
| <i>1. Act with Urgency, Intention, Transparency and Accountability</i>           |
| <i>2. Lead with Racial Equity, Social &amp; Environmental Justice</i>            |
| <i>3. Respond to Community Needs and Economic Concerns</i>                       |
| <i>4. Establish Financial Incentives and Mechanisms</i>                          |
| <i>5. Prioritize Health, Safety and Preparedness</i>                             |
| <i>6. Increase County Leadership through Action, Partnerships, and Influence</i> |
| <i>7. Seek Cross-Cutting Systems-Level Solutions</i>                             |
| <i>8. Use the Best Available Science and Data Management Practices</i>           |
| <i>9. Support Research, Development &amp; Demonstration Projects</i>             |

<sup>22</sup> See Sections (26) – (31) of [SB5162](#) for more detail on funding possibilities for county and local governments.

<sup>23</sup> 2020 Strategic Climate Action Plan, King County, WA.

demonstrated action, investments, and accountability. To ensure our efforts are effective we must act with transparency and accountability. The County will need to make data widely available to the public and adhere to broadly accepted standards.

**2. Lead with Racial Equity and Social and Environmental Justice.** The long-term health and wealth of low-income communities, especially communities of color, have been disproportionately impacted by pollution from manufacturing, agriculture, and transportation, including the production, transport, and use of fossil fuels.<sup>24</sup> These historic inequities are aggravated by climate change, which is also disproportionately burdening people of color, both in the US and abroad. In Whatcom County, agriculture is a large sector of the economy and people of color represent a large percentage of the agricultural workforce, making people of color disproportionately vulnerable to crop damage and extreme heat events associated with climate change.

Many factors increase sensitivity to climate change, with systemic racism and economic inequality being two root causes (Fig. 1.6). Local, state, and federal governments have a responsibility to address these inequities when

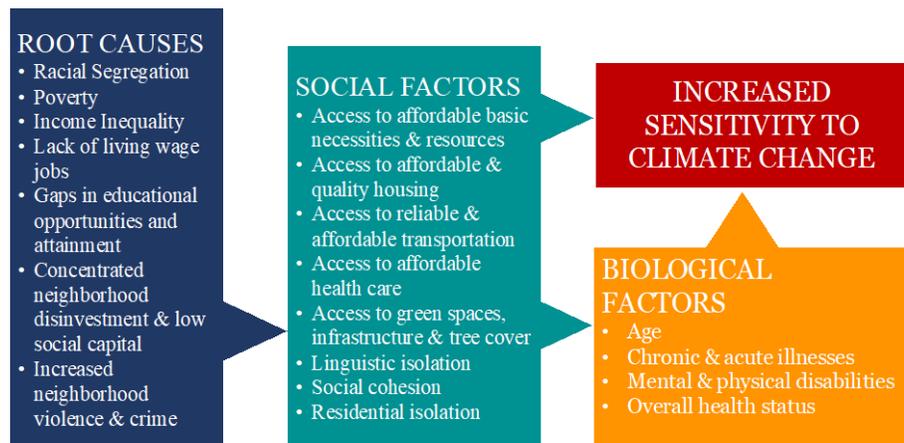

Figure 1.6: Root causes of climate change vulnerability, from *Urban Sustainability Network Directors Guide to Equitable, Community-driven*

making climate policies. Proposed actions to mitigate climate change can either increase injustice in society or reduce it. The tools we use are important. Funding for climate stabilization needs to be progressive rather than regressive and increase equity for historically marginalized communities. To promote social and environmental justice, this plan seeks to reverse injustices of the past and create a healthier future for all County residents.

In Whatcom County we must also **honor Tribal treaties and sovereignty**. The County needs to remain committed to our government-to-government relationship with our sovereign tribal nations when implementing climate recommendations in this plan. For example, Cherry Point is acknowledged as the ancestral homelands of the Lummi Nation, which has historic burial grounds located in the heart of this industrial zone. Cherry Point also holds traditional reef net fishing areas as well as harvesting for salmon and crab. The County needs to continue honoring Tribal treaty rights when preserving critical habitats and fully recognize land, water, and resource rights, and protect cultural sites.

**3. Respond to Community Needs and Economic Concerns.** To develop the background information needed to prepare this CAP, the CIAC began community outreach and engagement in 2019 with the Community Research Project. The stakeholders interviewed represented utilities and industries,

<sup>24</sup> <https://www.pugetsoundsage.org/true-cost-of-fossil-fuel-use-for-communities-of-color/>

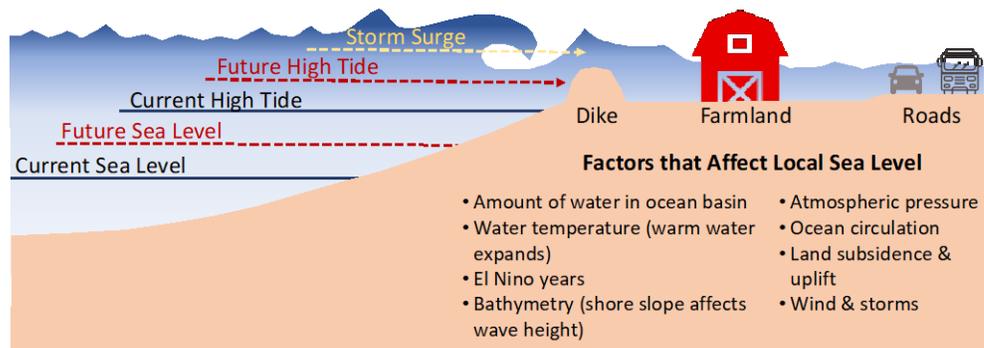

individual business owners such as farmers and fishers, city, county, state, and federal staff, tribal leaders, and representatives of nonprofits. To create a viable and enduring climate action plan, it will be critical for County staff to do additional community outreach and communication.

The financial risk associated with such effects of climate change as coastal and river flooding and wildfires could be substantial for the County, putting a strain on our emergency, public health, and many other County services. Modeling efforts have shown that what have in the past been considered 100-year floods of the Nooksack River will eventually occur every 10 years.<sup>25</sup>

*“It doesn’t matter if you believe in climate change; your insurance company does. The realities of that are going to be reflected moving forward.” Nick VinZant as quoted in the Washington Post, Oct 2, 2021.*

Sea-level rise and coastal storm surge intensify river flooding by causing a restriction or “backup” in the Nooksack River flow. Water continues to flow down rivers but meet a rising tide causing it to back up and/or spread out as it spills over levees and dikes (Fig. 1.7).<sup>26</sup>

Climate change also increases the risk of wildfires, which can be especially frequent in wildland/urban interfaces (WUI). Seventy to 90% of all wildfires are human caused.<sup>27</sup>

*Figure 1.7: Rising Sea Levels and Storm Surge. A 12-inch increase in sea level turns a 100-year coastal storm event into a 10-year coastal storm event. A 24-inch increase in sea level turns a 100-year coastal storm event into an annual coastal event.*

Potential financial risks can be reduced

if the County incorporates the likely impacts of climate change in every aspect of planning, whether it is critical infrastructure, such as roads, bridges or ferries, new developments, or even planning associated with emergency services and response. For example, the shoreline development plan can no longer ignore climate change. The County must consider damage from sea level rise and storm surge over the next few decades prior to approving coastal developments and associated road access. Taxpayers will ultimately pay for poor decisions made today or delays in needed action. Smart land use planning can be an effective tool for reducing financial risk to the County government and the community at large from the pain of property loss and relocation.

Whatcom County’s economy is in a relatively difficult position as the world pushes to decarbonize. Major investors around the world are starting to divest from fossil fuel companies. As home to two

<sup>25</sup> Dickerson-Lange, S.E. and R. Mitchell. 2013. Modeling the Effects of Climate Change Projections on Streamflow in the Nooksack River Basin, Northwest Washington. Hydrological Processes, Published Online in Wiley Online Library

<sup>26</sup> <http://www.skagitclimatescience.org/skagit-impacts/sea-level-rise/>

<sup>27</sup> Balch, J.K., et al. “Human-started wildfires expand the fire niche across the United States,” *PNAS*, MARCH 14, 2017. 114(11) 2946-2951.

major refineries, the County's strong dependence on fossil fuel jobs and revenue has the potential to make the County economically vulnerable unless the issues related to the economy and jobs are addressed in advance.

In a letter to stockholders<sup>28</sup> in January 2020, Larry Fink, asset manager at the mega-investment firm Blackrock, stated that a fundamental reshaping of finance is now underway at Blackrock because *climate risk is investment risk*. This is a risk that is rapidly changing and markets to date have been slow to reflect this risk.

**4. Establish Financial Incentives and Mechanisms.** To quickly reduce emission, the County will need to provide financial incentives and mechanisms. The initial cost of energy efficiency upgrades can be steep for homeowners and businesses. Ecosystem restoration and floodplain management projects can also be very expensive. There are many sources of stimulus and infrastructure funds available at the state and federal levels that could help fund new programs, yet individual staff may be unaware of these opportunities or do not have the time to apply for grants.

Another concept that crosscuts the Natural Environment section of this report is the need for Carbon Market transactions, as part of a larger natural resources marketplace, to incentivize management practices that increase carbon storage in soils and plants. A carbon market sells offsets or carbon credits to businesses that are large carbon emitters and financially rewards landowners who store carbon. A similar idea is being promoted locally in the formation of the [Kulshan Carbon Trust](#). The trust does not own the land, but instead buys an easement to ensure long-term storage of the carbon. The landowner generates income from the carbon credits and is responsible for protecting the carbon asset.

**5. Prioritize Investments in Health, Safety and Preparedness.** A recent analysis found that air pollution from fossil fuels leads to almost 250,000 premature deaths per year in the US.<sup>29</sup> Avoiding the increased medical costs and productivity losses associated with burning fossil fuels – even without including climate-related benefits - equates to over \$700 billion per year in economic benefits to the US – far more than the cost of the energy transition to renewables.<sup>30</sup>

In addition, floods, extreme rainfall events, snowstorms and heatwaves all affect access to health care and emergency services. Climate change is already increasing the frequency of extreme weather events that can destroy both public and private property and infrastructure while also increasing susceptibility to disease and pests.

Insurance companies started tracking climate-related disasters as early as 30 years ago. To protect their liability, these companies have been re-evaluating flood and fire zones and either increasing rates or denying coverage.<sup>31</sup> State Farm Insurance has stopped insuring homes in Florida and is evaluating similar

<sup>30</sup> Roberts, David. "Air pollution is much worse than we thought, Ditching fossil fuels would pay for itself through clean air alone," Vox News, Aug 12, 2020, *Vox.com*.

<sup>31</sup> How climate change is changing your insurance, PBS News Hour, Nov 27, 2018. <https://www.pbs.org/newshour/economy/making-sense/how-climate-change-is-changing-your-insurance>

action in parts of California.<sup>32</sup> The economic and societal impacts of US weather and climate have increased substantially over the last few decades with an estimated cumulative cost since 1980 that exceeds \$1.75 trillion.<sup>33</sup>

As the recent pandemic has illustrated, planning and investments in our emergency and public health systems are critical to lessening the economic and human impacts of natural disasters. Countries with strong public health systems and leadership, such as Taiwan, South Korea, and New Zealand, were in a better position to contain the Covid-19 virus relatively quickly.

Whatcom County has a valuable tool for increasing public health, safety, and preparedness in the face of a changing climate—land use planning. The way we use land is fundamental to our safety and climate change can amplify any problem. Enhanced protection starts by including climate change considerations when approving new developments, roads, bridges, and emergency facilities. Such actions were once viewed as radical and as a result, avoided. The result is that federal agencies are now using our tax dollars to move whole communities out of flood zones.<sup>34</sup>

**6. Increase County Leadership through Action, Partnerships, and Influence.** The complexity of climate impacts on the built and natural environments cannot be solved by government alone. Solving complex problems such as preserving water quantity and quality will require a broad range of partnerships across jurisdictions. To succeed, the County will need to provide strong leadership and coordination.

The County can also lead through example, by implementing and achieving aggressive goals to reduce carbon emissions in County operations, increase energy efficiency, and require zero-carbon operations in buildings. County-led demonstration projects that increase the availability of renewable energy, promote “green” jobs, and protect Whatcom County’s environment are all necessary leadership actions. The Climate Action Plan proposes several [demonstration projects](#) that would qualify for state, federal or foundation funding, be a benefit to the County, serve as an education and communication tool, and honor the historical roots of the County.

Finally, there are some policy areas where County government has direct control through regulations and others where it can exercise influence. For example, the County can influence changes in state laws and regulations that can help solve climate-related problems, such as state water laws or state laws on financing energy efficiency upgrades. The County can also influence companies to encourage new approaches to reduce GHG emissions.

**7. Seek Cross-Cutting Systems-Level Solutions.** As is the case with most climate action plans, the organization of this plan is largely dictated by the way the greenhouse gas emissions are assessed and reported. We recognize that there are many cross-cutting issues that impact multiple areas of the built and natural environment. In this case we encourage County staff to take a more systems-level approach when implementing strategies and actions.

---

<sup>32</sup> Barr, Alistair. “State Farm to exit Florida property insurance,” MarketWatch, Jan 27, 2009.

<https://www.marketwatch.com/story/state-farm-to-pull-out-of-floridas-property-insurance-market>

<sup>33</sup> NOAA Climate.gov, <https://www.climate.gov/news-features/blogs/beyond-data/2010-2019-landmark-decade-us-billion-dollar-weather-and-climate>

<sup>34</sup> Flavelle, Christopher. “US Flood Strategy Shifts to ‘Unavoidable’ Relocation of Entire Neighborhoods,” New York Times, Aug 27, 2020, <https://www.nytimes.com/2020/08/26/climate/flooding-relocation-managed-retreat.html?referringSource=articleShare>

Systems-level thinking is simply taking into account how different parts of a system or systems interact, and by doing so, develop approaches that can solve multiple problems. For example, any solution that provides for adequate water quantity in agriculture must also address adequate in-stream flow for fish. Systems-level solutions acknowledges that most problems, particularly environmental problems, are both multidimensional and interrelated. The best climate strategies solve a cross-cutting problem in a way that benefits multiple sectors. Properly implemented, the Climate Commitment Act will be an important part of system level solutions for Washington State.

The County should start by incorporating climate risk in all aspects of planning, starting with the Comprehensive Plan, Shoreline Management Plan, new infrastructure, zoning, and regulations in urban growth areas and new industrial, commercial, and residential developments (density, building codes, and multimodal transportation plans).

**Universal broadband** is a good example of an issue that crosscuts multiple sectors and is key to reducing emissions in electricity, buildings, and transportation. Remotely controlling energy use in buildings lowers energy costs and emissions. Enabling work from remote locations reduces emissions from transportation. Whatcom County cannot compete in the economic growth and commerce of the 21<sup>st</sup> century if broadband is only accessible to wealthier households and those located in urban areas.

**8. Use the Best Available Science and Data Management Practices.** Whatcom County has and continues to fund important science to better understand and address climate change impacts such as Nooksack River flooding and coastal sea level rise. Continued support of this type of research will be critical to planning efforts at the County level. The latest science should be incorporated when climate strategies are evaluated for effectiveness.

A common theme throughout this plan was a general lack of readily accessible data for both planning and evaluating the success or outcomes of various programs. Data collection and analysis are not only critical for making decisions but also for evaluating our progress in addressing climate change. Data are often missing or unavailable for evaluating the benefits of various mitigation strategies such as upgrading the energy efficiency of buildings, commute trip reduction programs, waste recycling initiatives, and carbon footprint differences between projects completed by County employees versus private contractors.

Data collected on natural resources in Whatcom County are fragmented and housed in multiple organizations. For example, several organizations in the County collect information on in-stream flow and water quality in the Nooksack River Basin. Recording all of this information in a common database that could be accessed by researchers and the general public could accelerate a greater understanding of this complex river system resulting in problem-solving and action. Snohomish County has such an online platform at [tableau.com](http://tableau.com) where information is collected from multiple sources, analyzed, and graphed to indicate trends and get a better understanding of changes occurring over time. Whatcom County should host such a system.

**9. Support Research, Development and Demonstration Projects.** Although this Climate Action Plan relies on existing technologies, many of these available technologies are not widely deployed and may be unfamiliar to the public. Local demonstration projects are a very effective way to test new technologies and show residents and builders their advantages. The County should design and execute demonstration projects through collaborations with local research universities, national laboratories, state and federal agencies and the private businesses. Data and information collected from

demonstration projects can also be used to support changes in existing regulations or even state laws and legislation.

When making all planning and purchasing decisions the County needs to ask how they affect progress toward our climate goals. County decisions must move us toward a lower-carbon, climate-resilient future, while also helping to promote economic prosperity, equity, and social justice. To maintain a prosperous Whatcom County, we must adopt both mitigation and adaptation strategies that maximize our resilience to flooding, water shortages and wildfires, and move closer to a sustainable cleaner energy economy. Our economy and health depend on clean water and air, healthy farmland and forestland, and diverse, resilient ecosystems. This revised Climate Action Plan is intended to be the roadmap to get started.

# SECTION 2 - BUILT ENVIRONMENT

## Introduction to the Built Environment

The built environment in this report includes the human-built infrastructure that is a part of everyday life—electricity, buildings, industry, transportation, and waste.

Additionally, land use is considered throughout this Climate Action Plan because its policies play a critical role in both increasing and reducing emissions. Land use can be viewed as a tool to help balance the built and natural environments.

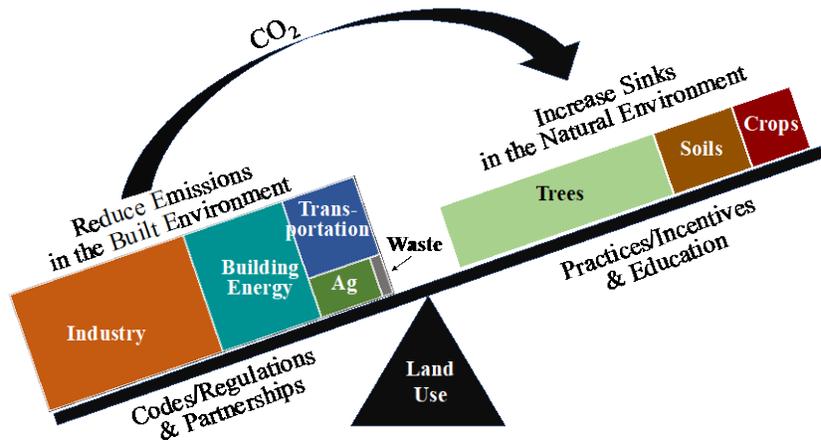

Figure 2.1: Land use can also be viewed as the fulcrum of a GHG balance beam with the built environment on one side and the natural environment on the other.

Land use can also be viewed as the fulcrum of a GHG balance beam with the built environment on one side and the natural environment on the other. Sources of GHG emissions currently outweigh potential sinks for GHG emissions. Smart decisions on land use practices are one of several tools that can help us balance this beam and reach net zero emissions by 2050.

The pie chart (Figure 2.2) showing categories of Whatcom County’s total communitywide emissions for 2017 includes five categories analyzed in the ClearPath modeling for Whatcom County. Industry emissions are by far the largest contributor to Whatcom County’s communitywide emissions, followed by building energy, transportation, agriculture, and solid waste and wastewater. Building energy includes emissions from electricity, fossil fuels used in heating (primarily natural gas), and refrigerants.

Whatcom’s industrial emissions are dominated by two oil refineries which produce gasoline that in turn contributes to the state’s largest emitter, transportation. The state’s largest refinery is owned and operated by *bp*, which understands the need to transition to renewable fuels and is quickly adapting its plans.<sup>35</sup>

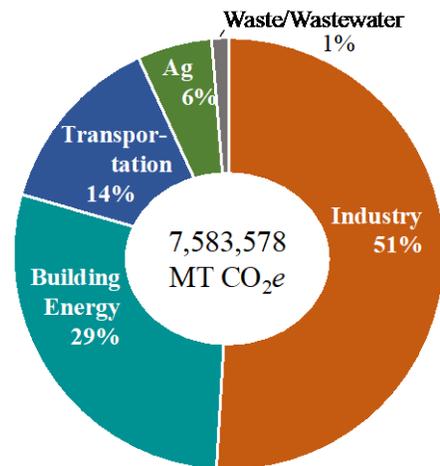

Figure 2.2: Categories of 2017 Whatcom communitywide GHG emissions.

All parties—the state, County, and private industry—should work together on win-win solutions to reduce GHG emissions from industry, while securing long-term economic benefits for Whatcom County.

<sup>35</sup> Ambrose, Jillian. “*bp* sets net zero carbon target for 2050,” The Guardian, Feb 12, 2020. <https://www.theguardian.com/business/2020/feb/12/bp-sets-net-zero-carbon-target-for-2050>

Our industries and workforce, therefore, can *become part of the statewide solution for GHG emissions* through the production of low-carbon fuels, which will accelerate our economic competitiveness in the emerging worldwide clean energy economy.

In addition, to reduce GHG emissions from building and transportation sectors, Washington’s 2021 State Energy Strategy emphasizes electrifying end uses to the greatest extent possible.<sup>36</sup> Space and water heating account for the majority of energy consumed in commercial and residential buildings, and commercially available heat pump-based appliances are far more energy efficient than other methods. Electric vehicle adoption will dramatically reduce carbon pollution but increase the demand on the grid. Fossil fuels must therefore be rapidly replaced on the grid for maximum gain.

Hence, electricity is often referred to as the *linchpin* for reducing GHG emissions (Figure 2.3). Large-scale wind and solar combined with energy storage make possible the replacement of most fossil fuel generation. A modern, flexible smart grid infrastructure can more effectively balance electricity supply and demand in real time as conditions change, reducing the high cost of fossil fuel peaking plants.<sup>37</sup> These cost competitive smart grid technologies can significantly reduce GHG emissions in Whatcom County.

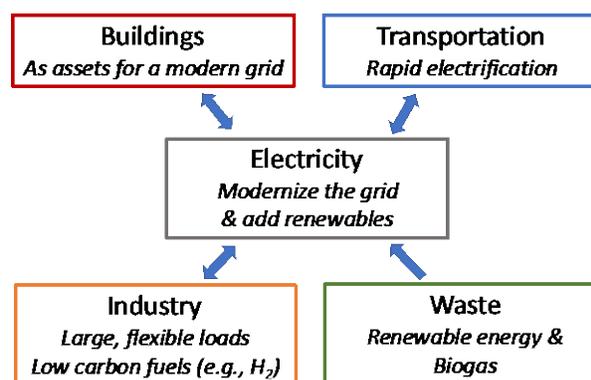

Figure 2.3: *Electricity is the kingpin for reducing GHG in the built environment.*

While electrification is a major thrust of mitigating GHG emissions, adaptation also has an important role in the built environment. For example, we must consider current and future climate change impacts, such as high temperatures, severe storms, flooding, sea-level rise, and other factors when designing new homes, buildings, and critical infrastructure such as hospitals, emergency response centers, roads, bridges, and broadband.

The built environment areas of Electricity and Buildings, Industry, Transportation, and Waste represent systems where mitigation practices are the major emphasis in the climate strategies. The built environment is an ecosystem of interconnected components that can be adapted when developing a sustainable, climate-resilient community. In many respects Land Use connects the built and natural environments as an effective tool for mitigation and a critical component in adaptation to climate change.

Agriculture is another area to consider and is responsible for a small portion of the emissions in Whatcom County; however, agricultural land has the potential to become a net carbon sink for addressing GHG emissions. This area is discussed in Section 3, Natural Environment.

<sup>36</sup> Washington 2021 State Energy Strategy, pg. 48. <https://www.commerce.wa.gov/growing-the-economy/energy/2021-state-energy-strategy/>

<sup>37</sup> “Peaker” plants can quickly ramp up electricity generation during periods of high electricity use. PSE has 4 natural gas peaking plants in Whatcom County alone.

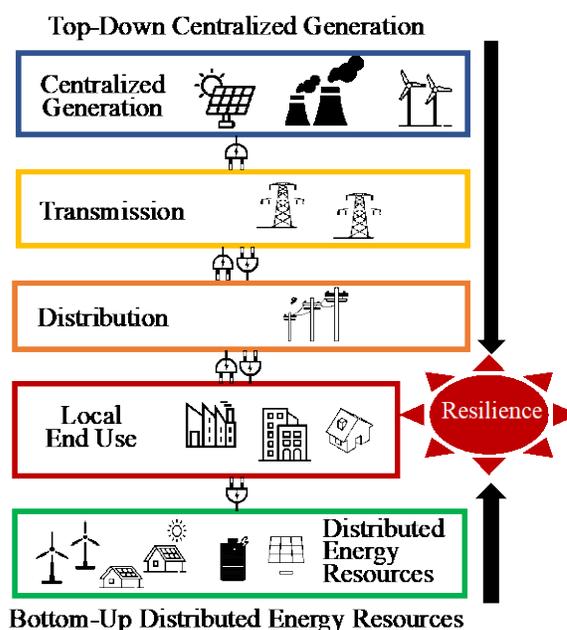

## Electricity and Buildings

To fight climate change, we must modify our buildings. To do so, we need to do two things —use less energy and make sure what energy we do use is clean, i.e., decarbonized. Buildings will increasingly play a key role in creating a modern, smart grid because most electricity on the grid is consumed in buildings. As a consequence, there is a growing need to view electricity and buildings as an integrated system – where electricity use in buildings can be used to manage the electricity load in a modern grid. Hence, buildings (and their major energy devices) can be operated as grid assets. For these reasons we treat electricity and buildings together.

Both Washington State and the US have mandated a transition of our energy economy to be carbon-neutral by 2050 or sooner. This 30-year economic transition will be difficult, and the exact roadmap is unclear. The overarching strategy is to rapidly electrify end uses while simultaneously removing fossil fuels from the electrical grid. The major impediment to decarbonizing the electric grid is the need for additional high-voltage transmission lines, which is why the federal government has put so much emphasis on new transmission in their infrastructure legislation.

Over the last century the traditional approach for providing electricity in the U.S. has been top-down centralized generation and delivery of electricity by a utility (Fig 2.4). This approach has served us well but is increasingly susceptible to cascading failures in the grid that are often the result of extreme weather events attributed to climate change. Grid failures can trigger blackouts caused by unseasonably cold weather such as what happened in 2021 in Texas<sup>38</sup> to drought-induced wildfires in California and Oregon.

Extreme weather events have resulted in a steep increase in grid failures over the last two decades.<sup>39</sup> Accordingly, state, and federal agencies have called for investments in a modern, smart grid that will be resilient to the unpredictable changes in climate. A critical component of creating a resilient electric grid will require much more emphasis on a bottom-up approach that uses buildings as grid assets (Fig 2.4).

**Fig 2.4:** A modern, resilient electrical grid depends on both centralized and distributed energy resources.

Washington State’s 2021 State Energy Strategy concludes that *the most effective way to reduce GHG emissions sufficiently is to decarbonize the grid and electrify end uses to the greatest extent possible.* “To

<sup>38</sup> Ball, Jeffrey. “The Texas Blackout is the Story of a Disaster Foretold,” Feb 19, 2021. Texas Monthly, <https://www.texasmonthly.com/news-politics/texas-blackout-preventable/>

<sup>39</sup> Allen-Dumas, Melissa R, Binita KC, and Colin I Cunliff. “Extreme Weather and Climate Vulnerabilities of the Electric Grid: A Summary of Environment Sensitivity Quantification Methods,” August 16, 2019. Oak Ridge National Laboratory, ORNL/TM-2019/1252/: <https://www.energy.gov/sites/prod/files/2019/09/f67/Oak%20Ridge%20National%20Laboratory%20EIS%20Response.pdf>

electrify the economy while assuring system reliability and resilience requires a smart, flexible, and optimized grid.”<sup>40</sup> Water heating and space heating/cooling use upwards of 70% of building energy; that is why we must focus on wisely electrifying them first.

By 2050, the Washington 2021 State Energy Strategy (SES) predicts the total demand for electricity will nearly double. Washington will change from a net exporter of electricity to a net importer, with over 40% of the state’s electricity coming from utility-scale wind (e.g., Montana, Wyoming) and utility-scale solar (e.g., Southwest primarily). However, the time, cost, and difficulty in building the required new transmission lines is a big multi-jurisdictional challenge to overcome. We expect our main utility PSE will move aggressively to acquire utility-scale resources, and they have indicated their plans to add 1800 MW of utility-scale renewable resources (400 MW solar and 1400 MW wind) and 1249 MW of distributed energy resources to their grid by 2030.<sup>41</sup>

The main challenge this decade will be building the required transmission network to take advantage of low-cost utility-scale renewables. Whatcom County can do their part to facilitate this by reviewing their codes/regulations on the siting of high voltage transmission.

The necessary complement to utility-scale renewables that can be deployed now, create local jobs, improve equity and social justice, reduce peak demand, and most-importantly build resilience is distributed energy resources (DERs), which are discussed in detail in strategy 4. The federal government, state, and PSE recognize the need to aggressively deploy DERs, such as rooftop solar and home batteries. “Rooftop solar and home batteries make a clean grid vastly more affordable; distributed energy is not an alternative to big power plants, but a complement,” according to David Roberts.<sup>42</sup> Since almost half of electricity cost is attributed to its delivery to the end-user, it is not surprising that locating DERs near the end-user not only lower overall cost but also provide resilience.

Using high efficiency appliances on a modern smart grid provides a dual benefit: reduced energy use and better management of electricity supply and demand. Federal and state agencies recommend these aggressive approaches as having the best chance of creating reliability and resilience while cutting GHG emissions and minimizing the need for additional natural gas peaking plants. Key approaches are detailed below that will build a modern grid to provide our community with clean electricity and enhance our ability to adapt to a changing climate.

### **Our Local Electricity System**

Unlike the rest of the US, Washington state has access to abundant hydroelectricity, which dominates all other renewables. According to the draft 2021 Northwest Power Plan,<sup>43</sup> climate change will have a dramatic impact on our future electricity supply. More precipitation and more moderate

***The Northwest Power and Conservation Council forecasts that changes to climate will cause major change in the region’s hydroelectricity operations:***

- *Increased winter and spring runoff,*
- *Increased summer electricity demand for cooling,*
- *Decreased summer and fall river flows exacerbating problems, particularly for fish passage.*

<sup>40</sup> Washington 2021 State Energy Strategy, pg. 122. <https://www.commerce.wa.gov/growing-the-economy/energy/2021-state-energy-strategy/>

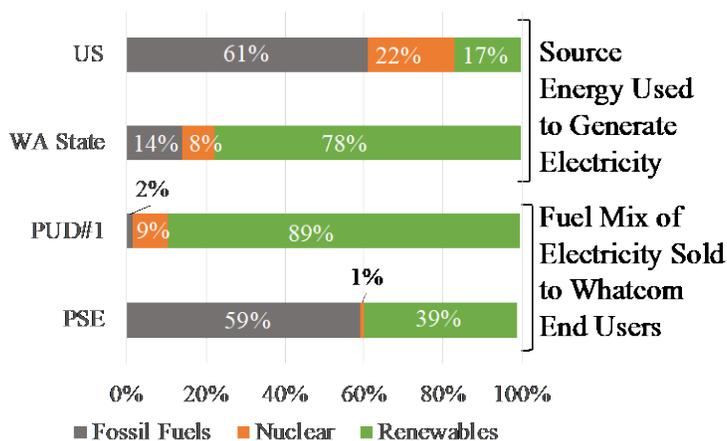

<sup>41</sup> Vande Griend, Carryn, PSE Public Comment on draft Climate Action Plan, July 30, 2021.

<sup>42</sup> Volts podcast, <https://www.volts.wtf/p/rooftop-solar-and-home-batteries>.

<sup>43</sup> Council Approves Release of Draft 2021 Northwest Power Plan for Public Review, August 25, 2021.

temperatures in the winter, and less precipitation and higher temperatures in summer. This means there will be less demand for electricity for heating in the winter and more demand for electricity in the summer for air conditioning. Peak demand for electricity or the “resource adequacy” will shift from winter to summer at the same time of the year when hydroelectric generation will be lowest. The addition of renewables is expected to cause very low market prices during midday hours and battery storage may extend electricity use into the evening hours. This will lead to operational challenges for utilities that operate natural gas peaking plants that will have trouble competing with these low market prices.

Seventy-eight percent of all the electricity generated in Washington uses renewables as the energy source (Fig 2.5). The fuel mix of electricity used in the state is the aggregate of electricity delivered by utilities to end users.<sup>44</sup> The Bonneville Power Administration (BPA) manages most of the hydroelectricity resource outside of Seattle. It provides electricity to public utilities in Whatcom County such as the cities of Blaine and Sumas and to Whatcom PUD1. Whatcom PUD1 supplies electricity to the Phillips 66 refinery at Cherry Point.

*Fig 2.5: Reported 2017 fuel mix for electricity generation and the fuel mix of electricity sold to end users in Whatcom County.*

The communitywide GHG emissions from electricity, ~1.38 million metric tons, are the second largest source of GHG emissions after point-source emissions from industry. Electricity use is roughly split in thirds among residential, commercial, and industrial buildings (Fig 2.6). The majority of residential, commercial, and industrial customers in Whatcom County buy electricity from PSE, a private, investor-owned utility. Given the hydroelectricity generation’s dominance in the state, it is often surprising to local PSE customers that most of their electricity is generated by coal and natural gas, similar to the US-wide generation (Fig 2.5). PSE owns and operates four electricity generating plants in Whatcom County which are fueled by natural gas. The fossil fuel component of PSE’s electricity increased to 66% in 2019.<sup>45</sup>

Decarbonization of electricity in Whatcom County will be a challenge. As electrification needs increase for space and water heating and for transportation, PSE in particular will need to generate more electricity while also rapidly reducing the amount of fossil fuels used to generate the electricity. The Bellingham Climate Action Task Force report<sup>46</sup> found that even with PSE’s current fossil dominated fuel mix,

<sup>44</sup> Washington State Electric Utility Fuel Mix Disclosure Reports for Calendar Year 2017, Washington Department of Commerce, November 2018, Report to the Legislature, Brian Bonlender, Director.

<sup>45</sup> PSE | Our Diversified Electricity Supply – Puget Sound Energy website: <https://www.pse.com/pages/energy-supply/electric-supply>. Note: Utilities are required to disclose their fuel mix. PSE’s website only displays their most recent annual calculation, which was 2019 at the time of this report. PSE’s 2018 fuel mix also reported 66% fossil fuel generation (coal plus natural gas).

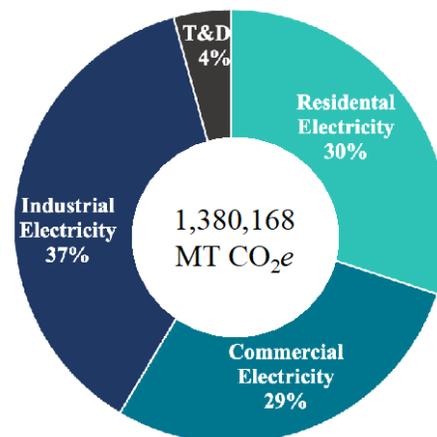

<sup>46</sup> City of Bellingham Climate Action Task Force Final Report, December 2019. [https://cob.org/wp-content/uploads/Climate-Task-Force-FINAL-Report-12\\_2\\_19.pdf](https://cob.org/wp-content/uploads/Climate-Task-Force-FINAL-Report-12_2_19.pdf)

efficiency gains from EVs and heat pumps for space and water heating would cut GHG emissions nearly in half by 2035. Switching to renewable electricity as mandated by Washington’s Clean Energy Transformation Act renders GHG emissions negligible from buildings and transportation.

## Goal and Strategies for Electricity and Buildings

**Goal: Reduce communitywide GHG emissions from electricity and buildings 45% by 2030, while creating equity-centered resilience in these sectors. County government will lead this effort and demonstrate action and operational cost savings via energy efficiency and new building concepts for government operations, effectively reducing government operations emissions 85% by 2030.**

Six strategies are proposed to support this goal and are aligned with Washington’s 2021 Energy Strategy. The strategies address both the traditional, top-down centralized generation and delivery of electricity, as well as a bottom-up distributed energy resource where buildings become assets to the grid for balancing supply and demand.

*Fig 2.6: Communitywide GHG emissions from electricity use in buildings in 2017, representing 18% of total GHG emissions. T&D are Transmission & Distribution*

### Strategies for Electricity and Buildings

1. Assert County leadership in state legislation, regulatory matters (Washington Utilities and Trade Commission and Commerce), and electric utilities operations that enables implementation of Whatcom climate strategies and facilitates a 45% reduction in GHGs by 2030.
2. Create resilience hubs for key community services and work with utilities to identify needed transmission and distribution investments.
3. Lead by example: electrify end uses in County government buildings, install renewable energy and energy storage where feasible to reduce energy operational costs and GHG emissions.
4. Focus on *buildings as grid assets* to maximize the grid’s reliability and resilience. Accelerate the use of clean Distributed Energy Resources (DERs) and microgrids to reduce peak electricity demand, optimize the grid, and provide electricity to the most important end uses when the utility grid is down.
5. Moving to net zero: upgrade existing buildings by collaborating with local NGOs to accelerate energy efficiency upgrades. Require new buildings to be net zero carbon emissions capable no later than 2027.

---

6. Pilot key concepts to reduce electricity use and building GHG emissions through demonstration projects that can scale up rapidly.

---

**Strategy 1: Assert County Leadership in State Legislation, Regulatory Matters, and Electric Utilities Operations.**

Although the County has no direct control over the operation of private and public utilities, the County does have influence over local utilities, state legislation, and state utility regulations that will help it achieve its climate goals by reducing GHG emissions from the electricity grid.

The 2019 Clean Energy Transformation Act (CETA) is a good example of where the County in concert with other cities and counties can exert leadership with the Washington Utilities and Transportation Commission (WUTC). CETA requires all electric utilities serving retail customers to eliminate coal-fired electricity by 2025 and be GHG neutral by 2030. GHG neutral means that utilities have flexibility to use limited amounts of electricity from natural gas if offset by other actions. By 2045, utilities must supply electricity that is 100% renewable or non-emitting, with no provision for offsets.

Whatcom County should actively participate in WUTC and Commerce regulatory proceedings for CETA, as well as engage in PSE’s Integrated Resource Plan (IRP) and Clean Energy Implementation Plan (CEIP).<sup>47</sup> These proceedings and plans are important opportunities for the public to exert influence on utilities to actually reduce their reliance on fossil fuels.

Also of note is the passage of the 2021 Climate Commitment Act and its potential impact on electric utilities and natural gas companies. “Potential impact” because the actual rule making for the CCA will take place this year. Any specific utility company’s decision about how to use the allowances obtained under this law will depend on several factors, including the going price for allowances and the regulatory treatment of those allowances by the UTC. It is therefore difficult to predict how PSE or Cascade Natural Gas will change behavior in response to the CCA. The new law will also make available funding for a variety of eligible projects such as deploying renewable energy, modernizing the grid (including demand side measures), increasing building energy efficiency, and electrifying space and water heating.

As we electrify end uses (e.g., space heating and transportation), the resulting impact on emission levels depends on how much carbon is removed from electricity generation. Without the cooperation of local utilities, County efforts to reduce GHG emissions from our energy supply will be difficult to achieve and could fall far short of desired outcomes.

Whatcom County is also home to three public utilities that provide electricity primarily generated by renewables – Whatcom PUD1 and municipal utilities in Blaine and Sumas. To provide consumer choice and reduce GHG emissions more rapidly, the County should support the evaluation of Whatcom PUD1 expansion within the County. PUDs and municipal utilities in our state generally charge lower prices and

---

<sup>47</sup> <https://www.cleanenergyplan.pse.com/>

use more renewable energy because they buy a large share of less expensive hydropower from BPA (Fig 2.5).

On average statewide, PUD rates are about 10% lower than PSE’s (Fig 2.7).<sup>48</sup> Delivery costs for public and private power companies are roughly the same – at about \$0.05/kWh. The difference is in the average cost of power, around 6 cents/kWh for PSE and ~4 cents/kWh for PUDs purchasing from BPA.

To reduce GHG emissions, the County should encourage and facilitate the addition of utility-scale renewable energy resources such as solar, wind, and battery, plus necessary transmission, and distribution infrastructure to deliver power to end users.

Considerable wind resources are potentially available in Montana, Wyoming, and eastern Washington. PSE’s retirement of its 700 MW share of the coal-based Colstrip power plant located in Montana frees up transmission capacity that it could use in the robust out-of-state renewable generation market (Fig 2.8). An emerging option for Washington State is to deploy offshore wind turbines in the Pacific (not in the Salish Sea), like the new GE turbine that is able to deliver 13 megawatts of power, six times more electrical power than current land-based windmills in the state.<sup>49</sup>

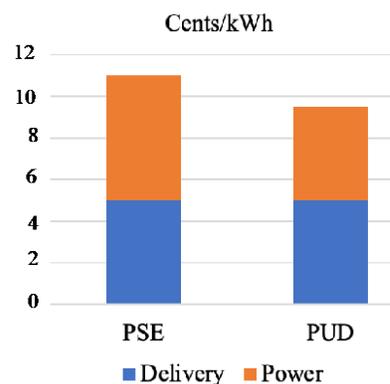

Fig. 2.7: PSE and PUD average cost of electricity in Washington.

Renewable generation with battery storage can overcome daily issues in electricity peak demand. Washington state’s first utility-scale solar and battery storage site was just completed in Richland. In addition to generating electricity, this facility will offer a training program for solar and battery storage technicians.<sup>50</sup> A Colorado energy company is also investing in southeast Washington, announcing plans for the 1,150 MW Horse Heaven Wind, Solar and Battery Farm near the Tri-Cities.<sup>51</sup> Solar and wind energy is cost-competitive with fossil fuel generation of electricity as shown in Figure 2.8. The Department of Energy (DOE) has recently set a target of reducing solar costs 60% by

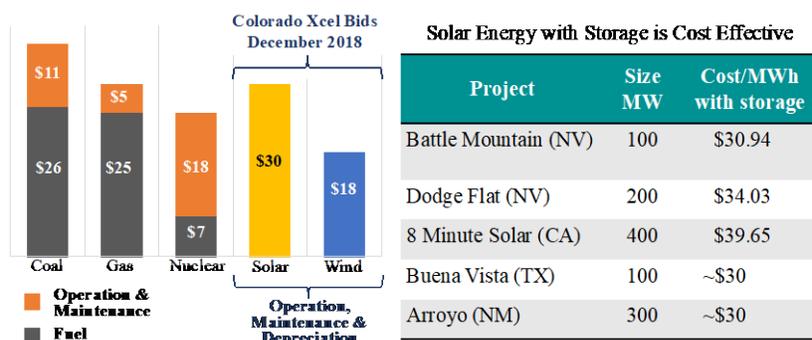

Figure 2.8: Cost of utility-scale renewables from actual bids. Coal, Gas and Nuclear costs are Energy Information Administration data prepared by the Regulatory Assistance Program (www.raponline.org)

<sup>51</sup> <https://www.efsec.wa.gov/energy-facilities/horse-heaven-wind-project>

2030.<sup>52</sup> DOE's previous *2011 SunShot Initiative* met its 75% reduction goal for utility-scale solar cost three years early in 2017.<sup>53</sup>

The US DOE is also targeting a 50% reduction in the cost of rooftop solar by 2030. The recent release of the SolarAPP+ software,<sup>54</sup> free to local and state governments, lowers the "soft costs" associated with rooftop solar installations (e.g., design, permitting, inspections) which are over half the total cost in the US. This software, which can be configured for local codes and databases, streamlines workflow and greatly speeds approvals for over 90% of standard installations. In addition, the app is being enhanced to include installation of battery storage and local energy management systems.

### **Key Priority for County Leadership:**

- ***Monitor utilities' progress with CETA, while exploring options for greater renewable energy for electricity end-users in Whatcom County. Advocate for state legislation that accelerates a reduction in GHG emissions in electricity and buildings.***

### **Strategy 2: Create Resilience Hubs for Key Community Services and Work with Utilities to Identify Needed Transmission and Distribution Investments.**

Resilience hubs are defined as additions to community-serving facilities so that they can support residents and coordinate resource distribution and services before, during or after a natural or man-made disaster.<sup>55</sup> On a daily basis, community resilience hubs provide a space for public meetings and activities that draw neighborhoods together and promote a shared sense of responsibility. A resilience hub can operate independent of the electrical grid temporarily. Examples include public facilities such as community centers or emergency shelters, fire stations, hospitals, schools, and water treatment plants. Resilience hubs can also apply to private facilities such as food processing and cold storage units vital to maintaining the food supply.

Resilience hubs are especially important in areas of the County where there is limited electricity transmission and distribution coverage, areas subject to frequent outages, and/or communities frequently impacted by flooding, heat waves and wildfires. Resilience hubs can be designed to address several of the guiding principles that were outlined in Section 1, such as health, safety and preparedness, community needs, and racial equity and social and environmental justice. They can serve as life-saving cooling centers for homeowners and renters who lack or cannot afford air conditioning. The County should work with local utilities to identify these areas to help prioritize resilience hubs.

Resilience hubs enhance social equity. For example, facilities with rooftop solar and/or batteries can be used to reduce electricity costs. Large solar arrays on multiple facilities could serve as a basis for a large community solar project to benefit renters and low-income households and create greater equity within the community. One of the most common requests from Whatcom residents is the desire to have a community solar program. Many homeowners do not have solar exposure or cannot afford to install rooftop solar, and renters have no option. True community solar, where the public can purchase solar

---

<sup>52</sup> DOE Announces Goal to Cut Solar Costs by More than Half by 2030, March 25, 2021. <https://www.energy.gov/articles/doe-announces-goal-cut-solar-costs-more-half-2030>

<sup>53</sup> The SunShot Initiative, DOE's Solar Technologies Office (<https://www.energy.gov/eere/solar/sunshot-initiative>).

<sup>54</sup> Sign up and learn about SolarAPP+ at [solarapp.nrel.gov](https://solarapp.nrel.gov).

<sup>55</sup> ISDN Resilience Hubs, Urban Sustainability Directors Network, <https://www.usdn.org/resilience-hubs.html>.

panels that are part of a large installation in order to reduce their energy costs will require utilities to provide virtual net metering (VNM). Several public utilities in the state already offer VNM, but it will take state legislation to require all utilities to offer VNM. VNM is essentially an accounting system that provides credit on an individual's electricity bill based on the portion of solar production they subscribe to in a community-owned solar installation.

The planning of resilience hubs must engage community members, vulnerable populations, and consider GHG emissions reductions. Resilience hubs can and should have the goal of building community or social infrastructure and cohesion.

*The Lummi Island workshop "Brainstorming a Pathway for an Energy Resilient Future" (April 2021) is an excellent example of active community involvement to determine their desired future. The focus was to bring together various organizations to learn best practices to develop a solar/ battery microgrid from neighboring OPALCO. The proposed Lummi Island microgrid would provide resilience for the electric grid and a source of energy for a new hybrid electric ferry. Whatcom County can show leadership by facilitating and supporting this process.*

#### **Key Priority for Resilience Hubs:**

- ***Create resilience hubs by fortifying key emergency and community services to provide clean energy daily for community benefits during normal times and backup power and shelter during disasters.***

#### **Strategy 3: Lead by Example: Electrify End Uses in County Government Buildings, Install Renewable Energy and Energy Storage Where Feasible.**

Whatcom County government operations can show both leadership and action by electrifying County buildings. The County should start by developing a multi-year master plan for upgrading, consolidating, or replacing government facilities to maximize energy efficiency *and* eliminate GHG emissions. Electrification of space and water heating, rooftop solar, battery storage, and EV charging infrastructure will not only save taxpayer money by reducing long-term County operating costs but serve as an example to local businesses on how they too can also increase resilience and reduce GHG emissions while reducing costs and saving money.

#### **Key Priorities for Whatcom Government Operations:**

- ***Develop a multi-year master plan for upgrading and/or consolidating County government facilities to maximize energy efficiency, renewable energy and storage, and EV charging infrastructure to reduce greenhouse gases.***
- ***Commit to net zero carbon emissions for new County government buildings and facilities.***

#### **Strategy 4: Focus on Buildings as Grid Assets to Maximize the Grid's Reliability and Resilience. Accelerate the Use of Clean Distributed Energy Resources (DERs) and Microgrids to add Renewables, Reduce Peak Electricity Demand, and Provide Electricity to the Most Important End Uses.**

To maximize reliability and resilience in the electrical grid, while at the same time reducing GHG emissions, a truly win-win strategy is to aggressively deploy Distributed Energy Resources (DERs) and

develop microgrids.<sup>56</sup> As shown in Fig 2.9, DERs can be employed by the utility (top-down generation) or at the building/facility scale (bottom-up generation). Rapid adoption of DERs and microgrids cannot be accomplished without innovative financing mechanisms, just as automobile and home financing dramatically expanded their respective markets in the last century.

DERs encompass the following three categories:<sup>57</sup>

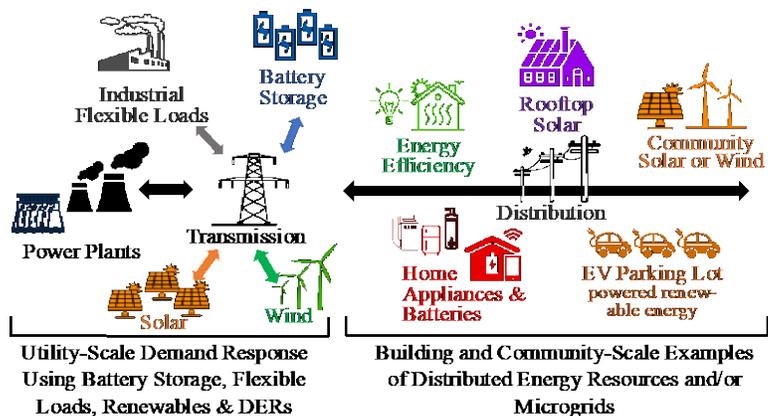

- **Energy Generation (or Supply):** Rooftop solar, wind turbines, mini-hydro, and biomass boilers.
- **Energy Storage:** Batteries, fuel cells, EVs, or phase change materials that can release or absorb energy when changing physical state. Energy management software can switch batteries quickly between charging, discharging, and storage, making them a valuable energy asset.
- **Energy Management:** “Smart” meters, inverters, and appliances; home energy management software; microgrid control systems.

*“DERs are not a boutique version of, or a distraction from, utility-scale renewables; they are a necessary complement, and an enabler and accelerator.” They save building owners money, create local jobs, improve equity, reduce peak demand, while increasing individual and community resilience. David Roberts, Volts*

A distinct advantage of DERs is that they can be deployed relatively quickly, incrementally, and at specific locations such as the resilience hub discussed above, targeting areas in the County that have frequent electric outages, and/or addressing equity and social justice needs.

Electrifying your house is a key strategy to reduce GHG emissions and create climate resilience. As noted in a recent Volts podcast,<sup>58</sup> the real game in town is the 200 million vehicles, 128 million households, and the 70 million natural gas furnaces. “What we really want is a country that has Australian rooftop solar policy, California or Norwegian EV policy, and South Korean or German heat-pump adoption. That’s the country where the economics are very positive for the household. So we know how to do this, we just don’t know how to do it in one place.”

A microgrid is a miniature, semi-independent grid. Microgrids combine energy generation and storage and have a control system that enables the facility to operate independently of the utility grid during outages or, alternatively, reduce loads during peak demand.

*Fig. 2.9: Distributed energy resources and microgrids can be used to maintain electricity load in a modern, smart grid.*

<sup>56</sup> Roberts, David. “Rooftop solar and home batteries make a clean grid vastly more affordable; Distributed energy is not an alternative to big power plants, but a complement.” Volts, May 28, 2021.

<sup>57</sup> Roberts, David. “Wildfires and blackouts mean Californians need solar panels and microgrids,” Oct 28, 2019, Vox.com.

<sup>58</sup> Roberts, David. Volts podcast featuring Saul Griffith (Rewiring America) and Arch Rao (CEO Span), June 28, 2021.

A microgrid may consist of a single building such as your home or a local fire station, multiple buildings such as a campus or neighborhood, or a community solar and/or battery storage facility, such as the Snohomish County Arlington microgrid<sup>59</sup> or the Decatur Island OPALCO microgrid.<sup>60</sup> Since 2010 the Pentagon has acknowledged that climate change poses a threat to military readiness and operations.<sup>61</sup> As a result, military bases have become one of the key drivers of microgrid growth in the U.S.<sup>62</sup> And Washington state’s Clean Energy Fund strongly supports microgrids for grid modernization, such as Avista’s campus microgrid and PNNL’s Transactive Energy Campus.<sup>63</sup> Figure 2.10 shows the microgrid’s point of connection to the main grid, or *behind-the-meter*. The energy supply and demand circles overlap showing four major energy using devices (hot water, HVAC, battery, and EV) responsible for the majority of building energy use. Wisely managing and communicating with these devices minimizes peak usage by effectively storing electrical or thermal energy for anticipated future uses (i.e., peak shifting). Critical loads are end uses important enough to have priority on backup power during outages.

Smart panels (Fig. 2.10) are basically upgrades to the standard electrical panel. A standard electrical panel has circuits and breakers. A smart panel adds communications, energy management, and smart inverters to the standard panel, which enables the owner to manage the energy for large devices and island their home or building when the grid goes down

(e.g., microgrid). An industry leader, Green Mountain Power, has launched a pilot program

“to empower residential customers with new technology to simplify the transition to clean energy for home heating, vehicle charging, solar generation and energy storage. This is the first utility in the country to work with Span to offer the Span Smart Panel.”<sup>64</sup>

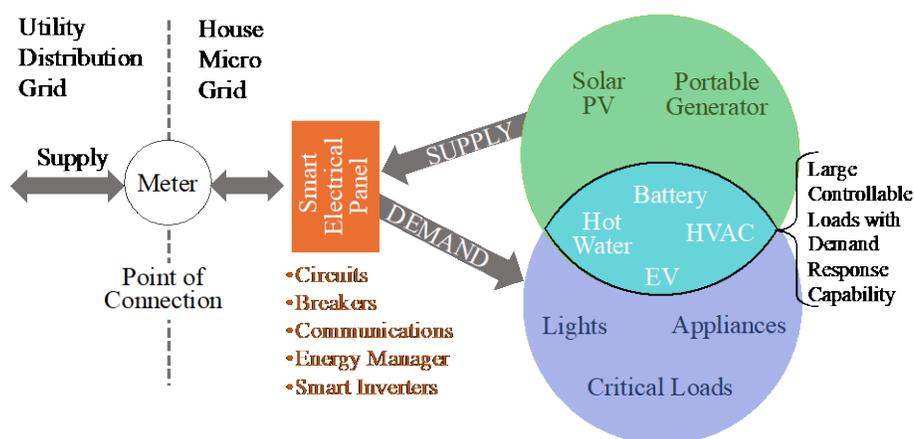

Figure 2.10. Future (Electrified & Smart) Home for reduced GHGs, lower energy costs, and resilient. New microgrid products are available from Span, Tesla, Enphase, Instant On, to name a few.

<sup>63</sup> Trabish, Herman. “Green Mountain Power’s pioneering steps in transactive energy raise big questions about DERs value,” The Vermont utility’s program will show what distributed energy resources are worth in customer-to-customer transactions; March 4, 2020, Utility Dive.

<sup>64</sup> GMP is First Utility to Offer Span Smart Panel to Empower Customers, and Accelerate Transition from Fossil Fuel to Clean Energy; News Release, 21 April 2021; <http://greenmountainpower.com> .

Accelerating the deployment of DERs and microgrids can provide power during outages and reduce or defer the high cost of electricity transmission and distribution upgrades. The 2021 State Energy Strategy intends to avoid the electrical grid outages and rolling blackouts highlighted by the California wildfires, by adding DERs quickly and creating microgrids for maximum benefit to a modernized grid.

Demand for electricity in the County varies by season, day, and time. Daily peak electricity demand usually occurs for a few hours in early morning and early evening. As renewables such as wind and solar are added, the peaks become steeper due to excess solar on the grid during mid-day when demand typically drops – resulting in the so called “duck curve.”<sup>65</sup> Demand response, essentially moving non time-dependent uses such as water heating and battery charging to off-peak hours, can reduce daily electricity peaks with minimal cost.

A BPA demonstration of demand response, conducted in cooperation with Pacific Northwest utilities including PSE, showed how daily peak loads for water heating could be shifted in a simple and cost-effective manner *without* affecting the customers’ lifestyle.<sup>66</sup> The vast majority of customers were satisfied with the pilot and would likely join a program based on this technology. The business case for this water heater project showed a benefit-cost ratio of 1.74 compared to a simple peaking generation plant. The key is how to transform the appliance marketplace quickly and then recruit customers to a utility’s demand response program first for water heaters, then progressing to other energy intensive appliances.<sup>67</sup> PSE plans to file its first DER request for proposals to solicit demand response, distributed solar energy resource, and distributed battery resource additions to eventually total 634 MW in their service territory by 2030.<sup>68</sup>

As of January 2021, all water heaters sold in Washington state are required to have a standard communication interface for demand response. Utilities should offer a demand response program and give customers the option to participate. Technologies such as demand response, in combination with energy storage, can be used to manage peak load more cost effectively, more quickly, and with a much lower carbon impact and should be implemented before considering adding possibly unnecessary additional natural gas peaking plants.

In summary, a microgrid of DERs enables “customers generating, storing, and managing their own power, either individually or in networked groups of any size.”<sup>69</sup> This can apply to single homes, groups of homes, neighborhoods, and beyond. Individual owners can choose what utility programs to enroll in, or not. In turn, this technology enables new opportunities for smart grids, like the Portland General Electric virtual power plant (VPP) of 4 MW by placing battery storage in over 500 homes and paying homeowners monthly rebates. System-level planning enables wise investment in smart appliances that can be monitored and controlled by the owners, by utilities, or both – leveraging multiple investments

<sup>69</sup> Roberts, David, “Wildfires and blackouts mean Californians need solar panels and microgrids.”

together all within the control of the owners. But also enabling much greater GHG emission reductions with the right policies and programs.

#### **Key Priorities for Distributed Energy Resources and Microgrids:**

- *Support efforts to deploy DERs, including expansion of broadband to facilitate DER expansion (while also benefiting remote work, education, and commerce).*
- *Work with utilities to accelerate use of demand response to reduce daily peak electricity demand and modernize control of the grid.*
- *Deploy energy storage in targeted locations where batteries, can provide more than one function (e.g., store solar for evening use and provide backup during outages)*

#### **Strategy 5: Moving to Net Zero: Upgrade Existing Buildings by Collaborating with Local NGOs to Accelerate Energy Efficiency Upgrades. Require New Buildings to be Net Zero Carbon Emissions Capable no Later than 2027.**

Overall energy use by buildings (electricity, natural gas) accounts for 27% of the communitywide GHG emissions. Most of the electricity on the grid is consumed in (or near) buildings. Across the U.S., buildings are the fastest growing sector of GHG emissions. If electricity generation is decarbonized and the grid modernized, rapid electrification of buildings reduces GHG emissions and allows buildings to become grid assets that can play a role in managing electric load as discussed in strategy 4.

New building construction only accounts for about 1% of the total building stock nationally every year, so our approach to reducing emissions in buildings must also focus on existing stock.<sup>70</sup> The overarching goal for new and, where feasible, existing buildings is to transition to be net zero carbon (NZC) emissions. *NZC buildings are so energy efficient to operate that onsite or offsite renewable energy can offset total energy use over a year's time period.*<sup>71</sup> Some newer buildings are so efficient that rooftop solar panels can make the building net positive energy production over a year-long period, even in Bellingham.<sup>72</sup> In order to reach NZC, these buildings maximize energy efficiency, install renewable energy generation as practical, and/or procure offsite renewable energy.<sup>73</sup>

A building with a positive energy profile can be used to offset embodied carbon (carbon in construction materials and the building process), or power an EV. New building materials are being developed that will reduce embodied carbon. For example, cross-laminated timber (CLT) is increasingly being produced by the timber industry and used in buildings as a replacement for high-carbon materials like steel and cement. Use of CLT in buildings would also support Whatcom's local forest industry.

Energy efficiency has long been the first step in reducing energy use in existing buildings. An evaluation of whole building performance includes peoples' needs, the electrification of major appliances, readily available grants and financing, and the potential for carbon reduction. Energy improvements may involve upgrades to insulation, windows, doors, and lighting, as well as energy efficient furnaces and

---

<sup>70</sup> Calculation of 1% based on US Census data: <https://www.census.gov/quickfacts/fact/table/US/HSD410218> and <https://www.census.gov/construction/nrc/pdf/newresconst.pdf>

<sup>71</sup> Shifting to Zero: Zero Carbon Building Policy Toolkit, Shift Zero, [www.shiftzero.org](http://www.shiftzero.org)

<sup>72</sup> TC Legend Builds Homes for a Carbon Neutral Future; <https://www.tclegendhomes.com/>

<sup>73</sup> Shift Zero Policy Toolkit, <https://shiftzero.org/toolkit/>

water heaters. Increasing social equity and improving occupant health should be emphasized. Community organizations, like the Community Energy Challenge, Opportunity Council and PSE's Efficiency Boost program provide energy audits, rebates, and low-income weatherization assistance. In addition, Sustainable Connections sponsors a Green Building Slam<sup>74</sup> every year to educate the public on energy efficient buildings.

Space heating/cooling and water heating on average account for 70% of energy consumption in U.S. homes.<sup>75</sup> Water heaters and gas furnaces that are at the end of their life span should be replaced with new high-efficiency electric appliances wherever possible. Water heaters do not need to heat water 24 hours per day, every day. Modern, smart water heaters can pre-heat and store hot water before daily periods of peak demand, which can be coordinated in areas where utilities offer demand response programs. The benefit is less cost to the consumer and the water heater can be used as grid asset to manage the peak electricity load.

**The Importance of Addressing Existing and Older Buildings**  
*"I ran numbers recently on an 1100 sq/ft home that was built in 1878. It was using 16 times the energy compared to today's code-minimum homes. Changing out its old oil heater in favor of a ductless heat pump, with no changes to the envelope, would reduce the carbon use of the home by about 70%, based on the current fuel mix in Washington." Ted L. Clifton, Clifton View Homes, Coupeville, WA.*

New electric heat-pumps, have energy efficiencies of up to 300% and are capable of both heating and cooling, saving energy and reducing fossil fuel use. Cooling will become more important as summer temperatures rise and wildfires create air pollution during late summer and fall. Many new HVAC (Heating, Ventilation, Air Conditioning) systems incorporate the latest air filtration to improve public health, particularly for those who need it most. Even if an aging gas furnace is still functioning, electric heat-pump based "mini-splits" (also called ductless heat pumps) can significantly reduce the use of natural gas, provide zonal heating and cooling, and reduce overall energy use. Mini-splits are cost-effective, easily installed, and can be added incrementally – thus enabling more rapid electrification and reduction of GHGs.

The initial cost of new HVAC systems is often an obstacle, so financing is a critical component of their adoption. The Property Assessed Clean Energy program, or PACE, actively used in several states, but not in Washington, allows participants to finance energy efficiency and renewable energy projects through property assessments that last the functional life of a project. So, if an owner upgrades to a high-efficiency heat pump that has a 15-year life span, payments become part of the property assessment that transfers to a new owner if the property is sold. This program allows owners to install energy efficiency improvements to reduce their energy costs, even if they plan to sell the property in the near future (a frequent obstacle to upgrading). Legislation called C-PACER for commercial properties was passed by the state legislature in 2020 but vetoed due to COVID-19 budget constraints. Regardless, Whatcom County is piloting a C-PACER program in 2021 that will accelerate energy efficiency

<sup>74</sup> <https://sustainableconnections.org/events/green-building-slam/>

<sup>75</sup> Use of Energy Explained. Energy use in homes, Energy Information Administration. <https://www.eia.gov/energyexplained/use-of-energy/homes.php>

improvements. To underscore, *more and better financing is critical*, and promotes equity for low-income households.

Building codes are the most effective tool for creating energy efficiency and are essential for meeting the 2030 GHG targets and beyond. According to the U.S. Department of Energy, today's energy codes provide over 30% energy savings compared to codes of a decade ago,<sup>76</sup> saving approximately \$5 billion annually in operation cost. The County incorporates new building codes adopted by the state of Washington and recognizes the need for increasing resilience from natural and climate impacts.

Energy efficiency upgrades should also consider GHG emissions. *Instead of using kilowatt-hours and therms saved, energy efficiency success should be measured by carbon emissions reduced.* This type of measure would likely favor electrification, as has been the case with the Sacramento Municipal Utility District,<sup>77</sup> and can incentivize lower carbon intensity in the existing building stock. Climate change and population growth suggest that much more is needed to make buildings grid assets and resilient to natural and man-made disasters.

#### **Key Priorities for Net Zero Carbon Emissions from Buildings:**

- ***Develop a robust financing plan that 1) supports major electric appliance upgrades, 2) promotes the transition of buildings to net zero carbon emissions operations and 3) is equitable for low- or fixed-income households.***
- ***Support and work with nonprofit organizations to expand energy efficiency upgrades and electrification of space and water heaters to residential and commercial buildings.***
- ***Implement latest WA state building codes into County building codes, with NZC and all-electric by the 2027 code where electricity distribution is available.***

#### **Strategy 6: Pilot Key Concepts to Reduce Electricity and Buildings GHG Emissions Through Demonstration Projects that Can Scale Up Rapidly.**

Many of the strategies outlined for electricity and buildings are innovative examples from industry leaders and promise to deliver great benefits in our efforts to reduce GHG emissions. They continue to build on current best practices and on the latest science and engineering breakthroughs. But because they are new, many of them have not been proven at large scale. Rather than wait for large-scale demonstrations that we can follow, we need to take the lead and implement the most important technologies in these strategies as small demonstration projects that will provide experience, public acceptance, and make it easier to scale-up rapidly in the future.

Grid flexibility is the core to resilience and to the deep decarbonization needed to meet our targets.<sup>78</sup> Making buildings grid assets is an important part of a modern, flexible grid. Upgrading building energy

---

<sup>77</sup> SMUD first in US to change efficiency metric to "avoided carbon," The new metric expected to encourage building electrification. <https://www.smud.org/en/Corporate/About-us/News-and-Media/2020/2020/SMUD-first-in-US-to-change-efficiency-metric-to-avoided-carbon>

<sup>78</sup> Imhoff, Carl. "Grid Modernization Implications for WA State Energy Strategy," PNNL, October 9, 2020.

systems leverages both public and private investments to develop a smart modern grid with efficient appliances that can be managed individually or together in groups for greater impact.

The following sample projects are designed to explain and demonstrate the potential for reducing GHG emissions as existing buildings become grid assets. These projects also kick-start strategies 3 and 5 to electrify existing homes and buildings, strategy 4 to add DERs throughout the community in an equitable manner, and strategy 2 to create resilience hubs that are self-sustaining during emergencies, but also provide low- and middle-income residents with low-cost renewable energy on a daily basis.

### **1. *Electrification Prequalification Project***

Define electrification incentives for high-efficiency heat pumps (for hot water and HVAC) to enable more rapid market adoption. Prequalify heat-pump products, installers, and associated financial incentives for use by Community Energy Challenge analysts to speed new appliance deployment and market transformation. Prequalified products will have built-in demand response capability for future DR programs.

### **2. *Solar/Battery Microgrid Project***

Demonstrate daily peak shaving and reduced load on the distribution grid, plus provide backup to the building's critical loads during power disruptions for selected homes. Install microgrid (energy manager, smart inverter) and renewable energy generator (solar and/or battery). Split federal/state incentives between solar and battery to stimulate deployment of distributed energy storage throughout the grid as prices continue to decline in the future.<sup>79</sup>

### **3. *Resilience Hubs Project***

Fund a project to identify and prioritize potential resilience hub sites for critical community services in Whatcom County.<sup>80</sup> Consider both public and private community services, similar to examples from the state of Maryland's Resiliency Hub Grant Program<sup>81</sup>. Resilience hubs use large microgrids with DERs to meet community needs for improving equity and social justice (e.g., community solar), providing important resilience during disruptions to the grid, and reducing GHGs daily with renewable energy and efficiency. Whatcom County must lead by example, implementing its most important resilience hub site quickly. Funding should be sought for other top priority hub sites and coordinated with the State's Office of Disaster Resilience.

### ***Key Priorities for Demonstration Projects:***

- ***Design and implement demonstration projects that will rapidly advance strategies 3 through 5 in a manner that promotes public acceptance and equity.***

---

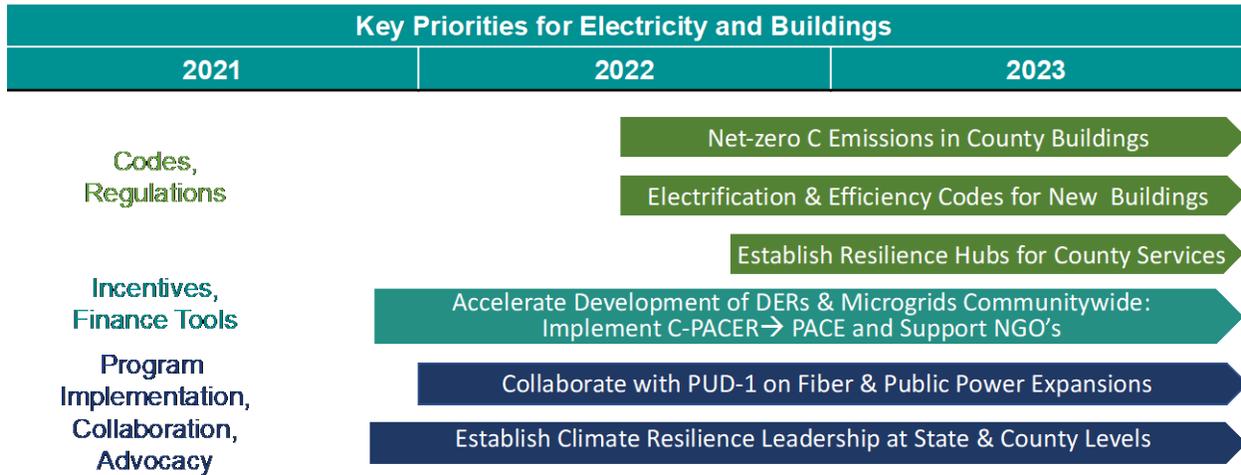

<sup>79</sup> Emerson, Joe. "Ted Clifton on Zero Energy Plans and the Future of Zero Energy Homes," Zero Energy Project, September 2017; Also confirmed in 2021 per email from Ted L. Clifton, Coupeville, WA, DOE Award Winning Builder in Pacific Northwest has advocated this since at least 2017.

<sup>80</sup> Consider California's "Resilience before Disaster – The Need to Build Equitable, Community-Driven Social Infrastructure" as a guide in the evaluation.

<sup>81</sup> <https://energy.maryland.gov/Pages/Resiliency-Hub.aspx>

- *Plan and implement a resilience hub at the most important County site to reduce long-term energy operating costs, provides critical backup during power outages, and demonstrates the value of buildings as grid asset.*

## Timeline and Summary of Strategy, Actions, and Benefits

### Electricity and Buildings Strategies, Actions, and Benefits

<b>1. Assert County leadership in state legislation, regulatory matters (WUTC and Commerce), and electric utilities operations that enables implementation of Whatcom climate strategies and facilitates a 45% reduction in GHGs by 2030.</b>	
Actions	Benefits
<p>1.1 Climate advisor participation in WUTC rule making and legal proceedings examining utilities compliance with CETA.</p> <p>1.2 Support state-wide legislation through testimony/ letters that will help achieve GHG goals for 2030 (e.g., VNM,<sup>82</sup> PACE).</p> <p>1.3 Pass a resolution to co-fund a municipalization study with Whatcom PUD-1 that would accelerate the use and development of renewable energy and give residents options.</p> <p>1.4 Identify areas where large scale solar and land or offshore wind could be located and facilitate county regulations for deployment.</p> <p>1.5 Partner with PSE and/or public utilities and residents with cost-competitive utility scale options for renewable energy.</p>	<ul style="list-style-type: none"> <li>• Provides competition to lower consumer electricity costs while at the same time expanding renewable electricity. (1.1, 1.2, 1.3)</li> <li>• A Board with local experts can help guide and accelerate clean electricity for all Whatcom County residents (1.3)</li> <li>• Virtual Net Metering/community solar allows renters and low-income households to access renewable energy. (1.5, 1.6)</li> <li>• Actions directly address equity issues and accelerate use of renewables. (1.2,1.3)</li> <li>• Creates new local jobs. (1.2,1.5)</li> </ul>
<b>2. Create resilience hubs for key community services throughout the county. Collaborate with utilities to identify needed Transmission and Distribution investments.</b>	

<sup>82</sup> VNM is Virtual Net Metering is required in many states, but not Washington. VNM is an accounting/billing process that is offered by some utilities, such as the Snohomish PUD and OPALCO, to compensate customers who have partial ownership in community solar or wind projects. This mechanism can provide equity to customers who rent or cannot afford rooftop solar.

Actions	Benefits
<p>2.1 Work with communities in the County to identify public buildings, such as schools, fire departments, etc., for potential community solar/battery projects and resilience hubs.</p> <p>2.2 Fund a study to evaluate and prioritize resilience hubs and microgrids (identified in 2.1) to fortify key emergency and public services and provide clean energy power in the event of a disaster and community benefits during normal times.</p> <p>2.3 Promote underground utility lines in areas of the county where frequent outages occur due to downed distribution lines (or target emergency battery backup where needed).</p>	<ul style="list-style-type: none"> <li>• Better address customer electricity needs across the county and provide climate resilience. (2.1, 2.2, 2.3)</li> <li>• Allows the county to focus efforts on areas that are currently underserved and create more equity. (2.2)</li> <li>• Creates local jobs (2.1, 2.3)</li> </ul>

<b>3. Lead by example: electrify end uses in County government buildings, install renewable energy and energy storage where feasible to reduce energy operational costs and GHG emissions.</b>	
Actions	Benefits
<p>3.1 Develop a multiyear master plan for upgrading/consolidating county government facilities while meeting GHG targets.</p> <p>3.2 Work with the utility to install behind the meter battery storage systems, rooftop solar on county government buildings and EV charging infrastructure.</p> <p>3.3 Commit to NZC emissions for new county government buildings and facilities.</p>	<ul style="list-style-type: none"> <li>• Take advantage of the window of funding over the next few years from state, federal, and private foundations. (3.1, 3.2, 3.3)</li> <li>• Batteries and rooftop solar show a commitment to saving operating costs and leadership in promoting a local clean energy economy. (3.2)</li> <li>• Transparency and urgency needed to address climate change. (3.3)</li> </ul>

<b>4. Focus on buildings as grid assets to maximize the grid’s reliability and resilience. Accelerate the use of clean Distributed Energy Resources (DERs) and microgrids to reduce peak electricity demand, optimize the grid, and provide electricity to the most important end uses when the utility grid is down.</b>	
Actions	Benefits
<p>4.1 Advocate the use and demonstration of demand response with local utilities to reduce daily peak electricity and modernize control of the grid.</p> <p>4.2 Pass a resolution to support PUD-1 broadband deployment to facilitate DERs.</p> <p>4.3 Identify electricity distribution limitations where DERs and microgrids should be added to promote climate resilience.</p> <p>4.4 Deploy energy storage in targeted locations where batteries can provide more than one function (i.e., peak demand reduction and outage backup).</p> <p>4.5 Pilot C-PACER program in 2021, PACE in 2023.</p> <p>4.6 Maintain a publicly available dashboard of up to date, DERs and grid-connected renewable energy resources over time against target GHG emissions to show progress.</p>	<ul style="list-style-type: none"> <li>• Optimize grid to accommodate EVs and gas appliance conversion to electricity. (4.1, 4.2)</li> <li>• DERs can postpone investments in distribution lines and reduce peak electricity demand, while providing clean power (and backup power) to underserved areas. (4.3, 4.4, 4.5)</li> <li>• Provide intraday storage of energy from intermittent renewable resources. (4.1, 4.4)</li> <li>• Creates new jobs in <i>clean</i> energy. (4.4, 4.6)</li> <li>• Allows building owner, regardless of income status, to defer the upfront cost of efficient electric space and water heating <i>accelerating adoption</i>. (4.6, 4.1)</li> <li>• Transparency and accountability (4.1 through 4.6)</li> </ul>

**5. Moving to net zero: upgrade existing buildings by collaborating with local NGOs to accelerate energy efficiency upgrades. Require new buildings to be net zero carbon emissions capable no later than 2027.**

Actions	Benefits
<p>5.1 Fund a local NGO to develop a plan to pre-qualify heat pump products, installers, and suggest financial incentives/policies for County review and approval.</p> <p>5.2 Require/subsidize the installation of high efficiency electric heat pump water heater or furnace in existing buildings when replacement is needed.</p> <p>5.3 Develop a robust financing plan based on financial need that 1) supports major electric appliance upgrades, and 2) transition to NZC operations.</p> <p>5.4 Increase support of non-profit organizations that provide energy efficiency upgrades to residential and commercial buildings.</p> <p>5.5 Implement the latest WA state building codes into county building codes, with NZC and all-electric furnace and water heater by the 2027 code where possible.</p> <p>5.6 Educate the public and builders on the value of NZC homes and buildings and available financing.</p> <p>5.7 Explore options that reduce embodied carbon in building construction.</p> <p>5.8 Transition from kilowatt-hours and therms saved to carbon emissions reduced as the measure of success for energy efficiency programs.</p> <p>5.9 Develop policies and standard building plans for fast-tracking NZC building permits.</p>	<ul style="list-style-type: none"> <li>• Ensures that buildings and homes are energy efficient, lowers operating costs for owners, decreases impact on the electrical grid and reduced GHG emissions. (5.1 thru 5.9)</li> <li>• Electrification reduces indoor air pollution and health risks. (5.2)</li> <li>• Focus funding and efforts to create equity in underserved and low-income communities. (5.2, 5.3, 5.4)</li> <li>• Transparency and urgency needed to address climate change. (5.9)</li> </ul>

**6. Pilot key concepts to reduce electricity use and building GHG emissions through demonstration projects that can scale up rapidly.**

Actions	Benefits
<p>6.1 Convene a workshop to identify and prioritize a list of possible projects, including partners (i.e., utilities, NGOs, etc.) and with special attention to funding sources. Also use this workshop to identify initial candidate resilience hub sites (strategy 2).</p> <p>6.2 Identify an ad hoc task force of local experts to produce a comprehensive plan for reducing carbon emissions from existing and new buildings.</p> <p>a) Evaluate solar + battery microgrids for daily peak shaving and grid services, and backup during disruptions.</p> <p>b) Evaluate the benefit of a full-featured home energy management system consisting of “smart” appliances under local control, utility control, or a combination.</p>	<ul style="list-style-type: none"> <li>• Opportunity to educate officials, businesses, and the general public on energy efficiency and new building techniques that lead to NZC. It is also an opportunity to identify partners and sources of state and federal funding. ## Conclusion

Most of the electricity we use is consumed in our buildings. We must modify our buildings to use less energy and ensure their energy mix is green. To achieve the energy transition our state has mandated, it requires we utilize electricity and buildings as grid assets. The best way to achieve our goals is to rapidly electrify end uses while simultaneously removing fossil fuels from the electrical grid as articulated by the US and Washington state energy strategies.

This discussion on Electricity and Buildings focuses on how to reduce GHG emissions using financing solutions, code revisions, and technologies already used by other communities; strategies for enhancing social equity during the transition; and new technologies such as distributed energy generation and storage. Electrification of our buildings is particularly promising since we have many tools – incentives and regulatory measures, by which to assist in a just transition away from fossil fuels.

We believe that some of the simplest recommendations can be implemented to bring down GHG emissions while tackling the planning and policy work required to enable the shift to occur by 2030.

## Industry

Whatcom County has a GHG problem greater than many of the counties in the state. Cherry Point is home to two refineries, an aluminum smelter and a gas-fired thermal power plant that combined, were responsible for an astounding 51% of Whatcom County's GHG emissions in 2017 (Figure 2.2). There are three counties in Washington State with this concentration of GHG pollution and all are home to one of the five refineries. They include Whatcom, Skagit, and Pierce Counties.

Point-source emissions are those GHG emissions released from manufacturing processes and are defined by the US Environmental Protection Agency (EPA) as "any single identifiable source of pollution from which pollutants are discharged, such as a pipe, ditch, ship or factory smokestack." Industries that produce 25,000 metric tons (MT) of CO<sub>2</sub> equivalent (CO<sub>2</sub>e) emissions yearly are required to report their emission data to the US EPA.

*Emissions from industrial buildings' energy use for heating, lighting, etc. that are **not** part of manufacturing processes are included in the previous chapter under building energy use.*

For decades our refineries and former aluminum smelter have provided immense economic benefit to the County and its citizens, but they also have been major contributors to climate change. This puts us in a paradoxical situation. The community is working diligently to reduce its GHG emissions, but our point-source industries still are discharging massive quantities of GHG pollutants into our atmosphere, making it impossible to reach net-zero emissions by 2050 without dramatic changes.

The worldwide transition to a clean energy economy is ramping up rapidly and this is a pivotal moment for Whatcom County to assert leadership to improve our environmental and economic future. It's a worldwide competition and our hope is that Whatcom County will act on this unique opportunity.

### State and County Roles

Washington derives its authority to regulate GHG emissions from the US EPA. The Washington State Department of Ecology requires entities that emit 10,000 tons per year of CO<sub>2</sub>e to comply with state reporting and recordkeeping for GHGs. In 2016 Washington's Department of Ecology adopted a Clean Air Rule that established GHG emission standards for "petroleum producers and importers" among other entities. The rule was challenged in 2018 but in January 2020 Washington's Supreme Court ruled that the State has the authority to regulate direct (point-source) emissions. The rule requires direct emitters reduce GHG emissions by 5% every three years. This reduction can be satisfied by purchasing credits.

Unfortunately, a 1.7% reduction in GHG emissions annually by point-source emitters hardly addresses the urgent nature of our climate crises and would only reduce these emissions by 14% by 2030 using these emission goals. Far more than incremental reductions are needed to reduce these immense point-source GHG emissions.

The State Department of Commerce recently released its 2021 State Energy Strategy. In the effort to deeply decarbonize, the state's strategy promotes the development of clean fuel refining and carbon capture, storage and utilization (CCSU) and focuses on the production of green hydrogen and renewable fuels from biomass among numerous other innovative goals.<sup>83</sup> Washington's recently enacted low carbon fuel standard will only increase the demand for renewable fuels.

---

<sup>83</sup> Washington 2021 State Energy Strategy, Department of Commerce. December 2020.

The Washington [Climate Commitment Act of 2021](#) is a comprehensive cap and invest system that will go into effect January 2023.<sup>84</sup> This Act will establish a [cap and trade emissions market](#) in the state. Industries that emit 25,000 metric tons of GHGs or more will receive free emissions allowances equal to their emissions in 2022. The refineries at Cherry Point are subject to foreign and out-of-state competition and fall under the category of “Emissions-Intensive Trade-Exposed” (EITE) in this Act. EITE industries will receive free GHG credits through 2035 and not be subject to the cap on emissions to prevent relocation to non-regulated regions. Regardless of the EITE exception, this Act sets up a timetable for reducing GHG emissions and may increase the transition to renewable energy. The State’s leadership and commitment to implementing bold solutions to our climate problems should inspire and motivate our County leadership ambitions.

Whatcom County also has a role in regulating Industrial point-source GHG emissions through its zoning codes and the authority the State has granted in administering the State Environmental Policy Act or SEPA. The recently passed “Cherry Point Amendment” will require a conditional use permit for the expansion of existing fossil fuel refineries that will result in a cumulative increase by more than 10,000 barrels per day of crude distillation capacity or transshipment capacity. New fossil fuel refineries, piers, docks, or wharves are prohibited at Cherry Point as well as coal-fired power plants. Conversion of a renewable fuel refinery or renewable transshipment facility to fossil fuel is also prohibited.

The new Cherry Point zoning ordinance allows manufacturing, fabrication, printing, storage, boat building and repair, and solid waste handling facilities. New power plants are only allowed in the heavy industrial zone at Cherry Point and cannot use coal as a feedstock.

Whatcom County has the opportunity to create an historic solution to this industry problem. In order for Whatcom County to reduce its GHG emissions, the industries responsible for point-source emissions need to use new greener technologies for refining processes now, and plan to respond to future demands by reducing the production of refined petroleum products<sup>85</sup> as internal combustion engine (ICE) technology and gasoline continue to lose market share.<sup>86</sup>

### **Skilled Workforce Development**

Whatcom County has a long history of supporting energy production. It has been home to a petroleum refining economy since the mid-1950s starting with the construction of the Phillips 66 plant and followed in the early 1970s with the addition of the *bp* plant. These two Fortune 500 companies support over 2,600 high-paying manufacturing jobs and have created a significant portion of our economic prosperity.<sup>87</sup>

As the world accelerates its efforts to reach net-zero emissions in the coming years petroleum consumption will decline as will refineries and refinery jobs. This fact was confirmed in a recent study that showed over the coming decade, the fossil fuel industry is expected to lose about 140 jobs per year in Washington.<sup>88</sup> *bp*’s corporate announcement to reduce their fossil fuel production worldwide by 40%

<sup>87</sup> Employment at Cherry Point by the Center for Economic and Business Research, Western Washington University, March 2019. [https://cbe.wvu.edu/files/2019 Cherry Point Employment Impact Study.pdf](https://cbe.wvu.edu/files/2019%20Cherry%20Point%20Employment%20Impact%20Study.pdf)

<sup>88</sup> Pollin, Robert, Heidi Garrett-Peltier, and Jeannette Wicks-Lim, 2017. “A Green New Deal for Washington State.” University of Massachusetts Amherst, <https://www.peri.umass.edu/publication/item/1033-a-green-new-deal-for-washington-state>.

over this decade will undoubtedly reduce their workforce – unless *bp* simultaneously invests in new clean fuels production.

A key requirement for attracting new industries to Whatcom County is creating and maintaining a skilled workforce. Workforce development must be at the forefront of County economic development efforts. Washington state and the federal government are continuing to invest heavily in preparing workers for the growth in clean energy jobs (Figure 2.11). Whatcom County is fortunate to have the Bellingham Technical College and the Whatcom Community College which offer continuing educational opportunities for skilled workers.

Maintaining a skilled workforce in turn requires living wage jobs. Vicinity Motor Corporation (VMC) broke ground recently in Ferndale to build an electric bus assembly facility. Initially this 58,000 square foot building will support 20 clean technologies jobs with plans for expansion. Silfab Solar in Bellingham, a solar panel manufacturer, will be expanding in Skagit County due to a lack of available space in Whatcom County. In addition, Phillips 66 and *bp* continue to talk about developing a solar installation at Cherry Point to generate clean electricity for their processes. It is unclear whether or not the Regional Economic Partnership has a strategy for replacing the jobs that were lost when the Alcoa Intalco Works shuttered.

One area of the clean energy sector that is growing fast in Whatcom County is solar and heat pump installation. The recent heat wave and smoke from forest fires has caused a local boom in electric heat pump-based cooling and heating units. Skilled electricians and installers are central to these residential and commercial installations as they will also be in demand as the US expands and modernizes the electric grid and develops utility-scale renewables.

We must consider the many attributes of Whatcom County that can attract new carbon-free industries. PUD1 offers clean electricity that can be used in manufacturing processes and reduce the company’s carbon footprint. Our agriculture and forest products industries can help supply the feedstocks for clean fuels and new sustainable building products. Our ports and rail systems provide transportation for new products. And finally, the outdoor recreation opportunities, resources and climate provide the high quality of life important to many families and skilled workers.

## 2017 Assessment for Point-Source GHG Emissions

As mentioned previously, the County’s point-source emissions from industry were not included in the 2007 Whatcom County Action Plan (CAP) because disclosure of this information was not required until 2010. Table 2.1 shows 2017 emissions by specific point-source industries; they total 3,862,348 MT CO<sub>2</sub>e. Since the completion of the GHG Inventory, the Alcoa Intalco aluminum smelter halted production in 2020. With this closure, point-source emission countywide will drop by over a million metric tons of

### 2019 Washington Clean Energy Jobs

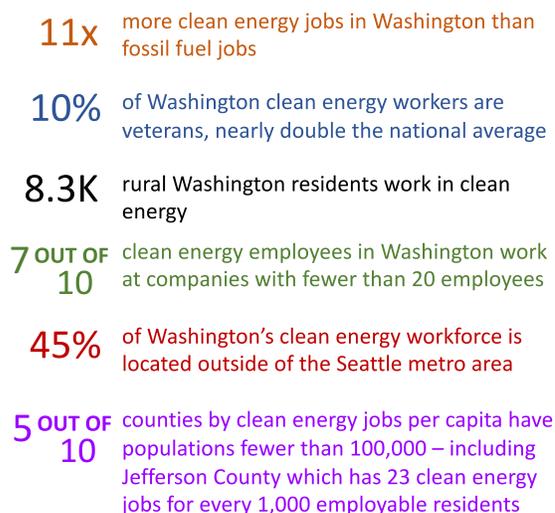

Figure 2.11. Assessment of Clean Energy Jobs from 2021 Washington State Energy Strategy

CO<sub>2</sub>e in future GHG assessments. Unfortunately, that substantial reduction was associated with the loss of over 700 jobs.

*Table 2.1. 2017 Industrial Point-Source Emissions by Source and by Facility (in Mt CO<sub>2</sub>e)<sup>89</sup>*

Sources of Emissions	Alcoa Intalco	Bp Cherry Point Refinery	NW Pipeline GP Sumas C/S	Phillips 66 Ferndale Refinery	Whitehorn Generation Station	Totals (by emission sources)
Stationary fuel combustion	N/A	1,251,561	N/A	383,963	1,715	1,637,239
Aluminum production	1,025,298	N/A	N/A	N/A	N/A	1,025,298
Petroleum refineries	N/A	239,213	N/A	305,344	N/A	544,557
Petroleum & natural gas systems	N/A	N/A	3,903	N/A	N/A	3,903
Industrial waste landfills	9,648	N/A	N/A	N/A	N/A	9,648
Hydrogen production	N/A	641,703	N/A	N/A	N/A	641,703
Totals (by facility)	<del>1,034,946</del>	2,132,477	3,903	689,307	1,715	3,862,348

From the data in the Table 2.1, it is clear that *bp* is the single greatest point-source emitter of GHGs in the County and also in the state during 2017. *bp* is a larger refinery and emits nearly three times the amount of GHGs as Phillips 66’s refinery. Therefore, *bp*’s Whatcom County-generated GHG pollution poses a serious, long-term problem for our community. Hopefully, this may simultaneously provide a remarkable opportunity to partner with *bp* to facilitate the transformative change that is necessary to meet the challenges of global warming. The ultimate goal is to facilitate the transition to low-emission industries by promoting green technologies as well as the sustainable energy jobs it will create for Whatcom residents.

As mentioned in [Section 1](#), *bp* is supporting a major shift to renewable energy production. Their intention is to reinvent *bp* and reduce their GHG emissions to net zero by 2050 or sooner. This includes reducing their oil production 40% and investing \$50 billion this decade. *bp* intends to spend 80% of this \$50 billion by 2025 and grow their hydrogen operations.<sup>90</sup> In addition, they plan to partner with 10 to 15 major cities around the world.<sup>91</sup> As *bp*’s US headquarters, *bp* partnered with the City of Houston to implement its climate action goals and is providing a \$2 million grant and two staffers to the Houston’s Office of Sustainability to that end.<sup>92</sup>

<sup>89</sup> Table 2.2 from Cascadia Consulting’s GHG Inventory

<sup>90</sup> Blackmon, David, “bp Commits Big Investments Towards Its ‘Net Zero Emissions By 2050’ Target,” October 10, 2020, Forbes. <https://www.forbes.com/sites/davidblackmon/2020/08/04/bp-commits-big-investments-towards-its-net-zero-emissions-by-2050-target/>

<sup>91</sup> Lin William, “Partnering with countries, cities and industries,” September 2020, *bp* week. <https://www.bp.com/content/dam/bp/business-sites/en/global/corporate/pdfs/investors/bpweek/bpweek-partnering-with-cities-countries-industries.pdf>

<sup>92</sup> “City of Houston Partners with *bp* to Advance Climate Action Plan Goals,” Mayor’s Office Press Release, July 22, 2020.

These actions are strategic on *bp*'s part, not just a sudden conversion to environmental values but an economic necessity. Weak natural gas and crude oil prices are a harbinger of the future for the industry. According to the law firm Haynes and Boone, in the first eleven months of 2020 forty-five oil and gas companies filed for bankruptcy.<sup>93</sup> Simultaneously wind and solar technologies are surging and will be further supported in future infrastructure bills which include efforts to remove electricity generated from fossil fuels from the grid by 2035 and strictly regulate methane emissions.<sup>94</sup>

Despite *bp*'s international aspiration, their Whatcom County refinery has not yet announced any effort to reduce its GHG emissions. It is hoped that *bp*'s Cherry Point refinery would address this problem. The VP of Corporate Analysis at Wood MacKenzie describes *bp* as the only organization of its "stature that has gone so far, or committed so unequivocally, to transforming itself in the face of the energy transition."<sup>95</sup> Therefore, *bp* should be open to a conversation about their local emissions and possible solutions. If corporate headquarters is buying charging stations, partnering to create large amounts of green hydrogen, funding major American city's Climate Action Plans, reducing oil production, eliminating all new exploration, and divesting itself of \$25 billion in assets over the next five years, then the Cherry Point facility, the newest refinery in the United States, should be thinking about innovations to reduce its GHG emissions.

## Goal and Strategies for Industry

***Goal: Eliminate 90% of the GHG emissions from the refineries by 2050.***

It is internationally acknowledged that the world's energy sector must be transformed rapidly to meet our collective goal of preventing a 2°C (3.6°F) increase in global temperature above pre-industrial levels. That translates into a goal of a 95% reduction below 1990 CO<sub>2</sub> levels by 2050. Remarkably, most of the nations of the world are now working to vastly overhaul their fossil-fuel-based economies in less than 30 years.

Whatcom County's refinery-derived CO<sub>2</sub> emissions pose a considerable challenge to meeting that goal and hence we offer detailed strategies designed for our specific situation. All strategies are offered from a collaborative mind set, utilizing creative problem-solving, and underpinned by an optimistic vision of what a carbon-neutral energy industry could look like.

---

### Strategies for Industry

1. Facilitate a solutions-focused collaboration with *bp*'s Cherry Point plant manager, energy experts in academia, and state and federal governments to discuss ways to achieve a 50% reduction in their point source GHG emissions by 2030.
2. Promote the research, development, and collaboration needed to build a hydrogen electrolysis facility to create green hydrogen in Whatcom County.

---

<sup>93</sup> Lefebvre, Ben, and Kelsey Tamborrino, "Trump's unplanned gift to Biden: Clean energy on the rise," December 29, 2020, <https://www.politico.com/news/2020/12/29/trump-biden-clean-energy-451546>.

<sup>94</sup> Ibid.

<sup>95</sup> Blackmon, "*bp* Commits Big Investments Towards Its 'Net Zero Emissions By 2050' Target".

**Strategy 1: Facilitate a solutions-focused collaboration with *bp*'s Cherry Point plant manager, energy experts in academia, and state and federal governments to discuss ways to achieve a 50% reduction in their point source GHG emissions by 2030.**

Whatcom County's goal should be to aid in any possible manner the implementation of the greenest technologies available to reduce GHG emissions from our refineries, particularly *bp*. Such a public-private collaboration, focused on designing and implementing pathways to carbon neutral solutions, has the potential to benefit all parties and aligns with the climate goals of Whatcom County, Washington State, the federal government and *bp*'s net-zero ambitions.

The purpose of an in-depth discussion with *bp* is to motivate this international organization to specifically focus on its GHG emissions impacts to Whatcom County, Washington State, and the adjacent communities of Blain, Ferndale, and Bellingham. While *bp* is the major emitter of GHGs in Whatcom County and Washington State, it is also one of the most climate-conscious petroleum companies in the world, but to date their carbon-reduction efforts have not been focused on their Cherry Point refinery. Since *bp*'s Cherry Point refinery is the newest in the nation and may be in operation well into the future, their emissions have the potential to be a chronic problem for our community. For this reason, a public-private dialogue and collaboration is warranted.

This solutions-focused discussion is needed to understand the history of previous efforts, the feasibility of possible actions, the resources required and potential sources of funding, the need for technical partnerships, and any legislative policy or appropriations needed to reduce the industry's GHG emissions.

Numerous resources are available to the County that can provide the support and creative problem solving necessary to expedite this task. They include the technical expertise of Western Washington University's Institute for Energy Studies, the University of Washington, Washington State University, the Regional Economic Partnership, and the Whatcom PUD1. This dialogue should also include appropriate representation from relevant federal and state agencies. For example, Washington State's Departments of Commerce and Ecology as well as the Governor's Office could be instrumental in aiding with resources needed to implement a significant GHG solution as could the federal government through the National Laboratories of the Department of Energy and/or the White House.

The moment is uniquely ripe for public-private collaboration given the climate focus of Governor Jay Inslee and the Biden Administration. Reducing GHG is a priority for this president who has made a commitment to a historic investment in energy and climate research and innovation. Retooling existing refining process to reduce emissions by utilizing green technologies is exactly the type of task that warrants extensive federal, state, local, and private partnership.

One area that should be discussed is enhancing energy efficiency in industrial processes. The US EPA's EnergyStar program is a voluntary program that provides energy management tools and strategies for the petroleum refining industry, among others. The program provides guidance on organization-wide energy management systems. It employs sub-metering, monitoring and control systems that can reduce the time required to perform complex tasks hence reduce energy consumption and GHG emissions.<sup>96</sup>

---

<sup>96</sup> Worrell, Ernst, Mariëlle Corsten, and Christina Galitsky, "Energy Efficiency Improvement and Cost Saving Opportunities for Petroleum Refineries." USEPA, February 2015. p 15.

The list of potential energy reductions (and associated emission reductions) is extensive and includes suggestions related to power recovery in high pressure operations such as fluid catalytic crackers and hydrocrackers, the use of combined heat to power (CHP) cogeneration plants, or medium- to high-temperature heat pumps to electrically crack petroleum feedstock.

The Phillips 66 refinery at Cherry Point has been awarded an EPA EnergyStar certificate for their voluntary efforts to reduce greenhouse gas emissions through energy efficiency. The certification indicates that the refinery performed in the top 25 percent of similar facilities nationwide for energy efficiency and met specific environmental performance levels set by the EPA.<sup>97</sup> *bp* has not participated in this program but no doubt has instituted some if not many of the energy efficiencies suggested. It's highly recommended that *bp* voluntarily engage in this program to show their commitment to reducing GHG emissions in Whatcom County.

As mentioned earlier, electricity use from the grid by industry is not categorized as a point-source emission, so the use of clean electricity will not reduce this category but would reduce industrial electricity emissions that are shown in [Figure 2.6 in Electricity and Buildings](#). Currently the *bp* refinery uses energy purchased on the spot market or from PSE, neither of which provide carbon-free electricity. In fact, both sources of energy are fossil fuel intensive, and the electricity generated is usually derived from greater than 60% fossil fuel. By comparison PUD1's electricity generation is only 2% fossil fuel.

Nearly a century ago Congress authorized the Bonneville Power Administration (BPA) to sell power to utilities and a few large industries. Whatcom PUD1's electricity is purchased from BPA and provides the Phillips 66 refinery with 98% clean electricity. *bp*'s location at Cherry Point offers the company with a unique opportunity to explore utilizing low carbon electricity provided by PUD1 to effectively reduce their GHG emissions.

Whatcom PUD1 is currently engaged in strategic planning related to their electricity capacity needs for the future. The PUD1 should seriously evaluate expanding its capacity to provide significant quantities of clean, green electricity to decrease the carbon footprint of our local industries. PUD1 is uniquely positioned to provide significant climate solutions to the State and the County. And for that reason, PUD1 in coordination with the County should attempt to engage *bp*.

BPA lines currently serve the curtailed Alcoa plant, and the distance required to extend those lines to *bp* is minimal, although costly. There may be an opportunity to use the mechanisms provided by Washington State's [2021 Climate Commitment Act](#) to help finance extension of these power lines. Clearly creative thinking is warranted to reduce the more than 2 million metric tons of CO<sub>2</sub>e emitted by *bp* annually in Whatcom County.

Ultimately, it may take the assistance of the federal government to accelerate the greening of refining processes. The federal government has long intervened in the energy market by providing tax subsidies, some of which have existed for a century.<sup>98</sup> Tax subsidies provide a means to encourage domestic energy production. But, in order for the tax code to align with fossil-free energy goals, tax subsidies need to be overhauled to provide incentives to reduce GHG emissions and enable new climate-compatible energy technologies. Currently the code allows companies to deduct a majority of the costs incurred from drilling new wells domestically. Instead, the federal government should subsidize the

---

<sup>97</sup> <https://www.phillips66.com/sustainability/energystar>

<sup>98</sup> Fact Sheet | Fossil Fuel Subsidies: A Closer Look at Tax Breaks and Societal Costs, Environmental and Energy Study Institute, July 29, 2019.

creation of utility scale renewable energy farms and/or the implementation of green hydrogen production at refineries, plus the T&D infrastructure to connect them to the NW grid.

**Strategy 2: Promote the research, development, and collaboration needed to build a hydrogen electrolysis facility to create green hydrogen in Whatcom County.**

Hydrogen is used predominately in petroleum refining in the hydrocracking and hydrotreating processes. It is also used in transportation as rocket fuel and in hydrogen fuel cell powered forklifts and vehicles. Although a minor component of transportation there is considerable effort to expand hydrogen use in that sector to reduce the amount of GHGs in the atmosphere. Hydrogen fuel cells are the likely replacement for diesel-powered semitrucks and trains, but also could be used for airplanes and ships. Multiple federal reports name transportation as the largest new market opportunity for hydrogen.

California has taken the lead in promoting hydrogen use. It has over 40 hydrogen fueling stations and dozens under construction to support the 7,500 hydrogen cars on the road. Los Angeles Department of Water and Power has pledged to transition to a hydrogen fueled power plant from its coal-fired Intermountain Power Plant, the first effort of this kind.<sup>99</sup> Airbus announced in September 2020 that it plans to develop a commercially viable, hydrogen fuel cell airplane within five years.<sup>100</sup> The first hydrogen fuel cell-powered maritime vessel was recently launched in Bellingham. Built by All American Marine and the investment company SWITCH Maritime, the ship will soon begin trips in California's Bay Area.<sup>101</sup>

Washington State has also seen the value of hydrogen. In 2019 Washington State authorized public utilities districts (PUDs) to produce, distribute and sell renewable hydrogen. Douglas County's PUD received \$250,000 in the 2020 Supplemental Capitol Budget for its Renewable Hydrogen Project.<sup>102</sup> The project provides a model for other PUDs along the Columbia River but also for PUDs interested in developing solar and wind power. In September 2020 Douglas County's PUD and Toyota received a \$1.9 million grant from the Centralia Coal Transition Board to develop the first hydrogen fueling station in Washington State.

**Hydrogen Varieties**

The carbon footprint of hydrogen is dependent on the method of production. There are three main varieties of hydrogen that are referred to as grey hydrogen, blue hydrogen, and green hydrogen.

Currently, 95% of all hydrogen produced in the US is created through the intensive CO<sub>2</sub>-emitting process of steam methane reforming (SMR). The resulting gas is referred to as **grey hydrogen** because of its high GHG footprint (Table 2.2). The process uses natural gas (methane) and steam (heated water) to produce hydrogen and carbon monoxide (CO). The CO converts in a subsequent reaction with steam to create CO<sub>2</sub> and H<sub>2</sub>.

---

<sup>99</sup> Roth, Sammy, "Los Angeles wants to build a hydrogen-fueled power plant," LA Times, 4/10/19).

<sup>100</sup> Ryan, Charlotte and Will Mathis, "Airbus bets on hydrogen to deliver Zero-Emission Jets," Bloomberg News, 12/4/20.

<sup>101</sup> Kemp, Ysabelle, "This monumental step toward more sustainable shipping taken in Bellingham," The Bellingham Herald, Aug 18, 2021.

<sup>102</sup> Vibbert, Meaghan, "Renewable Hydrogen Production Facility Groundbreaking," March 8, 2021. <https://douglasrud.org/Pages/Renewable-Hydrogen-Production-Facility-Groundbreaking.aspx>

Grey hydrogen generation produces large quantities of CO<sub>2</sub> and should not be used as a replacement for natural gas (methane). Because of this, grey hydrogen has a greater carbon footprint than using natural gas-to produce electricity.<sup>103</sup>

Another fundamental concern is that the SMR process utilizes methane. Methane is a far more powerful GHG but has a much

shorter decay half-life in the atmosphere before decomposing to CO<sub>2</sub>. When it leaks to the atmosphere, it traps 84 times as much heat in the atmosphere than CO<sub>2</sub> over a 20-year period. It is estimated that methane is responsible for 23% of all observed changes to the Earth’s climate over the last century.<sup>104</sup> The point is, natural gas leakage occurs along the entire path from mining to end use and is an environmental threat along that pathway.

To reduce the amount of CO<sub>2</sub> released in the production of grey hydrogen, efforts have focused on carbon capture, storage and utilization (CCSU)<sup>105</sup> to reduce the environmental impact. Grey hydrogen treated by CCSU is referred to as **blue hydrogen**. CCSU is simply a process to capture the CO<sub>2</sub> from the SMR process and either permanently store it in deep geologic formations or utilize the CO<sub>2</sub> to form other products. Unfortunately, markets for such large quantities of CO<sub>2</sub> do not currently exist in many areas of the county, including Washington state. The economics of the carbon capture and storage (CCS) process are also daunting, requiring large amounts of energy to capture, separate, and store the CO<sub>2</sub>. Future advances in technology may reduce the cost of hydrogen produced by SMR with CCS.

**Green hydrogen** is created by using emissions-free electricity (electricity generated from solar, wind, hydroelectric dams or nuclear) to run a current through water to break the bond between the hydrogen and oxygen atoms to produce hydrogen gas in a process called electrolysis. The hydrogen gas is then compressed to create a fuel that can be stored or used in fuel cells where it is converted to electricity. Water vapor is discharge as opposed to CO<sub>2</sub>. Heavy batteries are not needed in fuel cell vehicles and hydrogen fuel is pumped similar to refueling of gas vehicles.

Currently electrolysis requires massive amounts of electricity. As a result, most electrolysis installations in Washington State are in areas where excess emissions-free electricity is available for no or low cost. This excess emissions-free electricity may come from grid curtailments of solar, wind and hydroelectricity when production of electricity exceeds the demand needed for the electric grid. For example, the 5 MW hydrogen electrolysis facility being built in Douglas County in eastern Washington will use excess hydroelectricity generated by high river flows in the winter and early spring, which are only intensifying with climate change.

*Table 2.2. Calculated GHG emissions by H<sub>2</sub> production method. Emissions from blue H<sub>2</sub> can vary widely with the age and efficiency of the SMR process. Upstream methane emissions are not included in the SMR estimates.*

Type of H <sub>2</sub>	Method of H <sub>2</sub> Production	GHG Emissions (kg CO <sub>2</sub> /kg H <sub>2</sub> )
<b>Green Hydrogen</b>	Electrolysis with Renewable Energy	0
<b>Blue Hydrogen</b>	<b>SMR with CCS</b>	<b>1.7</b>
<b>Grey Hydrogen</b>	SMR	9.3

<sup>103</sup> Rapier, Robert. “Estimating the Carbon Footprint of Hydrogen Production,” Forbes, Jun 6, 2020

<sup>104</sup> [https://climate.nasa.gov/climate\\_resources/225/video-methane-sources/](https://climate.nasa.gov/climate_resources/225/video-methane-sources/), July 20, 2020.

<sup>105</sup> The US Department of Energy defines CCSU as a process that captures carbon dioxide emissions from sources like fossil-based power plants and either reuses or stores it so it will not enter the atmosphere. CO<sub>2</sub> storage in geologic formations includes oil and gas reservoirs, coal seams and deep saline reservoirs – structures that have stored these oil, gases, and brines for over millions of years. <https://www.energy.gov/carbon-capture-utilization-storage>

The aggressive pursuit of a green hydrogen facility is very strategic. It provides opportunities for both current and new industrial partners, thus maximizing support for Whatcom’s workforce and economy in this critical transformation period. Upgrading existing T&D infrastructure is required to support a green hydrogen facility; but also has multiple strategic benefits for any manufacturer at Cherry Point. Those include enabling large flexible industrial loads for the entire NW grid (using otherwise curtailed renewable energy that would be wasted and enabling load reduction during peak periods). These “grid services” are valuable and enable lower electrical prices in contracts. In the case of green hydrogen production, otherwise wasted renewable energy is captured and converted to an energy carrier for local storage and future distribution and use, without imposing undue demands on the NW grid. All this while making Cherry Point's skilled workforce and existing infrastructure available for product supply chains.

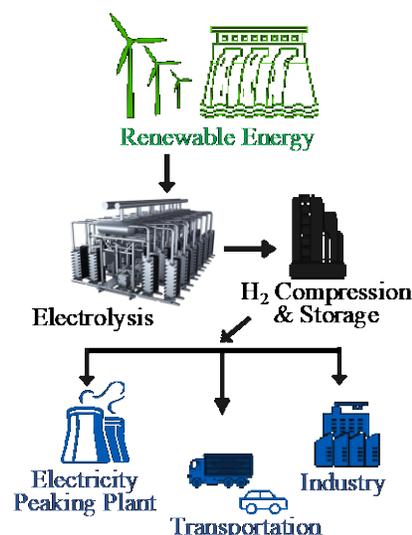

### *The Clean-Energy Potential of Green Hydrogen and World-Wide Demand*

As the world becomes more and more concerned with reducing GHG emissions the demand for green hydrogen has grown dramatically to replace coal, oil, and natural gas with this carbon-free fuel. Countries around the world, various states, and numerous industries are banking on hydrogen as an energy carrier and storage medium, in places where there will be a surplus of renewable electricity available. Europe is taking the lead in developing a hydrogen economy.<sup>106</sup> France, Germany, Italy, Portugal, and Spain as part of their hydrogen strategy anticipate investing \$44 billion in green and blue hydrogen programs in the next decade.<sup>107</sup>

The International Energy Agency roadmap for net zero energy by 2050 predicts that hydrogen use will increase globally from less than 90 million MT in 2020 to more than 200 million tons in 2030.<sup>108</sup> In the US, almost two thirds of the annual 10 million tons of hydrogen is used for petroleum refining. Most of the remainder is used in other industrial processes such as ammonia and methanol production, metal refining, glass production and electronics fabrication.<sup>109</sup>

The cost of generating green hydrogen has fallen by 40% since 2015 and is anticipated to fall an additional 40% by the end of 2025.<sup>110</sup> Hydrogen Europe, a coalition of private companies, research institutions and national agencies are working to push through the barriers of low demand for green hydrogen and lack of infrastructure to achieve their climate goals and generate a substantial number of new jobs.

*bp* is on the cutting edge of green hydrogen technology in Germany. In November 2020, *bp* and Ørsted announced they will collaborate on a 50 MW electrolyzer in Germany to replaced

*Figure 2.12. Liquid H<sub>2</sub> production, storage, and use.*

<sup>106</sup> Amelang, Soren, “Who will be the Hydrogen superpower? The EU or China,” August 31, 2020, <https://energypost.eu/who-will-be-the-hydrogen-superpower-the-eu-or-china/>

<sup>107</sup> Adler, Kevin, “Europe emerges as leader in hydrogen economy,” December 15, 2020, [ihsmarkit.com](https://www.ihsmarkit.com).

<sup>108</sup> Ruth, M., P. Jadun, N. Gilroy, et al. 2020. The Technical and Economic Potential of the H<sub>2</sub>@Scale Concept within the United States. Golden, CO: National Renewable Energy Laboratory, NREL/TP-6A20-77610.

<sup>109</sup> Net Zero by 2050, A Roadmap for the Global Energy Sector. International Energy Agency, 2021. <https://www.iea.org/reports/net-zero-by-2050>

<sup>110</sup> Ibid.

20% of the refinery's existing fossil-fuel-derived hydrogen.<sup>111</sup> This is *bp*'s first full-scale commercial hydrogen venture. It is anticipated to be functional by 2024. Additionally, by 2030 *bp* anticipates having 10% of the clean hydrogen market in "core hydrogen markets" as it pursues carbon-neutrality by 2050.

This is not the only hydrogen electrolysis plant in Germany. Shell is part of a consortium that is building the world's largest hydrogen electrolysis plant at its Rheinland refinery. The REFHYNE project will replace Shell's two existing SMR processes and significantly reduce its CO<sub>2</sub> emissions. It will also allow the company to provide leadership in the refining industry's transition to clean energy.

These and numerous other green hydrogen ventures are igniting across the world despite concerns about the cost of generating electricity to produce hydrogen. But there is increasing optimism that green hydrogen may become significantly cheaper. For example, Washington State University researchers have discovered and tested a new inexpensive catalyst for an electrolysis exchange membrane that does not rely on expensive precious metal catalysts such as platinum and iridium and also does not require use of corrosion-resistant metal plates.<sup>112</sup> Promising breakthroughs like these that lower the cost of hydrogen production need to be deployed and evaluated at scale to really fully understand the cost savings and feasibility of these new approaches.

Bill Gates and Hong Kong billionaire Li Ka-shing recently provided funds to back H<sub>2</sub>Pro, an Israeli start up, that is using a new method to produce green hydrogen. The method reduces the energy required by adding an additional thermal step. H<sub>2</sub>Pro anticipates making green hydrogen for \$1 per kilogram by the end of the decade, far cheaper than the \$2.5 to \$6.80 2019 price of a kilo of green hydrogen.<sup>113</sup> If this venture is successful most of the criticism of hydrogen energy will likely evaporate. It is this type of innovative endeavor that will give *bp* a competitive edge in the burgeoning renewable fuels market of the near future.

It is acknowledged that strategy 2 is the most aspirational and challenging of the strategies outlined in this chapter, but the concept is consistent with goals of numerous states and countries as well as supported by the 2021 Washington State Energy Strategy. Certainly, this strategy would warrant the full-scale support of the county, state, and federal governments as producing green hydrogen will enable numerous benefits.

## Timeline and Summary of Strategies, Actions and Benefits

### Strategies, Actions and Benefits for Industry

1. Facilitate a solutions-focused collaboration with <i>bp</i> 's Cherry Point plant manager, energy experts in academia, and state and federal governments to achieve a 50% reduction in their point source emissions by 2030.	
Actions	Benefits of Actions
<p>1.1 Promote enhanced energy efficiency at <i>bp</i>'s Cherry Point refinery through recommendations outlined in US EPA's EnergyStar program.</p> <p>1.2 Replace the current production and use of grey hydrogen at <i>bp</i>'s refinery with green hydrogen.</p> <p>1.3 Reduce GHG emissions at <i>bp</i>'s Cherry Point refinery and at any new or expanded facility at Cherry Point by promoting and facilitating the supply (i.e., transmission) and use of fossil-fuel free electricity.</p> <p>1.4 Develop recommendations for potential inclusion in the State's Climate Commitment Act's rulemaking process.</p> <p>1.5 Evaluate &amp; promote possible incentives &amp; tax subsidies at the federal level to accelerate the greening of refinery processes.</p>	<ul style="list-style-type: none"> <li>Reduce GHG emissions from industrial point source (1.1, 1.2).</li> <li>Action 1.3 will reduce emissions from industrial buildings electricity use (<a href="#">insert hyperlink</a>) but will <b>not</b> impact industrial point-source emissions, which only apply to manufacturing processes.</li> <li>Represent the County's interests at the state (1.4) and federal (1.5) levels, especially development of the workforce.</li> </ul>

2. Promote the research, development, and collaboration needed to build a hydrogen electrolysis facility to create green hydrogen in Whatcom County.	
Actions	Benefits of Actions
<p>2.1 Encourage PUD1 to evaluate the access to and availability of clean electricity from BPA to develop a 100 MW green hydrogen plant in Whatcom County.</p> <p>2.2 Create a task force with PUD1, Port of Bellingham, tribal &amp; public representation with the goal of developing a solar and/or wind energy facility.</p> <p>2.3 Collaborate with PUD1 and the Port of Bellingham to reach out to known green hydrogen supporters and producers to build a new green hydrogen facility at Cherry Point.</p>	<ul style="list-style-type: none"> <li>Enabling increased T&amp;D capacity to Cherry Point leverages access to regional electricity resources for all current and future users. (2.1)</li> <li>A green H<sub>2</sub> facility will provide a large flexible load on the regional BPA grid that can negotiate lower prices for power. (2.1, 2.3)</li> <li>Produce green hydrogen for multiple new markets by leveraging existing infrastructure (shipping, transport) and skilled workforce.</li> </ul>

<p>2.4 Working with State, federal, PUD1 and Port, understand the necessary legislative &amp; fiscal support needed to construct a green hydrogen plant and supporting workforce.</p>	<ul style="list-style-type: none"> <li>• Attract additional clean energy manufacturers to Whatcom County. (all actions)</li> </ul>
---	--

## Conclusion

We must acknowledge the importance of this moment and let it motivate us to be as creative and strategic in designing the next steps to deeply decarbonize and transform the energy sector. We need to look with fresh eyes at new processes not merely the mechanics but the soundness of the process of each technical energy innovation. We are in fact outlining a technologic revolution to the cleanest, healthiest, and most sustainable way of doing things.

This discussion on industrial point source emissions has focused on how to reduce GHG emissions from petroleum refineries and help Washington state transition to a clean fuel economy. We believe that some of the simplest strategies can be implemented and easily bring down GHG emissions while simultaneously beginning to turn the wheels on the process of envisioning, designing, and implementing the green energy industrial sector that Whatcom County and the state of Washington needs for a healthy and safe future. This rapid transition is inevitable and necessary. But it is also a competition with winners and losers. Whatcom County must compete vigorously in order to define our path.

# Transportation

Whatcom County’s climate action goals, strategies, and actions are intended to reduce GHG emissions in alignment with federal, state, municipal, and other existing community efforts. The Washington 2021 State Energy Strategy describes numerous proposals (most of which require action by the Washington State Legislature) that lead to GHG emissions reductions, including many in the area of transportation.

Transportation is critical to human civilization. We must have efficient ways to move goods and people. This movement requires energy, and in our current transportation system, the primary mode of transportation is single-occupancy internal combustion engine (ICE) vehicles that use fossil fuels as an energy source. One of the major drawbacks to the use of ICE vehicles is their emissions of a variety of pollutants, including large quantities of greenhouse gases (GHGs) such as CO<sub>2</sub> and nitrogen oxides (NO<sub>x</sub>).<sup>114</sup>

In 2017, transportation was the third largest source of Whatcom County’s GHG emissions (at 13.7%); only industrial sources (50.9%) and electricity consumption (18.2%) were larger (Fig. 2.2). Because Whatcom County’s transportation demand is projected to increase in the coming years with a growing population,<sup>115</sup> addressing mobility needs while reducing transportation emissions should be a primary target of Whatcom County’s climate change mitigation efforts.

The combustion of fossil fuels by on-road vehicles is the leading contributor to transportation emissions (see Figure 2.13<sup>116</sup>). Another essential component of transportation-related emissions is land use. Land use patterns, such as road networks, housing density, and zoning laws, determine transportation accessibility and behavior. Therefore, reducing transportation emissions will require changes in Whatcom County’s land-use patterns. Land use issues, including those related to transportation, are addressed in detail in the Land Use [chapter](#) of this report.

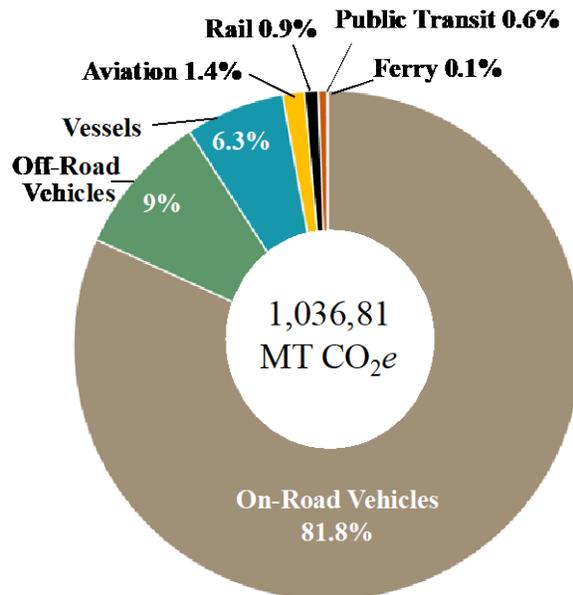

Figure 2.13: Whatcom transportation emissions in metric tons of CO<sub>2</sub>e.

<sup>114</sup> When we estimate the benefits of GHG reductions we should also include the co-benefits of reducing the health effects of local pollution.

<sup>115</sup> Whatcom Council of Governments, June 9, 2017, Whatcom Mobility 2040 <https://whatcommobility.org/2040-2/2040activity/>

<sup>116</sup> Whatcom County Greenhouse Gas Inventory Report, 2020, p. 12 Fig. 5. [https://www.whatcomcounty.us/DocumentCenter/View/48029/WhatcomCountyGHGInventory\\_DRAFT\\_June2020](https://www.whatcomcounty.us/DocumentCenter/View/48029/WhatcomCountyGHGInventory_DRAFT_June2020) Note that “off-road” vehicles are “agricultural, construction, commercial and industrial, lawn and garden, and recreational vehicles and equipment.”

Generally, there are two ways to reduce transportation emissions associated with a trip: reduce vehicle miles traveled (VMT) or reduce the emissions per vehicle mile traveled (E/VMT)<sup>117</sup>.

- Strategies for reducing vehicle miles traveled could be achieved in various ways, such as through land-use changes, using public transit instead of single-occupancy vehicles, or expanding remote work options.
- Strategies and actions that reduce the emissions per vehicle mile traveled include switching to alternative modes of transportation, such as bicycling and walking, or using alternative fuels for transportation, such as electricity or hydrogen.

Multiple state and local government agencies engage in transportation (and other) planning processes, all of which include consideration of climate-related issues. The goals and strategies in this Climate Action Plan are compatible with and supportive of those found in other agencies' plans.

- Many counties and cities are addressing climate change through land use and transportation planning or by adding optional elements to their Growth Management Act comprehensive plans.
- The Washington State Department of Transportation has both a Transportation Plan<sup>118</sup> and an Active Transportation Plan,<sup>119</sup> the latter is concerned with active transportation, defined as walking, biking or skateboarding to get from one place to another. While active transportation considerations often play a role in overall transportation planning (e.g., the inclusion of bike lanes on public thoroughfares), it is also beneficial for safety reasons to maintain active transportation routes apart from those used by motorized vehicles.
- Transportation planning in Whatcom County is overseen by the Whatcom Council of Governments (WCOG). WCOG maintains a long-term transportation plan, called the Whatcom Mobility 2040 Plan,<sup>120</sup> as well as shorter term (~5 years) Transportation Improvement Programs<sup>121</sup> that prioritize projects to be undertaken. In addition, the Whatcom Transportation Authority 2017 Strategic Plan<sup>122</sup> (to be replaced by in 2021 by the adoption of WTA 2040, a long-range strategic plan) incorporates climate considerations through analyses of the potential for electric buses and the installation of solar panels at major WTA facilities and bus stops.

Whatcom County's Bicycle/Pedestrian Advisory Committee is in the process of updating the County's Pedestrian and Bicycle Plan<sup>123</sup>, which was last revised in 2011. In December of 2019, the City of Bellingham produced a Climate Action Task Force Report that includes recommendations regarding transportation issues, and the City also annually updates its own Transportation Improvement Program.

---

<sup>117</sup> A simple but useful way to think about total transportation emissions (E) is as the mathematical product of vehicle miles traveled (VMT) and emissions per vehicle-mile traveled (E/VMT):  $E = VMT \times (E/VMT)$ . Note that the equation also implies that when E/VMT is at or very close to zero, reductions in VMT have little impact on emissions; they would still reduce traffic congestion, accidents, etc.

## Recent Legislation

Three important climate related bills with direct or indirect impacts on the strategies and actions contained in this document were passed by the Washington State Legislature in its recently concluded 2021 session. Two of these take direct aim at transportation emissions.

- An act relating to preparedness for a zero-emissions transportation future (HB 1287) requires state agencies and electric utilities to plan for increased EV charging capacity, requires new multifamily residential buildings to include EV charging capability, and establishes a goal that all publicly and privately owned passenger and light duty vehicles of model year 2030 or later sold, purchased, or registered in Washington state be electric vehicles.
- An act relating to reducing GHG emissions by reducing the carbon intensity of transportation fuel (HB 1091) establishes a tradeable credit based clean fuel standard and contains provisions designed to help expand EV charging capabilities, including those in underserved areas.
- The third bill, known as the Climate Commitment Act (SB5126), establishes a cap-and-trade carbon pricing system requiring that refineries (along with utilities, natural gas companies, and other facilities emitting more than 25,000 MT CO<sub>2</sub>e) obtain tradeable permits to cover the quantity of emissions associated with the production and consumption of their products. The total number of permits issued by the state will decline over time in line with state emission reduction goals. Both SB5126 and HB 1091 contain provisions that will fund a variety of climate change related activities, including at the local level, from the revenues gained in the sale of allowances or credits. This system will result in effectively putting a price to be paid for each ton of GHGs emitted from the electricity, natural gas, and motor fuel sold anywhere in Washington, including Whatcom County.

Governor Inslee signed the legislation,<sup>124</sup> and this will be the start of a complicated implementation process. First, both HB1091 and SB5126 require, prior to their becoming effective, the passage of a state transportation funding act meeting certain standards. In addition, state agencies must conduct rulemakings to implement specific portions of the legislation. Rulemaking processes typically last from several months to more than a year, especially for complicated pieces of legislation,<sup>125</sup> and they offer opportunities for interested parties to comment on proposed regulations.

The basic purpose of carbon pricing and clean fuel standards approaches to GHG emissions reductions is to incorporate the previously unaccounted for costs of pollution into decisions made by producers and consumers, with the increased costs being passed to consumers. Producers, in trying to keep their prices lower, have an incentive to reduce emissions from production processes and, where possible, from the usage of their products. To the extent that carbon pricing results in higher final product prices, consumers have an incentive to use less of that product. One negative impact of carbon pricing is that it is regressive—it takes a larger share of low-income consumers' incomes than it takes from high-income consumers. SB 5126 contains environmental justice provisions to favor overburdened communities in the awarding of projects funded from revenues collected by the state under the legislation.

---

<sup>124</sup> The governor vetoed the portion of HB 1287 requiring EVs, along with portions of SB 5126 concerning state-tribal consultations.

<sup>125</sup> For example, rulemaking processes stemming from the 2019 Clean Energy Transformation Act are still underway.

At the time of this report, the legislative outcomes regarding federal climate change efforts remain uncertain, but current proposals contain a wide variety of provisions designed to decrease the shares of GHG producing fuels in our nation’s energy system. Nevertheless, some federal grant money is already available from the Federal Highway Administration for EV charging infrastructure on the national highway system, which in Whatcom County consists of Interstate 5 and several other main arterial roads, including segments of state highways.<sup>126</sup>

## Goal and Strategies for Transportation

***Goal: Reduce transportation-related GHG emissions 45% below 1990 levels by 2030, including eliminating fossil fuels from County government transportation operations where technology permits, while ensuring climate-resilient transportation systems.***

Strategies proposed toward achieving this goal involve both benefits (benefits beyond those directly related to climate change are often referred to as “co-benefits”) and potential obstacles or drawbacks. Some co-benefits of the proposed transportation strategies are cleaner air and increased use of active transportation, leading to positive health outcomes. The reduction in local pollution is significant, especially for historically marginalized communities who have often borne a greater share of the negative impacts of that pollution.

Poor air quality associated with transportation is highlighted in the Whatcom County Climate Vulnerability Assessment. While the primary goal of eliminating fossil fuels from transportation is to reduce GHG emissions, the co-benefit of reductions in local and regional air pollution are important. These pollutants include nitrogen oxides (NO<sub>x</sub>), volatile organic compounds (VOCs), particulate matter (PM) and air toxics, all of which have negative health effects caused by breathing dirty air. For example, nitrogen oxides and VOCs react in sunlight to form ozone, which is the primary component of smog, which can cause a variety of health problems.<sup>127</sup> These effects are more pronounced in areas close to busy thoroughfares, which tend to have higher housing concentrations occupied by disadvantaged populations.

It should be noted that while these strategies are largely aimed at mitigating GHG emissions, some of them also present opportunities for adaptation, which will make Whatcom County more resilient to the expected impacts of an already changing climate. In particular, the Whatcom County Climate Vulnerability Assessment places roads and bridges in its High Vulnerability category because of likely impacts from extreme heat, heavy rain, flooding, and sea level rise. That Assessment also assigns medium vulnerability to public transit because of its dependence on roads and bridges for many public transit routes.

The four transportation strategies below address three broad areas: reducing VMT directly, moving toward alternative modes of transportation, or switching to alternative fuels. A detailed discussion of specific actions recommended under each of these strategies can be found in the appendix.

---

## Strategies for Transportation

1. Reduce vehicle miles traveled (VMT) by promoting alternatives to single occupancy vehicle (SOV) transportation.
2. Promote increased use of electric, hybrid, and alternative fuel vehicles.
3. Improve County vehicle fleet utilization while transitioning to non-fossil alternatives and reducing GHG emissions associated with County projects.
4. Use County resources to participate in and advocate for inter-governmental efforts at the state level for policies and programs to reduce GHG emissions associated with transportation.
5. Incorporate climate adaptation considerations into all County transportation planning processes.

### Strategy 1: Reduce vehicle miles traveled (VMT) by promoting alternatives to Single Occupancy Vehicle transportation

Single occupancy vehicles (SOVs) are the most common form of transportation because of their convenience and affordability, and road networks have been designed primarily for them. In addition, lower density land use patterns in the County often make walking, biking, or using public transit more difficult than in higher density urban areas. Strategy 1 focuses on promoting alternative transportation modes – one approach to reducing SOV use. Increasing the accessibility, affordability, and convenience of multimodal transportation options, such as bicycling, walking, or riding public transit, and even by eliminating the need for transportation through improved information technology options, can in principle incentivize their increased use. Although little data exists on the extent to which such improvements would stimulate the use of alternative modes in Whatcom County, we do know that good transportation infrastructure has been shown to attract new businesses and investment.<sup>128</sup>

Careful planning, including coordination with planning efforts of other governments (e.g., the City of Bellingham), to expand and enhance County trail networks now will increase possibilities for both recreation and commuting by alternative means to the SOV, whereas delay will likely increase costs and lead to reduced siting options. Additionally, improvements to public transit and rail, such as increasing frequency, reducing costs, and promoting the ease of single trip multimodal use (e.g., park and ride lots or secure bicycle storage near transit links) can make these transportation options preferable to SOVs.

In addition to providing better infrastructure for multimodal commuting (i.e., the supply side), it is important to find ways to encourage commuters to change their behaviors (the demand side) by using that infrastructure and through increases in telecommuting. The pandemic has forced employers to explore how best to adapt their workforces to remote working. As the pandemic abates, some of these new habits are likely to remain in place, presenting opportunities to help achieve climate goals. On the webpage introducing its recent case study of Expedia,<sup>129</sup> Nelson/Nygaard Consulting Associates states,

---

<sup>128</sup> Powell, Grant. "Build It and They will Come; Why Infrastructure Should Come First," Forbes, March 3, 2021: <https://www.forbes.com/sites/grantpowell/2021/03/03/build-it-and-they-will-come-why-infrastructure-should-come-first/?sh=15d4bce57e9d>

<sup>129</sup> Nelson\Nygaard, Luum, and Expedia. April 2021. Expedia Group Case Study: How a phased commute program led to longstanding behavior change. <https://nelsonnygaard.com/expedia-group-case-study/>.

“Work from home policies that sat undefined in the wings for decades have been forced centerstage practically overnight. While this is a time of uncertainty for organizations large and small, it is also an ideal time to plan for the future.” The study, which was conducted before the pandemic, documents ways in which careful data analysis and behavioral approaches (e.g., strong employee engagement and a pay-as-you-park system) led to large reductions in SOV commuting by Expedia employees, both before and after moving the company headquarters from Bellevue to Seattle’s Interbay district.

Although Whatcom County’s largest city does not have the traffic congestion of Seattle, major employers such as Peace Health and Western Washington University are considering more active transportation management programs that can actually change commuting behavior. The County should work internally as well as with employers to encourage the adoption of new, more aggressive programs to promote climate-friendly commuting behaviors and to overcome barriers to these changes.<sup>130</sup>

### **Key Priorities for Strategy 1:**

- ***Expand local and regional trail networks for non-motorized transportation to create safe active transportation to schools and enhance bicycle and pedestrian commuting infrastructure.***
- ***Work with major employers to create programs that incentivize multimodal commuting, expand telecommuting, and allow flexible scheduling.***

### **Strategy 2: Promote increased use of electric, hybrid, and alternative fuel vehicles.**

This strategy aims to reduce emissions of fossil fuel burning SOVs by increasing the transportation share of electric, hybrid, and alternative fuel vehicles that generate lower GHG emissions. Reaching emissions reduction goals will require the increased use of alternative modes of transportation; however, we must recognize that SOVs will still be used for transportation for some time.

Because they see their market changing through a combination of buyer preferences and government mandates,<sup>131</sup> many automobile manufacturers have announced plans to increase EV production and reduce or eliminate the production of internal combustion vehicles. For example, Toyota, with one of the largest market shares globally, is introducing new EV, hybrid, and hydrogen fuel cell models including for their trucks.<sup>132</sup> General Motors was the first American manufacturer to announce their commitment to produce 30 new global EVs by 2025<sup>133</sup> and pledged to stop making oil powered passenger cars, vans, and sport utility vehicles by 2035.<sup>134</sup>

By working with the community, local electric utilities, and the private sector, the County can accelerate the adoption of EVs, encourage the construction of electric vehicle charging infrastructure, and help ensure the growth of a skilled EV-related workforce. Since Whatcom County will be reliant on SOVs for some time, and on-road vehicles currently generate the most emissions in the transportation sector, implementing this strategy will be crucial to achieving this goal's emissions reductions.

The number of electric vehicle registrations more than doubled from 2017-2020, but the figure for 2020 still represents only about 0.5% of total Whatcom County vehicles (Fig 2.14)<sup>135</sup>.

Reducing transportation emissions by 45% by 2030 would require the replacement of somewhere between 50,000 and 100,000 fossil fuel vehicles with EVs (assuming VMT remain unchanged).

While the higher initial purchase costs of EVs are generally offset over the life of the vehicle by lower operating, fuel, and maintenance costs, the higher upfront cash outlay can nevertheless serve as a

deterrent to EV purchases. The County should therefore explore establishing a group buying program, such as the one in place in Fort Collins, Colorado,<sup>136</sup> that would result in discounts to EV prices.

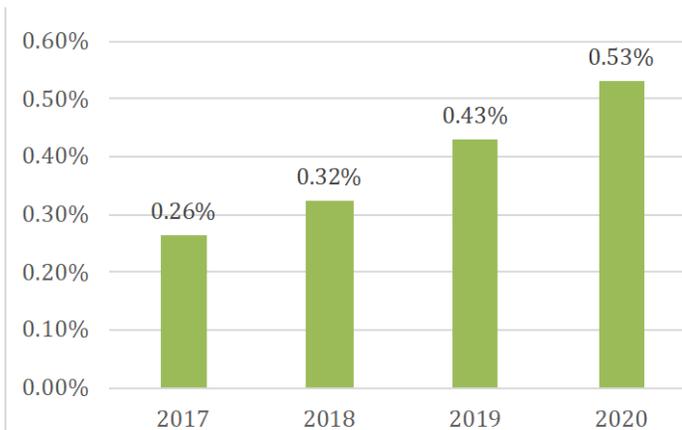

Figure 2.14: Whatcom County EV registrations by calendar year 2017-2020, Percent of total vehicles

### Key Priority for Strategy 2:

- **Sponsor pooled purchasing of EVs, facilitate additional EV charging infrastructure, promote training opportunities to create an EV workforce, and electrify school bus fleets.**

Note: While Strategies 1 and 2 are aimed at reducing transportation emissions generated by the community, the next strategies present significant opportunities for the County to lead by example.

### Strategy 3: Improve County vehicle fleet utilization while transitioning to non-fossil alternatives and reducing GHG emissions associated with County projects

Strategy 3 is focused on what the County can do to modify its operations to reduce emissions: improve County vehicle fleet utilization while transitioning to non-fossil-fuel alternatives and reduce GHG emissions associated with County projects. Doing so will not only reduce emissions but will also allow the County to serve as a visible example for businesses and other government units of what can be accomplished in moving toward transportation decarbonization. The most important step to take under this strategy is to analyze the existing fleet of County vehicles to optimize its use and to begin the

<sup>135</sup> Based on data taken from Washington Department of Licensing, Vehicle and Vessel Fee Distribution Reports at <https://fortress.wa.gov/dol/vsd/vsdFeeDistribution/ReportList.aspx>. This data comes from Motor Vehicle Registration by Class and County reports.

<sup>136</sup> Marmaduke, Jacy. "Electric vehicles for sale at reduced prices in Fort Collins during group buy event," *Fort Collins Coloradoan*, Oct. 30, 2020. <https://www.coloradoan.com/story/news/2020/10/30/fort-collins-electric-vehicle-group-buy-offers-lower-prices/6071879002/>.

replacement of fossil fuel vehicles with EVs or alternative fuel vehicles. Washington HB1091, concerning low carbon fuels, may provide funding for vehicle conversion.

Some of the proposed County actions in this area (e.g., adopting EVs for fleet use or replacing fossil fuel powered equipment) might also serve as pilot projects, allowing for further exploration of these GHG reduction approaches while illustrating how they might be best applied for other governments and the private sector.

The County is already moving in the direction of electrifying the Lummi Island Ferry, which is a recommended transportation action. This is especially important because the new ferry will be in use well after 2050, the target date for net zero emissions. In addition, we are recommending that contractors performing work for the County report the quantities and types of fuel used for County funded projects and that the County consider imposing standards regarding emissions reductions by contractors.

**Key Priorities for Strategy 3:**

- *Perform analyses designed to optimize County fleet use and incorporate EVs and alternative fueled vehicles and implement the recommendations thereof.*
- *Replace the Lummi Island Ferry with either an all-electric technology or a hybrid that can be converted to all-electric.*
- *Require fuel use reports from County contractors and incorporate emission reduction standards into County contracts.*

**Strategy 4: Use County resources to participate in and advocate for inter-governmental efforts at the state level for policies and programs to reduce GHG emissions associated with transportation.**

Strategy 4 calls on the County to use County resources to participate in and advocate for inter-governmental efforts at the state level for policies and programs to reduce GHG emissions associated with transportation. The County already participates in such efforts, such as the Whatcom Council of Governments' transportation planning process and should continue to do so while advocating for the increased inclusion of climate change goals. The State Energy Strategy includes multiple recommendations relating to inter-governmental cooperation.

Strategy 4 also recommends taking advantage of opportunities for funding and other types of assistance made available at the state level. For example, the low-carbon fuel bill HB1091 passed by the legislature in 2021 provides for the possibility of receiving funds and other assistance for transportation decarbonization, both in the County fleet and for the general public.

**Key Priority for Strategy 4:**

- *The County should continue existing inter-governmental cooperation and seek out new opportunities to work with other agencies of government, while taking advantage of new funding opportunities made possible by recent Washington state legislation.*

**Strategy 5: Incorporate climate adaptation considerations into all County transportation planning processes.**

The Vulnerability Assessment identifies Whatcom County roads and bridges as highly vulnerable (Table 2.3). The County has recently released the 2021 update of its Natural Hazards Mitigation Plan, which reviews past and current levels of flooding, coastal flooding, severe storms, wildland fires, and drought.<sup>137</sup> It is critical to safeguard as much as possible of roads and bridge infrastructure vulnerable to climate-related hazards. The Mitigation Plan is very thorough and makes specific recommendations that should be considered.

Several of the hazards identified in this new hazard mitigation plan are quite likely to be exacerbated by climate change in the next few decades. So, it is not only important to look at past and current levels of hazards, but it is also important to look at future levels of these hazards when planning new roads and bridge infrastructure that is expected to last for 30 or 40 years.

*Table 2.3. Vulnerability Assessment for Roads and Bridges*

 <b>Roads and Bridges</b> <b>High Vulnerability</b>		
<b>Exposure</b>	<b>High</b>	Whatcom County’s public roads and bridges are likely to be affected by extreme heat, heavy rain, flood water, and sea level rise—especially in low-lying areas such as along Puget Sound and in the Nooksack River floodplain. Damages and failures put assets (e.g., buildings, homes) and human safety at risk.
<b>Sensitivity</b>	<b>High</b>	Current infrastructure is often affected by flooding. Sea level rise, extreme rainstorms, and extreme heat are likely to interrupt the transportation system more frequently and severely in the future without action.
<b>Adaptive Capacity</b>	<b>Medium</b>	Whatcom County, Whatcom Council of Governments, and the Lummi Nation have developed plans and strategies that lead toward improving road and bridge resiliency, but improvements may occur at a slower pace than impacts.

For example, Section 3 of the Mitigation Plan includes an extensive table of “Unincorporated Whatcom County Identified Mitigation Actions 2021-2025.” The table contains several action items concerning assessing community risk (MU-1) and integrating mitigation into local planning (MU-6). We suggest that more emphasis be placed on projected climate change impacts over the next few decades. With respect to roads and bridges, risk assessment and planning should consider the likely impacts of flooding from changed rainfall patterns and sea level rise as well as other potential weather-related impacts that will intensify natural hazards. While collecting data on past events is important, the likelihood of more frequent and more severe occurrences should be anticipated in risk assessments affecting decisions about the reinforcement or replacement of transportation infrastructure.

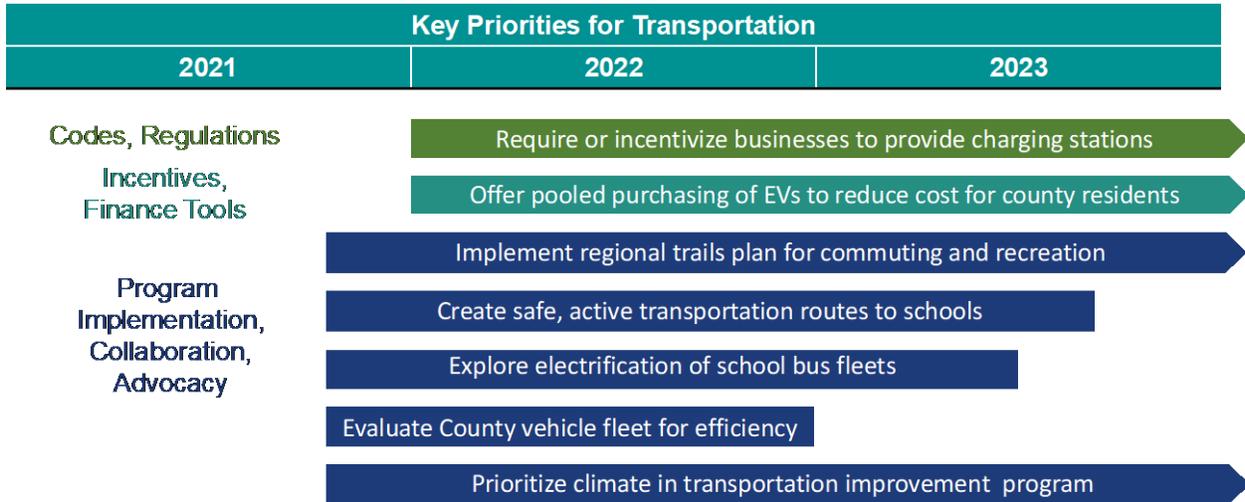

**Key Priority for Strategy 5:**

- ***New transportation infrastructure that is expected to last for several decades should be designed based on projected climate impacts.***

<sup>137</sup> This Plan can be found at <https://www.whatcomcounty.us/3569/2021-Natural-Hazards-Mitigation-Plan>

## Timeline and Summary of Strategies and Actions

Although the stated transportation strategies are fairly specific (and the actions associated with them even more so), it is important to understand that the broader policy and social environments in which they will be implemented are changing. For this reason, policy makers must remain flexible. The recent change of administrations will result in more aggressive climate change policy at the federal level. Washington state government is adding important provisions to its climate-related agenda through legislation and regulation. Old-line automakers are planning to increase EV production while reducing their output of ICE vehicles.

## Transportation Strategies and Actions

A detailed description of the actions is presented in Appendix D: Additional Information on Transportation.

1. Reduce vehicle miles traveled (VMT) by promoting alternatives to SOV transportation
Actions
1.1 Update and Implement the Regional Trails Plan as identified in the 2011 Bicycle Pedestrian Plan and 2004 Chain of Trails plan and any subsequent revisions thereto to expand the regional trail network for commuting and recreation.
1.2 Create safe active transportation routes to schools where they don't already exist, enhance existing active transportation routes to schools, and explore the electrification of school bus fleets.
1.3 Create a countywide non-motorized plan, especially in UGAs of cities to Enhance bicycle and pedestrian commuting infrastructure, including storage/parking and dedicated off-road non-motorized trails.
1.4 Work with WTA to improve transit service through network expansion, changes in transit schedules, and improved connections between transit routes and with other transport modes.
1.5 Adopt any available state programs and fund local efforts to provide means-tested transit subsidies, such as low or no cost passes, to increase accessibility to transit.
1.6 Support existing and develop new education and outreach programs to promote alternative transportation options.
1.7 Work with employers to find programs and incentives to support multimodal commuting.

- 1.8 Expand telecommuting and flextime scheduling for county employees and encourage other employers to do the same.
- 1.9 Expand broadband internet countywide.
- 1.10 Explore the feasibility of building multi-modal transfer stations to move freight from trucks to rail in coordination with the Port of Bellingham.
- 1.11 Foster increased rail transportation for the public and industries.
- 1.12 Conduct biennial surveys of County employee commuting preference to inform programs that encourage alternatives to SOV commuting.

**2. Promote increased utilization of electric, hybrid, and alternative fuel vehicles**

**Actions**

- 2.1 Implement a countywide EV promotions program through education and outreach.
- 2.2 Offer pooled purchasing of EVs to reduce the upfront cost of such vehicles for Whatcom County residents.
- 2.3 Work with local trade and technical schools, unions, and businesses to create an EV workforce pipeline.
- 2.4 Install electric charging stations in strategic locations, prioritizing underserved locations.
- 2.5 Require or provide financial incentives for major employers to provide onsite charging stations for employee EVs.
- 2.6 Work with WTA and municipalities in the county to create infrastructure for electric buses.
- 2.7 Develop an infrastructure plan for H<sub>2</sub> fuel distribution and other fuel mix options in coordination with state efforts.
- 2.8 Exempt e-bikes and other e-ride devices from local sales taxes.

**3. Improve county vehicle fleet utilization while transitioning to non-fossil alternatives and reducing GHG emissions associated with county projects**

**Actions**

- 3.1 The County should undertake an evaluation of its on-road vehicle fleet to achieve maximum GHG reductions. Considerations should include moving away from fossil fuels to electricity (EVs) and other clean fuels, the matching of vehicle numbers and types to their uses, and the potential for vehicle sharing among county departments. Ideally this would be accomplished by funding a study by an outside expert consultant.
- 3.2 Invest in a hybrid or electric technology to replace the Whatcom Chief ferry to Lummi Island.
- 3.3 Require end-of-life replacement of County-owned construction equipment using fossil fuels with alternative-fuel or electric equipment and encourage such replacements by private operators.
- 3.4 Incorporate contractor fuel emission reduction standards into bids and contracts and require reporting of fuel types and quantities used on specific contracted jobs.
- 3.5 Perform diesel exhaust retrofits for county-owned equipment, including filter technology with passive or active cleaning systems.

**4. Use County resources to participate in and advocate for inter-governmental efforts to reduce GHG emissions associated with transportation.**

**Actions**

- 4.1 Prioritize recommended actions within this Plan for funding and implementation within the County's 6-year Transportation Improvement Program
- 4.2 Continue to advocate for the advancement of climate goals in the Whatcom Council of Governments Regional Transportation Planning efforts.
- 4.3 Prioritize transportation climate goals when updating the Whatcom County Comprehensive Plan.

- 4.4 To the greatest extent possible adopt state Vehicle Miles Traveled (VMT) reduction targets and land use planning approaches designed to reduce VMT and SOV use. A separate strategy should be to adopt lower vehicular level of service standards in the County Comp Plan as a disincentive to auto-centric transportation planning.
  - 4.5 While both are reliant on higher density development, participate in State-led efforts to provide resources and promote interjurisdictional coordination for VMT reduction programs, including Transit Oriented Development (TOD) and Transportation Demand Management (TDM).
  - 4.6 Obtain available state funding to improve connections between transportation system elements.
  - 4.7 Participate in any available state programs that would facilitate the transition to hybrid or electric vehicles by ride-share programs like Uber and Lyft.
  - 4.8 Obtain available state-level funding for local jurisdictions to study freight travel reduction opportunities and plan for infrastructure improvements.
  - 4.9 Evaluate and adopt methods for data collection to understand the impacts of commuting behavior.
- 5. Incorporate climate adaptation considerations into all County transportation planning processes.**
- 5.1 Design new transportation infrastructure to withstand projected future climate impacts based on the intended lifespan of the infrastructure.
  - 5.2 Incorporate climate change projections into future Natural Hazards Mitigation plans.

**Conclusion**

The strategies presented in here are based on an extensive review of other communities’ climate action plans, the Community Research Project report<sup>138</sup>, the recently released Washington 2021 State Energy Strategy<sup>139</sup>, transportation-related plans or proposals produced by various agencies in Washington State and Whatcom County, and other information sources.

The pandemic has accelerated changes in work life and shopping behavior that will lead to a reduced need for transporting people, and longer-term trends will lead to lower rates of personal auto ownership, especially in urban areas. For all of these reasons and others, it will be critical to regularly and frequently reevaluate the strategies and actions recommended here.

# Waste

The World Bank predicts that without urgent action, global waste will grow by 70% by 2050.<sup>140</sup> High-income countries are responsible for more than one-third of the world’s waste. Plastics are especially problematic because most forms of plastic cannot be recycled and end up in landfills. Many corporations have sold us on a throw-away culture and convinced us that it is solely our responsibility to recycle the packaging they use for their products. Accountability for plastic waste packaging in particular, must shift back to the corporations that produce the packaging and the individual products that use the packaging. The way we handle waste is currently unsustainable.

Excellent detailed descriptions of waste disposal in Whatcom County can be found in the Comprehensive Solid and Hazardous Waste Management Plan<sup>141</sup> and the Community Research Project.<sup>142</sup> Unlike these reports, this discussion will focus only on the key waste areas that contribute to our 2017 communitywide GHG inventory.

## Our Current Waste Disposal System

Whatcom is one of only two counties in the state that has a privatized solid waste management system, which includes curbside pickup, transfer stations, and transport to landfills for burial (Fig 2.15). With the exception of the City of Blaine, the cities in Whatcom County manage their solid waste collection system.

No one is required to have trash or compost bins in rural areas, even though waste haulers are required to offer this service. Point Roberts is an exception where everyone must pay for waste pickup to make this service profitable.

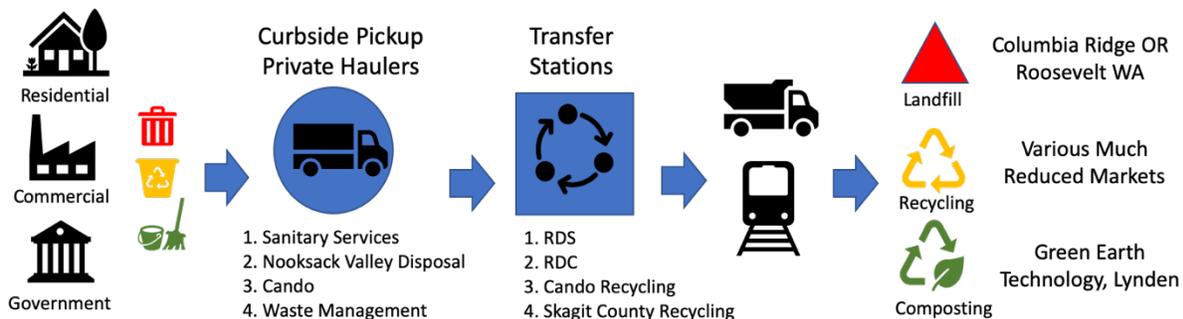

Figure 2.15: Depiction of the Whatcom County privatized solid waste management system.

<sup>140</sup> What a Waste 2.0: A Global Snapshot of Solid Waste Management to 2050, by Kaza, Silpa; Yao, Lisa C.; Bhada-Tata, Perinaz; Van Woerden, Frank. Urban Development; Washington, DC: World Bank: <https://openknowledge.worldbank.org/handle/10986/30317>

<sup>141</sup> Comprehensive Solid and Hazardous Waste Management Plan, Whatcom County, WA, June 14, 2016. <https://whatcomcounty.us/DocumentCenter/View/6723/Whatcom-County-Comprehensive-Solid-and-Hazardous-Waste-Management-Plan>

<sup>142</sup> 2019 Community Research Project, Chapter 3 Waste Reduction and Recycling, by Vicki Thomas. <https://whatcomcounty.us/3162/Meetings-Additional-Information>

Greenhouse gas emissions from waste falls into two general categories: Solid Waste and Wastewater. Waste accounts for only 1% of the total Whatcom GHG emissions, yet it is still an important environmental issue that should be addressed.

The overall basic strategy for solid waste management is reduction and recycling. Much of our current waste is buried in landfills in eastern Washington and Oregon, including a large quantity of the waste we attempt to recycle.

### Emissions from Solid Waste

Solid Waste is the major contributor, representing 91% of the overall GHG emissions from waste in Whatcom County. Solid waste is basically anything we put in garbage bins, whether the item is recyclable or not. It can also include industrial and sewage sludge, construction waste, vehicle parts and contaminated soils.

While plastics can make up a large volume of non-degradable landfill waste, organic waste accounts for most of the GHG emissions from landfills. Statewide, organic waste accounts for over 40% of the residential waste stream. Reduction of food waste is a priority and most often occurs through composting or redistribution of food to pantries, missions, and soup kitchens. The SSC curbside food and yard waste program, Food Plus, is voluntary and services about 19% of the households in the County.

Solid waste GHG emissions can be broken down into generation, transport, and processing<sup>143</sup> (Fig. 2.16). All new landfill material from Whatcom County is sent to large landfills in eastern Washington or Oregon. Waste statistics for Whatcom County<sup>2</sup> indicate that waste per household has trended downward as the public becomes more educated and aware of this problem.

At 70%, solid waste generation is the largest component of County waste management related emissions. Even though the solid waste is disposed of in landfills located outside of Whatcom County, the County is still responsible for the emissions from this waste.

Methane is the largest component of GHG emissions from buried waste, followed by smaller amounts of carbon dioxide. These GHG emissions are based on the overall composition and mass of the annual solid waste.

Only organic waste is used in calculations for methane emissions. Inert wastes in landfills are not expected to produce GHG emissions unless they are combusted in the future.

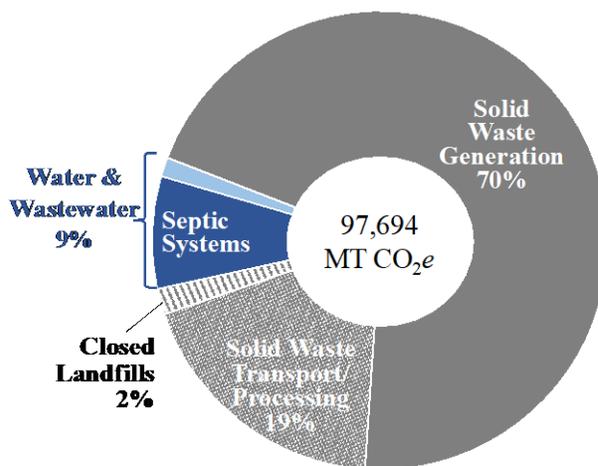

Figure 2.16: Whatcom communitywide emissions from solid waste and water and wastewater.

<sup>143</sup> Solid waste generation results from natural, human and animal activities. Emissions are based on the amount and composition of waste in the landfill.

Transport of the solid waste by rail or truck to landfills in eastern Washington and Oregon accounts for approximately 16% of the emissions with the remaining 3% from processing at the landfill.

Landfills are also subject to the recent Climate Commitment Act if their emissions exceed 25,000 MT CO<sub>2</sub>e. The State legislature plans to adopt a program specific to landfills which would suspend application of the carbon cap. Without this legislation, landfills will be subject to the carbon cap unless they capture at least 75% of their emissions or produce electricity or natural gas from these emissions.

The landfill at Roosevelt in Klickitat County disposes of most of Whatcom’s solid waste. This landfill takes shipments of solid waste from five states and British Columbia.<sup>144</sup> The Roosevelt landfill is now capturing the methane emitted from decomposing waste that could provide biogas to as many as 19,000 households. PSE has signed a contract to purchase this methane and will own the renewable credits.

Whatcom County has no open landfills and will not open any in the future due to issues related to shallow groundwater. The County Health Department is responsible for monitoring the six closed landfills that contain solid waste. These closed landfill emissions represent less than 2% of the total waste GHG emissions for our County. The GHG emissions from landfills peaked shortly after closing and then continued to decline as organic material has degraded. By 2030, GHG emissions from these closed landfills are expected to decline by 30%.

<b>Whatcom Landfills</b>	<b>Closed</b>
Cedarville	1990
Birch Bay	1983
Point Roberts PW	1990
Point Roberts Park	1990
Y Road Landfill I	1970
Y Road Landfill II	1989

### **Emissions from Water and Wastewater**

Water and wastewater emissions include fugitive emissions or leaks and other irregular releases of gases or vapors from septic systems (8%), and minor emissions from a combination of wastewater treatment lagoons, process N<sub>2</sub>O from effluent discharge to rivers and estuaries, combustion of biosolids and sludges, and wastewater treatment. Methane is produced when microorganisms biodegrade organic matter in septic systems, which in turn escapes to the atmosphere. The total amount of methane emissions is based on the population served by the septic systems in the County.

Together the minor sources only account for an additional 1% of total waste emissions. Wastewater lagoons create a small quantity of emissions from a combination of biological, physical, and chemical processes. Wastewater treatment plants in Everson, Newhalem, and Lynden discharge treated wastewater, which contains nitrous oxides directly into lakes, rivers, and Puget Sound. Nitrous oxides are GHGs. The Post Point Wastewater Treatment Facility reported combusting biosolids in 2017 which also releases small amounts of CO<sub>2</sub>.

<sup>144</sup> Giant landfill in tiny Washington hamlet turns trash to natural gas, as utilities fight for a future, by Hal Bernton. Seattle Times updated article, March 5, 2021. <https://www.seattletimes.com/seattle-news/turning-trash-to-natural-gas-utilities-fight-for-their-future-amid-climate-change/>

## Goal and Strategies for Waste Emissions

**Goal: Reduce by 40% the volume of communitywide solid waste transported to landfills and the growth in methane emissions from wastewater by 2030 through the use of education, incentives, and regulations on disposal.**

---

### Strategies for Waste Reduction and Reuse

1. Reduce the volume of non-recyclable single-use items and product packaging materials by increasing restrictions on disposal and communitywide education.
  2. Reduce the growth of food waste through better utilization, collection and composting.
  3. Understand the impact of methane emissions from septic systems in the County.
  4. Provide incentives to builders for the reuse of building materials in new construction.
- 

#### **Strategy 1: Reduce the volume of non-recyclable single-use items and product packaging materials.**

The average American is responsible for approximately 250 pounds of plastic waste each year. Over 75% of this plastic, based on weight, ends up in landfills across the US equal to around 27 million tons per year. Only about 9% of this plastic is recycled, with the remaining 16% combusted for energy.<sup>145</sup> These percentages will vary depending on the available regional markets that can use recycled plastics, such as for carpet or fleece clothing manufacturing. Actual recycling information for Whatcom County plastic waste is not available but could be requested from local solid waste disposal companies when the County issues a waste audit every five years.

We do know the categories of plastic waste that are never recycled: plastic wrap, plastic bags, flexible packaging, small plastic items such as bottle caps, utensils, and plastic packaging to name a few. Clamshells used for fruit, cupcakes, cut lettuce, and sandwiches are also often not recycled. Ridwell, a new recycling service that is planning to expand in Bellingham, collects hard-to-recycle items at your doorstep, such as batteries, light bulbs, plastic bags, films, and threads (clothes, shoes, textiles).<sup>146</sup> Ridwell in turn has contracts to recycle this waste such as their exclusive contract with Trex decking for plastic film.

The first strategy for solid waste is to restrict the use of single use plastic items and product packaging materials that cannot be recycled. To support this strategy, more detailed information is needed from material handlers on the composition and volume or weight of non-recyclables that are shipped annually to landfills. By ordinance, the County can as appropriate require the use of compostable single-serving containers and utensils by restaurants, stadiums, and local businesses. The County can also do more to educate the community on identifying product packaging that cannot be recycled, which may reduce demand for the product or alternatively, convince manufacturers to use recyclable packaging.

County government operations should require a higher percentage of recycled materials in products and packaging purchased by the County government. To reduce plastic bottle waste, the County should also install water bottle refill stations at all County parks.

---

<sup>145</sup> Plastics: Material-Specific Data, U.S. EPA, most recent data from 2018 used. website: <https://www.epa.gov/facts-and-figures-about-materials-waste-and-recycling/plastics-material-specific-data#PlasticsTableandGraph>

<sup>146</sup> Ridwell, <https://www.ridwell.com/>

### **Key Priorities to Reduce Non-Recyclable Waste:**

- *Eliminate single use plastics as much as possible.*
- *Install water bottle refill stations at County Parks.*

**Strategy 2: Reduce the growth of food waste.** Food waste has the greatest impact on the solid waste GHG emissions from landfills. The Whatcom Community Food Assessment in 2017<sup>147</sup> estimated that organic waste makes up more than half of our community's waste stream. Only about 19% of Whatcom households use SSC's voluntary FoodPlus program and it is unknown how many additional households have their own composting bins. FoodPlus service should be available at all County buildings.

The Whatcom Community Food Assessment listed the following key challenges to reducing food waste:

- A continued increase in food waste partly resulting from the "all you can eat" mentality that results in the waste of prepared foods from buffets, grocery store outlets, delis, etc.
- Some regulations to protect food safety and promote good nutrition also led to food waste.
- Food service businesses are hesitant to reduce meal portion size or add labor hours to collect and compost food waste.
- A lack of incentives for renters to use recycling/food composters or lack of space in apartment buildings to accommodate multiple bins for separating waste.
- The contamination of food waste with non-recyclable items.
- Lack of curbside collection in rural areas of the County.

Community education is one strategy in reducing food waste. More direct solutions to reduce food waste would be to expand funding for food recovery and redistribution programs and expand requirements for the disposal of food waste via curbside recycling or on-site composting. The County should support programs that help businesses reduce waste like the Sustainable Connections" Toward Zero Waste program. In rural areas on-site composting may include the use of anerobic digesters that can turn food waste and manure into usable bioenergy.

### **Key Priorities to Reduce Food Waste:**

- *Fund and expand the Food Recovery Program to Add a Food Kitchen*
- *County buildings should lead by example by offering a full suite of recycling including food composting and cardboard.*

**Strategy 3: Understand the impact of methane emissions from septic systems.** Rural septic systems were a small but significant contributor at 8% to the overall GHG emissions related to our waste stream. Currently there are about 30,000 total septic systems in the County. Septic systems are required to be inspected every year for pressurized systems and every 3 years for gravity-based systems. These inspections help identify leakage problems that can result in contamination of water systems.

Understanding the scale of the problem of methane emissions from septic systems requires more information on the rate of growth of these systems in the County. For septic systems located in urban growth areas, the County should create incentives for households to switch to municipal sewage systems when available. This could include a surcharge for septic systems when a municipal sewage

---

<sup>147</sup> Whatcom Community Food Assessment, 2017 Update Report prepared by the Whatcom Food Network CFA Update Subcommittee. <https://co.whatcom.wa.us/DocumentCenter/View/54385/Community-Food-Assessment-2017>

system is available. However more information is needed on the scale of the problem and the cost/benefit in respect to lowering GHG emissions and reducing water pollution.

**Key Priority to for Septic Systems:**

- *Collect more information to better understand the scope of the problem.*

**Strategy 4: Provide incentives to builders for the reuse of building materials.** An actual breakdown of the amount of waste generated by building demolition and construction is lacking for Whatcom County. However, the latest statewide Waste Characterization Study estimates that up to 10% could be from construction.<sup>148</sup> To prevent disposal of this waste at undesignated disposal sites and encourage recycling of building materials, the County’s Flow Control Ordinance (No. 91-041) could be revised to include construction and demolition debris.

The recycling of building materials is a valuable service in Whatcom County and deserves community support. One of the largest retail stores is The RE Store in Bellingham which provides a wide range of used building materials recovered from building remodels and demolition. According to the Building Industries Association of Whatcom County, area builders are mindful of estimating materials and creating as little waste as possible. This association’s Green Built program provides environmental benefits on many fronts including reducing waste.<sup>149</sup>

**Key Priorities for Building Material Waste:**

- *Request more detailed data through waste audits to evaluate the success of current programs or the need for additional programs.*

**Timeline and Summary of Strategies and Actions**

<sup>148</sup> 2015-2016 WA Statewide Waste Characterization Study, Publication 16-07-032, Department of Ecology, pg. 89.

## Waste Strategies and Actions

<b>1. Reduce the volume of non-recyclable single-use items and product packaging materials by increasing restrictions on disposal and communitywide education.</b>
<b>Actions</b>
<p>1.1 Eliminate single use plastic containers and utensils used by restaurants and retailers via County ordinances. Require compostable, single-serving containers at commercial locations including stadiums.</p> <p>1.2 Educate County residents and retailers on identifying product packaging that cannot be recycled and incentivize product manufacturers to provide better packaging options.</p> <p>1.3 Request more detailed data through waste audits, as needed, from material handlers to better understand the effectiveness of County programming.</p> <p>1.4 Identify large volume contributors to the solid waste stream and develop a community-wide campaign that either discourages product consumption or promotes changes in the packaging by the manufacturer.</p> <p>1.5 Require higher percentages of recycled materials in products and packaging purchased by the County government.</p> <p>1.6 Install water bottle refill stations at County parks to avoid the need for people to buy water in plastic bottles.</p>
<b>2.Reduce the growth of food waste through better utilization, collection, and composting.</b>
<b>Actions</b>
<p>2.1 Fund and expand the Sustainable Connections Food Recovery program. Add funding for a food kitchen to better utilize time-sensitive food use.</p> <p>2.2 Make Food Plus (the curbside food and yard waste recycling) mandatory for single and multi-family residents that do not have an on-site composting capability (e.g., compost bin or feed for livestock).</p> <p>2.3 Provide option of smaller trash containers at a reduced cost to offset the cost of action 2.2.</p>
<b>3.Understand the impact of methane emissions from septic systems in the county.</b>
<b>Actions</b>
<p>3.1 Evaluate the growth trend in septic systems in the County and determine how regulations can be used to limit future growth in methane emissions.</p> <p>3.2 Determine the costs and potential GHG emission benefit of switching current septic systems to nearby/accessible municipal sewage systems.</p>
<b>4.Provide incentives to builders for the reuse of building materials in new construction.</b>
<b>Actions</b>
<p>4.1 Revise the County’s Flow Control Ordinance (No. 91-041) to include construction and demolition debris to prevent disposal at undesignated disposal sites and encourage recycling of building materials.</p> <p>4.2 Evaluate potential for instituting recycling requirements for construction sites through the building permit program.</p>

## Conclusion

State law requires the County to develop a comprehensive solid and hazardous waste management program that is updated every five years. The County’s solid water management program relies primarily on educational programs to reduce waste including many actions implemented over the five-year time period between report updates. Little information is publicly available on the effectiveness or success of these actions. Our community may not see the waste because it is not landfilled here. However, the emissions are still attributed to our County and should be mitigated. Lack of data on some areas of emissions warrant further study and deliberate data gathering. Best practices should be applied to the issue to accomplish the goal of 40% reduction in our waste streams. However, until basic infor-

mation such as annual per capita waste in Whatcom County is provided, it will be difficult to monitor the effectiveness of strategies and actions for GHG reduction.

## Land Use

Incorporating climate change into County land use and development policies, regulations, comprehensive planning, and project implementation can build climate resilience while helping to mitigate GHG emissions. Climate-smart land use policies and regulations can significantly reduce environmental harm while also enhancing the local economy and quality of life.

Development and land use changes alters the natural environment, degrading land with high ecological, economic, and climate resilience value. In fact, research has found that throughout the Puget Sound region, degradation due to development and land conversion is outpacing restoration and has failed to maintain healthy ecosystems or offset impacts due to those developments.<sup>150</sup> Changes in land use can also threaten food systems, access to clean water, carbon storage and sequestration, critical wildlife habitat, recreation, and cultural sites.

Low density development increases carbon emissions in the transportation sector and contributes to the degradation of natural systems. Considering climate change in comprehensive planning and land development is essential to ensure protection of the natural environment, minimize impact of the built environment, and reduce a community's overall risk and vulnerability to climate change.

In addition, development within Whatcom County's floodplains is likely to worsen existing flooding hazards. Climate change is increasing the frequency and magnitude of rainfall events and hence, flooding in the Nooksack River and impacting the cities of Nooksack, Everson, Sumas, and Ferndale. These cities experienced major flooding from the Nooksack River in 2020 that caused more than \$4 million in damages to local homes, business, and infrastructure.<sup>151</sup> Other rivers and creeks in Whatcom County are also prone to flooding, such as the Sumas River, Breckenridge Creek and Swift Creek. Development on alluvial fans—the fan-shaped areas formed by rocks, wood, gravel, and mud where steep mountain streams empty onto flat valley bottoms—can greatly increase flood and debris flow hazards.<sup>152</sup>

A meaningful response to climate change will require strategic changes and significant updates in the County's land use code and Comprehensive Plan by 1) prioritizing climate resilient development in the built environment, 2) mitigating GHG emissions to create ecological gains and enhanced ecosystems functions, and 3) increasing protection of the natural environment and working lands.

A climate vulnerability assessment completed for land use stated that, "the County's Comprehensive Plan highlights risks and considerations for addressing population growth, economic development, and environmental health over the next 20 years. Ensuring the health of forest and riparian ecosystems, watersheds and floodplains, as well as utilizing natural or green infrastructure (e.g., rain gardens and urban trees) is important to build resilience to climate change impacts as the county develops."<sup>153</sup> This statement from

*The Washington State Growth Management Act (GMA) dictates how cities and counties can grow, by increasing housing density in more urban areas, promoting an accessible multi-modal transportation system, and ensuring that existing and new infrastructure is climate resilient and meets an established "green"*

<sup>150</sup> Puget Sound Partnership. 2019. State of the Sound Report. Olympia, Washington. November 2019. 79pp. [www.stateofthesound.wa.gov](http://www.stateofthesound.wa.gov)

<sup>153</sup> Whatcom County Climate Vulnerability Assessment for Land Use & Agriculture

the Comprehensive Plan is correct; however, climate change is the driver that is intensifying many of these risks. So we can no longer rely on historical information on population growth and weather events to analyze the future risks posed by climate change. Instead, we must understand how climate change is accelerating risk in order to build climate resilience in new infrastructure and natural systems.

Climate-smart land use can reduce GHG emissions in the built environment and support healthy ecosystems in the natural environment. Both are necessary to build climate-resilient communities that can continue to function and prosper despite the inevitable changes that are already occurring with our warming world.

## Goal and Strategies for Land Use

***Goal: Enhance carbon storage and sequestration and create climate resilience in the County through sustainable land use and development policies that preserve, protect, and enhance the health and function of our natural resources.***

The strategies for land use focus on four areas; three in the built environment including development, transportation, infrastructure; and high ecological value areas in the natural environment that are most threatened by human activities.

---

### Strategies for Land Use

- 1. Create a Climate Resilient Regulatory Framework for Sustainable Land Development:** Design and implement a climate resilient regulatory framework for new County developments (residential, commercial & industrial) that improves building energy use, greater density, multimodal mobility options, and minimal impact to natural ecosystems.<sup>154</sup>
- 2. Enhance Active and Public Transportation Systems:** Employ County land use policy and regulations and public investment to enhance transportation systems and infrastructure and increase transit ridership.
- 3. Build Green Infrastructure to Enhance Climate-Resilience and Reduce Environmental Impact:** Require a climate-focused risk assessment using future climate scenarios for all new County infrastructure (e.g., roads, bridges, buildings, emergency services, etc.) over the projected lifespan of the new infrastructure to reduce environmental impacts and risks.
- 4. Protect Climate-Sensitive Natural Resources of High Ecological Value:** Protect riparian corridors, floodplains, shorelines, wetlands, and migration corridors by incorporating science-based future climate scenarios in County code and increasing acquisition of voluntary conservation easements.<sup>155</sup>

---

### Strategy 1. Create a Climate Resilient Regulatory Framework for Sustainable Land Development

According to the Climate Vulnerability Assessment for Land Use & Agriculture, commercial and residential developments in Whatcom County are highly vulnerable to climate change (Table 2.4). Whatcom

---

<sup>154</sup> “Sustainable development is the organizing principle for meeting human development goals while simultaneously sustaining the ability of natural systems to provide the natural resources and ecosystem services on which the economy and society depend.” ([https://en.wikipedia.org/wiki/Sustainable\\_development](https://en.wikipedia.org/wiki/Sustainable_development)) “Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs.” (<https://www.iisd.org/about-iisd/sustainable-development>)

<sup>155</sup> Refer to WWC Chapter 16.16 Critical Areas, WWC Title 23 Shoreline Management Program, and our Resource Lands policies and regulations.

County estimates a 28% population increase by 2040 under a moderate growth scenario;<sup>156</sup> however, the County also estimates that its current urban growth areas (UGAs) can only accommodate an additional 6% population growth.<sup>157</sup> This discrepancy between population growth and available land will create additional pressure on increasing commercial and residential developments that may have high vulnerability to climate change and further displace the natural ecosystem services that support life on earth.

Table 2.4. Commercial and Residential Developments are Land Highly Vulnerable to Climate Change.

 <b>Commercial &amp; Residential Development</b> <b>High Vulnerability</b>		
<b>Exposure</b>	<b>High</b>	While incorporated cities and urban growth areas compose only about 3% of Whatcom County's total acreage, more than 58% of Whatcom County's population resides in these areas.
<b>Sensitivity</b>	<b>High</b>	Whatcom County's developed areas are vulnerable to coastal and riverine flooding risks, which are projected to increase under climate change.
<b>Adaptive Capacity</b>	<b>Medium</b>	Whatcom County has outlined growth management and land development strategies for the next 20 years in its 2016 Comprehensive Plan, with consideration for climate change. The County has also completed flood management plans for the Nooksack River and alluvial fans, but there is still need for further assessment and integration of climate change impacts into floodplain management.

Mitigation and adaptation to climate change will require the County to prioritize low impact and sustainable community development outside of climate impact zones, which involves thinking about how a community is designed from a land use perspective.

Buildings, transportation systems, and infrastructure must minimize impact and environmental harm while maximizing efficiency (Fig. 2.17). Sustainable development reduces greenhouse gas emissions by reducing sprawl, enhancing carbon sequestration through open green space and urban forests, conserving energy, water, and natural resources, and preserving critical ecosystems and the connections between them.

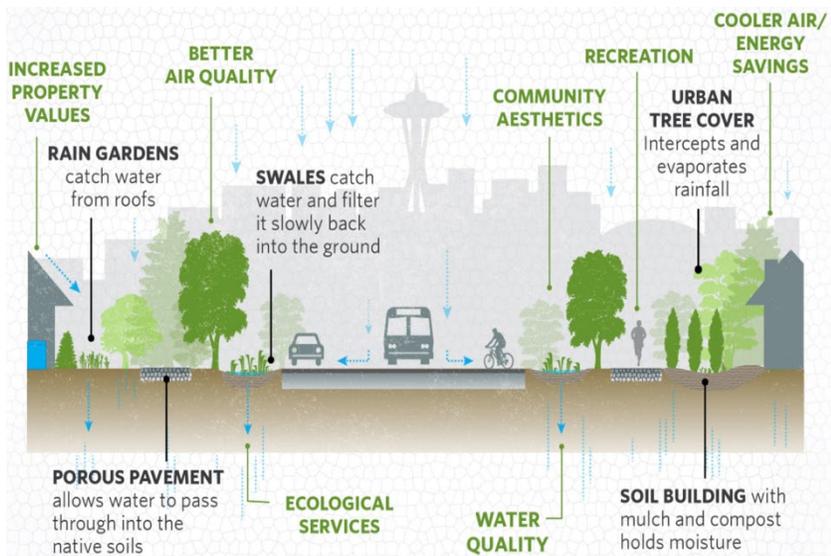

Figure 2.17: Example of sustainable development components, such as green infrastructure, worth considering in a sustainable development framework or model. Source: The Nature Conservancy

<sup>156</sup> Washington Office of Financial Management, "Growth Management Act population projections for counties: 2010 to 2040," State of Washington, December 2017. <https://ofm.wa.gov/washington-data-research/population-demographics/population-forecasts-and-projections/growth-management-act-county-projections/growth-management-act-population-projections-counties-2010-2040-0>.

<sup>157</sup> Whatcom County, "Whatcom County Comprehensive Plan," 2018.

The County needs to establish and implement a sustainable development framework and code that informs and dictates future development. Furthermore, the County, in conjunction with the cities, must assess the suitability of land for development based on climate resilience characteristics.<sup>158</sup> Coordinating with the cities when it comes to Countywide development is key. City urban growth areas (UGAs) consist of the city and surrounding unincorporated area designated by the county as UGA, appropriate for annexation and urban development. There are also three UGAs that are not associated with a city.<sup>159</sup>

**Replacing Conventional Design with Conservation Design.** Conventional design refers to “residential developments where all the land is divided into house lots and streets, with the only open space typically being undevelopable wetlands, steep slopes, floodplains, and storm water management areas.”<sup>160</sup> Problems with the conventional design include poor pedestrian infrastructure, minimal to nonexistent open green spaces, and fewer natural environments for plant and wildlife habitat.

By contrast, conservation design (Figure 2.18) “refers to residential developments where... half or more of the buildable land area is designated as undivided, permanent open space”, which can be achieved by “designing residential neighborhoods more compactly.”<sup>161</sup>

Conservation subdivisions are allowed, but the County needs to actively promote, incentivize, or require conservation designed land use and incorporate green infrastructure into the development strategy. While conservation design is desirable in all County zones, it is particularly important for rural areas and resource lands, to help protect high ecological value lands and increase climate resilience.

#### **Green Spaces for Urban Forests.**

Development with more open and green spaces, such as urban forests, parks, and community gardens, can increase carbon sequestration and enhance surrounding habitat. The County can promote carbon capture and sequestration in public areas by adding new goals and policies to the

*Figure 2.18: Architectural renderings depict a town filling in with development while preserving open space. Source: Steve Wright, Conservation Subdivisions: Good for the Land, Good for the Pocketbook.*

<sup>158</sup> This assessment should be informed by and in conjunction with the Whatcom County [Review & Evaluation Program \(Buildable Lands\)](#). “Components of the Review and Evaluation Program include updating county-wide planning policies, annual collection of data, developing a buildable lands program methodology, reviewing achieved densities, evaluating land suitable for development, and issuing a final report by June 30, 2022. The information contained in the final Review and Evaluation Program Report will inform the next update of the Whatcom County Comprehensive Plan, which is due by June 30, 2025.”

<sup>159</sup> For City UGAs, the city has sole authority relating to development that happens within the city limits. The county has land use authority over the portion of the UGA outside city limits; however, the seven cities have policies in place that generally do not allow extension of public water and sewer outside city limits. The result is that urban residential development typically does not occur in these UGAs until annexation.

<sup>160</sup> Arendt, Randall. Conservation Design for Subdivisions: A Practical Guide to Creating Open Space Networks. Washington, D.C.: Island Press, 1996

<sup>161</sup> Ibid

comprehensive plan that promote open green spaces, urban forests, street trees, and low impact landscaping practices.

In addition to carbon sequestration, tree canopies provide a number of environmental, economic, and human health benefits, including 1) managing storm water by intercepting rainfall from ground run off, 2) reducing the urban heat island effect, thus decreasing heating and cooling costs, air temperatures, and air pollution, 3) increasing property values, 4) providing wildlife habitat, and 5) improving quality of life (Fig. 2.19).<sup>162</sup>

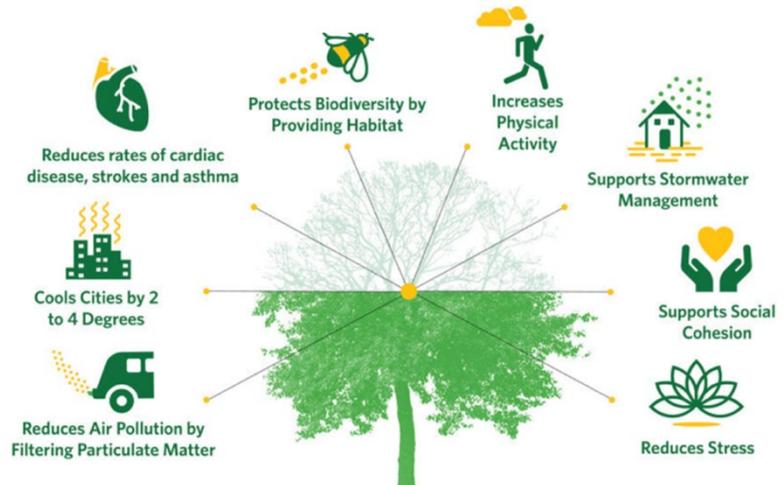

Figure 2.19: *Source: The Nature Conservancy*

The County can promote urban forests by expanding and strengthening Countywide tree canopy requirements and retention in existing and new developed areas of all sizes. This will require an implementation timeline, encouraging best practices for tree health and maintenance, collection of canopy data, and tracking tree removal and replacement to best understand short-term canopy changes.<sup>163</sup>

Reevaluating tree regulations can protect existing canopy and ensure that trees are replaced with right sized and more climate resilient native trees. The County can also collaborate with the seven cities and private landowners to create a network of street trees, adding trees on roads with County right of ways, and increasing tree planting requirements and incentives for all public and private projects, especially for transportation and infrastructure projects. Perhaps tree canopy requirements can be conditions for obtaining permits for any new or expanded developments, where trees must be replanted on site or elsewhere commensurate to the trees removed as a way to mitigate for loss of habitat and natural carbon capture and sequestration. Compensative tree planting or funding for said tree planting can help development achieve net ecological gain while reforesting critical county lands. The City of Vancouver, Washington has a model urban forestry program worth exploring.<sup>164</sup>

**Codes and Zoning.** Updating and strengthening land use codes and housing regulations can further encourage dense, sustainable, low impact, and energy efficient development. The County should prioritize strategies and expand incentives for compact development where consistent with the Growth Management Act. Strategies could include density bonuses, inclusionary zoning, clustering subdivisions to preserve green spaces, urban villages or mixed housing such as smaller homes on smaller lots,

<sup>162</sup> Urban Watershed Protection, Urban Tree Canopy, <https://www.cwp.org/urban-tree-canopy/>

<sup>163</sup> Whatcom County Water Resource Protection Overlay districts currently have tree canopy regulations including replacement and retention rules, but they can be expanded and strengthened. For example, regulations still allow for removal of trees younger than 50 years old without replacement requirements. Refer to tree removal and retention in [Chapter 20.51 Lake Whatcom Watershed Overlay District](#) to inform a countywide tree policy.

<sup>164</sup> Vancouver has strict and specific policies around tree removal and significant penalties for developers who do not adhere. They have dedicated staff who can educate and advise the community and developers regarding tree protection and maintenance. They also have an appointed Urban Forestry Commission to advise staff and policy makers. <https://www.cityofvancouver.us/publicworks/page/urban-forestry>

accessory dwelling units, duplexes, town homes, and multifamily complexes. These strategies should be encouraged in developable lands within urban growth areas (UGA). For non-UGA portions of the County, developers can cluster homes with a reserve area that is protected in perpetuity for open spaces, non-motorized trail easements, community gardens, etc.

The County can also encourage cities to develop their own infill housing toolkit,<sup>165</sup> subsidize the cost of sidewalks for qualifying developments, and explore public-private partnerships for parking, wetland mitigation and restoration, and stormwater management. Densely developed communities can reduce water and energy consumption, improve utility efficiencies, increase use of alternative transportation modes, and improve community infrastructure such as interurban trails and pathways for bicyclists and pedestrians.

A compact community equipped with a robust alternative transportation system, combined with access to reliable broadband, can significantly help reduce single occupancy vehicle miles travelled, therefore reducing the demand and use of fossil fueled vehicles and subsequently reducing carbon emissions.

In addition to reviewing and updating land use codes and regulations, the County should require a climate impact vulnerability assessment for all new large-scale development<sup>166</sup> including a lifecycle analysis of greenhouse gas emissions in industrial development and incorporating carbon offsets in carbon-intensive commercial or industrial uses. Increasing impact fees for major projects in rural areas and building incentive programs such as fast-tracking permits and reducing permit fees for sustainable, low impact development will shift development behavior.

Wildland Urban Interfaces or WUIs are areas where development meets and mixes with undeveloped natural areas such as forests or grasslands. These areas are highly sensitive to wildfires which cause damage to buildings, infrastructure and public health. During the 20-year period between 1990 and 2010, 20% of Whatcom County’s population growth occurred outside urban growth areas. This dispersed urbanization will increase cost burdens related to firefighting in the future. The overall climate vulnerability of wildfires in WUI areas is medium, especially if stricter international building codes for

*Table 2.5. Climate Vulnerability Assessment for Wildland Urban Interfaces.*

 <b>Wildland-Urban Interface</b> <b>Medium Vulnerability</b>		
<b>Exposure</b>	<b>Medium</b>	Whatcom County’s population mostly resides in developed and urban areas, but 20% of growth between 1990 and 2010 occurred outside of these areas. The eastern portion of the County, which has a smaller portion of the population is most at risk of wildfire.
<b>Sensitivity</b>	<b>High</b>	Wildland-urban interface areas are particularly vulnerable to fires that have the potential to cause significant damage to public health and infrastructure.
<b>Adaptive Capacity</b>	<b>Medium</b>	The Lummi Nation and Whatcom County’s Conservation District participate in the national Firewise Program, helping offset some of the vulnerabilities to changes in climate. However, fewer resources and funding are secured for WUI fire prevention.

<sup>165</sup> City of Bellingham as an example: <https://cob.org/gov/dept/pcd/infill-housing-toolkit>

<sup>166</sup> A climate impact vulnerability assessment should be highly encouraged, but not required, for smaller scale development including for single-family houses on existing lots. It should be noted that these assessments might increase cost of residential housing development. Housing affordability is already a barrier to many residents in Whatcom County, and we acknowledge this as an unintentional consequence.

fire-resistant structures are adopted by the County (Table 2.5). A new WUI map has been developed for Whatcom County.<sup>167</sup>

The Lummi Nation has entered a cooperative agreement with the state Department of Natural Resources, allowing the agency to respond to wildfires on the Reservation.<sup>168</sup> In addition, Whatcom's Conservation District has established six active "Firewise" communities, equipped with resources and materials to understand and address wildfire risk and provides free wildfire risk assessments for property owners.<sup>169</sup>

#### **Key Priorities for Sustainable Land Development:**

- ***Establish and implement a sustainable development framework and code that incorporates green infrastructure, greater development density and energy efficiency, and no or low impact to natural systems focusing on net-ecological gain.***
- ***Promote, incentivize, or require conservation designed land use and expand tree canopy county-wide.***
- ***Require a climate impact vulnerability assessment for all new large-scale development and increase impact fees where climate vulnerability is high.***

#### **Strategy 2. Enhance Active and Public Transportation Systems.**

Land use is an important consideration when it comes to the planning, development, and implementation of an active and multimodal transportation system. As discussed in [Transportation](#), Whatcom County must consider ways to reduce vehicle miles travelled (VMT) by single occupancy vehicles with internal combustion engines. There are three main ways to reduce VMT: 1) restrictive land use policy in unincorporated portions of the County, 2) incorporating transit-oriented land use planning and development, and 3) compact development of building amenities close to residential neighborhoods.

The Whatcom Mobility 2040 report predicts a substantial increase in VMT resulting from the projected growth in households and employment. This increase in VMT would be even greater in unincorporated areas if not for the rural land protections in the Washington's Growth Management Act.<sup>170</sup> Future transit service is also influenced by land-use decisions.

The County can improve transportation efficiency including increased accessibility to transit services and enhanced bicycle and pedestrian infrastructure by incorporating the transit-oriented development framework in land use planning. According to the Washington State Energy Strategy, "Transportation efficiency can be implemented in two basic ways. The first is to reduce the need for travel, which means either shortening the distance that people and goods travel (e.g., through improved urban design) or avoiding the need for trips altogether (e.g., via telemedicine). The second way is to shift travel to more efficient modes, such as public transit or maritime freight transport, which can move more passengers

---

<sup>167</sup> Whatcom County 2021 Natural Hazards Mitigation Plan, Section 2.1, pg 146.

<https://www.whatcomcounty.us/DocumentCenter/View/56370/1-2021-NHMP-Full-Public-Comment-Draft-v4-May18-PubComm--SECTION-2>

<sup>168</sup> Lummi Natural Resources Department, "Lummi Nation Climate Change Mitigation and Adaptation Plan: 2016-2026," 2016.

<sup>169</sup> Whatcom Conservation District, "Community Education & Risk Planning," [Online]. Available: <https://www.whatcomcd.org/wildfire-community-education-and-risk-planning>.

<sup>170</sup> Whatcom Council of Governments, Whatcom Mobility 2040, [https://whatcommobility.org/wp-content/uploads/2020/11/WM40\\_COMPLETE.pdf](https://whatcommobility.org/wp-content/uploads/2020/11/WM40_COMPLETE.pdf)

or goods per trip.”<sup>171</sup> Furthermore, the lowest-cost strategy to reduce VMT is to combine land-use policy (focusing on compact, transit-oriented development (TOD)), enhancement of transit service, and transportation demand management policies.

*The lowest-cost strategy to reduce vehicle miles traveled is to combine land-use policy, enhancement of transit service, and transportation demand management policies.*

Transportation Demand Management (TDM) is influencing people’s behavior to use the existing infrastructure in more efficient ways. Both “carrots and sticks” are needed to reduce VMT. A few examples of TDM policies that have been instituted by employers:

- Employee transit benefits (e.g., free or subsidized bus passes; incentives for walking/biking; etc.)
- Showers, changing rooms, secure/protected bike parking, protected bike lanes, etc.
- Daily pricing for parking; free parking for carpools
- Flexible work schedules or telework

The County should consider requiring a multimodal transportation plan for all new planned multi-unit residential, commercial, or industrial developments and subdivisions. A transportation plan can help identify and ensure community access to public transit options, and determine the impact on traffic congestion, access to basic services, and emergency response including safe evacuation routes. Transportation plans can also facilitate connectivity between communities, ensuring that people can travel efficiently. Efficiency and accessibility are major factors in determining if people will choose something other than a single occupancy vehicle for their regular commute trips.

Establishing transit-oriented land use policies and standards can influence development near transit corridors or develop new transit corridors that can serve a concentrated population. One example might be to require that new residential projects consisting of 25 units or more be located within a half mile of a transit node, shuttle service, or bus route with regularly scheduled daily service. The County may also encourage or require developers to coordinate with the Whatcom Transportation Authority to see where additional bus routes and bus stops may be established relative to new residential, commercial, and industrial development.

In addition to transit service, access to safe bicycle and pedestrian infrastructure will encourage more people to bike or walk. Developments should set aside land for trails to connect to existing urban or rural trail systems and the planned regional trail system to promote non-motorized commuting and recreational benefits. The positive health impacts and reduction of obesity resulting from biking and walking are well documented. Trails for non-motorized travel should also be planned and developed for existing community developments. This may require a revision to setback requirements or collaboration with cities or state agencies where existing rights of way exist.

Implementing “Complete Streets” development principles and standards can help the County achieve a more user-friendly alternative transportation system, especially for more rural communities. Complete Streets “are designed and operated to prioritize safety, comfort, and access to destinations for all people who use the street” and “may include sidewalks, bike lanes (or wide paved shoulders), special bus lanes, comfortable and accessible public transportation stops, frequent and safe crossing opportunities, median islands, accessible pedestrian signals, curb extensions, narrower travel lanes, roundabouts, and more.”<sup>172</sup>

<sup>171</sup> Washington State Energy Strategy, Department of Commerce, <https://www.commerce.wa.gov/wp-content/uploads/2020/12/Washington-2021-State-Energy-Strategy-December-2020.pdf>, 52

<sup>172</sup> <https://smartgrowthamerica.org/program/national-complete-streets-coalition/publications/what-are-complete-streets/>

Public multimodal transportation may not be an option for everyone in every community. As such, the transition to EVs by automakers will significantly reduce SOV GHG emissions going forward. The County needs to establish additional park and rides at potential transit nodes and trail systems and ensure that building and land use codes support the installation of electric vehicle charging stations. Large parking lots and park and ride lots that have good solar exposure can serve a dual use as a community solar installation (Figure 2.20). Siting electric vehicle

*Figure 2.20. Dual-use parking lot and solar panels. Credit: Masha Yakhkind.*

charging stations in multifamily housing complexes and public hubs such as park and rides, parks, and shopping centers can maximize their convenience and use.

Finally, actions outlined in the Washington State Energy Strategy can help future transportation funding and planning in Whatcom County. For these actions, the County should consult the State, Tribes, and other local governments including the seven Whatcom cities and Skagit County. State actions include “take steps to incentivize and remove barriers that restrict TOD” and “link cross-jurisdictional coordination and community engagement with funding related to the planning and implementation of land-use policies, TOD, TDM measures, transit and active transport infrastructure development and other measures designed to reduce VMT and enhance accessibility and mobility.”<sup>173</sup>

The County should also be aware that the Energy Strategy recommends that “the Legislature should fund WSDOT and Commerce to provide centralized assistance for jurisdictions to support development and implementation of model code related to corridor planning, ‘smart growth’ zoning and land-use policies, transportation-oriented design, and related infrastructure development.”<sup>174</sup> These potential funding sources are critical to ensuring implementation of this plan’s transportation and infrastructure goals, strategies, and actions as they pertain to land use.

#### **Key Priorities for Transportation:**

- **Improve the accessibility of transit and active transportation including promoting safe bicycle and pedestrian infrastructure and implementing the Regional Trails Plan**
- **Require a multimodal transportation plan that facilitates alternative transportation (e.g., park and ride, connection to bike and walking trails, bus stops and electric charging) for all new planned multi-unit residential, commercial, or industrial developments.**

<sup>173</sup> Washington State Energy Strategy, <https://www.commerce.wa.gov/wp-content/uploads/2020/12/Washington-2021-State-Energy-Strategy-December-2020.pdf>, 55

<sup>174</sup> Washington State Energy Strategy, 55

### Strategy 3. Build Green Infrastructure to Enhance Climate-Resilience and Reduce Environmental Impact.

The County needs to establish a “green” or climate resilient infrastructure criterion and develop a plan that identifies, protects, connects, and re-greens the landscape. Green infrastructure can help the County combat climate change while also protecting the environment, wildlife habitat, and natural resources. Green infrastructure includes existing forested and natural ecosystems as well as bioswales, rain gardens, and permeable pavements, all of which help filter polluted stormwater runoff close to its source, and green roofs that can help sequester carbon.

Bioswales and raingardens provide habitat for certain birds and other species and even provide linkages to large habitats if planned accordingly. In addition, green infrastructure includes renewable energy systems, modernization of the electric grid, electric vehicle charging stations, broadband (which enables smart technology), and wastewater treatment. Culverts are also critical infrastructure, and when removed or replaced, can improve habitat and fish passage

As a part of the green infrastructure plan, the County should identify critical infrastructure, such as roads, bridges, and emergency services at risk in climate impact zones and develop plans to flood proof, relocate or remove. It is also important to retrofit, or develop new, roads, bridges, and culverts to be climate resilient and to incorporate sea level rise, storm surge, and flood predictions into design requirements (Fig. 2.21). All new County infrastructure must adhere to the new criteria, which would be designed to protect critical watersheds and ecosystems.

Green infrastructure can be integrated into both new and existing structures to reduce greenhouse gas emissions. For example, developers and building owners can install green roofs or solar panels to mitigate carbon emissions.

No migration – fish stuck below the culvert restored!

Freedom to migrate up and down

*Figure 2.21: Source: Nooksack Salmon Enhancement Association*

Additionally, access to broadband creates opportunities for smart grid, smart buildings, and smart transportation and infrastructure. High-speed broadband can be used to collect and analyze energy data from devices or sensors, and even to remotely control these devices to improve efficiency and reduce

energy costs.<sup>175</sup> The data can also help cities and counties address issues such as traffic congestion and develop policies to improve a community's resilience to climate change.<sup>176</sup>

Additional sustainability outcomes include smarter water management, environmental monitoring, multi-modal and advanced transit, and smart buildings.<sup>177</sup> Green infrastructure can come in many forms with many benefits, that the County should consider when planning and developing new infrastructure or replacing old infrastructure.

***Key Priorities for Infrastructure:***

- ***Establish climate resilient infrastructure criteria to focus investments and protect, connect and re-green the landscape.***
- ***Identify critical infrastructure at risk in climate impact zones and develop a plan to retrofit, relocate or remove.***
- ***Incentivize installation of renewable energy systems and increase access to municipal owned broadband to facilitate grid modernization and become a "Smart County."***

**Strategy 4. Protect Climate-Sensitive Natural Resources of High Ecological Value**

In the natural environment, we must limit development in critical areas, agricultural lands, and forests in to protect water, natural resources, habitat, wildlife, and ecosystems. Many ecosystem services are already adversely impacted by human activities, and there is growing concern that climate change will further compromise the benefits of intact ecosystems. At the same time, there is growing evidence that restoration of habitat can help mitigate the effects of climate change while helping to avoid much greater costs of future climate impacts.<sup>178</sup> It will take significant investment and devotion of more resources to protect Whatcom County farmland, forestlands, shorelines, and riparian corridors.

Currently, the County is exploring mitigation options for developers who want to develop on or near wetlands that allows them to invest in the enhancement of degraded wetlands or restore high-value wetlands. It is important that the mitigation occur at the site of degradation and restore the services that are being harmed or lost by the development. If mitigation occurs in other locations, there is no guarantee as to whether key ecosystem services provided by the wetlands are accurately identified and restored. For example, if the wetland provides flood control, ecosystem services can be lost at the location of development and mitigation elsewhere would not restore it. Enhancing current mitigation requirements for all new development in the County will help minimize degradation to the natural environment.

The next section on the Natural Environment discusses in more detail the importance of protecting Whatcom County's water resources, fisheries, agriculture, forestry, and ecosystems. From a land use perspective, zoning lands strategically can help limit development in sensitive areas and protect ecosystem services and natural resources essential to building climate resilience. One way to

---

<sup>175</sup> Yesner, Ruthbea, "Accelerating the Digital Transformation of Smart Cities and Smart Communities," Microsoft. <http://info.microsoft.com/rs/157-GQE-382/images/Accelerating-the-Digital-transformation-of-smart-cities.pdf>

<sup>176</sup> Ibid

<sup>177</sup> Ibid

<sup>178</sup> <https://blogs.ei.columbia.edu/2019/06/28/nature-based-solutions-climate-adaptation/>

permanently conserve critical lands is through exploring a compensatory re-zone program where landowners subject to a re-zone receive a portion of the estimated value of rights removed.<sup>179</sup>

Furthermore, limiting or concentrating development ensures that critical working lands, including forest and agricultural lands, are not converted to residential or commercial use. Aside from the carbon sequestration benefits, productive agricultural lands are key to preserving the local food system. Forest lands not only sequester carbon, harvestable forest lands support a thriving local timber economy and natural forests serve as critical habitat for wildlife. It is also important to recognize that sustainable forest management practices, including in some cases timber harvesting, can help mitigate the impacts of wildfires, which impacts human health,<sup>180</sup> air quality, and agricultural production. The County must remain strategic when permitting commercial forest land, with preference towards limiting or even prohibiting expansion of commercial forest lands in its holdings. Instead, the County must prioritize the protection of existing trees in County lands, parks and forests, fund significant reforestation on lands that have suffered from floods, fire, land clearing or other harms, and encourage reforestation of rural land holdings along community edges that were previously forested.

Whatcom County's significant increase in population over the last few decades has resulted in the loss of working lands. In 2002, Whatcom County established the Purchase of Development Rights program (Fig. 2.22), which has recently been renamed to Conservation Easement Program (CEP). "The CEP program is a voluntary program that compensates property owners for the value of their unused development rights and protects the land through the placement of permanent conservation easements. Conservation easements are perpetual contract agreements where a landowner agrees to protect the values present within the property, such as working farmlands, working forestlands, and important ecosystems. By protecting these areas, we are protecting local economies and local ecosystems for current and future generations."<sup>181</sup> To ensure the success of the CEP program, the County would benefit from increasing its capacity by providing additional funding and staff support, which could in turn generate significant additional funds available in state and federal grant opportunities.

In addition, the County can protect natural resources through strategic conservation and land use planning. First, the County needs to consider climate change vulnerability and adaptation when updating plans pertaining to shoreline management, shoreline restoration, watershed management, salmon recovery, critical areas ordinances, floodplain management, and flood hazard assessments. More specifically, with guidance from the State, Whatcom County should thoroughly incorporate climate change, salmon recovery, and net ecological gain throughout the Comprehensive Plan and the corresponding development regulations, including the Shoreline Management Program, Critical Areas Ordinance, and other County codes.

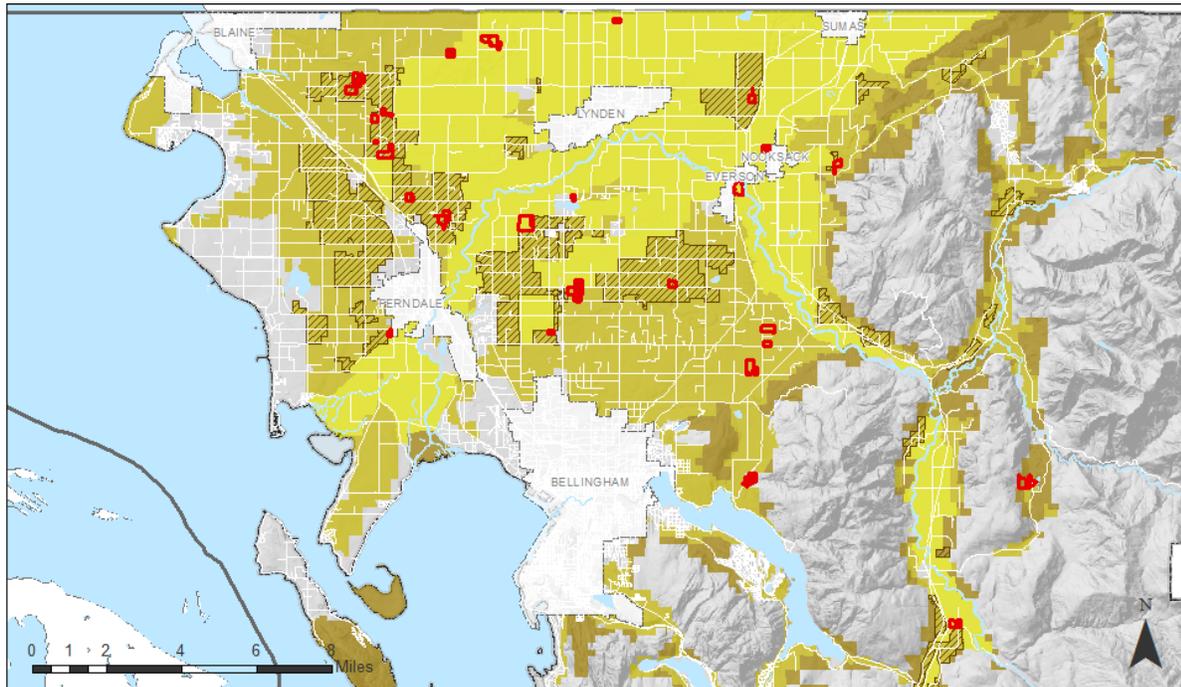

---

<sup>179</sup> Many of these strategies and actions, such as compensatory rezones, will require a source of funding. Subsequent chapters will consider potential finance tools as current county budget and resources are already constrained.

<sup>180</sup> According to the Whatcom County Climate Vulnerability Assessment for Land Use & Agriculture, "Wildfire smoke can exacerbate current health conditions and is linked to long-term health issues like asthma and respiratory disease. Vulnerable populations include people with respiratory and cardiovascular diseases, middle-aged and older adults, children, and those who are pregnant. Particle pollution from wildfires is particularly dangerous for adults 65 and older. This age group has already grown by 43 percent in Whatcom County between 2010 and 2019 and is expected to continue growing across Washington State. The risk is increased for emergency workers and first responders tasked with responding to wildfires. By the 2050s, Western Washington is projected to have 12 more days annually with very high fire danger compared to the 1971-2000 average, indicating that wildfire smoke may become more common, putting more people at risk of exposure."

<sup>181</sup> <https://www.whatcomcounty.us/573/Purchase-of-Development-Rights-Oversight>

Net ecological gain is defined as a standard for a comprehensive plan in which the ecological integrity is improved and enhanced as a result of mitigation measures, leaving it better off than before. The County would benefit from developing an ecosystem conservation plan that prioritizes protection of critical habitat and vulnerable wildlife. All future planning and development in Whatcom County, especially in rural areas, should be informed through a climate resilience and natural resource enhancement lens.

Key

#### Priorities to Protect Climate-Sensitive and High-Ecological Value Natural Resources:

- Significantly reduce and limit developments in climate impact zones, critical areas, wetlands, floodplains, agricultural lands, and forestry areas to protect key ecosystems services, critical core habitat and wildlife corridors.
- Increase capacity of Whatcom County's Conservation Easement Program
- Assess climate change vulnerability and adaptation when updating the County's various plans that involve natural resources.
- Incorporate climate change, salmon recovery, and net ecological gain throughout the Comprehensive Plan and Whatcom County Code

## Timeline and Summary of Strategies and Actions

### Land Use Strategies and Actions

<p><b>1. Create a Climate Resilient Regulatory Framework for Sustainable Land Development:</b> Develop and implement a sustainable and climate resilient regulatory framework for new County developments (residential, commercial and industrial).</p>
<b>Actions</b>
<p>1.1 Use climate resilience as a criterium for updating the Comprehensive Plan, land use codes and building codes in rural areas. Consider building energy efficiency and density, drought-tolerant landscaping, and maintenance of tree canopy cover. Also revise codes to encourage the siting of community-scale renewable energy.</p> <p>1.2 Update land use/housing regulations to concentrate new developments in urban growth areas (UGAs) that can be serviced by city utilities to eliminate expansion of septic and well water systems. Promote increased building energy efficiency and density of single and multifamily housing and encourage cities to also increase density to reduce urban sprawl. Provide incentives to build mixed-use neighborhoods.</p> <p>1.3 Exclude residential development in riparian corridors, floodplains, and on shoreline areas subject to storm surge. In addition, preserve rural and commercial forest lands and agricultural lands.</p> <p>1.4 Require climate impact vulnerability assessments and projected GHG emissions and mitigation in the planning of large new county residential, commercial or industrial developments.</p> <p>1.5 Collect or increase impact fees in rural areas to help offset the climate-related costs to the County. Use these fees to fund projects that reduce GHG emissions and promote climate resilience.</p> <p>1.6 Use the updated County Wildland Urban Interface (WUI) map from the DNR to require International Building Codes in WUI areas to reduce wildfire damage.</p>

**2. Enhance Active and Public Transportation Systems:** Employ County land use policy and regulations and public investment to enhance transportation systems and infrastructure and increase transit ridership.

**Actions**

- 2.1 Require multimodal transportation plans for new large-scale developments,<sup>182</sup> and encourage for smaller developments, to identify public multimodal options, impact on traffic congestion, access to basic services and emergency response, safe evacuation routes, as well as improved quality of life.<sup>183</sup>
- 2.2 Promote equitable transit-oriented development policies and standards that support efficient use of land, affordable housing developments near transit corridors, reduced volume of single occupancy vehicles, and increased urban access and circulation within the UGA.
- 2.3 Work with Whatcom Transportation Authority to ensure service is planned for high density areas. The target should be for new residential projects consisting of 25 units or more to be located within 0.5 mile of a transit node, shuttle service, or bus route with regularly scheduled daily service.
- 2.4 Require bicycle/walking trail infrastructure planning and development in new multi-unit developments, long subdivisions, and in developments where relevant County codes already require sidewalks. Emphasize trail connectivity to schools and services.
- 2.5 Expand Transportation Benefit Districts under RCW Chapter 36.73 to fund transportation projects that reduce greenhouse gas emission such as new trails, electric vehicle charging stations, and park and ride lots.
- 2.6 Require new County buildings be located in areas with convenient multimodal transportation systems, including public transit and bicycle/walking trails. Include an assessment of employee commute emissions and projected public emissions based on the current transportation options.

**3. Build Green Infrastructure to Enhance Climate-Resilience and Reduce Environmental Impact.**

**Actions**

- 3.1 Develop a climate resilient infrastructure plan that identifies, protects, connects, and enhances ecosystem resilience. Require all new county infrastructure to meet resilient criteria. Plan should identify critical infrastructure, such as roads, bridges, and emergency services at risk in climate impact zones or related hazardous areas and a plan to upgrade or relocate.
- 3.2 Avoid infrastructure development in critical watershed areas, wetlands, high value ecosystems, and climate impact zones.<sup>184</sup>
- 3.3 Prioritize replacement or retrofits of all county culverts that impact fish passage with fish friendly and climate resilient alternatives.
- 3.4 Collaborate with the Port of Bellingham and Whatcom PUD to fully fund and implement municipal-owned broadband service, especially in rural and underserved areas.

<sup>182</sup> For residential development, examples of large-scale developments may include planned unit developments, manufactured home parks and subdivisions, trailer/mobile home parks, and large multi-family residential complexes. For commercial and industrial, major industrial development as defined in [RCW 36.70A.365](#).

<sup>183</sup> Are there thresholds proposed? If a duplex or a minor commercial addition is proposed, will they have to do the plan? How will this add to the cost of housing and other development?

<sup>184</sup> Refer to [WCC Chapter 16.16 Critical Areas](#) definitions for critical watersheds and ecosystems

**4. Protect Climate-Sensitive Natural Resources of High Ecological Value:** Protect riparian corridors, floodplains, shorelines, wetlands, and migration corridors by incorporating science-based future climate scenarios in County code and increasing acquisition of voluntary conservation easements.

**Actions**

- 4.1 Accelerate and increase funding for the County’s Conservation Easement Program to compensate landowners willing to sell conservation easements.
- 4.2 Revise zoning codes to reduce development potential in high value working lands and ecosystem areas, including the Rural Study Areas<sup>185</sup> and climate impact zones. Consider zoning changes based on water availability. Compensate landowners subject to a rezone based on the estimated value of the rights removed.
- 4.3 Update the Whatcom County Comprehensive Plan to require 1) net ecological gain as a component of land use actions (HB 1117<sup>186</sup>), and 2) vulnerability assessments using science-based future climate scenarios.
- 4.4 Develop and implement a County ecosystem conservation plan or program that implements protection of critical habitat, critical core wildlife habitat, and climate migration corridors, and incorporate into relevant county plans and codes, as currently assigned to the Wildlife Advisory Committee.

**Conclusion**

Solutions for climate change mitigation and adaptation require planned intervention in the built environment and protection of the natural environment. “Whatcom County’s land use and development policies will play an important role in building resilience to projected climate impacts like warming temperatures, shifting precipitation patterns, wildfires, floods, and droughts.”<sup>187</sup>

Whatcom County’s land use planning, policies, and regulations intersect all sectors considered in this Climate Action Plan including electricity and buildings, industry, transportation, infrastructure, water resource management, working lands, and ecosystems. To fully mitigate and adapt to climate change, the County must be strategic in all future growth and development, and integrate watershed management, salmon recovery, and climate action planning within the broader land use planning processes.

The goal is to concentrate development within the urban growth areas to preserve working lands and critical areas. Climate and natural resource-informed comprehensive planning and land use policies can help protect productive working lands, natural resources, and ecosystem services. The County must address its large and growing carbon footprint by reducing the environmental impacts of buildings, industry, land development, transportation, and infrastructure. Considering climate change and natural resources in all County land use policies is necessary to meet greenhouse gas emission reduction goals and ensure mitigation, adaptation, and resiliency to climate change.<sup>188</sup>

# SECTION 3 - NATURAL ENVIRONMENT

## Introduction to the Natural Environment

Whatcom County is home to a wealth of natural resources, but these natural environmental systems are under an increasing threat from unsustainable development and climate disruption. Humans already directly affect more than 70% of the global, ice-free land surface, and about a quarter of this land surface has been degraded.<sup>189</sup> Climate change is exacerbating land degradation, because land surface air temperature has risen nearly twice as much as the reported globally averaged temperatures. Increases in the frequency and intensity of extreme weather events have contributed to topsoil removal, food insecurity and in general, declining ecosystem health. If we do not act immediately, we may risk losing some of the things that make Whatcom County such a wonderful place.

Perhaps the natural resource most directly threatened by climate change is water and in particular, freshwater. Water is the fundamental resource that supports our fisheries, forests, agriculture, and other critical ecosystems that support life on earth. Freshwater resources represent only about 3% of the total water on earth of which about 1% is readily available for human use.<sup>190</sup>

*Figure 3.1: Water is the key resource for healthy ecosystems and carbon storage.*

Rising stream temperatures are putting stress on our local salmon runs resulting in fewer fish for everyone. Climate change projections predict that 40 miles of the Nooksack River will exceed the thermal tolerance of salmon by 2040.<sup>191</sup>

Ecosystems in the Salish Sea are also suffering from the cumulative impacts of 150 years of development and climate stressors.<sup>192</sup> The climate impacts of ocean acidification and sea level rise threaten our fisheries and shellfish industry and destroy important shoreline and estuary ecosystems that are a vital part of the marine food chain. The three-day heat dome in June of 2021 literally “boiled” nearshore sea creatures critical to ocean food chain.

<sup>191</sup> Floodplains by Design and The Nature Conservancy, 2018. Climate Change in the Nooksack River: A quick reference guide for local decision-makers: <https://cig.uw.edu/our-work/decision-support/floodplains-by-design/>

<sup>192</sup> Sobocinski, K. L. (2021), The State of the Salish Sea, G. Broadhurst and N.J.K Baloy (Contributing Eds.), Salish Sea Institute, Western Washington University, <https://doi.org/10.25710/vfhb-3a69>

The natural environment in this plan includes those ecosystems that are threatened by climate disruption, but also can be part of the climate solution, especially in their role as natural sinks for large quantities of carbon (Fig. 3.1). Cropland, grasslands, forests, riparian corridors, wetlands, and estuaries serve many critical functions in addition to carbon storage, such as clean water, clean air, soil formation and food production to name a few. These are vital functions that play an important role in carbon uptake and storage and must be resilient to climate change.

As emphasized in Section 2 of this report, land use is a valuable tool that can reduce GHG emissions and enhance natural carbon sinks (Fig. 3.2). Sustainable management practices, incentives and education can increase the carbon storage potential of cropland, forests, and wetlands.

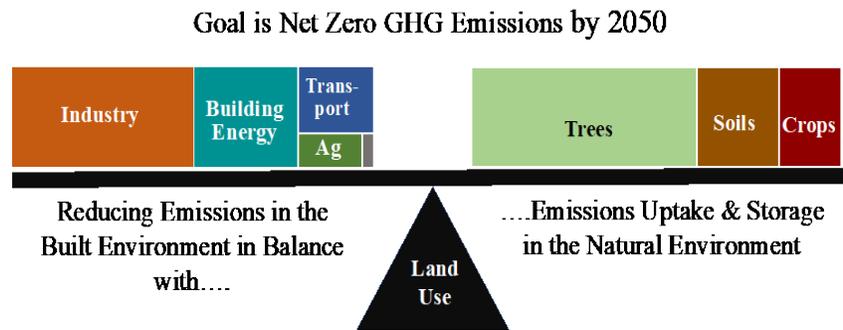

Wetlands are also a vital component of watersheds that support the overall hydrologic system.

Increases in forest cover not only increase carbon dioxide uptake but can also alleviate some of the negative impacts of climate change by

decreasing surface temperatures through evapotranspiration. Land use conversions to grassland, developments (settlement) or other lands results in a release of about 160 thousand MT CO<sub>2</sub>e per year in Whatcom County.<sup>193</sup> This amount of land conversion is not sustainable and would add about 1.6 million tons of GHG emissions this decade.

The addition of the natural environment in this Climate Action Plan signifies both the importance of natural ecosystems in achieving climate resilience and the increasing threat to these systems and our quality of life in Whatcom County. As expressed often and eloquently by Native Americans, we are temporary occupants and passing custodians of these natural resources and they must be protected for future generations.

This section provides an assessment of the current knowledge available on the status of the natural environment in Whatcom County and how these resources can be strengthened to build climate resilience.

*Figure 3.2: Using the natural environment along with significant emissions reduction in the built environment to help rebalance GHGs.*

<sup>193</sup> ICLEI sponsored study on the GHG Inventory for Forests and Trees Outside Forests for Whatcom County. 163,000 MT CO<sub>2</sub>e was the average per year emissions over a ten-year interval from 2000-2010 for Whatcom County.

## Water Resources and Fisheries

The landscape of Whatcom County has changed greatly over the past 150 years. The lowland forests have been nearly eliminated, the lower Nooksack River has been leveed with a large percentage of wetlands ditched or filled, permeable ground surfaces have been replaced with impervious surfaces and developments, and upland forests have been harvested multiple times in most places and most recently with short-duration harvest rotations. Watershed<sup>194</sup> functions and the interrelated hydrologic systems have been adversely impacted by these changes and in many cases the habitats they support are degraded. Recent studies suggest that young Douglas fir plantations are inefficient when it comes to water use and may reduce late summer streamflows by up to 50% as compared to mature and old growth stands.<sup>195</sup> With the projected impacts of climate change, a healthy, intact watershed is critically important.

Water resources in Whatcom County include the rivers, streams, floodplains, wetlands, estuaries, glaciers, and aquifers. These resources supply water for multiple municipal, domestic, industrial, and agricultural uses; provide habitat for all life stages and migration corridors for salmon and other aquatic and non-aquatic species; store and convey floods; support recreation and resilient ecosystem processes; and contribute to the natural character and beauty of our county.

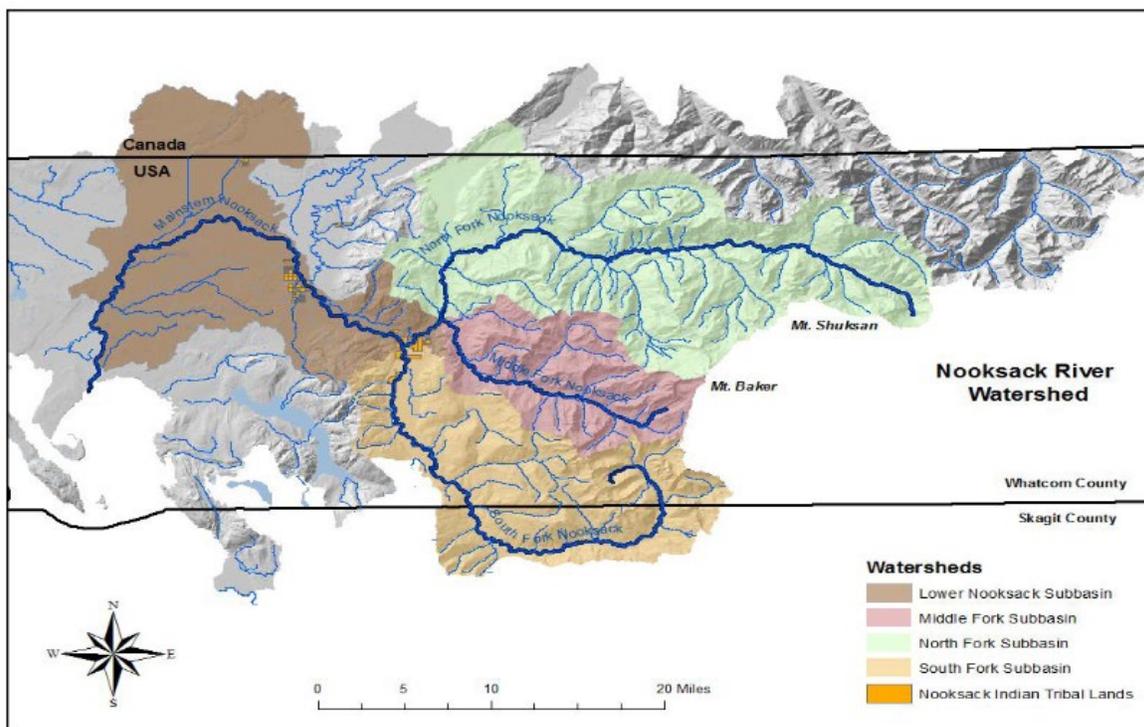

Figure 3.3. Nooksack River Watershed.

<sup>194</sup> <https://nplcc.blob.core.windows.net> 1 FINAL Glacier Summary Report\_2015.pdf

<sup>195</sup> Perry, T.D., and J.A. Jones. 2016. Summer streamflow deficits from regenerating Douglas fir forest in the Pacific Northwest, USA. *Ecohydrology* 2016:1-13. DOI 10.1002/eco.1790.

Climate change is already having a profound impact on Whatcom’s water resources.<sup>196</sup> More intense, heavy rains,<sup>197</sup> coupled with greater proportion of precipitation falling as rain during the winter instead of snow, will increase the frequency and magnitude of flooding and could overwhelm stormwater systems. Sea level rise<sup>198</sup> and increased storm surge will increase coastal flooding and create a “coastal squeeze”<sup>199</sup> that may result in loss of intertidal wetlands as well as the potential for damage and loss of buildings, roads, and other infrastructure near the shoreline.

The most detrimental factors to salmon survival and restoring sustainable fisheries are declining summer streamflows (Fig. 3.4)<sup>200</sup>, higher water temperatures, reduced habitat quantity and quality, redd scour loss due to increased peak flows and flooding, and insufficient in-stream river flow. The contribution of glacial meltwater to summer base flows that reduce stream temperatures will, in a matter of decades, be drastically diminished and essentially no longer be available after 2050. In August 2015, total flow in the North Fork of the Nooksack River was 60-95% glacier melt. Glacier melt contribution will be

drastically reduced in the future with continued climate change.<sup>201</sup> Annual winter snowpack will continue to decline under a warming climate, as well as the types of precipitation (e.g., snow vs. rain) and dynamics (location and amounts per time period).

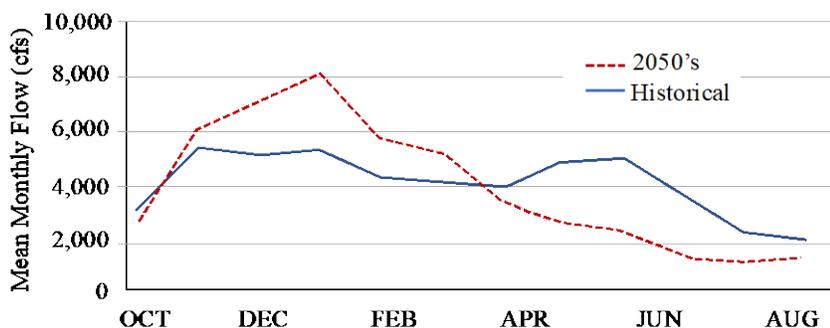

Figure 3.4: Projected Nooksack River flows at Ferndale in 2050's.

Further reductions to the already limited water supply threaten to intensify conflicts over water use.

In addition to the impact of climate change on freshwater systems, Whatcom County’s saltwater fisheries (including shellfish) are threatened by climate change, particularly by the effects of ocean water warming, sea level rise, and ocean acidification. These threats come at a time when other pressures, environmental and economic, have caused decline in fishing activity: for example, the Lummi Nation has only about half the number of active fishers as it had in the early days of the Boldt decision in the mid-1970s,<sup>202</sup> and the non-tribal fishing fleet has likely seen similar declines.

## Water Rights and Whatcom County’s Role

Waters of the state are a public resource, and a water right is required to beneficially use water. Western water law operates under the doctrine of prior appropriation, or “first-in-time, first-in-right,” based on the date the water is first put to a beneficial use. Beneficial use includes sufficient streamflow to sustain the habitat and life cycle needs necessary to provide a harvestable surplus of salmon that supports treaty-reserved fishing rights. Climate change is predicted to produce drier summers in Whatcom County which will increase water scarcity during critical periods for instream resources like salmon and out of stream water needs such as irrigation for farms.

Management and enforcement of water law is challenged by the sheer number and complexity of water rights in the Nooksack Basin. It has been estimated that up to 40% of all water used in agriculture may lack a legal water right.<sup>203</sup> Both the Lummi Nation and the Nooksack Indian Tribe have petitioned the state Department of Ecology to initiate stream adjudication, a court process that identifies, quantifies, and confirms legal water rights. The Washington state legislature secured funding (SB-5092 in 2021) to initiate pre-adjudication of water rights for the greater Nooksack River Basin, also known as Water Resource Inventory Area 1 (WRIA 1). In addition, funds were appropriated for Whatcom County to initiate a collaborative solution process to complement a water rights adjudication and also to collect additional needed technical water data.

**Whatcom County’s responsibility for water resources management** is primarily assigned to the Natural Resources Division in Public Works. The Planning and Development Services, and the Health Department also support specific water resource review and planning functions. The Public Works Department supports the following water resource management responsibilities:

<sup>203</sup> Community Research Project report, 2019. Document listed at: <https://whatcomcounty.us/3162/Meetings-Additional-Information>

- The River and Flood Division provides emergency flood response and floodplain management services. These services include integrated floodplain management planning, flood risk reduction through capital projects and acquisition of flood-prone areas, repair and maintenance of levees and other flood protection structures, floodplain permitting and administration of the National Flood Insurance Program. River and Flood staff, in partnership with Tribes and agricultural and other stakeholders, lead the Floodplain Integrated Planning (FLIP) process.
- The Natural Resources Division supports and engages in salmon recovery and water resources planning, monitoring, and management. Natural Resources staff support the WRIA1 (Water Resource Inventory Area 1) Watershed Management Board and Planning Unit. Whatcom County serves as the lead administrative agency for watershed management planning efforts.
- Planning and Development staff review development applications, issue development permits, enforce zoning and other development-related codes, and perform long range land use planning for the County. Long range planning efforts include periodic updates of the Comprehensive Plan, Shoreline Management Program, critical areas regulations, and the Coordinated Water System Plan.
- The Health Department responsibilities related to water resources are primarily related to the review and approval of potable water sources and the review, approval, and inspection of on-site septic systems.

**Whatcom County’s role in fisheries.** Whatcom County supports the 2005 WRIA 1 Salmonid Recovery Plan<sup>204</sup> goal of restoring healthy, self-sustaining runs of salmon to harvestable levels. The County has also formed shellfish protection districts to improve water quality so that all shellfish harvesting areas are free of fecal contamination and can be opened for harvest. Achieving these goals is essential to maintaining the way of life for the Lummi Nation and the Nooksack Indian Tribe and for the Whatcom County community at large.

Figure 3.6: WRIA 1 Salmonid Recovery Plan map. 2005

Whatcom County has both tribal ceremonial, subsistence, and commercial fisheries and non-tribal commercial and recreational fishing industries. The Lummi Nation and Nooksack Indian Tribe rely on salmon and shellfish and other traditional foods as a major part of their diet and are actively promoting consumption of traditional foods for their health and cultural value. Their rights to “take fish at usual and accustomed places” are guaranteed by the 1855 Treaty of Point Elliott and have been repeatedly confirmed by the courts. Tribal communities continue to fight for enforcement of their treaty rights and maintaining their legal sovereignty, as well as the chance to revitalize their communities economically and preserve their cultural autonomy. In addition to ceremonial and subsistence fisheries, the Lummi Nation and its individual members maintain the largest native commercial fishing fleet in the US, producing salmon, clams, and crabs for sale. The Lummi Nation co-manages several treaty-reserved fisheries. The Nooksack Indian Tribe and its members are also

<sup>204</sup> WRIA 1 Salmon Recovery Program, <https://salmonwria1.org/salmon-recovery>

heavily involved in commercial salmon fishing, both in the Nooksack River and in saltwater. Over one hundred commercial fishing boats (tribal and non-tribal) based here operate in the north Pacific, and there are several processing plants in Bellingham, Blaine, and Ferndale, as well as five commercial shellfish producers. Commercial fishing in the County brought in \$320 million in 2013.<sup>205</sup>

Climate change is an urgent concern to tribal and commercial fishers and shellfish producers, threatening both the way of life and the economic viability of both tribal and non-tribal fishers and shellfish producers. The cultural, social, and economic vitality of tribal communities depends partly on other stakeholders' maintaining and strengthening a relationship of mutual respect and cooperation, so that we can react to climate change and other environmental challenges in ways that preserve the Tribes' legal and cultural rights to subsistence, income, and sovereignty.

## Goal and Strategies in Water Resources and Fisheries

**Goal: Ensure long-term equitable and climate-resilient water resources in Whatcom County that address the impacts of climate change on water quantity and quality, sea-level rise and storm surge, and the challenges associated with water resource management.**

The strategies identified below also support the overarching natural resource goal of promoting adaptation and improving community and ecosystem resilience to climate change.

The nine water resources and fisheries climate strategies support two main areas: the seasonal impacts on water availability (strategies 1 through 5), and the increasing risk and damage from climate-related flooding and storm damage

(strategies 6 through 9). There are many cross-cutting issues in water resources that intersect and overlap with agriculture, forestry, ecosystems, and other land uses, which are discussed throughout this larger Section 3 on Natural Environment. Ensuring long-term equitable and climate-resilient water resources will require significant effort. To be most effective, actions pursuant to these strategies should be designated, designed, and implemented as soon as practical to be effective at offsetting the adverse impacts of continued climate change into the future.

*The water resources strategies support two main areas: the seasonal impacts on water availability and the increasing risk and damage from climate-related flooding and storm damage.*

### Climate Strategies in Water Resource and Fisheries

1. Resolve uncertainty in current and future water resources
2. Restore and protect streamflow to a level and temperature that ensures year-round salmon migration and survival and other aquatic and non-aquatic species.
3. Maintain and enhance estuarine, marine shoreline and coastal wetland habitats for fish and shellfish.
4. Reduce water demand through conservation and efficiency
5. Protect existing and develop new or alternative water supplies.

<sup>205</sup> Port of Bellingham, The Economic Impacts of the Commercial Fishing Fleet at the Port of Bellingham. <https://www.portofbellingham.com/DocumentCenter/View/5138/Commercial-Fishing-Impact-Study-2014-FINAL?bidId=>

6. Promote climate resilient floodplain (coastal and riverine) management.
7. Manage riverine floodplains to reduce flood risk and allow for natural processes that increase the capacity to store floodwaters and attenuate flood peaks.
8. Reduce flood risk by moving people and infrastructure out of harm's way.
9. Manage stormwater infrastructure for increased frequency and magnitude of rainfall/flood events.

### Strategy 1: Resolve Uncertainty in Current and Future Water Resources

Our local water supply is paramount to the livelihood and economy of the County through its role for salmon, ecosystem services, agriculture, industrial, domestic, and municipal consumption, and diverse cultural and recreational values. Surface and groundwater in the Nooksack River Watershed are the primary sources of fresh water for Whatcom County. Lake Whatcom is the source of water for about 50% of Whatcom County residents.

The Nooksack River streamflow is strongly seasonal. An oversupply of water occurs in the winter and early spring and can often result in flooding. In contrast, a scarcity of water in the summer and early fall results in low stream flows at a time when demand for irrigation is high (Fig 3.7).<sup>206</sup>

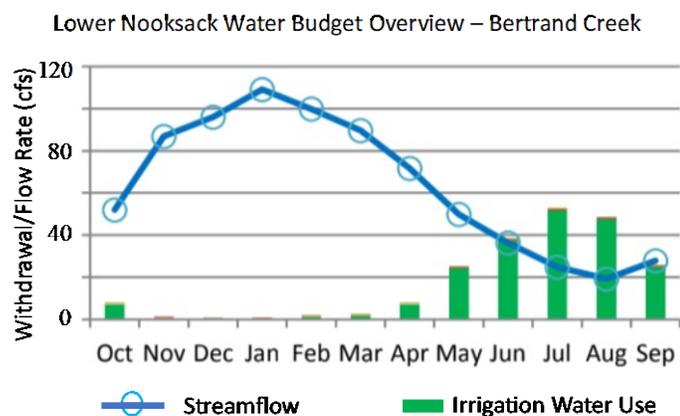

Figure 3.7: Simulated monthly streamflow 1999-2011 and estimated water use (Topnet-WM model as a function of evapotranspiration irrigation efficiencies, crop type and acreage).

Meeting our county's diverse needs with the quantity of water available will only become more difficult with climate disruption.<sup>207</sup> A projected shift in the amount and timing of precipitation with significantly less in spring and summer will continue to cause water shortages during the growing season. Glacial melt derived streamflow will increase slightly over the next 30 years in glacial creeks and in the North and Middle Forks and in the lower Nooksack River, but then decrease substantially in the latter half of the century as glaciers disappear (Figure 3.8).<sup>208</sup>

<sup>206</sup> Lower Nooksack Water Budget Overview, WIRA-1 Joint Board. Prepared by Silver Tip Solutions, Hydrologic Services Co., Dumas and Associates, and Associated Earth Sciences, Inc.

<sup>207</sup> Climate change in the Nooksack River: A quick reference guide for local decision-makers. Issued by Floodplains by Design and The Nature Conservancy. Based on the UW Climate Impacts Group, State of Knowledge: Climate Change in the Puget Sound, 2015.

<sup>208</sup> Ryan Murphy, 2016. Modeling the Effects of Forecasted Climate Change and Glacier Recession on Late Summer Streamflow in the Upper Nooksack River Basin. WWU Graduate School Collection. 461. <https://cedar.wwu.edu/wwuet/461>

*Figure 3.8. Recession of the Coleman Glacier on Mt Baker Between July 2003 and July 2021. Credit: John Scurlock*

Moving forward on solutions to our water supply has been stymied by several issues that start with accurate measurements of our water supply and use. Approximately 20% of irrigation water for agriculture is drawn from the Nooksack River system and lowland tributaries, and the remaining 80% comes from groundwater – mostly the Abbotsford-Sumas aquifer that extends into Canada.<sup>209</sup> Considering only direct withdrawals from the Nooksack River is deceptive, because withdrawals from shallow aquifers, like the Abbotsford-Sumas aquifer, that feed the river system also have a direct impact on stream levels.

While predictions of climate change impacts to specific water quantity concerns may contain uncertainty, there is sufficient confidence in the projected climate trajectories that indicate efforts to conserve, plan and adapt for less water availability will benefit regional resilience. The LENS Area Numerical Groundwater model<sup>210</sup> should be used to support implementation of the WRIA 1 Watershed Management Project. This regional model will provide a better understanding of groundwater and surface water interactions to allow resource managers to make decisions on how to allocate water for existing and future uses and how to mitigate impacts while maintaining sufficient instream flow. Data supported water planning and implementation will improve the climate resilience in the Nooksack River Basin and ensure a stable economic future and healthy environment.

Throughout this Climate Action Plan we have stressed the need for actual information/data as a foundation for formulating strategies and for measuring the effectiveness of strategies and actions. For example, it is anticipated that strategy 1 will provide the information needed to implement strategy 2 including the following:

- What are the minimum flows (in cubic feet per second) that must be maintained for fish health and long-term sustainability, and how do these values vary across watersheds and season?
- How much do stream flows need to be increased, where (by sub-basin watershed), and when?
- How are we to achieve this goal of increasing streamflows?

<sup>209</sup> Henry Bierlink interview, April 12, 2019, Community Research Project report, <https://whatcomcounty.us/3162/Meetings-Additional-Information>

<sup>210</sup> Lynden, Everson, Nooksack, Sumas (LENS) area of Whatcom County. Chuck Lindsay (Associated Earth Sciences, Inc.), Gilbert Barth (S.S. Papadopoulos and Assoc., Inc.), and Christina Bandaragoda (University of Washington).

- What are the costs to do that?
- What entities are responsible for the projects that increase streamflows?
- What are the determinants of success to know when flows have increased sufficiently?

### **Key Priorities for Strategy 1:**

- *Use climate change projections to estimate future water availability.*
- *Use the LENS model with climate projections to estimate the impact of different sectors on stream flow levels.*

## **2. Restore and Protect Streamflow to a Level and Temperature that Ensures Year-Round Salmon Migration and Survival**

Instream flow levels in the Nooksack River, which help support salmon life cycle needs, frequently fall below state requirements in the summer and fall. Recent studies suggest that flow in the Nooksack River has been declining since the late 1800's and that minimum instream flows at Nugent's Corner currently are not met approximately 112 days of the year. By 2075, minimum instream flows may not be met for as many as 190 days.<sup>211</sup> As a result, water quantity in Whatcom County has been the subject of much debate, planning, and at times, legal action over the last several years.

A combination of hotter temperatures, lowered stream flows, and historic removal of shade from riparian forests has raised the temperature of our creeks and rivers, to the point that temperatures in some areas are sub-lethal to lethal to salmon and trout. High water temperatures can also promote bacterial infections that can kill early Chinook salmon adults before they are able to spawn.

The South Fork Nooksack River in particular experiences dangerously high summer and fall water temperatures that threaten "early" or "spring" Chinook, that enter the Nooksack River in the spring and migrate upstream where they can stay for several months before spawning in August and September. Cool, deep pools with woody cover provide important resting areas where fish are safer from predators and disturbance and can conserve their energy for spawning. If the water table is lowered by increased irrigation or municipal use, these cool pools may no longer provide this needed refuge.

The North and Middle Forks of the Nooksack River receive a significant amount of their summer flow from snowfields and glaciers on Mount Baker, keeping water temperatures lower than on the South Fork. As glaciers shrink with lower snow accumulation rates each winter, there will be less summer water and less cool water in the future.

To maintain a healthy aquatic ecosystem it will be necessary to increase stream flows when they drop below a critical level. In addition, the scientific basis for the current minimum instream flow standards is in question and may be a low estimation of actual needs. There are numerous recommended approaches proposed to improve streamflow in upland and lowland streams. Efforts are underway to evaluate the role of forest hydrology in streamflow and significant projects are proposed in the South Fork Nooksack River basin to assess this approach. Restoration of forest hydrology also improves fish habitat, reduces sedimentation, and increases carbon storage across the landscape.

---

<sup>211</sup> Grah, O. 2019. "Nooksack Indian Tribe Climate Change Project - Glaciers and Planning for Climate Change." PowerPoint presentation to TRIBAL WATER in the PACIFIC NORTHWEST, Law Seminars International, September 19, 2019.

Projects are also proposed for stream augmentation which may be an effective way to increase streamflow from deep groundwater sources. These projects can generate the data needed to justify a change in state water regulations and laws that impact our ability to enhance stream flow under a changing climate.

Multiyear demonstration projects should involve most areas of the Nooksack River basin that typically experience low instream flows during the summer and early fall. Volunteers and staff from different organizations could collect data on the economic, social, and environmental impacts of this augmentation demonstration project. Ultimately, the information collected will be used to develop best practices and legislative fixes of state water laws and regulations as needed.

Salmon hatcheries, including two operated by the Lummi Nation and the Kendall hatchery operated by the Washington Department of Fish and Wildlife, have partially mitigated the effects of habitat loss on salmon runs. However, even enhancement by hatcheries may not be able to keep pace with the effects of diminished flows and warmer water on salmon reproduction.

Increasing air temperatures, declines in the depth and area of winter snowpack, retreat of snowlines to higher elevations, shrinking glaciers, and decreasing summer precipitation are expected to continue to disrupt freshwater systems, habitats, and watershed functions in Whatcom County. It is important for communities and natural resource managers to monitor, maintain, and adapt water policy to prepare for the risks and impacts associated with climate change.

#### **Key Priorities for Strategy 2:**

- *Develop demonstration projects to increase streamflow and lower stream temperatures.*
- *Restore and protect wetlands, riparian zones, and upland forested headwater areas.*

### **3. Maintain and Enhance Estuarine, Marine Shoreline and Coastal Wetland Habitats for Fish And Shellfish**

Aquatic habitat loss is a prime factor in endangering our salmon runs, other fish resources, and shellfish production. We can halt and reverse habitat loss and degradation through removing hard shore protection, restoring wetlands to promote structural complexity and biological diversity, and promoting mechanisms for sediment transport and deposition.

With 3 feet of sea level rise by 2100 predicted by many climate models, much of the current intertidal shellfish habitat could become permanently under water, reducing the total area available for shellfish production. Sea level rise may result in erosion of the estuaries of the Nooksack and other streams, impacting habitat for juvenile salmon. Attempts to armor shorelines to protect coastline residences and infrastructure can exacerbate the effects of sea level rise by causing waves to bounce off the bulkheads and erode the beach, impacting intertidal habitats for shellfish and forage fish such as sand lance and surf smelt. It is possible that in a few areas the shoreline and associated shellfish beds could move inland to places two to three feet higher elevation, but this is not certain.

Declining pH of ocean water is perhaps the most serious threat to our fisheries, particularly shellfish. Oysters, clams, and mussels cannot “set” shells when the water becomes too acidic, and some growers are already having to add basic materials to the water where shellfish larvae begin to set shells, or to seed larvae elsewhere and bring the juveniles here for maturation. Other disruptions may happen in the

marine food web. For example, Dungeness crabs, a key source of food and income for both Native and non-tribal fishers, probably will suffer declines in many of their prey species.

Warmer ocean water incidents in the Eastern Pacific in recent decades, including the famous “blob” that formed from 2015 to 2018 and repeated El Niño events, also bring warmer waters. This affects the distribution of the marine organisms that salmon feed on, and thus the distribution, growth, and survival of salmon in the Pacific Northwest and Alaska. It can also affect the migration routes of salmon returning to spawn; these all have direct effects on the number of fish available to local tribal and commercial fishers for harvest and to return to the spawning grounds to sustain the populations.

Ocean waters also become more stratified during warm water events; this promotes red tides, which have recently lasted longer into the fall, affecting the safety of our shellfish harvests. Rising ocean temperatures also promote toxic algal blooms as well as *Vibrio* and other bacteria, which release toxins rendering oysters that are toxic to humans. In addition, competing invasive species, such as the European green crab, have moved northward recently because of rising ocean temperatures. Other important tribal subsistence resources, such as sea urchins and sea cucumbers, also have their reproductive cycles shifted in time with changes in ocean temperatures.

The Shoreline Management Program (SMP) requires the County to understand the current and potential ecological functions and processes provided by shorelines, understand how exempt development will impact these ecological functions, and include policies and regulations to address the cumulative impact on these ecological functions. The SMP can be significantly strengthened by consideration of climate change and sea level rise. The permitting of new building developments and associated infrastructure that may be in place for decades must be evaluated using projected risks of sea level rise, storm surge and flooding over the projected lifetime of the building, road, or bridge. Coastal and riverine flooding will increase in magnitude and frequency.

Whatcom County is currently participating in the development of a local Coastal Storm Modeling System (CoSMoS) which will further inform the extent of potential impacts of sea level rise combined with storm surge, wind currents, barometric pressure, and other environmental factors. This effort will support selection of an actual sea level rise elevation scenarios and identify shoreline impact zones. New County code language is needed that clearly identifies the projected impacts of sea level rise and increased impacts of riverine and coastal flooding. Code improvements must also require applicants pursuing development within the shoreline jurisdiction to perform a climate vulnerability assessment for the proposed action and highlight mitigation measures proposed to address projected climate impacts. This language will support applicants in mitigating climate risk to their private investment and will support local government in protecting public safety, private property, and environmental health. Some developments in Whatcom County might already exist in climate impact zones subject to sea level rise and coastal storm processes. Whatcom County must support property owners to evaluate risk and consider necessary actions to protect public safety.

### **Key Priority for Strategy 3:**

- ***Revise codes and regulations for shoreline management to create healthy ecosystems that are climate resilient.***

#### 4. Reduce Water Demand through Conservation and Efficiency

Much can be done to conserve and improve the efficiency of water use in Whatcom County through educational outreach and modification of current practices. Whatcom County has contracted with the Whatcom Conservation District to implement the Enhanced Whatcom Water Alliance Program that promotes water use efficiency and conservation for domestic and municipal users and is also partnering with the District to develop an Agricultural Water Management Program to support farmers in improving water management practices.

##### *Key Priorities for Strategy 4:*

- *Incentivize efficiency upgrades to systems that consume large quantities of water such as crop irrigation.*
- *Incentivize increases in soil organic matter to increase water holding capacity of agricultural soils.*

#### 5. Protect Existing and Develop New or Alternative Water Supplies

The County should evaluate and consider developing new sources of groundwater that could replace the use of water withdrawals that impact the streamflow levels in the Nooksack Basin. Both the Birch Bay Water and Sewer District and the City of Ferndale have drilled deep groundwater wells in the past few years that have yielded potable water. For example, Birch Bay drilled an exploration well<sup>212</sup> that intersected a confined aquifer at a depth of around 600 feet. The available data indicates that the recharge area for the aquifer extends a significant distance into southern British Columbia<sup>213</sup> and therefore would not impact water levels in the Nooksack Basin.

The science is just beginning to reveal the deep aquifer potential in Whatcom County and whether this source of groundwater will be able to provide the quantity and quality of water needed for irrigation or municipal and industrial uses. It may also be possible to utilize these deep aquifers in northwest Whatcom County without impairing established water rights or minimum instream flows.

Protection of existing wetlands, aquifer recharge areas, and upland forest hydrologic systems also have significant impacts on streamflow and provide the potential to enhance or increase streamflows in the future. Current efforts to identify, restore, and protect wetlands, aquifer recharge areas, and headwater areas must be significantly enhanced and expanded. This could be accomplished through increased rate of acquisition of conservation easements on these priority areas, development of a carbon credit program to acquire protections on forested watershed areas, and improved protections within development regulations to minimize impacts to watershed health and water supply.

Other approaches for new and alternative water supplies may be as simple as rainwater harvesting to provide water for buildings or yards, advanced wastewater treatment for water reuse, and technologies like reverse osmosis for desalination.

---

<sup>212</sup> Dan Eisses, General Manager of the Birch Bay Water and Sewer District, presentation given at the Academy of Lifelong Learning, Whatcom Water Woes II, December 2018.

<sup>213</sup> Charles Lindsay, Senior Principal Hydrologist, Associated Earth Science, Inc., personal communication.

### **Key Priorities for Strategy 5:**

- *Develop a better understanding of deep groundwater resources that may augment freshwater needs.*
- *Restore and protect wetlands, riparian zones, and upland forested headwater areas.*

## **6. Promote Climate Resilient Floodplain Management**

In contrast to water shortages in the summer and early fall, climate change is increasing the frequency and intensity of extreme rainfall events in the late fall and winter causing the potential for severe flooding. According to one study, this will result in a 27% increase in Nooksack River streamflows in late winter and early spring, and the 100-year flood event may become the 10-year flood event.<sup>214</sup> The County's Public Works department, in partnership with Tribal staff and representatives from the agricultural community, is updating the 1999 comprehensive flood hazard management plan through the Floodplain Integrated Planning (or FLIP) process. Whereas the 1999 plan focused on flood hazard management, the intent of FLIP is to develop an Integrated Floodplain Management Plan that addresses flood hazard management, agricultural protection, and salmon recovery needs.

The County, together with the City of Bellingham and Port of Bellingham, is also supporting a USGS project to develop a fine-scale flood risk model for the lower Nooksack River (Compound Flood Model) and coastal areas of Whatcom County that includes consideration of the combined impact of sea level, storm surge and stream flooding under climate change (Coastal Storm Model System - CoSMoS). By including climate change in the FLIP process and the flood risk modeling of the river and coastal areas, the County will have a better understanding of flood risk and economic consequence. In turn, this should lead to improvements in floodplain management, revised land use regulations, and the County's approach to designing and locating infrastructure.

### **Key Priority:**

- *Lower flood risk and damage by implementing actions identified in the FLIP process.*

## **7. Manage riverine floodplains to reduce flood risk and allow natural processes that increase the capacity to store floodwaters and attenuate flood peaks**

The Nooksack River channel has changed dramatically over the last 150 years (Fig 3.9).<sup>215</sup> The historical meandering stream helped manage the energy flow of water by increasing resistance and reducing the channel gradient. In essence the meandering stream created a wider floodplain that accommodated the peak flows. Log jams were removed in the early 1900s to facilitate boat travel and economic development. This removal reduced the natural braiding and oxbows in the river channel and contributed to a narrowing of the natural channel. Removal of snags, levee construction and removal of riparian zones for agriculture further straightened the channel and increased the gradient.

---

<sup>214</sup> Dickerson-Lange, S.E. and R. Mitchell. 2013. Modeling the Effects of Climate Change Projections on Streamflow in the Nooksack River Basin, Northwest Washington. Hydrological Processes, Published Online in Wiley Online Library

<sup>215</sup> Lower Nooksack River Geomorphic Assessment, Final Report, by Applied Geomorphology, Inc., Element Solutions, Northwest Hydraulic Consultants, and DMT Consulting. February 11, 2019.

This straight river channel and high flow gradient can no longer accommodate the increases in winter and early spring rainfalls that are occurring due to climate change. To reduce flood risk and economic damage, the County needs to establish channel migration zones, reconnect floodplains by lowering or setting back levees and restore habitat in riparian zones.

Connectivity of wetlands and riparian areas to streams provides sources for water-conveyed materials such as sediment, nutrients, and woody debris, while reducing streamflow energy, promoting channel complexity, and providing habitat. Human alterations such as dams, levees, roads, and water withdrawals have reduced stream-floodplain or stream-wetland connectivity among other impacts.

Farming and forested ecosystems are the preferred land uses for historical floodplains. The County needs to increase funding and capacity for the Conservation Easement Program to discourage development in floodplains and re-evaluate land use designations and regulations in light of climate change.

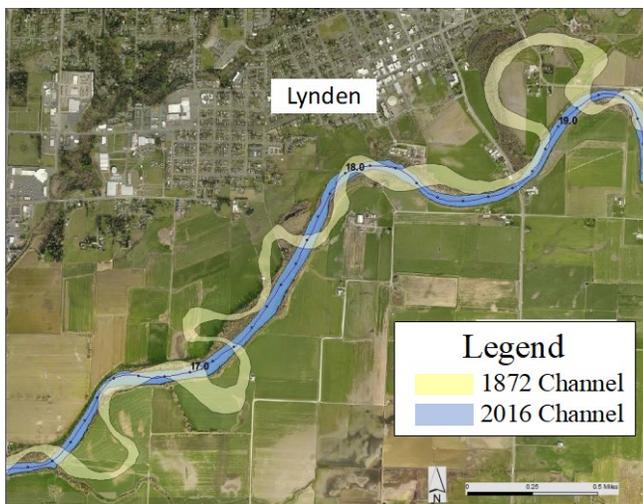

#### **Key Priority for Strategy 7:**

- ***Restore connectivity of our fragmented hydrologic system to increase water storage and reduce flood damage.***

### **8. Reduce Riverine and Coastal Flood Risk by Moving People, Development, and Infrastructure.**

A recent analysis showed that most US homeowners do not carry sufficient flood insurance to cover flood damage and could face \$18.8 billion in flood damage annually.<sup>216</sup> For Whatcom County the annual loss per property with substantial flood risk would amount to \$4,000 to \$8,000 per year. Only a few areas in the US have higher annual flood losses. This information is based on an analysis done by the First Street Foundation, which now provides a flood factor risk for homeowners by zip code.<sup>217</sup> For example, 43% of the properties in Lynden are at risk and annual damage could be as high as \$732 thousand this year.

FEMA has been updating its flood risk rating system using insurance industry approaches that will likely face backlash from homeowners who cannot afford the higher cost of flood insurance.<sup>218</sup> Many communities are already requesting federal tax dollars to move whole neighborhoods out of high flood

*Figure 3.9: Changes in the Nooksack River channel between 1872 and 2016*

<sup>216</sup> Kaufman, L. and M. Rojanasakul. Most Americans Don't Have Enough Flood Insurance for Climate Change, Bloomberg Green, February 22, 2021. <https://www.bloomberg.com/graphics/2021-flood-risk-financial-cost/>

<sup>217</sup> Find your home's Flood Factor, <https://floodfactor.com/>

<sup>218</sup> Flavelle, C. The Cost of Insuring Expensive Waterfront Homes is About to Skyrocket, New federal flood insurance rates that better reflect the real risks of climate change are coming. For some, premiums will rise sharply. New York Times, Sept 24, 2021. <https://www.nytimes.com/2021/09/24/climate/federal-flood-insurance-cost.html?referringSource=articleShare>

risk zones.<sup>219</sup> Moving structures out of harm’s way is the only long-term solution to reduce financial risk and ensure public safety. Moving to higher ground was noted by the Lummi Nation as the logical adaptation solution to sea level rise.<sup>220</sup> The County should also evaluate the need to move critical emergency infrastructure and develop a plan.

**Key Priority for Strategy 8:**

- *Move people and emergency infrastructure based on updated FEMA maps on flood risk and locally developed sea level rise and coastal storm surge maps.*

**9. Manage Stormwater Infrastructure for Increased Frequency and Magnitude of Rainfall/Flood Events**

Stormwater impacts are projected to increase under future climate scenarios. To effectively protect stream channels, wetlands, and watershed function from increased erosion and water impacts, it is necessary to manage the higher frequency, magnitude, and duration of stormwater flows. Future climate scenarios need to be incorporated into stormwater project design. This includes replacing culverts with structures that can convey increased flow while ensuring fish passage.

Codes and regulations should be updated to minimize impervious surfaces in developments and consideration of green stormwater infrastructure to reduce erosion from large storm events (see [Land Use](#)). The County should also accelerate the construction and retrofit of stormwater flow control system, runoff treatment and infiltration facilities to increase capacity and accommodate future rainfall and flood events.

**Key Priorities for Strategy 9:**

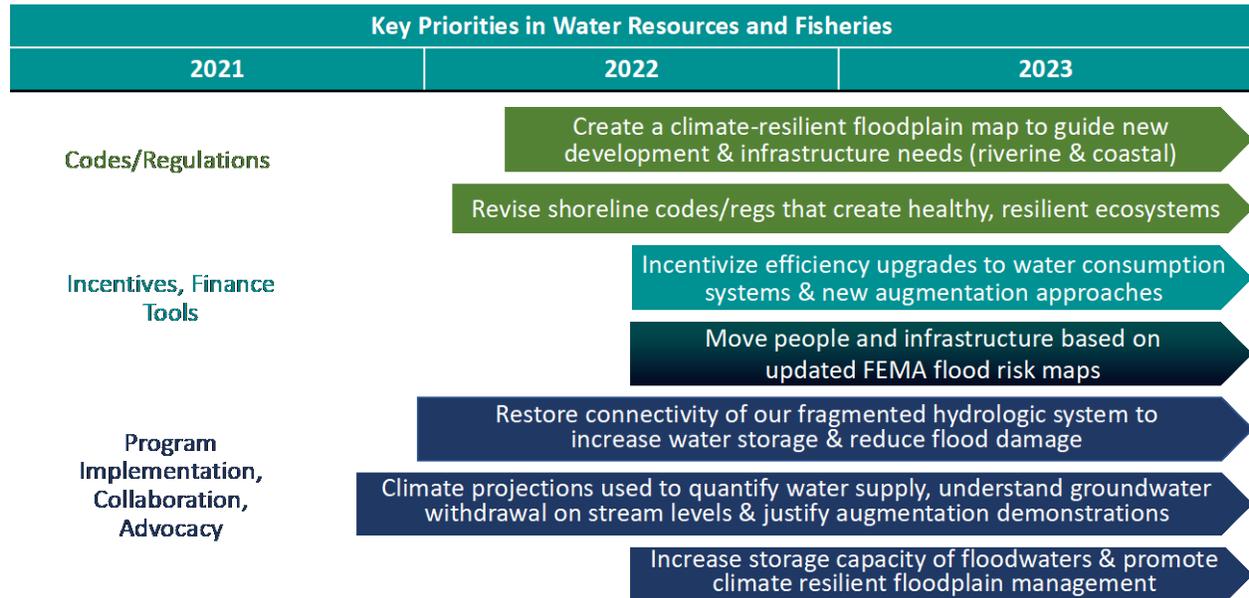

- *Update stormwater infrastructure such as culverts to minimize ecological damage from increased magnitude and frequency of storm events.*

<sup>219</sup> US Flood Strategy Shifts to ‘Unavoidable’ Relocation of Entire Neighborhoods, by Christopher Flavelle. New York Times, August 26, 2020. <https://www.nytimes.com/2020/08/26/climate/flooding-relocation-managed-retreat.html?referringSource=articleShare>

<sup>220</sup> Lummi Nation Climate Change Mitigation and Adaptation Plan: 2016-2026 prepared by the Water Resources Division, Lummi Natural Resources Department. February 16, 2016.

## Timeline and Summary of Strategy, Actions, Benefits

### Strategy, Action, Benefit Table for Water Resources & Fisheries

1. Resolve uncertainty in current and future water supply by accurately measuring water supply and understanding the impact of climate change on watersheds.	
Actions	Benefits of Actions
<p>1.1 Support resolution of WRIA 1 water supply by utilizing groundwater/surface water model analyses of current water use and supply, including projections of future water supply based on climate science.</p> <p>1.2 Expand monitoring of residential, industrial, and agricultural water use, including metering to ensure an accurate baseline for climate action planning.</p> <p>1.3 Evaluate smart water meter technologies for application locally.</p> <p>1.4 Encourage connection to available water systems for households currently using permit-exempt wells.</p> <p>1.5 Create a County-hosted public database that includes all the relevant field measurements on water levels &amp; other environmental measurements that are routinely collected by various organization in the County.</p>	<ul style="list-style-type: none"> <li>Provides the quantitative information needed to make decisions that will ultimately ensure an adequate water supply. (all actions)</li> <li>“You can’t manage what you don’t measure.” <i>Peter Drucker</i></li> </ul>

<b>2. Restore and protect streamflow and temperature that ensures year-round salmon migration and survival.</b>	
<b>Actions</b>	<b>Benefits of Actions</b>
<p>2.1 Develop and demonstrate projects that increase in-stream flow such as, surface-to-groundwater conversions, restoration of mature forest hydrology, and innovative approaches such as water banking and water spreading.</p> <p>2.2 Prioritize restoration and protection of wetlands in headwater areas and in the floodplain to improve base flows.</p> <p>2.3 Adopt innovative tools to decrease the impact of land use (e.g., forestry, agriculture, development) on summer stream flows such as minimizing impervious surfaces, restoration of mature forests, and maintenance of green infrastructure corridors.</p> <p>2.4 Restrict development that negatively impacts functionality of wetlands and effective aquifer recharge.</p>	<ul style="list-style-type: none"> <li>• Preserve current and future salmon runs in the Nooksack River Basin. (all actions)</li> <li>• Increase the base flows in rivers and streams. (all actions)</li> </ul>
<b>3. Maintain and enhance estuarine, marine shoreline and coastal wetland habitats for fish and shellfish.</b>	
<b>Actions</b>	<b>Benefits of Actions</b>
<p>3.1 Include climate change and sea level rise in the codes and regulations associated with the Shoreline Management Program.</p> <p>3.2 Measure ecological function health of shorelines and require vulnerability assessments for new buildings and infrastructure in the shoreline impact zone.</p> <p>3.3 Facilitate shoreward migration of coastal wetlands through removal of hard shore protection (e.g., bulkheads, dikes, seawalls) or other barriers to tidal flow.</p> <p>3.4 Preserve and restore structural complexity and biological diversity when undertaking wetland enhancement activities.</p> <p>3.5 Promote and maintain mechanisms for sediment transport and deposition.</p>	<ul style="list-style-type: none"> <li>• Reduce economic damage to property and shoreline ecosystem functions. (3.1)</li> <li>• Preserve a diverse habitat for shellfish juvenile fish and other marine organisms. (3.2, 3.3, 3.4)</li> <li>• Maintain water clarity and decrease pollution of shellfish beds (3.5)</li> </ul>
<b>4. Reduce water demand through conservation and efficiency and improve drought readiness.</b>	
<b>Actions</b>	<b>Benefits of Actions</b>
<p>4.1 Expand outreach and education programs to promote water conservation and efficiency for domestic, municipal, and agricultural water users.</p> <p>4.2 Reduce water demand by promoting drought tolerant landscaping and crops, and promotion of agroforestry principles.</p> <p>4.3 Evaluate/adapt agricultural drainage management to increase storage and promote subirrigation (e.g. permaculture swales, swales on contour, drainage ditch weirs).</p> <p>4.4 Provide incentives and cost-share to support farmers and homeowners to switch to more efficient irrigation processes.</p>	<ul style="list-style-type: none"> <li>• Outreach and education promote public participation in solving the problem. (3.1, 3.2, 3.3)</li> <li>• Rewards early adopters for their efforts to reduce water demand (3.4)</li> </ul>

<b>5. Protect existing and develop new or alternative water supplies.</b>	
<b>Actions</b>	<b>Benefits of Actions</b>
5.1 Implement advanced wastewater treatment for water reuse. 5.2 Encourage rainwater harvesting to provide water supply for buildings and agriculture. 5.3 Implement new technologies such as reverse osmosis for desalination. 5.4 Evaluate feasibility and sustainability of deep aquifer resources. 5.5 Protect and restore mature forest hydrology in headwater areas, perennial and non-perennial stream corridors, and upland wetlands. 5.6 Restore mature forest conditions throughout uplands to achieve greater than 50% mature forests to provide improved hydrology and streamflow.	<ul style="list-style-type: none"> <li>• Reuse of water and new aquifer sources will improve water quantity. (5.1, 5.2, 5.3, 5.4)</li> <li>• Increases water quality and quantity through the use of natural systems. (5.5, 5.6)</li> <li>• Alternative source of irrigation or municipal water as demonstrated by the cities of Blaine and Ferndale (5.4)</li> </ul>

<b>6. Promote climate resilience by incorporating climate scenarios in all aspects of floodplain management and infrastructure needs.</b>	
<b>Actions</b>	<b>Benefits of Actions</b>
6.1 Incorporate probabilistic scenarios for riverine/coastal flooding to inform planning and management and restrict development in the floodplain zone. 6.2 Incorporate future climate scenarios into riverine and coastal floodplain management planning and flood risk assessment. 6.3 Inform landowners, developers, and contractors about the climate change risks of developing in the floodplain (Conservation Reserve Program - CRP). 6.4 Modify flood zone designations, and update County code to incorporate sea level rise/storm surge and increased peak flows.	<ul style="list-style-type: none"> <li>• Reduce the economic losses associated with flooding. (5.1, 5.2, 5.3 5.4)</li> <li>• Smart climate resilience planning reduces taxpayer expenditures on infrastructure damage. (5.1, 5.2, 5.4)</li> </ul>

<b>7. Use natural processes that increase the capacity to store floodwaters and attenuate flood peaks to reduce flood risk.</b>	
<b>Actions</b>	<b>Benefits of Actions</b>
7.1 Establish channel migration zone and/or meander limits sufficient to accommodate increase in peak flows and sediment. 7.2 Identify and prioritize opportunities to reconnect floodplains by removing, lowering, or setting back levees to reduce maintenance costs, reduce flood risk, and increase opportunity for restoration. 7.3 Restore riparian vegetation and wetlands within floodplains, including prioritization of 300' landward of the historic migration zone.	<ul style="list-style-type: none"> <li>• Natural processes are often the most effective and least costly approach. (all actions)</li> </ul>

<b>8. Reduce flood risk by moving people and infrastructure out of harm's way.</b>	
<b>Actions</b>	<b>Benefits of Actions</b>
8.1 Identify critical infrastructure at risk of river/coastal flooding and relocate as needed. 8.2 Evaluate public and private developments and develop managed retreat plans as appropriate. 8.3 Acquire properties in the floodplain to reduce repetitive flood loss, reduce need for flood protection, and allow for floodplain restoration. 8.4 Remove development rights within floodplains through voluntary and regulatory pathways.	<ul style="list-style-type: none"> <li>• Ultimately the least costly and most effective approach to reducing damage and the economic losses to individual landowners and County infrastructure. (all actions)</li> </ul>

9. Manage stormwater infrastructure for increased frequency and magnitude of rainfall/flood events.	
Actions	Benefits of Actions
9.1 Incorporate future climate scenarios into stormwater management. 9.2 Accelerate construction or retrofit stormwater flow control, runoff treatment and infiltration facilities to increase capacity to accommodate future rainfall/flood. 9.3 Plan, create incentives for, and expand green stormwater retrofit projects such as rain gardens and other low-impact designs. 9.4 Restore fish passage at artificial barriers, prioritizing barrier replacement in cool-water tributaries that can function as cold-water refuge habitat.	<ul style="list-style-type: none"> <li>Incorporating climate now into stormwater planning will ensure infrastructure integrity into the future and reduce replacement costs. (all actions)</li> </ul>

### Conclusion

Water, which has always been viewed as a plentiful resource in the Northwest, is increasingly causing damage from oversupply in the winter and scarcity in the summer. In hindsight, many of our current problems with flooding and drought have been caused by humans trying to control and change the natural hydrologic system. Climate change has highlighted and accelerated the problems associated with these past water management approaches. We still have time to adapt our water management approaches to climate change to lessen detrimental impacts, but the sooner we act, the more we can avoid costs to life, property, our environment, and our economy in the future.

## Agriculture

Agriculture plays a critical role in Whatcom County's economy, history, and culture. Like other sectors of our economy, agriculture must adapt to climate change to remain economically viable and produce the food we all depend upon. Agriculture can also be a large part of the climate solution through soil carbon sequestration. Nationally, the USDA is focusing on improving soil health and building agricultural resilience that will put farmers in a stronger position as the impacts of climate change begin to mount.

As a part of our human infrastructure and an emitter of GHGs (Fig. 2.2), agriculture could have easily fit into the Built Environment Section of this report. Instead, we chose to place agriculture into this section because 1) the tremendous potential of agricultural soils to sequester carbon, and 2) the need for immediate action in agriculture to adapt to the high temperatures and drought that is already a growing problem, as demonstrated by the losses farmers suffered during the June 2021 extreme heat wave, a type of extreme weather event that is forecast to become more common as global temperatures rise.<sup>221</sup> Vulnerability assessments performed for the County in 2019 judged agriculture to have significant exposure—both ecological and economic—to the adverse effects of climate change. These assessments also showed agriculture to be highly sensitive to short- and long-term droughts like the one we experienced in summer 2021.

Agriculture is also central to our concern with climate equity and justice, as our field crops in particular depend on intensive farm labor during the hottest summer months, and farm workers are among those most exposed to the effects of heat waves.

### Agriculture in Whatcom County

In 2017 Whatcom County had 1712 farms operating on 102,000 acres.<sup>222</sup> Preserving this acreage provides the foundation for addressing the other impacts to climate change. Over a twenty-year period (1997-2017) nearly three times as much farmland was lost in Whatcom County as compared to the overall losses in western Washington. In response, Whatcom County established a goal to maintain a minimum of 100,000 acres<sup>223</sup> of agricultural land to support an economically viable industry.

Farmland in Whatcom County is used to grow crops, including food, animal feed, and fiber. With this fertile Pacific Northwest farmland, Whatcom County ranks in the top 3% of farm production in the US and is home to many favorite brands.<sup>224</sup> These include large and small farms producing berries, milk products, seed potatoes, tree fruit, cattle, horses, vegetables, ornamental plants, and others.

In 2017, the total value of agricultural products was \$372 million including \$218 million from animal agriculture and \$154 million from crops. In addition, agriculture creates numerous additional economic benefits locally due to agricultural processing and support industries and consumption of locally grown products.<sup>225</sup>

<sup>222</sup> <https://s3.wp.wsu.edu/uploads/sites/2091/2019/08/2017AgStatsSummary.pdf>

<sup>223</sup> <https://www.whatcomcounty.us/DocumentCenter/View/3989/Land-Cover-Analysis-PDF?bidId=>

<sup>224</sup> <http://choosewhatcom.com/agriculture/>

<sup>225</sup> All figures are from the National Census of Agriculture, 2017.

[https://www.nass.usda.gov/Quick\\_Stats/CDQT/chapter/2/table/1/state/WA/county/073](https://www.nass.usda.gov/Quick_Stats/CDQT/chapter/2/table/1/state/WA/county/073)

Several special characteristics of Whatcom County agriculture may impact our ability to adapt to climate change.

- Agricultural land here is expensive, almost tripling in value from 2002 to 2017, and growing more expensive since—often \$20,000 or more per acre with water rights. Farmland rental rates and taxes are also high. This restricts the crops that can be grown profitably.
- The majority of our agricultural products come from family-owned and operated small and medium-sized farms. In 2017, only 42 farms were larger than 500 acres; the average size was 60 and the median only 12. Farms of 10 acres or less have also more than doubled since 2002.
- About half of all agricultural land is irrigated.
- We grow a small number of crops compared to other regions: Dairy products and berries combined accounted for \$292 million, or 78% of total agricultural sales.
- Although the total number of cows has increased since 1950, the number of small dairy operations has decreased dramatically over this timeframe.
- Almost all our agricultural products are sold as commodities and consumed elsewhere; only an estimated 3-5% of locally grown agricultural products are consumed within the county.

To address the small percentage of agricultural products that are consumed locally, Sustainable Connections has developed a comprehensive Eat Local First program that identifies over 60 farms that sell produce, dairy products, and meat directly to the public.<sup>226</sup> Eating local has the advantage of lowering transportation emissions. Eating lower on the food chain is an action that individuals can take to reduce their carbon footprint; however, not all plant-rich diets are low emissions.

## Concern for Climate Change in the Agricultural Community

Whatcom County farmers have a strong, often multi-generational sense of stewardship of the land and of the environment and are concerned with the immediate and observable environmental trends and changes. Farmers are also concerned about the economic and regulatory environments in which they must run their businesses.

Washington crops and livestock are being affected by climate impacts such as increasing temperatures and water stress, declining availability of water during the growing season, rising atmospheric carbon dioxide, and changing pressures from pests, weeds, and pathogens (Fig. 3.10). Some impacts on agriculture may be beneficial while others may lead to losses – the consequences will be different for different cropping systems and locations.<sup>227</sup>

Higher temperatures will impact crop types, quantity, and quality. Warmer winter temperatures and fewer freezing days have already brought northward movement of insect pests, such as the spotted-winged fruit fly (*Drosophila suzukii*) that attacks raspberries and blueberries. Since the fruit fly appeared, farmers have had to return to the intensive spraying practices of the early 2000s. In addition, two fungal pests, *Botrytus* or gray mold and *Monilinia* or mummy berry, affect raspberries, blueberries, strawberries, wine grapes, and other crops.

---

<sup>226</sup> Sustainable Connections, <https://eatlocalfirst.org/>

<sup>227</sup> <https://cig.uw.edu/wp-content/uploads/sites/2/2020/12/snoveretalsok2013sec11.pdf>

Like plant pests, animal diseases migrate with changes in climate. Researchers believe climate change, which is creating warmer, drier conditions is contributing to an increase in bacterial infections such as Pigeon fever, which is spreading beyond its historic range.<sup>228</sup> Pigeon fever has recently affected horses here, and it or similar diseases may come to affect cattle.<sup>229</sup>

Agriculture in Western Washington is probably less vulnerable than in the interior. Water availability, access to urban markets, and the milder climate of coastal Washington will likely make it easier for agriculture to adapt in this region.<sup>230</sup> Additionally, other parts of the U.S. may experience more extreme climate impacts, encouraging more people to move to Whatcom County, thus increasing pressure to develop agricultural lands for residential purposes.

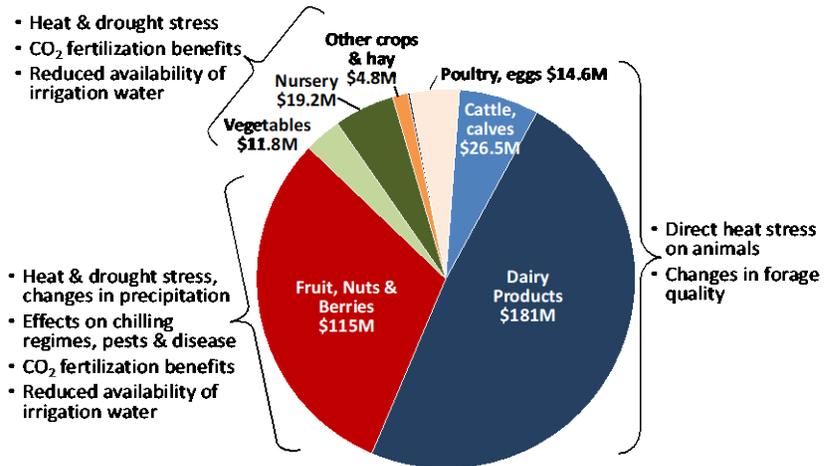

Figure 3.10: Impact of climate change on farm products in Whatcom County using values from the latest census data (2017). Total market value was \$373 million.

Climate change is resulting in a shift in seasonal precipitation – more precipitation in the winter and spring and less in the summer will increase pressure on an already complex and competitive water-rights regime. Water supply is a huge agricultural concern since planting schedules can be delayed by spring flooding and growing seasons often coincide with the dry season. Agricultural irrigation is the largest user of water in the county (44%), and irrigation peaks in August when streamflows are low (Fig. 3.11).<sup>231</sup> With decreasing snowpack, more winter precipitation will flow into streams and rivers when fields are fallow or crops do not need to be irrigated, and less water will be available

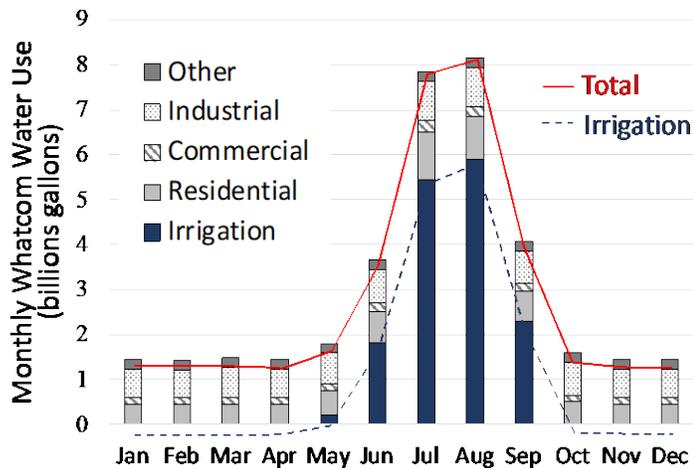

Figure 3.11: Example of monthly water use in Whatcom County (from Hirst, E. "Analysis of Whatcom County Water Use," January 2017: [https://nwcitizen.com/images/fileuploads/Analysis\\_of\\_Whatcom\\_County\\_Water\\_Use.pdf](https://nwcitizen.com/images/fileuploads/Analysis_of_Whatcom_County_Water_Use.pdf))

<sup>232</sup> Interview with Michael Anderson, DVM, Doctor of Veterinary Medicine, Whatcom County, WA.

<sup>230</sup> <https://cig.uw.edu/wp-content/uploads/sites/2/2020/12/snoveretalsok2013sec11.pdf>

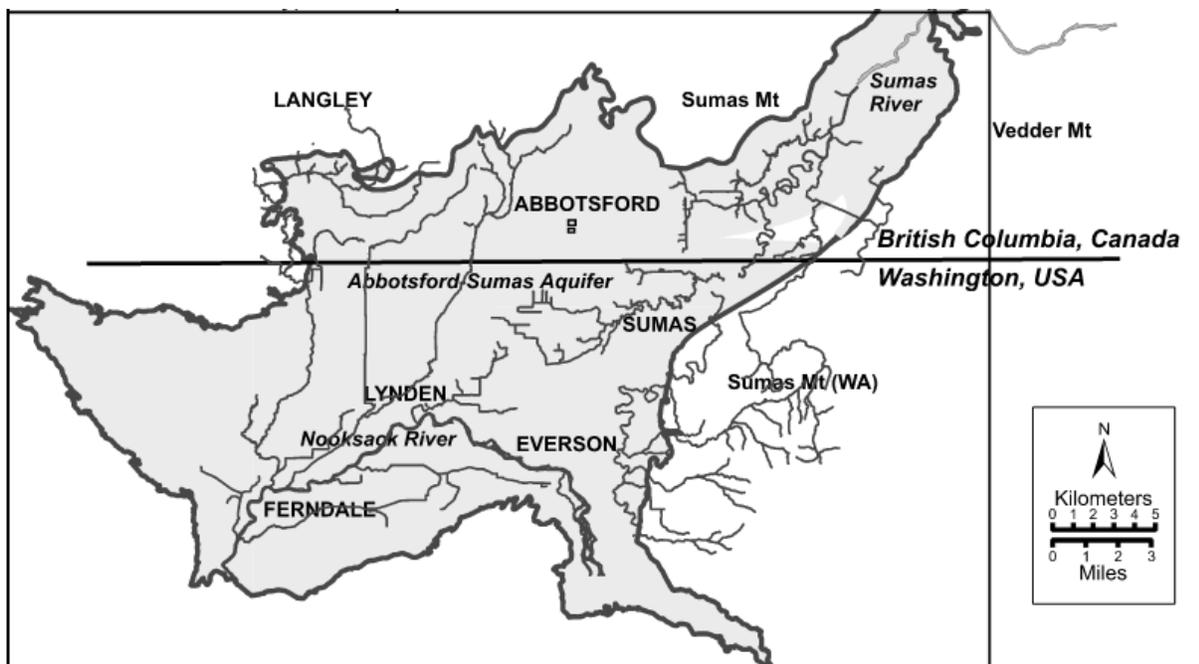

<sup>231</sup> See the UW Climate Impacts Group SWE [Trend Analysis Tool](#) for trends in the last 160 years. For projections, see the [Regional Climate Projections Tool](#) on the same website.

during the summer irrigation season.

Summer water shortages are likely to become much more common. In dry years, the County's irrigation water use typically increases approximately 25%. As precipitation patterns change, demand for irrigation water will increase at the same time the supply decreases. Conditions like those during the 2015 and 2018 droughts or the 2021 heat wave — when crops failed, pastures went dry, and cows gave very little milk because of heat and inadequate water — are likely to become more common.

It's important to note that as winter precipitation increases and more of it falls as rain rather than snow, lagoons, and tanks where dairy manure is stored during the winter may reach their maximum capacity, forcing farmers to cut their herds or increase storage capacity.

Farmers will also face increased competition, particularly for water from the transnational Abbotsford-Sumas aquifer (Fig. 3.12). Aquifer recharge is highly dependent on climate variables and this shallow, unconfined aquifer impacts river and stream flows and aquatic life as well. Currently, groundwater supplies about 80% of the agricultural irrigation needs in the summer. The Abbotsford-Sumas aquifer is highly productive and provides water supply for towns of Sumas, Lynden, and farmlands in the US and cities and farms in Canada, mostly for the City of Abbotsford, but also in the township of Langley. With drier summers and increased use, this shallow aquifer may no longer be adequate to meet water demands sustainably.

*Figure 3.12: Aerial extent of the shallow, unconfined Abbotsford-Sumas aquifer in southwestern British Columbia and northwestern Washington State.*

Already, many streams in the Nooksack River watershed are over-appropriated, and many farms lack adequate water rights, meaning they may not be allowed to use surface or shallow ground water sources for irrigation when streamflows are low. Water rights, already a contentious issue, may become even more so, making a just and equitable solution to water allocation the single most vital imperative for climate change adaptation.

Finally, our local agricultural economy depends on farmworkers, particularly in the summer season. Because farm laborers are among our most vulnerable populations, mitigating climate change becomes an imperative of environmental justice. Although heat stress is now a problem only on the hottest days, if temperatures continue to rise there may be more days like those of late June 2021, when field workers are exposed to dangerously hot conditions. Additionally, smoke from more frequent wildfires<sup>232</sup> in increasingly hot and dry summers are also a serious threat, exposing farm workers to dangerous levels of particulate matter, especially on the hottest days. Any actions we can take to mitigate temperature increase in the coming decades will redound to the benefit of these crucial participants in our agricultural community.

## Climate Goal and Strategies for Agriculture

Farmers are more likely to support new farming approaches to increase climate resilience if they are economically feasible and address their more immediate concerns of water availability, loss of topsoil and soil productivity, and loss of crops from disease, pests, and extreme weather events.

It will require both mitigation and adaptation strategies to maintain a viable agricultural economy and livelihoods in the County under a changing climate. Several specific and feasible strategies for addressing the problems outlined above are discussed below.

***Goal: Employ farm management practices that create climate resilience while at the same time reduce operational costs in agriculture and ensure a viable long-term food supply.***

### Climate Strategies for Agriculture

1. Adopt farm management practices that maximize soil carbon storage and increase water and nutrient availability.
2. Avoid the conversion of agricultural lands to maintain farm production at a level that sustains a vibrant and climate-resilient agricultural economy.
3. Enlist the agricultural community in preserving and enhancing water storage and stream-flow levels that enable salmon migration, healthy ecosystems, and agricultural irrigation.
4. Reduce agriculture-related emissions and increase renewable energy, while providing farmers with new income and cost-share opportunities.
5. Strengthen agricultural diversity to expand local markets and increase farm incomes.
6. Encourage increases in research and development of drought- and heat-resistant agricultural crops at the state and federal levels and flexible infrastructure to support diversified crops.

### Strategy 1: Adopt Farm Management Practices that Maximize Soil Carbon Storage and Increase Water and Nutrient Availability

Agriculture can play a very important role in reversing many of the detrimental impacts of climate change while at the same time reducing the high operational costs associated with modern industrial farming. Modern industrial farming has led to a tremendous increase in food production, but has also led to high operational costs, low profit margins for farmers, and in some cases, unintentional

---

<sup>232</sup> EPA, Change in Annual Burned Acreage by State, 1984-2001 and 2002-2020 <https://www.epa.gov/climate-indicators/climate-change-indicators-wildfires>

environmental damage. Climate change is further complicating farming practices, and in many areas of the country, rendering these practices unsustainable.

NASA satellite imagery has shown that concentrations of CO<sub>2</sub> increase in April and peak in May across the US. This is attributed both to soils warming and the practice of agricultural tillage. The release of CO<sub>2</sub> to the atmosphere is reduced and carbon storage in soils is enhanced by no-till or low-till farming methods.

Farmers have long known that off-season cover crops can increase the storage of soil carbon and important soil nutrients like nitrogen, while at the same time preventing soil erosion. Farmlands across the US could absorb 276 million tons of atmospheric CO<sub>2</sub> every year or about 5% of annual emissions according to a National Academy of Sciences report.<sup>233</sup>

Managing for soil health is one of the best ways farmers can increase crop productivity while preparing for stresses on crop growth due to climate change. Extreme weather events, such as extended drought and heavy precipitation, are out of landowners' and growers' control; but through effective soil health management systems they can better manage how they prepare for and react to these circumstances. Results are often realized immediately and last well into the future.

No-till, low-till, and the use of cover crops can help stabilize yields, improve agricultural productivity, and build resiliency through increased soil organic matter and enhanced water holding capacity.<sup>234</sup> Four basic principles improve the health of soil and can facilitate agricultural resilience: minimize disturbance, maximize soil cover, maximize biodiversity, and maximize the presence of living roots.<sup>235</sup>

- Healthy soil allows more water to infiltrate and retains more moisture, enabling it to effectively absorb extreme rainfall as well as support crops during droughts.
- Adopting soil health systems before extreme events happen can save farmers significant time and money in the long run and preserve the vitality of their soils for many years to come.
- Employing soil health systems by using practices such as no-till and cover crops can help stabilize yields, improve agricultural productivity, and build resiliency through increased soil organic carbon content and soil water storage.
- These practices also benefit the environment, reducing nutrients lost through run-off, replenishing aquifers, and acting as a natural filter for our waterways.

Additionally, the soil additive biochar acts as a sponge for water and nutrients making them available for plant growth and soil microorganisms. Biochar is essentially charcoal and is formed from a process called pyrolysis, where organic matter is burned under low oxygen conditions. The US Biochar Initiative supports increasing the rate of natural carbon sequestration and reducing the emissions of GHGs. Biochar technology can do both.

---

<sup>233</sup> National Academies of Sciences, Engineering, and Medicine 2019. *Negative Emissions Technologies and Reliable Sequestration: A Research Agenda*. Washington, DC: The National Academies Press. <https://doi.org/10.17226/25259>.

<sup>234</sup> <https://soilhealthinstitute.org/how-does-soil-health-increase-resilience-to-droughts-and-extreme-rainfall/>

<sup>235</sup> [https://www.nrcs.usda.gov/wps/PA\\_NRCSCconsumption/download?cid=nrcseprd1386665&ext=pdf](https://www.nrcs.usda.gov/wps/PA_NRCSCconsumption/download?cid=nrcseprd1386665&ext=pdf)

The conclusion of the recent documentary, *Kiss the Ground*<sup>236</sup>, proposes that by regenerating the world's soils, humans can rapidly stabilize Earth's climate, restore lost ecosystems, and create abundant food supplies by exploring the possibilities of regenerative farming (Fig. 3.13). Climate adaptation can be rooted in taking better care of our soils and drawing down carbon from our atmosphere by rebuilding our soils, practicing integrated pest management, nutrient and fertilizer management, and conservation agriculture. The Whatcom Conservation District provides critical support for local farmers interested in increasing their soil health; however, demand for technical support and conservation planning services stretches the District's capacity with current limited cost share funding opportunities.

Figure 3.13: The six principles of soil health from the Soil Health Academy. <https://soilhealthacademy.org/fact-sheets/>

Increasing soil organic matter has the added benefit of increasing water holding capacity and water availability for crops. The 2018 farm bill included a Soil Health Demonstration Trial whose participants follow certain soil health assessment protocols to enable further research and encourage widespread adoption of practices. Washington state legislators adopted the Sustainable Fields and Farms Program to create a voluntary grant program to support farmers in the implementation of practices that increase the quantity of carbon stored in the land through efficient carbon reduction and sequestration practices. The Washington State Conservation Commission is charged with implementing this program and has currently requested funding from the legislature for implementation.

The USDA is ramping up the Conservation Reserve Program to have higher rental payments and expanding the number of incentivized environmental practices allowed with a more targeted focus on climate change.<sup>237</sup> Farmers enrolled in this program receive a yearly payment to preserve environmentally sensitive areas that are difficult to cultivate, such as wetlands, from agricultural production.

Changing farm practices to promote soil health is a long-term investment and an excellent first step in creating greater climate resilience in our agricultural economy. Whatcom County can help farmers initiate this transition by sponsoring local workshops on soil health developed by organizations like the Soil Health Academy.<sup>238</sup> This series of workshops could be sponsored with the WSU Extension, Whatcom Conservation District, Sustainable Connections, and a local regenerative farm, Inspiration Farm.

<sup>236</sup> <https://kisstheground.com/>

<sup>237</sup> Expansion and Renewal of Conservation Reserve Program, <https://www.fsa.usda.gov/programs-and-services/conservation-programs/conservation-reserve-program/index>

<sup>238</sup> <https://soilhealthacademy.org/>

A common solution that occurs throughout this section on the Natural Environment is the need for a carbon credit program to compensate farmers, foresters, and other landowners for their efforts to increase carbon storage and sequestration. An example of a carbon credit program could be as simple as establishing a monetary value on carbon sequestration that would allow landowners to sell carbon credits to companies that want to offset their carbon emissions. This in turn incentivizes landowners to increase the carbon storage potential of their lands. Carbon markets offer an opportunity to improve soil health and bolster rural economies.

*“If you can get something green on the ground year-round, you’re feeding the microbes in the soil and it’s a lot healthier. And if somebody wants to pay you to do that, it looks to me like you’re foolish not to do it.” Ohio farmer, Rick Clifton, grows cover crops year-round & is paid ~\$35,000 per year to store soil carbon by Indigo Agriculture.*

### **Key priorities for carbon sequestration and water protection**

- **Promote regenerative farming practices to increase soil carbon storage**
- **Support development of a local carbon credit program to compensate landowners for climate smart practices**

### **Strategy 2: Avoid conversion of agricultural lands and maintain farm production at a level that sustains a vibrant and climate-resilient agricultural economy**

If predictions of up to three feet of sea level rise by 2100<sup>239</sup> are accurate, Whatcom County faces the loss of up to 5,000 acres of farmland in coastal areas,<sup>240</sup> particularly around Ferndale. Another concern, as sea level rises, is saltwater intrusion into groundwater and/or soil salinization in low-lying areas. Flood risk associated with storm surge will further exacerbate the problem. Increases in magnitude and frequency of riverine flooding may also impact the ability to farm floodplain acreage.

In addition to the direct impacts of climate change, population growth will continue to exert pressure to convert agricultural lands to other purposes as more and more people migrate to Whatcom County. Expensive agricultural land costs in Whatcom County discourage a new generation of farmers and often persuade older farmers to convert and sell all or portions of their land for development to fund their retirement. Loss of agricultural lands occurred over the last twenty years when the County allowed the proliferation of 5-acre *ranchette* developments. High agricultural land prices have also increased the potential transition of family farms into corporate farming.

Rapid residential development of former agricultural and forest lands threatens the viability of agriculture and continues to highlight the urgent need for greater protection of farmland at a time when climate change also threatens some forms of agriculture. The minimum of 100,000 acres of agricultural land as resolved by the County Council in 2009 must be permanently protected and available for agriculture. Whatcom County currently has slightly more than 87,000 acres zoned as agricultural, plus over 28,000 acres of rural-zoned (R5 and R10) lands that contain many working farms on prime agricultural soils that are much more vulnerable to conversion to non-agricultural uses than lands explicitly zoned for agriculture.

<sup>239</sup> [According to IPCC](#), depending on the amount of global temperature change, sea level is projected to rise from 26 to 98mm (10 to 38 inches).

<sup>240</sup> Interview with Chris Elder, Sr. Planner: Watersheds, Whatcom County, 23 May 2019.

The Rural Land Study report was developed by the Agricultural Advisory Committee in 2007 to identify and map areas within the Rural 5 and 10 Zones that are of agricultural significance and may require additional protection to ensure long-term agricultural viability. The Study helped inform Council's resolution to protect 100,000 acres of agricultural land and development of Agricultural Programs based out of Planning and Development Services and described in the 2011 and 2018 Agricultural Strategic Plans. Progress has been made with the Conservation Easement Program (CEP)<sup>241</sup> and other agricultural programs, but significant and rapid loss of farmland continues each year primarily to development. A 2019 update to the Rural Land Study tracks the changes in agricultural land and land uses in both Agriculture Zone and Rural Study Areas and provides updated maps of the identified 28,449 acres of Rural Study areas recommended for additional protections.

The Agriculture Advisory Committee recommends that these identified Rural Study Areas receive additional protection, from development and fragmentation, through 1) reducing development in R5 and R10 rural-zoned areas, 2) reducing conversion and fragmentation of farmland, 3) preserving agricultural neighborhoods, and 4) protecting open space from fragmentation.

The CEP and the Open Space Farm and Agriculture Current Use Assessment<sup>242</sup> program can be used to protect prime agricultural areas. However, many farmers consider the compensation provided by the CEP program to be inadequate, as the appraised value of development rights cannot compete with what the open market will pay. To be effective, the CEP program will need to be funded at a higher level, both to enable more land to be protected and to increase program payments by incorporating other attributes in assessing the land value, such as water rights and carbon storage. Increasing the rate of the Conservation Futures Fund levy to the rate authorized by Ordinance 92-002 would go a long way toward enhancing the CEP's effectiveness and scope.

The updated 2019 Washington State Farmland Preservation Indicators Report<sup>243</sup> documents efforts to preserve agricultural land. Conservation Futures<sup>244</sup> is a county tax levy program provided for in RCW 84.34.230 that protects, preserves, maintains, improves, restores, and limits the future use of threatened areas of open space, timberlands, wetlands, habitat areas, culturally significant sites, and agricultural farmlands. The funds for Conservation Futures are acquired through a property levy and are used to purchase rights or interests in real property for counties to preserve lands of public interest for future generations. In 2020, Whatcom County collected \$1,148,380 from this fund to support the CEP program.<sup>245</sup>

Because of the high cost of farmland, it is very difficult for new farmers to acquire the land needed to get started. Incentives to sell to farmers rather than developers or others, and subsidization of new farm purchases through low-interest loans would contribute to preserving agricultural land.

While the CEP can acquire agricultural conservation easements to protect specific acreages, Whatcom County must take more significant action to protect the minimum 100,000 acres needed to maintain the agriculture industry. We recommend a rezone of the identified Rural Study Areas from R5 or R10 zoning

---

<sup>242</sup> <https://www.whatcomcounty.us/1160/Open-Space-Program>

<sup>243</sup> [2019 Washington State Farmland Preservation Indicators Report \(PDF\)](#)

<sup>244</sup> <https://app.leg.wa.gov/rcw/default.aspx?cite=84.34.240>

<sup>245</sup> [https://uploads-ssl.webflow.com/5f8a950cdaa224e61edad9/6070c2b0676da848f07246c0\\_2020%20OFP%20Conservation%20Futures%20Report.pdf](https://uploads-ssl.webflow.com/5f8a950cdaa224e61edad9/6070c2b0676da848f07246c0_2020%20OFP%20Conservation%20Futures%20Report.pdf)

to either current Agricultural Zoning with a minimum parcel size of 40 acres or develop an intermediate Agriculture Zone with a minimum parcel size of 20 acres with one development right per minimum parcel unit. Council could accompany the rezone with compensation to property owners who end up with reduced development rights. This compensatory rezone could provide an intermediate option to achieve the County's broader goal of preserving 100,000 acres while addressing property owners concerns of any immediate loss in perceived or actual value attached to their properties. Match funding and cost share opportunities exist that could likely maximize local dollars to achieve this priority objective.

### **Key priorities for land conversion**

- **Expand Conservation Easement Program by increasing funding for staff, for acquisitions, and for programmatic enhancements.**
- **Re-zone rural study areas to preserve 100,000 agricultural acres.**

### **Strategy 3. Enlist the agricultural community in preserving and enhancing water storage and stream-flow levels that enable salmon migration, healthy ecosystems, and agricultural irrigation**

For agriculture, we need to address both inadequate summer water supplies and competition among different water users. Since independent negotiated settlements have often failed in the past, the joint processes of collaborative solutions and an adjudication of water rights provides a significant opportunity to resolve the issue of water equity and water access among the various users. Clarification of water rights must also recognize the future challenges brought about by climate change.

Several specific reforms to the current state water law could address summertime shortages and maldistribution, making local agriculture more resilient to increasingly severe shortages in the future. For example, the current "use it or lose it" relinquishment provision<sup>246</sup> discourages water conservation, water sharing, and water trading approaches. The County should explore and pilot water trading mechanisms including leasing, sales, banking and trading and innovative approaches to metering water.

None of these reforms would eliminate competition over water. However, greater flexibility in water allocation could improve the ability of competing interests to negotiate creatively and reach mutually acceptable solutions. Because it is inevitable that conflicts will arise, such conflicts must be addressed by a process that includes fair representation of all stakeholders, governments, and watershed partners.

Restoring salmon habitat also restores the health of our watershed. The watersheds provide clean drinking water, flood protection, waste assimilation, aesthetic and recreational benefits and other ecosystem services. As these services are lost, benefits are reduced and costs to residents increase. As the watershed is restored to health, our quality of life rises and the costs of watershed degradation decline. Sufficient funding mechanisms for salmon habitat would support both operating capacity and capital projects, as well as provide matching funds for grants to leverage the work. Money spent in the watershed provides jobs and economic development.<sup>247</sup>

---

<sup>246</sup> See WSU, Landowner's Guide to Washington Water Rights, page 7:

[https://s3.wp.wsu.edu/uploads/sites/2073/2014/09/landownerguide\\_waterrights.pdf](https://s3.wp.wsu.edu/uploads/sites/2073/2014/09/landownerguide_waterrights.pdf)

<sup>247</sup> <https://www.govlink.org/watersheds/9/committees/archive/1005/WRIA9-FundingMechanism-PolicyBrief2-FundingNeed.pdf>

Salmon-Safe<sup>248</sup> offers a peer-reviewed certification and accreditation program to implement farming practices that protect water quality, maintain watershed health, and restore habitat. As a leading U.S. ecolabel, Salmon-Safe offers peer-reviewed certification, linking site development and land management practices with the protection of agricultural and urban watersheds. Their mission is to transform land management practices so Pacific salmon can thrive in West Coast watersheds. Currently, 95,000 acres of farm and urban lands in Oregon, Washington, British Columbia and California are certified through their program.

The Water Resource Inventory Area 1, or Greater Nooksack River Basin, Salmon Recovery Program<sup>249</sup> and Nooksack Salmon Enhancement Association do a tremendous job in educating the community and restoring healthy rivers and marine shorelines. The County should support and continue to collaborate with non-profit organizations and salmon recovery partners to actively engage with local landowners, businesses, and the larger community. Recent efforts to restore anadromous fish passage with culvert removals and diversion dam removal on the Middle Fork Nooksack and efforts by the Floodplain Integrated Planning (FLIP)<sup>250</sup> are working to integrate actions with multiple stakeholders that address flooding, salmon needs, and land use.

Where feasible, the agricultural community should implement natural solutions, such as protection of riparian areas and wetlands to increase water storage, and employ drainage management, such as adjustable weirs, to increase storage early in the growing season and promote subirrigation of crops. Advanced wastewater treatment and manure treatment approaches can also be employed to allow water reuse. Finally, employing modern irrigation and efficiency technologies can greatly increase conservation of freshwater resources.

#### ***Key priorities for ensuring adequate water for agriculture and fish habitat***

- ***Use collaborative demonstration projects to collect the information needed to seek greater flexibility in our current water law.***
- ***Implement irrigation modernization and efficiency technologies to reduce water use.***

#### **Strategy 4: Reduce Agriculture-Related Emissions and Increase Renewable Energy, while Providing Farmers with New Income and Cost-Share Opportunities**

Agriculture is responsible for about 6% of the County’s GHG emissions - from machinery, transportation, agricultural chemical manufacturing, and energy use, along with methane emissions from animal agriculture.<sup>251</sup> There are measures that can reduce agriculture’s emissions and environmental effects while also maintaining “critical mass” and enhancing farmers’ income.

Nutrient (i.e., manure) treatment systems can reduce agricultural greenhouse gas emissions as well as alleviate the problems of poor distribution of water. Manure gives off methane, a potent greenhouse gas. Anaerobic digesters draw off the methane, which can be burned on site to produce electric power and release carbon dioxide, a much less potent greenhouse gas. Liquid residues still contain bioactive nitrogen and can be used as fertilizer, and solid residues can be used as bedding for cows, for mulch, or

---

<sup>248</sup> <https://salmonsafe.org/about/>

<sup>249</sup> <https://salmonwria1.org/>

<sup>250</sup> <https://whatcomcounty.us/2971/FLIP-Reports>

<sup>251</sup> US Environmental Protection Agency, [Sources of Greenhouse Gas Emissions](#), 2018; IPCC, “Climate Change and Land,” 2019, p. 9.

other uses. Other agricultural residues such as food processing waste can also be used in the digester, increasing its power output and making the investment more attractive to the dairy farmer.<sup>252</sup> Digesters can also lessen the problem of manure storage in the wintertime, which can contaminate waterways.

At present, however, anaerobic digesters are affordable only with cost-share for construction or subsidized prices for the electricity generated, because electricity prices are low in the Pacific Northwest with its large amounts of hydropower. Although farmers who installed digesters between 2010 and 2012 sell electricity at contract prices high enough to pay back construction costs, currently new or renewed contracts offer prices so low that digesters are no longer economical for farmers. Hence there have been only five digesters built in the county, four of them now operating.

Rather than burning digester methane on site, it can be sold to natural gas suppliers and help make the digester technology affordable. These systems are in place in Oregon, California, and British Columbia, and could be tried here if the price structure were attractive to farmers. Methane from digesters is considered renewable methane similar to the methane derived from landfills. The new CETA law that will increase the amount of renewable energy used to generate electricity by utilities may very well increase the contract price of renewable methane. As discussed in [Electricity and Buildings](#), many utilities like PSE are purchasing renewable methane from large landfills to offset their current use of fossil fuels.

Other nutrient management technologies can potentially address both climate change and other environmental issues: one of these is an innovative, three-stage processing system recently installed at Coldstream Farms near Acme (Fig. 3.14). The end product is clean water that can be returned to a stream. Such systems, however, are expensive to operate, suggesting that the County should incentivize installation and support research into lower-cost operation.

Petrochemical fertilizers and pesticides use fossil carbon both as feedstock and as fuel, so reducing their use can lower carbon emissions of agricultural operations and increase farm incomes. In addition, farmers have long known that petrochemical fertilizers can harm soil quality, so reduced use of chemicals can contribute to the improvement of soil quality as discussed in strategy 1. Promoting use of naturally derived and locally sourced nutrients and fertilizers can result in a reduction in associated GHG emissions. Reductions in pesticide use also provide

*Figure 3.14: Coldstream Dairy Farm has installed a three-stage processing system to manage dairy manure and produce water clean enough to be returned to nearby streams.*

a reduction in greenhouse gas emissions that occur during their manufacturing and incorporating an emissions reduction objective into Integrated Pest Management can support effective implementation.

Farms also have land and roof tops that can be used for wind and/or solar power. When paired with battery storage, farms can meet their own electricity needs when averaged over a year and may be able to sell excess renewable electricity as they do with power generated by burning methane from digestion. Starting in the late 1800's, farmers used windmills to pump water or grind grain. This practice largely ended with the Rural Electrification Act of 1936. Throughout the County farmers could enhance their income by leasing land for wind energy systems. Ninety-five percent of the land around wind turbines can continue to be farmed. The added income farmers receive from developers or utility companies can offset periods of low commodity prices, tariffs, or crop damage from droughts, floods, and pests.

### ***Key priorities for emissions reduction***

- ***Reduce emissions associated with fertilizer by incentivizing manure management systems***
- ***Support renewable energy projects in agriculture to reduce emissions and generate additional farm income***

### **Strategy 5. Strengthen Agricultural Diversity to Expand Local Markets and Increase Farm Incomes**

Increasing local market opportunities not only reduces transportation emissions but also provides an additional way to increase farm incomes. Our focus on a few monoculture crops increases Whatcom County agriculture's vulnerability to climate change and other environmental disturbances, but also to changes in markets. Almost all the food we produce goes to distant markets, and almost all the food we consume is produced elsewhere. This makes us dependent on markets as well as increasing fuel consumption. Reducing this dependence by developing a more diversified local food system would improve climate resilience and support local markets and new income streams for farmers.

Most local dairy farmers receive a nationally set price for their milk, which in recent years has been low enough to cause them significant hardship, or even induce them to sell out. Independent producer-handlers who sell specialty products locally, often at premium prices, should be encouraged, perhaps through tax breaks or assistance with marketing. Sustainable Connections<sup>253</sup> has a strong collective marketing campaign that supports local food and the businesses that sell it.

Connections between local food producers and consumers, particularly through direct sales, already happen at farmers markets and dockside fish sales, but most large grocery stores sell very few local foods. In specialty markets, consumers will pay more for organic products, and local markets might accommodate most, or all of the *organic* berries grown in the county. Expanding the farm-to-school program<sup>254</sup> in which local schools buy directly from farmers provides children with more healthy alternatives.

Promoting local food systems would facilitate the entry of small-scale farmers. The prosperity of farming depends in part on a trained workforce and access to land. Farm internship programs are gaining

---

<sup>253</sup> <https://eatlocalfirst.org/elf-for-biz/>

<sup>254</sup> <https://www.whatcomfarmtoschool.org/>

popularity.<sup>255</sup> As our farming workforce ages, the County should consider programs that provide access to small amounts of land for intensive, diversified vegetable, fruit, grain, and livestock farming. Additionally, farm transition planning is available for families who want to keep their farmland in production or in the family from generation to generation.<sup>256</sup> Washington FarmLink,<sup>257</sup> a program of Tilth Alliance, and Washington Farmland Trust's Farm to Farmer Program connects aspiring and experienced farmers to landowners and land ownership opportunities, ensuring that land remains in agricultural production. Sustainable Connections has its Food and Farming Program<sup>258</sup> which advocates for and strengthens our local food economy and runs a farmer education and incubator programs. Viva Farms, headquartered in Skagit County, also offers education and incubator services for small farms. Cloud Mountain Farm Center<sup>259</sup> is a local nonprofit working farm committed to agricultural education. In addition, worker-owned cooperatives are a model of farm ownership and operation that we should explore.

The County should adopt a funding mechanism that supports the Whatcom Conservation District's efforts to ensure a sustainable agricultural economy. Currently the Conservation District receives nearly 100% of its funding from grants and contracts. Historically, funding has come from the State legislature through the State Conservation Commission, but this has been declining. Our local Conservation District could do much more to increase soil carbon storage and help local farmers adapt to climate change if they had a guaranteed base of support. [RCW 89.08.405](#) authorizes the County to approve revenues for the Conservation District to support Council priorities, such as those outlined in this CAP. The County Council can approve by resolution an additional annual property rate that may not exceed 10 cents per acre with the maximum annual per parcel rate not exceeding \$5.<sup>260</sup>

**Key priority for expanding local markets:**

- ***Diversify our local agricultural crops to increase climate resilience in our food system, enable local markets for farm products, and increase farm incomes.***

**Strategy 6: Encourage Increases in Research and Development of Drought- and Heat-Resistant Agricultural Crops at the state and federal level and Flexible Infrastructure to Support these Crops**

The small number of crops currently grown in Whatcom County<sup>261</sup> renders our agricultural economy especially vulnerable to major changes in temperature and precipitation. Providing that water is available, warmer temperatures may facilitate growing new crops, but they may also challenge the viability of currently planted varieties. With decreasing water availability, however, it may be necessary to look for varieties that are more drought-tolerant or heat-tolerant, or even to switch to different crops. In addition, our major crops require specialized infrastructure to produce and process, making it more difficult for farmers to switch crops if this becomes necessary.

<sup>261</sup> See 2017 Census of Agriculture [https://www.nass.usda.gov/Quick\\_Stats/CDQT/chapter/2/table/1/state/WA/county/057](https://www.nass.usda.gov/Quick_Stats/CDQT/chapter/2/table/1/state/WA/county/057)

Currently, adequate infrastructure exists for berries, seed potatoes, and dairy products, but not for other potential crops. If agronomic and market research indicate that other crops would do well here, especially under anticipated future climate conditions, the County should consider facilitating infrastructure construction and equipment purchase, through loan guarantees, assisting farmers and businesses in obtaining grants and cost-share funding, and develop other ways to make purchase of necessary infrastructure more affordable for farmers. Food processors headquartered in British Columbia and Eastern Washington have recently shown interest in establishing operations here, which is something the County should encourage.

**Key priority for local food system**

- *Prioritize development of flexible food processing facilities*

**Timeline and Summary of Strategies, Actions, Benefits**

## Strategy, Action, Benefit Table for Agriculture

<b>1. Adopt farm management practices that maximize soil carbon storage and increase water and nutrient availability</b>	
<b>Actions</b>	<b>Benefits of (Actions)</b>
<p>1.1 Promote no-till and reduced-till agricultural practices to increase soil carbon storage, nutrients, and water-holding capacity of soils.</p> <p>1.2 Support County-sponsored local workshops on regenerative agriculture similar to those taught by the Soil Health Academy.</p> <p>1.3 Work with local agricultural organizations to develop a regenerative agriculture program that supports landowners to participate and monitors results.</p> <p>1.4 Increase incentives for the maintenance or restoration of areas within agricultural zoned property, such as wetlands and ponds, that function as carbon sinks, promote water storage, and provide other ecosystem services.</p> <p>1.5 Promote agroforestry practices to protect soil, animals, and crops from extreme weather events, improve water quality, sequester carbon, and promote long-term agricultural production.</p> <p>1.6 Develop &amp; implement a carbon credit program to pay farmers to sequester carbon.</p> <p>1.7 Initiate demonstration projects to educate our communities on the benefits of regenerative agriculture and carbon sequestration.</p>	<ul style="list-style-type: none"> <li>• Increased carbon storage (all actions)</li> <li>• More efficient water use &amp; conservation (1.3, 1.4)</li> <li>• Reduce runoff &amp; erosion (1.1, 1.2)</li> <li>• Lower temperature of microclimate above land and water bodies. (1.1, 1.3, 1.4, 1.5)</li> <li>• Additional farm income for increasing carbon storage. (1.6)</li> </ul>

<b>2. Avoid conversion of agricultural lands and maintain farm production at a level that sustains a vibrant and climate-resilient agricultural economy.</b>	
<b>Actions</b>	<b>Benefits of (Actions)</b>
<p>2.1 Strengthen codes to discourage the conversion of agricultural lands for residential, commercial, and industrial development.</p> <p>2.2 Significantly increase purchase of agricultural conservation easements in Agricultural and Rural Zones through an expanded CEP Program.</p> <p>2.3 Re-zone Rural Study Areas to agricultural and lower density zoning such as Ag 20 or Ag 40.</p> <p>2.4 Work with farmers to develop approaches to incentivize retiring farmers to sell land to new farmers.</p> <p>2.5 Subsidize new farmers' land purchase through low-interest loans and other supportive mechanisms.</p>	<ul style="list-style-type: none"> <li>• Maintain a critical mass of agricultural land (all actions)</li> <li>• Discourage sprawl, preserve farmland, encourage small &amp; diverse farms &amp; a new generation of farmers (2.1-2.4)</li> <li>• Allow people to begin farming without large amounts of capital (2.5)</li> </ul>

<b>3. Enlist the agricultural community in preserving and enhancing water storage and stream-flow levels that enable salmon migration, healthy ecosystems, and agricultural irrigation.</b>	
<b>Actions</b>	<b>Benefits of (Actions)</b>
<p>3.1 Develop and seek funding for demonstration projects on water conservation and augmentation to develop a basis for changing or eliminating the state water law on relinquishment.</p> <p>3.2 Allow water spreading, leasing, and transfer through establishment of a water bank, in coordination with Natural Resource Market development.</p> <p>3.3 Encourage farmers to manage adjustable weirs in drainage ditches to maintain higher water levels in the unsaturated zone.</p> <p>3.4 Support local organizations that improve floodplain connectivity and restore riparian zones and wetlands.</p> <p>3.5 Implement irrigation modernization and efficiency technologies.</p>	<ul style="list-style-type: none"> <li>• Prevent escalating water conflicts, encourages cooperation and more efficient water use (all)</li> <li>• Reduce the threat of flooding and/or reduce runoff (3.4)</li> <li>• Maintain cooler water temperatures for fish (3.1, 3.5)</li> <li>• Improve water use efficiency &amp; conservation (all actions)</li> <li>• Encourage development of water-trading and reduce opposition to water metering (all)</li> </ul>
<b>4. Reduce agriculture-related emissions and increase renewable energy, while providing farmers with new income and cost-share opportunities.</b>	
<p>4.1 Work with agricultural groups to explore economic incentives that may encourage farmers to reduce emissions and chemical fertilizer use, enable installation of nutrient treatment systems.</p> <p>4.2 Incentivize and invest in modern manure management such as Anaerobic digesters, Farm to Fresh Water Systems, or other technologies/systems.</p> <p>4.3 Incentivize and support development of renewable energy projects such as wind and solar that complement farm operations.</p> <p>4.4 Encourage reduced use of petrochemical fertilizers &amp; pesticides.</p>	<ul style="list-style-type: none"> <li>• Make nutrient treatment &amp; low-carbon farming economically attractive (4.1)</li> <li>• Reduce methane emissions and pollution. Mitigate public opposition to animal agriculture (4.2)</li> <li>• Green power plus income source (4.3)</li> <li>• Reduced GHG emissions &amp; improve soil quality (4.4)</li> </ul>
<b>5. Strengthen agricultural diversity to expand local markets and increase farm incomes.</b>	
<b>Actions</b>	<b>Benefits of (Actions)</b>
<p>5.1 Prioritize purchase, sale, and distribution of local agriculture and fisheries products to local facilities, groceries, and schools.</p> <p>5.2 Expand the farm-to-school food program.</p>	<ul style="list-style-type: none"> <li>• Provide markets for locally produced food &amp; transportation emissions (5.1)</li> <li>• Improve school children’s diets (5.2)</li> <li>• Increase farm incomes. (all)</li> </ul>

**6. Encourage increases in research and development of drought- and heat-resistant agricultural crops at the state and federal level and flexible infrastructure to support these crops.**

Actions	Benefits of (Actions)
<p>6.1 Develop crop varieties that will use less water and thrive in warmer conditions.</p> <p>6.2 Introduce new crops adapted to a changing climate.</p> <p>6.3 Anticipate invasive pests and develop resistant varieties or other biological control methods.</p> <p>6.4 Research and prepare for animal diseases that are likely to occur here under future climate scenarios.</p> <p>6.5 Prioritize development of flexible food processing and local distribution facilities.</p>	<ul style="list-style-type: none"> <li>• Decrease demands for water &amp; increased crop resilience to warming temperatures. (6.1)</li> <li>• Increase climate resilience (all)</li> <li>• Reduce dependence on chemicals (6.3) &amp; decrease disease outbreaks (6.4)</li> <li>• Diversified markets reduce dependency on single crops &amp; provide jobs in food processing (6.2, 6.5)</li> </ul>

**Conclusion**

Farming and forestry practices can support the County’s efforts in removing greenhouse gases from the atmosphere. Agricultural soils are potentially a large carbon sink and through management of soil health, can be a large part of the climate solution. Climate adaptation strategies in this sector are significant for improving food security and agricultural resilience as well, because many of them contribute to a more robust and inclusive food system, better able to withstand climate impacts.<sup>262</sup>

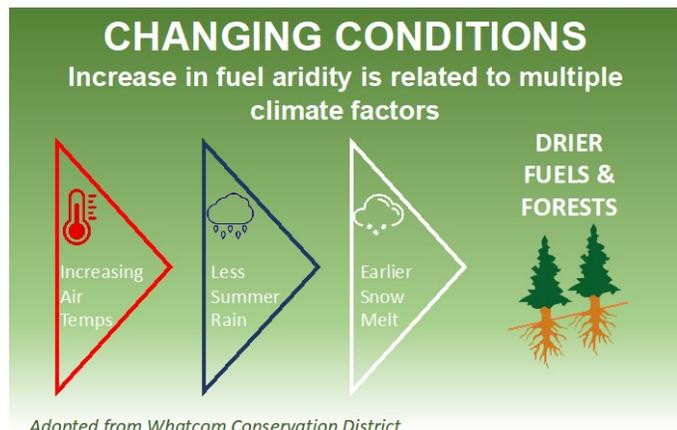

To achieve the ambitious but imperative goals outlined here, we must promote continued collaboration among federal, tribal, state, and local government agencies, conservation and water districts, universities and research organizations, representatives of the farming industry, farm worker social justice organizations, and most importantly, farmers. This will require leadership from the County Council and agencies of the county government, which need to be proactive in promoting innovative, resilient, and adaptive agriculture.

<sup>262</sup> <https://drawdown.org/sectors/food-agriculture-land-use>

## Forestry

Forested land accounts for the majority of the natural land cover encompassing over 60% of the county. If managed well, these forests can substantially contribute to carbon mitigation and climate adaptation. Climate disruption is the most important threat to the survival of forests and their viability as a carbon sink. Increasing temperatures, prolonged drought, and extreme weather events – all associated with our changing climate - are leading to larger and more destructive wildfires, flooding, landslides, and pest outbreaks. Forests also play an important role in climate resilience contributing to biodiversity, natural water filtration and storage, and removal of pollutants from the air. It is clear that climate change poses not only a threat to forest resources and their environmental benefits, but also to human habitation.

Forest lands contribute to Whatcom’s economy, supporting our forest products industry, as well as providing extensive educational and recreational opportunities and the jobs that support these sectors. Climate disruption is complicating the future viability of these important economic sectors. Higher overall temperatures and lower soil moisture impacts tree survival during summer months and have already caused a decline in western red cedar and western hemlock.<sup>263</sup> Tree survivability can especially be a problem when reforesting steep south- and west-facing slopes that tend to be hotter and drier.

*Figure 3.15: Drier fuels and forests from changing climate conditions*

Further, increased year-round temperatures allow for many invasive species to survive and damage the forest ecosystem. With warmer winters, invasive species whose population numbers and range were previously limited by extended cold temperatures are now able to survive and spread. A notable example of this is the western pine beetle, whose populations in the past were severely reduced each winter is now able to survive mild winter temperatures and cause more extensive damage in Northwest forests. Invasive species, both floral and faunal, may damage the local ecosystem by killing or outcompeting native tree species. In addition, some common invasive species such as Scotch broom and Himalayan blackberry are highly flammable and increase the risk of wildfire spread.

Climate change is already impacting Whatcom’s forests and woodland ecosystems based on a recent climate vulnerability assessment (Table 3.1). Climate-related stressors of warming temperatures, decreases in summer precipitation, and snowmelt occurring earlier in the year has produced drier fuels and a longer fire season in the Pacific Northwest. Species like Douglas-fir may shift to higher elevations to adapt to these increasing temperatures and changes in hydrology. The U.S. Forest Service has

<sup>263</sup> Hot, dry weather killing Washington trees, <https://www.king5.com/article/tech/science/environment/hot-dry-weather-killing-washington-trees/281-586640386>. Numerous news organizations have reported on this topic over the last few years.

developed management actions in response to the high risk imposed by climate change;<sup>264</sup> however, commercial forest operations have been slow to change their reforestation practices.<sup>265</sup>

*Table 3.1. The High Climate Vulnerability of Forests and Woodland Ecosystems.*

**Forest & Woodland Ecosystems**  
**High Vulnerability**

<b>Exposure</b>	<b>High</b>	Forests and woodland ecosystems encompass nearly 60% of Whatcom County. Over 70% of the County's forested area is managed federally (e.g., national parks, forests, and recreational areas).
<b>Sensitivity</b>	<b>High</b>	Significant risk of wildfire and pest damage that would harm the forest ecosystem and negatively affect timber and recreation industries. Many species cannot tolerate rapid change.
<b>Adaptive Capacity</b>	<b>Medium</b>	Given that the U.S. Forest Service has conducted a comprehensive vulnerability assessment for national forests in the Pacific Northwest and developed management actions in response, adaptive capacity is high, helping offset vulnerability due to exposure and sensitivity to changes in climate.

Forests in Whatcom County exist within a variety of jurisdictions and ownerships. Roughly two thirds of Whatcom County forests are located on federal lands including North Cascades National Park and Mount Baker-Snoqualmie National Forest. Non-Federal forestland within Whatcom County is managed or owned by the Washington Department of Natural Resources (DNR), large timber companies, and small acreage landowners. The Lummi Nation and Nooksack Indian Tribe manage their forests under the auspices of the Bureau of Indian Affairs.

### Goal and Strategies for Forestry

The goal and strategies identified below support the overarching natural resource goal of mitigating emissions, while promoting adaptation and improving forest ecosystem resilience to climate change. These strategies encompass changes that could be made to current forestry practices and additional practices that could improve the sustainability of Whatcom County's forest resources in the future. Many strategies in forestry are also applicable or relevant to other topics in natural resources, particularly land use, water resources and ecosystems.

***Goal: Ensure a long-term equitable and resilient forest resource in the county by acknowledging, educating, and preserving the benefits from current forest resources, addressing the impacts of climate change on forest health, and adapting forest management practices to this new reality.***

<sup>264</sup> Raymond, Crystal L., David L. Peterson, and Regina M. Rochefort (Eds), Climate Change Vulnerability and Adaptation in the North Cascades Region, Washington U.S. Department of Agriculture, Forest Service General Technical Report, PNW-GTR-892, Sept 2014.

## Forestry Strategies

1. Protect and enhance carbon storage and sequestration in forest ecosystems
2. Increase forest health, survival and climate resilience through forest management practices that reduce wildfire risk, increase soil moisture, and stream flows, and preserve wildlife habitat
3. Promote climate resilient planning and programs to maintain our forest economy for wood products, watershed health, and recreation through leadership, education, and successful programs.

### Strategy 1: Protect and Enhance Carbon Storage and Sequestration in Forest Ecosystems.

Whatcom County was part of a pilot study for the Local Governments for Sustainability to develop and test a protocol for estimating the amount of carbon that is removed from the atmosphere through photosynthesis and stored by forests. This protocol is now part of the ClearPath model for GHG assessments. Using data from early 2000 – 2010, the study established a baseline that indicated Whatcom forests are removing, or sequestering, about four million metric tons of CO<sub>2</sub>e every year, or about half of Whatcom’s total emissions in 2017. In addition, Whatcom forests store the equivalent of about 400 million tons of carbon dioxide in total. The county cannot afford to lose this important carbon mitigation resource to wildfires, drought, disease, or conversion of forestlands to other uses. Although this forest protocol was not evaluated for the 2017 GHG assessment, it should be required and included in future county-wide GHG assessments.

The trend in forest carbon storage and sequestration over time might indicate conversions in land use, disturbances such as logging and wildfires, and/or a change in forest health. This new ClearPath protocol for forests is a step forward, providing information on the value of our forests; however, it is also important to understand the value of the carbon storage potential for different forest and non-forest ecosystems. For example, wetlands that exist within and outside forests are known to store large quantities of carbon. Carbon storage can vary with soil and vegetation type, so identifying and protecting those lands with a high potential for carbon storage should be a priority.

Another approach that should be implemented is development of a local carbon credit program or carbon market and implementing carbon credit projects to increase carbon storage and offset GHG emissions. A carbon market establishes a monetary value on carbon storage and sequestration rates that would allow landowners to generate carbon credits, defined as the additional carbon stored above the minimum management practices required by the Washington State Forest Practices, and sell those credits to companies or entities that want to offset their emissions or invest in sequestration.

For example, under the Climate Commitment Act (CCA), carbon offsets can be used for compliance by industries that release GHGs up to limits specified in the legislation. This new source of revenue would incentivize landowners to increase the carbon storage potential through forest management practices like thinning to increase growth rates, extending the rotation age of a forest stand before harvesting, or preserving forested ecosystems that provide key watershed or climate resilience functions. In short,

carbon markets offer an opportunity to protect county forests from conversion to other uses, encourage more climate resilient forest practices and bolster rural economies and communities.<sup>266</sup>

The 2021 Climate Commitment Act calls for the establishment of a small forestland owner workgroup to identify carbon market opportunities, including carbon offsets that can be used in Washington. A portion of the proceeds from emissions allowance auctions can be used to conserve working forestlands and increase their carbon storage.

Whatcom County consists of 186,243 acres of Commercial Forestry zoned lands that hold no development potential and 35,638 acres of Rural Forestry zoned lands that has a minimum parcel size of 20 acres or one development right per 20 acres. Currently there are an estimated 1190 unused development rights on private forestlands in the Rural Forestry zone. Realization and development of these development rights would have a significant detrimental impact on the amount of acreage available for ongoing forest management, increase risk to public safety and private property from wildfire risk, and reduce the area available for carbon storage and sequestration. In order to preserve the working forestland values of the Rural Forestry zone, it recommended that the CEP focus additional energy and leverage significant additional funds to purchase forestry conservation easements to reduce the number residential development rights and to amend the Rural Forestry zoning code to consider revising the required minimum parcel size to one development right per 40 acres, adopt wildland urban interface development code, and encourage participation in the FireWise program.

#### **Key Priorities for Carbon Sequestration and Storage:**

- *Identify and preserve the most important forest resource lands based on carbon storage and sequestration potential through i) expanded purchase of forestry conservation easements through the Conservation Easement Program to rapidly retire development rights where pressure of conversion is greatest, and ii) review and revise Rural Forestry land use code to reduce development potential, reduce wildfire risk, and build climate resilience.*
- *Establish values and trends in forest carbon sequestration and storage over time using the ClearPath GHG assessment protocol.*
- *Fund a study to evaluate the potential of setting up a carbon market in the county to encourage and reward forest landowners for enhancing carbon storage and sequestration.*

#### **Strategy 2: Increase Forest Health, Survival and Climate Resilience Through Forest Management Practices that Reduce Wildfire Risk, Increase Soil Moisture and Stream Flows, and Preserve Wildlife Habitat.**

Healthy forests are stable, sustainable, and resilient to stress, but most importantly, vital to our future.<sup>267</sup> Forests provide large quantities of clean water, prevent soil erosion, and provide habitat for a diversity of plants and animals. Defining forest health however is difficult since it is so dependent on location. An ecologist may define the health of forests as those ecosystems that are able to maintain

---

<sup>266</sup> Whatcom Forests Provide Resilience Amidst Changing Climate, by Ellyn Murphy and Chris Elder. Whatcom Watch, March 2020. <https://whatcomwatch.org/?s=Whatcom+Forests>

<sup>267</sup> Forest Health Monitoring: National Status, Trends, and Analysis 2020, draft report by Kevin Potter and Barbara Conkling. USDA US Forest Service Forest Health Monitoring Program. [https://www.fs.fed.us/foresthealth/publications/FHM\\_2020\\_SRS\\_draft\\_national\\_technical\\_report.pdf](https://www.fs.fed.us/foresthealth/publications/FHM_2020_SRS_draft_national_technical_report.pdf).

their organization such as species diversity and autonomy over time.<sup>268</sup> A utilitarian may define forest health as to the average diameter and height of the trees based on age and species. The US Forest Service's program on Forest Health Monitoring uses a combination of both definitions.

There are 212 permanent forest inventory plots in Whatcom County for monitoring forest health, but only about half of these sample plots have been measured twice since 2002.<sup>269</sup> The county should partner with the various conservation organizations and natural resource management organizations to provide more frequent evaluation of sample plots as they relate to forest health. This could easily be accomplished by using summer interns. Wetland areas within forest tracts are especially important to wildlife, as well as the overall health of the ecosystem and have large carbon storage potential. Maintaining mature forest cover in these areas is critically important as well as increasing no harvest buffers along perennial and non-perennial streams and other important contributing headwater areas.

Reforestation and afforestation are challenging under a changing climate. The challenge is to plant a tree today that can withstand the higher temperatures, lower soil moisture, and more frequent wildfires over the next sixty-plus years. Several agencies such as the Washington DNR, Native American tribes and the USFS have initiated progressive programs to confront the risk of climate disruption. These programs are an excellent start but have not always resulted in actual changes in forest management practices, especially for commercial and rural forest landowners.

Wildland fires are a serious and growing hazard threatening life, property, while releasing large quantities of GHGs. Severe wildfires also reduce soil moisture retention by removing organic matter and in some cases volatilizing compounds that can form a water-repellent layer on the soil.<sup>270</sup> Milder winter temperatures and more rainfall in the winter and early spring creates a buildup of ground vegetation. During summer droughts this vegetation dries out, becoming fuel for wildfires, and creating conditions more conducive to wildfire spread. Low intensity fires are now widely recognized as a natural process that reduces understory vegetation and facilitated reforestation; the County should promote the judicious use of prescribed burns and thinning to counteract the buildup of fuel and excessive density of trees on County-owned lands and other private lands.

With population growth in Whatcom County a significant number of homes and businesses have been built in wildland-urban interfaces (WUIs) – the area where structures and other human development meets or intermingles with undeveloped wildland or vegetative fuels – often increasing the risk of fires and the destruction of property. These interface areas are particularly vulnerable because seventy to ninety percent of wildfires are human caused. Some of these areas, such as Glacier, also lack road access options beyond one way in and out, further raising the risk to property and life.<sup>271</sup> The Washington DNR was instructed by the State Legislature in 2018 to map WUIs in each county to mitigate wildfire hazard. This new WUI map is now available for Whatcom County as a tool for understanding and assessing

wildfire risk. The intent in mapping these areas is to guide where to apply stricter building codes in the WUI to reduce private property damage and protect public safety.

Resilience in the county's next generation of forests from wildfires, drought and disease will require forest owners to consider different harvesting strategies, specifically timing, size, and shape of harvests to reduce the spread of wildfires, damage from insects and disease, flooding and increasing sediment load in creeks, landslides, and increase summer streamflows. Even thinning young forest stands can enhance survival, growth, and carbon sequestration by reducing competition for soil moisture and sunlight as well as provide an opportunity to remove invasive plants. Survival of forests may also depend on a more diversified portfolio of tree species, an increase in tree spacing where soil moisture is a problem, or even assisted migration-planting stock from seed zones that are adapted to drier conditions. "...a land manager may need to consider appropriate seed lots or seed sources within populations. There may be populations within a species that are more suited to expected climate conditions and acquiring seed sources from those populations may help the species perform well into the future." There are tools to help foresters make decisions about assisted migration including the Climate Change Tree Atlas, and ForeCASTS for species-level considerations and the Seedlot Selection Tool for seed lot and seed source considerations.<sup>272</sup>

Douglas fir is one of the most predominant trees in western Washington that responds well to different environments. Recent studies have shown that Douglas fir from areas with the coldest winters and driest summers had the greatest drought resistance, not seedlings from the warmest, driest climate.<sup>273</sup> This makes sense because the physiological processes that help the tree tolerate dry winter winds and frozen soils also help the tree tolerate summer drought stress. Reforestation projects must consider future site conditions and should use tree stock from seed zones that can survive these conditions.

The Nooksack Salmon Enhancement Association (NSEA) recommended that forests should incorporate mixed landscape for greater diversity that allows shifts in species distribution.<sup>274</sup> This can be accomplished by creating a mosaic of patch sizes and age classes for timber harvest and avoiding monocultures. Species diversity has created more resilience in northeast deciduous forests but is rarely considered in the northwest conifer forests where monocultures are the norm.

The county can demonstrate and educate forest landowners by partnering with organizations such as the Whatcom Million Trees Project<sup>275</sup> to test climate-resilient practices in selected areas where a grassland may be converted to forest land. Large land disturbances may also present an opportunity to establish new genotypes and forest heterogeneity and diversity. Although Douglas fir is one of the most drought-tolerant commercial species in the Pacific Northwest, small rural landowners in the county and county parks might be more willing to experiment with a wider selection of conifer species.

#### **Key Priorities to Enhance Forest Health and Survival:**

- ***Increase monitoring of forest inventory plots and use information to revise forest management practices to reflect climate risk.***

- *Implement demonstration projects that plant climate resilient species and climate resilient reforestation techniques.*

### **Strategy 3: Promote Climate Resilient Planning and Programs to Maintain our Forest Economy for Recreation and Wood Products Through Leadership and Education.**

Whatcom County has a large financial stake in promoting a strong and vibrant forest industry as well as healthy forests on protected lands. According to the State Department of Commerce,<sup>276</sup> forestry contributed 1,889 direct jobs and over 3,000 indirect or induced jobs<sup>277</sup> in Whatcom County in 2017. These jobs translated into \$220 million in wages and \$5.8 million in taxes and fees.

The county can play an important leadership role by incorporating climate change risk into all aspects of the Comprehensive Plan. Forest zoning and new roads and developments all have an impact on forest health and survival under a changing climate. Many of the issues are complex and cross cutting such as the competing interests between the timber industry, watershed management, salmon recovery, recreation, and preservation of important ecosystem functions.

Support and partnerships with local organizations that educate the public about the important role of natural resource management in promoting climate resilience and producing food and fiber can sustain our local economy, environment, and wellbeing. The County can also use its purchasing power to buy locally sourced lumber for all county building projects and promote this concept to local builders. County efforts in economic development should encourage the research and development of new forest products such as cross-laminated timber that can reduce the carbon footprint of new buildings.

Given the significant loss of forestry and forest product infrastructure in Whatcom County and in the region over the last several decades, local forestry professionals recommend partnering with adjacent timber producing counties such as Skagit and Snohomish to collaborate on local forest products industry improvements. A tri-county forestry initiative could successfully develop and implement value added forest products such as cross laminated timber, a locally grown product marketing initiative, and other climate neutral or climate positive forest products.

The Wood Innovation Center<sup>278</sup> located in Darrington is a good example of a partnership between the Town of Darrington, Forterra, and Snohomish County that has received strong state backing. This innovation center takes advantage of their deep roots in the timber industry and will include companies building or manufacturing mass timber, cross laminated timber, and modular housing. In July 2020, Darrington received a \$2 million award from the state community economic revitalization board to support site acquisition and infrastructure. The Wood Innovation Center is scheduled to open in 2023. Whatcom County should consider partnering with this new innovation center.

---

<sup>276</sup> Washington State Department of Commerce, <http://data.workingforests.org/#Whatcom>.

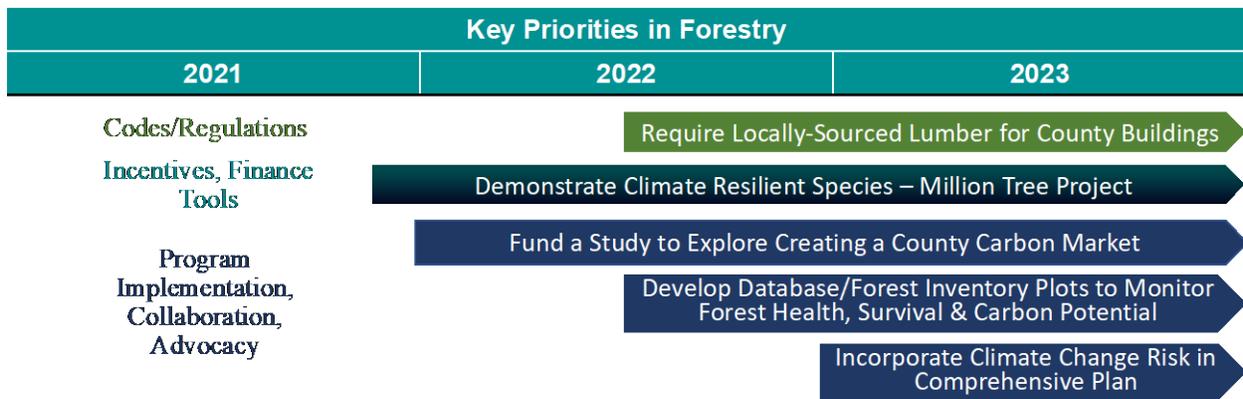

<sup>277</sup> Economists define indirect as those jobs created as a result of the direct jobs, while induced are jobs within the supply chain.

<sup>278</sup> Darrington Wood Innovation Center, <https://www.strongcommunitiesfund.org/dwic>

**Key Priorities in Forest Climate Resilience Planning and Programs:**

- *Incorporate climate change risk in all aspects of the Comprehensive Plan on forests and land use.*
- *Support local organizations that educate the public about the important role of natural resource management in promoting climate resilience.*
- *Use county economic drivers and influence to promote locally sourced lumber and development of new wood products such as Cross Laminated Timber in partnership with adjacent timber producing counties.*

**Timeline and Summary of Strategies, Actions and Benefits**

**Strategies, Actions and Benefits**

1. Protect and enhance carbon storage and sequestration in forest ecosystems.	
Actions	Benefits of Actions
<p>1.1 Include the ClearPath protocol for assessing GHG emissions and removals from forests and trees outside of forests every five years to understand general trends in carbon storage, sequestration, and emissions.</p> <p>1.2 Work with local forest conservation, research, and educational organizations (including tribal governments) to develop measures to assess carbon storage potential: i) associate carbon storage with descriptors such as soil type and tree species and age; ii) identify a variety of ecosystem plots to monitor including wetlands, and iii) create a database to identify changes over time.</p> <p>1.3 Identify and preserve the most important forest resource lands based on carbon storage and sequestration potential through i) expanded CEP to rapidly retire development rights and purchase of forestry conservation easements in Rural and Rural Forestry zones, ii) revise Rural Forestry zoning code to change minimum parcel size to 40 acres, and iii) require use of wildland urban interface building codes, and adopt FireWire practices.</p> <p>1.4 Fund a study to evaluate the potential of setting up a carbon market in the County to encourage and reward forest landowners for enhancing carbon storage and sequestration.</p>	<ul style="list-style-type: none"> <li>• Maintain or increase carbon mitigation and storage potential of forests (All actions)</li> <li>• Maintain and increase species diversity (Actions 1.2, 1.3)</li> <li>• Preserve important hydrologic features for trees, fisheries, and wildlife (Actions 1.2, 1.3).</li> <li>• Enhance the ability of rural forestry to extend rotation age before harvest (1.4).</li> </ul>

1.5 Assess the potential for increasing carbon sequestration on County-owned forest lands and measure the results of these programs.	
--	--

<b>2. Increase forest health, survival and climate resilience through forest management practices that reduce wildfire risk, increase soil moisture, and stream flows, and preserve wildlife habitat.</b>	
<b>Actions</b>	<b>Benefit</b>
<p>2.1 Work with local conservation, research, and educational organizations (including Tribal governments) to actively measure and assess forest health in Forest Inventory Plots.</p> <p>2.2 Plant one million trees in Whatcom County by 2030 outside of designated Rural and Commercial Forest zones and incorporate forest management practices that include selective thinning, diversity of tree species, elimination of invasive species and attention to the local microclimate. Experiment with assisted migration using tree stock from more heat- and drought-tolerant seed zones.</p> <p>2.3 Increase soil moisture in forest ecosystems by i) mapping wetlands and identifying key function(s) and measures for health; ii) maintaining mature forest cover on and around wetlands, headwater areas, and significant watershed features; and iii) increasing the width of no harvest buffers along fish-bearing, perennial, and non-perennial streams.</p> <p>2.4 Harvests and reforestation should be designed to increase diversity in tree species and age, and to create natural firebreaks to control wildfires.</p> <p>2.5 Promote the National Fire Protection Association Firewise USA® Program and wildfire preparedness and planning concepts to communities and individual landowners in the county. Adopt and enforce international fires codes for building construction in DNR-designated wildland-urban areas. Ensure that local fire departments have the equipment and training to manage wildfires.</p> <p>2.6 Identify and designate critical habitat cores and climate migration routes and fund the acquisition/protection/restoration of these areas through the CEP program. Consider expanding CEP program to WUI high-wildfire risk areas.</p>	<ul style="list-style-type: none"> <li>• Educate the public on the important role forests play in our local economy and the need to preserve (Actions 2.1, 2.2)</li> <li>• Preserve important hydrologic features in forests to maintain soil moisture and critical habitat for wildlife (Actions 2.3, 2.6)</li> <li>• Reduce the damage, intensity, and extent of wildland fires (Actions 2.4, 2.5)</li> <li>• Reduce property destruction and loss of life (and wildlife) during wildfires (Action 2.5, 2.6)</li> </ul>
<b>3. Promote climate resilient planning and programs to maintain our forests economy for recreation and wood products through leadership and education.</b>	
<b>Actions</b>	<b>Benefits of Actions</b>
<p>3.1 Incorporate climate change risk into county planning activities such as the Comprehensive Plan and permitting when considering forest zoning or new roads and developments.</p> <p>3.2 Educate the public about the importance and role of natural resource management in climate resilience and producing food and fiber to support our economy, environment, and wellbeing.</p> <p>3.3 Engage local foresters on the impacts of climate change and promote ecological forestry practices including certifications such as the Forest Stewardship Council (FSC).</p> <p>3.4 Prioritize management and harvest for lumber production to maximize carbon sequestration. Encourage the development of new forest products like Cross Laminated Timber that can reduce the carbon of new buildings in coordination with adjacent timber producing counties.</p> <p>3.5 Use locally sourced lumber for all County building projects and promote this concept to local builders.</p>	<ul style="list-style-type: none"> <li>• Improve emergency ingress and egress for wildfires, floods, landslides, and other natural disasters (Actions 3.1, 3.6)</li> <li>• Strengthen public knowledge and appreciation of our local forestry resource (Actions 3.2, 3.6)</li> <li>• Improve the climate resilience of forests throughout the County (Actions 3.3, 3.4, 3.5, 3.6)</li> </ul>

3.6 Initiate demonstration projects on climate resilience that increase public education and build partnerships with local agencies such as Whatcom Conservation District, DNR, WWU and Whatcom Land Trust, WSU Ext. Forestry.	
--	--

## Conclusion

Climate change dictates that we must anticipate and be prepared for rapid changes in forest management practices in commercial, rural, and recreational forests. Rapid change in a sector that is accustomed to thirty to sixty years between planting and harvesting is challenging. What works today might not work in a decade or half century. Although we cannot say with absolute certainty how forests will respond to a changing climate, we can incorporate and test new ideas that may preserve a forest industry for future generations.

Forestry research on climate change has been going on for at least twenty years but has intensified over the last decade. Incorporating climate change vulnerabilities into reforestation plans should become routine, rather than an exception. The county should support and partner with organizations that hire stewardship foresters such as the Whatcom Conservation District, Washington State University Extension Forestry, Tribes, and others. We can adapt and build resilience into our forest resources and maintain this vital resource for future generations. As with all change, communication and education are critical.

# Ecosystems

Whatcom County ranges from the Cascade Mountains to the lowlands to the Salish Sea creating a wide range of diverse ecosystems. Despite the alterations of the landscape and impacts on wildlife over time, Whatcom County remains an area of significant biodiversity. The County is characterized by 36 general habitat types and presently has 433 non-fish vertebrate species, including 15 amphibians, 8 reptiles, 320 birds, and 86 mammals.<sup>279</sup> Adding fish species to this list, there are well over 500 vertebrate species known to occur. Whatcom County is also home to over 1,100 species of plants as well as an unknown number of fungi, invertebrates, and other organisms on which the higher forms, including humans, depend.

Our ecosystems maintain many environmental processes that benefit humans, sustaining life as we know it. There are countless ecosystem services that humans and animals alike depend on for our health and wellbeing, but they generally fall into four broad categories: 1) *provisioning*, such as food products or water resources; 2) *regulating*, such as stabilizing climate and limiting disease; 3) *supporting*, such as nutrient cycling, carbon storage and oxygen production to maintain life; and 4) *offering cultural services*, such as spiritual benefits and recreational opportunities.<sup>280</sup> All of these ecosystem functions require healthy ecosystems (Fig. 3.16).

Impacts from climate change are already affecting the health of ecosystems in Whatcom County.<sup>281</sup> Shorelines and stream banks are being degraded by storm surge and flooding, salmon runs are threatened, western red cedar trees are dying, and native plants are migrating to more favorable growing zones. Climate impacts are likely to worsen without intervention. Ecosystem services that help us stabilize the climate and adapt to a changing climate are essential to human well-being and require immediate attention.

Ecosystem services such as carbon sequestration and storage should play a central role in our climate change response, both toward achieving net carbon neutral or net negative targets and as a by-product of the other goals described below. Community awareness of

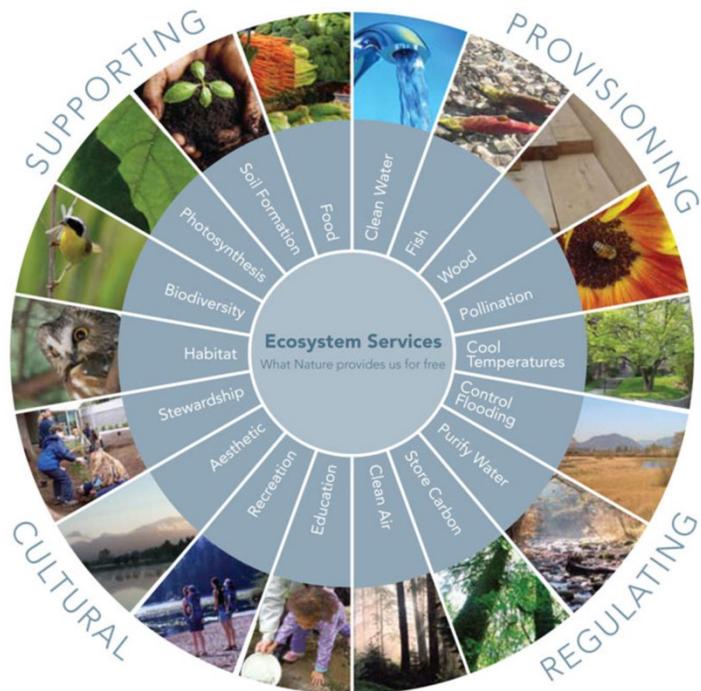

Figure 3.16. Ecosystem Services – what nature provides us for free. Graphic credit: TEEB Europe.

<sup>279</sup> Whatcom County 2017 Ecosystem Report, prepared by the Wildlife Advisory Committee.

<sup>280</sup> Kershner, D. 2019, Chapter 8, Land Use, Recreation, and Wildlife and Habitat. 2019 Community Research Project, prepared for the Whatcom Climate Impact Advisory Committee. <https://whatcomcounty.us/3162/Meetings-Additional-Information>

<sup>281</sup> Mauger, G.S., et. al. 2015. State of Knowledge: Climate Change in Puget Sound. Report prepared for the Puget Sound Partnership and the National Oceanic and Atmospheric Administration. Climate Impacts Group, University of Washington, Seattle. doi:10.7915/CIG93777D

the importance of ecosystems is, in general, low. Wetland, estuary, and forest ecosystems are capable of storing much more carbon than they release. This stored carbon accumulates in soil and sediments, live plant and animal tissues, and wood products, and in some instances (e.g., in peatlands and conifer forests of the Pacific Northwest) can serve as a carbon sink for centuries. Enlisting community support for protecting these critical ecosystems is essential.

Ultimately, planning for climate change may be viewed as a form of risk management with the goal of building resilience to climate change impacts. By implementing the strategies and actions in this document we may avert, lessen, or adapt to some of the expected consequences of climate change. For example, adaptation strategies such as landscape-level planning can play an important role in controlling outbreaks of pests and diseases and building resilience to natural hazards exacerbated by climate change. Land use decisions the County makes today will either reduce the effects of climate change in the future or worsen the economic and environmental toll. Consideration of climate change in all of the County's land use policies and regulations can significantly reduce this damage to our economy and quality of life.<sup>282</sup>

Providing information on climate-related risk can improve the capacity of land managers and enable timely decision making. A risk management approach may also save resources, amplify social resilience, support ecological restoration, and foster engagement and collaboration between multiple stakeholders. Due to the complexity of challenges and the diversity of actors involved in addressing land use challenges, a mix of policies, rather than single policy approaches, can deliver improved results in addressing the complex challenges of sustainable ecosystem management and climate change. An example of a risk-based adaptive policy mix is combining universal access to early warning systems with effective contingency planning and implementation of climate risk mitigation measures.

## Goal and Strategies for Ecosystems

Ecosystems and their component elements, including biodiversity and associated processes, are vulnerable to ongoing, gradual changes in climate, and extreme perturbations from storms, floods, droughts, or wildfires. Resilience is defined as "the capacity of a system to absorb disturbance and reorganize while undergoing change so as to still retain essentially the same function, structure, identity, and feedbacks." The following overarching goal is designed to maintain the health of local ecosystems in the face of a changing climate:

**Goal: *Develop climate resilient ecosystems by protecting and restoring ecosystems and the carbon they store and maximizing ecosystem health to enhance carbon sequestration.***

The strategies that support this goal fall into three main categories: i) Protecting existing ecosystems and the carbon they store (strategy 1); ii) Restoring natural ecosystems (strategy 2); and iii) Ensuring healthy ecosystems to maximize carbon sequestration (strategies 3 and 4).

---

<sup>282</sup> Kershner, D. 2019, Chapter 8, Land Use, p. 137.

## Strategies for Ecosystems

1. Incorporate projected climate change impacts into revised land use and development codes to reduce damage to healthy ecosystems and increase the climate resilience of vulnerable ecosystems.
2. Provide technical, logistical, and financial support for community efforts to restore and enhance ecosystems.
3. Implement long-term monitoring to assess the impact of climate on ecosystem health.
4. Preserve and enhance ecosystem health to build climate resilience in our hydrologic processes, air and water quality, carbon storage, and ecological connectivity.

### **Strategy 1: Incorporate Projected Climate Change Impacts into Revised Land Use and Development Codes to Reduce Destruction and Increase the Climate Resilience of Vulnerable Ecosystems**

Protecting land for recreation and wildlife habitat generally provides ecosystem services that are essential to the resilience of society in the face of climate change. These ecological benefits, which are freely provided when ecosystems are properly functioning, include such services as wood products, fish, clean drinking water, flood control and natural pollination of crops.<sup>283</sup>

Community awareness starts at the County level. The protection of ecosystems from climate and human impacts must be reflected throughout the Comprehensive Plan and the codes and regulations associated with land use. The County should also support our local non-profit organizations that enlist public volunteers in environmental projects and promote climate change education in our local school systems.

A meaningful response to climate change will require changes in the land use code. It will require increasing the pace of protection of working lands, recreation lands, habitat, and ecosystem restoration activities, as well as the scale of investment in these efforts. If there is going to be growth in Whatcom County that doesn't make us even more vulnerable to climate change, the County government needs to do a better job of focusing development in existing urban areas, while devoting more resources to protecting farmland and forest lands, shorelines, and riparian corridors and to restoring habitat. Low density development is one of the key contributors to carbon emissions.<sup>284</sup>

Currently, the County allows wetland mitigation projects in new developments, which simply means that a wetland can be removed if a comparable-size wetland is created elsewhere. Studies have shown that wetland mitigation projects are not providing the ecosystem services equal to what is being lost to permanent development.<sup>285</sup> At the very least, the mitigation project should be required to catalogue the ecosystem functions and demonstrate how they would recreate these key functions. Climate vulnerability assessments should also be considered for significant land use changes and must be incorporated into County development regulations in identified climate impact zones such as shorelines of the state, floodplains, alluvial fan hazards, and other critical areas.

<sup>283</sup> Kershner, D. 2019, Chapter 8, Land Use, p. 137

<sup>284</sup> Kershner, D. 2019, Chapter 8, Land Use, p. 137

<sup>285</sup> Chandrasekhar, A., How effective is restoration at recreating wetlands? The Economics of Ecosystems and Biodiversity blog, published December 24, 2013. <http://www.teebweb.org/how-effective-is-restoration-at-recreating-wetlands/>

## **Strategy 2: Provide Technical, Logistical and Financial Support for Community Efforts to Restore and Enhance Ecosystems**

Retaining, restoring, and expanding critical habitats can have outsized positive benefits. Planting trees in non-forested areas such as grasslands is an excellent example of increasing carbon sequestration and provides a host of ancillary ecological services. Enhancing carbon storage also requires protecting accumulated carbon in vegetation and soils from future catastrophic loss (or “sink reversal”) triggered by disturbances such as flood, drought, fire, or pest outbreaks, or future poor management.

Many local non-profit organizations are involved in restoring and enhancing natural ecosystems by expanding riparian zones and purchasing wildlands for preservation. These organizations are well-equipped to do this work and should be supported by the County.

## **Strategy 3: Implement Long-Term Monitoring to Assess the Impact of Climate on Ecosystem Health**

Maintaining and enhancing ecosystem health ties together both strategies 4 and 5. Ecosystem health is the indicator or measure of the well-being and natural condition of ecosystems and their functions. The most important aspect of measuring ecosystem health is that it provides a baseline for assessing changes over time, especially the changes that are occurring as a result of climate change. Both the Critical Areas Ordinance and the Shoreline Management Program have no standards for net loss of ecological function, nor does the County directly monitor ecological function over time. Baseline information on the health status of ecosystems in the County is sorely lacking.

Much of the needed information on ecosystem health can be accomplished by expanding County-sponsored citizen science programs, modeled after programs sponsored by the Marine Resources Committee. The County can also enlist and help fund local conservation organizations to help create a system for measuring ecosystem health and periodic monitoring of designated ecosystems in the County. This information on ecosystem health, along with considering cross-cutting strategies and actions in the other areas covered in this section on the Natural Environment, will assist prioritization of the projects presented in strategy 5.

## **Strategy 4: Preserve and Enhance Ecosystem Health to Build Climate Resilience in Our Hydrologic Processes, Air and Water Quality, Carbon Storage, and Ecological Connectivity**

Enhancing ecosystem health is important because climate-induced stressors are projected to increase, including more intense rainfall events, floods, periods of extreme heat, drought, and wildfire, higher sea levels and damaging waves. In Whatcom County, ongoing coastal erosion will only intensify as sea levels rise, adding to land use pressure. A pro-active strategy is needed to restore, revegetate, and strengthen coastlines and estuaries to withstand changing conditions. Great attention needs to be focused on preserving and enhancing ecosystem resilience to compensate for projected extreme impacts if climate policy falls short.

Ecosystems most at risk are those that are already degraded or near the limits of tolerance. Low resilience may be exacerbated by loss of key species, introduction of invasive species or diseases, and reduction and fragmentation of habitats, factors that may or may not be related to climate change. As such, reversing or mitigating these factors can increase ecosystem health and climate resilience. For example, reintroducing American beaver can help adapt to declines in glaciers and snowpack, which impact summer streamflow, because they help store more water in wetland and riparian areas.

Restoring saltwater wetlands is an effective strategy for sequestering carbon, while improving habitat for salmon and migratory birds. Western Washington University researchers John Rybczyk and Katrina Poppe have studied sediments in at the Nature Conservancy’s Port Susan Preserve, where dike removal and lowering of another dike have begun the process of restoring a 150-acre portion of the Stillaguamish Estuary. These researchers have found that restoring the marsh has resulted in twice the carbon sequestration of other marsh properties outside the restoration zone.<sup>286</sup>

Additionally, enhancing the connectivity of natural areas will facilitate the movement of plant and animal communities to more suitable climate zones in more northerly latitudes and higher elevations.<sup>287</sup> Consultants to the County recommended in 2005 that the impact of development projects on wildlife connectivity be identified and considered in development permitting as any other critical area would be evaluated. The County Council didn’t approve the change<sup>288</sup> but with the impacts of climate change, habitat connectivity and wildlife migration corridors are critically important for maintaining ecosystem health and building ecosystem resilience.

Sustainable ecosystem management can also contribute to resiliency in various ways, through reducing extraction of natural resources, expanding protected areas, combatting invasive species, and managing for species at risk. Ensuring that all components that make up an ecosystem function effectively is essential for the overall health of our natural resources.

The County has tools to address strategy 5, including the CEP program and potentially creating a county-wide carbon offset program that would value carbon storage and compensate property owners who voluntarily protect and enhance their carbon stores. This cross-cutting carbon offset market would apply to forests and agricultural lands in addition to ecosystems.

#### ***Key Priorities for Ecosystems:***

- ***Increase funding and community awareness of ecosystem restoration projects.***
- ***Create a system for monitoring ecosystem health over time and apply to representative ecosystems in the County.***
- ***Require climate vulnerability analysis, ecosystem function assessments, and a detailed plan to recreate these functions before approving any destruction of wetlands or other critical ecosystems.***
- ***Increase funding and staff capacity for the County CEP and develop a carbon market and implement carbon credit projects.***

## Timeline and Summary of Strategies, Actions and Benefits

### Strategies, Actions, Benefits for Ecosystems

1. Incorporate projected climate change impacts into revised land use and development codes to reduce destruction and increase the climate resilience of vulnerable ecosystems.	
Actions	Benefits of Actions
<p>1.1 Prioritize the preservation of healthy, climate-resilient ecosystems throughout the Comprehensive Plan.</p> <p>1.2 Conduct climate vulnerability assessments when planning and developing infrastructure (roads, bridges, stream crossings, buildings) in sensitive ecosystems.</p> <p>1.3 Update County Code to require climate vulnerability assessments when permitting new development or land use projects in or adjacent to climate impact zones (100+ yr. floodplains, coastal shorelines, geohazard areas, etc.), such as the Shoreline Management Program given impacts such as sea level rise.</p> <p>1.4 Designate climate impact zones within the Critical Areas Ordinance and regulate according to projected climate impacts and climate resilience needs, for example, include migration corridors and refugia to allow shifts in species distribution.</p> <p>1.5 Consider future climate conditions into the identification of fish and wildlife habitat conservation areas and wetlands.</p> <p>1.6 Incorporate greater diversity of topography and climate conditions in areas protected from development such as riparian and wetland habitats to allow for shifts in species distribution and ensure ecosystem resilience.</p> <p>1.7 Designate high-value habitat areas and climate migration corridors and habitat connectivity as a critical area to maintain larger, undisturbed tracts of intact ecosystems and the connections between them.</p> <p>1.8 Protect wetlands, riparian areas, and associated buffers from logging and other stressors.</p> <p>1.9 Incorporate climate change into the Ecosystem Report and develop an adaptation plan that leverages the work already done by the Nooksack Indian Tribe.<sup>289</sup></p>	<ul style="list-style-type: none"> <li>Better understanding of the true value of ecosystems. (1.1, 1.2, 1.3, 1.4, 1.5)</li> <li>Expand habitat for wildlife and avoid human-wildlife interaction (1.4, 1.5, 1.6, 1.7)</li> <li>Protect sensitive hydrologic systems and prevent fragmentation (1.5, 1.6, 1.7, 1.8, 1.9)</li> <li>Increase freshwater availability for humans, wildlife, fish, and ecosystems (1.3, 1.4, 1.5, 1.7, 1.8)</li> <li>Maintain maximum diversity of species (all actions).</li> </ul>

<sup>289</sup> Nooksack Indian Tribe Climate Change Adaptation Plan for Key Species and Habitats, <https://cig.uw.edu/wp-content/uploads/sites/2/2020/05/Nooksack-Indian-Tribe-Climate-Change-Adaptation-Plan.pdf>

<b>2. Provide technical, logistical, and financial support for community efforts to restore and enhance ecosystems.</b>	
<b>Actions</b>	<b>Benefits of Actions</b>
<p>2.1 Support the planting of one million trees in Whatcom County by 2030 by identifying non-forested County-owned lands and by partnering with other organizations and private landowners. Provide logistical support and tree stock for County-owned lands.</p> <p>2.2 Expand support for non-profit conservation programs that build ecosystem resilience to climate change through land protections, restoration, and community engagement.</p>	<ul style="list-style-type: none"> <li>• Raise community awareness and support for climate action (2.1, 2.2)</li> <li>• Increased community funding to preserve natural systems (2.2)</li> </ul>

<b>3. Implement long-term monitoring to assess the impact of climate on ecosystem health.</b>	
<b>Actions</b>	<b>Benefits of Actions</b>
<p>3.1 Monitor the status of critical areas and priority habitats (e.g., ecological processes sustaining these habitats and factors limiting them) and incorporate findings into planning and regulatory updates.</p> <p>3.2. Assess and monitor ecosystem health on County owned properties, including parks, right of ways, floodplain properties, etc.</p> <p>3.3. Develop goals, risk tolerances, and restoration strategies on County owned properties to address climate impacts and climate resilience.</p> <p>3.4. Expand County-sponsored citizen science programs for terrestrial ecosystems, modeled after programs sponsored by the Marine Resource Committee. Western Washington University faculty and staff could support these efforts.</p>	<ul style="list-style-type: none"> <li>• Understand the trend in ecosystem health (3.1, 3.2, 3.4)</li> <li>• Prioritize funding for restoring ecosystem health (all actions)</li> </ul>
<b>4. Preserve and enhance ecosystem health to build climate resilience in our hydrologic processes, air and water quality, carbon storage, and ecological connectivity.</b>	
<b>Actions</b>	<b>Benefits of Actions</b>
<p>4.1 Significantly increase the rate and scale of conservation easement acquisition of important ecosystems through the Purchase of Development Rights Program.</p> <p>4.2 As part of the County's Natural Resource Marketplace, develop a carbon valuation and credit program to compensate property owners who voluntary protect and increase carbon stores (forests, wetlands, soils) to mitigate climate impacts.</p> <p>4.3 Restore floodplain connectivity, native vegetation, and forest ecosystems within floodplains to enhance natural flood storage and mitigate flood impacts to ecosystems.</p> <p>4.4 Identify and protect mature forest stands that form connected habitat blocks from the Puget Sound to the Cascade Mountains (e.g., Chuckanut Wildlife Corridor, Nooksack River, and associated tributaries) through regulations, conservation easements, and updated management requirements.</p>	<ul style="list-style-type: none"> <li>• Protect sensitive areas and reduce damage from floods (4.1, 4.3, 4.4)</li> <li>• Enhance carbon storage (4.2, 4.4)</li> </ul>

## Conclusion

Healthy ecosystems will provide greater climate resilience for Whatcom County. Healthy ecosystems and the essential services they provide are not only necessary for sustaining our economy, but also contribute to the high quality of life in this County. Protecting sensitive ecosystems and habitat should be a top priority for the County, with restoration as a second priority, because it is cheaper to prevent damage than to try to fix it. Creating climate resilient ecosystems now will help us avoid potential irreversible damage over the next decade.

# **SECTION 4 - IMPLEMENTING THE CLIMATE ACTION PLAN**

## Office of Climate Action

The message of this Plan is clear. Section 1 explains why we must act quickly and decisively. We must mitigate the effects of our activities on the local and global climate, and we must adapt to those effects of changing climate that are beyond our ability to mitigate. Sections 2 and 3 outline specific, detailed, scientifically backed actions that we need to take to accomplish our mitigation and adaptation goals.

The County needs to place high priority on reducing greenhouse gas emissions and building climate resilience in our communities, while ensuring an equitable transition for those whose jobs and livelihoods may be affected by climate change and climate action. This final section proposes an organizational structure for effectively implementing climate action.

To be effective, the County must act according to the guiding principles laid out in Section 1 with emphasis on urgency, environmental and social equity and justice, transparency, and accountability. The County must also exercise leadership, promote systems-level solutions, and employ best available science and management practices. The inevitable transition to net zero emissions will have an enormous impact on Whatcom County's economy, which is home to two refineries that represent almost 2,400<sup>290</sup> highly skilled jobs. Whatcom County must be a leader in facilitating this economic transition to be competitive in the rapidly evolving clean energy future.

We propose that the first step toward climate resilience is to establish an Office of Climate Action within the County Government, headed by a senior Climate Advisor and reporting to the County Council and Executive. This Office needs to exercise leadership in addressing the three areas of concern that emerged in the 2019 Community Research Project leadership and coordination, data and information, and community engagement.

### Leadership and Coordination

The sheer number of strategies and actions presented in this plan's Appendix illustrates both the challenge and urgency needed to address climate disruption. We believe that to realize the full potential for climate action, the County needs a single office responsible for coordination, data collection and communication. As the County works toward more effective climate action, many departments will continue the important work they are doing now and much of their expertise will be needed to address the strategies and actions outlined in this plan. The job of the Office of Climate Action should be to coordinate programs that draw on this expertise, seek and secure funding for climate related activities, and ensure that County departments are aware of each other's plans and activities, work in concert to achieve climate action goals, and act according to the principles of urgency, equity, transparency, and accountability. In particular, the Office of Climate Action can help the County take full advantage of increasing opportunities for funding of climate-related projects such as the Washington Clean Energy Fund, various funds established under the 2021 Climate Commitment Act, and any new federal grant opportunities that address climate change.

---

<sup>290</sup> Hodges, H., A. Rucker, J. McCafferty, March 2019. Employment at Cherry Point, Exploring the economic impacts of Cherry Point on Whatcom County. Prepared by the Center for Economic and Business Research, Western Washington University. The number of jobs includes *bp*, Phillips 66 and Western Refinery Services.

To ensure coordination in addressing all aspects of the Climate Action Plan, the Senior Climate Adviser should have direct access to the County Executive. In some cases, continuing the work of the existing Climate Leadership Committee, to be chaired by the Senior Climate Advisor, may be the most expedient way to ensure this coordination. In addition, it is vital that all County agencies consider climate effects when deciding and implementing policy; the Office of Climate Action can help agencies see their own particular responsibilities through a "climate lens."

In addition to coordinating key climate priorities and programs, the Climate Advisor should actively coordinate and cooperate with those organizations and communities in Whatcom County and beyond who will be affected by climate change and who can be partners in the effort to mitigate and adapt to it. Within the County, these include tribes, city governments, school districts, water and conservation district, ports, utilities, labor organizations, agricultural organizations, businesses, media, and community advocacy groups. Partners outside the county include neighboring counties, state and federal agencies, local and provincial governments in British Columbia, and state and national climate advocacy organizations.

We are particularly encouraged by recent exchanges between leaders of the County and of the City of Bellingham, outlining concrete steps to ensure coordination, and also proposing that smaller city governments be brought into our joint efforts. We second these efforts and recommend that the County's Senior Climate Advisor organize and chair a Climate Action Committee including representatives of the County, cities, Port of Bellingham, Public Utility District, and other relevant governmental agencies.

There are many areas where the County can collaborate with the city governments, including land use codes that support density in urban areas and urban growth areas, electrification of new and existing buildings, water resources planning, resilience centers especially in areas with vulnerable populations, and securing reliable sources of renewable energy to significantly reduce emissions from electricity generated by fossil fuels.

In order to carry out these tasks of leadership, the Senior Climate Advisor should have wide experience in government and corporate relations, as well as technical and policy knowledge of the nature of the climate crisis, basic climate science, and energy policy. In addition, an important part of leadership is problem-solving and identifying opportunities. It is inevitable that, in the next few years as we move toward carbon-neutrality and climate resilience, unexpected problems and opportunities will arise. The current world-wide transition to net zero emissions is promoting rapid advances in technologies, so flexibility and willingness to change strategies are critical. The Senior Climate Advisor should have the ability to think creatively and adaptively, where necessary recommending that the County adjust and update climate policies and actions as our knowledge and experience grow, and local conditions change.

The Office of Climate Action should also consider engaging interns from local colleges and universities to undertake specific, time-limited tasks.

### **Data and Information**

Accurate and current data and information resources are essential for effective climate action and for compliance with our principles of transparency and equity. The Office of Climate Action should exercise

leadership through collecting and disseminating vital information about climate change and about the County's progress in addressing it. In order to carry out the informational aspects of the Office's mission, the Advisor should be assisted by a technical information specialist who can compile and disseminate information regarding climate change and the County's progress in climate action.

The information specialist should have experience in climate-related data and information science. Data compilation services will include tracking and modeling emissions with the ClearPath model, updating information on energy savings from facility upgrades or other investments made to enhance climate resilience, monitoring information on climate programs at the state and federal levels and in neighboring counties and maintaining an online dashboard for the County on climate progress.

The work of the information specialist will also be instrumental in helping the County prioritize the numerous climate actions that it needs to undertake. Since questions of cost as well as efficacy of various actions are likely to arise, such tools as marginal abatement cost (MAC) analysis will be extremely useful to county planners and administrators in determining priorities for climate action. MAC analysis evaluates the monetary cost of implementing a specific action per unit of greenhouse gas emissions prevented. Recent improvements also allow MAC analysis to the interplay between different actions, and thereby guide decisions on the order in which to take different actions.<sup>[4]</sup> For example, GHG reductions from EV's increase over time as the electricity generation becomes cleaner. Or utility-scale renewable costs are much higher if new transmission must be built to get this electricity to the customers. MAC should not be the sole guide for prioritization since it does not consider social benefits and costs, climate resilience benefits, or other environmental gains that might come from climate actions. With this caveat, we recommend that the County commission such an analysis, and that the information specialist be conversant with such techniques, minimally at the level of supervising a contracted analysis.

In addition to *collecting* information, the office should be a readily available *source* of reliable information. The public will be most interested in the impacts on workforce transition, jobs, equity, and the environment over time. The Office should regularly inform the public about our climate goals and our progress toward achieving them. Thus a transparent, public-facing dashboard of county climate-related data and information will be essential. The Office should also provide testimony when required to relevant state and federal bodies on climate legislation and rules that facilitate our County climate goals.

The Office can also serve as a source of information about the County's ongoing and future programs of climate action. For example, the County has upgraded facilities to increase energy efficiency, reducing operational costs and saving taxpayers money. However, actual reporting on these savings is hard to find. Another example is the County-instituted a purchase of development rights program that can increase climate resilience by preserving and enhancing open space, high value working lands, and ecosystem services. This program is important and deserves much greater visibility.

In addition to compiling relevant data and making them available to county staff and the public, the Office should consult where appropriate with academic, government, and foundation experts on the biophysical, economic, and social aspects of climate change.

## **Community Engagement**

Coordinating climate action and collecting and disseminating climate information will only be effective if the public understands the urgency of climate action and knows that this Plan is being carried out in a just, equitable, and transparent manner. For this reason, the Office of Climate Action needs to take a broad range of actions to inform, influence, and secure support from the general public in our County.

As soon as it is established, the Office should mount a campaign through print, electronic, and social media to explain the Climate Action Plan. It should enlist members of CIAC, academic and scientific experts, and advanced university and college students to give presentations to variety of interested organizations and community stakeholders.

The Office should also request that to kick off the implementation of this Plan, the County Executive and the Climate Advisor hold a public, town-hall type meeting to announce and promote the Climate Action Plan and hold yearly town-hall meetings thereafter to report on progress and discuss issues regarding the implementation of the Plan.

The Office should develop an outreach plan with local organizations involved in conservation, sustainability, and environmental education to inform the community on climate change. The main focus of this educational outreach would be school districts, but it is also important to reach out to community organizations that can help spread the message of the importance of climate action.

## **Role of the Climate Impact Advisory Committee**

The County Council established the Climate Impacts Advisory Committee in 2017. Its mandate includes both providing expert advice to the County Council and Executive and serving as “a conduit to the public for information exchange, education, and engagement.” We recommend that the Office of Climate Action take advantage of the expertise and experience of CIAC members to carry out aspects of its mission.

The Committee should continue the active role it began with the Community Research Project in 2019 and has continued with the compilation of this Plan. In accordance with its enabling legislation, it should be prepared to advise the County Council on cross-cutting projects that will enhance climate resilience, changes to the Comprehensive Plan and existing codes, budgetary priorities, and possible sources of funding for climate action. CIAC members can provide their own expert advice, consult with scientific and policy experts, and help with community outreach as directed by the Office of Climate Action. An important function of the CIAC is advising the Office of Climate Action of new, emerging technologies and opportunities to provide a systems-level approach to achieve climate resilience.

To take full advantage of CIAC's role, the Climate Advisor needs to serve as the County liaison to the committee. We recommend that in the future, when citizens apply for CIAC vacancies, the Climate Advisor should recommend to the County Council those applicants that might best meet the needs for specific expertise and community representation. The Committee can thus serve as volunteer advisers to the Office on general policy directions as well as on specific projects and their implementation.

## Funding

To be effective, the Office of Climate Action needs adequate funding. We fully realize that funds are scarce in a time of economic uncertainty, but we also believe that action is urgent and imperative to simultaneously help combat climate change and recover the economy. Strategic investments made now can save the County both money and effort in the future. We therefore recommend that the County Council allocate funds for the Office of Climate Action immediately, including supporting the Senior Climate Advisor and the information specialist as permanent positions beginning in fiscal year 2022. Staffing the Office of Climate Action, in turn, will enable the County to seek and secure outside funding for specific actions recommended in this Plan. Without such staffing, it may be difficult to take full advantage of the increasing opportunities to secure funding for climate mitigation and resilience.

Whatcom County is competing with other communities to be a leader in Washington state for the clean energy transition, as the state rapidly replaces fossil fuels in its economy. This transition will create the jobs needed to compete worldwide over the next several decades. A successful transition will also provide Whatcom County with the skilled workforce needed to effectively compete in the 21<sup>st</sup> Century and a stable, growing economy.

Once the Office of Climate Action is established, it can coordinate proposals for grants requests that are already available and should become increasingly so over the next two years. The State Department of Commerce is sending out requests for proposals for the Clean Energy Fund, including for example energy retrofits for public buildings. Other state sources, such as the funds appropriated in the various transportation-related bills detailed in Transportation, should also come online soon. The infrastructure bill currently being negotiated, in whatever form it passes Congress, will almost certainly include many programs that can enable many of the recommendations made in Section 2 on the Built Environment.

Other possible sources include the Amazon Climate Pledge Fund <sup>291</sup>and the Gates Foundation's Breakthrough Energy Ventures. In addition, the Office can collaborate with universities to seek funding for research, including for example agricultural programs through WSU and marine ecology programs through WWU and UW. A combination of all these sources could provide funds for GHG emission reductions, ecosystem adaptations, equitable job transitions, and climate resilience. But it takes time to pursue grants, loans, and collaborative projects, and we believe that quickly establishing and funding the Office of Climate Action is a timely investment that will bring immense returns in the form of money for desperately needed climate action measures.

## Priorities to Implement in the First Year

The CIAC has created a list of key priorities to initiate in the first year of operation for the Office of Climate Action. This list was developed at the request of County leadership and the Council due to the large number of strategies and actions that are proposed in this five-year plan.

Climate action must begin with establishing the Office of Climate Action (OCA) and appointing an interim manager who can devote a minimum of 70% of their time to organizing and initiating the first-year priorities. The key responsibility of the interim manager will be to develop job descriptions for the

---

<sup>291</sup> <https://sustainability.aboutamazon.com/about/climate-pledge-fund>

Climate Manager and Data Analyst and start the process for hiring permanent staff for these two positions. The CIAC will assist in recommending skill sets and responsibilities for both positions.

The interim manager will organize and chair the internal Climate Action Team (CAT) committee and external Joint Climate Action Team (JCAT) committee and serve as the liaison for the CIAC until a permanent director is hired. Planning and community outreach will be extremely important as the scope, organization, and initial first-year activities are rolled out for the OCA. The interim climate manager will also start the implementation of the first-year priorities for the Built and Natural Environments that are listed below.

**1. Advocate for a state-level legislation that encourages quick adoption and growth of renewable electricity generation with an emphasis on community solar and addresses our additional need for Transmission and Distribution.** Throughout this climate action plan we emphasize the need for state-wide legislation that will accelerate decarbonization and create climate resilience, the two primary drivers in this CAP. During the 2019 Community Research interviews, the most common concern was the lack of community solar in Whatcom County. A 2021 ranking of states based on their installed megawatts of solar PV (both rooftop and community solar) showed that Washington ranks 37<sup>th</sup> and is near the bottom of solar PV penetration compared with other US states along the Canadian border (Table 4.1). Only North Dakota has a lower percentage of solar in its electricity. For comparison, Oregon has installed over four times more solar PV than Washington. Our state should look to Minnesota and Oregon legislation on how to successfully increase solar PV.

Minnesota community solar has become the most successful in the country. Their success is largely attributed to having no caps on community solar development and creating a new compensation model that added up all the costs and benefits of distributed solar, including the social cost of carbon (i.e., the value for avoided carbon emissions). In addition, Minnesota's Public Utility Commission found that the grid costs for managing the variability of solar power flows were essentially zero and would remain so until solar generation exceeds ~15% of the state's power supply.<sup>292</sup> Minnesota continues to refine its value-of-solar rate that analyzes and rebalances the myriad costs and benefits of solar.

The U.S. Department of Energy's (DOE) Solar Futures Study<sup>293</sup> showed that there is enough community solar installed in the US today to power 600,000 households. The new goal set by DOE's National Community Solar Partnership is to enable community solar systems to power the equivalent of five million households by 2025 and create \$1 billion in energy bill savings. Essentially, this means an increase of more than 700% in the next four years. The Sharing the Sun<sup>294</sup> report shows that community solar can lead to substantial savings on electricity bills – from 5 to 25%.

PSE's planned community solar project for the Whatcom Falls water storage tank site will add ~400 kW (about 1,200 panels and ~270 shares). This is an important start, but Whatcom County should set a goal

---

<sup>292</sup> Fairley, P. Minnesota finds net metering undervalues rooftop solar. March 24, 2014: <https://spectrum.ieee.org/minnesota-finds-net-metering-undervalues-rooftop-solar>

<sup>293</sup> Solar Futures Study, US Department of Energy's Solar Energy Technologies Office, September 2021: <https://www.energy.gov/eere/solar/solar-futures-study>

<sup>294</sup> Heeter, J. Sharing the Sun: Understanding Community Solar Deployment and Subscriptions, May 21, 2020, NREL: <https://www.nrel.gov/docs/fy20osti/76853.pdf>

consistent with the US DOE programs, which would mean providing roughly 3,500 households with community solar over the next four years.

Expansion of community solar has the added benefit of creating equity for both low-income families and renters who cannot afford the cost of installing renewables and/or do not own their rooftop. Many PUD-owned community solar projects, including the Snohomish Arlington microgrid, set aside a portion of their panels for low-income families by further reducing the cost of participation for these groups.

Transmission and distribution planning also needs to get underway with Whatcom’s local utilities and the State Department of Commerce. With an anticipated doubling of electricity demand by 2050, much of this electricity will come from wind power imported from Montana and Wyoming and solar power from the Southwest. Additional transmission will be needed to meet this demand, which often requires at least 10 years to acquire the land, permits, and construction of this new infrastructure.

**2. Start a dialogue with bp management about how they intend to reduce their GHG emissions.** Since bp headquarters announced a 40% reduction in oil production by 2030 and a 30% reduction in GHG emissions, little information has been available as to how this commitment will impact the largest oil refinery in the state, bp Cherry Point. Recently, however, bp has announced that they plan to spend \$269 million at Cherry Point to produce more renewable diesel, a biofuel, and make other improvements to reduce GHG emissions around 7%.<sup>295</sup>

Additional ideas that could be included in this dialogue with bp management include participating in EPA’s EnergyStar program for refineries, converting to the use of clean electricity, and using electricity instead of fossil fuels to pre-heat high temperature processes. Undoubtedly bp has the technical knowledge and insight to suggest additional ways to improve efficiency and reduce their GHG emissions. The County and Port can help by advocating for state and federal funds to help fund these important initiatives.

*Table 4.1. State rankings of installed solar photovoltaics (PV) as of the first quarter of 2021. The listed states are primarily northern border (exceptions are California, Massachusetts, and Oregon). Jobs include both solar manufacturing and installation. The entire listing of all fifty states (including Washington DC) and can be found at [seia.org/states-map](http://seia.org/states-map).*

State	2021 Q1 Ranking	Megawatts Solar PV	% Solar in Electricity	Jobs
California	1	32,394	24.0%	68,677
Massachusetts	8	3,380	18.5%	9,495
New York	10	2,990	2.8%	10,214
Minnesota	15	1,617	3.6%	3,993
Oregon	19	1,172	2.6%	3,502
Michigan	25	590	0.5%	3,379
Idaho	26	583	3.7%	486
Wisconsin	27	488	0.6%	2,910
Vermont	31	385	15.0%	1,046
Maine	36	280	1.8%	595
Washington	37	270	0.3%	3,565
New Hampshire	41	147	0.9%	985
Montana	43	119	0.3%	288
North Dakota	51	1	0.0%	211

<sup>295</sup> Bernton, H., BP to up Cherry Point renewable diesel production, Seattle Times, Oct. 4, 2021. [https://replica.seattletimes.com/popovers/dynamic\\_article\\_popover.aspx?artguid=66ff6601-00d3-4b7b-aa0c-d6019c884d44](https://replica.seattletimes.com/popovers/dynamic_article_popover.aspx?artguid=66ff6601-00d3-4b7b-aa0c-d6019c884d44)

**3. Adopt new financial tools and incentives that will accelerate electrification of existing buildings and the installation of distributed energy resources for climate resilience.** Only 1% of our total building stock is new every year, so our efforts should concentrate on electrifying space and water heating in existing building stock. The biggest financial impediment to buying high-efficiency heat-pump based heating systems is the initial cost, even though their high efficiency pays for itself over time by lowering electricity bills. The County has piloted a C-PACER program for commercial buildings, but also needs to pilot a PACE program for residential buildings.

Along with financial tools the Climate Manager must advocate for state legislation that will accelerate the deployment of distributed rooftop solar and storage. This includes extending subsidies for rooftop solar that also address equity. New technologies are available already that may influence the way the state designs subsidies to increase DERs. For example, the continued price drop in battery storage and the deployment of smart inverters will eventually allow buildings with rooftop solar to gain the full benefit of the electricity they produce on site and eliminate the need for net metering policies. As the adoption of these technologies increases, upfront costs will decline. Widespread expansion of DERs not only increases decarbonization of the electric grid, but also creates resilience to climate change, while creating local jobs and reducing the health care costs associated with carbon pollution.

**4. Install publicly accessible electric charging stations at all county government facilities and underserved locations. Require EV charging stations at apartment complexes and new commercial and industrial complexes.** The largest impediment to widespread adoption of EVs is range anxiety. EVs are often viewed as great for commuting and local trips, but inadequate for longer commutes and occasional longer trips and vacations. As the range of EV batteries approach gasoline-powered vehicles, EV charging stations will need be strategically located along travel corridors and sized to accommodate rapid charging. While many EV owners may charge their EV at home, others will rely on accessible EV charging at their place of work or large parking lots.

The County can lead this transformation by including electric charging at County buildings for both employees and visitors. In addition, county codes for EV charging infrastructure should be included for all new commercial and industrial developments. Codes should also require 240 V circuits in new residential garages so that the homeowner can easily add an EV charger if needed.

**5. Implement the Regional Trails Plan as identified in the 2011 Bicycle Pedestrian Plan and 2004 Chain of Trails plan and any subsequent revisions thereto to expand the regional trail network for commuting, recreation, and emissions reduction.**

Increasing staff and consultant support, pursuing numerous grant funding opportunities, and allocating significantly more local transportation funds to implement a connected network of trails will create more walking, biking, horseback riding, and other active transportation opportunities to reduce the number of trips of single occupancy vehicles and provide more transportation and recreation options for both rural and urban residents. Such a network that prioritized development of off-road trails could assist school districts in creating safe routes to schools, provide emissions free transportation opportunities for rural residents working in towns, and provide improved access to recreational opportunities and generally connecting communities.

Efforts to create a well-integrated system of trails in Whatcom County have existed since the 1970s, and while some progress has been made, there still remains an enormous amount of work to do. The 2011 Bicycle Pedestrian Plan, created by the Bicycle Pedestrian Advisory Committee, contains planning considerations, implementation recommendations, and policy recommendations that are intended to provide guidance for expanding the active transportation trail network. The Bicycle Pedestrian Advisory Committee maintains a current list of priority projects. Developing the Regional Trail network will require the County to acquire easements, purchase property, work with existing landholders and developer, and re-evaluate County right-of-way planning processes and development regulations to prioritize non-motorized trail system development.

**6. Incorporate climate change risk into all aspects of the County Comprehensive plan, from infrastructure to land use to natural systems.** Risk assessments for infrastructure are either lacking or based on historical trends. As demonstrated again and again in this climate action plan, historical trends are insufficient for predicting the future risk posed by a changing climate. Well over a decade ago insurance companies started incorporating climate change into their risk assessment and pricing of insurance. FEMA has recently restructured the pricing of its flood insurance to reflect the more frequent and intense storm events.

The County's reports on topics such as natural hazards mitigation and shoreline development can no longer rely on historical data to predict future risk of flooding, sea-level rise, and other climate impacts. We strongly recommend that the current revision of the Comprehensive Plan incorporate climate risk throughout its chapters on Land Use, Housing, Facilities, Utilities, Transportation, Economics, Resource Lands, Recreation and Environment. All of these areas face specific risks associated with climate change, and mitigation and adaptation strategies consistent with the strategies in this plan should be recognized.

**7. Prioritize restoration, function and protection of wetlands, riparian areas, headwaters, and other climate resilience areas to improve base flows in streams and rivers, to increase carbon sequestration and storage potential, and to build resilience to climate impacts.** Whatcom County must significantly increase its conservation acquisition and protection efforts to ensure ecosystem resilience to climate impacts. The County should pursue acquisition and restoration of lands that build climate resilience and lands that are vulnerable to climate impacts. Local funding sources such as the Conservation Futures Fund should maximize fund recruitment by collecting the maximum allowable levy rate and County staff should pursue multiple matching funds and grant funding sources to increase conservation funds available

This also includes reviewing and revising land use codes to protect major carbon sinks from development, conversion, and other land disturbances. Risk and resilience assessments must be required for all proposed developments that occur within or near to climate impact zones such as shorelines, forests, and floodplains and to ensure that resilience to climate impacts such as sea-level rise, drought, flooding, and wildfire are evaluated. Wetlands, riparian zones, watershed headwaters, shorelines, and other critical areas are also vulnerable to climate impacts and provide resilience to climate impacts. The risk and resilience assessment should include consideration of future climate scenarios that may result in sea-level rise, flooding or wildfires from extreme weather events. The assessment should also show the current carbon sequestration and storage potential and the expected

loss of carbon sequestration and storage potential over the lifespan of the development or up to fifty years in the future.

In addition, more emphasis needs to be placed on identifying key ecosystem services in wetlands. Allowing wetlands to be developed in exchange for restoring a wetland elsewhere should not be viewed as a one-for-one exchange. The assessment needs to catalogue ecosystem services of the wetland to be developed and explain how these important services will be duplicated at the proposed alternate location. Restoring and protecting ecosystem services provided by agricultural lands, forestlands, wetlands and other ecosystem areas should be identified, promoted, and incentivized through property tax assessments, conservation easement acquisition, and other programs that could be part of a broader Natural Resource Marketplace.<sup>296</sup>

**8. Ensure a stable land base for our agricultural economy and promote renewable energy in agricultural areas that can reduce emissions from farms and provide farmers with new income.**

A healthy agricultural economy in Whatcom County requires a minimum land base of 100,000 agricultural acres. Zoning codes and development regulations for rural and agricultural lands must be reviewed and revised to ensure low-density development occurs to protect the soil resource and the agricultural community from overdevelopment, non-compatible development, and conversion to non-agricultural uses. Increasing renewable energy projects such as wind and solar will accelerate renewable energy generation in rural areas and provide farmers with a steady income which will also contribute to the protection of agricultural values. The CIAC will review and recommend improvements to the wind energy system code to increase implementation of wind energy projects. Solar developments are very compatible with agricultural buildings and infrastructure and can also complement field management, if done well, further increasing financial benefits and energy-related emissions.

**9. Increase funding and staff capacity for the County Conservation Easement Program and develop a carbon credit market.** The Conservation Easement Program has been an effective tool protecting over 1,500 acres of mostly agricultural land over the past 20 years. Insufficient staff capacity to recruit new applications and pursue additional grants and funding opportunities has limited the scope and effectiveness of the program. To protect working lands and important ecosystem areas, it is critical that Whatcom County increase the momentum and program efficiency and effectiveness of the Conservation Easement Program to implement the broad protections needed to build resilience to climate impacts

A carbon credit market is needed to incentivize landowners for enhancing carbon sequestration and storage in soils and forests. A 2019 report by the National Academy of Sciences found that regenerative farming practices that enhance soil carbon storage can sequester 250 million tons of CO<sub>2</sub> annually, or about 4% of the country's emissions.<sup>297</sup> IHS Markit estimates that the total potential supply of carbon credits in the agricultural sector is greater than 300 million tons CO<sub>2</sub>e annually and will keep growing.<sup>298</sup> The current soil carbon payments for carbon sequestration average approximately \$30 per acre.

---

<sup>296</sup> Agriculture Watershed Project. <https://sites.google.com/site/wcwatershedag/home>

<sup>297</sup> Negative Emissions Technologies and Reliable Sequestration: A Research Agenda, 2019, A consensus study report: <https://www.nap.edu/read/25259/chapter/1>

<sup>298</sup> Carbon farming: Opportunities for agriculture and farmer to gain from decarbonization, IHS Markit report, 2021: <https://cdn.ihsmarkit.com/www/pdf/0721/Carbon-Whitepaper-Final.pdf>

Whatcom County should pursue pilot projects with private landowners and for public acquisition projects that can assess carbon sequestration and storage values and develop carbon credits through existing national programmatic frameworks. Carbon credits could contribute as part of a larger Natural Resource Marketplace approach to working with property owners to build resilience to climate impacts and protecting significant carbon stores.

**10. Expand a County-hosted public database hub that includes georeferenced environmental measurements that are routinely collected by various organizations in the County.** This database hub should store information on natural resources that is routinely collected by different organizations, such as streamflow levels, water quality, soil types and carbon storage, glacial retreat, major vegetation types, and carbon sequestration and storage to name a few. The County needs to institute a standard approach for measuring ecosystem health and start conducting these measurements on important ecosystems to document changes over time. These measurements could include a sub-grouping of sample plots that are used for the National Land Cover Database. The County should hire a small team of summer interns annually to sample designated plots. Understanding these data trends will be instrumental in protecting healthy ecosystems and restoring damaged ecosystems.

### **Concluding Thoughts**

It is an oft-repeated cliché that reports are written in order to gather dust on shelves in government offices. With the present state of the global and local climate crisis, we do not have the luxury of dust-gathering. This report is written in the spirit of both urgency and optimism—we are in a crisis and all of us must act now, involving government, stakeholders, and citizenry. At the same time, we have the knowledge, commitment, and planning to make a difference *for our communities and our environment* before it is too late. Organizing for effective climate action, as outlined in this Section, can give us both the hope and the tools we need to implement those actions and build community resilience to climate impacts throughout Whatcom County.

# SECTION 5 - APPENDICES

# Appendix A: Technical Reviewers and Public Review Process

## Technical Reviewers by Subject Area

We would like to acknowledge the following individuals who provided valuable technical guidance and reviews of the chapters in this Climate Action Plan.

### Electricity and Buildings

(lead authors: Cynthia Mitchell, David Hostetler, Ellyn Murphy)

Reviewer	Organization or Technical Area
Hunter Hassig	former CIAC member, PSE Energy Advisor
Imran Sheikh	CIAC member, WWU Asst. Prof. Institute for Energy Studies
Eddy Ury	CIAC member, energy policy
Phil Thompson	CIAC member, retired WWU economics & energy professor
Emily Kubiak	Sustainable Connections & Community Energy Challenge
Rose Lathrop	Sustainable Connections, Buildings
Erin McDade	Architecture 2030
Atul Deshmane	PUD1 Commissioner
Markus Virta	President, WA Solar Energy Industries Assn.
Mark Schofield	Mgr-Community Energy Challenge
Ted Clifton Sr	Clifton View Homes, net zero energy home design and construction
Christine Grant	WWU Adjunct Instructor Energy Policy; PUD1 commissioner
Sarah Vorpahl	Dept of Commerce, State Energy Strategy
Austin Scharff	Dept of Commerce, State Energy Strategy
Rob Ney	Whatcom County Facilities Manager
Ray Kamada	Kamada Science and Design
Deepa Sivarajan	Climate Solutions – WA Policy Mgr

### Industry (lead author: Sue Gunn)

Reviewer	Organization of Technical Area
Joel Swisher, PhD	Director, Institute of Energy Studies, WWU
Don Goldberg	Director of Economic Development, Port of Bellingham
Christine Grant	WWU, PUD1 Commissioner
Atul Deshmane	PUD1 Commissioner
Glenn Blackmon, PhD	Manager of Energy Office, WA Dept of Commerce
Michelle Jordon	Institute of Energy Studies, WWU
Ken Dragoon	Director of Hydrogen Division, Obsidian Renewables
Eugene Akiaten	Retired Petroleum Refinery Systems Director
Ray Kamada, PhD	Physicist, Kamada Science and Design
Robert Ruiz, PhD, MBA	President, Ruiz Energy Corporation
Pam Brady	Government Affairs Manager, <i>bp</i>
Elizabeth Davis	Commercial Optimization Superintendent, <i>bp</i>
Courtney Lancaster	Operations Superintendent, <i>bp</i>

James Berburg	Senior Environmental Engineer, <i>bp</i>
Sharon Shewmake, PhD	State Representative, WA 42 <sup>nd</sup> & WWU Energy Economics
David Hostetler	Engineer, research information & State Energy Strategy
Ellyn Murphy, PhD	CIAC - reviewing

**Transportation** (lead author: Phil Thompson, Alec Howard)

Reviewer	Organization or Technical Expertise
John Shambaugh	Washington Department of Transportation
Adrienne Hegedus	Port of Bellingham
Caryn Vande Griend	Puget Sound Energy
Daniel Tepper	Whatcom Parks and Recreation Foundation
Tim Wilder	Whatcom Transportation Authority
Kirsten Wert	Whatcom Council of Governments
Lethal Coe & Transportation Technical Advisory Group	Whatcom Council of Governments
Seth Vidana	Climate Manager, City of Bellingham
Chris Comeau	Transportation, City of Bellingham

**Waste** (lead author: Ellyn Murphy)

Reviewer	Organization or Technical Area
Vicki Thomas*	2019 Community Research Project on Waste
Ali Jensen	Whatcom County staff
Jennifer Hayden	Whatcom County staff
John Wolpers	Whatcom County staff

\* A special thank you to Vicki Thomas (LWV) who conducted interviews and wrote the chapter on Waste for the 2019 Community Research Project. Much of the information in this Climate Action Plan originate directly from her work.

**Land Use** (lead author: Kaylee Galloway)

Reviewer	Organization or Technical Area
Ellyn Murphy	CIAC member, Guidance and big picture
Steve Harrell	CIAC member, Guidance and text editing
Dave Kershner	CIAC member, Land Use lead for Community Research Project Report
Phil Thompson	CIAC member, transportation, and infrastructure sections
Chris Elder	County Staff and CIAC liaison
Cliff Strong	County Staff, Shoreline Management Plan
Matt Aamot	County Staff
Karlee Deatherage	RE Sources, Water and Land Use Policy

## **Water Resources and Fisheries** (lead authors: Chris Elder, Ellyn Murphy, Stevan Harrell)

<b>Reviewer</b>	<b>Organization or Technical Area</b>
Lisa Wilson, G.I. James, Kara Kuhlman, Karl Mueller	Lummi Nation Natural Resources
John Thompson, Cliff Strong	Whatcom County
Kasey Cykler	WA Department of Ecology
Alan Chapman	Whatcom Conservation District Supervisor
Henry Bierlink	Director, Ag Water Board
Analiese Burns	City of Bellingham, Natural Resources
Becky Peterson	Owner, Geneva Consulting
Oliver Grah	Nooksack Indian Tribe
Treva Coe*	CIAC and Nooksack Indian Tribe
Eric Hirst	Whatcom water supply expert; PhD Engineering

\*Treva Coe developed the information on government roles as a former member of CIAC.

## **Agriculture** (lead author: Stevan Harrell)

<b>Reviewer</b>	<b>Organization or Technical Area</b>
Henry Bierlink	Washington Raspberry Commission
Nichole Embertson	Whatcom Conservation District
Michael Anderson, DVM	Doctor of Veterinary Medicine
John, Karen, Kate, and Zach Steensma	Steensma Dairy and Creamery
Galen Smith	Coldstream Farms
Krista Rome	Resilient Seeds
Larry Davis	Whatcom Conservation District

## **Forestry** (lead authors: Ellyn Murphy, Chris Elder)

<b>Reviewer</b>	<b>Organization or Technical Area</b>
Chris Hankey, Cory McDonald	Washington DNR
Joshua Fleischmann	Whatcom County Planning Dept
Jenny Coe	Whatcom Conservation District
Chris Elder	Whatcom County Public Works
Wallace Kost	Whatcom County Emergency Services

## **Ecosystems** (lead author: Katherine Kissinger)

<b>Reviewer</b>	<b>Organization or Technical Area</b>
Vicki Jackson	Whatcom County Wildlife Advisory Committee
Stephen Nyman	PhD Herpetologist, Whatcom County Wildlife Advisory Committee
Ginny Broadhurst	CIAC, Director of WWU Salish Sea Institute

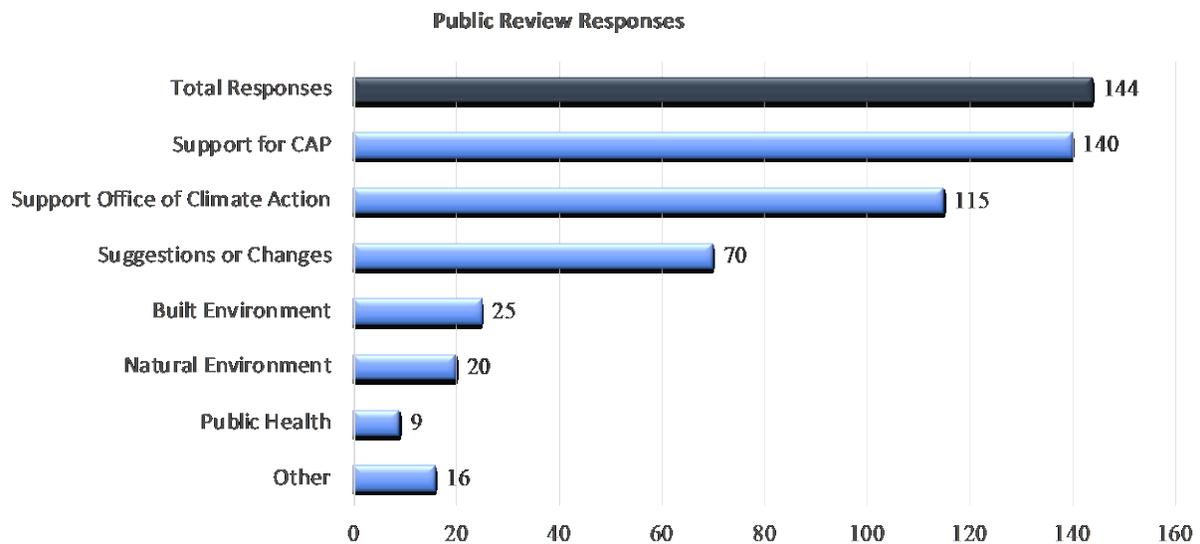

## Public Review Process

We would like to thank all those members of the public who responded to our call for public comments in July 2021. The committee received a total of 144 responses during this month-long comment period announced July 1. Of those, 140 commenters expressed support for the Climate Action Plan, while the remaining 4 did not indicate support, one way or the other. There was overwhelming support for the Office of Climate Action (115 respondents). A total of 70 reviewers expressed their personal views or concerns regarding climate change and 22 of these 70 reviewers offered specific actionable changes or additions to the plan.

A CIAC subcommittee processed the comments and referred suggestions or specific changes to appropriate chapter authors. The authors then incorporated comments, where appropriate. After the 30-day review period the CIAC received four additional comments prior to its September 2<sup>nd</sup> meeting, which were also included. All comments received between July 1<sup>st</sup> and September 2<sup>nd</sup> are available as a link on the CIAC webpage.

Five local organizations offered specific comments:

- North Cascades Audubon
- RE Sources for Sustainable Communities
- Whatcom Million Trees Project
- Puget Sound Energy
- City of Bellingham

# Appendix B: Glossary

Term	Definition
Adaptation	Altering human behavior and/or systems to reduce or avoid the climate change impacts likely to occur despite any mitigation.
Algae Blooms	A rapid increase or accumulation in the population of algae (typically microscopic) in a water system. Algal blooms may occur in freshwater as well as marine environments.
Anaerobic	In the absence of oxygen. Anaerobic digesters convert organic waste to methane or biogas. In the presence of oxygen, organic decomposition releases CO <sub>2</sub> instead of CH <sub>4</sub> .
Blue Hydrogen	Essentially grey hydrogen (made from methane via steam methane reforming) where the emissions from this process are captured and stored in deep geologic formations. Since capture of CO <sub>2</sub> is not 100%, this process emits ~1.7 kg CO <sub>2</sub> /kg H <sub>2</sub> .
Carbon Capture, Sequestration and Utilization	A process by which CO <sub>2</sub> is captured before release to the atmosphere and either is pumped into deep geologic formations or utilized by another manufacturer. Markets for such large concentrations of CO <sub>2</sub> are not available at Cherry Point.
Carbon sequestration	
Clean energy	Clean energy does not emit greenhouse gases during generation and includes electricity generated from dams and nuclear plants. Renewable energy is generally used for electricity generated from solar, wind, and can also include hydroelectricity.
ClearPath	A powerful, cloud-based, advanced web application for assessing GHG emissions.
Climate Resilience	The capacity of a system, be it a person, a forest, a city or an economy, to deal with climate change and continue to function.
Conservation Easement Program	Formerly referred to as the Purchase and Development Rights Program. A program that removes sensitive and critical areas from future development by compensating the landowner.
Distributed Energy Resources	A source of energy such as rooftop solar that can continue to operate when the main utility grid fails. Refer to the detailed definition in the discussion of Strategy 4 under Electricity and Buildings.
Ecosystem services	Ecosystem services are the benefits people obtain from ecosystems. These services include the production of food and water; regulating, such as the control of climate and disease; supporting, such as nutrient cycles and crop pollination; and cultural, such as spiritual and recreational benefits.
Embedded carbon	The GHG emissions resulting from the manufacturing of a product in terms of CO <sub>2</sub> equivalent.
Emissions-Intensive Trade-Exposed	Industries that are subject to foreign and out-of-state competition that could force relocation due to the additional expense of a cap-and-trade process.
Estuarine	An estuary is a body of water formed where freshwater from rivers and streams flows into the ocean, mixing with the seawater. Estuaries and the lands surrounding them are places of transition from land to sea, and from freshwater to saltwater.
Federal Energy Regulatory Commission	FERC was established under the Department of Energy Organization Act of 1977. It regulates electric transmission and wholesale sale rates and services principally under Parts II and III of the Federal Power Act.
Greenhouse Gases	Any number of gases that absorb infrared radiation, trap heat in the atmosphere, and contribute to the greenhouse effect. Primary GHGs are water vapor, carbon dioxide, methane, nitrous oxide, and ozone. Refrigerants like CFC also contribute to warming.
Green Hydrogen	Created via electrolysis using emissions-free electricity.
Grey Hydrogen	Created from methane using steam methane reforming (SMR), a carbon intensive process creating over 9 kg CO <sub>2</sub> /kg H <sub>2</sub> ). A third of bp's GHG emissions comes from the production of H <sub>2</sub> . Hydrogen is used in the fuel refining process.

Marginal Abatement Cost	The expense associated with eliminating a unit of pollution.
Methane	A colorless, odorless flammable gas which is the main constituent of natural gas. It is a greenhouse gas that is roughly 30 times more potent as a heat-trapping gas than CO <sub>2</sub> , but has a shorter, ~10 year, half-life in the atmosphere.
Microgrid	A microgrid is localized electricity source(s) and load(s) that normally operates connected to the grid, but can also operate independent from the utility grid or “island.” Microgrids provide climate or disaster resilience when the utility grid is down.
Mitigation (emissions)	The avoidance, reduction (and when possible, the total elimination) of heat-trapping emissions usually associated with human activity.
Mitigation (wetlands)	Compensatory mitigation is required to replace the loss of wetland and aquatic resource functions in the watershed. Compensatory mitigation refers to the restoration, establishment, enhancement, or in certain circumstances preservation of wetlands, streams or other aquatic resources for the purpose of offsetting unavoidable adverse impacts.
Mitigation banking	A wetlands mitigation bank is a wetland area that has been restored, established, enhanced or reserved, which is then set aside to compensate for future conversions of wetlands for development activities. Permittees, upon approval of regulatory agencies, can purchase credits from a mitigation bank to meet their requirements for compensatory mitigation. The County allows mitigation banking, but has not set up any local mitigation banks that can sell wetland mitigation credits.
Multi-modal transportation	The movement of cargo or people from origin to destination by several modes of transport.
Net Ecological Gain	A measure of the increase in ecological integrity and health as a result of mitigation or restoration efforts.
Peak Demand	Peak demand is simply the highest electrical power demand that occurs over a specific time period. Peak demand is often reported for daily or annual time periods.
Phase change materials	A material or substance which releases/absorbs sufficient energy at phase transition to provide useful heat/cooling. The phase change may be between liquid and solid or a change in crystalline structure.
Point-Source Emissions	Emissions from industrial manufacturing processes that must be reported to the U.S. EPA if the industry/factory produces annually 25,000 MT CO <sub>2</sub> e.
Redd	A spawning ground or nest made by a fish, especially a salmon or trout
Red Tide	A brownish-red discoloration of marine waters caused by the presence of enormous numbers of certain microscopic flagellates, especially the dinoflagellates, that often produce a potent neurotoxin that accumulates in the tissues of shellfish, making them poisonous when eaten by humans and other vertebrates.
Resilience	The capacity of a system, be it a person, a forest, a city or an economy, to deal with change and continue to function.
Resilience center or hub	A community-serving facility that can support residents and coordinate resource distribution and services before, during or after a natural or man-made disaster by generating its own electricity and providing food, water, and shelter. During normal times this community center provides a space for neighborhood meetings and create a shared sense of responsibility.
Resource adequacy	A condition in which the region is assured that utilities have acquired sufficient resources to satisfy forecasted future electrical load reliability.
Riparian	Riparian areas are lands adjacent to streams, lakes, and estuarine-marine shorelines. Riparian areas are transitional between terrestrial and aquatic

	ecosystems, through which surface and subsurface hydrology connects water bodies with their adjacent uplands. Riparian areas provide a variety of ecological functions and services and help improve or maintain local water quality.
Therm	A unit of heat that is equal to $1.054 \times 10^8$ joules. Since natural gas meters measure volume and not energy content, a therm factor is used to convert the volume of gas used to its heat equivalent.
Tipping Points	When a small incremental change leads to a sudden collapse of a system.
Transportation Demand Management	Programs and projects that emphasize using existing transportation infrastructure to enhance mobility and system efficiency.
Transit-Oriented Development	Transit-oriented developments create compact, mixed-use communities near transit where people enjoy easy access to jobs and services.
<i>Vibrio</i>	A genus of motile bacteria that often cause gastrointestinal diseases like cholera.
Virtual Net Metering	An accounting system that automatically provides credit on an individual's electricity bill based on the portion of solar production they subscribe to in a solar installation (regardless of the location or ownership of the solar installation).
Vulnerability assessment	Often used to describe the potential (adverse) effects of climate change on ecosystems, infrastructure, economic sectors, social groups, communities, and regions. Vulnerability is the degree to which a system is susceptible to and unable to cope with the adverse effects of climate change. It often includes an assessment of the sensitivity of the system, its exposure, and its adaptive capacity.
Wetland	Those areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas.
Wildland Urban Interface	A zone where structures and other human development intermix with undeveloped wildlands or vegetative fuels.

# Appendix C: Demonstration Projects and Funding for Electricity and Buildings

In the race to reduce GHG emissions in half by 2030, new innovations will be required that can be deployed later this decade. They continue to build on current best practices and on the latest science and engineering breakthroughs. But because they are new, many of them have not been proven at large scale. Rather than wait for large-scale demonstrations that we can follow, we need to take the lead and implement the most important examples in these strategies as small demonstration projects that will provide local experience, public acceptance, and make it easier to scale-up rapidly in the future to meet our GHG targets. To wait for others to lead on all things will make it unlikely to meet our targets.

Whatcom County leadership will need to continuously evaluate the potential value of an evolving list of example projects against the CAP's recommended strategies. The list below is just a starting point. All projects start as a business value proposition or concept that is evaluated against available resources (e.g., time, funding, staffing, collaborators). The most important and promising projects then develop a detailed project plan for formal review. If the plan is approved, then it is executed. If the value proposition is not sufficient, then business conditions can be monitored for new future developments.

Grid flexibility is the core to resilience and to the deep decarbonization needed to meet our targets.<sup>299</sup> Buildings become grid assets by upgrading to energy saving appliances that can be managed individually or together in groups for much greater impact.

We identified three projects that were key to getting started: 1) an electrification prequalification project, 2) a solar/battery microgrid project, and 3) a resilience hub project. These example projects are designed to understand and demonstrate the potential for reducing GHG emissions. These projects also kick start strategies 3 and 5 to electrify existing homes, farms, and buildings, strategy 4 to add DERs throughout the community in an equitable manner, and strategy 2 to create resilience hubs that are self-sustaining during emergencies, but also provide low- and middle-income residents with low-cost renewable energy on a daily basis.

***Additional examples to consider are:***

***Community Solar*** – The purpose is to enable customers without solar panels to buy whole or a portion of a solar panel available elsewhere on the grid and to credit their generation of electricity on their utility bill. Community solar is critical to equity-centered climate resilience by allowing those without access to clean energy (e.g., renters or owners without good solar exposure), and subsidizing lower income customers. There are many solar-exposed roofs throughout the local community capable of hosting community solar panels that would provide local resilience, better equity, and local investments and jobs – instead of funding utility-scale renewables elsewhere. The existing financial structure for community solar projects in Washington State makes participation an uneconomical investment, but that could be changed by state legislation and/or rulemaking to create a viable community solar program with Virtual Net Metering (VNM). With VNM, ratepayers that participate in community solar would be credited a fair price per kWh for their share of power production which is deducted from their home or apartment utility bill, just as net metering currently works for rooftop solar PV installations on owner-occupied residences. With the intent to make community solar programs functional, fair and

---

<sup>299</sup> Grid Modernization Implications for WA State Energy Strategy, Carl Imhoff, PNNL, October 9, 2020.

rewarding for participants in Washington State, the County should support legislation that promotes community solar and VNM.

**Water Heater Demand Response (DR)** – The purpose is to shift water heating away from peak times by heating water earlier for use when needed. All new electric water heaters in Washington are required to have built-in demand response capability. Thus, a utility only needs to define policies for recruiting customers into a demand response program, and begin a demonstration project, that can scale up over time. This should receive high priority, especially as part of the electrification incentive process. With sufficient customer participation, new natural gas peaking plants can be avoided.

**HVAC DR** – The purpose is to shift building heating and cooling away from peak times by adjusting thermostats in anticipation of customer needs. For example, Consumers Energy in the state of Michigan is giving away 100,000 free smart thermostats in exchange for customer participation in their demand response program. Smart thermostats connect to the internet and allows the customer/owner or utility to remotely adjust space heating or cooling during extreme events. The results of this demonstration will be used to guide similar efforts to decarbonize the state’s energy supply.<sup>300</sup> This should receive high priority, especially as part of the electrification incentive process. With sufficient customer participation, new natural gas peaking plants can be avoided.

**Solar + Battery + EV** – The purpose is to manage for 1) maximum energy storage for backup during outages (e.g., a battery), 2) peak shifting (e.g., storing solar energy for evening), or 3) responding to utility signals (e.g., time of use pricing) according to the **customer-configured** preferences. To emphasize, the customer decides and can change, the operating configuration at any time. This is made possible by new “microgrid” products available from Tesla, EnPhase Energy, and others in response to customer needs in California and elsewhere. Microgrids are a sort of building block for incremental grid modernization. In a simple sense, any electrical system that can “island” off the main grid is a microgrid or a semi-independent grid of its own. With the right equipment and software, a microgrid can coordinate DERs within its group, maximizing local resources while ensuring that enough power is drawn from the larger grid to keep supply and demand matched. Small residential microgrids typically “island” only when the main grid loses power and reconnect when power returns.<sup>301</sup> Wildfires in Australia and California have driven demand for these products, but the multifunction capability will improve, and costs will decline— *making them broadly available for modernizing the grid and providing resilience.*

**County Services Hub** – Similar to Snohomish PUD’s Arlington Microgrid, provide a solar PV array, battery storage, and electric vehicle charging for the new Northwest County Services buildings to add renewable energy, resilience, and community solar services. This a simple resilience hub focused on these county buildings (Public Works and Planning Departments).

**Battery Storage DR** – The purpose is three-fold in the case of Green Mountain Power in Vermont, whose demonstration project is being watched closely. The demonstration manages battery charging in homes to shave peaks, to provide emergency back up in outages, and to test the value of “transactive energy” enabled by the energy management module. This program will show what distributed energy resources

<sup>300</sup> Free Google Nest thermostats available for Consumers Energy customer, posted May 19, 2020 on Michigan Live; <https://www.mlive.com/news/2020/05/free-google-nest-thermostats-available-for-consumers-energy-customers.html>

<sup>301</sup> Wildfires and blackouts mean Californians need solar panels and microgrids, by David Roberts, Oct 28, 2019, *Vox.com*.

are worth in customer-to-customer transactions (as opposed to utility-to-customer transactions)<sup>302</sup> A recent Federal Energy Regulatory Commission (FERC) Order 2222 removes obstacles to wide scale deployment of DERs on the grid, which could facilitate customer to customer interactions according to Richard Brooks of Energy Central.<sup>303</sup> In the future when high-performance EV batteries are updated, the old batteries will be repurposed at low cost for less demanding applications like home backup, and rooftop solar. *All of this potential from a simple battery in a building, which can then be leveraged together in groups for even greater impact (see Virtual Power Plant).*

**Virtual Power Plant** – Large aggregations of DERs called Virtual Power Plants or VPPs are growing rapidly. Modern VPPs are a decentralized network of DERs, that can be combined and controlled at a central control point, often a cloud-based software platform operated for the utility by a third party. These DERs often remain independent in their ownership, but their operation can be managed under certain conditions in exchange for a subsidy or rebate to the owner. Tesla has been a leader in large-scale VPPs with its Hornsdale Australia battery installation that replaced a fossil-based peaking plant. Portland General Electric (PGE) in Oregon is assembling a 4-megawatt VPP by placing battery storage in over 500 homes.<sup>304</sup> PGE offers households a rebate on the battery purchase or are paid \$20 or \$40 per month for use of households that have existing batteries. This PGE project will demonstrate the value of managing peak load, provide emergency backup, and address social equity, while modernizing their smart grid.<sup>305</sup>

**Campuses** – The purposes of campus microgrids go beyond residential microgrids described earlier. Campus microgrids remain “separate but connected” to the main grid all the time. Campuses of various public and private organizations increasingly do this to modernize their operations and achieve organizational goals. The private utility Avista is currently developing a transactive energy microgrid in Spokane that will optimize energy use in “a hub building and five buildings of about 160,000 square feet each that will have net zero energy impact,” Avista’s Curtis Kirkeby said.<sup>306</sup> The Department of Energy’s Pacific Northwest National Laboratory (PNNL) campus in Richland launched its Clean Energy and Transactive Campus in 2015, leading the way for innovations in distributed devices and control systems that more efficiently and cost-effectively manage DER and building energy usage.<sup>307</sup> The PNNL campus is similar in size to a small university campus. Both Avista and PNNL microgrids were supported by the Washington state Clean Energy Fund, in order to lead the way on grid modernization in the state.

## Potential Funding Opportunities for Electricity and Building Projects

Throughout [Electricity and Buildings](#), CIAC recommends that the County facilitate demonstration projects that focus on key approaches to modernizing the electric grid and integrating buildings as grid assets with the ultimate goal of creating resilience. With a new federal emphasis on modernizing our infrastructure and increasing resilience, funding and grant opportunities over the next few years promises to be significant. Therefore, it is important for County staff to develop a list of priority projects to begin implementation of the Climate Action Plan. These projects should be mapped against possible funding sources, starting with the Washington Clean Energy Fund (administered by the Department of Commerce) and the anticipated American Jobs Act. If passed, the American Jobs Act will most likely be administered over several federal departments, including Energy, Transportation, Commerce, Agriculture, to name a few.

This Washington State Department of Commerce: is the place to start as Washington’s Energy Strategy is implemented through information, resources and funding provided through this website. Expect these pages to update with the most recent strategy and legislative mandates soon. Covers the Clean Energy Fund; Energy Efficiency and Solar Grants; Forest Products financial Assistance Program; Home Rehabilitation Loan Program; and a map of locations for [Energy Grants and Loans Programs](#).

[The Clean Energy Fund](#) description and reports of past awards also describes the status and updates of the following Commerce grant programs:

### ***Grid Modernization Program***

<b>Commerce Grant Program</b>	<b>Description</b>
Grid Modernization Program	This program is for public and private electrical utilities serving Washington customers. Utilities can partner with other public and private sector research organizations and businesses to apply for funding.
Electrification of Transportation Systems	This program provides grants to Washington State local governments and retail electric utilities for charging infrastructure.
Research, Development and Demonstration	This program provides a match for federal and non-state funds for strategic research and development projects on new and emerging technologies.
Wood Energy for Public Facilities	This program emphasizes projects that replace fossil energy sources with wood energy products (e.g., pellets, chips, cordwood, and other forms of forestry management debris) to meet the thermal and/or electrical needs of public facilities.
Grants to Nonprofit Lenders	Revolving Loan Fund grants show that a modest public investment can promote private investment. This drives economic activity and jobs for Washingtonians and helps our state lead the nation in energy efficiency.
Solar Deployment	The Solar Deployment program supports the development of projects that deliver environmental and economic benefit to Washington communities.
Dairy Digester Enhancement	The 2019 capital budget provides grants that enhance the viability of dairy digester projects, including bioenergy, improved energy efficiency and advanced nutrient recovery systems. Grants will include one project east and one west of the Cascades.

### **Commerce Clean Technology Sector**

The Washington State clean technology sector is working with a variety of industries to provide technology and related production processes. These will improve their environmental and business performance. Our top priority is to create an economic understanding across the state, where innovation and entrepreneurship can thrive and create well-paying jobs. Website: <https://www.commerce.wa.gov/growing-the-economy/key-sectors/clean-technology/>

**American Jobs Plan** (*Federal Funding plan will be voted on sometime in the summer 2021; versions of this plan have significant funding for building climate resilience in communities*)

### **Amazon Climate Fund**

The Climate Pledge Fund <sup>308</sup>is a corporate venture capital fund that invests in companies that can accelerate Amazon’s path to meeting The Climate Pledge. The scope is global and will consider investments in companies developing products or services that reduce carbon emissions and help preserve the natural world.

Sector focus areas include:

- Transportation and Logistics
- Energy use, storage, and management
- Manufacturing and materials
- Circular economy
- Food and agriculture
- Renewable energy technology

### **Gates Related Funds**

Breakthrough Energy Ventures<sup>309</sup> – This fund basically follows the outlines of Bill Gates recent book and describes the problems and possible solutions under evaluation now.

<sup>309</sup> <https://www.breakthroughenergy.org/>

# Appendix D: Additional Information on Transportation

## **Recommended actions for Transportation Strategy 1: Create behavior change by promoting alternatives to SOV transportation**

### **Action 1.1: Implement the Regional Trails Plan as identified in the 2011 Bicycle Pedestrian Plan and 2004 Chain of Trails plan and any subsequent revisions thereto to expand the regional trail network for commuting and recreation.**

A connected network of trails creates more walking, biking, horseback riding, and other active transportation opportunities to reduce the number of trips of single occupancy vehicles and provide more recreation options. Such a network can also assist school districts in creating safe routes to schools (see Action 1.2 below), and planning should incorporate that consideration. Efforts to create a well-integrated system of trails in Whatcom County have existed since the 1970s, and while good progress has been made, there remains much work to do. The 2011 Bicycle Pedestrian Plan, created by the Bicycle Pedestrian Advisory Committee, contains planning considerations, implementation recommendations, and policy recommendations that are intended to provide guidance for expanding the active transportation trail network. The Bicycle Pedestrian Advisory Committee maintains a current list of priority projects. Expanding a trail network will require the County to acquire easements, purchase property, and work with the existing landholders and developers.

### **Action 1.2 Create safe active transportation routes to schools where they don't already exist, enhance existing active transportation routes to schools, and explore the electrification of school bus fleets.**

Work with school districts to ensure that school property renovations support walking, biking, carpooling, and bussing to schools and that all school districts in Whatcom County maintain their Walk Route Plans, to be updated every two years. The Washington State Department of Transportation maintains Walk Route Plans and other resources, such as the Safe Routes to School Grant program, which provides funding to communities for project development. Work with school districts to ensure new schools are constructed in areas already well served by the multimodal transportation network. Consider implementing school crossing guard programs. Creating safe active transportation options for youth can also promote positive behavior and health outcomes. Messaging to students and their parents about available alternatives and their benefits will also play an important role.

We recognize that rural settings create challenges to active student transportation that aren't present in urban areas, but those challenges can be lessened if student transportation is included in County trail planning efforts (see action 1.1 above). We also recognize that school transportation systems are the responsibility of school districts, not county government, and that high costs present a formidable barrier to school bus fleet electrification, but we note that new ownership models (e.g., leasing rather than purchase) are being tested to reduce those barriers.<sup>310</sup>

### **Action 1.3: Enhance bicycle and pedestrian commuting infrastructure, including storage/parking and dedicated off-road non-motorized trails.**

Improvements to active transportation infrastructure can make such transportation modes safer, faster, more reliable, and more accessible. There are many potential infrastructure upgrades that would encourage increased use of active transportation. Some potential improvements can be found in the

---

<sup>310</sup> See, for example, Mufon, S., and S. Kaplan, "A lesson in electric school buses," Washington Post, Feb. 24, 2021. <https://www.washingtonpost.com/climate-solutions/2021/02/24/climate-solutions-electric-schoolbuses/>

2011 Bicycle Pedestrian Plan, including increasing safe and secure bicycle parking infrastructure at transportation nodes and residential, commercial, and public facilities; creating protective physical barriers for active mobility infrastructure; and installing adequate lighting, on-road paint, signage, and rain protection.

It is important to note that there is a distinction between Actions 1.1 and 1.3. Specifically, on-road active mobility infrastructure improvements, such as bicycle lanes, are less accessible and safe than trails and paths that are segregated from roads. Past efforts to grow the County trail system referred to in item 1.1 above included both off-road and on-road components, which should also account for a significant part of all relevant County transportation and parkland planning.

**Action 1.4: Work with WTA to improve transit service through network expansion, changes in transit schedules, and improved connections between transit routes and with other transport modes.**

Important factors that affect the willingness to use public transit are convenience and efficiency, its proximity to riders and any additional time required to use public transit as compared to SOV travel. WTA's goal is to increase public transit's share of work commuting from 5% to 9%<sup>311</sup>. The County should work with WTA to support and expedite these efforts, including the construction of park and ride lots and the extension of trails to public transit access points. Employers would also have an interest in such improvements, as many businesses and their employees are not located conveniently near current WTA routes.

**Action 1.5: Adopt any available state programs and fund local efforts to provide means-tested transit subsidies, such as low or no cost passes, to increase accessibility to transit.**

Reducing or eliminating the financial costs of riding transit can increase ridership. The outcomes can be improved when targeting specific communities, such as low-income, disabled, youth, seniors, or underserved communities. Cost reduction programs, such as Regional Reduced Fare Permits for seniors and riders with disabilities, exist and could be expanded to include more people. State assistance in this area is recommended in the State Energy Strategy<sup>312</sup>.

Action 1.6: Support existing and develop new education and outreach programs to promote alternative transportation options.

Support and expand existing education and outreach programs that promote community mobility or active transportation. Work with other community partners who have shared interests like Whatcom County Public Health to promote active transportation and improve community health outcomes through transportation choices. Use targeting marketing in concurrence with new projects to increase community awareness of new projects and routes. The County could also partner with ridesharing apps as pandemic concerns about social distancing subside; this would be useful for not only trips to school and work, but also for shopping and leisure.

---

<sup>311</sup> WTA 2040 Long-Range Transit Plan, <https://www.wta2040.org/>

<sup>312</sup> Washington State Department of Commerce, 2021, 2021 State Energy Strategy, p. 58.  
<https://www.commerce.wa.gov/growing-the-economy/energy/2021-state-energy-strategy/>

**Action 1.7: Work with employers to find programs and incentives to support multimodal commuting.**

Continue to offer transportation advising to employers, with an emphasis on large employers. Large employers in particular can change employee commute behavior by offering rebates for transit expenses, bike or walk to work incentives, secure bike parking, e-bike charging, flexible daily charging for parking, or employee showers within each building. For example, The Community Food Co-op currently offers employees a rebate on transit and bicycle costs.

**Action 1.8: Expand telecommuting and flextime scheduling for county employees and encourage other employers to do the same.**

Whenever possible, employers should develop telecommuting and flextime abilities for their employees. Telecommuting refers to the ability of employees to perform regular job duties remotely, or away from their primary business location. Flextime refers to a work schedule that permits employees to work hours that are alternative to the 8am to 5pm standard work schedule. In addition to reducing transportation demand, allowing employees the flexibility to choose their schedule and work remotely can assist individual needs, such as family needs, and increase employee morale and productivity while reducing tardiness and absence. County adoption of these approaches can serve as an example for other employers in the county and can inform them of the possible benefits. The community has gained very helpful insights into opportunities for and the workability of telecommuting during the COVID-19 pandemic. The County Human Resources Department would have the primary responsibility for leading this effort for County employees and the proposed Office of Climate Action recommended in Section 4 of this report would carry out communications with other employers.

**Action 1.9: Expand broadband internet countywide.**

Expanding broadband internet countywide should be done prior to or in conjunction with action 1.7. In addition to reducing commuting needs, providing broadband internet countywide can also increase quality of life to underserved or more distant, rural areas by allowing access to online services. There is an existing community interest in expanding broadband internet countywide, and the pandemic has strengthened that interest.

Private internet service companies typically provide adequate service in denser urban settings but find less dense rural areas less lucrative, resulting in unserved or underserved areas where publicly owned providers should step in. Funding such public efforts is an important barrier to rural broadband extension. While state funding is available for counties classified as rural, Whatcom County is not in that category. Some federal infrastructure money that could be used for broadband projects has been made available to states through the recently enacted American Rescue Plan, and there is also some pending federal legislation to help fund the expansion of broadband access.

In its latest strategic plan<sup>313</sup> Whatcom PUD No. 1 identifies, as one of its 2019 New Initiatives, “Working with the Port of Bellingham to advance analysis of need for development of broadband services in the county to determine future role of the PUD in infrastructure (fiber) development.” The County should support any such community efforts to provide publicly owned broadband access, both financially and

---

<sup>313</sup> Public Utility District No. 1 of Whatcom County, “Strategic Plan 2025,” p. 8 [https://www.pudwhatcom.org/wp-content/uploads/2019/04/Whatcom-County-PUD-No.-1-Strategic-Plan\\_2025.pdf](https://www.pudwhatcom.org/wp-content/uploads/2019/04/Whatcom-County-PUD-No.-1-Strategic-Plan_2025.pdf)

by taking any regulatory actions necessary to assist broadband expansion. It should also seek any available federal or state funding available to counties.

**Action 1.10: Explore with the Port of Bellingham the feasibility of building multi-modal transfer stations to move freight from trucks to rail.**

The County currently relies on medium- and heavy-duty freight trucks for transporting goods. Because the technology for zero and low emission freight trucks is undeveloped or still being developed, the County should consider a shift to rail to offset freight emissions. Increasing the use of rail for transportations of goods will require a broader, more regional effort that includes potential coordination with the State, British Columbia, or the entire West Coast, in addition to the private freight rail carriers. Because of the regional nature of this option, it is likely that the most likely role for the County (through the proposed Office of Climate Action)

**Action 1.11: Foster increased rail transportation for the public and industries.**

Increasing the use of rail for transportations of goods or people will require a regional effort. The County should work with community partners and stakeholders to explore the benefits and opportunities of increased rail transportation in Whatcom County and explore/consider opportunities to develop passenger rail service transportation within Whatcom County. For example, efforts are underway to add an Amtrak station in Blaine, thus improving rail connectivity along the I-5 corridor.

**Action 1.12: Conduct brief biannual surveys of County employee commuting behavior to inform programs to encourage alternatives to SOV commuting**

An understanding of the commuting behavior of County employees will help in the creation of programs (e.g, reduced price transit passes, carpooling arrangements) designed to reduce employee commuting VMT.

**Recommended actions for Transportation Strategy 2: Promote increased utilization of electric, hybrid, and alternative fuel vehicles.**

**Action 2.1: Implement a countywide EV promotions program through education and outreach.**

One important barrier to more rapid adoption of EVs, which can be minimized through education and outreach efforts, is a basic lack of understanding on the part of consumers. These efforts should be overseen in Whatcom County by the Office of Climate Action recommended in Section 4 of this report. For example, Puget Sound Energy (PSE) has shown a willingness (in official filings with the Washington Utilities and Transportation Commission in 2018) to assist in those efforts, and County EV education and outreach should take advantage of that. In addition, the recently issued State Energy Strategy recommends that the Legislature provide resources for these efforts. Whatcom County Code Chapter 2.126, which established the Climate Impact Action Committee, states (2.126.030H) that one of CIAC's functions is to "Serve as a conduit for public education, information exchange, and engagement in support of Whatcom County's climate change mitigation and impact prevention, adaptation, and preparation goals. This action recommendation would therefore be carried out by CIAC in conjunction with the proposed Office for Climate Action and any other relevant county departments.

**Action 2.2: Offer pooled purchasing of EVs to reduce the upfront cost of such vehicles for Whatcom County residents.**

Pooled purchases reduce the upfront cost of EVs to consumers. While there is already a federal tax credit of up to \$7,500 for EV purchases, pooled purchasing can provide an additional incentive. This would be even more important for buyers in lower income brackets whose income tax liability would not be high enough to allow for the full \$7,500 credit. Whatcom County government may be able to use its buying power to initiate and maintain such a program, which would be established and coordinated through the Office of Climate Action recommended in Section 4 of this report.

**Action 2.3: Work with local trade and technical schools, unions, and businesses to create an EV workforce pipeline.**

More widespread adoption of EVs will require a larger skilled workforce to sell and service EVs as well as maintaining the publicly or privately owned charging infrastructure. For example, the Whatcom Transportation Authority's 2017 Six-year Strategic Plan identifies the need for a maintenance personnel training program as WTA adds electric buses to its fleet. In Skagit County the Northwest Washington Electrical Industry Joint Apprenticeship training center in Mount Vernon has a program for installing EV charging stations. Bellingham Technical College or Whatcom Community College could develop a similar training program. The proposed Office of Climate Action can help coordinate these efforts.

**Action 2.4: Install electric charging stations in strategic locations, prioritizing underserved locations.**

What has been termed “range anxiety” is the concern of existing and potential EV owners regarding when and where to charge their vehicles. Initial adopters typically are single-family homeowners who for the most part charge their vehicles at home, but there will be an increased need for public charging stations, especially in underserved areas. The 2020 State Energy Strategy recommends state funding of a charging infrastructure needs assessment.

PSE has four pilot programs in place to help increase charging capabilities: single family, multi-family, public charging, and for employers. There are also privately owned public stations in Whatcom County. See [PlugIn America](#) for a locator map of these stations.

Level 1 charging is the simplest, but also the slowest (2-5 miles of range per hour of charge time), requiring only a standard 120V grounded outlet at 8 or 12 amps, and is the most commonly used in single family homes. Level 2 charging requires 240V service but is at least twice as fast as Level 1 (10-25 miles of range per hour of charge time); these can be installed in single family homes but are more common at workplaces, apartment buildings, and public areas. Finally, Level 3 or DC fast charging will provide a full charge in approximately one hour. This requires more specialized equipment and is commonly found in public areas and along heavy traffic corridors such as interstate highways. Note that “public” does not necessarily mean “free”; various pricing structures are used, including subscription and pay-by-the-hour.

Although private charging companies are becoming more common, they typically do not place chargers in low use areas, sometimes called “nonattainment” areas. Such areas will have to be served in other ways, such as through publicly funded chargers. Recently enacted Washington State legislation (HB 1091) regarding a Low Carbon Fuel Standard provides for funding by electric utilities of chargers in these

underserved areas. In addition, PSE is running a “Multifamily Charging” pilot at four multifamily housing sites in Whatcom County.

Coordinated efforts to provide charging capabilities could be overseen by the proposed Office of Climate Action, which could also assess the extent to which the County should be involved in the provision of charging facilities. One concrete action that county government could take is an adjustment of building codes to require new (and perhaps older) buildings to have electrical systems capable of handling the increased electrical demands resulting from EV charging activities. If necessary, zoning regulations should be changed to allow easier placement of charging stations. Building codes should be revised to require or strongly encourage the inclusion of or, at the very least, the electrical system capability for charging stations in multifamily residential buildings

**Action 2.5: Require or provide financial incentives for major employers to provide onsite charging stations for employee EVs.**

While some employers are already doing this, possible county government actions in this area include requiring by law employers of a certain size to provide charging facilities or offering tax advantages to employers who do so. PSE has a Workplace Charging pilot underway with Western Washington University and the Whatcom County Civic Center.

**Action 2.6: Work with WTA and municipalities in the county to create infrastructure for electric buses.**

Whatcom Transportation Authority's 2017 Six-year Strategic Plan, Appendix C, presents an analysis of the possibilities and challenges associated with public transit electrification, including the need for charging stations in appropriate locations. WTA expects delivery of its first two electric buses in early 2021. A major impediment to rapid electrification is the high initial cost of the buses (\$400,000 higher than conventional diesel), but new ownership models being used for school bus fleets might also be applied to public transit fleets (see the discussion of Action 1.2 above). Whatcom County's role could include assistance in finding such locations and in helping WTA fund the installation of the chargers, which could be done through the proposed Office of Climate Action.

**Action 2.7: Develop, in coordination with state efforts, an infrastructure plan for H2 fuel distribution and other fuel mix options.**

While EVs are clearly the immediate future of non-fossil fueled vehicles, technologies for fuel cell vehicles (FCVs) that use hydrogen as a fuel are showing considerable promise. An important issue confronting this technology (similar to charging stations for EVs) is providing an adequate fueling station network. This would eventually require a new hydrogen pipe system connecting fueling stations. Whatcom County's immediate role in this process would be to cooperate with state efforts outlined in the 2020 State Energy Strategy to undertake a comprehensive FCV fueling infrastructure needs assessment, and such County efforts would be overseen by the proposed Office of Climate Action.

**Action 2.8: Exempt e-bikes and other e-ride devices from local sales taxes.**

While the portion of an e-bike's final sales price accounted for by local sales taxes is small, so is the proportion of county tax revenues. Exempting such sales from these taxes would be a low-cost way to signal the County's support for these vehicles and accommodates a proposed action in the State Energy

Strategy (p. 58) for local governments to “explore options for providing incentives for e-bikes and other electric transportation devices.” This exemption could be modelled after [HB 1330](#).

**Recommended actions for Transportation Strategy 3: Improve county vehicle fleet utilization while transitioning to non-fossil fueled alternatives and reducing GHG emissions associated with county projects.**

**Action 3.1: The County should undertake an evaluation of its on-road vehicle fleet to achieve maximum GHG reductions. Considerations should include moving away from fossil fuels to electricity (EVs) and other clean fuels, the matching of vehicle numbers and types to their uses, and the potential for vehicle sharing among county departments. This would be best accomplished by funding a study by an outside expert consultant.**

Although total emissions from all County government operations amount to just over 0.001% of the overall total for Whatcom County, it is important for county government to demonstrate its commitment to GHG emission reductions and model ways in which other organizations and the general public can achieve such reductions. While the County vehicle fleet accounts for only a third or so of county government operations emissions, and those fleet emissions fell by roughly 20% between 2000 and 2017, the county fleet can serve as a very visible example of ways in which emissions can be reduced by the broader Whatcom community. (Emissions data are taken from the recently completed Whatcom County Greenhouse Gas Inventory Report.)

The most obvious way to reduce fleet emissions is to convert the fleet to EVs and other clean vehicles. The optimal approach to doing so involves first understanding how the fleet is used, and then determining and following the best path to conversion without reducing the benefits of the vehicle fleet. It is likely that the County will have to engage an outside consulting firm with experience in performing such analyses. That analysis would also help to ensure that the fleet composition is optimal. While vehicle sharing may not result in significant emissions reductions, it would reduce the required size of the fleet, thereby decreasing required expenditures.

**Action 3.2: Invest in a hybrid or electric technology to replace the Whatcom Chief ferry to Lummi Island.**

While the ferry only accounts for 0.05% of Whatcom County transportation GHG emissions, it nevertheless represents 5% of total County operations emissions and over 15% of County vehicular fleet emissions, making it the largest single vehicular emitter in the fleet and the second largest emitting County facility of any kind. Although the Washington State Energy Strategy 314(p. 61) discusses efforts of Washington State Ferries to decarbonize its fleet using hybrid and electric technologies, it makes no specific recommendation regarding funding those activities, nor does it address ferries operated by other units of government. It is especially important to consider a cleaner technology now because the ferry will likely have a long life—the Whatcom Chief is 60 years old—and locking in an old GHG emitting technology for such a long time should be avoided. Adopting a carbon neutral ferry would not only result in lower GHG emissions, but it would also have the additional significant benefit of reducing the local air and water pollution impacts from burning and handling diesel fuel.

---

<sup>314</sup> <https://www.commerce.wa.gov/growing-the-economy/energy/2021-state-energy-strategy/>

Fortunately, the County is already taking steps in this direction. The Whatcom County 2019-2032 Fourteen Year Ferry Capital Program<sup>315</sup> quotes from Whatcom County Resolution 2018-026, stating “To approach the goal of a carbon neutral vessel and provide flexibility for future electric conversion and reliability, the design of the vessel shall be a hybrid diesel-electric.” The capital budget shown in the Ferry Capital Program indicates an anticipated \$14.35 million for boat construction; part of this cost would be covered by the recently approved increase in Lummi Island Ferry fares. The Lummi Island Ferry Advisory Committee has stated in a February 2020 resolution that “once funding is in hand and the project can begin, LIFAC recommends that PWD allocate planning resources and create a timeline with milestones for upgrading the vessel to a carbon neutral propulsion system.” This Committee strongly urges the County to follow the LIFAC recommendation.

One challenge to the full electrification of the ferry is increasing electricity transmission and distribution capacity on the Lummi Peninsula or Lummi Island to accommodate higher loads caused by charging the ferry, and, since these technologies are relatively new and still evolving, there is also a potential of reduced reliability and increased maintenance costs. In addressing these issues the County can learn from other nearby ferry systems, such as BC Ferries, Washington State Ferries, and the Guemes Island ferry, which are also in the process of electrification.

**Action 3.3: Require end-of-life replacement of County-owned construction equipment using fossil fuels with alternative-fuel or electric equipment and encourage such replacements by private operators.**

Most construction equipment currently utilizes diesel fuel. First, the County should explore such replacements for its own equipment inventory and make those replacements when equipment reaches the end of its useful life. Second, the County should engage in outreach to construction companies or other businesses that use fossil-fuel burning equipment to ensure awareness of the options and benefits of alternatives and encourage their adoption. Encouragement could take the form of requiring that all equipment used on work under contract with the County be fueled by electricity or other clean alternative fuels by some future date certain (e.g., 2030).

**Action 3.4: Incorporate contractor fuel emission reduction standards into bids and contracts and require reporting of fuel types and quantities used on specific contracted jobs.**

Work with the Planning and Development Services Department to modify existing contracts and other documents and implement data collection programs. County Requests for Proposals should require estimates of the amount of fossil fuels that will be used on a project as well as maintaining an actual record of the amount of these fuels used after the project has concluded; such information will improve the accuracy of future GHG inventories. This action will have no direct impact on current emissions, but it has nevertheless been designated a high priority item because it has a relatively low cost, and it sends a signal about potential future requirements.

**Action 3.5: Perform diesel exhaust retrofits for county-owned equipment, including filter technology with passive or active cleaning systems.**

---

<sup>315</sup> Available at <https://www.whatcomcounty.us/DocumentCenter/View/40743/Exhibit-B-2019-2032-Ferry-Capital-Plan-v21-RR-Final>

Cleaning up the exhaust from off-road mechanical equipment would not appreciably reduce CO2 emissions, but it can reduce other GHG emissions (e.g., NOX) as well as other types of pollution that cause negative health impacts (e.g., particulates).

**Recommended actions for transportation strategy 4: Use County resources to participate in and advocate for inter-governmental efforts to reduce GHG emissions associated with transportation.**

**Action 4.1: Prioritize recommended actions within this Plan for funding and implementation within the County’s 6-year Transportation Improvement Program.**

Whatcom County’s Transportation Improvement Program (TIP) is a federally mandated plan that lists upcoming transportation and associated funding sources and informs regional long-range transportation planning efforts. The plan reflects the transportation priorities of the County as identified in the Comprehensive Plan. In coordination with an update to the Comprehensive Plan, as recommended in Action 4.3, the Capital Construction projects identified in the TIP should align with the County’s climate goals. The next update for the plan is scheduled for 2025.

**Action 4.2: Continue to advocate for the advancement of transportation climate goals in the Whatcom Council of Governments Transportation Improvement Programs.**

WCOG currently considers climate impacts and prioritizes emissions reductions in its decision-making process. See, for example, the 2016 Comprehensive Plan and Whatcom Mobility 2040. The County should continue to use its position in WCOG to advocate for the prioritization of emissions reductions and climate resilient transportation infrastructure in WCOG’s TIP projects. While there are several items in the current TIP that align with other recommended actions in this report, climate change issues (both emission reductions and improved climate resilience) should be emphasized equally with safety issues in formulating future plans.

**Action 4.3: Prioritize transportation climate goals when updating the Whatcom County Comprehensive Plan.**

Whatcom County’s Comprehensive Plan is a guiding document for growth in unincorporated areas in coordination with the new plans of its cities that establishes a framework of goals, policies, and action items for growth planning. The Comprehensive Plan is a tool to be used in decision-making and can also be used to apply for grant funding. In the County’s 2016 Comprehensive Plan, Goal 10-D calls for the “Strengthen[ing of] the sustainability of Whatcom County’s economy, natural environment, and built communities by responding and adapting to the impacts of climate change.” At the same time, the Plan’s Goal 6B in [Transportation](#) does not include climate or other environmental goals as clear priorities, while other goals (e.g., 6D, 6E, and 6K) clearly support other recommendations in this report. The 2025 Comprehensive Plan should include an emphasis on the most current emissions reduction goals.

**Action 4.4: To the greatest extent possible adopt state Vehicle Miles Traveled (VMT) reduction targets and land use planning approaches designed to reduce VMT and SOV use.**

The recently released Washington 2021 State Energy Strategy 316(pp. 53-54 and Appendix C) recommends the establishment of clear VMT reduction targets that can be used to gauge the joint

---

<sup>316</sup> <https://www.commerce.wa.gov/growing-the-economy/energy/2021-state-energy-strategy/>

progress of multiple activities targeted at reductions in transportation activities. That document states (Appendix C, p. 1): “VMT is a function of the distances between destinations, the availability of transportation options and the availability of technologies and services that could replace travel. Land use patterns are a key factor in demand for transportation. Reducing VMT requires transportation planning and land use planning to be coordinated.” Targets are to be achieved through direct means such as increased use of alternatives to SOV travel as well as through land use decisions such as the adoption of transportation-oriented development (TOD) principles; see Action 4.5 also. One simple example of the intersection of transportation and land use policy is the difficulty of using public transit in rural areas because buses lack safe “turn-around” options and passengers lack safe pedestrian access to the network. The Strategy recognizes that transportation needs are different in urban, suburban, small city, and rural environments and recommends that the state adopt regional VMT targets, perhaps linking state transportation funding to achieving targets for VMT along with other efficiency and equity metrics. Whatcom County should monitor and, if possible, participate in the development of these targets, and once the targets are established, they should be incorporated into all relevant County planning processes.

**Action 4.5: Participate in State-led efforts to provide resources and promote interjurisdictional coordination for VMT reduction programs, including Transportation Oriented Development (TOD) and Transportation Demand Management (TDM).**

This recommendation is related to Action 4.4 in that it also flows from the Washington 2021 State Energy Strategy (see pp. 54-55). Whatcom County should monitor and participate in these coordination efforts through the Office of Climate Action recommended in Section 4 of this report.

**Action 4.6: Obtain available state funding to improve connections between transportation system elements.**

Regularly explore and seek funding options for local jurisdictions to improve connections between transportation system elements. The Washington 2021 State Energy Strategy recommends (p. 57) the establishment of a state-level fund to support these efforts. Whatcom County would carry out this recommendation through the Office of Climate Action recommended in Section 4 of this report.

**Action 4.7: Participate in any available state programs that would facilitate the transition to hybrid or electric vehicles by ride-share programs like Uber and Lyft.**

Regularly explore and participate in any available state programs that would facilitate the transition to hybrid or electric vehicles by ride-share programs like Uber and Lyft. The City of Seattle’s “Clean Transportation Electrification Blueprint” calls for the electrification of ride-sharing vehicles by 2030. Such services are less prominent in Whatcom County than in Seattle, so that electrifying them would not yield significant emissions reductions, but doing so would nevertheless serve as a reinforcement of the push for electric vehicles in the county. Whatcom County would carry out this recommendation through the Office of Climate Action recommended in Section 4 of this report.

**Action 4.8: Obtain available state-level funding for local jurisdictions to study freight travel reduction opportunities and plan for infrastructure improvements.**

Heavy duty trucks account for only 5% of the vehicles on the road nationally but are responsible for 25% of US transportation emissions<sup>317</sup>. Such vehicles therefore represent important emissions reductions opportunities. The County should explore and seek funding options for local jurisdictions to study freight travel reduction opportunities and plan for infrastructure improvements. The Washington 2021 State Energy Strategy states (p. 60): “State and local governments should have access to sufficient resources, including data, to conduct planning and implement strategies for reducing VMT and greenhouse gas emissions in freight operations.” The Office of Climate Action recommended in Section 4 of this report would be tasked with monitoring and participating in freight VMT and emissions reductions programs established at the state level.

**Action 4.9: Evaluate and adopt methods for data collection to understand the impacts of commuting behavior.**

Explore data collection tools and methods best practices and regularly collect transportation data that can help inform continued transportation-related decisions. Consider expanding on existing data collection efforts, such as the City of Bellingham’s Bicycle/Pedestrian Survey. Involve other local public/private jurisdictions in data-collection efforts. After establishing a preferred method of data collection, regularly measure and publish relevant data. This recommendation parallels one made in the 2019 Community Research Report produced by the Climate Action Advisory Committee (see Table 2.1, p. 54). This task could be performed by the proposed Climate Action Office or by a contracted outside organization.

**Recommended actions for transportation strategy 5: Incorporate climate adaptation considerations into all County transportation planning processes.**

**Action 5.1: Design new transportation infrastructure to withstand projected future climate impacts based on the intended lifespan of the infrastructure.**

Many of the studies discussed in [Water Resources and Fisheries](#) have modeled the impact of climate change on streamflow levels and should be taken into account when designing new infrastructure, such as bridges, that are expected to last for 40-50 years. In addition, the County has supported the development of a detailed map on the projected sea-level rise for Whatcom’s coastal areas. This information needs to be used when designing expensive new infrastructure.

---

PROPOSED BY: Executive

INTRODUCTION DATE: \_\_\_\_\_

**RESOLUTION NO. \_\_\_\_\_**

**APPROVING THE NAMING OF THE CRISIS STABILIZATION FACILITY AS “THE ANNE DEACON CENTER FOR HOPE”**

**WHEREAS**, Anne Deacon, in her role as Human Services Manager, within the Whatcom County Health Department, played a significant role in the conception, building and operation of the Whatcom County Crisis Stabilization Center that is operated at 2026 Division Street, Bellingham, and

**WHEREAS**, Ms. Deacon also worked with the legislature to obtain dedicated funding; designed the model and service delivery systems, led the grant-writing process, consulted with the architect and construction companies on everything from the layout to the furniture, and,

**WHEREAS**, Ms. Deacon also was instrumental in contracting with the providers for services and organizing a multi-disciplinary group including Emergency Medical Services and police agencies to address issues on operationalizing referrals and intakes, and

**WHEREAS**, Directors of Health and Human Services Departments in our region have agreed and supported naming the facility as a fitting tribute to Ms. Deacon, and

**WHEREAS**, in the words of poet, Robert Frost, “hope is not finding a way out, but a way through” and the goal of the Crisis Stabilization Center is to help people in crisis find hope by assisting and giving them tools to move through the challenges they experience, and

**WHEREAS**, the Whatcom County Council concurs and supports this proposal,

**NOW THEREFORE BE IT RESOLVED**, that the Whatcom County Crisis and Stabilization Center will be named THE ANNE DEACON CENTER FOR HOPE from this day forward and the Council authorizes the placement of signage on the facility and use of this name wherever the Crisis Stabilization Center is mentioned.

## Application for Appointment to Whatcom County Boards and Commissions

### Public Statement

*THIS IS A PUBLIC DOCUMENT: As a candidate for a public board or commission, the information provided will be available to the County Council, County Executive, and the public. All board and commission members are expected to be fair, impartial, and respectful of the public, County staff, and each other. Failure to abide by these expectations may result in revocation of appointment and removal from the appointive position.*

Title	<i>Field not completed.</i>
First Name	Brian
Last Name	Hunter
Today's Date	6/26/2021
Street Address	134 Monte Drive
City	Point Roberts
Zip	98281
Do you live in & are you registered to vote in Whatcom County?	Yes
Do you have a different mailing address?	<i>Field not completed.</i>
Primary Telephone	(360)945-1196
Secondary Telephone	<i>Field not completed.</i>
Email Address	<u><a href="mailto:Zygopteraehukai@gmail.com">Zygopteraehukai@gmail.com</a></u>
1. Name of Board or Committee	Point Roberts Community Advisory Committee
2. Do you meet the residency, employment, and/or affiliation requirements of the position for which you're applying?	Yes
3. Which Council district do you live in?	District 5
4. Are you a US citizen?	Yes
5. Are you registered to vote in Whatcom County?	Yes

6. Have you declared candidacy (as defined by RCW 42.17A.055) for a paid elected office in any jurisdiction within the county?

No

7. Have you ever been a member of this Board/Commission?

No

8. Do you or your spouse have a financial interest in or are you an employee or officer of any business or agency that does business with Whatcom County?

No

You may attach a resume or detailed summary of experience, qualifications, & interest in response to the following questions

*Field not completed.*

9. Please describe your occupation (or former occupation if retired), qualifications, professional and/or community activities, and education

Please see previous e mail to County Executive

10. Please describe why you're interested in serving on this board or commission

Having been elected charter review commissioner, and couple planning commission appointments in State understand necessity of general experience over special interests.

References (please include daytime telephone number):

**Subject:** Vacant at large positions Point Roberts CAC

Dear Mr. Satpal;

Please consider me for appointment to the PRCAC:

Brian Hunter  
134 Monte Drive  
Point Roberts, WA 98281  
(360)945-1196

Elected Experience:  
Charter Review Commissioner, Clallam County, WA  
2019-2020

Professional Experience:

Senior Planner, City of Carlsbad, CA 1985-1999

Planning and Environmental Services Manager, Community Development Department, City of Chula Vista, CA 1999-2002

Stormwater Runoff Planner, Clean Water Branch, Department of Health, State of Hawaii 2003-2013

Development Services Tech, Permitting Services, City of Portland, Oregon 2013-2014

Community Service:  
Planning Commissioner, City of Port Angeles, WA 2015-2017

Planning Commissioner, County of Clallam, WA 2018-2020

Thank you for your consideration

See attached resume.

10. Please describe why you're interested in serving on this board or commission

The Covid crisis has been especially hard for Point Roberts (PR) due to the extended border closure and its impact on both the residents and businesses of PR. While we can hope that the border will eventually re-open, it is not a given that everything will go back to the old normal. What we need is a fundamental re-imagining of what PR is and can be, leveraging it's unique geographical, historical, natural, and human assets while maintaining the essential character that make PR what it is. As a relative new-comer (I have been a member of the PR community since Oct 2019) but with skills and experiences that might be increasingly relevant to the future of PR, I would be happy to volunteer my services to help PR emerge from this crisis stronger, more resilient, and with a clear plan for the future.

Point Roberts, WA

Experienced corporate leader and software entrepreneur with over 20 years of experience building high performance teams that build, deploy, and support innovative mission-critical products and services for customers world-wide. Repeatedly demonstrated the ability to identify challenging problems, win approval / funding for a plan to address the challenge, and build a team to go execute successfully against the mission.

#### Track Record

##### VP of Engineering, Amazon Web Services (AWS)

2020 – 2021

At AWS, I was the single-threaded leader responsible for a portfolio of analytics services ([Amazon EMR](#) and [Amazon Athena](#)) with over \$1 Billion in annual revenue and a team of 300+ employees. My responsibilities included strategy formulation, hiring, engineering execution, pricing, go-to-market and supporting production customers around the world. During my time, we led a strategic re-positioning of the Athena service (including growing the investment in that service by 2x) as well as a comprehensive quality and security overhaul of the EMR service. Both services accelerated growth during my tenure while increasing quality and optimizing operational expenses.

##### VP of Engineering, Workday

2019 – 2020

After Workday's acquisition of Trusted Key in 2019, I joined the senior leadership team for [Workday Credentials](#), "*the world's most advanced network for verified and trusted credentials, powered by blockchain technology.*" In this role, I lead the team of 50+ engineers building all aspects of this product, including the blockchain trust layer, the credentials runtime platform, the credentials administrator portal, integrations with Workday's HCM and other applications, APIs for issuers and verifiers, as well as the end-user facing WayTo credentials management application for iOS and Android. The product hit Limited Availability in March of 2020 and is now in the process of onboarding production customers.

##### Co-founder, founding CEO, and CTO of Trusted Key

2016 – 2019

I was the primary founder of Trusted Key, a startup aimed at reshaping digital identity as we know it. It is generally agreed-upon that a personal digital identity (one that is owned and controlled by the individual) is one of the key missing foundational concepts in today's Internet. In early 2016, it occurred to me that there finally was a way to solve this problem, securely and at scale, using increasingly ubiquitous and mature technologies such as smartphones with trusted execution environments, public-private-key cryptography, and a programmable blockchain platform such as Ethereum.

As founding CEO, I took the startup from idea to incorporation and fund-raising, hired a top-tier team of full-stack developers, and built an industry-leading product (including an enterprise-facing digital identity platform and an end-user facing mobile app for iOS and Android). Along the way, Trusted Key applied for over a dozen patents in this space, the first and most significant of which was successfully awarded in March 2020.

In Jan 2018, I made the decision to bring on a more business-focused CEO and move to the CTO role. Over the next 18 months, Trusted Key completed successful PoC and pilot implementations with 2 of the top 5 commercial banks in the US as well as with the leading consortium of over 200 healthcare companies, and established go-to-market partnerships with 2 of the top 4 technology consulting companies world-wide. On the back of this growing momentum, Trusted Key landed the first public investment from Okta Ventures in early 2019 and was acquired soon after by Workday.

Trusted Key's approach to digital identity is now becoming industry norm, with efforts from leading companies such as [Workday](#), [Microsoft](#), [SAP + Oracle](#), [MasterCard](#), and others adopting the same fundamental approach.

##### CTO, Microsoft Asia-Pacific R&D (ARD) Group (based in Shanghai, China)

2012 – 2014

As CTO, I help set the strategic direction and innovation agenda for ARD, Microsoft's largest R&D group outside of the Redmond headquarters. ARD consists of over 2000 full-time engineers and researchers working on a variety of products in areas such as cloud computing, e-commerce, big data, search, hardware devices and more.

#### Key Achievements

- Partnered with global R&D and local Sales & Marketing to successfully land [Microsoft Azure in China](#). Microsoft was the first non-Chinese provider to receive government approval and start offering commercial cloud services in China.

- Championed and led the establishment of Microsoft Startup Accelerator in Beijing that helped startups be successful on Azure. The Accelerator graduated 100 companies in its first 3 years, for a combined market value of over \$5B.
- Led strategy and technology development to address the key Smart Cities opportunity targeting the over 100 cities in China with a population over 1M. This project grew into Microsoft's CityNext offering for partners that provides a customizable analytics platform for cities world-wide.

**General Manager, Microsoft Server & Tools Business (STB) China R&D** 2009 – 2012

I had overall responsibility for the strategy and operations of STB's R&D organization in China, consisting of over 400 full-time employees and an annual operating budget of over US\$ 100M. This role combined strategy development, large team management, coordination between HQ and China, as well as working with customers, partners, and stakeholders in China.

Key Achievements

- Planned and executed a broad organizational transformation, that, over a 3-yr period, transitioned the organization from over 20+ fragmented efforts to 6 Focus Areas. Along the way, the team was also up-leveled from one consisting primarily of junior engineers to one comparable with other global R&D centers in seniority & experience.
- Oversaw completion, inauguration and move-in into Microsoft's first fully owned campus in China (in Shanghai), with a capacity of over 2,500 seats, along with an executive briefing center, partner training center and other facilities.
- Built deep connections with the local ecosystem of Microsoft customers and partners, including the establishment of the China Cloud Innovation Center (CCIC), with a mission to help China customers and partners move to the cloud.

**Product Unit Manager, Microsoft SQL Server China R&D** 2007 – 2009

I volunteered to move to China to build SQL Server's R&D team in China. Over 2.5 years, I built a highly talented team of 100+ engineering across Beijing and Shanghai that successfully delivered into multiple releases of SQL Server. Three of the top five leaders on the team were female, and team had the best gender diversity ratio of any 100+ R&D team WW.

**Director of Strategy at SQL Server, Microsoft** 2005 – 2007

I was co-responsible for developing the long-term product and business strategy for the SQL Server. I was the primary creator of the Data Platform strategy to expand the reach of SQL Server from devices all the way to the cloud, supporting all types of data, and providing a rich set of services. This strategy was approved in a Bill Gates review and served as the north star for the SQL Server team for many years thereafter.

**Principal Program Manager, SQL Server Customer Advisory Team,** 2004 – 2005

I was part of a group of elite architects who worked with large enterprise customers to help implement the most complex, large-scale, mission-critical projects on the Microsoft platform. I supervised customer projects that deployed a core-banking system in Japan and a telco OSS system in Korea, both firsts for Windows and SQL Server worldwide.

**Development Manager at Microsoft SQL Server** 1998 – 2003

Led development of the Query Execution Engine for the SQL Server 2000 & SQL Server 2005 database product releases. Also led development of features in the core SQL Server product for the WinFS integrated storage initiative.

**Development Lead at Informix Software (later acquired by IBM)** 1994 – 1998

Led development of the Query Execution Engine for the massively parallel Informix XPS database product.

**Research Intern at Digital Equipment Corp (DEC)** 1993 – 1994

Pioneered massively parallel technologies in lab headed by Turing Award winner, the late Dr. Jim Gray.

## Application for Appointment to Whatcom County Boards and Commissions

### Public Statement

*THIS IS A PUBLIC DOCUMENT: As a candidate for a public board or commission, the information provided will be available to the County Council, County Executive, and the public. All board and commission members are expected to be fair, impartial, and respectful of the public, County staff, and each other. Failure to abide by these expectations may result in revocation of appointment and removal from the appointive position.*

Title	<i>Field not completed.</i>
First Name	Roger
Last Name	Kubalek
Today's Date	10/29/2021
Street Address	2332 Tuttle Lane
City	Lummi Island
Zip	98262
Do you live in & are you registered to vote in Whatcom County?	Yes
Do you have a different mailing address?	<i>Field not completed.</i>
Primary Telephone	7074957548
Secondary Telephone	<i>Field not completed.</i>
Email Address	<a href="mailto:Roger.Kubalek@gmail.com">Roger.Kubalek@gmail.com</a>
1. Name of Board or Committee	<b>Agricultural Advisory Committee</b>
Agricultural Advisory Committee Position:	Agricultural Producer
2. Do you meet the residency, employment, and/or affiliation requirements of the position for which you're applying?	Yes
3. Which Council district do you live in?	District 3
4. Are you a US citizen?	Yes

5. Are you registered to vote in Whatcom County?	Yes
6. Have you declared candidacy (as defined by RCW 42.17A.055) for a paid elected office in any jurisdiction within the county?	No
7. Have you ever been a member of this Board/Commission?	No
8. Do you or your spouse have a financial interest in or are you an employee or officer of any business or agency that does business with Whatcom County?	No
You may attach a resume or detailed summary of experience, qualifications, & interest in response to the following questions	<u>Resume Roger Kubalek 2021.pdf</u> - attached
9. Please describe your occupation (or former occupation if retired), qualifications, professional and/or community activities, and education	<i>Field not completed.</i>
10. Please describe why you're interested in serving on this board or commission	<i>Field not completed.</i>
References (please include daytime telephone number):	<i>Field not completed.</i>
Signature of applicant:	Roger Kubalek
Place Signed / Submitted	Lummi Island, WA

## PROFESSIONAL EXPERIENCE

---

### **Operations Manager** – Full Harvest Technologies, Inc. *January 2019- Present*

- Established & manages the supplier approval program, specifications, food safety documentation, and auditing protocols
- Manage contract manufacturing of innovative products from sourcing raw materials through finished ingredients
- Develop supply networks for specific commodities and customer products
- Manage organic certification process including auditing supply network and certificate renewals
- Build and maintain network of 3rd party processors for IQF and dehydrated ingredients
- Partnered with recruiting team to source and interview quality candidates across the organization
- Work cross functionally with engineering to incorporate and stress test new product features
- Developed and maintain department OKRs in line with high-level company goals

### **President - Board of Directors** – Oregon Tilth Certified Organic, Corvallis, Oregon. *February 2021-Present*

#### **Member - Board of Directors** *January 2018 – February 2021*

Oregon Tilth Certified Organic is one of the largest and longest standing organic certification bodies in the U.S. with thousands of clients ranging from growers to food manufacturers. The Board oversees the executive operations and reviews an annual budget of \$10 million supporting an organization of over 40 employees. I serve on the Governance Committee that ensures the bylaws of the organization are met and the Executive Director is functioning in their role.

### **Operations Manager - Post Harvest** – Plenty, Inc. *October 2017- January 2019*

- Managed all post-harvest operations including cooling produce, packaging, labeling, lot coding, inventory and shipping.
- Created SOPs and SSOPs that scale for current farms and future farms
- Oversaw the establishment and development of a formal QA/QC process and program
- Assisted in SQF Certification with zero major or minor non-conformities in post-harvest
- Worked closely with engineering, marketing, and strategy teams to develop systems for ambitious growth plans
- Managed two highly productive full-time employees and temporary labor.
- Invented innovated growing system that reduced costs and inputs for vertical farming operations

### **Agridulce Farm- Owner-Operator**, Berkeley, CA. *February 2016-December 2017*

- Managed production of a 1-acre market garden utilizing organic and regenerative farming techniques
- Started plants in greenhouse as well as directed seeded crops
- Harvested and marketed produce to local restaurants and food producers.
- Managed field irrigation, fertility, and integrated pest management for diverse crop species

### **Rosarian** – City of Berkeley, Berkeley, CA *May 2016 – October 2017*

- Managed a historically significant 3.7 acre garden including over 2000 roses (200 varieties) and natural landscapes
- Performed all horticultural activities with little supervision to restore a neglected park
- Developed volunteer programs and community relationships to strengthen the park's support

### **Grower Relations Manager** – Juicero, Inc., San Francisco, CA *November 2014 – September 2015*

- Developed the organic produce sourcing strategy for an ambitious cold-pressed juice food+tech startup
- Responsible for fostering strong business relationships with organic farms, processors and wholesale distributors
- Worked closely with all departments including Food Safety, R&D, Manufacturing, Marketing, I.T., and Finance
- Assisted in development of quality specifications, receiving SOP's and GMP's.
- Managed production planning and forecasting raw material volumes through stages of company growth
- Maintained inventory and safety stock volumes for pilot production
- Identified opportunities for cost savings
- Consulted in fresh-cut plant design and build-out

**Agricultural Field Representative** – Amy’s Kitchen, Santa Rosa, CA. *May 2012 – November 2014*

- Managed farmer & processor relationships to ensure high quality standards were met
- Mitigated potential losses by proactively managing harvests and vegetable processing
- Assisted in contracting, logistics, and conflict resolution by utilizing creative problem-solving skills
- Managed ingredient supply from harvest through processing plants located across U.S., Canada, Mexico, and Europe.
- Worked closely with multiple departments including Sensory, QA Raw Materials, Planning, R&D, Tech Services, Warehouse and Marketing
- Managed sales of out-of-specification material resulting in over \$400,000 in cost avoidance
- Developed a manufacturing procedure that increased a supplier’s capacity to produce a key, difficult to source ingredient by 50% which kept our plant running in an otherwise “out of stock” situation.

**Education and Farm Manager** – Sustainable Agriculture Education, Berkeley, CA. *February 2011 – May 2012*

- Scheduled and taught 4<sup>th</sup>-8<sup>th</sup> grade farm and natural resource based field trips and service learning
- Organized volunteer work activities for youth and adults
- Farm management including pest control, infrastructure maintenance, irrigation and proactively keeping site human health and safety standards
- Provide admin support for various organizational projects including grant applications, hiring, and conservation contracts.
- Curriculum development including farm field trips and in-school presentations

**Skills**

---

Food Safety | Contract Manufacturing | Project Management | Contract Negotiation | Agricultural Sourcing | 3rd Party Audit Schemes | Mac & PC Proficient | Microsoft Office Suite + Outlook | Google Apps | ERP Systems | Organic & Biodynamic Certification | Customer Service | Lean Manufacturing | Forecasting

**EDUCATION**

---

**Masters of Agriculture** – Graduation in *Spring 2021*

Washington State University- Pullman.

Researching weed control on small organic farms.

**Bachelor of Science, Plant Biology** – Biotechnology – *December 2010*

University of Nebraska-Lincoln:

*College of Agricultural Sciences and Natural Resources*

3.7 GPA

**TITLE FOR AGENDA ITEM:**

Ordinance Amending the Project Budget for the E. Smith/Hannegan Road Intersection Improvements Fund, Request No. 2

**SUMMARY STATEMENT OR LEGAL NOTICE LANGUAGE:**

Requests appropriation of \$1,015,000 to fund increased costs of construction and property rights acquisition for a total project budget of \$5,800,000.

---

**HISTORY OF LEGISLATIVE FILE**

---

<b>Date:</b>	<b>Acting Body:</b>	<b>Action:</b>	<b>Sent To:</b>

**Attachments:** Proposed Ordinance, Supplemental Request, Six-Year Transportation Improvement Plan

**ORDINANCE NO. \_\_\_\_\_**

**ORDINANCE AMENDING THE PROJECT BUDGET FOR THE E.  
SMITH/HANNEGAN ROAD INTERSECTION IMPROVEMENTS FUND,  
REQUEST NO. 2**

**WHEREAS**, Ordinance No. 2018-057 established the E. Smith/Hannegan Road Intersection Improvements Fund in 2018 granting expenditure authority to initiate preliminary engineering for the multi-year project, and;

**WHEREAS**, previous phases of the project included preliminary engineering, design, permitting, property rights acquisition, initial construction and construction engineering services, and;

**WHEREAS**, it is now necessary to add to the project based budget to supplement for construction and property rights acquisition in order to continue with the project, and;

**WHEREAS**, the East Smith & Hannegan Road Intersection Improvements Project was confirmed on the Council approved 2022 Annual Construction Program and is item number 2 on the Council approved 2022-2027 Six Year Transportation Improvement Program (2022-2027 STIP), and;

**WHEREAS**, the original construction cost and property rights acquisition cost estimates have increased due to economic changes in market forces along with necessary design changes, and therefore the 2022-2027 STIP estimate of \$4.3 million is insufficient, and;

**WHEREAS**, the project previously secured \$2 million of outside funding commitments (\$1 million federal Highway Safety Improvement Program funds and \$1 million federal Surface Transportation Block Grant funds), as well as \$2,785,000 of local Road funding, and;

**WHEREAS**, additional Road funds of up to \$1.015 million, including contingency amounts, will be used to supplement the project's current funding;

	8301.108	Operating Transfer In	(\$1,015,000)
	<b>Request Total</b>		<b>\$0</b>

**1a. Description of request:**

The intersection of East Smith and Hannegan Roads is located in Sections 28, 29, 32 and 33, T39N, R3E. This project is listed #R2 on the 2022-2027 Six-Year Transportation Improvement Program and experienced delays due to the lack of left-turn channelization on Smith Road. Traffic counts and warrants have been completed. Additionally, an associated 'Alternatives Analysis' was performed by a traffic consultant in 2018. Construction is anticipated in 2022. This request provides the funding needed in the project based budget for the construction and construction engineering work related to this project.

**1b. Primary customers:**

All road users who travel on the Hannegan and Smith Road corridors.

**2. Problem to be solved:**

The main purpose of the intersection improvements is to improve vehicle operations and increase safety for vehicle drivers, bicyclists, and pedestrians.

**3a. Options / Advantages:**

The alternatives analysis completed in 2018 compared three alternatives for improvements to the intersection. The three alternatives were an upgraded traffic signal with protected left turn movements, a single-lane roundabout, and a double-lane roundabout. The double-lane roundabout provided the highest level of vehicle operations for a twenty year design life, while providing a much safer intersection than the existing signal or an upgraded signal.

**3b. Cost savings:**

Potential costs savings are realized by an improved level of service for the motoring public and potential decrease in motor vehicle accidents.

**4a. Outcomes:**

The approval of budget authority will allow for the completion of design, R/W acquisition, permitting, and construction of the chosen alternative

**4b. Measures:**

The measures of success will be obligation of construction grant funds of \$2 million when R/W is certified and environmental permits are signed off by FHWA and WSDOT.

**5a. Other Departments/Agencies:**

N/A

# Supplemental Budget Request

Status: Pending

**ORDINANCE ESTABLISHING THE BIRCH BAY LYNDEN RD. & BLAINE RD. INTERSECTION IMPROVEMENTS FUND AND ESTABLISHING A PROJECT BASED BUDGET FOR THE BIRCH BAY LYNDEN RD. & BLAINE RD. INTERSECTION IMPROVEMENTS FUND; CRP #906001**

**WHEREAS**, the Birch Bay Lynden Rd. & Blaine Rd. Intersection Improvements project is item number R6 on the 2022-2027 Six Year Transportation Improvement Program (STIP), and item number 6 on the 2022 Annual Construction Program, with anticipated right-of-way and preliminary engineering (PE) costs of \$1,450,000 over multiple years; and

**WHEREAS**, the Washington State Department of Transportation requirements for the STIP include construction engineering in the PE line item; and

**WHEREAS**, since preparation of the STIP, professional consulting has recommended a smaller, lower cost roundabout without affecting Level of Service; and

**WHEREAS**, this request for funding is for preliminary engineering, not to include construction engineering, and right-of-way phases of the smaller project, which are anticipated to be \$650,000; and

**WHEREAS**, funding for this phase of the project will come from the Road Fund; and

**WHEREAS**, Section 6.80 of the Whatcom County Home Rule Charter allows for project-based capital budget appropriation ordinances that lapse when the project has been completed or abandoned or when no expenditure or encumbrance has been made for three (3) years,

**NOW, THEREFORE, BE IT ORDAINED** by the Whatcom County Council that a new fund is hereby established, effective January 1<sup>st</sup>, 2022, titled Birch Bay Lynden Rd. & Blaine Rd. Intersection Improvements Fund. This fund shall be used to account for the revenues and expenditures of the improvement project described above, and

1  
2 **BE IT FURTHER ORDAINED** by the Whatcom County Council that the Birch Bay Lynden Rd.  
3 & Blaine Rd. Intersection Improvements Fund is approved as described in Exhibit A with an initial  
4 project budget of \$650,000.

Date

Costs:	Object	Object Description	Amount Requested
	6110.595110	Regular Salaries & Wages	\$57,000
	6290.595110	Applied Benefits	\$43,000
	6630.595110	Professional Services	\$300,000
	6630.595200	Professional Services	\$75,000
	7320.595200	Land	\$175,000
	8301.108	Operating Transfer In	(\$650,000)
	<b>Request Total</b>		<b>\$0</b>

**1a. Description of request:**

This project is located 4.6 miles south of Blaine, at the corners common to Sections 19, 20, 29, and 30, T40N, R1E. Intersection improvements being considered are a roundabout or a signal. This is a joint project with the Washington State Department of Transportation; however, it is unlikely that they will participate as a funding source. This project is listed #R6 on the 2022-2027 Six-Year Transportation Improvement Program.

Survey work and Right-of-Way Plan has been started. Consultant contract completed to evaluate & decide on preferred design alternative, which was a roundabout. Applied for and received federal STBG funding of \$800K which is available in 2023-2024. Final design consultant selected, and proceeding with final design in late 2021. Additional grant funds will be looked for through other sources.

Construction proposed for 2024

This request is to provide the funding needed to establish a project based budget for the preliminary engineering and right-of-way needs to design this project.

**1b. Primary customers:**

All road users who travel on the Birch Bay Lynden and Blaine Road corridors.

**2. Problem to be solved:**

The main purpose of the intersection improvements is to improve vehicle operations and increase safety for both vehicle drivers and pedestrians.

**3a. Options / Advantages:**

**3b. Cost savings:**

Potential costs savings are realized by an improved level of service for the motoring public and potential decrease in motor vehicle accidents.

**4a. Outcomes:**

This project will provide a more efficient and safer intersection at the Birch Bay Lynden and Blaine Road intersection.

# Supplemental Budget Request

Status: Pending

---

**Public Works**

**Engineering Design/Const**

---

Suppl ID # 3533

**Fund**

**Cost Center**

**Originator:** Randy Rydel

---

**4b. Measures:**

The measures of success will be obligation of construction grant funds when Right-of-Way is certified and environmental permits are signed off by FHWA and WSDOT.

**5a. Other Departments/Agencies:**

N/A

**5b. Name the person in charge of implementation and what they are responsible for:**

WSDOT coordination is necessary due the the multijurisdictional nature of this intersection.

**6. Funding Source:**

The Road Fund will fund the design and build with support from grants.

Surface Transportation Block Grant funds are expected for this project in 2023-2024.

## 1a. Description of request:

This project is located south of Everson/Goshen in Section 19, T39N, R4E. This is a project to replace the existing 62-foot structurally deficient bridge. This project is listed #B5 on the 2022-2027 Six Year Transportation Improvement Program.

The existing Goshen Road Bridge No. 248 is considered structurally deficient and has deteriorating girders, pile caps and piles. It will be replaced with a new pre-stressed concrete girder bridge.

Preliminary design, permitting and real estate work began in 2020. Approximately \$5 million in Federal Bridge Replacement funds were secured in late 2019 for the preliminary engineering and construction phases of this project.

## 1b. Primary customers:

## 2. Problem to be solved:

The existing Goshen Road Bridge No. 248 is structurally deficient and has a reinforced concrete channel beam superstructure with a wood pile substructure. The existing approach roadway has 9-foot paved lanes and 2-foot gravel shoulders and will be replaced with a new pre-stressed concrete girder bridge and associated road approach work.

## 3a. Options / Advantages:

## 3b. Cost savings:

## 4a. Outcomes:

Construction of the new bridge is expected to take place and conclude in 2024. The new bridge will no longer hold weight limit restrictions, opening this roadway back up to all legal traffic loads.

## 4b. Measures:

### TITLE FOR AGENDA ITEM:

Ordinance Establishing the North Fork Road/Kenney Creek Fish Passage Fund and Establishing a Project Based Budget for the North Fork Road/Kenney Creek Fish Passage Fund; CRP #919007

### SUMMARY STATEMENT OR LEGAL NOTICE LANGUAGE:

Request establishes the North Fork Road/Kenney Creek Fish Passage Fund and requests a project based budget of \$425,000 for the preliminary engineering and right-of-way phases of the project.

**Attachments:** Proposed Ordinance, Supplemental Budget Request, Six-Year Transportation Improvement Program

**ORDINANCE NO. \_\_\_\_\_**

**ORDINANCE ESTABLISHING THE NORTH FORK ROAD/KENNEY CREEK FISH PASSAGE FUND AND ESTABLISHING A PROJECT BASED BUDGET FOR THE NORTH FORK ROAD/KENNEY CREEK FISH PASSAGE FUND; CRP #919007**

**WHEREAS**, the North Fork Road/Kenney Creek Fish Passage project is item number B11 on the 2022-2027 Six Year Transportation Improvement Program (STIP), and item number 37 on the 2022 Annual Construction Program, with anticipated right-of-way and preliminary engineering (PE) costs of \$770,000 over multiple years; and

**WHEREAS**, Washington State Department of Transportation requirements for the STIP include construction engineering in the PE line item; and

**WHEREAS**, this request for funding is for preliminary engineering, not to include construction engineering, and right-of-way phases of the project, which are anticipated to be \$320,000; and

**WHEREAS**, it is appropriate to include a contingency amount in the project, knowing that unused budget will flow into the construction effort; and

**WHEREAS**, the Brian Abbott Fish Barrier Removal Board has committed \$2,975,000 of state funding for the construction phase of this project, with a local cost share from the Road Fund; and

**WHEREAS**, Section 6.80 of the Whatcom County Home Rule Charter allows for project-based capital budget appropriation ordinances that lapse when the project has been completed or abandoned or when no expenditure or encumbrance has been made for three (3) years,

**NOW, THEREFORE, BE IT ORDAINED** by the Whatcom County Council that a new fund is hereby established, effective January 1<sup>st</sup>, 2022, titled North Fork Road/Kenney Creek Fish Passage Fund. This fund shall be used to account for the revenues and expenditures of the improvement project described above, and

1 **BE IT FURTHER ORDAINED** by the Whatcom County Council that the North  
2 Fork Road/Kenney Creek Fish Passage Fund is approved as described in Exhibit A  
3 with an initial project budget of \$425,000.

	8301.108	Operating Transfer In	(\$425,000)
	<b>Request Total</b>		<b>\$0</b>

**1a. Description of request:**

The existing 5-foot diameter corrugated steel culvert which carries Kenney Creek under the North Fork Road has been identified as a barrier to fish passage and, considering habitat to be gained, is considered one of the highest priority barriers within the County road system. Washington State Fish Barrier Removal Board (FBRB) funding has been secured for the design and construction phases of this fish passage project. This project is listed as #B11 on the 2022-2027 Six-Year Transportation Improvement Program.

Project design, permitting and real estate began in 2019. Design work was completed in the spring of 2021. Whatcom County has been awarded \$443,000 of State FBRB funds for the design phase of this project and in the summer of 2021 Whatcom County was awarded \$2,975,000 in state FBRB funds for the construction phase of this project.

Construction of this project is scheduled for 2023.

**1b. Primary customers:**

**2. Problem to be solved:**

This project will restore full fish passage at an existing poorly functioning fishway and culvert where Kenney Creek crosses under North Fork Road approximately 1-mile north of Mosquito Lake Road with a new 110-ft concrete bridge

**3a. Options / Advantages:**

**3b. Cost savings:**

Re: Supplemental Budget Request #3134 for the implementation of the 2022 Annual Construction Program

The attached Supplemental Budget Request #3537 grants expenditure authority for the capital budget associated with the approved 2022 Annual Construction Program (approved by Council 10/26/21). The Annual Construction Program has been summarized in the following schedule:

<b>Total Approved 2022 Annual Construction Program</b>	<b>\$29,070,000</b>
Project based budgets (less funding transfers in)	-14,925,000
Previously budgeted wage and benefits	<u>-1,137,550</u>
<b>Remaining ACP Expenditure to be budgeted</b>	<b>\$12,007,450</b>
<b>Current Budget Expenditure Request</b>	
Prelim./Const. Engineering	\$1,647,450
Right of Way Acquisition	120,000
Contract and County Forces Construction	<u>7,150,000</u>
<b>Capital Expenditure Request Total</b>	<b>\$8,917,450</b>
<b>Transfers to fund Project Based Budgets (PBB)</b>	
East Smith/Hannegan Rd Fund 382	\$1,015,000
Birch Bay Lynden Rd/Blaine Rd Fund	650,000
Jackson Rd/Terrell Creek Br 81 Fund	700,000
Goshen Rd/Anderson Creek Br 248 Fund	300,000
North Fork Rd/ Kenney Creek Fund	<u>425,000</u>
<b>Transfer to PBB Total</b>	<b>\$3,090,000</b>
<b>Remove Offsetting Federal/State Grant Funding</b>	<u>-925,000</u>
<b>Net Change/SBR Total</b>	<b>\$11,082,450</b>

Please contact Randy Rydel at extension 6217 with any questions.

**1a. Description of request:**

This supplemental follows council's approval of the 2022 Annual Road Construction Program. The requested funding will provide the expenditure authority to move forward with the approved Annual Construction Program.

The County Road Administration Board (CRAB) requires that an Annual Construction Program (ACP) be approved prior to approving a capital budget to fund the program. Council reviewed and approved the 2022 ACP at the October 26th council meeting. This request summarizes the budgetary impacts of the ACP and supplements the Road Fund's 2022 budget to account for the included capital projects.

This request also authorizes the transfer of \$1,875,000 into Project Based Funds for preliminary engineering funding of 4 multi-year projects, Birch Bay Lynden Rd & Blaine Rd Intersection Improvements, Jackson Road/Terrell Creek Bridge No. 81 Replacement, Goshen Road/Anderson Creek Bridge No. 248 Replacement, and the North Fork Road/Kenney Creek Fish Passage project. Additionally \$1,015,000 will be transferred into the East Smith Road & Hannegan Road Intersection Improvements project.

**Attachments:** Proposed Ordinance, Supplemental Budget Request, Six-Year Transportation Improvement Program

**ORDINANCE NO. \_\_\_\_\_**

**ORDINANCE ESTABLISHING THE JACKSON ROAD/TERRELL CREEK BRIDGE  
NO. 81 REPLACEMENT FUND AND ESTABLISHING A PROJECT BASED  
BUDGET FOR THE JACKSON ROAD/TERRELL CREEK BRIDGE NO. 81  
REPLACEMENT FUND; CRP #917004**

**WHEREAS**, the Jackson Road/Terrell Creek Bridge No. 81 Replacement project is item number B2 on the 2022-2027 Six Year Transportation Improvement Program (STIP), and item number 33 on the 2022 Annual Construction Program, with anticipated right-of-way and preliminary engineering (PE) costs of \$450,000 over multiple years; and

**WHEREAS**, it is anticipated that \$450,000 will move this project through the type, size, and location phase of preliminary design; and

**WHEREAS**, due to the project location in Birch Bay, which is an area of cultural significance and an urban setting, it is appropriate to include a contingency amount in the project, knowing that unused budget will flow into the future phases of the project; and

**WHEREAS**, funding for this project is entirely Road Fund with other sources still being sought; and

**WHEREAS**, Section 6.80 of the Whatcom County Home Rule Charter allows for project-based capital budget appropriation ordinances that lapse when the project has been completed or abandoned or when no expenditure or encumbrance has been made for three (3) years,

**NOW, THEREFORE, BE IT ORDAINED** by the Whatcom County Council that a new fund is hereby established, effective January 1<sup>st</sup>, 2022, titled Jackson Road/Terrell Creek Bridge No. 81 Replacement Fund. This fund shall be used to account for the revenues and expenditures of the improvement project described above, and

1 **BE IT FURTHER ORDAINED** by the Whatcom County Council that the Jackson  
2 Road/Terrell Creek Bridge No. 81 Replacement Fund is approved as described in  
3 Exhibit A with an initial project budget of \$700,000.  
4

5 **ADOPTED** this \_\_\_\_\_ day of \_\_\_\_\_, 2021.

**1a. Description of request:**

This project is located near Birch Bay in Section 31, T40N, R1W and is listed #B2 on the 2022-2027 Six Year Transportation Improvement Program.

The Jackson Road Bridge No. 81 over Terrell Creek, near the intersection of Jackson Road and Birch Bay Drive, was built in 1975 and is nearing the end of its useful service life. The existing 62-foot bridge span consists of two 31-foot channel beam girders supported on an intermediate pier with timber caps and piles. As this bridge is currently load restricted and classified as structurally deficient, Whatcom County Public Works has begun work on its replacement. Preliminary design work, including a type, size, and location study began in 2020. Design work and Right-of-Way will continue with anticipated construction in 2025.

This funding request is anticipated to cover the project needs through the type, size, and location study as well as a contingency amount that will carry through the project phases.

Outside funding is being pursued for the construction phase of this project.

**1b. Primary customers:**

The Birch Bay Community and visitors to the area.

**2. Problem to be solved:**

The existing 62-foot bridge span consists of two 31-foot channel beam girders supported on an intermediate pier with timber caps and piles. This bridge is at the end of its useful service life and is load restricted and classified as structurally deficient,

**3a. Options / Advantages:**

**3b. Cost savings:**

**4a. Outcomes:**

**Attachments:** Proposed Ordinance, Exh A 3.08.060 strikethrough, Exh B 3.08.95 strikethrough, Exh C 3.08.096 new redline

PROPOSED BY: Brad Bennett

INTRODUCED: November 9, 2021

**ORDINANCE NO.** \_\_\_\_\_

**AN ORDINANCE AMENDING WCC 3.08 (PURCHASING SYSTEM) TO UPDATE THE SMALL PUBLIC WORKS ROSTER PROCESS TO AWARD PUBLIC WORKS CONTRACTS UNDER WCC 3.08.095 AND TO ESTABLISH CONSULTING SERVICES ROSTER AWARD PROCESS FOR ARCHITECTIURAL, ENGINEERING, AND OTHER PROFESSIONAL SERVICES.**

**WHEREAS**, RCW 39.04.155 and other laws regarding contracting for public works by municipalities, allow certain contracts to be awarded by a small works roster process; and

**WHEREAS**, Whatcom County Code sections 3.08.060 and 3.08.095 provide for awards of contracts from a small works roster pursuant to RCW 39.04.155; and

**WHEREAS**, WCC 3.08.095 should be updated to ensure compliance with the current requirements of state law as to allow for continued use of the small works roster contract awards process; and

**WHEREAS**, Ch. 39.80 RCW and other laws regarding contracting for consulting services by municipalities allow certain contracts to be awarded by a consultant roster process; and

**WHEREAS**, WCC 3.08.060 currently requires all awards of contracts for professional services exceeding \$40,000.00 be based upon bids or proposals in response to specifications and invitations to bid subject to the provisions of WCC 3.08.090; and

**WHEREAS**, the Whatcom County Council seeks to establish procedures for the use of consultant rosters as an alternative means of procuring professional services contracts consistent with the requirements of state law; and

**WHEREAS**, the availability and use of a consultant roster contract award process will help achieve greater administrative efficiencies related to the procurement of professional services; and

**WHEREAS**, the Whatcom County Council wishes to update the purchasing code, WCC 3.08, to include a new section that provides for a consultant roster contract award process as an alternative to existing purchasing code requirements.

**NOW, THEREFORE, BE IT ORDAINED**, that the County Code shall hereby be amended as detailed in the attached Exhibit(s) A, B, and C.

**EXHIBIT A**  
**3.08.060**

**3.08.060 Bids and proposals required.**

Awards of contracts for the acquisition of materials, supplies, services, tools, equipment or rental of personal property and professional services exceeding \$40,000 will be based upon bids or proposals received in response to specifications and invitations to bid, except as follows provided below:

A. Sole source purchases shall not be required to go through competitive bidding. A purchase may be determined to be sole source by the county executive or designee when the bidding process would be futile because only one bidder could respond to the invitation.

B. In the event of an emergency when the public interest or property of the county would suffer material injury or damage by delay, upon an order of the county executive declaring the existence of such emergency and reciting the facts constituting same, the requirements governing competitive bids with reference to any purchase or contract may be waived pursuant to RCW [36.32.270](#).

C. Public works projects involving funds not exceeding the amount allowed in ~~under~~ RCW [39.04.155](#), ~~Small works roster contract procedures — Limited public works process~~, or any successor statute, may be completed utilizing the small works roster contract award process pursuant to WCC 3.08.095.

D. Acquisition is from another public entity.

E. Contract does not require use of county funds.

**F. The procurement of professional services may be completed utilizing the Consultant Roster Award Process pursuant to WCC 3.08.096.**

Proposals from architects and engineers are subject to the requirements of Chapter [39.80](#) RCW. (Ord. 2016-032 Exh. A; Ord. 2013-029 Exh. A; Ord. 2007-004 Exh. A; Ord. 97-034 Exh. A; Ord. 93-042 Exh. H).

**EXHIBIT B**  
**3.08.095**

**3.08.095 Small works roster contract award process.**

This section may be utilized in the acquisition of contractual services necessary to complete public works projects as allowed under RCW [36.32.250](#), and consistent with RCW [39.04.155](#). ~~In order to use a small works roster contract award process in lieu of formal sealed bidding, the county shall~~ **To use the small works roster contract award process provided for by this section the following procedures shall be followed:**

~~A. Publish at least twice each year in the official county newspaper a notice of the existence of the roster and solicit the names of contractors that are qualified for the requested categories of work. Notice shall be published at least once in each week for two consecutive weeks prior to the last date upon which response to the notice will be received, and may be published for as many additional publications as shall be considered in the county's interest.~~ **Publication.** At least once a year, the County or its designee, shall publish in a newspaper of general circulation within the County's jurisdiction a notice of the existence of a small works roster and solicit the names of contractors for the small works roster. Responsible contractors shall be added to the small works roster at any time that a contractor completes an online application provided by the County or its designee, and meets the minimum State requirements for roster listing.

~~B. In every case a certain category of work is to be accomplished under this section, all contractors responding to the above notice and indicating their qualification to perform the category of work proposed shall be contacted and provided an invitation to bid.~~ **Small Works Roster - Non- Limited Public Work Process. Written, or Electronic Bids.** The County shall obtain, written, or electronic bids for public works contracts from contractors on the appropriate small works roster to assure that a competitive price is established and to award contracts to a contractor who meets the mandatory bidder responsibility criteria in RCW 39.04.350(1). The County may establish supplementary bidder criteria under RCW 39.04.350 (2) to be considered in the process of awarding a contract.

1) An invitation to bid pursuant to a small works roster will not be advertised. Invitations for bids shall include an estimate of the scope and nature of the work to be performed as well as materials and equipment to be furnished. However, detailed plans and specifications need not be included in the invitation.

2) Bids will be invited from all appropriate contractors on the appropriate small works roster. As an alternative to the preceding requirement, quotations may be invited from at least five contractors on the

appropriate small works roster who have indicated the capability of performing the kind of work being contracted, in a manner that will equitably distribute the opportunity among the contractors on the appropriate roster. "Equitably distribute" means that the County may not favor certain contractors on the appropriate small works roster over other contractors on the appropriate small works roster who perform similar services.

If the estimated cost of the work is from two hundred and fifty thousand dollars (\$250,000) up to the authorized threshold for use of the small works roster process in RCW 39.04 and the County elects to solicit bids from less than all the appropriate contractors on the appropriate small works roster pursuant to this sub-section, the County must notify the remaining contractors on the appropriate small works roster that bids on the work are being sought. The County has the sole option of determining whether their notice to the remaining contractors is made by:

- (a) publishing notice in a legal newspaper in general circulation in the area where the work is to be done;
  - (b) mailing a notice to these contractors; or
  - (c) sending a notice to these contractors by facsimile or email.
- 3) At the time bids are solicited, the County representative shall not inform a contractor of the terms or amount of any other contractor's bid for the same project;
- 4) A written record shall be made by the County representative of each contractor's bid on the project and of any conditions imposed on the bid. Immediately after an award is made, the bids obtained shall be recorded, open to public inspection, and available by telephone inquiry.

~~C. Include in the invitation to bid the date on which bids will be received, the scope and nature of work to be performed, the materials and equipment to be furnished, and, if not provided otherwise in the invitation to bid, where the detailed plans and specifications may be seen and obtained.~~ **Small Works Roster-**

**Limited Public Works Process.** The County may award a contract for work, construction, alteration, repair, or improvement projects using the limited public works process if the project cost is equal to or less than the amount established in RCW 39.04.155(3). For a limited public works project, the County will solicit electronic or written bids from a minimum of three contractors from the appropriate small works roster and shall award the contract to the lowest responsible bidder as defined under RCW 39.04.010. After an award is made, the bids shall be open to public inspection and available by electronic request.

For limited public works projects, the County may waive the payment and performance bond requirements of chapter 39.08 RCW and the retainage requirements of chapter 60.28 RCW, thereby assuming the liability for the contractor's nonpayment of laborers, mechanics, subcontractors, material

men, suppliers, and taxes imposed under Title 82 RCW that may be due from the contractor for the limited public works project. However, the County shall have the right of recovery against the contractor for any payments made on the contractor's behalf.

The County shall maintain a list of the contractors contacted and the contracts awarded during the previous 24 months under the limited public works process, including the name of the contractor, the contractor's registration number, the amount of the contract, a brief description of the type of work performed, and the date the contract was awarded.

~~D. Otherwise apply the provisions of WCC 3.08.090(B), (E), (F), (G), (H), (I), (J), and (M).~~ **Determining Lowest Responsible Bidder/Award.** Public works contracts under this section shall be awarded to the lowest responsible bidder provided that, whenever there is a reason to believe that the lowest acceptable bid is not the best price obtainable, all bids may be rejected and the County may call for new bids. A responsible bidder shall be a registered or licensed contractor who meets the mandatory bidder responsibility criteria established by Chapter 133, Laws of 2007 (SHB 2010) and who meets any supplementary bidder responsibility criteria established by the County.

~~E. Forgo the advertisement of a contract awarded through use of the small works roster.~~ Unless otherwise addressed in this section, the provisions of WCC 3.08.090 (B), (E), (G), (H), (I), (J), and (M) shall apply. (Ord. 2016-032 Exh. A; Ord. 2013-029 Exh. A; Ord. 2007-004 Exh. A; Ord. 97-034 Exh. A).

## NEW SECTION UNDER WCC 3.08

### 3.08.096 Consultant roster contract award process for architectural, engineering, and other professional services.

As an alternative to the requirements of WCC 3.08.060 and 3.08.090, this section may be utilized to acquire consultant services. Consultant services include professional services. Professional services are those services that have a primarily intellectual output or product and include, but are not limited to, services provided by architects, engineers, surveyors, doctors, trainers, tax professionals, accountants, and management, labor and financial advisors.

To use the consultant roster contract-award process provided for by this section the following procedures shall be followed:

**A. Publication.** At least once a year the County or its designee shall publish in a newspaper of general circulation within the municipality's jurisdiction a notice of the existence of the consulting services roster and solicit the names of consultants for the consulting services roster. The County or its designee shall add responsible consultants to the consulting services roster at any time that a consultant completes the online application provided by the County or its designee, upload a Statement of Qualifications, and meets minimum State requirements for roster listing.

**B. Review and Selection of the Statement of Qualifications Proposals for professional services.** The County shall use the following process to select the most highly qualified consultant off of the Consulting Services Roster to provide the required services:

1) The department head shall have established criteria that must be consider in evaluating consultants for a given project. Consultant rate may be considered for services other than architectural, engineering, landscape architectural, and surveying. Criteria for architectural, engineering, landscape architecture, or surveying services shall include a plan to ensure that minority and women-owned firms and veteran-owned firms are afforded the maximum practicable opportunity to compete for and obtain

public contracts. The level of participation by minority and women-owned firms and veteran-owned firms shall be consistent with their general availability within the jurisdiction of the county.

2) The department head shall evaluate the written statements of qualifications and performance data on file with the county at the time that consultant services are required;

3) Such evaluations shall be based on the criteria established by the department head.

4) The department head shall conduct discussions with one or more consultant regarding anticipated concepts and the relative utility of alternative methods of approach for furnishing the required services.

5) The consultant deemed most highly qualified by the agency to do the project will be selected. The department head shall negotiate with the selected firm for a contract at a price that he/she determines is fair and reasonable, considering the estimated value of the services to be rendered as well as the scope and complexity of the project. If a satisfactory contract cannot be negotiated, the department head terminates the negotiations with that firm and attempts to negotiate a contract with the next most qualified firms. The process continues until an agreement is reached or the search is terminated.

**C.** In those instances where provisions of Chapter 3.08 WCC are inconsistent with the provisions of this section, the provisions of this section shall control..

- Exhibit A – Proposed Amendments

**II. Background**

The Council has expressed interest in increasing affordable housing options, in particular by amending the Whatcom County Code to allow for the siting of tiny homes within mobile home or RV parks or on individual lots, as newly authorized under amendments to RCW 58.17.040 via ESSB 5383. Staff is also proposing amendments to the Planned Unit Development (PUD) code to allow and encourage duplexes in urban growth areas. Both are intended to provide additional affordable housing options for Whatcom County citizens.

**Tiny Homes**

**What are Tiny Homes?**

To decipher how best to develop the regulatory structure to allow tiny homes, staff first identified the key characteristics of the various types of tiny homes to compare with our existing types of analogous residential units. Broadly, but in more detail in Table 1, these characteristics have to do with what type of state or federal license or certification they can obtain, whether or not they're self-contained<sup>1</sup>, and whether they have chassis and axles/wheels, all of which have to do with whether they are intended or can be used for long-term (residential) or short-term (recreational) use. There are other differences, like how much insulation they have or whether they have basic sanitary facilities such as toilets, showers, and sinks, but these are built into the certification/licensing standards and the characteristics we've used seem to suffice for classification.

---

<sup>1</sup> Meaning do they have tanks to hold water and sewage and have batteries for power, or do they need to be connected to utilities to operate?

Based on this analysis, we have identified four types of tiny homes, each corresponding to one of our existing unit types. The two that are intended for long-term residential use are:

- *Site-Built Tiny Homes* are built on-site, are not self-contained, are intended for long-term use, and meet the International Residential Code (IRC) standards. They are analogous to standard site-built homes, except that they're smaller (< 400 sq. ft.).
- *Manufactured Tiny Homes* are built off-site (generally at a manufacturing plant) with a chassis, axles, and wheels and transported to their final location (though the wheels may be removed) where the unit is placed on a permanent foundation. They are not self-contained, are intended for long-term use, and would have to meet the IRC standards *or* be HUD certified *and* be L&I certified as a permanent dwelling unit. They are analogous to standard mobile (or manufactured) homes, except that they're smaller.

The other types of tiny homes that are getting a lot of interest are Tiny Homes on Wheels (or THOWs, and yes, a real acronym). These tend to be homemade but, because of their construction standards, they are only intended and can only be certified for short-term recreational use or occupancy. But even among them, based on key characteristics, there are two different types. We're designating them:

- *Type 1 Tiny Homes on Wheels* have a chassis, axles, and wheels and are intended for trailering. They are *not* self-contained so must be hooked up to utilities. They do not meet the IRC standards nor are they certified by HUD for long-term residential use, but can be certified by L&I for short-term recreational use. And they must be licensed by the state Department of Licensing for transport on the highways. They are analogous to park model trailers.
- *Type 2 Tiny Homes on Wheels* are similar to Type 1 THOWs, but *are* self-contained, meaning they have tanks to hold water and sewage and have batteries for power so that they don't always need to be connected to utilities. They do not meet the IRC standards nor can they be certified by HUD for long-term residential use, but can be certified by L&I for short-term recreational use. And they must be licensed by the state Department of Licensing for transport on the highways. They are analogous to recreational vehicles (RVs).

Regarding building permit requirements, please note that the Council already adopted the newest International Residential Code, including Appendix Q, which contains the building code rules for tiny homes.

We would also like to point out that staff met several times with some tiny home proponents who proposed a third type of THOW. This type wouldn't meet IRC or HUD standards, but would be based on standards we specifically adopt in our code. These standards, they claimed, would be based on ANSI standards (what L&I uses to certify RVs) plus some additional standards (they referred to them as ANSI++) and our Building Official would have to certify them for use in Whatcom County. However, this approach would create significant jurisdictional regulatory inconsistencies since such units wouldn't be able to be used in any other jurisdiction (including the cities in Whatcom County) as they would only be "certified" for use in unincorporated Whatcom County under our own unique standards.

These proponents were also asking that these types of THOWs be able to be used for guest lodging for longer than 120 days<sup>2</sup>, which is our standard "temporary recreational occupancy" time limit under existing code. Extending temporary recreational occupancy would essentially make these THOW's

---

<sup>2</sup> For all Temporary Recreational Occupancies – On individual lots, the maximum length of stay of any recreational vehicle on a lot may not exceed a total of 120 days per calendar year; provided, that no accessory guest RV shall remain on the subject lot for more than 14 consecutive days nor more than 30 days total per calendar year.

permanent accessory dwelling units and raise potential GMA challenges and cause greater impacts that come with such increased densities, especially in rural areas.

Council should also be aware that staff tried very hard to figure out a way to allow “tiny home villages” (including those allowing site built tiny homes) in rural areas. However, GMA rural density restrictions significantly limit the potential for such “villages” in rural areas—meaning they would have to meet the underlying rural low density zoning just like any other subdivision. Our conclusion was that such tiny home villages are more likely to be created in cities or UGAs (which allow higher urban densities) and then only when adequate utilities are available, which our cities generally won’t extend until the property is annexed. But we do have existing (nonconforming at least in terms of density) mobile home and RV parks, so allowing the appropriate type of tiny homes within them at least furthers the affordable housing goal.

### **Allowing Duplexes in Planned Unit Developments**

Another amendment proposed as a way to increase affordable housing options is to allow duplexes in certain zones when a project is developed as a Planned Unit Development (PUD) (WCC Chapter 20.85). PUDs:

- Allow certain uses beyond those allowed in the underlying zone when a project is developed as a planned neighborhood community;
- Can only be developed within Urban Growth Areas and have to be at least two acres in size (except under certain conditions listed in WCC 20.85.020);
- Have additional standards for buffering, open space, circulation, access, parking, storage, and utilities;
- Allow for increased densities (WCC 20.85.108);
- Allow a relaxation of dimensional standards (WCC 20.85.109); and,
- Can only be approved by Council.

Currently PUDs allow single-family and multi-family residential uses, but not duplexes. To rectify this incongruity and help promote affordable housing, staff is proposing amendments to WCC 20.85.050.

Table 1. Defining characteristics of the various types of "homes"

Characteristic	Site-Built Home	Site-Built Tiny Home	Manufactured (Mobile) Home	Manufactured Tiny Home	Park Model Trailer	Type 1 Tiny Home on Wheels	Recreational Vehicle	Type 2 Tiny Home on Wheels
Meets IRC standards for permanent dwelling unit	Yes	Yes	Yes	Yes	No	No	No	No
<b>OR</b> Is HUD certified	No	No	Yes	Yes	No	No	No	No
Is L&I certified for Use <sup>3</sup>	No	No	Yes, as a permanent dwelling unit	Yes, as a permanent dwelling unit	Yes, for recreational use	Yes, for recreational use	Yes, for recreational use	Yes, for recreational use
Is DOL licensed	No	No	No	No	No	No	Yes	Yes
Is intended/ licensed for long-term or short-term residential use	long-term	long-term	long-term	long-term	short-term	short-term	short-term	short-term
Is self-contained (wastewater, water, power) (if not, must be connected to utilities)	No	No	No	No	No	No	Yes	Yes
Has chassis and axles/wheels	No	No	Yes when manufactured, but wheels removed once sited	Yes when manufactured, but wheels removed once sited	Yes, when manufactured, but wheels removed once sited	Yes, when manufactured, but wheels removed once sited	Yes	Yes

<sup>3</sup> Certified as a (long-term) permanent dwelling unit or for (short-term) recreational use, as noted.

### III. Amendments

The proposed amendments are found in Exhibit A. Please refer to that attachment; explanations are provided therein. Here is an overview, though.

#### Proposed Tiny Home Regulatory Structure

Based on the characteristics shown in Table 1 each of the four types of tiny homes corresponds or is analogous to a type of (either long- or short-term) residence that the County already regulates. Thus, to simplify or streamline the means to regulate these units, we can just define each of these types of tiny homes as one of our existing types and they would be regulated under existing regulations for that type.

So staff is proposing to add definitions for each of the types: “Tiny Homes,” with subcategories for “site-built tiny homes” and “manufactured tiny homes”; and “Tiny Homes on Wheels,” with subcategories for “Type 1 THOWs” and “Type 2 THOWs” (see Exhibit A, §20.97.435.03 & §20.97.435.04). Then we’re proposing to amend the definitions for “Mobile Home” to include “Manufactured Tiny Homes” (Exhibit A, §20.97.250), “Recreational Vehicle” to include “Type 2 THOWs” (Exhibit A, §20.97.335), and “Park Model Trailer” to include “Type 1 THOWs” (Exhibit A, §20.97.292) (plus some grammatical edits).

With these definitional amendments, each of these tiny home types would then be allowed wherever their existing corresponding standard type is allowed under existing code:

- Site-built tiny homes would generally be allowed wherever and under whatever circumstances and standards standard site-built homes are allowed (either as a primary use or an accessory dwelling unit (ADU));
- Manufactured tiny homes would generally be allowed wherever and under whatever circumstances and standards standard mobile (or manufactured) homes are allowed (as a primary use, an ADU, or in a mobile home park);
- Type 1 THOWs would generally be allowed wherever and under whatever circumstances and standards park model trailers are allowed (as temporary guest lodging or in an RV park in a space designated for park models, meaning they have utility hookups); and,
- Type 2 THOWs would generally be allowed wherever and under whatever circumstances and standards recreational vehicles are allowed (as temporary guest lodging or in an RV park).

Table 2 more specifically identifies in which zones the various tiny home types would be allowed, as what type of use, and what permit would be required. These are identical to where we currently allow their existing counterpart (single-family residences, mobile homes, park model trailers, and recreational vehicles). Do note, however, that for simplicity’s sake there may be additional standards or requirements in some zones not shown in the table, but they’d be the same as for their counterparts.

Apart from these definitional amendments, staff is also proposing to clarify our Mobile Home and RV Park Standards. First, we’re proposing to separate the two into distinct sections. We’re also identifying the process by which such a park can be permitted (binding site plan or condominium), and that CC&R’s must be submitted and approved (so that we can ensure long-term maintenance and operations are dealt with properly). Apart from that, we’re keeping the rules that applied to both in both, but putting the rules that only apply to one type of park in their respective sections. (See Exhibit A, §20.80.950 and §20.80.955.)

Under the proposed regulations, one could develop a mobile home park for mobile homes, manufactured tiny homes, or a mix of the two; and an RV park for RV’s, Type 2 THOWs, or a mix of the two. Mobile home parks are allowed as a conditional use in the Resort Commercial (RC), Urban

Residential Mixed (UR-MX), and Urban Residential – Medium Density (URM) Districts. Recreational vehicle (RV) parks are allowed as a conditional use in the Resort Commercial (RC), Tourist Commercial (TC), and Point Roberts Special Districts.

Table 3 shows how many mobile home and RV parks currently exist in the County. In total there are 39 mobile home parks and 7 RV parks, containing 2,858 spaces, 1,881 of which can be used for park models or Type 1 THOWS.

#### Duplexes in Planned Unit Developments

While most of the changes to WCC 20.85.053 shown in Exhibit A are just cleaning up grammar, the two that are policy changes are where “duplexes” has been added to subsections (1) and (2).

## IV. Comprehensive Plan Evaluation

The proposed amendments to the regulations (WCC Title 20) have been developed using the guidance of the Comprehensive Plan so as to remain consistent. Particularly relevant are:

**Goal 3C: Create opportunity for a broad range of housing types and encourage mixed affordability.**

Policy 3C-1: Support lot clustering, varied lot sizes, small-scale multi-family dwellings, accessory housing, especially accessory dwelling units (ADUs) in single-family zoning, and reductions in infrastructure requirements for subdivisions as incentives for development of housing obtainable by purchasers with the greatest possible mix of needs and household incomes.

Policy 3C-3: Support development of manufactured and mobile home parks and establish design criteria that will enable them to fit into the surrounding community.

**Goal 3E: Provide for future housing needs by responding to changing household demographics.**

Policy 3E-1: Review and revise existing regulations to identify inhibitions to housing for the varying preferences of those needing housing. Focus on population segments with particular needs such as temporary, transitional, or emergency housing.

**Goal 3F: Provide incentives to create affordable housing.**

Policy 3F-3: Support innovative housing ideas including co-housing (essentially a micro-community with some centralized facilities), elder cottages (housing units for healthy but aging family members), accessory dwelling units (ADUs) in single family zoning of all jurisdictions, including cottage designs available at planning department front desk, and shared living residences or group quarters in UGAs, and educate the public about them.

**Table 2. Zoning Districts where Tiny Homes would be allowed (and by what Permit<sup>4</sup>) under the proposed rules**

## **V. Draft Findings of Fact and Reasons for Action**

Staff recommends the Council adopt the following findings of fact and reasons for action:

1. The County Council has expressed interest in increasing affordable housing options, in particular by amending the Whatcom County Code to allow for the siting of tiny homes.
2. Additionally, Planning and Development Services (PDS) has identified that in addition to allowing single- and multi-family dwellings in Planned Unit Developments, allowing duplexes would also increase affordable housing options.
3. PDS submitted an application (PLN2021-00012) to make amendments to Whatcom County's zoning regulations (WCC Title 20) to provide these affordable housing options.
4. A determination of non-significance (DNS) was issued under the State Environmental Policy Act (SEPA) on May 20, 2021.
5. Notice of the subject amendments was submitted to the Washington State Department of Commerce on May 20, 2021, for their 60-day review.
6. On June 24, 2021, the Planning Commission held a duly noticed public hearing to consider testimony on the proposed amendments.
7. The County Council held a duly noticed public hearing on the proposed amendments on October 29, 2021, and reviewed and considered the Planning Commission recommendation, staff recommendations, and public comments on the proposed amendments.
8. The amendments are consistent with the Growth Management Act, Whatcom County Comprehensive Plan, and other applicable requirements.
9. The proposed amendments reflect current local circumstances and promote the general public health, safety, morals and welfare.

## **VI. Proposed Conclusions**

1. The amendments are in the public interest.
2. The amendments are consistent with the Whatcom County Comprehensive Plan.

## **VII. Recommendations**

1. Planning and Development Services recommends that the Council adopts the proposed regulations shown in Exhibit A.
2. The Planning Commission voted 7-0 to recommend approval of the proposed amendments to the County Council.

**ORDINANCE NO.** \_\_\_\_\_

**ADOPTING AMENDMENTS TO WHATCOM COUNTY CODE TITLE 20 ZONING TO PROVIDE ADDITIONAL AFFORDABLE HOUSING OPTIONS, INCLUDING ALLOWING AND REGULATING TINY HOMES AND ALLOWING DUPLEXES IN PLANNED UNIT DEVELOPMENTS**

**WHEREAS**, The County Council is interested in increasing affordable housing options, in particular by amending the Whatcom County Code to allow for the siting of tiny homes.

**WHEREAS**, Planning and Development Services (PDS) has identified that in addition to allowing single- and multi-family dwellings in Planned Unit Developments, allowing duplexes would also increase affordable housing options; and,

**WHEREAS**, The Whatcom County Council reviewed and considered Planning Commission recommendations, staff recommendations, and public comments on the proposed amendments; and

**WHEREAS**, The County Council hereby adopts the following findings of fact:

**FINDINGS OF FACT**

1. The County Council has expressed interest in increasing affordable housing options, in particular by amending the Whatcom County Code to allow for the siting of tiny homes.
2. Additionally, Planning and Development Services (PDS) has identified that in addition to allowing single- and multi-family dwellings in Planned Unit Developments, allowing duplexes would also increase affordable housing options.
3. PDS submitted an application (PLN2021-00012) to make amendments to Whatcom County's zoning regulations (WCC Title 20) to provide these affordable housing options.
4. A determination of non-significance (DNS) was issued under the State Environmental Policy Act (SEPA) on May 20, 2021.
5. Notice of the subject amendments was submitted to the Washington State Department of Commerce on May 20, 2021, for their 60-day review.
6. On June 24, 2021, the Planning Commission held a duly noticed public hearing to consider testimony on the proposed amendments.
7. The County Council held a duly noticed public hearing on the proposed amendments on October 23, 2021, and reviewed and considered the Planning Commission recommendation, staff recommendations, and public comments on the proposed amendments.
8. The amendments are consistent with the Growth Management Act, Whatcom County Comprehensive Plan, and other applicable requirements.
9. The proposed amendments reflect current local circumstances and promote the general public health, safety, morals and welfare.

**CONCLUSIONS**

1. The amendments to the development regulations are in the public interest.

2. The amendments are consistent with the Whatcom County Comprehensive Plan.

**NOW, THEREFORE, BE IT ORDAINED** by the Whatcom County Council that:

Section 1. Amendments to the Whatcom County Code are hereby adopted as shown in Exhibit A.

Section 2. Staff is authorized to work with Code Publishing to correct and update any cross-references made ineffective by these amendments.

ADOPTED this \_\_\_\_\_ day of \_\_\_\_\_, 2021.

# Exhibit A: Proposed Amendments to the Whatcom County Code to Allow and Regulate Tiny Homes & to Allow Duplexes in Planned Unit Developments

## Regarding Tiny Homes:

### TITLE 20 ZONING

#### Chapter 20.80 Supplementary Requirements

##### 20.80.950 Mobile Home (including Manufactured Tiny Home) and Recreational Vehicle Park Standards.

All mobile home ~~and recreational vehicle~~ parks shall meet the following standards:

- (1) Mobile home parks shall be developed through either a Binding Site Plan pursuant to WCC Title 21 (Land Division) or by condominium pursuant to Chapter 64.34 RCW (Condominium Act). In either case:
  - (a) An organization or individual with proper funding to maintain common facilities and operate the parks shall be provided.
  - ~~(a)~~(b) A declaration of covenants addressing and ensuring long-term compliance with the appropriate requirements herein shall be submitted for review and approval.
  - (c) Each rental or lease space shall be numbered on the site plan and the number shall be prominently displayed on the site.
- (2) Where not specified by the applicable zoning district, mobile home parks shall have:
  - (a) A maximum density of ~~seven~~7 lease spaces per acre when public water and sewer are provided;
  - (b) A maximum density of ~~three~~3 lease spaces per acre when public water and sewer are not provided;
  - (c) A minimum parcel size of ~~two~~2 acres.
- ~~(3) Where not specified by the applicable zoning district, recreational vehicle parks shall have:~~
  - ~~(a) A maximum density of 15 lease spaces per acre when public water and sewer are provided;~~
  - ~~(b) A maximum density of seven lease spaces per acre when public water and sewer are not provided;~~
  - ~~(c) A minimum parcel size of two acres.~~
- ~~(4)~~(3) Mobile home parks shall provide storage area for boats, recreational vehicles, and other large items. Recreational vehicle parks may provide such storage areas. Said storage areas shall be screened consistent with these standards.
- ~~(5)~~(4) Recreational vehicles set up for occupancy shall be at least 10 feet from each other and any structures on the property. Whether or not intended for occupancy, they shall be at least 10 feet from all structures not on the same property. Within a mobile home park, no mobile home, other major structure, or outdoor storage shall be located closer than 20 feet to the perimeter of the site.

**Comment [CES1]:** Mobile home and RV park standards have been separated into 2 sections, with the appropriate existing & new rules placed into each

**Comment [CES2]:** A requirement of ESSB 5383 for tiny home parks (and it should be for mobile home parks).

~~(6)~~(5) Along the edges of mobile home parks, walls or vegetative screening shall be provided where needed to protect residents from undesirable views, lighting, noise, or other off-site influences, or to protect occupants of adjoining property from potentially adverse influences within the mobile home park. In particular, extensive off-street parking areas and service areas for loading and unloading other than passenger vehicles, and for storage and collection of trash and garbage, shall be screened.

~~(7)~~ A 30-foot landscaped buffer area or screening composed of suitable native vegetation shall be placed around all common storage areas and at all perimeters of any recreational vehicle park. The purpose of said buffer is to protect on a year-round basis the adjacent property or roadways from unsightliness, visual distraction and/or noise impacts. The buffer area may be reduced where it can be demonstrated that alternative screening can adequately accomplish the purposes stated in this subsection. Perimeter buffers shall be supplemented by a fence or other device where trespass is a potential problem. No structures, development or other activities shall occur within any buffer areas; provided, that trails may be located within those buffer areas which are at least 50 feet in width.

~~(8)~~(6) There shall be landscaping developed consistent with WCC 20.80.300 (Landscaping) within open areas of ~~the mobile home park and recreational vehicle~~ parks not otherwise used for park purposes. Such open areas and landscaping shall be continually and properly maintained.

~~(9)~~(7) Mobile homes ~~and recreational vehicle~~ parks shall keep 40% ~~percent~~ of the site free of buildings, structures, parking areas, and other impervious surfaces.

~~(10)~~ ~~An organization or individual with proper funding to maintain common facilities and operate the parks shall be provided.~~

~~(11)~~(8) On-site recreational amenities with at least one substantial facility serving the users of a park or identified area shall be provided. Such substantial facilities may include tennis courts, children's play areas with equipment, or a swimming pool. The type and size of facility shall be appropriate to the type and amount of clientele being served.

~~(12)~~ ~~Maximum length of stay in recreational vehicle parks shall not exceed 180 days for any one-year time period.~~

~~(13)~~(9) Interior roads within mobile home ~~and recreational vehicle~~ parks shall be private, unless the County Engineer determines that the development of public roads is necessary.

~~(14)~~(10) For each mobile home space there shall be provided and maintained at least two parking spaces conforming ~~with to zoning ordinance~~ the requirements of WCC 20.80.500, et seq. (Off-Street Parking and Loading Requirements). In addition to occupant parking, guest and service parking shall be provided within the boundaries of the park at a ratio of one parking space for each two mobile home spaces.

~~(15)~~(11) There shall be a minimum of 10 feet of separation maintained between all mobile homes on the site. Accessory structures may be located no closer than 10 feet to any mobile home or five feet to other accessory structures.

~~(12)~~ Each rental space shall be numbered on the site plan and the number shall be prominently displayed on the site. All mobile home parks shall comply with WCC Chapter 24.04 (Recreational Vehicle Park and Subdivision Rules) regarding utility provision. Utility (wastewater, water, electricity) hook-ups shall be provided for each rentable or leasable space.

Comment [CES3]: Moved above

**20.80.955 Recreational Vehicle (including Tiny Homes on Wheels) Park Standards.**

All recreational vehicle parks shall meet the following standards:

- (1) Recreational vehicle parks shall be developed through either a Binding Site Plan pursuant to WCC Title 21 (Land Division) or by condominium pursuant to Chapter 64.34 RCW (Condominium Act). In either case:
  - (a) An organization or individual with proper funding to maintain common facilities and operate the parks shall be provided.
  - (b) A declaration of covenants addressing and ensuring long-term compliance with the appropriate requirements herein shall be submitted for review and approval.
  - (c) Each rental or lease space shall be numbered on the site plan and the number shall be prominently displayed on the site.
- (2) Where not specified by the applicable zoning district, recreational vehicle parks shall have:
  - (a) A maximum density of 15 lease spaces per acre when public water and sewer are provided;
  - (b) A maximum density of 7 lease spaces per acre when public water and sewer are not provided;
  - (c) A minimum parcel size of 2 acres.
- (3) Recreational vehicles set up for occupancy shall be at least 10 feet from each other and any structures on the property. Whether or not intended for occupancy, they shall be at least 10 feet from all structures not on the same property.
- (4) A 30-foot landscaped buffer area or screening composed of suitable native vegetation shall be placed around all common storage areas and at all perimeters of any recreational vehicle park. The purpose of said buffer is to protect on a year-round basis the adjacent property or roadways from unsightliness, visual distraction, and/or noise impacts. The buffer area may be reduced where it can be demonstrated that alternative screening can adequately accomplish the purposes stated in this subsection. Perimeter buffers shall be supplemented by a fence or other device where trespass is a potential problem. No structures, development, or other activities shall occur within any buffer areas; provided, that trails that are at least 5 feet in width may be located within those buffer areas.
- (5) There shall be landscaping developed consistent with WCC 20.80.300 (Landscaping) within open areas of recreational vehicle parks not otherwise used for park purposes. Such open areas and landscaping shall be continually and properly maintained.
- (6) Recreational vehicle parks shall keep 40% of the site free of buildings, structures, parking areas, and other impervious surfaces.
- (7) On-site recreational amenities with at least one substantial facility serving the users of a park or identified area shall be provided. Such substantial facilities may include tennis courts, children's play areas with equipment, or a swimming pool. The type and size of facility shall be appropriate to the type and amount of clientele being served.
- (8) Maximum length of stay in recreational vehicle parks shall not exceed 180 days for any one-year time period.
- (9) Interior roads within recreational vehicle parks shall be private, unless the County Engineer determines that the development of public roads is necessary.
- (10) All recreational vehicle parks shall comply with WCC Chapter 24.04 (Recreational Vehicle Park and Subdivision Rules) regarding utility provision. Utility (wastewater, water, electricity) hook-ups shall be provided for each rentable or leasable space designated for park model trailers and Type 1

**Comment [CES4]:** A requirement of ESSB 5383 for tiny home parks.

**Comment [CES5]:** Moved from 20.97.340 (definition of RV Park), as these are regulations, not definitions.

**Comment [CES6]:** A requirement of ESSB 5383 for tiny home parks.

THOWs. Spaces designated solely for self-contained recreational vehicles may use communal facilities.

## Chapter 20.97 Definitions

### **20.97.250 Mobile Home (a.k.a, Manufactured Home).**

“Mobile home” means a dwelling unit designed for long-term human habitation by one family and having complete living facilities; constructed and fabricated into a complete unit at a factory and capable of being transported to a location of use on its own chassis and wheels; identified by a model number and serial number by its manufacturer; and designed primarily for placement on an impermanent footing. This includes manufactured tiny homes (see “Tiny Home.”) A unit ~~which that~~ was originally built as a mobile home but ~~which~~ has substantially lost its mobility ~~through by~~ being placed on a permanent footing, the tongue and axle removed, skirting is installed, and ~~which that~~ wholly meets state standards for such units, shall not be considered to be a mobile home and shall be treated as a single-family dwelling for the purpose of this ~~ordinance code only when it is fixed to a permanent footing and tongue and axle have been removed and skirting installed.~~

### **20.97.255 Mobile Home Park.**

“Mobile home park” means any parcel or adjacent parcels of land in the same ownership ~~which that~~ is ~~utilized~~ used for occupancy by more than two mobile homes. This term shall not be construed to mean campgrounds, recreational vehicle parks, or tourist facilities for camping.

### **20.97.292 Park Model Trailer.**

“Park model trailer” means a trailer designed to provide seasonal or temporary living quarters; ~~which are not self-contained and thus may needs to~~ be used with temporarily connections to utilities ~~necessary~~ for operation of installed fixtures and appliances; ~~it~~ has a gross trailer area not exceeding 400 square feet; ~~or and~~ is approved by the state as a park model trailer. This includes Type 1 THOWs (see “Tiny Home on Wheels”).

### **20.97.335 Recreational Vehicle.**

“Recreational vehicle” means a motor vehicle; or portable structure capable of being transported on ~~the~~ highways by a motor vehicle; ~~that is~~ designed and intended for casual or short-term human occupancy for travel, recreational, and vacation uses without a permanent foundation; identified by a model number (RV), serial number, and vehicle registration number; and equipped with limited water storage and other self-contained living facilities. For the purposes of these regulations, the term “recreational vehicle” shall include self-contained campers, motor-homes, Type 2 Tiny Home on Wheels, and travel trailers, ~~and but~~ shall not include park model trailers or Type 1 Tiny Home on Wheels, as they are not self-contained units.

### **20.97.340 Recreational Vehicle Park.**

“Recreational vehicle park” means a parcel of private land in which three or more contiguous sites are primarily for occupancy by recreational vehicles for travel, recreation, or vacation uses. ~~For~~ Within

mobile home parks, only spaces that are designated and/or are used for recreational vehicles shall constitute a recreational vehicle park. ~~Recreational vehicles set up for occupancy shall be at least 10 feet from each other and any structures on the property. Whether or not intended for occupancy, they shall be at least 10 feet from all structures not on the same property.~~ For the purposes of these regulations, the term “recreational vehicle park” shall include camping clubs.

**Comment [CES7]:** These are regulations, not definitions, and have been moved to 20.80.955.

#### **20.97.435.03 Tiny Home.**

~~A tiny home is a dwelling unit that is 400 square feet or less in floor area (excluding sleeping lofts). For the purposes of this code there are two types of tiny homes, as described below. For Tiny homes on Wheels see WCC 20.97.435.04.~~

**Comment [CM8]:** This portion matches the definition in appendix Q in the IRC. The size is also consistent with the definition of a park model in WAC 296-150P-00200.

- ~~1. *Site-Built Tiny Home.* A tiny home built on-site on a permanent foundation that meets the minimum requirements of the International Residential Code (IRC), including provisions of Appendix Q, and is reviewed and inspected by Whatcom County. For the purposes of this code they are equivalent to and are permissible under the same rules as any standard single-family dwelling.~~
- ~~2. *Manufactured Tiny Home.* A factory-built tiny home bearing a certification tag from the Washington State Department of Labor and Industries (L&I) or other approved third party inspection agency stating it is approved for use as a single-family residence per the current edition of the International Residential Code (IRC) or Housing and Urban Development (HUD) requirements. Manufactured tiny homes usually have wheels and a chassis when they come out of the factory, and typically have the wheels removed prior to placing it on its manufacturer-approved foundation. For the purposes of this code they are equivalent to and are permissible under the same rules as any standard mobile home.~~

#### **20.97.435.04 Tiny Home on Wheels (THOWs)**

~~A Tiny Home on Wheels is a portable structure licensed to be transported on the highways by a motor vehicle; designed and intended for casual or short-term human occupancy for travel, recreational, vacation and other temporary uses without a permanent foundation; in a space of 400 square feet or less in floor area (excluding sleeping lofts). For the purposes of this code there are two types of tiny homes on wheels, as described below.~~

- ~~1. *“Type 1 THOW”* is a THOW that is not self-contained, and thus needs to be temporarily connected to utilities necessary for operation of installed fixtures and appliances. For the purposes of this code they are equivalent to and are permissible under the same rules as for Park Model Trailers.~~
- ~~2. *“Type 2 THOW”* is a THOW that is self-contained and may use communal utility services (water, wastewater). For the purposes of this code they are equivalent to and are permissible under the same rules as for Recreational Vehicles (RVs).~~

## Regarding Duplexes in Urban Zones via Planned Unit Developments:

### Title 20 ZONING

#### Chapter 20.85 Planned Unit Developments (PUD)

##### 20.85.050 Permitted Uses.

**.051** Uses ~~outright permitted-allowed~~ in a planned unit development shall include those permitted, accessory, and conditional uses allowed in the underlying zone district(s), ~~as well as-and~~ such other uses as provided in WCC 20.85.052 ~~to-through~~ 20.85.055. For areas located within a Water Resource Protection Overlay District, the more restrictive use provisions of Chapter 20.71 WCC shall apply.

**.052** In addition to the uses allowed in the underlying zone, the following uses shall be allowed outright ~~where-when~~ they are only serving the planned unit development and ~~where~~ all other applicable standards are met:

- (1) Community buildings;
- (2) Indoor recreation facilities, including athletic clubs or fitness centers, racquetball courts, swimming pools, tennis courts, or other similar uses;
- (3) Outdoor recreation facilities, including swimming pools, tennis courts, recreational trails, or similar use; and
- (4) Recreational vehicle storage areas.

**.053** ~~Even though they may not be allowed in the underlying zone(s).~~ A planned unit development may also authorize ~~add the following additional~~ land uses ~~activities, as follows;~~ provided the criteria of WCC 20.85.054 are met:

- (1) ~~For~~ in the Urban Residential and Rural zones, duplexes and multifamily dwellings consistent with the density requirements of the underlying zone, except as that may be modified by the provisions of WCC 20.85.108 (Density Increases). The number of units attached may be greater than would otherwise be allowed by the underlying zoning.
- (2) In ~~For~~ the Urban Residential and Urban Residential Medium zones, duplexes and those uses allowed in the Neighborhood Commercial zone ~~are may~~ also be permitted. In addition, both resort- and non-resort-oriented transient accommodations, such as inns or hotels, may be permitted; provided, that:
  - (a) The total number of sleeping units shall not exceed ~~50%-percent~~ of the total number of dwelling units that would be allowed on the property by the underlying zone regulations;
  - (b) Each sleeping unit shall count as one dwelling unit for the purpose of determining the total number of dwelling and sleeping units, in combination, permitted on the property;
  - (c) It can be demonstrated that the overall development will not generate more traffic than conventional residential development at the density allowed in the zone.
- (3) In ~~For~~ the General Commercial zone, those uses allowed in the Urban Residential Medium zone are ~~appropriate~~ allowed.
- (4) In ~~For~~ the Resort Commercial zone:

Comment [CES9]: Policy change

Comment [CES10]: Policy change

- (a) Multiple single-family dwellings per lot are permitted if developed as condominiums under state law; and
- (b) Single-family attached dwellings (at a base gross density of ~~seven~~ 7 units/acre); ~~and~~.
- (5) ~~In For~~ the Light Impact Industrial zone, those uses allowed in the Urban Residential Medium, Neighborhood Commercial, ~~and/or~~ General Commercial zones are ~~appropriate~~ allowed.

**.054** In order ~~to expand for those additional~~ uses ~~listed allowed~~ in WCC 20.85.053 ~~to be authorized~~, the applicant ~~shall~~ must demonstrate:

- (1) That the primary land use activity of the planned unit development ~~shall be those uses~~ is one allowed by the underlying zone district;
- (2) That the ~~expanded~~ additional uses will benefit and serve the residents or employees of the proposed planned unit development; and
- (3) That all other applicable approval criteria and standards are met.

**.055** Where a proposed development is located in two or more zone districts, the uses allowed in the applicable districts may be located on any portion of the site; provided, that all applicable standards are met.

**.056** For purposes of determining appropriate standards, the requirements of the zone district allowing the use would apply. If the use is allowed by two or more districts, the lesser standards would apply.

**Attachments:** Proposed Ordinance

**PROPOSED BY:** Executive  
**INTRODUCTION DATE:** November 09, 2021

**ORDINANCE NO. \_\_\_\_\_**  
**ORDINANCE AUTHORIZING THE LEVY OF TAXES**  
**FOR COUNTYWIDE EMERGENCY MEDICAL PURPOSES FOR 2022**

**WHEREAS**, pursuant to Home Rule Charter Section 6.10 the County Executive is required to submit for Council consideration a budget and proposed tax and revenue ordinances necessary to raise sufficient revenues to balance the budget; and,

**WHEREAS**, the County Council has approved a budget for the 2021–2022 biennium, including all sources of revenues and anticipated expenditures on November 24, 2020; and,

**WHEREAS**, the County Council, in the course of considering the mid-biennium review and modification has reviewed all sources of revenue and examined all anticipated expenses and obligations; and,

**WHEREAS**, the County Council has determined it is not necessary to increase the Countywide Emergency Medical Fund property tax levy for 2022, and,

**WHEREAS**, the County Council has held public hearings regarding the county biennial budget and mid-biennium review, which included property tax revenues, and other revenues;

**NOW, THEREFORE, BE IT ORDAINED AND ESTABLISHED** by the Whatcom County Council that amounts collected through the Countywide Emergency Medical levy shall be limited to the amount of 2021 taxes, increased for the addition of new construction and improvements to property and any increase in the value of state assessed property. A property tax increase, in addition to the amount resulting from the addition of new construction and improvements to property and any increase in the value of state-assessed property, is hereby authorized for the 2022 levy in the amount of \$0, which is a percentage increase of 0% from the previous year.

Originator: M Caldwell

Year 2 2022

Add'l FTE

Priority 1

Name of Request: 2022 wage and benefit adjustments-Assessor

**X**

Department Head Signature (Required on Hard Copy Submission)

Date

Costs:	Object	Object Description	Amount Requested
	6110	Regular Salaries & Wages	\$144,253
	6210	Retirement	(\$32,030)
	6230	Social Security	\$11,048
	6245	Medical Insurance	\$35,345
	6255	Other H&W Benefits	\$15,339
	6259	Worker's Comp-Interfund	\$1,040
	6269	Unemployment-Interfund	\$386
	<b>Request Total</b>		<b>\$175,381</b>

**1a. Description of request:**

To add 2% COLA, reduce retirement rates, change other benefit rates and add back 2 FTEs previously "frozen".

**1b. Primary customers:**

**2. Problem to be solved:**

**3a. Options / Advantages:**

**3b. Cost savings:**

**4a. Outcomes:**

**4b. Measures:**

**5a. Other Departments/Agencies:**

**5b. Name the person in charge of implementation and what they are responsible for:**

**6. Funding Source:**

General Fund

# Supplemental Budget Request

Status: Pending

## Assessor

Suppl ID # 3422	Fund 1	Cost Center 300	Originator: Rebecca Xczar
Year 2 2022	Add'l FTE <input type="checkbox"/>	Priority 1	

Name of Request: Postage

X

Department Head Signature (Required on Hard Copy Submission)

Date

Costs:	Object	Object Description	Amount Requested
	6710	Postage/Shipping/Freight	\$6,000
	<b>Request Total</b>		<b>\$6,000</b>

### 1a. Description of request:

The office is required to mail change of value notices annually, as well as mail personal property renditions and personal property notices annually, and senior exemption renewals. Postage is required to meet these statutory obligations. Costs of postage has increased.

### 1b. Primary customers:

Property owners in Whatcom County.

### 2. Problem to be solved:

Postage costs have increased. Mailing notices is a statutory requirement. The increase in postage costs was not previously known or budgeted for.

### 3a. Options / Advantages:

There is no other option. Mailing notices is a statutory requirement.

### 3b. Cost savings:

Notices are bundled when there is more than 1 notice going to the same owner, to reduce postage needed. We also offer eNotice and hope to have more proeprty owners sign up this year. There is no cost savings to the increased cost of postage.

### 4a. Outcomes:

The office will meet its statutory requirements annually.

### 4b. Measures:

Notices will be mailed.

### 5a. Other Departments/Agencies:

No

### 5b. Name the person in charge of implementation and what they are responsible for:

### 6. Funding Source:

General fund.

**Department Head Signature (Required on Hard Copy Submission)** **Date**

<i>Costs:</i>	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	6630.902	Professional Services	\$100,000
	<i>Request Total</i>		<i>\$100,000</i>

**1a. Description of request:**

The Whatcom County Council adopted Ordinance 2021-045 on July 13, 2021 to establish an independent commission to review our community's response to the COVID-19 pandemic and identify lessons learned and opportunities for improvement. On September 14, 2021, Council Committee of the Whole approved staff to submit a budget supplement of \$100,000. This budget supplement will fund the consultant contract to complete the review.

**1b. Primary customers:**

Businesses and residents in Whatcom County

**2. Problem to be solved:**

A review of the pandemic response will enable the county to be better prepared for the next public emergency.

**3a. Options / Advantages:**

An independent review of county operations and community coordination will provide insight for improvements.

**3b. Cost savings:**

Identifying lessons learned and opportunities for improvement will help the county save time and money when called upon to respond to the next public emergency.

**4a. Outcomes:**

The consultant will create a final report including data gathered, recommendations, and updates suggested for the Emergency Management Plan.

**4b. Measures:**

Success of this effort will be the delivery of a final report with recommendations for the next emergency response and for the next update to the Emergency Management Plan.

**5a. Other Departments/Agencies:**

All staff participating in the pandemic response will be called upon to provide information and feedback to the consultant for this effort, including Health Department, Information Technology, Sheriff's Office, and other partner agencies in Whatcom County.

**5b. Name the person in charge of implementation and what they are responsible for:**

The special commission/consultant will work with key health department and emergency management staff, as well as staff from partner agencies to receive data and feedback.

**6. Funding Source:**

General fund

for interested citizens.

Those efforts are not enough on their own to inform the community about the work of the IPRTF and engage their participation in the process. 1. Creating a campaign for select topics will get key messages to as many individuals as possible. 2. Creating a framework for future messaging campaigns will empower Task Force members and staff to continue engaging with the public on a meaningful level.

### 3b. Cost savings:

N/A

### 4a. Outcomes:

Deliverables will include campaign materials; messaging and other document templates; a written guide of best practices, guidelines, and tips for developing messages and content; and a final report to include: 1. An Excel spreadsheet that lists all target audience groups and the appropriate content type and distribution channel(s) for each group. 2. Templates for future marketing and outreach materials. 3. Recommendations for improvements to existing communications efforts.

### 4b. Measures:

1. Launch of communications campaign for 3-4 select Task Force initiatives. 2. Receipt of deliverable documents and reports. 3. Included in the scope of work requirements to develop a process for evaluating the success of the contracted and future communication campaigns.

### 5a. Other Departments/Agencies:

The deliverables will benefit other departments and stakeholders, but will not impose a burden on other departments, their budgets, or their staff.

### 5b. Name the person in charge of implementation and what they are responsible for:

The IPRTF and its Steering Committee will oversee the contractor/team. No other department or agency outside the County Council Office will be responsible for implementation.

### 6. Funding Source:

General fund.

	6650	Ct Eval/Investigations	\$50,000
	8301	Operating Transfer In	(\$182,415)
	<b>Request Total</b>		<b>\$0</b>

**1a. Description of request:**

Management of the backlog of cases created by pandemic related cancelation and rescheduling of court hearings. In addition, these funds will be used to maintain ongoing workload increases created by new processes created to keep the court in operation during the pandemic. This can be achieved by hiring an additional receptionist and court clerk position, along with using the services of pro tem judicial officers.

**1b. Primary customers:**

The public, prosecutors, public defenders, civil attorneys, and others court users.

**2. Problem to be solved:**

Management of caseload backlog and ongoing support of new pandemic related processes in District Court:

1. Remote hearings

- a. Pre-pandemic, the court did not conduct any remote hearings
- b. Takes significantly longer for court clerks to prepare for and coordinate remote hearings. This includes processing remote hearing requests, adding the request and entering the email address into the record, preparing the technology in the courtroom, sending zoom links, processing additional log sheets, and downloading the zoom recordings, in addition to having to hand address and mail court documents to those that attended the hearing remotely.
- c. Takes longer for the Judicial Officer to conduct remote hearings. Infraction calendars now take approximately 4 times as long when compared to pre-pandemic.
- d. Creates a significant increase in phone call and email traffic over what was experienced pre-COVID.
- e. Remote hearings will continue to be offered as the pandemic appears to resolve.

2. Email acceptance of court documents

- a. Pre-pandemic emailed documents were not accepted by District Court. The emails are more time consuming and create additional workload as they need to be printed and responded to.
- b. Email acceptance of court documents will continue to be offered as the pandemic appears to resolve.
- c. Pre-pandemic email inquiries (in addition to court documents) were not an available option. Staff now

respond to 30-50 emails each day.

3. Backlog of criminal cases.

a. During the pandemic, criminal hearings were being canceled and rescheduled at the rate of approximately 900-1100 a month. Cause was found to delay speedy trial timelines.

b. Criminal cases are backlogged due to the fact that District Court did not conduct any jury trials from April, 2020 through June, 2021.

c. The backlog continues to grow as District Court is now only able to conduct one jury trial per week.

4. Backlog of civil case processing

a. Due to gubernatorial directives, garnishments were suspended for many months which in turn created a backlog of delayed data entry, judicial review and case processing.

b. The suspension of civil trials have created a backlog.

5. Backlog of infraction cases

a. During the pandemic, infraction hearings were canceled and rescheduled. Cause was found to delay speedy trial timelines.

b. During the pandemic, the number of cases per calendar were reduced because of the amount of processing time the remote hearings require.

6. Jury Coordination

a. Jury coordination during the pandemic has continued.

b. Pre-pandemic Jury check in/orientations took one staff member. This process now takes a minimum of five staff members to assure safe social distancing.

7. Online infraction program

a. Although this option was available pre-pandemic, the use of this program has increased significantly during the pandemic. Processing cases with this program are more time consuming than in person hearings.

### 3a. Options / Advantages:

Eliminating improved customer service options for the public and continue to be unable to adequately process backlogged cases.

### 3b. Cost savings:

N/A

### 4a. Outcomes:

Successful management of backlogged cases and maintenance of pandemic related customer service improvements.

### 4b. Measures:

### 5a. Other Departments/Agencies:

### 5b. Name the person in charge of implementation and what they are responsible for:

	<b>Request Total</b>		<b>\$136,823</b>

### 1a. Description of request:

The County Executive is requesting expenditure authority for a new position to provide project management and administrative oversight for the County's strategic initiatives. The new position will have the title of Director of Strategic Initiatives and will be responsible for County initiatives aimed at addressing such community-wide issues as child care, climate change, behavioral health and housing, as well as diversity, equity and inclusion work within County Government.

### 1b. Primary customers:

All residents of Whatcom County.

### 2. Problem to be solved:

The pandemic has disrupted our community in many ways and exacerbated longstanding problems. The COVID-19 Community Health Impact Assessment presented by the Health Department in July 2021 identified some of the most acute problems: an emerging child care crisis; social, racial and economic disparities in school readiness; accelerated erosion of housing affordability; heightened expression of behavioral and mental health issues such as anxiety, depression, and substance use; and a sharp surge in homeless families with children.

Simultaneously, new funding streams have emerged to address both immediate COVID impacts (ARPA) and long-term issues (other state and federal programs for child care, housing, climate resilience, broadband, etc.).

The County Executive's Office needs to increase its administrative capacity to respond commensurately to emerging and longstanding needs and to meet the public's rising expectations for proactive problem-solving. With the increased availability of state and federal resources to address issues facing our community, it is important that the County Administration have sufficient capacity to access and deploy these resources.

### 3a. Options / Advantages:

# Supplemental Budget Request

Status: Pending

## Executive

Suppl ID # 3520

Fund 1

Cost Center 1200

Originator: Tawni Helms

The County Administration has received requests from advisory boards and community advocacy groups to create separate offices in the Executive's Office to address specific issues, such as the Office of Child & Family and Office of Climate Action. While such an approach has symbolic appeal, it would be much costlier and create unnecessary competition for resources.

Establishing the position of Director of Strategic Initiatives is a leaner approach to addressing the key challenges facing Whatcom County. Furthermore, there is a precedent for having a special projects manager in the Executive's Office, and previous administrations have found this approach effective.

Retaining the status quo, where the countywide administrative burden rests on the Executive and Deputy Executive, would inhibit the Administration's ability to adequately respond to current needs and meet the community's expected level of service.

### 3b. Cost savings:

Creating a single position to manage multiple strategic initiatives represents a cost-effective and fiscally responsible approach to bolstering administrative capacity.

The alternative of hiring multiple directors would incur high costs by severalfold. The alternative of retaining the status quo would undermine the County's ability to address critical social and economic problems, having a long-term impact on the community's socio-economic health with the fiscal impacts resonating for many years to come.

### 4a. Outcomes:

Significant preparatory work has been done with regard to the Child & Family Action Plan and the Climate Action Plan, with outcomes identified and timelines established. Metrics will be developed for other strategic initiatives as well.

### 4b. Measures:

Each strategic initiative will have its own set of measurable outcomes, and the Director of Strategic Initiatives will regularly report on results to the County Executive and County Council.

### 5a. Other Departments/Agencies:

N/A

### 5b. Name the person in charge of implementation and what they are responsible for:

**1a. Description of request:**

We are requesting increased spending authority for substance use prevention services due to an increase in the 2021 Substance Abuse Block Grant revenue that will continue into 2022. This funding provides for the continuation of support for substance use disorder outreach services provided by Opportunity Council's Homeless Outreach Team (HOT). This is a continuation of a grant received since 2017. This funding supports street outreach and care coordination to get people into assessments and treatment. He/she will also provide capacity for HOT to ensure appropriate care, including referrals to syringe exchange, treatment, mental health services, health services, and housing.

**1b. Primary customers:**

Opiate addicts and people with other substance use disorders that are homeless.

**2. Problem to be solved:**

The Homeless Outreach Team (HOT) lack clinical support for substance use disorders (SUD), yet, more than 80% of the people they contact have SUD issues.

**3a. Options / Advantages:**

To ensure professional SUD services on the HOT and to ensure appropriate interventions for those who need services.

**3b. Cost savings:**

Services will be contracted with a local provider.

**4a. Outcomes:**

Ensure access to SUD services for opiate addicted people who are homeless and provide coordinated care to housing.

**4b. Measures:**

Number of people getting in for SUD assessment Number of people served Number of people getting into other SUD services, such as syringe exchange or Suboxone clinics.

**Name of Request: Emergency Rental Assistance 2022**

**X**  
 Department Head Signature (Required on Hard Copy Submission) \_\_\_\_\_ Date \_\_\_\_\_

Costs:	Object	Object Description	Amount Requested
	4331.2102	American Rescue Plan Act	(\$3,568,628)
	6610	Contractual Services	\$3,500,000
	<b>Request Total</b>		<b>(\$68,628)</b>

**1a. Description of request:**

The Health Department requests expenditure authority of new federal funding from the US Treasury to provide housing assistance for households in Whatcom County. 90% of these emergency rental assistance funds will be used for payment of rent and utilities among households behind on expenses. The remaining ten percent will be available for housing stability services including personnel required to deliver assistance. The Health Department will work with local housing support service providers to deliver the program. The grant total of \$6,911,585 provides funding beginning in 2021 through September 2022.

**1b. Primary customers:**

Households in Whatcom County who are below 80% of the Area Median Income (AMI) and have rent or utility obligations that place them at risk of losing their housing or utilities without financial assistance. Households below 50% of the AMI are prioritized.

**2. Problem to be solved:**

The COVID pandemic has created an economic crisis for many households who have experienced a loss of income and/or a significant increase in costs. This crisis has caused many households to be in arrears or unable to continue paying lease obligations or utility bills. Upon termination of the current Eviction Moratorium, it is expected that many households will lose their housing if financial assistance is not provided. According to the Census Bureau Pulse Survey, approximately 14% of the Washington State renters are not caught up on rent payments, placing them at risk of eviction. This equates to about 4,600 households in Whatcom County.

**3a. Options / Advantages:**

Whatcom County had the option to accept the federal grant, or to deny the direct funds and defer our share to the state. In order to maximize the amount Whatcom County could receive, the county chose to receive the funds directly from the US Treasury Department. Receiving the monies directly expedited the ability to utilize the funds, thereby affording immediate planning efforts for distribution of assistance.

**3b. Cost savings:**

Households that might otherwise experience loss of stable housing and perhaps exit to homelessness can now remain in their homes. Stable housing promotes opportunities for gainful employment, education, family and social ties. This provides a positive return on the investment as households can continue to contribute to the local economy with no need to rely on other public assistance.

**4a. Outcomes:**

Eligible households will receive up to 12 months of rent and utility assistance, distributed in no more than three-month increments. Evictions will be prevented.

**4b. Measures:**

The program anticipates serving approximately 130 households per month, and anticipates spending the

	6320	Office & Op Supplies	\$5,000
	6610	Contractual Services	\$20,000
	<b>Request Total</b>		<b>(\$118,735)</b>

### 1a. Description of request:

In order to support COVID response efforts, the Health Department requests spending authority of dedicated grant funding to support the on-going COVID response operations through December 31, 2022. This funding request will support the continuation of 4 positions established during 2021 to respond to the COVID pandemic, including 3 full-time, benefitted, short term nurses and a COVID manager. These positions are funded for a full 12 months.

In November 2020, Council approved ASR #2021-6303 for an initial Department of Health COVID ELC grant to fund temporary staff for the COVID response through June 2021. The second COVID ELC grant amendment ASR #2021-3198 extended funding for these positions through December 2021. This is part of the Health Department's shift to a more stable staffing response to the COVID pandemic response and recovery efforts.

In addition, these funds include contractual services such as testing site communication or planning as necessary to prevent the spread of COVID.

### 1b. Primary customers:

Customers are all residents of Whatcom County, who will benefit from timely case and contact investigations, testing availability, quarantine and isolation support, warehouse/PPE management and distribution, and communication support.

### 2. Problem to be solved:

Temporary positions create a structural barrier for stable and consistent support. Temporary employees may only work full time for three months and then drop hours to 16 hours per week. For many of these positions, it takes a full three months for proficiency. This challenge contributes to turnover in favor of full time positions, instability in staffing, severe administrative burden to continually recruit and hire additional temporary staff, and reduced capacity to respond to the pandemic.

### 3a. Options / Advantages:

Employees will be advantaged by having benefits, especially among those in higher COVID risk roles, and by having some stability and predictability in their employment status. The County will be advantaged by having a more stable workforce and the ability to attract and retain well-qualified individuals needed to respond to COVID.

### 3b. Cost savings:

Some of these positions will replace the need for higher cost contractors. The more effective the

response, the sooner the county will recover economically.

**4a. Outcomes:**

More staff available to assist in the response, less administrative time spent in recruitment and hiring, more efficient operations with better trained and more experienced staff, less reliance on costly contracts.

**4b. Measures:**

Adequate community testing; 90% of cases called within 24 hours; 80% of contacts called within 48 hours; daily monitoring of all people in isolation and quarantine; timely contact with businesses, schools, day cares, healthcare organizations, and long term care facilities.

	<b>Request Total</b>		<b>(\$48,303)</b>

### 1a. Description of request:

The Health Department is requesting expenditure authority of dedicated grant funding to support the COVID response. The original grant expenditure authority was approved in 2021 by Council with ASR #2021-3200. This request for an additional \$82,239 in expenditure authority will allow the Health Department to finish spending the full grant award of \$853,429. This COVID Relief Fund grant began in 2021 and expires December 2022.

This funding would support the continuation of a full-time, benefitted, short term clerk/site scheduler through December 2022. This regular position is funded for 12 months. This request is part of the Health Department's shift to a more stable staffing strategy to the COVID pandemic response and recovery efforts. In addition, these funds will cover contractual services supporting vaccination planning and community resource information.

### 1b. Primary customers:

Customers are all residents of Whatcom County, who will benefit increased coordination and access to COVID-19 vaccine.

### 2. Problem to be solved:

Temporary positions create a structural barrier for stable and consistent support. Temporary employees may only work full time for three months and then drop hours to 16 hours per week. For many of these positions, it takes a full three months for proficiency. 	6259	Worker's Comp-Interfund	\$437
	6269	Unemployment-Interfund	\$257
	<b>Request Total</b>		<b>\$137,999</b>

**1a. Description of request:**

Request to add .6FTE authority and funding for the purposes of having two Co-Health Officers, each at .6FTE.

**1b. Primary customers:**

Residents of Whatcom County, who will benefit from additional medical expertise and guidance from the health department; healthcare providers and other partners, who will have more access to public health medical professionals and coordination around programs, communicable and reportable diseases, and emergency response; residents who require vital records or other services needing a timely Health Officer review and signature.

**2. Problem to be solved:**

Since 1998, when the previous Health Officer was hired at .6FTE, Whatcom County has grown significantly as have the scope of services provided by the Health Department. In recent years, the previous Health Officer regularly worked more than 24 hours/week, and an additional doctor was hired to cover tuberculosis for 8-10 hours/week. When recruiting for a new Health Officer, there was an opportunity to better staff the role with more FTE authority, including expanding the coordination and leadership within the healthcare community and medical partners.

**3a. Options / Advantages:**

The first option the Health Department initiated was to hire 1 FTE Health Officer and retain the second doctor providing TB support. After two candidates over two searches declined the position because of the low salary relative to clinical practice, the Health Department recognized the need to provide flexibility for a Health Officer to continue in a part-time role. In addition, the TB doctor will transition out this fall, requiring more than 1FTE to support the full scope of work. Having two Health Officers will ensure on-call coverage, provide diverse perspectives for good decision-making, allow continued clinical practice and connection to the medical field, expand the Health Department's ability to continue COVID-initiated collaborations like the Healthcare Coalition, and meet the scope and complexity of our growing county.

**3b. Cost savings:**

The county will not need to utilize a contractor or hire out for physician-level clinical services.

	6320	Office & Op Supplies	\$2,400
	6610	Contractual Services	\$2,000
	7110	Registration/Tuition	\$2,170
	7115	Membership & Assoc Dues	\$400
	<b>Request Total</b>		<b>(\$13,857)</b>

**1a. Description of request:**

The Health Department is requesting expenditure authority of dedicated grant funding. These funds will allow the Health Department to expand testing and treatment among people at risk for latent Tuberculosis (TB) infection and strengthen case finding and treatment for TB disease. Higher rates of TB in our community has moved us into a higher tier and eligible for additional state funding to support local work. Surplus of revenue over expenditures will cover existing personnel currently in the Health Dept budget, as well as departmental overhead.

**1b. Primary customers:**

Persons with active and/or latent TB who reside in Whatcom County, Healthcare providers, Program staff.

**2. Problem to be solved:**

When TB is not identified early it is costly to treat both in terms of health system expenses and long-term impacts on the individual patient.

**3a. Options / Advantages:**

Additional funding will support staff education and training through conferences and membership in the national TB controller's association, enhanced PPE (CAPRS) for working with infectious patients, and a virtual system for monitoring daily medication administration.

**3b. Cost savings:**

Without treatment, latent TB infection can become TB disease, early identification and treatment of TB while still in the latent phase has significant cost savings over later detection where a person might develop drug resistant TB needing costly medications to treat (along with side effects.) It costs about \$500 to treat one person with latent TB infection and can cost over \$100,000 to treat one person with multi drug resistant TB.

**4a. Outcomes:**

Early identification and treatment of active and latent TB in county residents, decreased long term costs to the healthcare system.

**4b. Measures:**

# of persons treated annually

**5a. Other Departments/Agencies:**

Name of Request: Food System Plan

**X**  
 Department Head Signature (Required on Hard Copy Submission) \_\_\_\_\_ Date \_\_\_\_\_

Costs:	Object	Object Description	Amount Requested
	6610	Contractual Services	\$40,000
	<b>Request Total</b>		<b>\$40,000</b>

**1a. Description of request:**

The Health Department is requesting additional expenditure authority for facilitation, drafting, and implementation planning for the Whatcom County Food System Plan (FSP). The FSP, as outlined by the ordinance establishing the Whatcom Food System Committee, is slated to be drafted by the end of 2022. This ASR includes the following activities: 1) hiring a consultant to facilitate this community process, 2) the drafting, editing, and publishing of the FSP.

**1b. Primary customers:**

The primary customers of this process are members of our local food system, which includes food industry laborers, farmworkers, local and regional food producers, fishermen, food security advocates, food waste/recycling organizations and food consumers in Whatcom County.

**2. Problem to be solved:**

This ASR addresses the ongoing and emerging problem of a disconnected local food system. Major factors working against a healthy local food system, such as climate impacts, inadequate access to healthy, affordable food, and inequitable labor practices have been identified in several updates to the Whatcom County Community Food Assessment. The Whatcom County Council committed to addressing these problems by supporting the drafting and implementation of a countywide food system plan, as advised by the Food System Committee.

Twelve percent of Whatcom County residents are food insecure, a percent that does not take into account those who accessed emergency food services through the pandemic. Residents who work in the food service and food processing industries experience inconsistent employment, both by hours per week and weeks per year. This has made them especially economically vulnerable during the pandemic. Despite our rich agricultural and fishing economies, most of what we grow and fish here is exported overseas. We are dependent on sourcing food from outside of our county. New water rights laws are disproportionately impacting local sales farmers. Finally, as identified by both the Climate Impact Advisory Committee and the Solid Waste Advisory Committee, there is a need to address food waste in our community.

The FSP will provide a blueprint for County government to not only address these factors, but will also allow for our county to be more nimble in dealing with new food system challenges in the future.

**3a. Options / Advantages:**

The Ordinance establishing the Food System Committee explicitly outlines the need for a Food System Plan. WCHD has dedicated a staff person to the committee. No other county department has the capacity to carry out this work.

It is possible for the committee to request funding directly from the Whatcom County Council and it is also feasible the committee could apply for federal grants to support this work. These two options, however,

# Supplemental Budget Request

Status: Pending

## Health

## Community Health

Suppl ID # 3471

Fund 1

Cost Center 677350

Originator: Astrid Newell

are likely to take more time. The timeline dictates that the food system plan should be completed by the end of 2022. It has already been delayed a year by the pandemic. This plan is especially important in the COVID recovery response and any more delay may lead to further negative impacts on our community members. While the food system is vast and includes several sectors, providing a public health lens to a food system plan will allow for both immediate and long-term health successes.

### 3b. Cost savings:

Investment in our food system will allow for a more sustainable and equitable food system. Food will become an increasingly expensive commodity, which will disproportionately affect our low-income, rural, and BIPOC residents. These populations already have poorer health outcomes. By outlining a robust plan, we can prevent negative health outcomes. Additionally, by promoting a more local food system, Whatcom County will be able to continue to provide food for our residents and be less dependent on the global food system. If we dedicate resources to strategic planning today, we can ensure a healthy food growing landscape, which will be good for all of our community's producers in the long-term.

### 4a. Outcomes:

- Pre-plan work
  - oReview Community Food Assessment (CFA) and other County plans (such as the Climate Action Plan) (January 2022)
  - oEstablish Food System Plan goals, based on CFA review (January 2022)
- Food System Plan facilitation
  - oGuide Food System Committee in outlining community engagement process for plan (February 2022)
  - oCoordinate community engagement process (February, March 2022)
  - oFacilitate prioritization and decision-making of food system plan elements (March, April 2022)
  - oDevelop metrics and system for data collection for each food system plan goal (April, May 2022)
- Food System Plan finalization
  - oProvide a draft of the Food System Plan (no later than October 2022)
  - oDevelop plan for outlining implementation and sustainability of plan (October 2022)
- Focusing equity
  - oEnsure an equitable design and process (January 2022-October 2022)
  - oFood System Plan reviewed, edited, and adopted by County Council (October-December 2022).

### 4b. Measures:

The FSP will be approved by the Food System Committee and adopted by County Council. Metrics within the plan will be collected.

### 5a. Other Departments/Agencies:

It is likely that a county-wide FSP will require input and coordination with other advisory committees, community groups, and County departments. Specifically, there will be overlap with the Solid Waste Advisory Committee, the Climate Impact Advisory Committee, the Conservation Easement Program, WRIA, Washington State Food Policy Forum, the Marine Resources Committee, and the Agricultural Advisory Committee, as well as the Food Security Taskforce. Some community groups and non-profits that may be impacted are the Whatcom County Foodbank Network, the Whatcom Food Network, Opportunity Council, and WSU extension. Since some of work addresses ag zoning and water rights, it is possible the Planning and Development Services and Public Works departments may be impacted.

### 5b. Name the person in charge of implementation and what they are responsible for:

Costs:	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	4334.0691	HCA - CJTA	(\$98,524)
	6610	Contractual Services	\$95,568
	<i>Request Total</i>		<i>(\$2,956)</i>

**1a. Description of request:**

We are requesting expenditure authority of new grant funding from the state to support treatment services in the jail and in the community. This funding will support the provision of behavioral health services in the jail and the GRACE program.

**1b. Primary customers:**

Individuals with serious mental health disorders, particularly class members of the state's Trueblood lawsuit. Class action members include those people with serious mental illness who need to undergo an evaluation of their competency to stand trial, or who have been deemed incompetent to stand trial as a result of a mental illness and require restoration services from a designated hospital.

**2. Problem to be solved:**

Individuals with behavioral health disorders, especially class action members, have more difficulties than the general population with accessing behavioral health and support services effectively. Decompensation of one's mental illness can lead to hospitalization and increased time in the justice system.

**3a. Options / Advantages:**

This new funding supports the county's efforts to provide intensive services to people involved in the criminal justice system and who have serious mental health disorders. Trueblood funding is intended to help serve people with behavioral health disorders in their communities in an effort to avoid expensive hospitalizations, arrests and incarceration.

**3b. Cost savings:**

These monies are not local funds, but rather derive from a state legislative proviso. Therefore, this decreases the burden on local dollars that might be used for these services.

**4a. Outcomes:**

Outcomes include: Less offender recidivism, increased stability in services, and increased retention in services.

**4b. Measures:**

Number of offenders with serious mental illness served in the jail and by the GRACE program and connected to ongoing services

	<b>Request Total</b>		<b>\$245,735</b>

**1a. Description of request:**

The Health Department is requesting expenditure authority to expand services for children and families. This request aligns with the Executive's establishment of an Office of Strategic Initiatives and creates capacity for that office related to the Child and Family Well-being Initiative. This request also builds capacity within the Health Department to support key childcare initiatives and ARPA distributions related to childcare capacity planning, partnerships and service expansion.

This funding would support the addition of 2 new positions in the health department including a Child and Family Well-being Manager/Strategic Lead and a Childcare Program Specialist.

**1b. Primary customers:**

Whatcom County residents, particularly children and families and those most impacted by systemic barriers to accessing needed services and resources.

**2. Problem to be solved:**

Over the past several years, County leaders and community partners have recognized the critical need and opportunity to address several "big" cross-cutting issues through coordinated and collaborative efforts across jurisdictions, departments, divisions, and communities, working together for a healthier future in Whatcom County. Partners and planning groups have called for the development of additional infrastructure within the County government to organize and lead efforts on these big issues. The Child and Family Action Plan called for infrastructure focused on child and family well-being and at a level able to influence all departments within county government. Without that infrastructure and countywide focus, it has been challenging to move projects and initiatives forward.

**3a. Options / Advantages:**

The Executive's proposed model creates efficiencies and coordination at the leadership level, and ensures that dedicated resources are available for each issue. In addition, the model allows for some standardization of approach across each of the issues, and recognizes the inter-relatedness of these

# Supplemental Budget Request

Status: Pending

Health

Community Health

Suppl ID # 3475

Fund 1

Cost Center 621200

Originator: Astrid Newell

issues.

Adding a Childcare Program Specialist in the Health Department will provide the county with expertise in program planning, outcome measurement, contract development, and distribution of ARPA and other funds to address childcare challenges countywide.

### 3b. Cost savings:

The Executive's proposed model and staffing within the Health Department will centralize some supportive functions, such as administrative coordination, communications, data analysis, and policy support creating efficiencies over addressing strategic issues in separate offices. In addition, the ability to coordinate efforts on these issues will reduce duplication and maximize opportunities for impact, leading to better outcomes for children, families and communities and decreased need for high-cost crisis interventions in the future.

### 4a. Outcomes:

The leadership infrastructure and specific capacity for Child and Family Well-being will support progress on the following results, outlined in the Child and Family Action Plan and aligned with emerging work of Healthy Whatcom Community Health Improvement process:

- 1.Children are safe, healthy, and ready to learn
- 2.Families are strong, stable and supported from the start
- 3.Communities are welcoming and supportive places for children and families to live, learn, work and play

### 4b. Measures:

Measures will address the following indicators:

- Increase School readiness
- Decrease Child maltreatment
- Improved Family financial stability
- Decreased Family homelessness
- Increased Sense of belonging
- Increased Affordable housing
- Increased Child care availability and access
- Increased Behavioral health services and support

### 5a. Other Departments/Agencies:

This Strategic Lead on Children and Families has significant connections with all departments and divisions of County government, with specific impacts on departments that are serving as "home base" for the Strategic Initiative leads (i.e., the Health Department for Child and Family Well-being Strategic Initiative).

The proposal also has key connections with a wide variety of jurisdictions (cities, tribes), community partners and groups.

### 5b. Name the person in charge of implementation and what they are responsible for:

Implementation of this approach resides within the Office of the County Executive, working in collaboration with departmental leaders, other jurisdictions (eg. City of Bellingham, small cities) and community entities.

Within the Health Department, the Community Health Manager will be responsible for hiring and overseeing the work of the Childcare Program Specialist.

### 6. Funding Source:

County General Fund. Some positions may be eligible for ARPA funds for a period of time.

	<b>Request Total</b>		<b>(\$309,437)</b>

### 1a. Description of request:

The Health Department is requesting expenditure authority for dedicated grant funding for Foundational Public Health Services which was allocated by the Washington State legislature in 2021. This on-going funding is intended to support increased staff and program capacity for specific foundational public health programs and services, as described more fully here <https://www.doh.wa.gov/ForPublicHealthandHealthcareProviders/HealthSystemsTransformation/PublicHealthTransformation>. These core public health services include Communicable Disease services, Environmental Public Health programs, data and assessment, epidemiology, communications, and administrative functions. This funding would support 5 new positions and 4 current positions in the health department in these key areas.

### 1b. Primary customers:

Whatcom county residents

### 2. Problem to be solved:

Chronic underfunding of the public health system across WA State has led to significant gaps in the ability of local health jurisdictions to provide core public health services to meet community needs, and respond to urgent and emergent public health issues. The WA State legislature has acknowledged this problem, and provided additional funds to reinforce and expand capacity of the governmental public health system across the state.

### 3a. Options / Advantages:

The Foundational Public Health Services Steering Committee, a collaborative entity comprised of representatives of the State Dept of Health, State Board of Health, American Indian Health Commission,

## Health

## Communicable Disease & Epidemiology

Suppl ID # 3477

Fund 1

Cost Center 660525

Originator: Erika Lautenbach

and Local Health Jurisdictions have identified and concurred on priority areas for use of this biennium's allocation. Local health funding is targeted to these areas and cannot be used for programs or services outside the designated categories. These categories include: Communicable Disease (General and Hepatitis C), Environmental Public Health (School Environmental Safety, Food Safety, Water System Capacity/Quality, and Sewage Safety), and Cross-Cutting Capabilities (Assessment/Epidemiology, Policy/Planning, Administrative and Business Office Functions, etc)

### 3b. Cost savings:

This funding covers long-term investments in public health without increasing the burden on the County's General Funds. The intent is to increase state funding for foundational public health services, allowing General Funds to be used to increase support for other local public health priorities.

### 4a. Outcomes:

The Health Department will have capacity to provide core public health services needed to meet community needs, and respond to urgent and emergent public health issues. Outcomes will include:

- Increased ability to monitor, asses and mitigate the spread of transmittable diseases in our community
- Decreased spread of transmittable diseases
- Improved food and school environment safety
- Improved communication with community
- Improved data systems with increased accessibility
- Increased administrative capacity to meet the needs of Health Department services

### 4b. Measures:

Measures will be consistent with Health Department performance measures, strategic plan, and accreditation requirements for the positions added and programs/services provided.

### 5a. Other Departments/Agencies:

n/a

### 5b. Name the person in charge of implementation and what they are responsible for:

Department Head Signature (Required on Hard Copy Submission)

Date

Costs:	Object	Object Description	Amount Requested
	6630	Professional Services	\$12,000
	<b>Request Total</b>		<b>\$12,000</b>

### 1a. Description of request:

As per Whatcom county Code 2.06.120 the medical examiner, after accepting jurisdiction for unclaimed human remains, shall arrange for the transportation and cremation of such remains at the county expense. This budget supplemental will ensure adequate budget authority for 2022 claims based on the 2021 average.

### 1b. Primary customers:

### 2. Problem to be solved:

The cost for this fluctuates from year to year. 2021 experienced a significant jump to the number of unclaimed remains and there was a backlog of claims submitted for payment. To ensure adequate budget authority in 2022 we propose the same increased budget for 2022 that was afforded in 2021.

### 3a. Options / Advantages:

This provides adequate budget authority for anticipated expenses.

### 3b. Cost savings:

n/a

### 4a. Outcomes:

Claims for indigent burial (cremation) can be paid.

**Name of Request:** Move Granicus Annual Maintenance

<b>X</b>	
<b>Department Head Signature (Required on Hard Copy Submission)</b>	<b>Date</b>

Costs:	Object	Object Description	Amount Requested
	6625	Software Maint Contracts	\$33,125
	<b>Request Total</b>		<b>\$33,125</b>

**1a. Description of request:**

Move the existing budget Granicus agenda management annual maintenance and hosting from the County Council budget to the Historical Preservation funding in Non Departmental.

**1b. Primary customers:**

All departments.

**2. Problem to be solved:**

RCW 36.22.170 allows the county legislature to use historical preservation funding to be used to promote historical preservation of historical programs, including preservation of historic documents. Granicus is the repository for the historic preservation of all legislative actions and its annual maintenance costs are an appropriate use for this funding.

**3a. Options / Advantages:**

Continue to have Council staff administer the annual maintenance contract and payments out of general fund funding.

**3b. Cost savings:**

N/A

**4a. Outcomes:**

The budget for the Granicus agenda management annual maintenance and hosting would be moved from a Council cost center to the Historical Preservation cost center in Non Departmental.

**4b. Measures:**

The budget would move and IT would start administering Granicus agenda management annual maintenance and hosting payments in collaboration with and on behalf of Council staff.

**5a. Other Departments/Agencies:**

County Council would experience a budgeting change.

**5b. Name the person in charge of implementation and what they are responsible for:**

Finance would need to implement the budgeting change.

**6. Funding Source:**

Historic Preservation Funding

**1a. Description of request:**

Dr. Gary Goldfogel has served as Whatcom County's Medical Examiner for 34 years and will be retiring at the end of this year. The County is now actively in the process of recruiting a new Medical Examiner. There are essential tools and equipment used by the Medical Examiner but not owned by the County. Negotiations with a new Medical Examiner candidate will help to determine the equipment needs to assume the role in 2022.

In addition to equipment and tools, partnering agencies will be engaged to ensure the full ME services will continue without interruption. Once the candidate has been selected the County will work to negotiate a new agreement.

Transitional costs are anticipated as follows:

- Transportation Agreements
- Acquisition of Tools/Equipment
- X-Ray Services
- Additional Storage

**1b. Primary customers:**

Whatcom County residents

**2. Problem to be solved:**

Whatcom County will be transitioning to a new Medical Examiner in 2022.

**3a. Options / Advantages:**

It is anticipated that costs will be incurred to ensure a smooth transition for the newly appointed Medical Examiner to begin in 2022.

**3b. Cost savings:**

n/a

**4a. Outcomes:**

A new Medical Examiner will be appointed to replace our long standing and long serving current ME who is retiring at the end of the year.

 6210.6269 - \$1.06

### 1b. Primary customers:

Visitation to all County parks and trails is at an all time high. Seasonal extra help staff is critical to maintain and operate these areas and this directly benefits the citizens of Whatcom County.

### 2. Problem to be solved:

Recruitment of qualified candidates has become increasingly challenging. One contributing factor continues to be the rising minimum wage and competitive job market. Current minimum wage is \$13.69/hour. The 2022 minimum wage will be announced this fall and is anticipated to be over \$14/hr. Offering a competitive wage that is commiserate with the skills we are looking for will enable us to better

recruit and maintain staff to provide the level of service our customers expect.

Additionally, offering a rate of pay that is reasonable in the current job market helps to reduce turn-over and encourages seasonal staff to return for multiple seasons. This significantly reduces time spent on recruiting, interviewing, orientating and training.

	7060	Repairs & Maintenance	\$1,000
	<b>Request Total</b>		<b>\$12,000</b>

**1a. Description of request:**

Parks is requesting an increase in the budget for cleaning supplies, general supplies, and repair and maintenance due to increased visitation and enhanced cleaning protocols related to COVID. The volume of cleaning supplies now required to maintain facilities has increased due to these enhanced cleaning protocols and increased visitation. Increases in visitation are also resulting in an increase in supplies needed for repair and maintenance as well as additional septic pumping.

Closures due to COVID caused people to explore local parks, trails and campgrounds in record numbers. Between 2019 and 2020, parks saw an overall increase in visitation of 20%. Visitation at Silver Lake Park alone increased by over 100,000 visitors in 2020. This is all without seeing any of the usual Canadian visitors. This year, we are on point to break those records and expect visitation to soar even higher once the restrictions at the border are fully lifted.

**Name of Request:** Fire Inspector Replacement Vehicle

X

---

**Department Head Signature (Required on Hard Copy Submission)** **Date**

Costs:	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	8351	Operating Transfer Out	\$60,000
	<i>Request Total</i>		<i>\$60,000</i>

**1a. Description of request:**

Purchase a replacement Vehicle for assigned vehicle #124 (2008 Ford F150 pickup).

**1b. Primary customers:**

Whatcom County Citizens, permit applicants internal and external, Sheriff's Office Arson Investigation.

**2. Problem to be solved:**

When a new Fire Inspector position was authorized during the budget preparation process for the 2019-2020 Budget. Planning was given authorization to fill the position, however, not given budget authority to purchase a new vehicle. At the time, the vehicle we are currently requesting to replace had been replaced by Equipment Services and was heading to be auctioned. At the Executive's request, we asked Equipment Services to return the vehicle to us so the incoming Fire Inspector could use it. At the time we were told to request a new vehicle during the next budget approval process. Due to the budget constraints related to COVID, we were unable to request a new vehicle during the 2021-2022 budget approval process.

The vehicle #124 the Fire Inspector is currently driving has more than reached the end of its functional life span. It has over 160,000 miles on it and the equipment maintenance staff are not able to continue to keep it in safe working condition without a large investment of time and money. Our Fire Inspectors cover the entire county and are required to respond to emergency calls any time of day or night. They need safe, reliable transportation.

This truck is the only one being used by the Fire Inspectors that is not equipped for clean evidence storage or a heated bed to prevent molding and degradation of tools, evidence, electronics, and safety gear. The truck also has failing electronics, outdated radio systems, outdated emergency lights etc. From a uniformity standpoint it also looks drastically different from the other Inspector vehicles on emergency scenes, large scale work sites, and is no longer presenting a professional image for Whatcom County.

**3a. Options / Advantages:**

We have been operating under an option since 2019 when a new vehicle was needed and at this time there are no real viable options except replacement

**3b. Cost savings:**

The county has saved the cost of a new vehicle for several years but it cannot be delayed any longer.

**4a. Outcomes:**

Purchase of a replacement vehicle.

**4b. Measures:**

Vehicle will be purchased and fully equipped for Fire Inspector to do their work.

**5a. Other Departments/Agencies:**

**Name of Request:** Fire Inspector Safety/Investigation Equipment

X

---

**Department Head Signature (Required on Hard Copy Submission)** **Date**

Costs:	Object	Object Description	Amount Requested
	6510	Tools & Equip	\$55,600
	Request Total		\$55,600

**1a. Description of request:**

Essential operating and safety equipment for Fire Inspectors to safely investigate fire. Fire Inspector gear is currently outdated or missing; Inspectors are often required to attend fire incidents as part of their investigation where dangerous and toxic conditions are present. They need the proper tools and safety gear to negotiate the site, collect the necessary evidence and store in a procedurally correct fashion.

**1b. Primary customers:**

Whatcom County Citizens, Northwest Clean Air Agency, Sheriff's Department

**2. Problem to be solved:**

The Fire Investigation/Arson Investigation is a very important service that our three Fire Inspectors provide to the community and our Sheriff's Department. In the past there was funding for some equipment through the Sheriff's Office. However, over the past few years there has been no ongoing mechanism for keeping the Fire Inspectors tools, equipment and safety gear up to date.

Many of the current necessary tools and equipment are either missing, broken or outdated. In order to ensure Fire Inspectors are able to safely respond to ongoing fire complaints or complete an investigation at a fire incident scene; to effectively do their jobs they need some updated equipment. There is a detailed list of equipment attached to this request providing more specific information. PDS is going to use existing 2021 budget authority for a portion of the equipment, however, for some of the larger tickets items it would require additional budget in 2022.

To explain just a few of the items on the list and their importance:

Scott Self Contained Breathing Apparatus (SCBA) \$42,000 - PDS Fire Inspectors must respond in what is considered "Immediate Danger for Life and Health" (IDLH) Environments which requires appropriate breathing apparatus. Currently we are not meeting the Washington Administrative Code (WAC) or National Fire Protection Association (NFPA) requirements regarding SCBAs for our inspectors. Each of our fire inspectors are responding 20 to 40 IDLH fires each year and their equipment is insufficient. While the cost is high, this is a 20-25 year investment if the proper maintenance is performed on the gear.

Bunker Gear - \$3,000 - PDS has one Fire Inspector using expired bunker gear. The gear is expired, ill fitting and wearing it does not provide adequate protection. The current gear does not meet WAC or NFPA standards.

Scene Light Packs-\$4,500 - Scene lighting for evening fires (the majority of the investigations), allow Fire Inspectors to investigate in a safe and timely fashion without having to hold a scene until daylight which greatly increases overtime hours and pay.

The remainder of the requested funds in the supplemental NFPA Coveralls, Drill/Saw Combination & 4-gas monitor \$6,100.

# Supplemental Budget Request

Status: Pending

Planning & Development Services

Building Services

Suppl ID # 3413

Fund 1

Cost Center 830

Originator: Curtis Metz, Mark Personi

Our fire investigators each respond to 20-40 fires each year; this equates to more IDLH exposure than many full time fire fighters. While the cost of the specialized gear is high, this request would provide a "reset" for the Fire Marshal's Office; many of the items will not need to be replaced for 7 or more years. This will allow for the Fire Inspection team to be on a proper replacement and maintenance cycle providing them with critical Personal Protective Equipment to safely complete the vital role they fill in our community and for Whatcom County.

### 3a. Options / Advantages:

There are no viable options for the larger ticket items. We are stretching our budget authority to cover many of the smaller equipment needs. Some documentation indicates that this type of equipment may be covered by the Federal Relief Funding and presume Finance will explore this possibility.

### 3b. Cost savings:

### 4a. Outcomes:

The equipment will be purchased and put into use by Fire Inspectors and they can continue their work in more safe and protected manner.

### 4b. Measures:

Equipment and gear will be received and put into service

### 5a. Other Departments/Agencies:

Sheriff's Department, Northwest Clean Air Agency, Whatcom County Fire Districts

### 5b. Name the person in charge of implementation and what they are responsible for:

### 6. Funding Source:

General Fund. However, some documentation indicates that this type of equipment may be covered by the Federal Relief Funding and presume Finance will explore this possibility.

	7115	Membership & Assoc Dues	\$1,000
	8301	Operating Transfer In	(\$379,546)
	<b>Request Total</b>		<b>\$0</b>

**1a. Description of request:**

The Prosecuting Attorney's Office is seeking approval to continue funding the two attorneys, a legal assistant, and a victim/witness coordinator to address the backlog of cases due to the pandemic.

The Prosecutor's Office needs the funding continued for these positions so that they can properly investigate and litigate the most serious cases, pursue the speedy resolution of criminal findings, and safeguard the rights of victims of crime.

**1b. Primary customers:**

The primary customers of this request are the citizens of Whatcom County and the victims of crime.

**2. Problem to be solved:**

The pandemic drastically interfered with the functioning of criminal courts. We have been unable to hold criminal jury trials for over a year, causing cases to be continued over and over again while prosecutors had no ability to force a resolution through trial. The pandemic led to fewer resolutions, which in turn caused an increase in our attorney's caseloads.

**3a. Options / Advantages:**

N/A

**3b. Cost savings:**

N/A

**4a. Outcomes:**

Increasing the number of attorneys and support staff is an ongoing benefit that allows us to meet the obligation of providing quality prosecutorial services to the people of Whatcom County. It allows us to better fulfill our role in the criminal justice system, leading to safer communities.

	7115	Membership & Assoc Dues	\$3,225
	8301	Operating Transfer In	(\$960,472)
	<i>Request Total</i>		<i>\$0</i>

**1a. Description of request:**

The Whatcom County Public Defender's Office requests continued funding for 2022 for temp FTE positions: four attorneys, two investigators, one behavioral health specialist and two legal assistants. We also request funding for office supplies, training, books/Westlaw subscriptions, advertising for positions, office equipment, equipment rental for copy machine, funds for cell phones, added costs for our phone bill, travel costs for investigators, membership dues for the Washington State Bar Association and member dues for the Washington Defender Association.

**1b. Primary customers:**

Indigent defendants in the Whatcom County Superior and District Courts and respondents in Whatcom County Juvenile Court and Involuntary Treatment Act Proceedings.

**2. Problem to be solved:**

Current pending caseloads have soared due to the Covid-19 pandemic. For over 1.5 years, we have had no jury trials held in Whatcom County courts and case resolutions have come to a near standstill. Additional impediments to case resolutions include the inability to conduct in-person meetings with clients, victim/witnesses, and opposing counsel, increases in the seriousness of the cases pending and higher

# Supplemental Budget Request

Status: Pending

## Public Defender

Suppl ID # 3426

Fund 1

Cost Center 2662

Originator: Julie Wiles

recidivism rates due to restrictions on booking standards. As a result of the pandemic, the Public Defender's Office has seen open caseloads rise to intolerable levels and experienced lawyers have departed the office, in part due to those heavy caseloads.

### 3a. Options / Advantages:

The necessary reassignment of cases from attorneys who have departed the office, absences due to FMLA, and exceedingly high open caseloads have caused the Public Defender to send unprecedented number of cases back to the Office of Assigned Counsel. The result is a far less cost-effective defense. The Office of Assigned Counsel's budget for contracted private lawyers will be exceeded in 2021 by a large amount.

### 3b. Cost savings:

This request should be fulfilled with ARPA funds.

### 4a. Outcomes:

With additional staffing, the Public Defender's Office will be able to accept more cases, subject to the limitations of Standards of Indigent Defense and the Office of Assigned Counsel will require fewer contract attorneys. Continued additional staffing will also allow us to reduce assignments to attorneys who are carrying excessive open caseloads, which is critical to retaining our current employees.

### 4b. Measures:

Continued funding will allow our department to function within the Standards for Public Defense and comply other grant funding requirements and allow for better staff retention and morale.

### 5a. Other Departments/Agencies:

Granting this request will have a positive impact on the Courts and the P.A.'s office. Continuing with more legal staff to process and adjudicate cases will help to alleviate the backlog of cases as a result of the pandemic. In addition, the additional staff will be able to better communicate with the P.A.'s office on cases in order to resolve matters as efficiently as possible.

### 5b. Name the person in charge of implementation and what they are responsible for:

None

### 6. Funding Source:

The funding source is the ARPA funding.

# Supplemental Budget Request

## Public Defender

Suppl ID # 3437	Fund 1	Cost Center 2662	Originator: Julie Wiles
Year 2	2022	Add'l FTE <input checked="" type="checkbox"/>	Priority 1

**Name of Request: ARPA Extra Help for First Appearance Hearings**

**X**  
 Department Head Signature (Required on Hard Copy Submission) \_\_\_\_\_ Date \_\_\_\_\_

Costs:	Object	Object Description	Amount Requested
	6120	Extra Help	\$30,000
	8301	Operating Transfer In	(\$30,000)
	<b>Request Total</b>		<b>\$0</b>

**1a. Description of request:**

This extra help request is to provide funding for an attorney who will represent our clientele at First Appearance hearings one to two days per week. We have had an attorney who is extra help already working in our office who has been doing our first appearances and we would like to keep him on staff for 2022. That attorney has been grant-funded through 2021 through OPD and has not impacted the General Fund. The grant expires at the end of 2021.

**1b. Primary customers:**

The primary customers are indigent defendants in the Whatcom County Superior and District Courts.

**2. Problem to be solved:**

This request addresses the increased work load the exceedingly high case loads the regular FTE attorneys are handling due to Covid-19, while at the same time representing our clientele in first appearance hearings that are referred to our office by the Courts. Our department constantly strives to stay within the State Standards of Public Defense by ensuring that our attorneys do not represent more clientele than what the State Standards indicate.

**3a. Options / Advantages:**

The only other option is to assign the regular staff attorneys to represent those clientele in First Appearance Hearings and this will drive up the case limits the attorneys have with regard to the State Standards.

**3b. Cost savings:**

Our department will operate with more efficiency. Having this attorney assigned to conduct First Appearance Hearings one to two days per week will help ensure the regular full time attorneys will be able to concentrate on their assigned criminal cases and hopefully stay within State Standards.

**4a. Outcomes:**

Granting this request will allow our department to focus on ensuring (to the extent possible) that the criminal referrals we are assigned, will be handled according to State Standards of Public Defense.

**4b. Measures:**

Granting this request will help to ensure we continue to receive grant funds from the Office of Public Defense (as we have to stay within State Standards in order to continue receiving this funding). In addition, granting this request will have a very positive impact on staff morale.

**5a. Other Departments/Agencies:**

Granting this request will have a positive impact on the Courts and the Prosecuting Attorney's Office. The Courts and the P.A's office have developed a working relationship with the person currently handling our First Appearances and this has had a positive impact on our department.

## Public Defender

Suppl ID # 3455	Fund 1	Cost Center 2650	Originator: Julie Wiles
Year 2	2022	Add'l FTE <input type="checkbox"/>	Priority 1

Name of Request: *Reclassification for two Investigator positions*

**X**

Department Head Signature (Required on Hard Copy Submission)

Date

Costs:	Object	Object Description	Amount Requested
	6110	Regular Salaries & Wages	\$10,687
	6210	Retirement	\$1,094
	6230	Social Security	\$816
	6255	Other H&W Benefits	\$15
	6269	Unemployment-Interfund	\$26
	<b>Request Total</b>		<b>\$12,638</b>

**1a. Description of request:**

We are reclassifying two of our Investigators to the positions of Investigator II.

**1b. Primary customers:**

The primary customers are indigent clients accused of a large range of criminal offenses ranging from misdemeanor offenses to the most serious felony offenses.

**2. Problem to be solved:**

Retention of high-quality criminal defense investigators who are difficult and time consuming to find replacement at the same level of qualifications.

**3a. Options / Advantages:**

The ability to offer a larger range for current investigators and provide future candidates a step process that yields future options to move upward as their abilities and skill sets are mastered.

**3b. Cost savings:**

Allows are office the ability to retain and attract highly trained and educated investigative staff who typically require years of ongoing training and education to reach.

**4a. Outcomes:**

Higher staff morale.

**4b. Measures:**

Higher staff retention.

**5a. Other Departments/Agencies:**

Courts and the P.A.'s office will both be impacted and benefit by having experienced investigators who can testify in Court and work with the P.A.'s office.

**5b. Name the person in charge of implementation and what they are responsible for:**

None

**6. Funding Source:**

The funding source is the General Fund.

	6269	Unemployment-Interfund	\$34
	<b><i>Request Total</i></b>		<b><i>\$15,669</i></b>

**1a. Description of request:**

The costs associated with the difference between filling a currently funded Investigator position (1.0 FTE) at step at step 8, rather than at step 3.

**1b. Primary customers:**

Public Defender clientele.

**2. Problem to be solved:**

The Public Defender's Office is currently funded at step 3 for this Investigator position and we would like to hire a specific candidate at step 8 in order to compensate him for his 20 plus years of experience.

**3a. Options / Advantages:**

This is the best option in order to hire the person with the most experience who will be able to handle a regular large caseload without any training.

**3b. Cost savings:**

We will not have to spend months training a candidate with far less experience.

**4a. Outcomes:**

The ability to hire and compensate a candidate for his experience in the field of criminal investigations.

**4b. Measures:**

Successful recruitment of qualified candidate.

**5a. Other Departments/Agencies:**

The Courts and the P.A.'s office will benefit by having an experienced investigator who will be able to navigate the legal system with ease.

	6110	Regular Salaries & Wages	\$43,992
	6210	Retirement	\$4,509
	6230	Social Security	\$3,365
	6245	Medical Insurance	\$16,416
	6255	Other H&W Benefits	\$1,868
	6259	Worker's Comp-Interfund	\$728
	6269	Unemployment-Interfund	\$114
	<b>Request Total</b>		<b>\$70,992</b>

**1a. Description of request:**

The Sheriff's Office is requesting to hire a full-time temporary coordinator position to assist and support the Chief Inspector responsible for the Office of Professional Standards (OPS). The office has a Chief Inspector, but no additional support staff. The Office of Professional Standards has primary responsibility for the development and implementation of new policy and procedures for the Sheriff's Office (both Corrections, Law Enforcement and Support staff). In addition, OPS is responsible for intake/processing of citizen complaints and conducting administrative investigations into employee misconduct, as well as responding to large public disclosure requests for documents and information. Due to recent changes in legislation and public focus on police reform, the Sheriff's Office has experienced a significant increase in public records requests, as well as time sensitive updates to policies in order to comply with the new laws.

The Sheriff's Office is currently updating policies and transitioning to the Lexipol policy manual for both Law Enforcement and Corrections. Currently, the County Code pertaining to jail operations has been suspended until the new policies can be updated and accessed by the public online. In order to complete the Corrections Policy Manual, we need to allow the Chief to prioritize the development and implementation of new policies. Due to the significant workload, it will require the delegation of some of the OPS responsibilities. The addition of the Coordinator position would assume much of the PDR and citizen complaint processing and allow the Chief to focus on the Lexipol policy manuals.

**1b. Primary customers:**

The citizens of Whatcom County

**2. Problem to be solved:**

The workload placed upon the one (1) FTE that we have working in OPS has exceeded that which can be reasonably accomplished in a timely manner. In order to allow the Chief to focus on policy development and implementation, it is necessary to bring in additional support staff to assist with the workload

**3a. Options / Advantages:**

We considered hiring an FTE to develop and implement policy, however it would be challenging to find someone with the skills and law enforcement/institutional knowledge necessary to write Sheriff's Office policy.

# Supplemental Budget Request

Status: Pending

Sheriff

Administration

Suppl ID # 3431

Fund 1

Cost Center 2900

Originator: Doug Chadwick

**3b. Cost savings:**

While difficult to quantify, having updated Lexipol policies in place will potentially reduce liability related to employee performance/misconduct and associated litigation.

**4a. Outcomes:**

Completion of the Corrections and Law Enforcement Policy Manuals. Six (6) months to one (1) year for completion of both manuals. Priority will be to complete Corrections manual first, due to the current status of the suspended County Code related to jail operations and administration.

**4b. Measures:**

Update Corrections and Law Enforcement Policy Manuals will be published, searchable and accessible to the public online. Policies will then be updated annually as needed.

**5a. Other Departments/Agencies:**

No

**Name of Request: Training Mandates**

X

**Department Head Signature (Required on Hard Copy Submission)**

**Date**

Costs:	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	6780	Travel-Educ/Training	\$16,500
	7110	Registration/Tuition	\$8,500
	<b>Request Total</b>		<b>\$25,000</b>

**1a. Description of request:**

This proposal is for funding to support mandated training for Sheriff's Office personnel.

The Sheriff's Office is submitting a corresponding supplemental budget for overtime needed to backfill shift vacancies in order to accomplish the mandated training and maintain minimum staffing for 24/7 operations (see corresponding supplemental ID# 3472).

**1b. Primary customers:**

All commissioned deputies of the Whatcom County Sheriff's Office.

**2. Problem to be solved:**

Training is an essential component for safe law enforcement functions. The laws regarding criminal justice reform require every deputy/certified peace officer to undergo an additional 40 hours of training in regards to Initiative 940 (I-940). The newly passed laws require every WCSO deputy be re-trained in use of force, pursuit driving, and receive continuing training for de-escalation, first aid/combat medical training, re-certification on less-lethal devices, intervention techniques, body camera requirements, and basic call response incorporating the requirements of utilizing mental health professional. These trainings are required either annually for all commissioned personnel, with the 40 hours requirement being every third year.

In addition, the Sheriff's Office provides deputies with less-lethal devices to ensure the deputies have the necessary tools and equipment to safely de-escalate incidents. Recent legislative changes now prohibit the use of less-lethal devices previously used by the Sheriff's Office. The Whatcom County Prosecuting Attorney advised in the attached memo, "Due to the legislative prohibition on these types of devices, the Whatcom County Sheriff's Office will need to find other options for less lethal devices that fit within the confines of ESHB 1054." Therefore, the Sheriff's Office is acquiring new less-lethal devices. The new equipment needed to comply with the new laws will also require additional training for safety and proficiency.

**3a. Options / Advantages:**

There are no reasonable alternatives. The additional training associated with I-940 is State mandated. And the additional training associated with new less-lethal equipment is required for the safe and proficient use of the equipment.

**3b. Cost savings:**

Training is a cost saving in potential liability and risk management.

**4a. Outcomes:**

The additional training will allow the Sheriff's Office to comply with State mandates. Deputies will be

**Name of Request: Law Enforcement Wellness Programs**

**X**  
 Department Head Signature (Required on Hard Copy Submission) \_\_\_\_\_ Date \_\_\_\_\_

Costs:	Object	Object Description	Amount Requested
	6625	Software Maint Contracts	\$57,000
	6635	Health Care Services	\$25,000
	<b>Request Total</b>		<b>\$82,000</b>

**1a. Description of request:**

A web-based application that encompasses a wealth of resources for physical, emotional and mental health and wellness of employees and employee’s family members. To address, in part, first responder trauma. This program builds off of the existing county EAP program.

**1b. Primary customers:**

All employees of the Sheriff’s Office and their immediate family members

**2. Problem to be solved:**

It is an undeniable fact that Law Enforcement officers work in a dangerous profession. This profession is unlike any other within the career field and unlike any other entity or department within county, city or federal government. No other county entity or unit outside of Law Enforcement has a concern about or pattern of being assaulted while performing their assigned duties.

While some jobs within the government contain risk of occupational injury, Law Enforcement officers have a significantly higher rate of injury and death – not only from occupational injury but from assaults perpetrated by violent suspects. There are numerous studies and surveys to support these claims. If one were to take a few minutes searching for this data it is supported by the US Bureau of Labor and Statistics, the US Center for Disease Control and Prevention and the Department of Justice to name a few.

- A total of 1,763 law enforcement officers died in the line of duty during the past 10 years, an average of 176 per year. There were 306 law enforcement officers killed in the line of duty in 2020. That represents almost 6 deaths per week in the line of duty. Incidentally, the deadliest year in Law Enforcement history was 1930 where 312 officers were killed in the line of duty. It is startling to note that almost 100 years later, the industry still carries a high lethality.

- According to the FBI’s Uniform Crime Report 2019 Law Enforcement Officers Killed (LEOKA) report: There were 56,034 assaults against law enforcement officers in 2019, resulting in 17,188 injuries.

- Police officers have a higher risk of incurring a work-related injury or illness than most other occupations. On average, 115 police and sheriff’s patrol officers suffered fatal work injuries each year from 2003 to 2014. Another 30,990 nonfatal injuries involving days away from work were reported for police and sheriff’s patrol officers on average each year from 2009 to 2014.

- The rate of fatal work injuries for police officers in 2014 was 13.5 per 100,000 full-time equivalent workers, compared to 3.4 for all occupations. Similarly, the rate of nonfatal occupational injuries and illnesses involving days away from work among police officers was 485.8 cases per 10,000 full-time workers in 2014; the rate was 107.1 cases for all occupations.

- Not only does law enforcement have the concern of injury or death within the line of duty, studies have shown that the average life expectancy of a police officer is 21.9 years less than the general population. Factors believed to contribute to this alarming number are: stress, shift work, obesity and hazardous work

exposures. (Violanti, et al National Library of Medicine, 2013:15(4):217-28)

The supportive data largely discusses physiological risks and hazards of working in Law Enforcement. However, what is more devastating and pervasive is the toll the career takes on mental health.

The leading cause of death among Law Enforcement is suicide. This is a trend that has climbed year to year in the last 5 years. On a daily basis, Law Enforcement officers deal with human trauma and suffering. They encounter grisly crime scenes and see the parts of society not many other people have to witness. They have notified parents whose children were killed in a car wreck. They have held dead children in their arms. They have seen the signs and effects of physical and emotional abuse perpetrated by one person to another. Law Enforcement officers often miss holidays and family events due to the emergent nature of the work and shift work. Regardless of their current rank, assignment, or stage in life – every law enforcement officer carries an emotional burden that most people cannot fathom.

These are some of the things that cannot be un-seen or un-experienced.

It is a plain reality that as a law enforcement officer you are consistently concerned with things such as:

- Being a target for murder as a result of your position
  - Being violently attacked as a result of your position
  - Being faced with the potential of taking another human life
  - Losing freedom, retirement, and personal assets due to a lawsuit
  - Being in an auto accident at a high rate of speed (during a vehicle pursuit or emergency code run)
  - Having your family being targeted at your home by persons who harbor ill-will toward law enforcement
- Aside from the mandated EAP, Whatcom County and the Sheriff's Office have no wellness or resiliency program in place.

A program such as this will help to mitigate some of the stresses mentioned above, provide industry specific support on a 24/7 emergent and ongoing basis and provide tools to prevent and rehabilitate both physical and psychosocial injury.

### 3a. Options / Advantages:

We have considered trying to hire a dedicated mental health professional for the Sheriff's Office, a nutritionist and a 'wellness' coordinator who would help implement fitness programs. To hire one of those positions as an FTE would greatly exceed the cost of this proposed program.

### 3b. Cost savings:

The cost for the proposed program is \$57,000 for a 3-year contract. We are also seeking an additional \$25,000 per year to fund individual critical incident debriefing appointments with an identified trauma certified therapist, as well as fund additional training and wellness program options.

### 4a. Outcomes:

The outcome will be a robust wellness program with numerous resources at the fingertips of every employee and family member of the Sheriff's Office.

This will be available shortly after the contract is finalized.

### 4b. Measures:

The company makes it possible to retrieve anonymous analytics to assess which aspects of the program are being utilized and when.

### 5a. Other Departments/Agencies:

No

### 5b. Name the person in charge of implementation and what they are responsible for:

None

### 6. Funding Source:

The American Rescue Act/CARES funding due to the stresses of working throughout and continuing to

Year 2   2022      Add'l FTE       Priority   1

**Name of Request:** 3500 Gallon Oil Distributor

X

**Department Head Signature (Required on Hard Copy Submission)**

**Date**

Costs:	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	8351.501	Operating Transfer Out	\$360,000
	<b>Request Total</b>		<b>\$360,000</b>

**1a. Description of request:**

Upgrade a previously approved 1500 gallon, tandem axle oil distributor to a 3500 gallon tandem axle oil distributor. The request is to change the tank size specified on the previous approval.

**1b. Primary customers:**

All road users.

**2. Problem to be solved:**

ASR 2021-6155 was approved to purchase a new 1500 gallon, tandem axle oil distributor. The old equipment, a 3500 gallon tandem axle oil distributor, has been used in the interim. It has been identified that the larger tank capacity is very efficient and purchasing a new truck with a smaller, 1500 gallon tank would reduce productivity by increasing trips to refill and carrying less product to the job site. We would not like to move forward with a 1500 gallon truck.

**3a. Options / Advantages:**

One option is to continue to use the 28 year old truck. This is not desirable because it is past the replacement life, reliability is a concern and maintenance costs increase with vehicle age. Another option is to only use one truck. This is undesirable because it cuts productivity in half and increases overall overtime wage cost.

This is the best option because it improves operational efficiency, equipment reliability and provides the right tool for the job.

**3b. Cost savings:**

There will be less machines to maintain, this cost varies depending on trailer use and equipment use but averages 20K per year savings. There will be a savings of maintaining a 27 year old distributor and associated down time. The downtime of the crew alone costs \$2000 per hour. Operating with a single distributor ensures downtime each time it leaves the worksite to reload oil (7-8 times per day.)

**4a. Outcomes:**

Chip sealing will be completed more efficiently and expediently freeing up large crews for other work during the Fish Window. Downtime will be reduced. New equipment will be more reliable.

**4b. Measures:**

The chip seal program will complete more miles in less days than with one truck. Crew will stop less waiting for material to be delivered and mechanics will work on old equipment less.

**5a. Other Departments/Agencies:**

Yes, Equipment Services will facilitate the purchase and maintenance of the new equipment.

**5b. Name the person in charge of implementation and what they are responsible for:**

Eric Schlehber, Equipment Services manager.

Year 2 2022 Add'l FTE  Priority 1

Name of Request: Safety Training Vehicle

**X**

Department Head Signature (Required on Hard Copy Submission)

Date

Costs:	Object	Object Description	Amount Requested
	8351.501	Operating Transfer Out	\$55,000
	<b>Request Total</b>		<b>\$55,000</b>

### 1a. Description of request:

To add a new 1/2 ton 4x4 extended cab pickup truck for the person hired as the Safety and Training Specialist.

This would be an addition to the ER&R fleet.

### 1b. Primary customers:

All road users would benefit as a result of safer work zones and better trained county road workers.

### 2. Problem to be solved:

M&O is currently in the process of filling an Industrial Safety and Training Specialist in order to reduce accidents and improve training for our work force. The person that fills this position will need a vehicle that is dedicated to them in order to maintain the tools of the job in one vehicle and so the safety specialist can make on the job safety inspections. Having a dedicated vehicle to this position will allow for prompt responses to accidents involving county employees or vehicles.

### 3a. Options / Advantages:

The other option would be for the safety and Training Specialist to use another vehicle from the current fleet. Using whatever vehicle is available is not the best option because the needs of the field crews varies by project and there may not be a suitable vehicle for the safety person to utilize. The additional vehicle would be the best option because it would allow the employee to have a consistent vehicle to store and transport tools necessary for the job and allow the specialist the ability to conduct field inspections and trainings without having an impact on the vehicle needs of other crews.

### 3b. Cost savings:

Cost savings would include more efficient use of time and preventing excessive fuel use. Extra valuable time would be required if the Industrial Safety and Training Specialist had to load and unload tools and materials each day from different vehicles that are in the current fleet. Dedicating one of the vehicles from the current fleet would require the use of larger and less efficient trucks for tasks that generally would not require something as large.

### 4a. Outcomes:

The outcome is having a Safety and Training Specialist that can respond quickly to accident sites, consistently travel with the tools needed for on site safety inspections and have the flexibility to conduct field visits. The outcome would be delivered as soon as the specialist is able to get into the field.

### 4b. Measures:

Success will be known when the safety and Training Specialist is able to perform their duties without wasting time looking for searching for a vehicle to drive and having to move equipment from one place to another repetitively.

**Name of Request:** *Engineering Tech for M&O*

X

---

**Department Head Signature (Required on Hard Copy Submission)** **Date**

<i>Costs:</i>	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	6110.542900	Regular Salaries & Wages	\$51,500
	6290.542900	Applied Benefits	\$38,107
	<i>Request Total</i>		<i>\$89,607</i>

**1a. Description of request:**

The Maintenance and Operations division of Public Works is requesting approval to hire 1 Engineering Technician FTE. This employee will provide technical assistance for project planning, plans interpretation and permitting assistance to our 7 crew leaders.

**1b. Primary customers:**

Maintenance and Operations personnel. The Engineering Technician will provide knowledge expertise and administrative support to the personnel performing the work. This support will improve safety and services, increase efficiency, and provide a quality product to all road users.

**2. Problem to be solved:**

The maintenance and repair work managed by the Crew Leaders and Supervisors has become more complex and difficult due to changes in requirements and regulations. These changes require the Crew leaders and Supervisors to interpret standards and regulations, design/engineer repairs, procure advanced and lengthy permitting, and other administrative functions of which they are neither trained nor licensed for. In turn, management of the core work is suffering as Crew Leaders and Supervisors are pulled away from managing job site safety, workforce distribution/allocation/planning/coordination, job site quality control and assurance, and training.

The problem is further exacerbated by a full Crew Leader turnover over within the last 3 years. With all the Crew Leaders being new or relatively new to their positions, there are technical aspects of the core job duties that they are still learning. The recent serious employee accident reinforced PW's intention to prioritize a safer workplace that adheres to industry standard specifications. The realigned priority of safety and quality has highlighted new challenges and procedures that affect productivity. The additional FTE will add to our safety effort by alleviating some of the additional advanced duties the crew leaders are asked to perform, leaving them to focus on the safety of their crews and effecting quality work on Whatcom County roadways.

**3a. Options / Advantages:**

Hiring an Engineering Technician is the best option because it provides M&O with a skilled employee solely dedicated to assisting the crew leaders with their technical needs. The ideal engineering candidate is trained in the various permitting processes required for working near or in water, has knowledge of materials needed for different types of road projects in accordance with WSDOT standards and is available to help with the interpretation and or development of project plans.

Other options include:

The use of other engineers within Public Works. This option is problematic as the engineering pool is shorthanded and already dedicated to funded projects.

# Supplemental Budget Request

Status: Pending

---

## Public Works

## Maintenance & Operations

---

Suppl ID # 3338

Fund 108

Cost Center 108100

Originator: Michael Koenen

---

The use of outside consultants. This option is much more expensive and limited to the scope of the contract in both time and scale.

### 3b. Cost savings:

Cost savings result from a more efficient and effective utilization of the crew leaders' time. Providing a resource for the crew leads will ensure that they are not bogged down by the permitting process and materials or regulatory research.

### 4a. Outcomes:

As a resource, the Engineering Technician will provide consistent, reliable information and assistance to the Crew Leaders resulting in maintenance and repair jobs that are completed more efficiently while maintaining high standards for safety and quality. Additional outcomes include our crews becoming more efficient with drainage projects and an increased ability to take on the steadily increasing demand for water quality and fish habitat improvement projects. Ideally, we will be able to respond quicker to citizen requests that involve challenging drainage issues.

### 4b. Measures:

Success will be measured by reductions in incidents, increased number of drainage projects completed and discussions with crew leaders about whether they were able to refocus on their crews. We will look into whether these outcomes have occurred within one year of the new position starting.

### 5a. Other Departments/Agencies:

Improved communication between the various engineering groups and M&O.

Ideally Human Resources would have less work from us as our greater focus on safety would hopefully reduce accidents and injuries.

### 5b. Name the person in charge of implementation and what they are responsible for:

Public Works Maintenance and Operations Superintendent, Andy Bowler

### 6. Funding Source:

Road Fund

Maintenance & Operations

Suppl ID # 3341 Fund 108 Cost Center 108100 Originator: Gina Miller

Year 2 2022 Add'l FTE  Priority 1

Name of Request: Rubber Tired Roller Upgrade

X

Department Head Signature (Required on Hard Copy Submission)

Date

Costs:	Object	Object Description	Amount Requested
	8351.501	Operating Transfer Out	\$90,000
	<b>Request Total</b>		<b>\$90,000</b>

**1a. Description of request:**

Equipment #436, a 48" steel drum roller is budgeted and scheduled for capital replacement in 2021. This type of equipment no longer meets the business needs of M&O. The request is to surplus the steel drum roller and replace it with a rubber tired roller.

**1b. Primary customers:**

All Road Users

**2. Problem to be solved:**

The county owns a 48" steel drum roller. This roller has been used only 38 hours in the last 3 years. The county needs to rent a rubber tired roller each summer at a cost of approximately \$16,000.00. The rubber tired roller rental market is small and one is not always available during the peak season we need it. Surplusing a roller that is no longer needed and replacing it with a roller that is required and hard to rent would benefit the road maintenance programs as well as reducing equipment that isn't used.

**3a. Options / Advantages:**

We could continue to look for a rental roller each summer and pay a vendor for this. Owning one ensures the maintenance program has the equipment required, available when it is needed. Additionally, the service life of the new roller would be long enough that the county would realize a savings over continually renting.

**3b. Cost savings:**

Cost to rent for 3 years, \$49,000. Cost to purchase is approximately \$89,000. The replacement life for this equipment is approximately 15 years. 15 year rental cost assuming NO inflation, \$244,999. Additional maintenance costs are also incurred with a rental. One time purchase cost is \$89,000. Savings would be approximately \$155,999 over 15 years.

**4a. Outcomes:**

An unused roller will no longer need to be maintained. A needed roller will be available when projects need it. This will happen as soon as the old equipment is auctioned and the new equipment is put into service.

**4b. Measures:**

Rental costs will not be incurred for a roller. Maintenance costs will not be incurred for a roller that sits unused. The road maintenance projects will have the roller needed to produce good quality in a timely manner.

**5a. Other Departments/Agencies:**

Yes, Equipment Services. They will facilitate the purchase and maintenance of the equipment.

**5b. Name the person in charge of implementation and what they are responsible for:**

Eric Scheduler, Equipment Services Manager.

**Name of Request:** Carry Over Remove and Replace CRS Road Oil Tanks

X

---

**Department Head Signature (Required on Hard Copy Submission)** **Date**

Costs:	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	6190.534430	Direct Billing Rate	\$16,900
	7410.594430	Equipment-Capital Outlay	\$250,500
	<i>Request Total</i>		<i>\$267,400</i>

**1a. Description of request:**

ASR 2021-6281 approved \$236,500 for this project, which is under way, for the removal of four horizontal road oil storage tanks and replacement with one upright (vertical) storage tank that provides proper storage, heating and agitation of road oil used in our chip seal program. This also includes the removal and replacement of the concrete pad. The project has been started but delayed due to staffing shortages and vendor availability.

The overall cost of this project is expected to be \$278,400 with \$11,000 spent in 2021. In late 2021 new pricing was obtained for the tanks accounting for the 18% project increase.

**1b. Primary customers:**

All road users.

**2. Problem to be solved:**

The initial approval was based on this problem; The four existing oil tanks are horizontally mounted and approximately 30 years old. They are dilapidated and repair parts are not readily available. There are no agitators or radiator style heaters in them. Because of the horizontal mounts, the stability of the road oil is compromised due to the large surface area exposed to air. These types of tanks drain very slowly and increase load / unload time.

Due to staffing shortages and general contractor delays during the pandemic, the project has been unable to move at the originally anticipated pace. Two of the tanks have been removed and a contract for structural engineering is in the process of being executed.

**3a. Options / Advantages:**

Continuing the project into 2022 is the only option to complete the proposal.

**3b. Cost savings:**

None.

**4a. Outcomes:**

The project will be completed and road oil can be stored for longer periods of time. Chip seal programs will have greater flexibility.

**4b. Measures:**

The new tank will be installed and the old tanks will have been removed.

**5a. Other Departments/Agencies:**

Equipment services will assist with future maintenance of the tanks.

**5b. Name the person in charge of implementation and what they are responsible for:**

Year 2 2022      Add'l FTE       Priority 1

**Name of Request:** *Engineering Tech FTE work station*

X

---

**Department Head Signature (Required on Hard Copy Submission)** **Date**

Costs:	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	6510	Tools & Equip	\$5,000
	7070	Minor Remodeling	\$20,000
	<b>Request Total</b>		<b>\$25,000</b>

**1a. Description of request:**

The proposed addition of one FTE Engineering Tech to M&O, (Suppl ID# 3338) will require a minor remodel to add workspace, a new laptop, two monitors, a desk, county cell phone and a desk phone with extension.

**1b. Primary customers:**

All Road Users

**2. Problem to be solved:**

Adding a new FTE requires workspace for them to perform their daily tasks at as well as the proper office equipment.

**3a. Options / Advantages:**

One option would be to require this employee to share a workstation with another FTE. This would cause scheduling challenges and reduce the availability of the workstation for both FTE's sharing space. Providing the employee with a dedicated workspace is the best option because it allows them to be productive in a consistent environment with available workspace.

**3b. Cost savings:**

N/A

**4a. Outcomes:**

The engineering tech will have a space to perform the daily tasks assigned to them, they will have a phone to be reached at and a dedicated workstation available. The work can be performed at the demand of the employee needing the workstation.

**4b. Measures:**

The outcome will happen when the workstation is installed and the FTE has been hired.

**5a. Other Departments/Agencies:**

Costs:	Object	Object Description	Amount Requested
	6510	Tools & Equip	\$5,000
	<b>Request Total</b>		<b>\$5,000</b>

## 1a. Description of request:

Create a workstation for the Safety and Training FTE. This FTE will need a desk, laptop, monitors, desk phone with extension and county cell phone.

## 1b. Primary customers:

All road users

## 2. Problem to be solved:

M&O is hiring an Industrial Safety and Training FTE and the workspace is not yet established. This individual will need a space to write reports, do research and complete other daily tasks. Whatcom County needs to address this as an integral component of the safety program. Maintenance and Operations has some of the highest risk and exposure and the FTE's work space will allow them to move important safety measures forward.

## 3a. Options / Advantages:

This employee could share a workstation with another FTE. This would result in reduced availability for both FTE's. Establishing a dedicated work station is the best option because it allows for maximum productivity for the FTE's affected.

## 3b. Cost savings:

N/A

## 4a. Outcomes:

The Safety FTE will have a workstation to perform their daily tasks at.

## 4b. Measures:

The outcome will be evident when the workstation is set up.

	8351.128	Operating Transfer Out	\$7,998
	<b>Request Total</b>		<b>\$7,998</b>

**1a. Description of request:**

Whatcom County is required by a binding consent decree to make \$300k (\$150k Road Fund and \$150K Flood Fund) annual transfers into the Swift Creek Sediment Management Fund for the continued efforts to deal with Swift Creeks sediment. The amount is scheduled to increase annually based on changes to CPI. At the time of the 2021-2022 budgeting it was not anticipated to increase as much as it did. This request brings the budget in line with the 2022 transfers out from the Road Fund.

Costs:	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	6610	Contractual Services	\$80,000
	8351	Operating Transfer Out	\$11,352
	<i>Request Total</i>		<i>\$91,352</i>

**1a. Description of request:**

The Health Department is requesting additional expenditure authority to increase contracted housing case management services specifically for veterans in Whatcom County.

**1b. Primary customers:**

Whatcom County veterans experiencing homelessness in need of assistance to locate and secure housing. This service will also support veterans in housing who need assistance maintaining housing.

**2. Problem to be solved:**

The 2021 Point in Time Count reflected 37 veterans who were experiencing homelessness in Whatcom County. There are currently 55 veterans using HUD/VASH vouchers in Whatcom County to provide affordable housing for veterans who were chronically homeless. The VA Case Managers assigned to those housed veterans are not often able to provide the housing case management, and focus more on clinical support of those veterans. Between those seeking housing and those working to maintain housing, additional case management support is needed to get veterans into housing and maintain it.

**3a. Options / Advantages:**

Currently housing staff working in our permanent supportive housing buildings such as Francis Place and 22 North have been offering support when available to veteran tenants, but due to increased complex needs of many of the residents in the building, the support they are able to offer has been limited. This would create a Case Manager position specifically for those veteran clients who need support to maintain their housing.

**3b. Cost savings:**

There are an additional 3-5 HUD/VASH vouchers expected to arrive in the community, on top of the 55 already in place. This contracted service would help to get eligible veterans into housing quickly, as well as supporting some of the veterans currently in housing to prevent them from becoming homeless again. This would mean less need of these veterans to access emergency and homeless services and reducing the cost to the community.

**4a. Outcomes:**

Whatcom County will have the much needed additional support for veterans experiencing homelessness to access and maintain housing. This position will support at least a minimum of 25 veterans over the course of the year and help to reduce the homeless count for veterans in the coming year.

**4b. Measures:**

The Veteran Housing Case Manager will be hired in 2022 and will keep records of eligible veterans served in the HMIS database. This information will be reported during the same reporting periods as housing case managers not working with veterans.

Name of Request: Replacement of Large Prisoner Transport Truck

**X**

Department Head Signature (Required on Hard Copy Submission)

Date

Costs:	Object	Object Description	Amount Requested	
	8301	Operating Transfer In	\$0	(\$95,101)
	8351	Operating Transfer Out		\$265,267
	<b>Request Total</b>		<b>\$265,267</b>	<b>\$170,166</b>

Note: Fund from Jail Sales Tax Fund, no ARPA transfer

### 1a. Description of request:

This supplemental request is for the additional funding needed to purchase, license and make ready a replacement Large Prisoner Transport Truck. \$184,733 exists in ER&R. We are seeking approval to get funds to handle the increased cost of a replacement vehicle as well as the increase funding required to mitigate the spread of novel corona virus, commonly known as COVID-19.

The new large Prisoner Transport Truck will be comprised of a long-haul truck cab and chassis with a custom made module attached that holds the offenders. The custom module is designed for the transportation of offenders between our jail partners. Additionally, the custom module be built with additional individual cells to maintain social distancing. I will also have the air handling capability to clean and maintain the air through the use of HEPA filters and UV light sanitation ensuring the safe transport of the offenders.

Breakdown of costs associated with equipment, materials, and construction methods used to reduce the likelihood of the transmission of the Novel Coronavirus (COVID 19) in a TriVan prisoner transport vehicle:

1)construction of (7) segregation cells for the isolation of up to (14) inmates: \$36,750

2)use of polycarbonate shields at outside of segregation cells (outside of perforated aluminum security doors) to allow visibility, but prevent coughing / spitting / urinating directly outside of segregation cells: \$4,119

3)Use of polyurea (aka: bedliner - a tough material that will not absorb moisture or host airborne pathogens) on ALL interior surfaces in transport module (including floor, walls, ceiling, doors, benches, etc) for easy decontamination and cleanout: \$19,521

4)Climate Control System configured so individual segregation cells have individual air exhausts to the atmosphere (to create negative air pressure in segregation cells, and avoiding recirculation of possible airborne pathogens): \$4,599

5)Climate Control System includes the following specific features to minimize the airborne transmission of the Coronavirus: \$30,112

-Climate Controlled Air delivered to individual segregation cells and general population areas by ductwork

-HEPA Filtration to minimize the opportunity for airborne transmission

UV Light Scrubbing for Climate Controlled Air

# Supplemental Budget Request

Status: Pending

## Jail

Suppl ID # 3323

Fund 118

Cost Center 118180

Originator: Barry Lovell

The above amounts total \$95,101

### 1b. Primary customers:

Offenders who have been arrested and need to be transported either to Whatcom County, or from Whatcom County to the county/city where a warrant was issued.

### 2. Problem to be solved:

The Whatcom County Sheriff's Office, Corrections Bureau transports thousands of inmates annually on the Northwest Cooperative shuttle. We anchor the Northern end of the shuttle, and are reimbursed by Skagit, Island, San Juan Counties and Marysville for transporting their offenders. These contracts help defray the cost of moving offenders arrested in 1 jurisdiction and wanted in another.

The advent of Covid-19 has made it a much greater challenge to safely move offenders from place to place. In order to follow COVID precaution protocols, we need the ability to separate offenders from each other, and be able to control air flow. Evaluating the current transport vehicle, it quickly became apparent that it did not have the capability to provide for even the most basic precautions. In researching solutions, it became apparent that additional compartments were needed in the transport vehicle, a more modern HVAC system was required to filter and sanitize the air as well as directly vent the used air to the outside of the vehicle. and the materials used to create the interior surfaces should be able to be decontaminated and sanitized on at least a daily basis.

The current vehicle has nearly 400,000 miles and is 14 years old. Retrofitting the transport unit would not be cost effective due to the extensive changes to the interior that would need to take place. In addition, the truck unit has had increasingly frequent mechanical failures including engine failures and transmission issues that have left the Transport Deputies and dangerous offenders repeatedly stranded up and down the I-5 corridor. Because of these mechanical failures we have mandated that any deputy leaving the county must have an additional officer for increased safety and security. This necessary safety measure has led to an increase in staffing costs.

### 3a. Options / Advantages:

A new vehicle is the best choice; further, we have determined that a local company has the skills, materials and excellent reputation in the building of similar vehicles to allow the project to be done within Whatcom County.

The other option is to not purchase the new vehicle. This creates an issue for the jail, as the vehicle we are currently operate is not reliable and is unsafe for both staff and inmates in transit. The current recommendation from the county shop is to NOT operate the vehicle outside of the county because it is unreliable. Not having a Large Prisoner Transport Vehicle limits our ability to maintain our contracts within the Northwest Cooperative Transport system, which in turn limits our ability to bill out for our services to help off-set the transport costs. Additionally, there are times when we must operate the current vehicle because we need to use the safety cells that do exist within the vehicle. Having a vehicle that is not reliable, increases our exposure liability.

### 3b. Cost savings:

There are no specific cost savings; however the avoidance of liability is an important consideration. The County assumes a greater level of liability if it is using a questionable vehicle to move offenders.

### 4a. Outcomes:

A realizable and safe vehicle will be available to transfer offenders from one location to another. It will meet the current COVID standards and will be useful in the future to limit exposure to all type of airborne communicable disease. We anticipate that the vehicle can be completed within the 1st 6 months of 2022.

### 4b. Measures:

When we are notified by the County Shop that the vehicle is ready for use. Success will be measured by the number of times the vehicle is used to transport large numbers of offenders without any mechanical issues.

# Supplemental Budget Request

Status: Pending

## Jail

Suppl ID # 3323

Fund 118

Cost Center 118180

Originator: Barry Lovell

### 5a. Other Departments/Agencies:

Yes, this request impacts Public Works, Equipment Services. They will be responsible for the actual purchase of the vehicle and responsible for overseeing compliance with the bid specifications, as well as some additional "make ready" work that will need to be done after the vehicle is turned over to the Corrections.

### 5b. Name the person in charge of implementation and what they are responsible for:

We have been working with Eric Schlehuber, the Equipment Services Manager, on this project. He has worked with us in developing cost estimations and specifications. The vehicle will be included in the County fleet, and fall under the control of ER & R. Eric will be bringing the bid award request to the County Administration in concert with this supplemental request.

### 6. Funding Source:

Funding for this request will come out of a combination of the Corrections ER & R fund, the jail sales tax fund and, due to the need for the continued precautions to control the COVID-19 pandemic, funding from the American Rescue Freedom Act.

# Supplemental Budget Request

Status: Pending

## Jail

Suppl ID # 3353	Fund 118	Cost Center 118160	Originator: Wendy Jones
Year 2	2022	Add'l FTE <input type="checkbox"/>	Priority 1

Name of Request: **Nursing Services**

**X**  
 Department Head Signature (Required on Hard Copy Submission) \_\_\_\_\_ Date \_\_\_\_\_

Costs:	Object	Object Description	Amount Requested
	6635.003	Visiting Nurse Personal	\$88,000
	<b>Request Total</b>		<b>\$88,000</b>

### 1a. Description of request:

This supplemental will increase the contract amount paid to Northwest Regional Council (NWRC) for the provision of nursing services for the Whatcom County Corrections Bureau. NWRC has held the nursing contract since the latter part of 2013. This request is in addition to the increase granted as part of the 2021/22 budget process. This increase will bring the total cost for the jail's portion of the Nursing care to \$1,502,974 for a total of 24,500 hours of service. This will bring the per hour costs up 4.9% to \$61.35. The increase in hours should allow for the increased work related to both the MOUD program and COVID.

### 1b. Primary customers:

Offenders at the Whatcom County Jail and Work Center

### 2. Problem to be solved:

This request is being put forward due to the following 4 factors:

- 1) An existing CBA between NWRC and the Nurses bargaining unit.
- 2) On-going Nursing shortage.
- 3) The significant increase in the offender participation in the MOUD (Medications for Opioid Use Disorder)
- 4) The continued effects of the COVID-19 pandemic on offender populations.

The NWRC has an existing CBA with the Nursing bargaining unit that includes an approximately 5% wage/benefits increase per year. When costs of this program were originally estimated, the annual increase estimate was based on the County's base of 2-3%. Since the base rate is higher than originally used, additional funds are needed to provide this service.

It is anticipated that the demand for Nurses will continue to grow over at least the next 5-7 years as existing Nurses retire and/or exit the workforce and the need for skilled nursing care continues to escalate. This need is even more acute in Correctional Health Care, as the challenges of working in a jail can be an impediment to attracting qualified Nurses. As a result, wages tend to be higher than in other public or private practices in order to attract the type of Nurses that can handle the clientele and the environment.

The Jail's MOUD has grown significantly over the last 2 years. The average number of offenders on some type of medication assisted Opioid treatment has increase 72% between 2019 and 2021. A significant driver to this increase is the number of offenders asking to participate in the program and who reported the use of the combination of Opioid, Methamphetamine and Fentanyl from 7 offenders in 2019 to 46 this year- this is an increase of 557%. The more offenders who are being screened and accepted for the program translates to increase workload for the Nursing staff.

Lastly, the COVID-19 pandemic. Nurses are the primary front line to preventing COVID from invading the Corrections facilities and from there, to the community. We have had 1 limited outbreak at the Work

# Supplemental Budget Request

Status: Pending

## Jail

Suppl ID # 3353

Fund 118

Cost Center 118160

Originator: Wendy Jones

Center early in 2021, where 48 offenders were ultimately diagnosed with COVID. No one had to go to hospital and the cases that were seen and treated presented with mild symptoms. We do see offender coming into the facility with positive rapid tests: the medical protocols developed in collaboration between Custody and Nursing, have limited any additional exposure. Nursing staff have also become state certified to provide a vaccination program within the facilities for any offender who wishes to be vaccinated. This started with providing COVID-19 vaccination and has now spread so that offenders can be vaccinated for a number of common viruses. This reinforces the health of many underserved members of our community and, in the long run, benefits all of our citizens. There have been approximately 1100 hours of nursing services focused on the assessment, testing, direct medical care, patient follow up and vaccination administration for COVID-19.

### 3a. Options / Advantages:

The Nursing RFP was put out for bid in 2019 and NWRC was awarded the contract as the most responsive bidder. We have a legal requirement under both Washington State law and Federal standards which require us to provide medically necessary care for individual with serious medical needs; further, that level of care is required to meet the standard of our community. Failure to do so can and frequently does result in very expensive lawsuits. An educated and dedicated Nursing staff forestall many of the issues that wind Jails up in Court.

### 3b. Cost savings:

There are no specific hard cost savings, however, we are proposing a financing plan that will have very little net impact on the Jail's budget. Please see "Funding Source".

### 4a. Outcomes:

There will be sufficient funds available to enter into a Nursing contract for 2022.

### 4b. Measures:

Thorough review of the budget status each month, comparing current spending levels against the budget, Regular meetings with the NWRC Nursing Supervisor and Program Manager.

### 5a. Other Departments/Agencies:

N/A

### 5b. Name the person in charge of implementation and what they are responsible for:

N/A

### 6. Funding Source:

The funds will come from the Jail Sales Tax Fund. We are proposing to leave a clerical support position assigned to the Work Center open for 2022. This will allow us to off-set \$85,253 of the \$88,000 increase. The remainder can be reallocated from within the Jail's approved budget, An alternative funding source may be the American Rescue Plan Act, as approximately 1100 hours have been used in 2021 for COVID response and/or prevention. We anticipate that this workload will continue through 2022.

Name of Request: Medical Social Worker

**X**

Department Head Signature (Required on Hard Copy Submission) \_\_\_\_\_ Date \_\_\_\_\_

Costs:	Object	Object Description	Amount Requested	
	6630	Professional Services		\$125,000
	8301.124	Operating Transfer In	(\$62,500)	\$0
	<b>Request Total</b>		<b>\$62,500</b>	<b>\$125,000</b>

Note: Added 50% funding from Behavioral Health Fund- (\$62,500)

### 1a. Description of request:

This supplemental request is to create a social worker position to work with medically complex offenders in order to coordinate community release plans. The position would be integrated into the Jail Health Program, and would provide critical assistance in coordinating aspects of the criminal justice process with the varied needs of complex offenders. It is anticipated this would be a contract position vs. and FTE.

### 1b. Primary customers:

Offenders in full custody who have complex medical, emotional, mental health, substance abuse, cognitive and psycho-social issues that require specialized assistance and coordination.

### 2. Problem to be solved:

The need for this type of position in the jail has increased over the last 18-24 months. We are experiencing significant increases in bookings involving individuals who have a combination of issues, including a variety of health conditions, and issues with substance abuse, mental health and cognitive impairment. We are finding not only the number of people are increasing, the acuity of their illnesses are also. In many of these cases, the core reason someone winds up in jail is due to behavior triggered by their underlying conditions. Law enforcement has to respond to the behavior, which is often to the point that no other facility would accept the individual, and are left with no other choice but to book them into jail. It is only after the individuals are in a controlled environment, with staff who are trained observers, that we are able to identify that there is something going on with the person in addition to breaking the law. We find these individuals are very poor historians and don't remember or are in denial about previous diagnosis or treatments.

The position we are proposing would be someone who is familiar with resources in the community (Social Security Administration, Medicaid rolls, Veterans affairs, community providers such as SeaMar, Unity Care, Compass Health, etc.) and how to access information from those resources and the resources themselves. They can assist medical in determining the existence of underlying medical conditions that can be triggering behavior that appears to be related to mental illness-, determine if the person has support in the community, work to find alternative placement in a treatment/residential facility, bring information to the Defense Attorney and Prosecutor concerning factors that may mitigate the need for someone to remain in custody, etc. In 2 recent cases, offenders who had been booked on property crimes and were, based on their behaviors, presumed to have a serious mental illness, were determine to have cognitive impairments due to brain damage; in one case due to the aftereffects of a significant stroke and in the other, signs of early dementia. Medical reached out to senior custody staff, who interceded to contact the involved attorney's and reach out to some community resources. The end result was that both of the individuals were released. Having a social worker as an in-house resource will give us a consistent and centralized way to perform tasks such as back-tracking an individual's history with various social service and medical agencies, determine if someone may be eligible for assistance via agencies such as

Status: Pending

## Jail

Suppl ID # 3364

Fund 118

Cost Center 118160

Originator: Wendy Jones

the Veterans Administration, be able to provide information to the criminal justice system about alternatives that are available other than holding someone in custody, coordinate with community case managers, etc.

### 3a. Options / Advantages:

- 1) Leave things as they are: staff does an excellent job, but given short staffing and the added demands created by COVID protocols, they don't have the time, and in most cases, the expertise needed to work their way through multiple bureaucratic agencies to perform these functions.
- 2) Hire a social worker as a County FTE. We have had excellent results in contracting with community providers for personnel who are specialists in the medical and social service fields. While we carry expertise in supervising and managing Corrections staff, we do not have the subject matter expertise to serve this function for this position.
- 3) Depend on the existing pre-arrest diversion program to divert these individuals from custody: Over the past 18-24 months we have seen this classification of offenders rise in numbers and acuity, not fall, despite the growth of GRACE, LEAD, District Court EHM and the opening of the Stabilization Center. The core issue is that the individuals are presenting with behaviors that make them ineligible for these options leaving law enforcement with few options in order to either keep the individual safe or the community protected. The Social Worker position would provide for more robust post arrest diversion options.

### 3b. Cost savings:

Early recognition and intercession with offenders fitting within this classification will reduce their length of stay. Every day they are not in jail saves Whatcom County and/or one of our Municipal or Tribal partners \$193.00. If the individual is able to be maintained in the community, the probability of their coming back into custody is significantly reduced. We have seen local results supporting this premise with the GRACE program.

### 4a. Outcomes:

Contract with a local provider such as NWRC, SeaMar, Unity Care, etc. for the position of a Jail Social Worker. If we are able to work with one of our current providers to expand their contract to include a Social Worker, we anticipate we will have the social worker on-site by the end of 1st quarter 2022. If we have to go out to RFP, it may be the second quarter of 2022.

### 4b. Measures:

- \* Tracking the process of hiring and orienting the individual selected for the position.
- \* Monthly statistics will be submitted on agreed upon data points in order to measure items such as the number of contact, community placements, length of stay for participants, etc. The original data points may modified if better measures are determined to exist.
- \*The Social Worker will be part of the Jail Health Program and as work closely with Jail Medical and Behavioral Health staff and participate in the quarterly medical meetings

### 5a. Other Departments/Agencies:

The only impact will be with those departments directly involved with the County contract process. There will be a positive impact on the Prosecutor and Public Defender's offices as the work done by the Social Worker will contribute to final resolution of a category of criminal cases in a more timely manner.

### 5b. Name the person in charge of implementation and what they are responsible for:

N/A

### 6. Funding Source:

The funding will come from the Jail Sales tax. It appears that we may be able to use some grant funds coming available on a Federal and State level, and this position would also appear to fit within the parameters of Behavioral Health Sales Tax.

# Supplemental Budget Request

## Jail

Suppl ID # 3381	Fund 118	Cost Center 118195	Originator: Wendy Jones
Year 2	2022	Add'l FTE <input type="checkbox"/>	Priority 1

Name of Request: Training

**X**  
 Department Head Signature (Required on Hard Copy Submission) \_\_\_\_\_ Date \_\_\_\_\_

Costs:	Object	Object Description	Amount Requested
	6140	Overtime	\$30,000
	6210	Retirement	\$3,871
	6230	Social Security	\$2,459
	6255	Other H&W Benefits	\$44
	6259	Worker's Comp-Interfund	\$535
	6269	Unemployment-Interfund	\$118
	7110	Registration/Tuition	\$13,000
	<b>Request Total</b>		<b>\$50,027</b>

**1a. Description of request:**

This supplemental budget request is to provide additional funds for training for the Corrections Bureau. These funds will cover the increase in the per person cost for the Corrections Officer Academy (\$1,577 per person) and overtime costs and benefits to cover staff time for essential training that has been delayed due to COVID-19.

**1b. Primary customers:**

Corrections Deputies with the Whatcom County Sheriff's Office

**2. Problem to be solved:**

Over the past 2 years, a great deal of training has been canceled and/or postponed due to a combination of the effects of the COVID-19 pandemic. We have experienced 2 outbreaks: ; the first in January of 2021 involving offenders and a second in August of 2021 involving staff. In both cases, training had to be canceled because the staff were needed to cover shifts. In addition, some types of training were canceled in order to meet COVID precaution protocols. This has included essential trainings such as the following:

- First aid/CPR
- Firearms
- Defensive Tactics
- Suicide Prevention
- De-escalation training.

In addition to our In-service training, The Washington State Legislature increased the basic Corrections Academy (COA) from 4 weeks to 10 weeks effective July 1, 2021. This was done as part of the overall review and modification of statutes as they applied to Peace Officers and Corrections Officers. As a result, we are covering 6 additional weeks of salary and benefits at the academy, travel expenses, plus increases in the cost of the academy itself.

Failing to have the Corrections Deputies complete essential training places us in violation of Washington State law, requirements of the National Commission on Correctional Health Care (NCCHC), and significantly increases our liability exposure.

# Supplemental Budget Request

Status: Pending

## Jail

Suppl ID # 3381

Fund 118

Cost Center 118195

Originator: Wendy Jones

### 3a. Options / Advantages:

The COVID-19 pandemic was instrumental in the creation of this situation and was beyond our control. The training needs to be completed and documented.

### 3b. Cost savings:

There are no quantifiable savings, however since this issue was created by COVID, it seems reasonable that COVID mitigation funds would be available to cover the increases for 2022.

### 4a. Outcomes:

All Staff are trained in all essential training and that information is formally recorded in their training records.

### 4b. Measures:

Review of training records on a quarterly basis

### 5a. Other Departments/Agencies:

N/A

### 5b. Name the person in charge of implementation and what they are responsible for:

N/A

### 6. Funding Source:

The Jail Sales Tax Fund. We would suggest that a majority of this expenditure should be covered by COVID mitigation funds, since it is the reason for the training cancelation, and consideration be given to covering the balance of the cost with the funds provided to the County to mitigate the effect of the 2021 legislative changes, as that has impacted the length of the academy, resulting in staff coverage costs.

	6635	Health Care Services	\$298,000
	8301	Operating Transfer In	(\$298,000)
	<b>Request Total</b>		<b>\$0</b>

### 1a. Description of request:

This supplemental budget request will extend supplemental 3220 into 2022. Council approved up to \$435,000 in funds to cover testing for COVID-19 in either of the 2 Corrections Facilities. As of the end of August, we have expended \$131,645. We are seeking to extend the spending authority for any balance that remains at the end of 2021 through 2022., as we are anticipating the need to continue testing through the next year. We estimate the maximum amount of the carry over balance to be \$298,000. The original funding came from the American Rescue Plan Act, which allows the fund to be carried over into 2022.

### 1b. Primary customers:

Offenders at either of the 2 Correction Facilities.

Year 2 2022 Add'l FTE  Priority 1

Name of Request: Commerce HEN Grant Increase

**X**

Department Head Signature (Required on Hard Copy Submission) Date

Costs:	Object	Object Description	Amount Requested
	4334.0427	Homeless Grant Asst Program	(\$1,386,142)
	6610	Contractual Services	\$1,386,142
	<b>Request Total</b>		<b>\$0</b>

**1a. Description of request:**

The Health Department is requesting expenditure authority to utilize additional funding available from Washington State Department of Commerce to support housing and homeless programs. This supplemental increases the revenue and expense for this pass through grant. It includes an increase of in Housing and Essential Needs (HEN) funding during 2022.

**1b. Primary customers:**

Those qualifying for the Housing and Essential Needs Program (HEN), which requires applicants be unable to work for at least 90 days due to a disability, and have zero income or receive Aged, Blind and Disabled cash benefits.

**2. Problem to be solved:**

Households who are eligible for this assistance do not have sufficient income to access or retain housing independently, and may need resources for essential needs.

**3a. Options / Advantages:**

Housing and essential needs such as hygiene and sanitation products are critical to supporting people whose income is not sufficient to access housing without assistance.

**3b. Cost savings:**

HEN provides state funding to counties to serve those at-risk of or experiencing homelessness, thereby saving local costs being used to meet the basic needs of eligible households.

**4a. Outcomes:**

It is expected that between 7/1/2021 – 6/30/2022, 350 HEN-eligible households will receive essential needs items and cleaning and move-in supplies; and 230 households will receive HEN rent and utility assistance. The increased funding will allow for an increase in the number of households who receive rent and utility assistance and will support additional housing support staff time needed to remove housing barriers.

**4b. Measures:**

- Number of HEN eligible households served each month and year to date
- Average amount of subsidy per HEN household
- Number of HEN eligible households defined
- System performance measures as set by the WA State Department of Commerce

**5a. Other Departments/Agencies:**

Opportunity Council administers HEN funding and the Department of Social and Health Services determines eligibility.

**5b. Name the person in charge of implementation and what they are responsible for:**

Name of Request: DOC Shelter Program Grant

**X**  
 Department Head Signature (Required on Hard Copy Submission) \_\_\_\_\_ Date \_\_\_\_\_

Costs:	Object	Object Description	Amount Requested
	4334.0421	Commerce Grant	(\$342,977)
	6610	Contractual Services	\$342,977
	<b>Request Total</b>		<b>\$0</b>

**1a. Description of request:**

The Health Department requests expenditure authority of new funding from the Washington State Department of Commerce in to develop/expand shelter capacity in our community. The goal of the funded services is to bring individuals inside and transition participants to permanent housing quickly. The grant total of \$1,194,211 provides funding from 2021 through June 30, 2023 and it is expected that \$964,000 will be utilized in 2021 and \$342,977 in 2022.

**1b. Primary customers:**

Whatcom County individuals and families experiencing homelessness.

**2. Problem to be solved:**

On January 28, 2021, 859 people in Whatcom County were counted as experiencing homelessness during the annual Point in Time (PIT) Count. These are the highest numbers recorded since the annual counts began in 2008. In addition to those counted, hundreds more are known to be at risk of losing their homes and becoming homeless in Whatcom County. In 2019, there were 432 emergency shelter beds available in Whatcom County, and while additional beds were made available in 2020, the number of safe emergency shelter beds does not meet the need in the community. To add to this challenge, increased bed capacity in existing shelter continues to be challenging as congregate living situations are not recommended during the COVID-19 pandemic.

**3a. Options / Advantages:**

These additional funds will support an expansion of shelter options which will promote individual as well as public health and welfare interests. Providing safe nightly shelter with the opportunity for regular social service supports can help those experiencing homelessness gain stability and begin to access more permanent housing options.

**3b. Cost savings:**

These funds are supported by state dollars and will not impact local funds. Cost savings will occur as people are stabilized in housing, and the negative impacts to public health and welfare are mitigated.

**4a. Outcomes:**

Increased shelter opportunities to provide for safety, security and wellness for those experiencing homelessness.

**4b. Measures:**

Increase in number of additional shelter beds and services in the community to provide support to those experiencing homelessness.

**5a. Other Departments/Agencies:**

The Health Department will work closely with Whatcom Homeless Service Center's Coordinated Entry

Costs:	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	6610	Contractual Services	\$373,000
	6720	Telephone	\$2,000
	8351	Operating Transfer Out	\$53,213
	<b>Request Total</b>		<b>\$428,213</b>

**1a. Description of request:**

The Health Department is requesting an increase in spending authority in order to increase housing contracted services with community providers.

**1b. Primary customers:**

Whatcom County residents who are homeless or at risk of being homeless, who require housing support and assistance. Households who have very low income and need stable, permanent housing.

**2. Problem to be solved:**

Housing availability in the county is limited, and housing costs are rising, challenging many households to find or retain their current housing. Households who are experiencing homelessness, especially families with children, are increasing. Households with very low income are unable to find, much less afford, suitable housing. Without stable housing, employment opportunities, health and well-being are compromised.

**3a. Options / Advantages:**

The housing program of the Health Department has created a strategic plan that implements solutions along a continuum. Current document recording fees fund these various programs. Increased revenue from this source should be invested in these solutions in order to ensure housing opportunities to additional households.

**3b. Cost savings:**

Document recording fees are a dedicated source of revenue for programs and services to people in need of housing assistance. Providing supportive services and stable housing not only improves the health and well-being of the community members, but also reduces the cost burden on the county as stable health results in increased employability, positive family life, and improved social relationships.

**4a. Outcomes:**

Expected outcomes include an increase in the number of households receiving housing assistance.

**4b. Measures:**

The housing program of the Health Department administers numerous contracts with various housing providers in the community. Each contract has performance measure that are expected to be achieve and reported on a regular basis. Success will be measured by reviewing whether the performance measures have been met.

**5a. Other Departments/Agencies:**

Services will be delivered by various community partners.

**Name of Request: Emergency Solutions Grant-COVID**

**X**  
**Department Head Signature (Required on Hard Copy Submission)** \_\_\_\_\_ **Date** \_\_\_\_\_

Costs:	Object	Object Description	Amount Requested
	4333.1423	Emergency Solutions	(\$1,270,000)
	6610	Contractual Services	\$1,270,000
	<b>Request Total</b>		<b>\$0</b>

**1a. Description of request:**

We are requesting expenditure authority of additional federal funding (Emergency Solutions Grant – COVID) passed through by the Washington State Department of Commerce from the U.S. Department of Housing and Urban Development (HUD). This funding will be used to prevent, mitigate, and reduce the transmission of COVID-19 in Whatcom County for those experiencing or at high risk of homelessness.

This will be accomplished through the following activities for those experiencing or at high risk of homelessness: 1) expand capacity of emergency motel stays for families with children, youth and young adults, and highly vulnerable singles; 2) add rental assistance resources; 3) add personnel support including case management for achieving housing stability and retention; 4) support additional Homeless Management Information Systems data management costs related to this grant; 5) provide other financial assistance related to housing such as security deposits, utility costs, and application fees. 6) Purchase of furniture, supplies and staffing needed to increase beds for senior women at the YWCA. 7) Provide additional staffing and supplies for Sun House emergency shelter to mitigate the impacts of COVID-19 for residents and staff 8) include Hazard Pay for NWYS staff serving ESG eligible youth

The goal of these funded services is to bring people inside in temporary and permanent housing to reduce the risk of the spread of COVID-19, and facilitate transition to permanent and stable housing quickly. The grant total is \$3,044,770 and provides funding through September 30, 2022. In 2021, Council approved the original grant supplemental budget request #2021-3140. We anticipate \$1,545,000 of the full award to be spent in 2021, leaving a balance \$1,500,000 to be spent in 2022.

**1b. Primary customers:**

Whatcom County individuals and families experiencing and/or at risk of homelessness.

**2. Problem to be solved:**

On January 28, 2021, 859 people in Whatcom County were counted as experiencing homelessness during the annual Point in Time (PIT) Count. In addition to those counted, hundreds more are known to be at risk of losing their homes and becoming homeless in Whatcom County. The number of shelter beds available for families with children, youth and young adults, and highly vulnerable singles, is insufficient to meet the current need. Additionally, households living in vehicles, outdoors, and doubled up in overcrowded conditions may be unable to meet social distancing recommendations, and often lack access to sanitary facilities for personal care needs. Congregate living situations are not recommended during the COVID-19 pandemic. Increased case management is needed to increase capacity to assist households in achieving housing stability and retention.

**3a. Options / Advantages:**

These additional funds will support an expansion of shelter options thereby promoting individual as well as

# Supplemental Budget Request

Fund 122

Cost Center 122800

Originator: Ann Beck

public health and welfare interests. The provision of safe shelter and rental assistance, in combination with case management and related support, will reduce potential exposure to and spread of COVID-19, and focus on housing stability objectives resulting in permanent housing.

**3b. Cost savings:**

These funds are supported by federal dollars passed on through the state and will not impact local funds. The intent of these funds is to mitigate, prepare for, prevent, and end the spread of COVID-19 in the community among vulnerable populations. The resources supported by these funds are intended to avoid the spread of COVID-19 in the community and related costs, and support public health. People in emergency shelters and permanent housing, and receiving case management, are more likely to achieve housing stability, and thereby reduce public costs related to homelessness and the spread of COVID-19.

**4a. Outcomes:**

Increased capacity of shelter and rental assistance resources and increased numbers served for highly vulnerable populations to prevent, mitigate, and prepare for the spread of COVID-19 in the community among vulnerable populations lacking stable housing.

**4b. Measures:**

Increase in number served of those at high-risk of or experiencing homelessness with increased non-congregate emergency shelter capacity, rental assistance and case management throughout the county.

**5a. Other Departments/Agencies:**

n/a

**5b. Name the person in charge of implementation and what they are responsible for:**

	8301.169	Operating Transfer In	\$126,528
	<b>Request Total</b>		<b>\$0</b>

## 1a. Description of request:

The Lake Whatcom Stormwater Utility (132) has reevaluated their need for stormwater engineering support in 2022. To accommodate their needs, engineering time and effort will be shifted from the Stormwater Fund (123) to the Lake Whatcom Stormwater Utility Fund (132). This will not result in new FTE's but will instead reallocate their time within the Stormwater Division.

As the Stormwater Fund (123) is funded by the Flood Control Zone District Fund (169), this will result in a net zero change to the Stormwater Fund but will reduce expenditures on the Flood Fund budget by approximately \$126K.

## 1b. Primary customers:

Date

Costs:	Object	Object Description	Amount Requested
	6659.002	Building Maintenance Fee	\$39,000
	<b>Request Total</b>		<b>\$39,000</b>

**1a. Description of request:**

The purpose of this request is to request expenditure authority to cover annual maintenance expenses for the original crisis stabilization center located at 2030 Division Street, Bellingham WA. The facility is owned by the County and provides office space for mental health service providers who provide outreach services for the new Crisis Stabilization Center. When completing the current 21-22 budget, the maintenance expenses for the original facility were unintentionally omitted.

**1b. Primary customers:**

The facility currently provides a home base for behavioral health agency personnel who provide crisis outreach and recovery support. The professionals who use this space also provide back-up support to the services provided at the newly-constructed Crisis Stabilization Center.

**2. Problem to be solved:**

The County owned building requires ongoing annual maintenance service. Personnel who provide crisis services need a location close to the Crisis Stabilization Center to provide back-up services.

**3a. Options / Advantages:**

Use of the facility by behavioral health crisis outreach staff supports the community in services and increases behavioral health crisis support in a location that includes the recently completed Crisis Stabilization Center.

**3b. Cost savings:**

n/a

**4a. Outcomes:**

Necessary building maintenance will be completed to ensure the building is available for occupancy

**4b. Measures:**

Ongoing maintenance will ensure the location is available for tenants.

**Department Head Signature (Required on Hard Copy Submission)** **Date**

Costs:	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	4367.1000	Donations	(\$20,000)
	6610	Contractual Services	\$20,000
	<i>Request Total</i>		<i>\$0</i>

**1a. Description of request:**

The Health Department is requesting expenditure authority to utilize dedicated grant funding to create a training program for community professionals who respond to people experiencing episodes of behavioral health distress. This one-time grant was received in 2021 and continues into 2022. The full grant award is \$27,000.

**1b. Primary customers:**

Training recipients will include First Responders from Law Enforcement and EMS as well as community social service providers.

**2. Problem to be solved:**

Whatcom County Health Department is working closely with community partners to expand and develop new programs that will respond and provide support to residents who are experiencing behavioral health distress or crises, or medical issues that don't require emergency services. First Responders and other professionals have identified the need for specialized training to enhance their knowledge, skills and abilities as they work in these new programs.

**3a. Options / Advantages:**

Training videos and other forms of training will provide responders and community professionals with the tools they need to be effective in their interventions and support of people in need. Curriculum will be available online and accessible.

**3b. Cost savings:**

Grant funding will provide the support for this training project, saving taxpayer dollars.

**4a. Outcomes:**

Training materials, websites, and curriculum will be available to professionals for use as needed. First responders and social services providers will be better equipped to manage the people they are working with and will be more familiar with resources in the community.

**4b. Measures:**

Number of professionals accessing and receiving training from all law enforcement agencies, all EMS districts, and social service providers. Since much of the training will be via video, community professionals will access to the trainings for many years into the future.

**5a. Other Departments/Agencies:**

The County will work with a consultant to accomplish the project, with input from EMS and Law Enforcement personnel, and GRACE leadership.

**5b. Name the person in charge of implementation and what they are responsible for:**

Name of Request: City of Bellingham GRACE Award Increase

**X**  
 Department Head Signature (Required on Hard Copy Submission) \_\_\_\_\_ Date \_\_\_\_\_

Costs:	Object	Object Description	Amount Requested
	4337.1001	City of Bham Support	(\$140,000)
	6120	Extra Help	\$10,000
	6610	Contractual Services	\$112,603
	8351	Operating Transfer Out	\$17,397
	<b>Request Total</b>		<b>\$0</b>

**1a. Description of request:**

We are requesting expenditure authority of dedicated grant funding to expand the GRACE (Ground-level Response and Coordinated Engagement) program. This two-year award was received in 2021 and continues in 2022. This funding supports the addition of an Intensive Case Manager for the GRACE program, new program components that respond to people who are experiencing a behavioral health crisis, and development and training for public education of the programs.

**1b. Primary customers:**

GRACE serves people who require intensive supports and coordination among providers to ensure stability of general and behavioral health. People who are experiencing a behavioral health crisis, yet are not GRACE members will be served with the new GRACE program component.

**2. Problem to be solved:**

- A. People who use emergency response systems often to try to meet their needs, often cycle through these systems without receiving sufficient benefit.
- B. People who are experiencing a behavioral health crisis and call 911 may be more appropriately served by a non-law enforcement response.

**3a. Options / Advantages:**

- A. GRACE provides coordinated care and community support to its members, thereby reducing unnecessary emergency services responses, while promoting greater health and stability.
- B. People, who are non-GRACE members, who call 911 when having a behavioral health crisis may receive more effective and appropriate care when behavioral health professionals respond on scene. Law enforcement's primary role is public safety, which is not always relevant to 911 calls for behavioral health crises.

**3b. Cost savings:**

Behavioral health services delivered pursuant to a coordinated community support plan are less expensive and more effective than numerous emergency services responses from EMS or law enforcement.

**4a. Outcomes:**

The GRACE program will increase personnel and provide services to an additional 20 people at any given time.

**4b. Measures:**

Number of additional people served in the GRACE program in conjunction with Bellingham Police

	6610	Contractual Services	\$230,000
	8351	Operating Transfer Out	\$32,637
	<b>Request Total</b>		<b>(\$937,363)</b>

**1a. Description of request:**

We are requesting an increase in expenditure authority to provide increased behavioral health services much needed in our community. These programs and services are focused on prevention, intervention, treatment courts, recovery support and specialized housing. Approval of this request would allow us to expand these services in 2022.

**1b. Primary customers:**

Whatcom County residents with behavioral health concerns.

**2. Problem to be solved:**

A community focus on improving the behavioral health of county residents has been a high priority, especially in efforts to prevent or reduce interface with the criminal justice system, reduce homelessness, and promote the health and welfare of children, youth and their families. The COVID pandemic has impacted many residents, with increasing rates of anxiety and depression being reported. Crisis line calls have increased during the pandemic, and the behavioral health workforce has diminished, creating a challenging situation. Permanent supportive housing programs are experiencing a significant need for on-site behavioral health support due to increasing events of volatile behaviors by the residents and lack of skills for addressing such by resident staff.

**3a. Options / Advantages:**

Ensuring that programming is in place for people who are experiencing behavioral health disorders or crises is a goal of the Health Department and the community.

**3b. Cost savings:**

Behavioral health services and support reduce cost burden on the county because they result in increased employability, healthy family life, and improved mental health and well-being.

**4a. Outcomes:**

Expected outcomes include increased engagement in treatment services, increased housing stability for persons with behavioral health disorders, decreased utilization of costly emergency services, decreased law enforcement contacts, decreased jail bookings and days spent in jail.

**4b. Measures:**

The Behavioral Health Advisory Committee in conjunction with the Health Department will provide formal reports to the community in 2022. Success will be measured by analyzing performance measures delivered. Performance measures will include number of contacts with identified clients, client caseload ratios, connection to treatment services, access to housing, stability in housing programs, and decreased contacts with emergency services and criminal justice systems.

---

**Department Head Signature (Required on Hard Copy Submission)** **Date**

Costs:	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	6610	Contractual Services	\$30,000
	8351	Operating Transfer Out	\$4,257
	<i>Request Total</i>		<i>\$34,257</i>

**1a. Description of request:**

The Health Department is requesting an increase in spending authority in order to increase contracted services with community providers.

**1b. Primary customers:**

Whatcom County residents challenged with mental illness and in need of specialized support services and housing.

**2. Problem to be solved:**

People living with serious and persistent mental illness sometimes require specialized housing and support services in order to attain and retain their housing, and stabilize the symptoms of their illness. The county has prioritized housing for vulnerable populations and the increased revenue in the millage fund allows for additional investment in these services.

**3a. Options / Advantages:**

Mental Health millage revenue has increased over budgeted expectations. Keeping the funding support at the current level even though revenue has increased does not serve the public well. Millage use is guided by state statute and the county can only use the fund for the activities allowed. It is important to optimize the support allowed under funding availability.

**3b. Cost savings:**

Mental Health Millage is a dedicated source of revenue for people suffering from mental illness. Providing supportive services and stable housing not only improves the health and well-being of the population, but also reduces the cost burden on the county as stable health results in increased employability, positive family life, and improved social relationships.

**4a. Outcomes:**

Expected outcomes include increased engagement in treatment services, increased housing stability for persons with serious and persistent mental illness, decreased utilization of costly emergency services, decreased law enforcement contacts, decreased jail bookings and days spent in jail.

**4b. Measures:**

The Behavioral Health Advisory Committee in conjunction with the Health Department will provide formal program reports to the community in 2022. Success will be measured by analyzing performance measures delivered. Performance measures will include number of individuals who have been served in specialized shelters and permanent housing, to include housing retention data.

**5a. Other Departments/Agencies:**

Services will be delivered by various community partners.

**5b. Name the person in charge of implementation and what they are responsible for:**

### 1a. Description of request:

This budget supplemental makes the necessary 2022 budget adjustments for increased revenue amounts and contractual cost adjustments. Original revenue assumptions made during the biennial budget process in summer of 2020 were necessarily conservative because of the unknown economic impact of the pandemic. Assumptions concerning the property tax collection rate, sales tax income, GEMT funding and investment interest income have all been increased. Wages and benefits have been adjusted due to 2% COLA, reduction in retirement rates and other benefit rate changes. Budget for the Stryker equipment agreement has been added and Image Trend software maintenance has been increased to account for

	6870	Space Rental	\$5,600
	7110	Registration/Tuition	\$10,000
	<b>Request Total</b>		<b>\$56,576</b>

**1a. Description of request:**

Adjusts Training Specialist wage and benefit to account 2% COLA, reduction in retirement rates and other benefit rate adjustments.

Requests \$10,000 budget authority to develop instructors to provide training to the EMS System. This includes CPR Instructor and EMS Evaluator courses, materials and tuition for the providers, and cost of the lead instructor in the development program. This line item also includes professional development for the Training Specialist to attend courses or conferences. \$5,600 is requested for rental of training space and \$3,500 is requested for equipment to train and educate the EMS System providers and staff.

\$37,000 is requested to provide for an Advanced Airway Course for paramedics, respiratory therapists, physicians, and nurse anesthetists. It is anticipated there will be some cost recovery from non EMS providers and out of county EMS providers. Those fees have not yet been set.

**1b. Primary customers:**

Whatcom County citizens.

**2. Problem to be solved:**

This supplemental will provide for further development of the EMS provider training program which is of benefit to all Whatcom County citizens.

**3a. Options / Advantages:**

Current option is that each agency acquire their own training. There is a benefit to the system to ensure all personnel from various agencies are 1) adequately trained and 2) trained to the same quality standard as the EMS training program will be able to provide. This training is necessary to adequately and appropriately staff the EMS system.

	6210	Retirement	\$7,422
	6230	Social Security	\$4,634
	6245	Medical Insurance	\$16,416
	6255	Other H&W Benefits	\$1,859
	6259	Worker's Comp-Interfund	\$520
	6269	Unemployment-Interfund	\$158
	<b>Request Total</b>		<b>\$91,585</b>

**1a. Description of request:**

The EMS Administration division has a wide range of responsibilities to administer the Whatcom County EMS System. Administrative support is needed for a high volume of budget processes including financial reporting, accounts payable, and budgeting. Other duties will include recording and retrieval of data and information for new existing and new programs. The administration is also responsible for facilitating several EMS board meetings including Finance Committee, Technical Advisory Board, and the EMS Oversight Board.

**1b. Primary customers:**

EMS stakeholders.

**2. Problem to be solved:**

The EMS Administration Division has evolved since the passage of the 2016 EMS Levy. The administration has operated as a functional department managing the countywide EMS system without dedicated administrative support. This has compromised the ability of staff to produce the high volume of work necessary to facilitate meetings schedules, budgeting and other general office duties. The addition of a full time administrative assistant will fill a void and allow for greater effectiveness in the division.

**3a. Options / Advantages:**

The division has operated with the help and support of the Executive Office staff, volunteers and the willingness of the Manager to perform clerical duties in off hours. With the volume of work increasing it is imperative for the EMS division to assume all administrative functions to more effectively manage their budget, meeting facilitation and other complex duties.

**3b. Cost savings:**

n/a

**4a. Outcomes:**

The EMS division will be equipped to complete all administrative duties in an efficient and timely manner.

**4b. Measures:**

A new FTE will be hired to fulfill the administrative assistant position. This will ensure greater consistency and fulfillment of the required administrative work.

Name of Request: EMS Administration - Data Analyst Budget

**X**  
 Department Head Signature (Required on Hard Copy Submission) \_\_\_\_\_ Date \_\_\_\_\_

Costs:	Object	Object Description	Amount Requested
	4369.9001	Miscellaneous Revenues	(\$22,500)
	6510	Tools & Equip	\$2,372
	6610	Contractual Services	\$8,750
	6625	Software Maint Contracts	\$63,100
	7110	Registration/Tuition	\$2,165
	7190	Other Miscellaneous	\$110
	<b>Request Total</b>		<b>\$53,997</b>

**1a. Description of request:**

The data analyst position is responsible for maintaining, analyzing and elevating the data through various software technology. These technologies are sophisticated and technical requiring ongoing training as well as new software implementation. This budget supplemental recognizes the cost of implementing Tableau software as well as recognizing the ongoing software maintenance fees for Julota which had previously been covered by other funding sources. The Julota software is a mobile integrated software used by EMS, the Health Department and Peacehealth which allows different organizations to share data across platforms. The cost is to be shared between the entities using the program. Tableau is an interactive data analysis and dashboard program that will allow users to see and analyze EMS data that will help drive informed decisions about managing the countywide EMS system.

**1b. Primary customers:**

EMS, Health and PeaceHealth

**2. Problem to be solved:**

The Julota software platform provides an automated collaboration between the agencies. Mobile integrated health is essential for ensuring immediate access to timely information by all parties.

Tableau will help users see and make sense of EMS data and provide better decision-making tools.

Ongoing training and certification is essential to managing these data systems.

**3a. Options / Advantages:**

Not implementing Tableau is an option but results in making decisions in a more subjective manner rather than in a more analytic and data-driven manner. The Julota system is currently being used by all parties. Consistent training is essential to maximizing the software platforms to their full capabilities.

**3b. Cost savings:**

**4a. Outcomes:**

Improved processes once Tableau is implemented and personnel are trained. Continued use of Julota which has proven invaluable in sharing clientele information across agencies.

**Name of Request:** 2022 Lateral Paramedic Training

X

---

**Department Head Signature (Required on Hard Copy Submission)** **Date**

<i>Costs:</i>	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	7210.001	Intergov Prof Svcs	\$118,672
	7210	Intergov Prof Svcs	\$237,344
	<b>Request Total</b>		<b>\$356,016</b>

**1a. Description of request:**

Both Fire District 7 and Bellingham Fire Department are recruiting and training lateral paramedic candidates from other agencies as opportunity allows. This budget will provide for training up to 4 lateral candidates at BFD and up to 2 candidates at FD7. Agencies will be reimbursed for actual costs based on budgets of \$9,706 per month for each candidate for up to 6 months of training plus \$1,100 each for evaluation fees.

**1b. Primary customers:**

The community and EMS system benefits from fully trained and staffed ALS units.

**2. Problem to be solved:**

Recruiting trained paramedics from other agencies is an effective and more cost effective way to fill paramedic vacancies. The six new laterals will be able to work as paramedics at an accelerated rate because the lateral training is significantly shorter than training new aspring medics.

Candidates are required to be trained and tested on Whatcom County protocols. These new lateral hires will help to increase the number of paramedics tnecessary to fully staff the ALS units.

**3a. Options / Advantages:**

Lateral hires is an efficient, cost saving and timely method of recruiting new paramedics.

**3b. Cost savings:**

Savings are considerable when considering the cost of training new medics through the Bellingham Technical College/BFD sponsored program.

**4a. Outcomes:**

Fully trained paramedics will be available in 4 - 6 months if they pass the training evaluations.

**4b. Measures:**

Success will be measured when candidates have successfully passed all evaluations.

**5a. Other Departments/Agencies:**

Bellingham Fire Department and Fire District 7 as Whatcom County ALS providers. Impact will be increased number of paramedics available for service.

**5b. Name the person in charge of implementation and what they are responsible for:**

Chief Hewitt and MSO Ryckman for BFD  
 Chief Hoffman and Chief Boyko for FD7  
 responsible for oversight of the trainees

Costs:	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	7210	Intergov Prof Svcs	\$1,496,500
	<b>Request Total</b>		<b>\$1,496,500</b>

**1a. Description of request:**

Contract with Bellingham Fire Department for 5th medic unit implementation costs:

Costs covered include:

IT Equipment	\$13,000
Durable Medical Equipment	18,000
PPE	27,000
Medical Kits	7,500
Miscellaneous	15,000
Subtotal	\$80,500

Plus up to 10 paramedic FTEs currently paid in the COB General Fund that will be moving to mixed ALS/fire status in 2022. They will staff a part time rig as capacity permits. BFD will be reimbursed for the actual costs of the paramedics which are estimated to be \$11,800 per month each for a total of \$1,416,000.

**Name of Request: Lake Whatcom Stormwater Utility 2022 Update**

X

**Department Head Signature (Required on Hard Copy Submission)**

**Date**

Costs:	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	6110	Regular Salaries & Wages	\$72,717
	6290	Applied Benefits	\$53,811
	6630	Professional Services	\$10,500
	6780	Travel-Educ/Training	\$500
	7060	Repairs & Maintenance	\$70,000
	7110	Registration/Tuition	\$1,000
	7380	Other Improvements	(\$200,000)
	<b>Request Total</b>		<b>\$8,528</b>

**1a. Description of request:**

The Lake Whatcom Stormwater Utility (132) has re-evaluated its needs for its 2022 budget. Major changes include:

- A determination that the assistance of an engineer FTE is necessary to move projects forward. This FTE will be reallocated from the Stormwater Fund (123)
- A reduction in the 2022 large project construction program
- An increase in the 2022 small works (repair and maintenance) projects
- An increase in professional services for social marketing and graphic design contracts.

**1b. Primary customers:**

Property owners residing in the Lake Whatcom Stormwater Utility district

**2. Problem to be solved:**

At this time, capital improvement projects in Lake Whatcom are primarily covered by REET funding. Rather than spending \$250,000 of LWSU funds on capital projects in 2022, it was decided that REET should continue to be the primary funding source. This will allow the LWSU fund balance will build up over the next few years so that it's available as needed to supplement future capital projects. Additionally, the M&O NPDES crew has encountered staffing and resource shortages that have prevented them from completing the requested maintenance and repair projects for the past few years. In 2022, contractors will be hired to complete the necessary small works projects, which requires an increase in budget over last year.

**3a. Options / Advantages:**

N/A

**3b. Cost savings:**

N/A

**4a. Outcomes:**

The overall budget request is only increased by \$8,528. LWSU funding will be directed more toward maintenance and small works repair projects, rather than large capital projects in 2022. Additional funding will also be spent on education and outreach graphic design contracts and social marketing campaigns in

	6269	Unemployment-Interfund	\$323
	6610	Contractual Services	\$850,000
	8351	Operating Transfer Out	\$146,786
	<b>Request Total</b>		<b>\$0</b>

**1a. Description of request:**

The Health Department requests budget authority to add capacity to the Housing and Behavioral Health Programs in Whatcom County. This funding would support an additional Housing Specialist and Coordinator in the Human Services Division of the Health Department. This funding would also support case management and behavioral health services for eligible community members, with a large focus on the increased number of families becoming homeless. Per RCW, 60% of these funds must be dedicated for the development of affordable housing in the community such as construction and renovation.

**1b. Primary customers:**

The affordable housing developed with these funds will be available to those at 60% Area Median Income or below, with a particular focus on veterans, seniors, families with children, people with disabilities and survivors of domestic violence. This funding is tied to RCW 82.14.530 and housing and facilities providing housing must serve those populations specified in the RCW. Case management and behavioral health programs would also be focused on these same customers.

**2. Problem to be solved:**

In regards to the positions for staffing, the expanse and complexity of work in the homelessness and affordable housing program has increased significantly over the past few years. Grant revenues from the state and federal government have increased, along with the need for comprehensive reporting to the funders as well as program development. Homelessness issues locally have increased the need for the county to work more closely with city and community partners, and has also increased the need for county staff to provide intensive technical assistance to housing providers and developers. Two new local revenue sources have created the need for a robust affordable housing development component in the housing program that requires new sets of skills and relationships with community partners. The current two Housing Specialists have been struggling to meet the growing work demands of the program now, and with additional monies and associated expectations, staffing is now insufficient to meet the expectations, demands, and opportunities that the multimillion-dollar program has.

# Supplemental Budget Request

Status: Pending

## Health

## Human Services

Suppl ID # 3442

Fund 133

Cost Center 133100

Originator: Ann Beck

In regards to funding portion for housing development and services available, the concerns and challenges around homelessness and behavioral health needs in the community continue to grow. This new funding would expand housing inventory as well as the services needed for folks to be achieve and maintain stable housing.

### 3a. Options / Advantages:

The Human Services Manager and Human Services Supervisor have been performing some of the work of the Housing Specialists in an effort to meet work demands. This is not sustainable at the level currently required. New stable local monies require staff technical expertise in affordable housing development and a consistent point person in the county. Hiring an additional Housing Specialist and Coordinator is the best option to meet the increasing demands of the program and achieve greater outcomes while simultaneously creating in-house expertise and stability in affordable housing development.

Staff has continued to support services in the community with the available resources, but the needs are increasing and this funding can help increase capacity for services and housing. This funding would offer the new human services positions dedicated funds to focus on creating more affordable housing options, as well as the corresponding funds to offer programming to those in need of supportive and stabilizing services.

### 3b. Cost savings:

This new source of local funding which supports affordable housing development eliminates the need for general fund support to increase housing staff capacity. Increased revenue from document recording fees will also help offset the costs of this new position in future years.

Increased affordable housing in the county will relieve pressure on the current system and help to move people from shelter to permanent housing. Emergency shelter, such as motel stays is an expensive model that could be reduced with more housing options available. Additional staff time will increase Whatcom County's ability to secure grants and other funding from state and federal sources, as well as deploy it effectively in Whatcom County.

### 4a. Outcomes:

Capacity for behavioral health and housing services will be increased in the community with newly developed programs and partnerships before the end of 2022.

The county will have an affordable housing development specialist that will facilitate creation of new housing units in the county, serve as the county point person for affordable housing efforts, and support the need for reasonable workloads for the housing program staff who can then meet demands with high quality work.

### 4b. Measures:

The new Housing Specialist will be hired and begin to assume the work already initiated in affordable housing, and expand upon it.

With added housing capacity there will be movement of households out of emergency shelter and into permanent housing within the various programs providing support, and the additional services and supports will increase the number of Whatcom residents who achieve and maintain stability in housing projects.

### 5a. Other Departments/Agencies:

The City of Bellingham is supportive of additional county staffing since it will improve collaborative efforts in both affordable housing development as well as addressing the current challenges facing those who are experiencing homelessness. The City of Bellingham will continue to meet regularly with County staff to maximize funding to serve those in need throughout Whatcom County with housing and services. Small city governments are depending on the county to provide leadership and technical expertise in affordable housing development outside the limits of the city of Bellingham.

### 5b. Name the person in charge of implementation and what they are responsible for:

	<b>Request Total</b>		<b>\$3,860,191</b>

## 1a. Description of request:

In order to support COVID response efforts, the Health Department requests spending authority to support the on-going COVID response operations through December 31, 2022.

This funding request supports the continuation of 35 full time, benefitted, short-term positions for 12 months and 12 part-time temporary positions. These positions include case and contact investigators (CCI), nurses, logistics coordinator, communication specialists, clerks, site schedulers, emergency response specialist, interim manager, and program specialist.

In November 2021, Council approved ASR #2021-6303 for an initial Department of Health COVID ELC grant to fund temporary staff for the COVID response through June 2021. The second COVID ELC grant amendment ASR #2021-3198 extended funding for these positions through December 2021. This is part of the Health Department's shift to a more stable staffing response to the COVID pandemic response and recovery efforts.

In addition, this request includes contractual services such as testing site communication or planning as necessary to prevent the spread of COVID.

The Health Department also requests expenditure authority of \$380,000 to improve and modernize the Department's data systems and data infrastructure. This funding supports a systems analyst position, software upgrades, technical assistance and specialized design. The three-year project will focus on

# Supplemental Budget Request

Health

Communicable Disease & Epidemiology

Suppl ID # 3476

Fund 138

Cost Center

Originator: Erika Lautenbach

building interoperability across data systems to improve data access, data quality, ease of use, reporting, and reduce duplicative efforts, maintenance and operational costs.

### 1b. Primary customers:

Customers are all residents of Whatcom County, who will benefit from timely case and contact investigations, testing availability, quarantine and isolation support, warehouse/PPE management and distribution, accurate data and timely communication responses.

### 2. Problem to be solved:

Temporary positions create a structural barrier for stable and consistent support as temporary extra help employees may only work full time for three months and then drop hours to 16 hours per week. This challenge contributes to turnover in favor of full-time positions, instability in staffing, severe administrative burden to continually recruit, hire and train additional temporary staff, and reduced capacity to respond to the pandemic.

During the last peak in January/February 2021, we supported this work through shared staffing from other agencies through the structure of Whatcom Unified Command. However, with the stand down of unified command on July 31, after 18 months staff that were fulfilling these roles have been returned to their home agencies.

In order to meet support, response and communications needs required to support substantial and high levels of transmission of COVID-19 in Whatcom County, we need full-time temporary with benefits personnel in logistics, clerical, communications and outreach to manage that workload. The program specialist position will provide community outreach, information, referral, service coordination and health promotion related to COVID-19 for Hispanic/Latino/Latinx community members who experience cultural and linguistic barriers. The Communication Specialist request is in response to the sustained need for timely, reliable, and comprehensive communication and tools to reach residents and the media.

While the intensity of COVID case burden has varied throughout the pandemic, the demand for regular communication locally has consistently remained high and is tied to the success of prevention measures and the credibility of the Health Department and Whatcom County. This position will both provide additional support for communication, with an emphasis on graphic design and videography for the successful candidate or by reassignment of duties within the existing team of Communications Specialists. These are two areas of communication for which the Health Department has contracted services that could be met, in part, with additional in-house capacity. Additionally, adding another full-time position would allow the Health Department to achieve its communication objectives in 2022 without relying on other County or city agencies for temporary staffing reassignments.

In terms of current data systems at the Health Department, multiple programs are using outdated data systems and the current functionality no longer meets their business needs. Data systems currently lack interoperability to collate, analyze and use data. In addition to this, several of the department's data systems have been built internally and lack sufficient ongoing maintenance support. As a result, staff continue to create workarounds that impact productivity and often require additional staff time to address inefficiencies. Some processes still require manual entry of data which increases the risk for human error. The mix of paper-based processes and the lack of interoperability of computer-based systems affect the ability to use data to inform program planning and evaluation. It also impacts the agency's ability to use data for performance accountability and communicate programmatic impacts to stakeholders and the community.

### 3a. Options / Advantages:

Employees will be advantaged by having benefits, and by having some stability and predictability in their employment status. The County will be advantaged by having a more stable workforce and the ability to attract and retain well-qualified individuals needed to respond to COVID. With the 5th surge of COVID cases, we will be able to support logistics requests from partner agencies, public communications and administrative support for test and vaccine scheduling.

# Supplemental Budget Request

Status: Pending

Health

Communicable Disease & Epidemiology

Suppl ID # 3476

Fund 138

Cost Center

Originator: Erika Lautenbach

Modernizing data systems and improving the data infrastructure will increase the department's ability to effectively communicate with stakeholders and the public and inform program planning, evaluation and policy development. It will also decrease the need for manual data entry and data management which can lead to errors and staff time making corrections.

### 3b. Cost savings:

These positions will support the COVID response and allow regular staff ability to take vacation and decrease overtime. These positions will also reduce need to pull regular staff from other program areas (or other agencies) to support COVID surge response.

A more efficient and appropriate data infrastructure will improve program delivery and evaluation. We will also reduce ongoing maintenance and operational costs of outdated systems and staff time spent on manual data entry and data management.

### 4a. Outcomes:

Whatcom County businesses and healthcare facilities will be supported with PPE and other supplies logistics coordination. Communication support will result in increased information and data to residents, media and elected officials countywide, and additional volume of linguistically and culturally appropriate education materials and tools for organizations impacted by the virus. More staff available to assist in the response, less administrative time spent in recruitment, hiring and training, more efficient operations with better trained and more experienced staff, less reliance on pulling regular staff from other program areas; when regular staff are surged, there is often a period training/refreshing needed not to mention leaving the programs that are pulled from shorthanded

The Health Department's data systems and the ability to collect, manage, analyze and report program and contractual data will improve.

### 4b. Measures:

Adequate community testing; 90% of cases called within 24 hours; 80% of contacts called within 48 hours; daily monitoring of all people in isolation and quarantine; timely contact with businesses, schools, day cares, healthcare organizations, and long-term care facilities. Outbreaks will be minimized and managed effectively in partnership with employers. Increased social media posts, information on website, media briefings, education materials, and other communication tools as needed

The data system upgrade measures include:

1. Completion of a Department wide data system assessment, prioritization and project plan for improving the department's data infrastructure.
2. A minimum of 3 data systems upgraded within the first year.
3. Improvement in reports and communications on the impact and effectiveness of the Department's programs and the funds provided for contractual programs in the community.

	7220	Intergov Subsidies	\$1,000,000
	7350	Buildings & Structures	\$1,500,000
	<b>Request Total</b>		<b>\$3,500,000</b>

**1a. Description of request:**

Housing security will be addressed through a multi-faceted approach. Whatcom County will dedicate funding to infrastructure, temporary shelter and respite and hygiene facilities.

Whatcom County leadership has committed to keep children from sleeping unsheltered in our community, as well as focusing on the well-being of vulnerable youth. The number of families with children entering homelessness has increased throughout the COVID pandemic. The current shelter solution is motel stays while they work with homeless housing providers to move back into permanent housing. Increased efforts, in partnership with the City of Bellingham, are focused on rapidly re-housing these families but the need for emergency housing is part of those efforts. This funding would continue to support motel stays and staffing needed to help families transition out of homelessness.

As winter months approach there is a continued need to support vulnerable youth in the community who are over 18 and living unsheltered. NWYS is operating a winter shelter to offer a space for these youth to safely sleep during the winter months, which will also increase capacity at Basecamp as those youth move from that larger congregate shelter, to a smaller setting designed to meet the needs of youth 18-24. Funding for operations is needed to support this temporary shelter during the winter months.

This supplemental will also support the buildout of a medical respite and hygiene facility for vulnerable populations, primarily the unhoused. The project will provide accessible medical respite beds and showers and laundry services for vulnerable populations.

The County will also be working with community agencies to acquire new affordable housing units. The housing crisis has only been exacerbated by the COVID pandemic. Acquiring new affordable housing units will help support the effort to reduce homelessness in Whatcom County.

- \$1M Contractual Services to be used to provide shelter to homeless youth and families
- \$1M Intergovernmental Subsidies will be dedicated to pending affordable housing projects
- \$1.5M Buildings & Structures to support the build out of a medical respite and hygiene facility for vulnerable populations

**1b. Primary customers:**

Whatcom County residents, unhoused youth and families and vulnerable populations.

### 2. Problem to be solved:

This funding would continue to support motel stays and staffing needed to help families transition out of homelessness.

The continued need to support vulnerable youth in the community who are over 18 and living unsheltered. NWYS is operating a winter shelter to offer a space for these youth to safely sleep during the winter months, which will also increase capacity at Basecamp as those youth move from that larger congregate shelter, to a smaller setting designed to meet the needs of youth 18-24.

Funding is also dedicated to providing medical respite and recovery beds to vulnerable populations. Additionally, the site will provide accessible showers and laundry resources for vulnerable populations. Medical respite has the potential to significantly improve the lives of a severely vulnerable population while reducing hospital admissions, decreasing inpatient days and increasing outpatient provider visits. (Biederman, Gamble, Wilson, Douglas, & Feigal, 2019). Readily accessible shower and laundry facilities are a continuing and growing need in the community.

Housing security will be addressed working with community organizations to acquire affordable housing units.

### 3a. Options / Advantages:

Supporting efforts to mitigate the homeless crisis in our community impacted by the COVID pandemic is an eligible and outcome based use of ARPA funding.

### 3b. Cost savings:

n/a

### 4a. Outcomes:

Funding will be dedicated to the vulnerable homeless youth population and used to ensure medical respite beds and accessible showers and laundry are readily available to this vulnerable community impacted by COVID.

### 4b. Measures:

Access to a facility that provides medical respite beds, showers and laundry will be available to this vulnerable population.

### 5a. Other Departments/Agencies:

**Name of Request:** ARPA - Economic Recovery - Childcare - Capital

X

---

**Department Head Signature (Required on Hard Copy Submission)** **Date**

Costs:	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	6610	Contractual Services	\$3,500,000
	<i>Request Total</i>		\$3,500,000

**1a. Description of request:**

ARPA funding will be used to acquire both buildings and structures in qualified census tracts (Aloha, Millworks, Barkley , BGC Lynden, and Forest Street) to be re-purposed for childcare facilities. As childcare facilities they will be used to increase the capacity for desperately needed childcare services throughout Whatcom County.

**1b. Primary customers:**

Eligible families in need of quality childcare services.

**2. Problem to be solved:**

Child care needs far outweigh the community's availability of affordable childcare opportunities in Whatcom County. During the pandemic 80% of Whatcom County child care providers closed temporarily. One in four remain closed today while 67% of child care centers are at risk for closing and 47% of family child care providers are at risk of closing. The amount of currently available child care for kids under age 5 will need to triple by the year 2025 in order to meet Whatcom County's anticipated child care needs. By acquiring these facilities Whatcom County can provide the undisputed need for more readily available quality child care space. These services will help to align families in need of childcare with affordable care.

**3a. Options / Advantages:**

Low inventory of childcare options in Whatcom County has undermined the community's economic recovery. Reduced options and high cost of child care threaten family budget budget stability which further impacts the community's economic recovery.

**3b. Cost savings:**

n/a

**4a. Outcomes:**

Affordable quality childcare will be available for families in need of affordable quality childcare.

**4b. Measures:**

These new facilities will be utilized by families needing affordable quality childcare.

Costs:	Object	Object Description	Amount Requested
	6610	Contractual Services	\$2,000,000
	<b>Request Total</b>		<b>\$2,000,000</b>

### 1a. Description of request:

Existing childcare facilities are currently understaffed as childcare workers have steadily left the workforce for higher paying jobs as a result of burnout and low wages. The pandemic escalated an already tough employment industry into a staffing crisis. Workers are trading their childcare jobs for other jobs that pay more and have better benefits. Whatcom County will use ARPA funding to support workforce development opportunities to help attract, train and recruit qualified childcare staff. Additionally, incentives and premiums will be used to attract and retain quality workers in this critical industry.

### 1b. Primary customers:

Families in need of childcare services. Childcare facilities in need of qualified workforce.

### 2. Problem to be solved:

Childcare services are limited throughout Whatcom County. Families unable to find affordable, quality childcare are most often unable to return to work. Increasing the availability of childcare services by expanding the workforce with well-trained and competitively paid childcare providers will encourage economic recovery in our community as more families can return to work outside of the home.

### 3a. Options / Advantages:

Childcare opportunities are an integral component to our economic recovery. Without quality, affordable childcare, families are unable to resume full time employment. Having a strong workforce will help the community's economic recovery.

### 3b. Cost savings:

n/a

### 4a. Outcomes:

Quality and affordable childcare will be available throughout the community. The childcare workforce will grow as a result of training, recruitment and higher wages.

### 4b. Measures:

Families will have access to affordable quality childcare.

### 1a. Description of request:

Rural broadband has been widely recognized as a crucial resource in establishing equitable opportunities for business and education. Whatcom County will use ARPA funds to add broadband capability for the last mile projects in the Deming, Glacier and Point Roberts communities. The ability for our rural communities to access high speed broad will maximize educational and work opportunities. Both will support the economic recovery in our community.

### 1b. Primary customers:

Whatcom residents will benefit from access to broadband.

### 2. Problem to be solved:

Broadband access in our rural communities has been limited and sparse. The opportunity to finally bring that capability into these communities will increase business and educational opportunities to these rural neighborhood communities.

### 3a. Options / Advantages:

Completing the last mile broadband projects will assist the county in our economic recovery.

### 3b. Cost savings:

N/a

### 4a. Outcomes:

the last mile of broadband will be made available to our rural communities.

### 4b. Measures:

Broadband will be available in our rural communities.

### 5a. Other Departments/Agencies:

Port of Bellingham

### 5b. Name the person in charge of implementation and what they are responsible for:

Gina Stark

### 6. Funding Source:

**Name of Request:** *Leased space for Public Defender's new staff*

X

---

**Department Head Signature (Required on Hard Copy Submission)** **Date**

<i>Costs:</i>	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	6870	Space Rental	\$100,000
	<b><i>Request Total</i></b>		<b><i>\$100,000</i></b>

**1a. Description of request:**

Rental space is being requested to accommodate the addition of 9 new Public Defender staff to deal with the court case backlog caused by the pandemic. The unfinished second floor of the Public Defender's building will be remodeled to accommodate the increased staffing related to the backlog and will also provide much needed attorney/client privilege meeting rooms. Until this remodel is completed there is an immediate needs for more office space.

**1b. Primary customers:**

Indigent defendants in the Whatcom County Superior and District Courts will benefit from this additional office space. Providing space for new Public Defenders Office staff will have a positive impact on the courts and P.A.'s office as well because more cases will be processed.

**2. Problem to be solved:**

The Public Defenders Office is hiring nine additional attorneys to help mitigate the significant backlog of cases. These new attorneys will need a place to work until the 2nd floor remodel is accomplished. Creating new office space will serve to meet the additional space will serve to meet the additional space needs of the department.

**3a. Options / Advantages:**

Remote work opportunities were also being considered but does not address the need for client/attorney privacy. New attorneys will also benefit from being able to work in the same location as other staff rather than starting a new job remotely. Leasing rental space to accommodate increased staffing until the remodel is complete will ensure the critical work of the Public Defenders Office will not be impacted.

**3b. Cost savings:**

n/a

**4a. Outcomes:**

New office space to accommodate the new Public Defenders staff can be acquired during the 2022 year until the remodel is complete.

**4b. Measures:**

Office space will be leased until the 2nd floor of the Central Plaza Building has been remodeled to accommodate increased staffing needs.

**5a. Other Departments/Agencies:**

Public Defender, AS-Facilities and AS-IT to set up the new office space.

**5b. Name the person in charge of implementation and what they are responsible for:**

**1a. Description of request:**

The Grants Manager working out of the Executive Office to respond to the innumerable and unprecedented grant opportunities being made available through ARPA and the new infrastructure package. The work will be accomplished through a small Economic Relief and Recovery team working under Administrative Services and tasked with identifying opportunities, preparing and managing grant applications using ARPA funds. The goal of this team is to improve efficacy of programs that help address negative economic impacts.

**1b. Primary customers:**

Whatcom County residents and the community at large.

**2. Problem to be solved:**

Whatcom County is poised to apply for and receive an unprecedented amount of funding through the American Rescue Plan Act. Access to these funds will be contingent on our ability to identify opportunities, align projects with funding eligibility requirements, and submit well-written and timely project proposals and applications.

To accomplish this, Whatcom County must increase its grant administration capacity.

**3a. Options / Advantages:**

Without adequate personnel to pursue and administer grant funding opportunities, Whatcom County will not be able to take advantage of the unprecedented funding opportunities now available to local governments.

**3b. Cost savings:**

n/a

**4a. Outcomes:**

The position will ensure Whatcom County is positioned to receive and administer funding opportunities.

Name of Request: Solid Waste Property Cleanup with Liens

**X**

Department Head Signature (Required on Hard Copy Submission)

Date

Costs:	Object	Object Description	Amount Requested
	6610	Contractual Services	\$50,000
	8351	Operating Transfer Out	\$12,840
	<b>Request Total</b>		<b>\$62,840</b>

**1a. Description of request:**

The Health Department is requesting expenditure authority for the Whatcom County Solid Waste Program. The purpose of this request is to establish a program for cleanup of properties with egregious solid waste violations on them. The program would be used to abate and clean up violations of health regulations, and the Solid Waste fund would be replenished upon sale of the property and collection of the lien.

**1b. Primary customers:**

Residents of Whatcom County

**2. Problem to be solved:**

Solid Waste staff encounter properties where an extreme violation of a public health regulation exists, multiple complainants have contacted the Health Department about the property, and all existing avenues of mitigating the health violation have been exhausted to no effect. Whatcom County Code 24.07, Administrative Notice Proceedings, Civil Penalties and Abatement, states that “the county may institute a civil suit in any court of appropriate jurisdiction for the collection of any civil penalty imposed, for the cost of any work of abatement, and/or for its administrative costs pursuant to this chapter, against any person whose violation or violations of a health regulation resulted in the penalty, the abatement, or the costs. The civil penalty, the cost of abatement, and the administrative costs are also joint and several personal obligations of any person in violation,” and, “WCHD shall have a lien for any civil penalty imposed, the cost of any work of abatement, and/or its administrative costs which may be foreclosed and enforced in the civil suit authorized by this chapter against the real property on which the civil penalty was imposed, the administrative cost incurred, or any of the work of abatement was performed.”

**3a. Options / Advantages:**

The Solid Waste program maintains a voucher program to assist homeowners and occupants with property cleanups. This program is very successful when the property owner or occupant is willing to cooperate with the County and work to mitigate the violation. Occasionally, property owners have no interest or motivation to perform a cleanup of their property, and the violation continues to affect the health and well-being of the neighborhood. The County has the option to assess civil penalties on the property owner, but those are unlikely to be paid, as many property owners with solid waste complaints do not have the financial ability to perform a cleanup, let alone pay a civil penalty, and it does not address the problem of the health violation. This program is expected to be used infrequently, in those situations where all other attempts to mitigate the violation have been unsuccessful.

**3b. Cost savings:**

The lien on the property would enable the County to be reimbursed for expenses incurred.

# Supplemental Budget Request

Status: Pending

Health

Environmental Health

Suppl ID # 3457

Fund 140

Cost Center 140100

Originator: Sue Sullivan

**4a. Outcomes:**

Properties with long-term solid waste violations would be cleaned up, and the county would lien the property for the entire cost of the cleanup. Properties that are cleaned up would no longer be considered a public health nuisance. Outcomes could include vector remediation, decreased threat of hazardous materials reaching the environment, and decreased threat of exposure to hazardous materials or disease-causing materials, such as used syringes.

**4b. Measures:**

Closed Solid Waste complaints after a cleanup is performed.

**Name of Request:** Pt Roberts Trailer

X

---

**Department Head Signature (Required on Hard Copy Submission)** **Date**

Costs:	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	7350	Buildings & Structures	\$150,000
	8351	Operating Transfer Out	\$38,520
	<b>Request Total</b>		<b>\$188,520</b>

**1a. Description of request:**

The Health Department is requesting 2022 expenditure authority to purchase a replacement trailer at Point Roberts. The purchase was approved by Council in 2019, but due to time constraints was not completed. This expenditure authority covers purchase and installation of a replacement trailer at the County-owned Point Roberts solid waste transfer station. The budget has been increased from the original budget request due to several factors. The original proposal assumed that the previous owner of the transfer station would be responsible for removal and disposal of the existing trailer, all electrical and plumbing connections, and site prep. The County will accrue the additional expense in the removal. Due to COVID-19, demand for these trailers has risen, which has increased the price, and transportation through Canada is heavily regulated and requires very specific equipment. Due to these reasons, the budget has been increased.

**1b. Primary customers:**

Residents of Whatcom County

**2. Problem to be solved:**

Outdated facility requires improvements for safety and efficiency.

**3a. Options / Advantages:**

Improvements to County owned solid waste handling facilities will make them safer and result in more effective use by the county residents.

**3b. Cost savings:**

The current County-owned 1961 Point Roberts transfer station mobile office trailer, used by both the public and by the lessee, as leased property, as per leasehold agreement, is unpermitted, dilapidated, unsafe, fully depreciated and contains asbestos. A cost savings exceeding \$100,000 will be realized through the elimination of risk of potential liability and litigation resulting from personal injury to either public users of the facility, or the lessee, due to negligence of the county to maintain the leased property, as per leasehold agreement.

**4a. Outcomes:**

County owned solid waste handling facilities will be safer and more effectively utilized by the county residents.

**4b. Measures:**

Improvements completed.

**1a. Description of request:**

We are requesting 2022 expenditure authority to repaint the floor at the Disposal of Toxics facility. The facility is required to have a chemically resistant floor coating due to Department of Ecology regulations, in order to prevent chemical spills from entering the environment. The floor coating at the facility is over 20 years old and the floor has many cracks and scrapes, and has never been repainted.

**1b. Primary customers:**

Residents of Whatcom County

**2. Problem to be solved:**

Moderate Risk Waste facility floor needs maintenance

**3a. Options / Advantages:**

Improvements to County owned solid waste handling facilities will make them safer and decrease the chance of a chemical spill getting released to the environment.

**3b. Cost savings:**

A cost savings of \$10,000 or more can be realized by preventing a costly cleanup from a chemical spill reaching the environment.

**4a. Outcomes:**

County owned solid waste handling facilities will be safer and be brought up to state regulations.

	<b>Request Total</b>		<b>\$0</b>

**1a. Description of request:**

Northwest Law Enforcement Administrative Radio Network (NW LEARN) coordinated the development and maintenance of the public safety radio network serving Island, San Juan, Skagit, and Whatcom Counties for more than thirty years. The Northwest Regional Council dissolved NW LEARN effective 12/31/2020 and transitioned all of the administrative purchasing function related to NW LEARN back to member agencies. Whatcom County Sheriff's Office Division of Emergency Management (WCSD-DEM) now has the responsibility for leasing radio towers and for the repair and maintenance of radio equipment. WCSD-DEM needs budget authority for these expenses.

**1b. Primary customers:**

Fire, EMS, Law Enforcement, and Public Works agencies in Whatcom County.

**2. Problem to be solved:**

Having managed the Public Safety Radio System for the first nine months in 2021, WCSD-DEM has been able to assess the tower requirements for radio and microwave support and requires additional budget authority for the necessary tower leases.

Also, the \$14,400 expected from Other Entity Support has not materialized and support from the General Fund is needed to offset this loss of revenue.

**3a. Options / Advantages:**

There are no other options since the leased radio towers are required for a functional system.

**3b. Cost savings:**

This necessary expense will provide for a functional Public Safety Radio System in Whatcom County.

**4a. Outcomes:**

**4b. Measures:**

**5a. Other Departments/Agencies:**

Multiple jurisdictions, departments, and agencies utilize the Whatcom County Radio System.

**Name of Request:** Courthouse Security Upgrades

X

---

**Department Head Signature (Required on Hard Copy Submission)** **Date**

Costs:	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	7380	Other Improvements	\$217,000
	<i>Request Total</i>		<i>\$217,000</i>

**1a. Description of request:**

Facilities Management is requesting a one-time allocation of funds (to be placed in a project based budget) for security improvements to the Whatcom County Courthouse. These improvements are related to vulnerabilities identified with Camp 210, as well as other desired security upgrades and improvements. A list of requests is as follows:

1. A panic button system that will immediately lock the Courthouse. This involves installing mechanical equipment in the rotunda as well as the south entrance that would automatically lock all public doors upon request. \$30,000+WSST
  2. Additional surveillance cameras to provide full coverage of public areas of the Courthouse (cameras, cabling, programming) . \$40,000+WSST
  3. Adding a video surveillance viewing station in Lottie Street for the Sheiff Department, giving the SO the ability to monitor video and of external activity \$5,000+WSST
  4. Install additional external camera coverage to the outside of the jail. There are large voids in this coverage. \$10,000+WSST
  5. Video Storage upgrades necessary to accommodate the additional camera coverage and storage needs. \$40,000+WSST
  6. Facilities staff labor to coordinate the above effort. \$15,000
  7. Network upgrades and Siemens programming. \$51,000+WSST
  8. Intercom System to South Entrance for ADA. \$8,000+WSST
- \$199,000+ Washington State Sales Tax, rounded to \$217,000

**1b. Primary customers:**

Whatcom County employees as well as citizens of Whatcom County entering County Courthouse.

**2. Problem to be solved:**

During the crisis created by Camp 210, it was quickly identified that the Courthouse should be made more secure with the ability to quickly lock down the facility as well as monitor public activity both on the inside and outside of the Courthouse. Currently, all but one door in the Rotunda must be physically locked by a person and there is not the ability to quickly secure the Courthouse without putting staff in a compromised position.

---

### 3a. Options / Advantages:

There are not many other alternatives to this request. The only other option would be to not make the improvements.

The safety and security of our employees as well as the public within the Courthouse is paramount.

### 3b. Cost savings:

There are not many cost saving and most of the cost of materials are fixed. Facilities will be prudent with procurement to ensure the most economical selections are made that meet the needs of the County.

### 4a. Outcomes:

Facilities will prioritize the panic button and this improvement will be made as soon as funding is available. The remainder of the items will be performed as staff time allows, which is why we would also be requesting a project based budget for these funds

### 4b. Measures:

Facilities will implement improvements as soon as possible.

When improvements are installed

### 5a. Other Departments/Agencies:

The impacts could only be considered advantageous.

All County departments within the Courthouse would receive benefit for the improvements.

### 5b. Name the person in charge of implementation and what they are responsible for:

<i>Suppl ID #</i> 3410	<i>Fund</i> 326	<i>Cost Center</i>	<i>Originator:</i> Rob Ney
<i>Year 2</i> 2022		<i>Add'l FTE</i> <input type="checkbox"/>	<i>Priority</i> 1

**Name of Request:** Courthouse Signage

X

**Department Head Signature (Required on Hard Copy Submission)** **Date**

Costs:	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	7060	Repairs & Maintenance	\$125,000
	<i>Request Total</i>		<i>\$125,000</i>

**1a. Description of request:**

The Council passed Resolution 2021 on January 12, 2021 directing staff to provide multi language signage to all public buildings. As this is a quite costly action, and staff wants to test the effectiveness of implemented measures, this ASR is for that signage replacement project within the Courthouse.

Staff proposes two electronic directories and information displays, one at each public entrance on the first floor of the Courthouse. Each electronic devise will display office locations for each Department, as well as the Court docket for that day. Each item will be displayed in multiple languages. Additionally, each floor will be provided a new directory at the lobby in addition to all new suite and building signage.

**1b. Primary customers:**

Any citizen that enters the Courthouse in need of County services.

**2. Problem to be solved:**

Staff needs to address the Resolution passed by Council. This action will apply to the Courthouse and will be the pilot project for the rest of the County. If effective, similar measures will be requested in the rest of the County buildings.

**3a. Options / Advantages:**

This is the only measure staff has considered. However, all options will be well thought out and executed. This plan may be fluid based on our findings. However, any action must have budget authority to carry out.

Creating a budget and further developing an action plan, then implementing this plan will comply with Resolution 2021-001.

**3b. Cost savings:**

Staff will evaluate each alternative and implement a plan that is cost effective at addressing the Council action.

**4a. Outcomes:**

Multi-lingual signage will be installed to assist citizens that need assistance in languages other than English.

**4b. Measures:**

The signage will be installed.

Staff will work with Departments to see if there are comments from citizens on this topic.

**5a. Other Departments/Agencies:**

The impacts could only be considered advantageous.

None.

**5b. Name the person in charge of implementation and what they are responsible for:**

Date

Costs:	Object	Object Description	Amount Requested
	7220	Intergov Subsidies	\$2,000,000
	<b>Request Total</b>		<b>\$2,000,000</b>

### 1a. Description of request:

This request is for EDI Program funding to support the Port of Bellingham's Rural Broadband construction project

### 1b. Primary customers:

Unincorporated Whatcom County, as well as the townships of Kendall, Mt. Baker, Deming and Glacier.

### 2. Problem to be solved:

In May 2021 the County Council approved and EDI Board recommendation to provide additional grant funding in the amount of \$2,000,000 to the Port of Bellingham in support of the rural broadband construction project. This project consists of engineering and construction of an open access dark fiber network; this will provide broadband to our local businesses and community members who currently are unserved and underserved by the current fiber infrastructure.

### 3a. Options / Advantages:

The EDI Board has determined that this project continues to meet the objectives of the EDI Program project guidelines.

### 3b. Cost savings:

N/A

### 4a. Outcomes:

The introduction of rural broadband will make our rural communities more marketable to new businesses and will encourage growth of more home-based businesses. The project includes four routes throughout the county totaling 113.2 miles.

### 4b. Measures:

Final project report and budget summary.

### 5a. Other Departments/Agencies:

Project development and success involves many partners such as PUD#1 of Whatcom County, tribes, small cities

### 5b. Name the person in charge of implementation and what they are responsible for:

### 6. Funding Source:

**1a. Description of request:**

Whatcom County, the Port of Bellingham and City of Bellingham have partnered since 2011 to join their funding resources on a multi-year basis to increase efficiencies and coordination of countywide economic development services. Funding supports economic development programs and personnel through the Port of Bellingham to facilitate the creation, retention and promotion of economic development purposes throughout the county.

Funding through Whatcom County has increased to allow for more targeted services utilizing the existing collaboration including the implementation of a countywide strategic plan and a vision for economic development for the entire regions.

**1b. Primary customers:**

Whatcom County

**2. Problem to be solved:**

Collaborative efforts create consistency and efficiencies in economic development services. Allow for special projects to be completed for countywide infrastructure and economic development.

**3a. Options / Advantages:**

Collaborating and joining resources creates continuity and efficiencies in countywide Economic Development

**3b. Cost savings:**

n/a

**4a. Outcomes:**

- Business retention
- Business expansion
- Assistance for start-up businesses
- Business recruitment
- Asset and capacity building

**Name of Request:** EDI Housing Affordable (HATWF) Loan Program

X

---

**Department Head Signature (Required on Hard Copy Submission)** **Date**

<i>Costs:</i>	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	7220	Intergov Subsidies	\$500,000
	<i>Request Total</i>		<i>\$500,000</i>

**1a. Description of request:**

The Housing Affordable through the Workforce (HATWF) program has been very successful in the last 10 years providing 122 loans for eligible EDI Impact fees on new affordable housing construction. Homebuilders, including Habitat for Humanity of Whatcom County and Whatcom Skagit Housing, applied for funding from the County through the HATWF program. These loans were applied to direct payment to municipalities for eligible impact fees. By the end of the year the program will have a balance of just over \$1,000. This budget supplemental will provide the necessary funding to continue this valuable program.

In addition, over \$375k in loan repayments will be used to establish a revolving loan fund to secure ongoing funding of this program.

**1b. Primary customers:**

Low to moderate income families in needs of affordable housing.

**2. Problem to be solved:**

The Housing Affordable through the Workforce (HATWF) program has commitments in 2021 that will draw down the fund to just over \$1,000 by the end of the year. This supplemental will inject funding necessary to continue the loan program. The EDI Board met on September 29, 2021 and made a unanimous recommendation to approve \$500,000 in supplemental funding to the HATWF program to ensure the continuation of loan opportunities for new affordable housing projects.

**3a. Options / Advantages:**

Ensuing funding is available for new loans will allow the HATWF program to continue in its success in assisting housing agencies.

**3b. Cost savings:**

**4a. Outcomes:**

Impact fee loans made through the HATWF program average around \$16,000 each. This supplemental funding will provide the necessary funding to continue the successful HATWF program.

**4b. Measures:**

Affordable housing will continue to be constructed for eligible families.

	8301.108	Operating Transfer In	(\$2,475)
	<i>Request Total</i>		<i>\$3,025</i>

**1a. Description of request:**

The Ferry Division, on behalf of The Lummi Island Ferry Advisory Committee, requests funds for the rental and maintenance of a handicapped accessible sanican at the Gooseberry Point Terminal.

**1b. Primary customers:**

Lummi Island Ferry commuters.

**2. Problem to be solved:**

Currently, there are no year round bathroom facilities at this location.

**3a. Options / Advantages:**

The Lummi Bay Market opened for business in March of 2020. It is directly across the street from the Gooseberry Point ferry terminal with 6 am to 9 pm operating hours and has restrooms available for paying customers.

Customers historically have used the underside of the dock as a bathroom. This option is not ecologically sound or hygienic and should be discouraged.

**3b. Cost savings:**

There is no cost savings associated with this request.

**4a. Outcomes:**

Provide a safe, maintained space for bathroom use as well as a hand washing station that is convenient for ferry traffic.

**4b. Measures:**

Success will be measured by a decline in public feedback regarding a need for on site bathrooms.

**5a. Other Departments/Agencies:**

No

**5b. Name the person in charge of implementation and what they are responsible for:**

**Name of Request:** *Expanded Shop Service Writer Office Remodel*

X

---

**Department Head Signature (Required on Hard Copy Submission)** **Date**

Costs:	Object	Object Description	Amount Requested
	7380	Other Improvements	\$40,000
	Request Total		\$40,000

**1a. Description of request:**

This request funds a central shop office reconfiguration eliminating the current Shop Service Writer office that due to size no longer meets the needs of this expanded position and installing a pre-built/self contained modular office with windows, door and ceiling/roof. An expanded office is appropriate for this position to provide space for organization and meeting with clients, resulting in better efficiency and improved customer service from the Shop Service Writer.

**1b. Primary customers:**

All Whatcom County govt departments with fleet vehicles.

**2. Problem to be solved:**

The Shop Service Writer's office is currently not adequate for the demands of the position. It does not allow for enough usable operating space even with only basic furniture (one desk, one file cabinet and one chair). The lack of space makes communication with ER&R customers challenging and often results in conversations in the busy mechanic bays instead. This remodel allows for better organization, efficiency, communications and customer service to all of ER&R's customers.

**3a. Options / Advantages:**

The preferred option is to expand/eliminate the current Shop Service Writer office and install a pre-built/self contained modular office with windows, door and ceiling/roof.

This option is the least disruptive, quickest and easiest to implement.

**3b. Cost savings:**

None.

**4a. Outcomes:**

When the Shop Service Writer has enough office operating room to conduct their job responsibilities and meet with customers.

**4b. Measures:**

When completed.

**5a. Other Departments/Agencies:**

AS-Facilities

**5b. Name the person in charge of implementation and what they are responsible for:**

Costs:	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	7410	Equipment-Capital Outlay	\$812,000
	<b>Request Total</b>		<b>\$812,000</b>

**1a. Description of request:**

To carryover the following 2021 budgeted capital equipment replacements that are not complete:

M&O	Blade truck	#228	\$375,000
M&O	Loader	#335	\$290,000
M&O	Air Compressor	#453	\$30,000
M&O	Sander	#454	\$32,000
Parks	1 ton truck w/ workboxes	#886	\$85,000
		Total	\$812,000

**1b. Primary customers:**

M&O and Parks.

**2. Problem to be solved:**

Due to staffing shortages, vacancies and COVID related delays over the past year not all of the ER&R capital replacements will be complete before 2021 year end.

**3a. Options / Advantages:**

Due to vehicle and equipment supply issues including microchips, unavoidable delays have occurred over the past 12-18 months.

**3b. Cost savings:**

None.

**4a. Outcomes:**

When eligible vehicles and equipment are replaced per the ER&R replacement schedule.

**4b. Measures:**

When replaced.

**5a. Other Departments/Agencies:**

Delayed vehicle replacements for M&O and Parks departments.

**5b. Name the person in charge of implementation and what they are responsible for:**

**Name of Request:** Abel Pit salt and sand storage

X

**Department Head Signature (Required on Hard Copy Submission)** **Date**

Costs:	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	7380	Other Improvements	\$45,000
	8301.108	Operating Transfer In	(\$45,000)
	<b>Request Total</b>		<b>\$0</b>

**1a. Description of request:**

2020 Supplemental Budget Request #1 approved \$90,000 for the construction of covered road salt bunkers at Pt Roberts and Abel pit. This proposal requests a carry over of that budget authority for the Abel pit portion which has not been completed.

The budget will fund additional storage capacity of road salt for the Maintenance and Operations division by constructing a covered storage area at the county owned gravel pit on Abel Rd. The storage area would incorporate a 40' x 50' arch cover on top of a 40' x80' concrete pad.

**1b. Primary customers:**

Citizens of Whatcom County.

**2. Problem to be solved:**

In February 2019, the Washington faced a statewide snow and ice storm event that contributed to salt rationing from suppliers and forcing the county to find alternative sources for road salt in order to meet the safety expectations of Whatcom County residents. After that storm we registered with the WA State DES salt procurement program that guarantees us 120% of our average annual use but requires us to purchase at least 80% of our average annual use. This structure would allow us to store salt for extreme snow events and provide us with extra capacity to purchase our contracted amounts during light snow years.

**3a. Options / Advantages:**

Other options include paying a higher price for salt, if available during a snow emergency. Reducing the amount of treatment on roadways when our supply runs low. Storing salt uncovered which could result in leaching of salt into aquifers.

**3b. Cost savings:**

Cost savings result from pre-ordering a specified quantity of salt at a predetermined rate.

**4a. Outcomes:**

An adequate salt supply to meet our storm response level of service.

**4b. Measures:**

When the motoring public is able to safely navigate Whatcom County roads during snow and ice events.

**5a. Other Departments/Agencies:**

No.

Date

Costs:	Object	Object Description	Amount Requested
	6135	Leave Payout	\$100,000
	<b>Request Total</b>		<b>\$100,000</b>

### 1a. Description of request:

Request to set up leave cash out reserve to fund leave payouts for terminating employees.

### 1b. Primary customers:

Terminating AS employees

### 2. Problem to be solved:

Senior staff leave payouts for retiring employees put an extra burden on division budgets and cause unnecessary delays in filling essential positions.

### 3a. Options / Advantages:

Continue funding all leave payouts from each divisions budget. Setting up a leave payout reserve, such as the General Fund has, will mean divisions do not have to carry the full load of the cash outs and therefore have to delay hiring new staff until such time as there is adequate budget lapse to cover both the new hiree and the leave payouts.

### 3b. Cost savings:

none

### 4a. Outcomes:

Faster turnaround on filling vacancies.

### 4b. Measures:

New personnel will be on board and getting trained.

<b>Year 2 2022</b>		<b>Add'l FTE</b> <input type="checkbox"/>	<b>Priority 1</b>

**Name of Request:** *Reclassification Facilities Assist to Admn Assist*

X

---

**Department Head Signature (Required on Hard Copy Submission)** **Date**

Costs:	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	6110	Regular Salaries & Wages	\$4,068
	6210	Retirement	\$1,930
	6230	Social Security	\$311
	6255	Other H&W Benefits	\$278
	6269	Unemployment-Interfund	\$11
	<i>Request Total</i>		<i>\$6,598</i>

**1a. Description of request:**

As Facilities continues to grow in staff and take on more and more challenging projects to make up for deferred maintenance and new development project, the administration of the department is becoming overwhelming in need of additional administrative capacity. The Facilities Assistant (Union) job was reclassified to an Administrative Assistant (Unrepresented).

**1b. Primary customers:**

The entire staff of Facilities Management, as well as other Departments that receive services from Facilities Management.

**2. Problem to be solved:**

In order to continue to produce high quality results and manage an ever increasing workload, additional administrative capacity is necessary in Facilities Management. This proposal would elevate an existing staff member to a Facilities Administrative assistant, consistent with other AS Departments. No additional staff is requested, just a reclassification. This reclassification occurred after the 2022 budget was created.

**3a. Options / Advantages:**

Lessening the workload of Facilities. However, that pathway is not desired or palatable. The many decades of deferred maintenance of County Facilities has necessitated an ambitious response to bring the fleet of buildings into a managed and consistent state of repair. This will allow the Project and Operations manager to delegate some of the responsibility of administration of Facilities Management, resulting in better and faster results in a hectic and fast paced work environment.

**3b. Cost savings:**

There is no cost savings option other than not performing the work at this time.

**4a. Outcomes:**

This reclassification will result in immediate additional responsibilities for the newly appointed Administrative Assistant.

**4b. Measures:**

Additional work and responsibilities will be performed by the reclassified employee. Performing additional workload.

**5a. Other Departments/Agencies:**

Suppl ID # 3379    **Fund** 507    **Cost Center** 507130    **Originator:** Marianne Caldwell

Year 2   2022    Add'l FTE     **Priority** 1

**Name of Request:** Grant Compliance Specialist

X

**Department Head Signature (Required on Hard Copy Submission)**

**Date**

Costs:	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	6110	Regular Salaries & Wages	\$72,309
	6210	Retirement	\$8,858
	6230	Social Security	\$5,532
	6245	Medical Insurance	\$16,416
	6255	Other H&W Benefits	\$2,135
	6259	Worker's Comp-Interfund	\$520
	6269	Unemployment-Interfund	\$189
	8301	Operating Transfer In	(\$52,980)
	<b>Request Total</b>		<b>\$52,979</b>

**1a. Description of request:**

The Grant Compliance Specialist will assist departments with research and compliance with state and federal grant requirements. Internal controls insuring grant contract compliance are required. The current Finance office staffing is inadequate to provide the required support to departments to ensure that complex grant requirements are adequately researched, communicated and addressed on a timely basis.

**1b. Primary customers:**

**2. Problem to be solved:**

Whatcom County does not have the capacity and dedicated expertise necessary to properly manage all aspects of federal and state grants. The number, dollar value and complexity of state and federal grants has increased over the last 5 years. The ARPA funding is subject to the complex federal requirements and will overwhelm our ability to address the issues inherent in federal grants.

**3a. Options / Advantages:**

Staffing of Administrative Services is lean. If the County wants to take advantage of grants it is necessary to provide staffing to properly administer the grants. If the county has inadequate internal cortols over grants it will result in expanded scope of the state audit and increase audit costs.

**3b. Cost savings:**

**4a. Outcomes:**

The position will be filled in the 4th quarter of 2021. Beginning in late 2021 grant support will be available to departments

**4b. Measures:**

## 1a. Description of request:

The proposal is to subscribe to a service to improve our financial reporting systems including our Annual Financial Report, Budget and quarterly reports.

## 1b. Primary customers:

The primary customers of this service are taxpayers, bond holders and internal customers.

## 2. Problem to be solved:

The problem is in today's environment financial reporting is complex and requires adjustments to our General Ledger specifically for financial reporting. These adjustments make it challenging to use the financial system for management reporting. We need a tool to assist in using the same data for both internal and external reporting.

We are also challenged to generate the Annual Financial Report and the Biennial Budget Document on a timely basis. The current financial reporting systems have integrated tools to generate documents more efficiently.

## 3a. Options / Advantages:

## 3b. Cost savings:

**Name of Request:** *Electronic Timesheets*

X

**Department Head Signature (Required on Hard Copy Submission)**

**Date**

Costs:	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	6625	Software Maint Contracts	\$80,000
	6630	Professional Services	\$50,000
	<b>Request Total</b>		<b>\$130,000</b>

**1a. Description of request:**

Implement electronic timesheet system.

**1b. Primary customers:**

County departments

**2. Problem to be solved:**

Whatcom County has an active project to modernize our JD Edwards Financial System. A consultant (SoftResources) was selected and completed a needs analysis in 2020. Our Project Steering Committee (Finance, HR, IT, Treasurer, Public Works) has endorsed upgrading the JD Edwards Financial System from the World version to the EnterpriseOne version as the most viable and cost effective option at this time. SoftResources helped our committee identify some gaps in this upgrade that could be filled using third party software. A significant current and future gap that has been identified is electronic time and attendance. The majority of employees fill out and print a Microsoft Excel spreadsheet for their timesheet each week. The timesheet is paper based and then scanned and entered into our JD Edwards payroll system. It has been challenging and resource intensive to use our current paperbased system during the COVID-19 global pandemic.

**3a. Options / Advantages:**

The COVID-19 global pandemic has highlighted the need to continue the move from paperbased to electronic systems with efficient workflows.

**3b. Cost savings:**

The county would save time by reducing duplicate time entry and having an electronic approval workflow.

**4a. Outcomes:**

In 2022 we would select, procure, configure, pilot and implement an electronic timekeeping system that would interface with both JD Edwards World (current) and JD Edwards Enterprise One (future).

**4b. Measures:**

Time studies will be done before and after the implementation of these projects to measure the process and quality improvements.

**5a. Other Departments/Agencies:**

Yes. Electronic timekeeping will benefit all departments

**5b. Name the person in charge of implementation and what they are responsible for:**

Electronic Timekeeping - B. Bennett \ M. Keeley \ P. Rice

**Name of Request: Compensation Consultant for Unrepresented Study**

X

---

**Department Head Signature (Required on Hard Copy Submission)** **Date**

Costs:	Object	Object Description	Amount Requested
	6630.911	Professional Services	\$50,000
	Request Total		\$50,000

**1a. Description of request:**

Funding for an outside consultant to perform a classification and compensation study of benchmark unrepresented positions. Primary objective is to determine if County compensation is externally competitive, internally equitable, and consistent with County objectives. The study would also provide a recommendation on potential changes that may improve on the County's current traditional salary structure and compensation policies. The cost is an estimate and may vary from the budget request after completion of the RFQ process.

**1b. Primary customers:**

The consultant will evaluate Department Head, Management, Supervisory, Professional and Support positions within the elected and non-elected County departments.

**2. Problem to be solved:**

The last compensation study was performed in 2016. It is a best practice to periodically review compensation, including a comparable market analysis, to determine appropriateness of County pay and classification structure.

**3a. Options / Advantages:**

A professional compensation consultant with breadth and depth of experience can provide unique market insights, better maintain focus on the project, provide objective findings, and recommend impartial solutions in a timely manner.

**3b. Cost savings:**

Fair and competitive compensation results in better recruitment and retention of County employees. The cost of turnover (lost productivity, recruitment, training) is expensive. Additionally, when employees feel valued they are generally more engaged and productive.

**4a. Outcomes:**

The County will be confident its pay structure is appropriate for unrepresented employees and that current job classifications are properly aligned. Competitive salaries will result in a positive work environment that attracts and retains quality employees.

**4b. Measures:**

The consultant findings and recommendations will determine if salaries are externally competitive and internally equitable and whether any changes to structure are recommended.

**5a. Other Departments/Agencies:**

Potential to impact all County departments.

**5b. Name the person in charge of implementation and what they are responsible for:**

Following a competitive RFQ process and the selection of a consultant, this project will be implemented and monitored by Human Resources with oversight from the Executive's Office.

**Name of Request:** *Reclassification of HR Representative III*

X

**Department Head Signature (Required on Hard Copy Submission)**

**Date**

Costs:	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	6110	Regular Salaries & Wages	\$3,804
	6210	Retirement	\$489
	6230	Social Security	\$291
	6255	Other H&W Benefits	\$42
	<b>Request Total</b>		<b>\$4,626</b>

**1a. Description of request:**

This is a request to reclassify an HR Representative III position ID 130 to a Senior HR Representative. Following two leadership retirements in the past year, capacity at the Senior level is needed to act as a lead for HR Reps, to provide technical expertise for complex, cross-organizational personnel actions, to provide project management, and to provide leadership support and coverage for periods when the HR Manager and/or Associate Manager are out of the office or unavailable due to extended meetings and negotiations.

**1b. Primary customers:**

All County employees and elected officials with special focus to help advise leaders.

**2. Problem to be solved:**

Two recent leadership retirements created a gap in higher level work capacity.

**3a. Options / Advantages:**

This option allows the County to retain the required expertise needed through internal promotion of existing staff. The Senior HR Representative classification has been used successfully in HR in the past and allows for better distribution of workload across HR Reps, promotes the capacity for project management and continued process improvement, and provides the necessary technical expertise to help manage employment risk.

**3b. Cost savings:**

Retaining current staff through promotion offers a large cost savings at a minimal cost compared to recruitment and training of new personnel.

**4a. Outcomes:**

Immediate ability to provide capacity to perform lead work, technical expertise, and assistance to management.

**4b. Measures:**

Performance will be monitored and appropriate training provided to ensure success. Generally speaking, promoted employees feel recognized and valued and will be satisfied, engaged, and productive with their work.

**5a. Other Departments/Agencies:**

Positive impact to a variety of departments through added higher level HR work capacity.

**5b. Name the person in charge of implementation and what they are responsible for:**

	6320	Office & Op Supplies	\$250
	8301	Operating Transfer In	(\$50,908)
	<i>Request Total</i>		<i>\$50,908</i>

**1a. Description of request:**

The Human Resources Division of the Administrative Services Department requests an additional HR Representative II to assist with the increase in workload experienced since the start of the COVID-19 pandemic. For many years, HR has provided services with a small, but mighty team of 7 FTEs. Four of our FTEs are HR Representatives who work as HR Generalists providing a range of HR services for assigned departments. For a short period, an additional FTE was added from 2007-2009 to assist with classification and compensation work. Following the great recession, that FTE was not replaced.

The COVID-19 pandemic caused an increase in workload in the following areas: recruitment and employment for COVID response positions, interpretation and application of new federal and state leave laws and benefits, leave of absence administration due to COVID exposure/illness and school closures, multiple union contract and unrep resolution amendments due to COVID, telework policy revision and administration, and workplace safety compliance. Much of our regular work was pushed to the side to address the immediate needs our departments faced related to COVID.

We anticipate continued additional work in the areas of recruitment for the newly funded ARPA positions and to meet the ongoing needs of the Health Department. HR is also administering the recent vaccine mandates, bargaining impacts with affected unions, processing exemption requests and evaluating reasonable accommodations.

We require additional staffing to assist with the County's DEI initiative and to promote a diverse and inclusive work environment to include potential changes to recruitment, staff training, and leadership orientation.

We also require additional staffing to fulfill the Executive appointed role of the Americans with Disabilities (ADA) Coordinator as set out in County Code 2.86. This role requires ongoing facilitation of an advisory committee to the Executive, the ability to interface with the public on accessibility issues, interaction with

# Supplemental Budget Request

all departments regarding needed accessibility improvements, and recordkeeping.

The County's labor environment is growing more complex with the addition of three new Union groups since 2019. An additional HR Rep would assist with contract interpretation and administration for their assigned department, take notes during bargaining and provide input on proposal development.

Finally, we expect to take on some large projects with Finance and IT in the near future to modernise our services through new technology which will require dedicated staff to implement.

While the total cost for this additional FTE is \$101,816, due to a retirement and subsequent reorganization, we anticipate a savings of \$51,670 from our 2022 base budget which brings the actual cost of this request to \$50,146.

### 1b. Primary customers:

HR Reps are assigned specific County departments.

### 2. Problem to be solved:

Staff resources for additional work due to COVID, DEI initiative, ADA Coordinator appointment, and growing complex labor environment.

### 3a. Options / Advantages:

It has become evident over the last 18 months that we cannot sustain our current workload with existing staff. We anticipate continued challenges due to COVID and potential expansion and growth from some departments which will need HR services.

### 3b. Cost savings:

Providing timely and efficient HR services to County departments results in cost savings and minimizes liability.

### 4a. Outcomes:

Current HR staff burn out will be alleviated, workload will be better balanced, and department satisfaction with HR services will remain high.

### 4b. Measures:

Evaluation of workload factors and feedback from departments.

### 5a. Other Departments/Agencies:

Increase in service delivery to County departments.

### 5b. Name the person in charge of implementation and what they are responsible for:

### 6. Funding Source:

	6625	Software Maint Contracts	\$15,000
	6630	Professional Services	\$30,000
	<b>Request Total</b>		<b>\$45,000</b>

**1a. Description of request:**

Replace the current HR electronic recruitment system with one that better meets needs.

**1b. Primary customers:**

All county departments

**2. Problem to be solved:**

Whatcom County has an active project to modernize our JD Edwards Financial System. A consultant (SoftResources) was selected and completed a needs analysis in 2020. Our Project Steering Committee (Finance, HR, IT, Treasurer, Public Works) has endorsed upgrading the JD Edwards Financial System from the World version to the EnterpriseOne version as the most viable and cost effective option at this time. SoftResources helped our committee identify some gaps in this upgrade that could be filled using third party software. A significant current and future gap that has been identified is talent management, recruitment and training.

Whatcom County currently uses the CivicHR recruitment platform. The system has not been able to meet expanded needs during the global pandemic and the current high level of staffing transitions. The current vendor also does not have additional products or features such as onboarding, training and performance management / evaluation. A new recruitment system is needed that can also be expanded to meet other areas of Human Resources for a more integrated approach.

**3a. Options / Advantages:**

Continue with the current system that has not been meeting needs.

**3b. Cost savings:**

The county would save time with a new electronic recruitment system that has more features that would allow additional paperbased and separate electronic systems to be integrated.

**4a. Outcomes:**

The current HR recruitment system would be replaced in 2022.

**4b. Measures:**

A new HR recruitment system will be in place with additional features.

**5a. Other Departments/Agencies:**

HR will collaborate with Finance and IT to integrate the new system into our current environment.

**Name of Request:** *Replace Firewall Intrusion Detection System*

X

---

**Department Head Signature (Required on Hard Copy Submission)** **Date**

Costs:	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	6630	Professional Services	\$30,000
	<i>Request Total</i>		<i>\$30,000</i>

**1a. Description of request:**

Replace the intrusion detection components of the countywide firewall.

**1b. Primary customers:**

All county departments.

**2. Problem to be solved:**

Whatcom County purchased our main network firewall in 2017 and its life expectancy is until 2024. However, the intrusion detection additional components of this firewall are end-of-life in March of 2022. It is critical that we keep our network security components current to minimize cyber threats.

**3a. Options / Advantages:**

The primary alternative is to try to use our intrusion detection system beyond its end-of-life date. We would not be able to get regular threat updates which would quickly degrade the usefulness of the system and expose the county network to cyber threats.

**3b. Cost savings:**

This request is the lifecycle replacement of existing critical security infrastructure that helps to minimize the impact of cyber threats.

**4a. Outcomes:**

Our vendor would assist with the installation and configuration of a new intrusion detection system.

**4b. Measures:**

A new intrusion detection system would be fully integrated with our firewall and actively listening for and preventing unwanted cyber intrusions.

**5a. Other Departments/Agencies:**

The intrusion detection system installation would be done outside of normal business hours to minimize impact to county operations.

**5b. Name the person in charge of implementation and what they are responsible for:**

N/A

**Name of Request:** COVID Related Video Conferencing / Remote Access

X

---

**Department Head Signature (Required on Hard Copy Submission)** **Date**

Costs:	Object	Object Description	Amount Requested
	6625	Software Maint Contracts	\$30,000
	Request Total		\$30,000

**1a. Description of request:**

Continue subscriptions of video conferencing and remote access licenses for departments that were setup in 2020 in response to the COVID-19 global pandemic.

**1b. Primary customers:**

All county departments.

**2. Problem to be solved:**

In 2020 in response to the COVID-19 global pandemic, Whatcom County made 1-year subscription purchases of online video conferencing systems such as Zoom and GoToMeeting for remote meetings and court proceedings. GoToMyPC 1-year subscriptions to support remote work for employees were also purchased. These remote online tool subscriptions were funded one-time from the Coronavirus Aid, Relief and Economic Security (CARES) Act. Departments continue to need to use these online tools in response to the evolving pandemic and new funding is needed.

**3a. Options / Advantages:**

The primary option is to discontinue the use of a high level of video conferencing and remote access tools. This would be counter productive given how effective Whatcom County departments have been in using these tools to continue operations during the global pandemic.

**3b. Cost savings:**

Video conferencing is a necessity to efficiently continue county operations during the ever evolving COVID-19 global pandemic.

**4a. Outcomes:**

County departments would continue to have video conferencing tools needed to continue operations during the COVID-19 global pandemic.

**4b. Measures:**

County Information Technology (IT) would have the funding to continue video conferencing and other remote tool subscriptions in use by all county departments.

**5a. Other Departments/Agencies:**

All county departments will be using these video conferencing licenses.

**5b. Name the person in charge of implementation and what they are responsible for:**

County IT partners with our IT contacts in each department to setup and use these video conferencing licenses.

**6. Funding Source:**

ARPA

**Name of Request:** Multi-Factor Authentication for Remote Access

X

---

**Department Head Signature (Required on Hard Copy Submission)** **Date**

Costs:	Object	Object Description	Amount Requested
	6625	Software Maint Contracts	\$16,000
	Request Total		\$16,000

**1a. Description of request:**

Subscribe to an online service that provides multi-factor authentication for employees and vendors to remotely access our network.

**1b. Primary customers:**

Employees and vendors that currently remotely access our network.

**2. Problem to be solved:**

Remote access to the county data network exposes the county to cyber threats. Requiring multi-factor authentication for employees and vendors in order to connect to the county network increases overall security. In order to qualify for cybersecurity insurance, providers are now requiring that multi-factor authentication be in place for all remote access to our network.

**3a. Options / Advantages:**

Continuing to allow remote access to our network without using multi-factor authentication increases security risks and also jeopardizes the county's ability to qualify for cybersecurity insurance.

**3b. Cost savings:**

Multi-factor authentication would increase our security and reduce the risk and costs associated with a catastrophic cyber event.

**4a. Outcomes:**

Whatcom County Information Technology (IT) is working on a contract using 2021 base budget funding to configure our current firewall and directory services to use multi-factor authentication. These licenses would allow IT to roll out this important security measure to all 300 employees and vendors that remotely access our network in 1Q2022.

**4b. Measures:**

All employees and vendors that remotely access our network would be using multi-factor authentication.

**5a. Other Departments/Agencies:**

Current employees and vendors that are remotely accessing our network would need to be setup and trained on the new way to remotely access our network.

**5b. Name the person in charge of implementation and what they are responsible for:**

N/A

**Name of Request:** Website Platform Upgrade to Civic Evolve Additions

X

---

**Department Head Signature (Required on Hard Copy Submission)** **Date**

Costs:	<b>Object</b>	<b>Object Description</b>	<b>Amount Requested</b>
	6630	Professional Services	\$41,000
	<b>Request Total</b>		<b>\$41,000</b>

**1a. Description of request:**

Add \$41,000 in funds to the \$80,000 budgeted in 2022 for the website platform upgrade and redesign.

**1b. Primary customers:**

All county departments and citizens.

**2. Problem to be solved:**

In 2020, County Council approved \$80,000 in one-time funding (ASR#2021-6236) in 2022 for a platform upgrade and redesign of our public website. Our team has worked extensively with our vendor (CivicPlus) this year to further refine the project. We have learned that we need additional resources since we have a higher page count to migrate, need more implementation services and a project contingency of 10% to be successful.

**3a. Options / Advantages:**

Start the project with the initial \$80,000 in funding. This funding will not be enough to migrate all of our existing pages so a tremendous amount of limited IT and department resources will be needed which would limit the success of the project. Our public website is a critical tool for communicating and engaging with our citizens. Providing additional funding will allow our team to successfully complete the project.

**3b. Cost savings:**

A new website platform and design will allow IT and department content editors to provide more services more efficiently to citizens via our public website.

**4a. Outcomes:**

It is anticipated that our public website would be migrated to the CivicPlus Engage Evolve platform and redesigned by the end of 2022.

**4b. Measures:**

Our public website will undergo the first redesign since 2015, the site will be on a new platform and department pages will be successfully migrated to the site and fully operational.

**5a. Other Departments/Agencies:**

Yes. All departments will need to be involved to assist the design and content changes to their particular web pages.

**5b. Name the person in charge of implementation and what they are responsible for:**

P. Rice \ J. Pearson (IT) and A. Haines (Executive's Office) will be responsible for the overall implementation.

**6. Funding Source:**

X

**Department Head Signature (Required on Hard Copy Submission)**

**Date**

Costs:	<i>Object</i>	<i>Object Description</i>	<i>Amount Requested</i>
	6625	Software Maint Contracts	\$12,000
	<b>Request Total</b>		<b>\$12,000</b>

**1a. Description of request:**

Continue to improve our public website's accessibility for all of our citizens by adding an dynamic overlay or comparable tool.

**1b. Primary customers:**

All citizens.

**2. Problem to be solved:**

In 2019, Whatcom County implemented a service by SiteImprove for website metrics and accessibility. SiteImprove provides robust website metrics and it also scans and identifies accessibility issues for county department content editors to address. It is important for the underlying accessibility issues to be resolved, but it takes time. We need a separate overlay service or comparable tool that dynamically masks website accessibility issues almost immediately.

**3a. Options / Advantages:**

Continue to use our current accessibility tools. Adding a dynamic overlay to our public website will improve accessibility while our department content editors resolve the underlying issues.

**3b. Cost savings:**

Citizen accessibility to our website will increase and the time to find information will decrease.

**4a. Outcomes:**

A dynamic overlay service or comperable tool will be added to our public website in 2022 to increase assessibility.

**4b. Measures:**

A new accessibility service will be added to our public website.

**5a. Other Departments/Agencies:**

All county departments will have improved accessibility to their web pages.

**5b. Name the person in charge of implementation and what they are responsible for:**

A. Haines from Executive's Office will be instrumental in the implementation. County IT and our vendor will partner with department website content editors to roll out new accessibility features.

**6. Funding Source:**

Costs:	<b>Object</b>	<b>Object Description</b>	<b>Amount Requested</b>
	6625	Software Maint Contracts	\$10,000
	<b>Request Total</b>		<b>\$10,000</b>

**1a. Description of request:**

Purchase Laserfiche Community User subscription licensing block of 500 licenses to allow departments to electronically authenticate and transmit accounts payable batches to the County Finance department.

**1b. Primary customers:**

All county departments.

**2. Problem to be solved:**

In 2020, at the onset of the COVID-19 global pandemic, County Finance quickly implemented a system for departments to sign, print, scan and electronically transmit accounts payable batches. This is a manually intensive process for Finance, but it transitioned the accounts payable process to go from paper to electronic. County Information Technology (IT) and Finance have completed a project to use our existing Laserfiche document imaging system to electronically authenticate, transmit, index and store an accounts payable batch to Finance. To complete the project, we need the additional Laserfiche licenses so that all of the accounts payable approvers can use the new process.

**3a. Options / Advantages:**

Continue to use the current system, but it has become too time intensive for County Finance.

**3b. Cost savings:**

This is a key mitigation strategy to allow remote or hybrid employees during the global pandemic to continue to process accounts payable.

**4a. Outcomes:**

In 1Q2022 or sooner, the new license subscription will be added to our Laserfiche system. Finance and IT will then roll out the improved process to electronically authenticate, transmit, index and store accounts payable batches electronically.

**4b. Measures:**

All departments will be submitting their accounts payable batches using the new system. Limited Finance staff will spend less time manually organizing the current electronic files coming in via e-mail so they have more time to review and work with departments to resolve payment issues.

**5a. Other Departments/Agencies:**

All county departments will be using the new process following a pilot implementation.

**5b. Name the person in charge of implementation and what they are responsible for:**

County Finance and IT are workly collaborately on this project.

**6. Funding Source:**

ARPA for an initial funding period and then the ongoing costs will need to be funded from a new source.

Department Head Signature (Required on Hard Copy Submission)

Date

Costs:	Object	Object Description	Amount Requested
	6625	Software Maint Contracts	\$19,000
	<b>Request Total</b>		<b>\$19,000</b>

### 1a. Description of request:

Add the new CivicPlus CivicOptimize module to our web platform to enhance online services for citizens

### 1b. Primary customers:

All county departments and citizens.

### 2. Problem to be solved:

The Whatcom County CivicPlus public website has basic forms with limited forms intelligence and workflow. The global pandemic has highlighted the importance of providing citizens with increased online tools to access government services. The CivicPlus CivicOptimize module would allow the county to create intelligent web apps, forms and electronic workflows to provide and streamline digital services. Electronic workflows would allow citizens to access their applications each step of the way, simplify multi-department approval processes and setup conditional routing and notifications. Over 160 government templates can be used to setup out-of-box automated workflows with minimal configuration. Low code development tools are available to integrate with other business systems.

### 3a. Options / Advantages:

Our current and planned CivicPlus web platform will provide basic forms with limited workflows. We could continue the status quo, but citizens and departments need increased online services to meet needs.

### 3b. Cost savings:

In general, time will be saved by departments and citizens by having more intelligent forms and electronic workflows.

### 4a. Outcomes:

The CivicOptimize module would be first implemented inconjunction with our CivicPlus upgrade to the CivicEngage Evolve platform in late 2022. During this upgrade, County IT would start by using CivicOptimize to improve the forms that we are currently using. Overtime we would add intelligent forms with automated workflows across departments.

### 4b. Measures:

The county will have more intelligent forms and automated workflows available to citizens, business partners and employees.

### 5a. Other Departments/Agencies:

Over time, County IT would work with web contacts in each department to review, prioritize and enhance their web pages with improved digital services.

### 5b. Name the person in charge of implementation and what they are responsible for:

**INTRODUCTION DATE:** November 09, 2021

**ORDINANCE NO. \_\_\_\_\_**  
**ORDINANCE AUTHORIZING THE LEVY OF TAXES**  
**FOR CONSERVATION FUTURES PURPOSES FOR 2022**

**WHEREAS**, pursuant to Home Rule Charter Section 6.10 the County Executive is required to submit for Council consideration a budget and proposed tax and revenue ordinances necessary to raise sufficient revenues to balance the budget; and,

**WHEREAS**, the County Council has approved a budget for the 2021-2022 biennium, including all sources of revenues and anticipated expenditures on November 24, 2020; and,

**WHEREAS**, the County Council has determined it is not necessary to increase the Conservation Futures Fund property tax levy for 2022; and,

**WHEREAS**, the County Council held a public hearing regarding the county biennial budget which included property taxes, and other revenues;

**NOW, THEREFORE, BE IT ORDAINED AND ESTABLISHED** by the Whatcom County Council that amounts collected through the County Conservation Futures levy shall be limited to the amount of 2021 taxes, increased for the addition of new construction and improvements to property and any increase in the value of state assessed property. A property tax increase, in addition to the amount resulting from the addition of new construction and improvements to property and any increase in the value of state-assessed property, is hereby authorized for the 2022 levy in the amount of \$0, which is a percentage increase of 0% from the previous year.

**ORDINANCE AUTHORIZING THE LEVY OF 2022**  
**PROPERTY TAXES FOR COUNTY ROAD PURPOSES**

**WHEREAS**, pursuant to Home Rule Charter Section 6.10 the County Executive is required to submit for Council consideration proposed tax and revenue ordinances necessary to raise sufficient revenues to balance the Budget; and,

**WHEREAS**, the County Council has approved a budget for the 2021-2022 biennium, including all sources of revenues and anticipated expenditures on November 24, 2020; and,

**WHEREAS**, the County Council, in the course of considering the mid-biennium review and modification has reviewed all sources of revenue and examined all anticipated expenses and obligations; and,

**WHEREAS**, the County Council has determined it is not necessary to increase the Road Fund property tax levy for 2022; and,

**WHEREAS**, the County Council has held public hearings regarding the county biennial budget and mid-biennium review, which included property tax revenues, and other revenues;

**NOW, THEREFORE, BE IT ORDAINED AND ESTABLISHED** by the Whatcom County Council that the amounts collected through the County Road levy shall be limited to the amount of 2021 taxes, increased for the addition of new construction and improvements to property and any increase in the value of state assessed property. A property tax increase in addition to the amount resulting from the addition of new construction and improvements to property and any increase in the value of state-assessed property is hereby authorized for the 2022 levy in the amount of \$0, which is a percentage increase of 0% from the previous year.

**BE IT FURTHER ORDAINED AND ESTABLISHED**, that the Whatcom County Council does hereby authorize diverting \$806,530 of the County Road District levy for the budget year 2022 to the General Fund. Diverted County Road Taxes are to be used for traffic law enforcement in the unincorporated areas of Whatcom County.

**ADOPTED** this \_\_\_\_ day of \_\_\_\_\_, 2021.

**Attachments:** Proposed Ordinance, Exhibit B

**ORDINANCE NO.** \_\_\_\_\_

**ORDINANCE AUTHORIZING THE LEVY OF TAXES  
FOR COUNTY AND STATE PURPOSES  
IN WHATCOM COUNTY, WASHINGTON,  
FOR THE YEAR OF 2022**

**WHEREAS**, pursuant to Home Rule Charter Section 6.10 the County Executive is required to submit for Council consideration a budget and proposed tax and revenue ordinances necessary to raise sufficient revenues to balance the budget; and,

**WHEREAS**, the County Council has approved a budget for the 2021-2022 biennium, including all sources of revenues and anticipated expenditures on November 24, 2020; and,

**WHEREAS**, the County Council, in the course of considering the mid-biennium review and modification has reviewed all sources of revenue and examined all anticipated expenses and obligations; and,

**WHEREAS**, the County Council has determined it is not necessary to increase the General Fund property tax levy for 2022 to fund essential county services; and,

**WHEREAS**, the County Council has held public hearings regarding the county biennial budget and mid-biennium review, which included property tax revenues, and other revenues;

**NOW, THEREFORE, BE IT ORDAINED AND ESTABLISHED** by the Whatcom County Council:

- (A) The property taxes for Whatcom County are hereby levied and are to be charged to the assessment and tax rolls of Whatcom County; and,
- (B) Property taxes are levied in 2021 for collection in 2022; and,
- (C) The amounts collected through the County general levy shall be limited to the amount of 2021 taxes increased for the addition of new construction and improvements to property and any increase in the value of state assessed property; and,

(D) Because the State of Washington is currently unable to provide the figures and documentation necessary to establish fixed levy rates, as these figures do become available from the state, levies shall be fixed per "Exhibit A" which shall be prepared by the County Assessor, and attached and incorporated herein by reference.

**BE IT FURTHER ORDAINED**, that the taxes to be levied against parcels of property within the Diking Districts, Drainage Districts, and Drainage Improvement Districts are to be credited to the individual maintenance funds for the year 2022, and the amounts to be apportioned to the original assessments for construction in said districts are as follows per "Exhibit B" attached hereto and incorporated herein by reference.

**BE IT FURTHER ORDAINED**, that if the Washington State Legislature changes any laws affecting levies contained herein, and the Prosecuting Attorney's Office concurs, the Whatcom County administration will change such levies accordingly.

**ADOPTED** this \_\_\_\_ day of \_\_\_\_\_, 2021.

**ORDINANCE NO.** \_\_\_\_\_

**ORDINANCE LIMITING THE 2022  
GENERAL FUND PROPERTY TAX LEVY**

**WHEREAS**, the County Council has approved a budget for the 2021-2022 biennium, including all sources of revenues and anticipated expenditures on November 24, 2020; and

**WHEREAS**, the County Council, in the course of considering the mid-biennium review and modification has reviewed all sources of revenue and examined all anticipated expenses and obligations; and,

**WHEREAS**, the County Council has determined it is not necessary to increase the General Fund property tax levy for 2022; and,

**WHEREAS**, the County Council has held public hearings regarding the county biennial budget and mid-biennium review, which included property tax revenues, and other revenues;

**NOW, THEREFORE, BE IT ORDAINED AND ESTABLISHED** by the Whatcom County Council that amounts collected through the County general levy shall be limited to the amount of 2021 taxes, increased for the addition of new construction and improvements to property and any increase in the value of state assessed property. A property tax increase in addition to the amount resulting from the addition of new construction and improvements to property and any increase in the value of state-assessed property is hereby authorized for the 2022 levy in the amount of \$0, which is a percentage increase of 0% from the previous year.

**ADOPTED** this \_\_\_\_ day of \_\_\_\_\_, 2021

## Proposed Amendments to WCC Title 20 (Zoning) Regulating the Production, Processing, and Retail Sales of Recreational Marijuana in Whatcom County and Repeal of Ordinance No. 2021-066 (Marijuana Moratorium)

### I. File Information

**File #:** PLN2021-00009

**File Name:** Marijuana Regulations

**Project Summary:** Proposed amendments to WCC Title 20 (Zoning) regulating the production, processing, and retail sales of recreational marijuana in Whatcom County.

**Applicant:** Whatcom County Planning and Development Services (PDS)

**Location:** Countywide.

**Recommendations:**

- Planning Commission – Approve
- Planning and Development Services – Approve

**Attachments:**

- Draft Ordinance
- Exhibit A – Proposed Amendments

### II. Background

On November 6, 2012, Initiative 502 was passed by the voters of the State of Washington, amending Chapter 69.50 RCW and providing the regulatory framework for marijuana producers, processors, and retailers to become licensed by the Washington State Liquor Control Board (“WSLCB”).

On November 16, 2013, the WSLCB adopted final marijuana licensing rules as codified in Chapter 314-55 WAC. During the period between November 18, 2013 and December 20, 2013, the WSLCB accepted marijuana license applications for marijuana production, processing and retail facilities. Whatcom County began receiving notifications of proposed marijuana facilities from the WSLCB in mid-December, 2013, and the WSLCB anticipated issuing marijuana producer, processor, and retail licenses to qualified applicants starting in late February or March, 2014.

On January 16, 2014, the Washington State Attorney General issued an opinion stating that Initiative 502 does not preempt counties from banning or placing additional regulatory requirements on marijuana related businesses within their jurisdictions.

During the licensing application window between November 18, 2013, and December 20, 2013, the WSLCB accepted approximately 228 recreational marijuana producer, processor and/or retail license applications for unincorporated Whatcom County. Whatcom County soon after began receiving notifications from the WSLCB of those applicants and applied to locations. The Prosecuting Attorney and

PDS had at the time implemented a zoning interpretation policy, which stated that PDS would regulate marijuana proposed uses, as allowed by Initiative 502 in the same way as any other commodity that is grown, processed, or sold in Whatcom County. However, it became evident that many of those proposed locations could conflict with other surrounding uses.

On February 11, 2014, the Whatcom County Council adopted Ordinance 2014-011, an emergency ordinance imposing a moratorium on the acceptance of all building and/or land use applications that pertain to marijuana producers, processors, retailers and medical marijuana collective gardens.

On March 31, 2015, the Whatcom County Council adopted Ordinance 2015-006, which contains the current County zoning regulations for recreational marijuana type uses. The regulations allowed for the production (as a permitted use) and processing (as an administrative approval use) of marijuana in the Rural, Rural Forestry, Agriculture, Rural Industrial and Manufacturing, Light Impact Industrial, and Heavy Impact Industrial districts, subject to a proposed facility meeting several stated use standards. Such standards include odor controls (for indoor grows), lighting, traffic and parking control measures, as well as setbacks of 1,000 feet from community centers and 300 feet from residences not located on the same property.

When Whatcom County's regulations were first adopted, the County Council chose to treat marijuana production like any other agricultural endeavor, as most of the applicants were small businesses. However, as no new state licenses are being issued it seems that more recently larger operators (with more capital) are buying up the earlier licenses and expanding operations or changing locations.

Earlier this year both the Commission and the Council received numerous complaints from citizens neighboring certain of the marijuana production and processing facilities. Issues raised included odor, lighting, and excessive water usage. As of 4/27/2021, there were 2 licensed (only) producers, 4 licensed (only) processors, 29 licensed (combo) producers/processors, and 12 licensed retailers of marijuana in unincorporated Whatcom County (see attached map, which also indicates how many are in each zoning district). (For a comparison of the numbers of producers in other counties, see Figure 1, below.) It should be noted that the majority of complaints arise from only a couple of Whatcom County producers; the majority of the operations are complying with the regulations and not causing problems.

Based on those citizen complaints, the Planning Commission recommended, and the Council adopted, an interim 6-month moratorium on accepting applications for outdoor marijuana production and/or processing facilities (Ord. 2021-018, 4/6/21). On April 20th the Council expanded that moratorium to further clarify that "outdoors" for purposes of the moratorium includes production on open land; in non-rigid greenhouses (i.e., hoop houses); in greenhouses with rigid walls, a roof, and doors; and similar type greenhouse structures (Ord 2021-023). That moratorium would have expired on November 7, 2021. However, on October 26, 2021, the Council extended that moratorium for another six months.

The Council also placed on the County's annual docket PLN2021-00009, directing Planning and Development Services (PDS) to:

"Review and revised Whatcom County Code relating to marijuana growing and processing in rural areas. Consider impacts of marijuana growing and processing facilities in rural areas, and evaluate growing and processing facilities as an agricultural or non-agricultural use. Consider compatibility with GMA and County Comprehensive Plan."

Thus, the Planning Commission held two public workshops and with staff assistance developed the proposed amendments to the County's recreational marijuana land use regulations discussed below. On October 14<sup>th</sup> they held a public hearing and voted 5-2-0 to approve the amendments shown in Exhibit A.

## Marijuana Producers in Washington

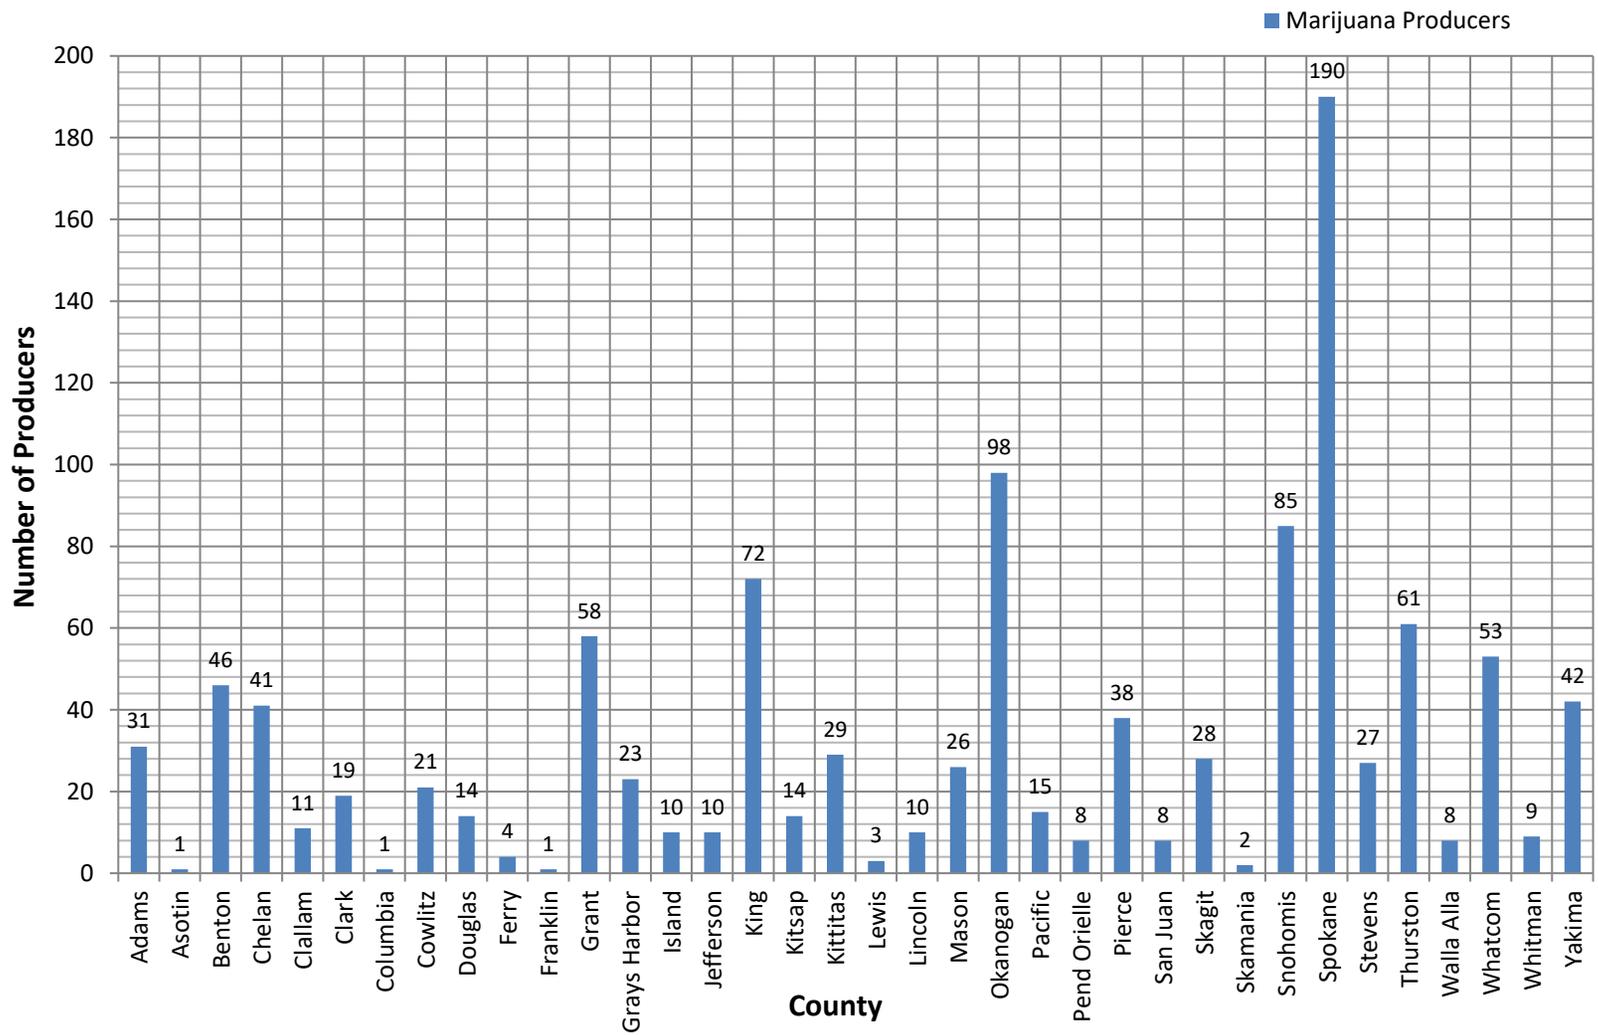

Figure 1. Number of marijuana producers in WA State counties (LCB data, Aug 2021).

### III. Proposed Amendments

The proposed amendments are found in Exhibit A. Please refer to that attachment; explanations are provided therein. Tables 1 and 2  
**Table 1. Summary of Existing Marijuana Rules**

Type	Zone Requirements						Supplemental Requirements (Applies in all zones)					
	Zone	Permit Type	Distance req't	Lot Size	Accessory Use	Odor	Odor	Lighting	Traffic	Parking	Character	Max. Employees

	NC	P										
	RGC	P										
	GC	P										

Table 2, below, also provide summaries of the existing and proposed regulations, respectively. Following, however, is a list of proposed policy changes.

### **“Marijuana Production Facilities” Definition (§20.97.227)**

The terms “outdoor” and “indoor” production facilities are being relabeled as Type 1 and Type 2 Marijuana Production Facilities. The reason is that the difference between outdoor and indoor in terms of structure type is confusing, given that greenhouses and other such structures are a little of both. What seems to really matter—in terms of how many grow cycles one can obtain, and thus how often flowering marijuana produces the objectionable odor—is whether artificial lighting is used to aid in the growth cycle, as that extends growing and flowering cycles to several. Testimony from producers indicated that without artificial lighting a producer can only obtain one growth cycle here in Whatcom County.

One proviso is that producers have commented that even if they are small scale and don’t use artificial lighting for most production they still need at least one small structure (a.k.a, “headhouse” or “mother room”) in which they can overwinter<sup>1</sup> the plants. So the proposed definition of a Type 1 facility allows one small structure with artificial lighting for overwintering plants.

### **Locations for Type 1 (“Outdoor”) vs. Type 2 (“Indoor”) Production**

The Planning Commission was averse to prohibiting outdoor production entirely, in particular because it uses less energy and is less costly for small start-ups. But they did want to limit the size of outdoor production in the zones that typically have more residential uses (i.e., Rural and Agriculture) as one way to reduce odor impacts (most odor complaints have arisen around the larger (Tier 3) hybrid<sup>2</sup> facilities in the Rural district).

Thus, the draft regulations propose to:

- a) Allow Type 1 facilities only in the Rural and Agricultural districts and limit the area of production facilities to a maximum of 1 and 2 acres, respectively, (§20.80.690(2)(a)); and
- b) Allow Type 2 facilities only in the Rural (with a facility size limit of 1 acre) and industrial (RIM, LII, & HII) districts (with no facility size limit).

(Note: Lot coverage standards for each district also place a limit on the total square footage of structures on a lot commensurate with the lot size.)

### **Use and Permit Requirements**

As a way to further reduce externalities the Commission wanted to require permits that have more public process. Thus, rather than being a Permitted use in most zones as they are currently, the following is proposed:

- In the Rural and Agriculture districts Type 1 production and processing should be an Administrative Approval Use (requiring public notice, written comments, and decision by staff);
- In the Rural district Type 2 production should be a Conditional Use (requiring public notice and a public hearing and decision by the Hearing Examiner).

---

<sup>1</sup> According to one knowledgeable producer overwintering plants is part, but only part, of the purpose of the headhouse. Their primary purposes are 1) the preservation of genetics and 2) the propagation of new plants.

<sup>2</sup> Moving plants between and using both artificial and natural lighting (or indoor and outdoor) so as to achieve more growing cycles.

- In the Rural Industrial and Manufacturing, Light Impact Industrial, and Heavy Impact Industrial districts Type 1 production should not be allowed (as these zones are intended for industrial type development and higher wage job creation) but Type 2 production and processing should be allowed as a Permitted Use.
- Additionally, neither marijuana production nor processing should be allowed in the Rural Forestry district, as this zone is intended to protect such lands for forest production and forestry jobs. Currently there are no production or processing facilities located in this district.

## Lighting

One of the other externalities from outdoor grow operations people have complained about is the excessive lighting coming from grow lights in transparent and semi-transparent structures (i.e., green- and hoop-houses). Additionally, growing seasons can be extended to up to 3-4 cycles by using artificial lighting, extending the odiferous periods significantly.

For outdoor fixtures (security lights, etc.), lighting impacts can be mitigated by requiring the installation and use of down-shielding. For facilities using artificial lighting in their growth cycles, lighting impacts can be mitigated by requiring the installation and use of blackout shades. Such language has been included in the draft amendments (§20.80.690(3)(a)).

## Odor

Odor from Type 2 (“indoor”) production can be controlled through the installation and use of ventilation and odor control systems, and such language has been included in the draft amendments (§20.80.690(3)(g)(ii)). And though language has been included stating that odor from any production facility cannot be detectable at or beyond the property boundaries at a level that causes a public nuisance (§20.80.690(3)(g)(i)), odor from Type 1 facilities cannot be controlled the same as with Type 2 production facilities. However, it is understood that Type 1 production can generally only obtain one growth cycle, so the time and duration of odors from these facilities should be limited. Additionally, it can be significantly reduced in time and duration through the other regulations the Commission recommends, as discussed herein.

## Limit on Number of LCB Licenses per Lot

As a way of preventing multiple businesses from operating on the same lot or from one business buying additional LCB licenses and stacking multiple licenses to create larger scale, more intensive operations, the Commission proposes to limit operations to one production and/or processing license(s) per lot in the more residential districts. Thus, such language has been included in the draft regulations for the Rural and Agriculture districts. (§20.80.690(2)(d))

## Setbacks/Separation Requirements

Currently production in the Rural, Rural Forestry, and Agriculture districts requires a 1,000’ separation (measured from property lines) from community centers<sup>3</sup> and a 300’ setback (measured from

---

<sup>3</sup> Defined in Title 20 as “land and/or building(s) owned by a public agency or private nonprofit entity used for social, civic, educational, religious, or recreational purposes, which serves mainly the community where located; including but not limited to community halls and centers, grange halls, senior citizen centers, teen centers, youth clubs, field houses, and churches. The facilities are available for occasional public meetings. They may also have the minimal kitchen facilities required for occasional banquets. Private clubs as defined in this title are not included.”

structures) from existing off-site residences<sup>4</sup>. For processing the same rule applies in the Rural district, but only the 300' setback from residences applies in the Rural Forestry district, and the 1,000' setback from community centers in the Agricultural district. The Commission expressed no interest in modifying the existing setback and separation requirements so the existing ones have been carried over into the proposed amendments. (§20.80.690(2)(b))

But additionally, based on public comments the Commission received, the draft amendments would require a 1,000 foot separation between production facilities so that one particular neighborhood doesn't all end up with several. (§20.80.690(2)(c))

### **Processing Facilities that Use Hazardous Materials**

The Commission agreed that processing facilities that use hazardous materials should only be allowed in the industrial districts. Such language has been included in the draft amendments (§20.80.690(2)(f)). Currently there are no such facilities in the rural districts, as adequate fire flow is necessary and can't be obtained without major investment. Thus, this change shouldn't affect any existing processors.

### **Nonconforming Rules**

The Commission agreed that production and processing facilities made nonconforming by revisions to the marijuana regulations should be able to continue (as are all nonconforming uses under the County code), but not be able to expand (by any significant amount) or change to another nonconforming use. Thus such language has been included (§20.80.690(1)(e)).

## **IV. Comprehensive Plan Evaluation**

The proposed amendments to WCC Title 20 (Zoning) have been developed using the guidance of the Comprehensive Plan so as to remain consistent. Though there are no policies regarding marijuana production or processing, the following support the proposed amendments:

Policy 2DD-2: Protect the character of the rural area through the County's development regulations.

(Supports limiting the size, location, and types of marijuana production facilities in the rural areas so as to reduce externalities)

Policy 2FF-2: Support resource-based industries that require only rural services, conserve the natural resource land base, and help maintain the rural character and lifestyle of the community. Assure adequate facilities, mitigation and buffers through development regulations.

(Supports eliminating marijuana production and processing facilities as an allowed use in the Rural Forestry district.)

## **V. Draft Findings of Fact and Reasons for Action**

Staff recommends the Planning Commission adopt the following findings of fact and reasons for action:

1. The County Council placed on the County's annual docket PLN2021-00009, directing Planning and Development Services (PDS) to: "Review and revised Whatcom County Code relating to marijuana growing and processing in rural areas. Consider impacts of marijuana growing and processing

---

<sup>4</sup> This 300' setback was taken from our manure lagoon regulations (WCC 20.80.225(2)) as a way to reduce odor impacts.

facilities in rural areas, and evaluate growing and processing facilities as an agricultural or non-agricultural use. Consider compatibility with GMA and County Comprehensive Plan.”

2. Whatcom County Planning and Development Services (PDS) submitted an application (PLN2021-00009) to revise the County’s recreational marijuana production, processing, and retail sales zoning regulations.
3. A determination of non-significance (DNS) was issued under the State Environmental Policy Act (SEPA) on September 29, 2021.
4. Notice of the subject amendments was submitted to the Washington State Department of Commerce on September 13, 2021, for their 60-day review.
5. On October 14, 2021, the Planning Commission held a duly noticed public hearing to consider testimony on the proposed draft amendments.
6. The County Council held a duly noticed public hearing on the proposed amendments on   X  , 2021.
7. The amendments are consistent with the Growth Management Act, Whatcom County Comprehensive Plan, Chapter 314-55 WAC, and other applicable requirements.
8. The proposed amendments reflect current local circumstances and promote the general public health, safety, morals and welfare.
9. Once this ordinance is adopted and effective there is no longer a need for the interim moratorium imposed by Ordinance No. 2021-066.

## **VI. Proposed Conclusions**

1. The amendments are in the public interest.
2. The amendments are consistent with the Whatcom County Comprehensive Plan.

## **VII. Recommendation**

At their October 14, 2021, meeting the Planning Commission voted 5-2-0 to approve the draft findings of fact and the amendments shown in Exhibit A.

Planning and Development Services recommends that the County Council approve the draft ordinance with amendments to the Whatcom County Code as shown in Exhibit A.

**Table 1. Summary of Existing Marijuana Rules**

Type	Zone Requirements						Supplemental Requirements (Applies in all zones)					
	Zone	Permit Type	Distance req't	Lot Size	Accessory Use	Odor	Odor	Lighting	Traffic	Parking	Character	Max. Employees
Production	R	ADM	Not w/in 1,000' of a community center or 300' of an offsite residence <sup>5</sup>	If land is < 4.5 ac then facility limited to 2,000 sf <sup>6</sup>			For indoor production only, must install ventilation, can't emit odors beyond walls, or bother neighbors	Must be controlled away from adjoining properties and roads	Can't be more than what's expected in the zone	Must provide off-street parking	Must be compatible with area's character	N/A
	RF	P										
	A	P										
	RIM	P		For indoor production only, must install ventilation, can't emit odors beyond walls, or bother neighbors								
	LII	P										
	HII	P										
Processing	R	ADM	Not w/in 1,000' of a community center or 300' of an offsite residence <sup>1</sup>	If land is < 4.5 ac then facility limited to 2,000 sf <sup>2</sup>	Must be accessory to production	For indoor processing only, must install ventilation, can't emit odors beyond walls, or bother neighbors	For indoor processing only, must install ventilation, can't emit odors beyond walls, or bother neighbors	Must be controlled away from adjoining properties and roads	Can't be more than what's expected in the zone	Must provide off-street parking		10
	RF	P	Not w/in 300' of an offsite residence <sup>1</sup>									10
	A	P	Not w/in 1,000' of a community center <sup>1</sup>									20
	RIM	P										10
	LII	P										10
	HII	P										10
Retail	STC	P		Limited to 2,500 sf								
	NC	P										
	RGC	P										
	GC	P										

<sup>5</sup> May be waived when all adjacent property owners agree.

<sup>6</sup> Note that a Tier 1 production license allows up to 10,000 sf of grow area, so this rule essentially prohibits production on smaller lots.

Table 2. Summary of Proposed Marijuana Rules

Type	Zone Requirements			Supplemental Requirements										
	Zone	Facility/Permit Type	Lot Coverage <sup>1</sup>	Facility Size Restrictions	Separation of Facilities	Accessory Use	Separation	# of Licenses	Hazardous Materials	Screening	Odor	Lighting	Noise	Other
Production	R	Type 1 – ADM	No structure or combination of structures shall occupy or cover more than 5,000 square feet or 20%, whichever is greater, of the total lot area, not to exceed 25,000 square feet. (§20.36.450)	For parcels < 4.5 ac production or processing facilities limited to 2,000 sf  For parcels ≥ 4.5 ac production facility limited to 1 ac  Also limited by lot coverage restrictions	Not w/in 1,000' of another production facility		Not w/in 1,000' of a community center or 300' of an offsite residence <sup>2</sup>	1 production and/or 1 processing license per lot	N/A	Consistent with WCC 20.80.345 (Buffer Plantings).	Must install engineered odor control system; no VOCs shall be emitted that is detectable at or beyond the property boundaries	Light fixtures shall be designed and down-shielded away from adjoining properties, critical areas, shorelines, and public roads. Indoor lights must use blackout shades.  All structures using artificial lighting for aiding in the growth cycle of plants shall install and employ mechanisms (e.g., blackout shades) that prevent light from escaping production structures	Shall comply with WCC 20.80.620 (Noise), and have a mechanical engineer design the noise control system	Must also comply with security, water, waste disposal, and parking standards
		Type 2 – CUP												
	AG	Type 1 – ADM	No structure or combination of structures, including accessory buildings, shall occupy or cover more than 25% of the total area of the subject parcel... (§20.40.450)	For parcels < 4.5 ac production facility limited to 2,000 sf  For parcels ≥ 4.5 ac production facility limited to 2 ac  Also limited by lot coverage restrictions										
	RIM	Type 2 – P	In a rural community designation, combined floor area of all buildings shall not exceed that of a use of the same type that existed on a lot in that same rural community designation on July 1, 1990. (§20.69.451)  In a rural business designation, building or structural coverage of a lot shall not exceed 50% of the total area. (§20.69.452)											
	LII	Type 2 – P	The maximum building coverage shall not exceed 60% of the lot size. (§20.66.450)											
	HII (ADM)	Type 2 – P	The maximum building or structural coverage shall not exceed 60% of the lot size. (§20.68.450)											
Processing	R	ADM	Same as for production, above	For parcels < 4.5 ac processing & production area limited to 2,000 sf		Must be accessory to production	Not w/in 1,000' of a community center or 300' of an offsite residence <sup>2</sup>	1 production and/or 1 processing license per lot	Not allowed					
	AG	ADM												
	RIM	P												
	LII	P												
	HII	P												
Retail	STC	P		Limited to 2,500 sf										
	NC	P												
	RGC	P												
	GC	P												

<sup>1</sup> Though not a specific marijuana facility regulation, these rules apply to all hard surfaces, including structures and would limit the size of structures commensurate with the lot size.

PROPOSED BY: \_\_\_\_\_  
INTRODUCTION DATE: \_\_\_\_\_

**ORDINANCE NO.** \_\_\_\_\_

**ADOPTING AMENDMENTS TO WCC TITLE 20 (ZONING) REGULATING THE PRODUCTION, PROCESSING,  
AND RETAIL SALES OF RECREATIONAL MARIJUANA IN WHATCOM COUNTY AND REPEALING  
ORDINANCE NO. 2021-066**

**WHEREAS**, on November 6, 2012, Initiative 502 was passed by the voters of the State of Washington, amending Chapter 69.50 RCW and providing the regulatory framework for cannabis producers, processors, and retailers to become licensed by the Washington State Liquor and Cannabis Board (“WSLCB”); and,

**WHEREAS**, on November 16, 2013, the WSLCB adopted final cannabis licensing rules as codified in Chapter 314-55 WAC. During the period between November 18, 2013 and December 18, 2013, the WSLCB accepted cannabis license applications for cannabis production, processing and retail facilities. Whatcom County began receiving notifications of proposed cannabis facilities from the WSLCB in mid-December 2013, and the WSLCB began issuing cannabis producer, processor, and retail licenses to qualified applicants in March of 2014; and,

**WHEREAS**, on January 16, 2014, the Washington State Attorney General issued an opinion stating that Initiative 502 does not preempt counties from banning or placing additional regulatory requirements on cannabis related businesses within their jurisdictions; and,

**WHEREAS**, the Prosecuting Attorney and Planning and Development Services (PDS) had at the time implemented a zoning interpretation policy, which stated that PDS would regulate cannabis proposed uses as allowed by Initiative 502 in the same way as any other commodity that is grown, processed, or sold in Whatcom County, it became evident that many of those proposed locations could conflict with other surrounding uses; and,

**WHEREAS**, on February 11, 2014, the Whatcom County Council adopted Ordinance 2014-011, an emergency ordinance imposing a moratorium on the acceptance of all building and/or land use applications that pertain to cannabis producers, processors, retailers and medical cannabis collective gardens; and,

**WHEREAS**, the County developed and implemented several sets of interim regulations during that time, though none were deemed appropriate by the Council as permanent regulations; and,

**WHEREAS**, on March 31, 2015, the Whatcom County Council adopted Ordinance 2015-006, which contains the current County zoning regulations for recreational cannabis type uses, treating cannabis similar to other agricultural products; and,

**WHEREAS**, Whatcom County Code (WCC) 20.97.227 defines marijuana production as a facility licensed by the state Liquor and Cannabis Board to produce, harvest, trim, dry, cure, and package marijuana, and sell marijuana at wholesale to state-licensed marijuana processors and other state licensed marijuana producers; and,

**WHEREAS**, WCC 20.97.227 states marijuana production may take place either indoors within a fully enclosed secured facility or a greenhouse with rigid walls, a roof and doors, or outdoors in non-rigid

greenhouses, other structures or an expanse of open or cleared ground fully enclosed by a physical barrier; and,

**WHEREAS**, Ordinance 2015-006 allows for the production and processing of cannabis in the Rural (administrative uses), Rural Forestry (permitted uses) and Agriculture zone districts (permitted uses), subject to a proposed facility meeting several stated use standards. Such standards include odor controls (for indoor grows only), lighting, traffic and parking control measures, as well as setbacks of 1,000 feet from community centers and 300 feet from residences not located on the same property. The ordinance also allowed for the production and processing of marijuana in the Rural Industrial and Manufacturing, Light Impact Industrial, and Heavy Impact Industrial districts as permitted uses, subject to odor control measures (for indoor grows); and,

**WHEREAS**, the WSLCB is no longer issuing new licenses, existing licenses throughout Washington State can be transferred and Whatcom County was notified by the WSLCB of approximately 30 recreational marijuana production and/or processing renewal licenses last year (2020) within unincorporated Whatcom County; and,

**WHEREAS**, while earlier licensees were small, local producers, their licenses now appear to be being transferred to larger operators with more capital who are buying up the earlier licenses and expanding and/or changing operations and/or locations; and,

**WHEREAS**, prior to adoption of the first moratorium on issuing new permits for certain marijuana production facilities, the Council, Executive, Planning Commission, and PDS received complaints from residents adjacent to existing and proposed cannabis facilities regarding excessive odor, lighting, and potential water usage, suggesting that the County's cannabis regulations may not be sufficient; and,

**WHEREAS**, on March 23, 2021, the County Council adopted the 2021 Docket, a component of the PDS work plan, including item PLN2021-00009, to "Review and revise Whatcom County Code relating to marijuana growing and processing in rural areas. Consider impacts of marijuana growing and processing facilities in rural areas, and evaluate growing and processing facilities as an agricultural or non-agricultural use. Consider compatibility with GMA and County Comprehensive Plan." However, due to the pandemic, the Planning Commission and County Council have backlogs of other issues to address, and PDS will need time to work with the community to properly develop and process any potential regulatory amendments; and,

**WHEREAS**, on April 20, 2021, the County Council adopted Ordinance No. 2021-023, imposing a six-month interim moratorium prohibiting the filing, acceptance, or processing of new applications for permits or authorizations for recreational marijuana production and/or processing facilities which are proposed to operate outdoors or in greenhouses; and,

**WHEREAS**, on October 26, 2021, through the adoption of Ordinance No. 2021-066, the Council extended that moratorium for an additional 6 months; and

**WHEREAS**, once this ordinance is adopted and effective there is no longer a need for the interim moratorium imposed by Ordinance No. 2021-066;

**WHEREAS**, pursuant to the Washington State Constitution, the general police powers granted to counties empower and authorize Whatcom County to adopt land use controls to provide for the regulation of land uses within the County and to provide that such uses shall be consistent with applicable law; and,

## **FINDINGS OF FACT**

1. The County Council placed on the County's annual docket PLN2021-00009, directing Planning and Development Services (PDS) to: "Review and revised Whatcom County Code relating to marijuana growing and processing in rural areas. Consider impacts of marijuana growing and processing facilities in rural areas, and evaluate growing and processing facilities as an agricultural or non-agricultural use. Consider compatibility with GMA and County Comprehensive Plan."
2. Whatcom County Planning and Development Services (PDS) submitted an application (PLN2021-00009) to revise the County's recreational marijuana production, processing, and retail sales zoning regulations.
3. A determination of non-significance (DNS) was issued under the State Environmental Policy Act (SEPA) on September 29, 2021.
4. Notice of the subject amendments was submitted to the Washington State Department of Commerce on September 13, 2021, for their 60-day review.
5. On October 14, 2021, the Planning Commission held a duly noticed public hearing to consider testimony on the proposed draft amendments.
6. The County Council held a duly noticed public hearing on the proposed amendments on November 23, 2021.
7. The amendments are consistent with the Growth Management Act, Whatcom County Comprehensive Plan, Chapter 314-55 WAC, and other applicable requirements.
8. The proposed amendments reflect current local circumstances and promote the general public health, safety, morals and welfare.

## **CONCLUSIONS**

1. The amendments to the development regulations are in the public interest.
2. The amendments are consistent with the Whatcom County Comprehensive Plan.

**NOW, THEREFORE, BE IT ORDAINED** by the Whatcom County Council that:

Section 1. Amendments to the Whatcom County Code are hereby adopted as shown in Exhibit A.

Section 2. Ordinance No. 2021-066 is hereby repealed in its entirety upon the effective date of this ordinance.

ADOPTED this \_\_\_\_\_ day of \_\_\_\_\_, 2021.

## WCC Title 20 Zoning

### Chapter 20.36 RURAL (R) DISTRICT

#### 20.36.130 Administrative approval uses.

The following uses are permitted subject to administrative approval pursuant to WCC 22.05.028.

...

**.137** ~~Type 1 Marijuana Production Facilities, subject to WCC 20.80.690y; provided, that in addition to the criteria found in WCC 20.80.690 through 20.80.694:~~

- ~~(1) The facility shall not be located within 1,000 feet of a community center. The distance shall be measured as the shortest straight line distance from the property line of the proposed building/ business location to the property line of the community center. The zoning administrator may waive this spacing requirement from community centers if the authorized representatives of all existing community centers within 1,000 feet provide a notarized written agreement as provided by the department consenting to the facility.~~
- ~~(2) The facility shall not be located within 300 feet of any existing residential unit not located on the same parcel as the facility. The distance shall be measured as the shortest straight line distance from the closest point of a single family dwelling (structure) to any structure or fence used for the production of marijuana. The zoning administrator may waive this spacing requirement from residential units if the owners of all existing residential units within 300 feet provide a notarized written agreement as provided by the department consenting to the facility.~~
- ~~(3) On parcels smaller than four and one half acres the facility shall not exceed a total of 2,000 square feet, except where the facility is contained within a building that existed on the effective date of the ordinance codified in this section.~~

**.138** ~~Marijuana Processing Facilities, subject to WCC 20.80.690.y; provided, that in addition to the criteria found in WCC 20.80.690 through 20.80.694 and WCC 22.05.028:~~

- ~~(1) The facility is accessory to the on-site production of marijuana.~~
- ~~(2) The facility shall not be located within 300 feet of any existing residential unit not located on the same parcel as the facility. The distance shall be measured as the shortest straight line distance from the closest point of a single family dwelling (structure) to any structure or fence used for the processing of marijuana. The zoning administrator may waive this spacing requirement if the owners of all existing residential units within 300 feet provide a notarized written agreement as provided by the department consenting to the facility.~~
- ~~(3) On parcels smaller than four and one half acres the total area used for marijuana processing and production shall not exceed 2,000 square feet, except where the facility is contained within a building that existed on the effective date of the ordinance codified in this section.~~

**20.36.150 Conditional uses.**

...

.160 Type 2 Marijuana Production Facilities, subject to WCC 20.80.690.

...

**Chapter 20.40 AGRICULTURE (AG) DISTRICT**

**20.40.050 Permitted uses.**

Unless otherwise provided herein, permitted, accessory, and conditional uses shall be administered pursuant to the applicable provisions of WCC Chapter 20.80 WCC (Supplementary Requirements), and Chapter 22.05 WCC (Project Permit Procedures), Chapter 16.08 (the Whatcom County SEPA) Ordinance, Title 21 (Land Division Regulations), the Whatcom County Subdivision Ordinance and Title 23 the Whatcom County (Shoreline Management Program). The following are permitted uses:

...

~~.059~~ Marijuana production facility; provided, that in addition to the criteria found in WCC 20.80.690 through 20.80.694:

- (1) ~~The facility shall not be located within 1,000 feet of a community center. The distance shall be measured as the shortest straight line distance from the property line of the proposed building/business location to the property line of the community center. The zoning administrator may waive this spacing requirement from community centers if the authorized representatives of all existing community centers within 1,000 feet provide a notarized written agreement as provided by the department consenting to the facility and the waiver is approved through an administrative approval process per WCC 22.05.028.~~
- (2) ~~The facility shall not be located within 300 feet of any existing residential unit not located on the same parcel as the facility. The distance shall be measured as the shortest straight line distance from the closest point of a single family dwelling (structure) to any structure or fence used for the production of marijuana. The zoning administrator may waive this spacing requirement from residential units if the owners of all existing residential units within 300 feet provide a notarized written agreement as provided by the department consenting to the facility, and the waiver is approved through an administrative approval process per WCC 22.05.028.~~

...

**20.40.100 Accessory uses.**

...

~~.115~~ Marijuana Processing Facility, WCC 20.80.690 through 20.80.694:

- (1) ~~The facility is accessory to the on-site production of marijuana.~~
- (2) ~~The facility shall not be located within 300 feet of any existing residential unit not located on the same parcel as the facility. The distance shall be measured as the shortest straight line distance from the closest point of a single family dwelling (structure) to any structure or fence used for the processing of marijuana. The zoning administrator may waive this spacing requirement if the owners of all existing residential units within 300 feet provide a notarized written agreement as provided by the department consenting to the facility, and the waiver is approved through an administrative approval process per WCC 22.05.028.~~

**20.40.130 Administrative approval uses.**

...

.140 Type 1 Marijuana Production Facilities, subject to WCC 20.80.690.

.141 Marijuana Processing Facilities, subject to WCC 20.80.690.

...

**Chapter 20.42 RURAL FORESTRY (RF) DISTRICT**

**20.42.050 Permitted uses.**

Unless otherwise provided herein, permitted, accessory, and conditional uses shall be administered pursuant to the applicable provisions of WCC Chapter 20.80 WCC (Supplementary Requirements), and Chapter 22.05 WCC (Project Permit Procedures), the Whatcom County Chapter 16.08 (SEPA) Ordinance, Title 21 (Land Division Regulations) the Whatcom County Subdivision Ordinance, and Title 23 the Whatcom County (Shoreline Management Program).

...

~~.070~~ Marijuana production facility; provided, that in addition to the criteria found in WCC 20.80.690 through 20.80.694:

- ~~(1) The facility shall not be located within 1,000 feet of a community center. The distance shall be measured as the shortest straight line distance from the property line of the proposed building/business location to the property line of the community center. The zoning administrator may waive this spacing requirement from community centers if the authorized representatives of all existing community centers within 1,000 feet provide a notarized written agreement as provided by the department consenting to the facility and the waiver is approved through an administrative approval process per WCC 22.05.028.~~
- ~~(2) The facility shall not be located within 300 feet of any existing residential unit not located on the same parcel as the facility. The distance shall be measured as the shortest straight line distance from the closest point of a single family dwelling (structure) to any structure or fence used for the production of marijuana. The zoning administrator may waive this spacing requirement from residential units if the owners of all existing residential units within 300 feet provide a notarized written agreement as provided by the department consenting to the facility, and the waiver is approved through an administrative approval process per WCC 22.05.028.~~

...

**20.42.100 Accessory uses.**

...

~~.106~~ Marijuana processing facility; provided, that in addition to the criteria found in WCC 20.80.690 through 20.80.694:

- ~~(1) The facility is accessory to the on-site production of marijuana.~~
- ~~(2) The facility shall not be located within 300 feet of any existing residential unit not located on the same parcel as the facility. The distance shall be measured as the shortest straight line distance from the closest point of a single family dwelling (structure) to any structure or fence used for the processing of marijuana. The zoning administrator may waive this spacing requirement if the~~

~~owners of all existing residential units within 300 feet provide a notarized written agreement as provided by the department consenting to the facility, and the waiver is approved through an administrative approval process per WCC 22.05.028.~~

...

### Chapter 20.69 RURAL INDUSTRIAL AND MANUFACTURING (RIM) DISTRICT

#### 20.69.050 Permitted uses.

The following permitted uses shall be allowed subject to an evaluation by the Director zoning administrator pursuant to the provisions of this chapter and WCC Chapter 20.80 (Supplementary Requirements) ~~WCC~~. In a rural community designation, nonresidential uses listed below are permitted if a use of the same type existed in that same rural community designation on July 1, 1990, per WCC 20.80.100(1). In a rural business designation all uses listed below are permitted.

#### .051 Manufacturing/fabrication type uses.

...

(17) ~~Type 2 M~~ marijuana production facilities, subject to WCC 20.80.690.

(18) Marijuana processing facilities, subject to WCC 20.80.690.

...

#### 20.69.700 Performance standards.

##### 20.69.704 Odor, dust, dirt, and smoke.

(1) Except as specified in subsection (2), No odor, dust, dirt, or smoke shall be emitted that is detectable at or beyond the property line, for the use concerned, in such a concentration or of such duration as to cause a public nuisance, or threaten health or safety, or to unreasonably infringe upon the use and enjoyment of property beyond the boundaries of the district.

(2) For marijuana production or processing facilities, odor shall be regulated pursuant to WCC 20.80.690(3)(g).

##### ~~20.69.708 Marijuana odor.~~

~~For indoor facilities no odor or smoke shall be emitted that is detectable at or beyond the walls of the facility, in such a concentration or of such duration as to cause a public nuisance, or threaten health or safety, or to unreasonably infringe upon the use and enjoyment of neighboring use. The applicant shall install an exhaust system that is designed and constructed to capture sources of contaminants to prevent spreading of contaminants or odors to other occupied parts of the building or surrounding area. The system must be designed by a licensed Washington State professional engineer.~~

Comment [CES1]: Now covered by 20.80.690(3)(g).

### Chapter 20.66 LIGHT IMPACT INDUSTRIAL (LI) DISTRICT

#### 20.66.050 Permitted uses.

Unless otherwise provided herein, permitted and accessory uses shall be administered pursuant to the applicable provisions of WCC Chapter 20.80 ~~WCC~~ (Supplementary Requirements), Chapter 22.05 ~~WCC~~ (Project Permit Procedures), Chapter 16.08 ~~(the Whatcom County SEPA) Ordinance~~, Title 21 (Land

~~Division Regulations), the Whatcom County Subdivision Ordinance and Title 23 the Whatcom County (Shoreline Management Program).~~

...

~~.087 Type 2 Marijuana Production or Processing Facilities, subject to WCC 20.80.690.~~

~~.088 Marijuana Processing Facilities, subject to WCC 20.80.690.~~

...

**20.66.700 Performance standards.**

...

**20.66.704 Odors.**

~~(1) Except as specified in subsection (2), No odor, dust, dirt, or smoke shall be emitted that is detectable at or beyond the property line, for the use concerned, in such a concentration or of such duration as to cause a public nuisance, or threaten health or safety, or to unreasonably infringe upon the use and enjoyment of property beyond the boundaries of the district.~~

~~(2) For marijuana production or processing facilities, odor shall be regulated pursuant to WCC 20.80.690(3)(g).~~

**20.66.709 Marijuana odor.**

~~For indoor facilities no odor or smoke shall be emitted that is detectable at or beyond the walls of the facility, in such a concentration or of such duration as to cause a public nuisance, or threaten health or safety, or to unreasonably infringe upon the use and enjoyment of neighboring use. The applicant shall install an exhaust system that is designed and constructed to capture sources of contaminants to prevent spreading of contaminants or odors to other occupied parts of the building or surrounding area. The system must be designed by a licensed Washington State professional engineer.~~

Comment [CES2]: Now covered by 20.80.690(3)(g).

**Chapter 20.68 HEAVY IMPACT INDUSTRIAL (HII) DISTRICT**

**20.68.050 Permitted uses.**

Unless otherwise provided herein, permitted and accessory uses shall be administered pursuant to the applicable provisions of ~~WCC Chapter 20.80-WCC, (Supplementary Requirements), and Chapter 22.05 WCC, (Project Permit Procedures), Chapter 16.08 (the Whatcom County SEPA) Ordinance, Title 21 (Land Division Regulations), the Whatcom County Subdivision Ordinance and Title 23 the Whatcom County (Shoreline Management Program).~~ The purpose of the SIC numbers listed within this chapter is to adopt by reference other activities similar in nature to the use identified herein. (Policies of the subarea Comprehensive Plan may preclude certain permitted uses to occur in particular subareas. Please refer to the policies of the applicable subarea plan to determine the appropriateness of a land use activity listed below.)

...

~~.066 Type 2 Marijuana Production or Processing Facilities, subject to WCC 20.80.690.~~

~~.067 Marijuana processing facilities, subject to WCC 20.80.690.~~

...

**20.68.700 Performance standards.**

...

(1) Except as specified in subsection (2), No odor, dust, dirt, or smoke shall be emitted that is detectable at or beyond the property line, for the use concerned, in such a concentration or of such duration as to cause a public nuisance, or threaten health or safety, or to unreasonably infringe upon the use and enjoyment of property beyond the boundaries of the district.

(2) For marijuana production or processing facilities, odor shall be regulated pursuant to WCC 20.80.690(3)(g).

...

~~20.68.709 Marijuana odor.~~

~~For indoor facilities no odor or smoke shall be emitted that is detectable at or beyond the walls of the facility, in such a concentration or of such duration as to cause a public nuisance, or threaten health or safety, or to unreasonably infringe upon the use and enjoyment of neighboring use. The applicant shall install an exhaust system that is designed and constructed to capture sources of contaminants to prevent spreading of contaminants or odors to other occupied parts of the building or surrounding area. The system must be designed by a licensed Washington State professional engineer.~~

Comment [CES3]: Now covered by 20.80.690(3)(g).

**20.80 SUPPLEMENTARY REQUIREMENTS**

~~20.80.690 Marijuana production and processing.~~

~~20.80.691 Marijuana state license required.~~

~~Prior to commencing operations, a marijuana producer, processor, or retailer shall obtain approval as a state-licensed marijuana producer, processor, or retailer under Chapter 69.50 RCW, as amended, and Chapter 314-55 WAC, as amended.~~

Comment [CES4]: Now covered by 20.80.690(1)(a).

~~20.80.692 Application for county development permits—Timing.~~

~~Applicants for marijuana production, processing, or retailing may apply for county development permits at any time. Applicants who wish to apply for county permits, or commence construction of facilities for producing, processing, or retailing of marijuana under Chapter 69.50 RCW, prior to obtaining approval as a state-licensed marijuana producer, processor or retailer do so at their own risk. Final occupancy of the building will not be granted until a state Liquor and Cannabis Board license has been approved.~~

Comment [CES5]: Now covered by 20.80.690(1)(a).

~~20.80.693 Production.~~

(1) ~~For indoor facilities no odor or smoke shall be emitted that is detectable at or beyond the walls of the facility, in such a concentration or of such duration as to cause a public nuisance, or threaten health or safety, or to unreasonably infringe upon the use and enjoyment of neighboring use. The applicant shall install an exhaust system that is designed and constructed to capture sources of contaminants to prevent spreading of contaminants or odors to other occupied parts of the building or surrounding area. The system must be designed by a licensed Washington State professional engineer.~~

Comment [CES6]: Now covered by 20.80.690(3)(g).

(2) ~~Any lights used to illuminate the facility shall be so arranged as to direct the light away from the adjoining property and the public road.~~

Comment [CES7]: Now covered by 20.80.690(3)(a).

- (3) ~~No traffic shall be generated by such a facility in greater volume than would normally be expected in the applicable zoning district and appropriate for the road classification which serves the property.~~
- (4) ~~Any need for parking generated by the conduct of such a facility shall meet the off-street parking requirements as specified in this title. At least one additional space shall be provided for each nonresident on-site employee.~~
- (5) ~~The proposed use shall be compatible with the general appearance and character of the surrounding area. The zoning administrator at his or her discretion may require landscape screening pursuant to the requirements of WCC 20.80.345.~~

**Comment [CES8]:** Staff believes we don't need this. Firstly, there's no way to judge what "greater volume than would normally be expected."  
Secondly, no production facility, with normally only a few employees and no customers coming to the site, would create an inordinate amount of traffic.

**Comment [CES9]:** Now covered by 20.80.690(3)(d).

**Comment [CES10]:** Now covered by 20.80.690(3)(b).

**20.80.694 Processing.**

- (1) ~~The facility employs no more than 10 permanent employees, except that in the Agriculture and Rural Forestry Zones the facility may employ no more than 20 employees.~~
- (2) ~~For indoor facilities no odor or smoke shall be emitted that is detectable at or beyond the walls of the facility, in such a concentration or of such duration as to cause a public nuisance, or threaten health or safety, or to unreasonably infringe upon the use and enjoyment of neighboring use. The applicant shall install an exhaust system that is designed and constructed to capture sources of contaminants to prevent spreading of contaminants or odors to other occupied parts of the building or surrounding area. The system must be designed by a licensed Washington State professional engineer.~~
- (3) ~~Any lights used to illuminate the facility shall be so arranged as to direct the light away from the adjoining property and the public road.~~
- (4) ~~No traffic shall be generated by such a facility in greater volume than would normally be expected in the applicable zoning district and appropriate for the road classification which serves the property.~~
- (5) ~~Any need for parking generated by the conduct of such a facility shall meet the off-street parking requirements as specified in this title. At least one additional space shall be provided for each nonresident on-site employee.~~

**Comment [CES11]:** Not needed. Was originally included when we were treating marijuana as an agricultural product, and this mimics the language for ag processing

**Comment [CES12]:** Now covered by 20.80.690(3)(g).

**Comment [CES13]:** Now covered by 20.80.690(3)(a).

**Comment [CES14]:** Staff believes we don't need this. Firstly, there's no way to judge what "greater volume than would normally be expected."  
Secondly, no production facility, with normally only a few employees and no customers coming to the site, would create an inordinate amount of traffic.

**Comment [CES15]:** Now covered by 20.80.690(3)(h).

**20.80.690 Marijuana – Production and Processing Facilities.**

- (1) **General.** Marijuana production or processing facilities shall comply with RCW Title 69, Chapter 314-55 WAC, and the following general standards:
  - a. The WSLCB must approve a marijuana license for the subject property prior to issuance of the County's certificate of occupancy for buildings proposed for marijuana production or processing. Any permitting or construction work done prior to receiving said license is done so at the applicant's own risk.
  - b. Consistent with WAC 314-55-015, marijuana production and processing shall not take place in a residence or other location where law enforcement access, without notice or cause, is limited.
  - c. Marijuana production and processing are not allowed as home occupations or cottage industries.
  - d. Marijuana production and processing operations may not be located in critical areas or their buffers (WCC Chapter 16.16, Critical Areas) or in the shoreline jurisdiction (WCC Title 23).
  - e. Nonconforming Uses. This section applies to those marijuana facilities legally existing as of INSERT DATE OF ADOPTION OF THESE RULES that, due to noncompliance with these standards,

**Comment [CES16]:** Note to Cliff: Fill in upon adoption

become nonconforming. Legally existing facilities that meet these standards are not considered nonconforming and may continue the use or they may expand with the proper permits.

- (i) Continuation of Nonconforming Uses. Any legally existing marijuana production or processing facility that becomes nonconforming may continue operations as a nonconforming use within the terms of their permit(s) even when those facilities do not meet the standards of this section, pursuant to WCC 20.83.010.
- (ii) Expansion of Nonconforming Uses. Similarly, expansion may be allowed pursuant to WCC 20.83.020, EXCEPT that:
  - A. Expansion of nonconforming Type 2 marijuana production facilities is prohibited; and,
  - B. Any other expansion shall be limited to 10% (in area) unless the standards of this section are met.
- (iii) Change to Another Nonconforming Use. WCC 20.83.040 shall not apply: Nonconforming marijuana production or processing facilities shall not be able to change to another nonconforming use.

**(2) District Specific Standards.**

- a. Facility Size –
  - (i) In the Rural district, production or processing facilities on parcels smaller than 4.5 acres shall not exceed a total of 2,000 square feet. On lots of 4.5 acres or greater production and processing facilities shall not exceed 1 acre.
  - (ii) In the Agriculture district, production and processing facilities on parcels smaller than 4.5 acres shall not exceed a total of 2,000 square feet. On lots of 4.5 acres or greater processing and production facilities shall not exceed 2 acres.
- b. Separation of Uses – In the Rural and Agriculture districts, no facility shall be located within 1,000 feet of a community center or within 300 feet of any residential dwelling unit not located on the same parcel as the facility and existing at the time of application. Said distance shall be measured as the shortest straight line distance from property lines (for community centers) or structures (for residences).
- c. Separation of Facilities – In the Rural and Agriculture districts, no marijuana production facilities shall be located within 1,000 feet of each other. Said distance shall be measured as the shortest straight line distance from such facilities.
- d. Limit on Number of Licenses per Lot. In the Rural and Agriculture districts, only one Washington State Liquor and Cannabis Board (WSLCB) marijuana production license may be used per legal lot (though may be combined with one processing license).
- e. Accessory Use Only. In the Rural and Agriculture districts, processing facilities are only allowed as an accessory use to a production facility.
- f. Hazardous Materials – Marijuana processing using hazardous or flammable solvents or gases is allowed only in the LII, HII, or RIM districts. Producers and processors that will use chemicals, industrial solvents, or other noxious or hazardous substances shall comply with all federal, state, and County safety, fire, structural, storage, and disposal standards. They shall describe the proposed use of hazardous substances, methods, equipment, solvents, gases, and mediums identified in WAC 314-55-104 on permit applications and site plans.

**Comment [CES17]:** Defined in T-20 as, "Community center" means land and/or building(s) owned by a public agency or private nonprofit entity used for social, civic, educational, religious, or recreational purposes, which serves mainly the community where located; including but not limited to community halls and centers, grange halls, senior citizen centers, teen centers, youth clubs, field houses, and churches. The facilities are available for occasional public meetings. They may also have the minimal kitchen facilities required for occasional banquets. Private clubs as defined in this title are not included."

**(3) Facility Design Standards.**

- a. Lighting – For both Type 1 and 2 production facilities:
  - (i) Outdoor fixtures illuminating production or processing operations shall be designed and down-shielded to direct light away from adjoining properties, critical areas, shorelines, and public roads.
  - (ii) All structures using artificial lighting for aiding in the growth cycle of plants shall install and employ mechanisms (e.g., blackout shades) that prevent light from escaping production structures.
- b. Screening – Marijuana production and processing facilities shall be landscaped and screened consistent with WCC 20.80.300, et seq. (Landscaping). Screening shall be located outside of the state’s required security fence to provide a visual barrier.
- c. Security – Producers and processors shall install the security requirements of WAC 314-55-083 prior to issuance of the County’s certificate of occupancy for a marijuana operation.
- d. Parking – Such facilities shall meet the off-street parking requirements of WCC 20.80.500, et seq. (Off-street Parking and Loading Requirements).
- e. Water and Waste Disposal – Permit applications shall include documentation of compliance with the water system requirements and waste disposal regulations of WCC Title 24 (Health Code) and WAC 314-55-097.
- f. Noise – Producers and processors required to install odor control system per subsection (g) shall comply with WCC 20.80.620 (Noise). Fan noise from operations shall be minimized. A mechanical engineer licensed in the state of Washington shall design the noise control system, to be approved by the Building Official, using standard industry practices such as installing fans with components listed by Underwriters Laboratories (UL) and a combination of the following techniques and components:
  - (i) Short and straight line vent runs;
  - (ii) Silencers and insulated vents, vent sleeves and mufflers;
  - (iii) Acoustic ducting;
  - (iv) Fan speed controllers;
  - (v) Soundproofing boxes;
  - (vi) Sound-muffling casing;
  - (vii) Padded foam cushions under the fans;
  - (viii) Intelligent programming motors and controllers; and
  - (ix) Hanging fans hung from bungee cords from hooks in ceiling.
- g. Odor –
  - (i) All Production and Processing – No odor, terpenes, or other similar volatile organic compounds (VOCs) shall be emitted that is detectable at or beyond the property boundaries of the facility in such a concentration or of such duration as to cause a public nuisance or threaten health or safety.
  - (ii) Type 2 Production – Type 2 producers shall minimize odors emitted by using best management practices and technology, and all air must go through an odor control system before being vented outdoors. A mechanical engineer licensed in the state of Washington shall design the odor control system using guidance from the National Air

Filtration Association and approved by the Building Official. The odor control plan must incorporate a combination of the following site design practices, tools, or other newly improved technologies to mitigate odors:

- A. Use of filters on exhaust air prior to dispersal;
- B. Placement of operations after consideration of predominant wind directions;
- C. Installation of additional vegetative buffers around grow areas;
- D. Reduction of passive odor escapes by tightening and sealing structures;
- E. Use of negative pressure techniques and air locks to reduce odors from escaping when doors open;
- F. Use of chillers that move water around the structure and leave air in place instead of air conditioning;
- G. Installation of carbon filter scrubbers to heating, ventilation, and air conditioning systems;
- H. Installation of dry vapor systems;
- I. Installation of ionizers;
- J. Use of mini-vapor screens on the interior, and Vapomatic and vapor screens on the exterior of structures;
- K. Installation of a piping system on perimeter fencing that neutralizes malodorous molecules;
- L. Installation of a gas phase filtration system; and/or,
- M. Installation of a fog system to disperse mixed water- and odor-neutralizing chemicals.

h. *Building Permits Required* – Building permits shall be required for any structures used in Marijuana Production Facilities.

#### **20.80.691 Marijuana – Retail Sales Facilities.**

Marijuana retail sales facilities shall comply with RCW Title 69, WAC Chapter 314-55, and the following.

1. The WSLCB must approve a marijuana retail sales license for the subject property prior to issuance of the County's certificate of occupancy for buildings proposed for marijuana retail sales. Any permitting or construction work done prior to receiving said license is done so at the applicant's own risk.
2. Consistent with WAC 314-55-015, marijuana retail sales shall not take place in a residence or other location where law enforcement access, without notice or cause, is limited. Marijuana retail sales are not allowed as home occupations or cottage industries.
3. Retail sales facilities shall install the security requirements of WAC 314-55-083 prior to issuance of the County's certificate of occupancy for a marijuana operation.
4. Such facilities shall meet the off-street parking requirements of WCC 20.80.500, et seq. (Off-street Parking and Loading Requirements).

## Chapter 20.97 DEFINITIONS

### 20.97.010 Agriculture.

“Agriculture” means the use of land for farming, horticulture, floriculture, viticulture, and the necessary accessory uses for packing, treating or storing the produce; ~~provided, however, that, though~~ the operation of any such accessory uses shall be secondary to that of normal agricultural activities.

However, the production of marijuana is not considered agriculture.

### 20.97.010.1 Agricultural Processing.

“Agricultural processing” means the transformation, either chemically or physically, of raw agricultural goods including but not limited to washing, grading, sizing, drying, extracting, icing, producing ornamental agricultural products, sorting, cutting, pressing, bagging, freezing, canning, packaging, milling, crushing, fermenting, aging, pasteurizing, preserving, storage, bottling, but excluding slaughtering of livestock. Agricultural processing includes those process steps associated with product preparation and processing. Storage, warehousing, and distributing products in conjunction with the agricultural processing activity occurring on that site shall be allowed. However, the processing of marijuana is not considered agricultural processing.

### 20.97.225 Marijuana, ~~marihuana or cannabis.~~

“Marijuana,” (a.k.a., “marihuana” or “cannabis”) means all parts of the plant cannabis, whether growing or not, with a THC concentration greater than 0.3 percent on a dry weight basis; the seeds thereof; the resin extracted from any part of the plant; and every compound, manufacture, salt, derivative, mixture, or preparation of the plant, its seeds, or resin. The term does not include the mature stalks of the plant, fiber produced from the stalks, oil or cake made from the seeds of the plant, any other compound, manufacture, salt, derivative, mixture, or preparation of the mature stalks (except the resin extracted therefrom), fiber, oil, or cake, or the sterilized seed of the plant which is incapable of germination.

### 20.97.226 Marijuana processing facility.

“Marijuana processing facility” means a facility licensed by the state Liquor and Cannabis Board to process marijuana into useable marijuana, marijuana concentrates, and marijuana-infused products; ~~and~~ package and label useable marijuana and marijuana-infused products for sale in retail outlets; ~~and~~ sell useable marijuana and marijuana-infused products at wholesale to marijuana retailers. A marijuana processing facility shall include any structure that is associated with the processing of marijuana.

### 20.97.227 Marijuana production facility.

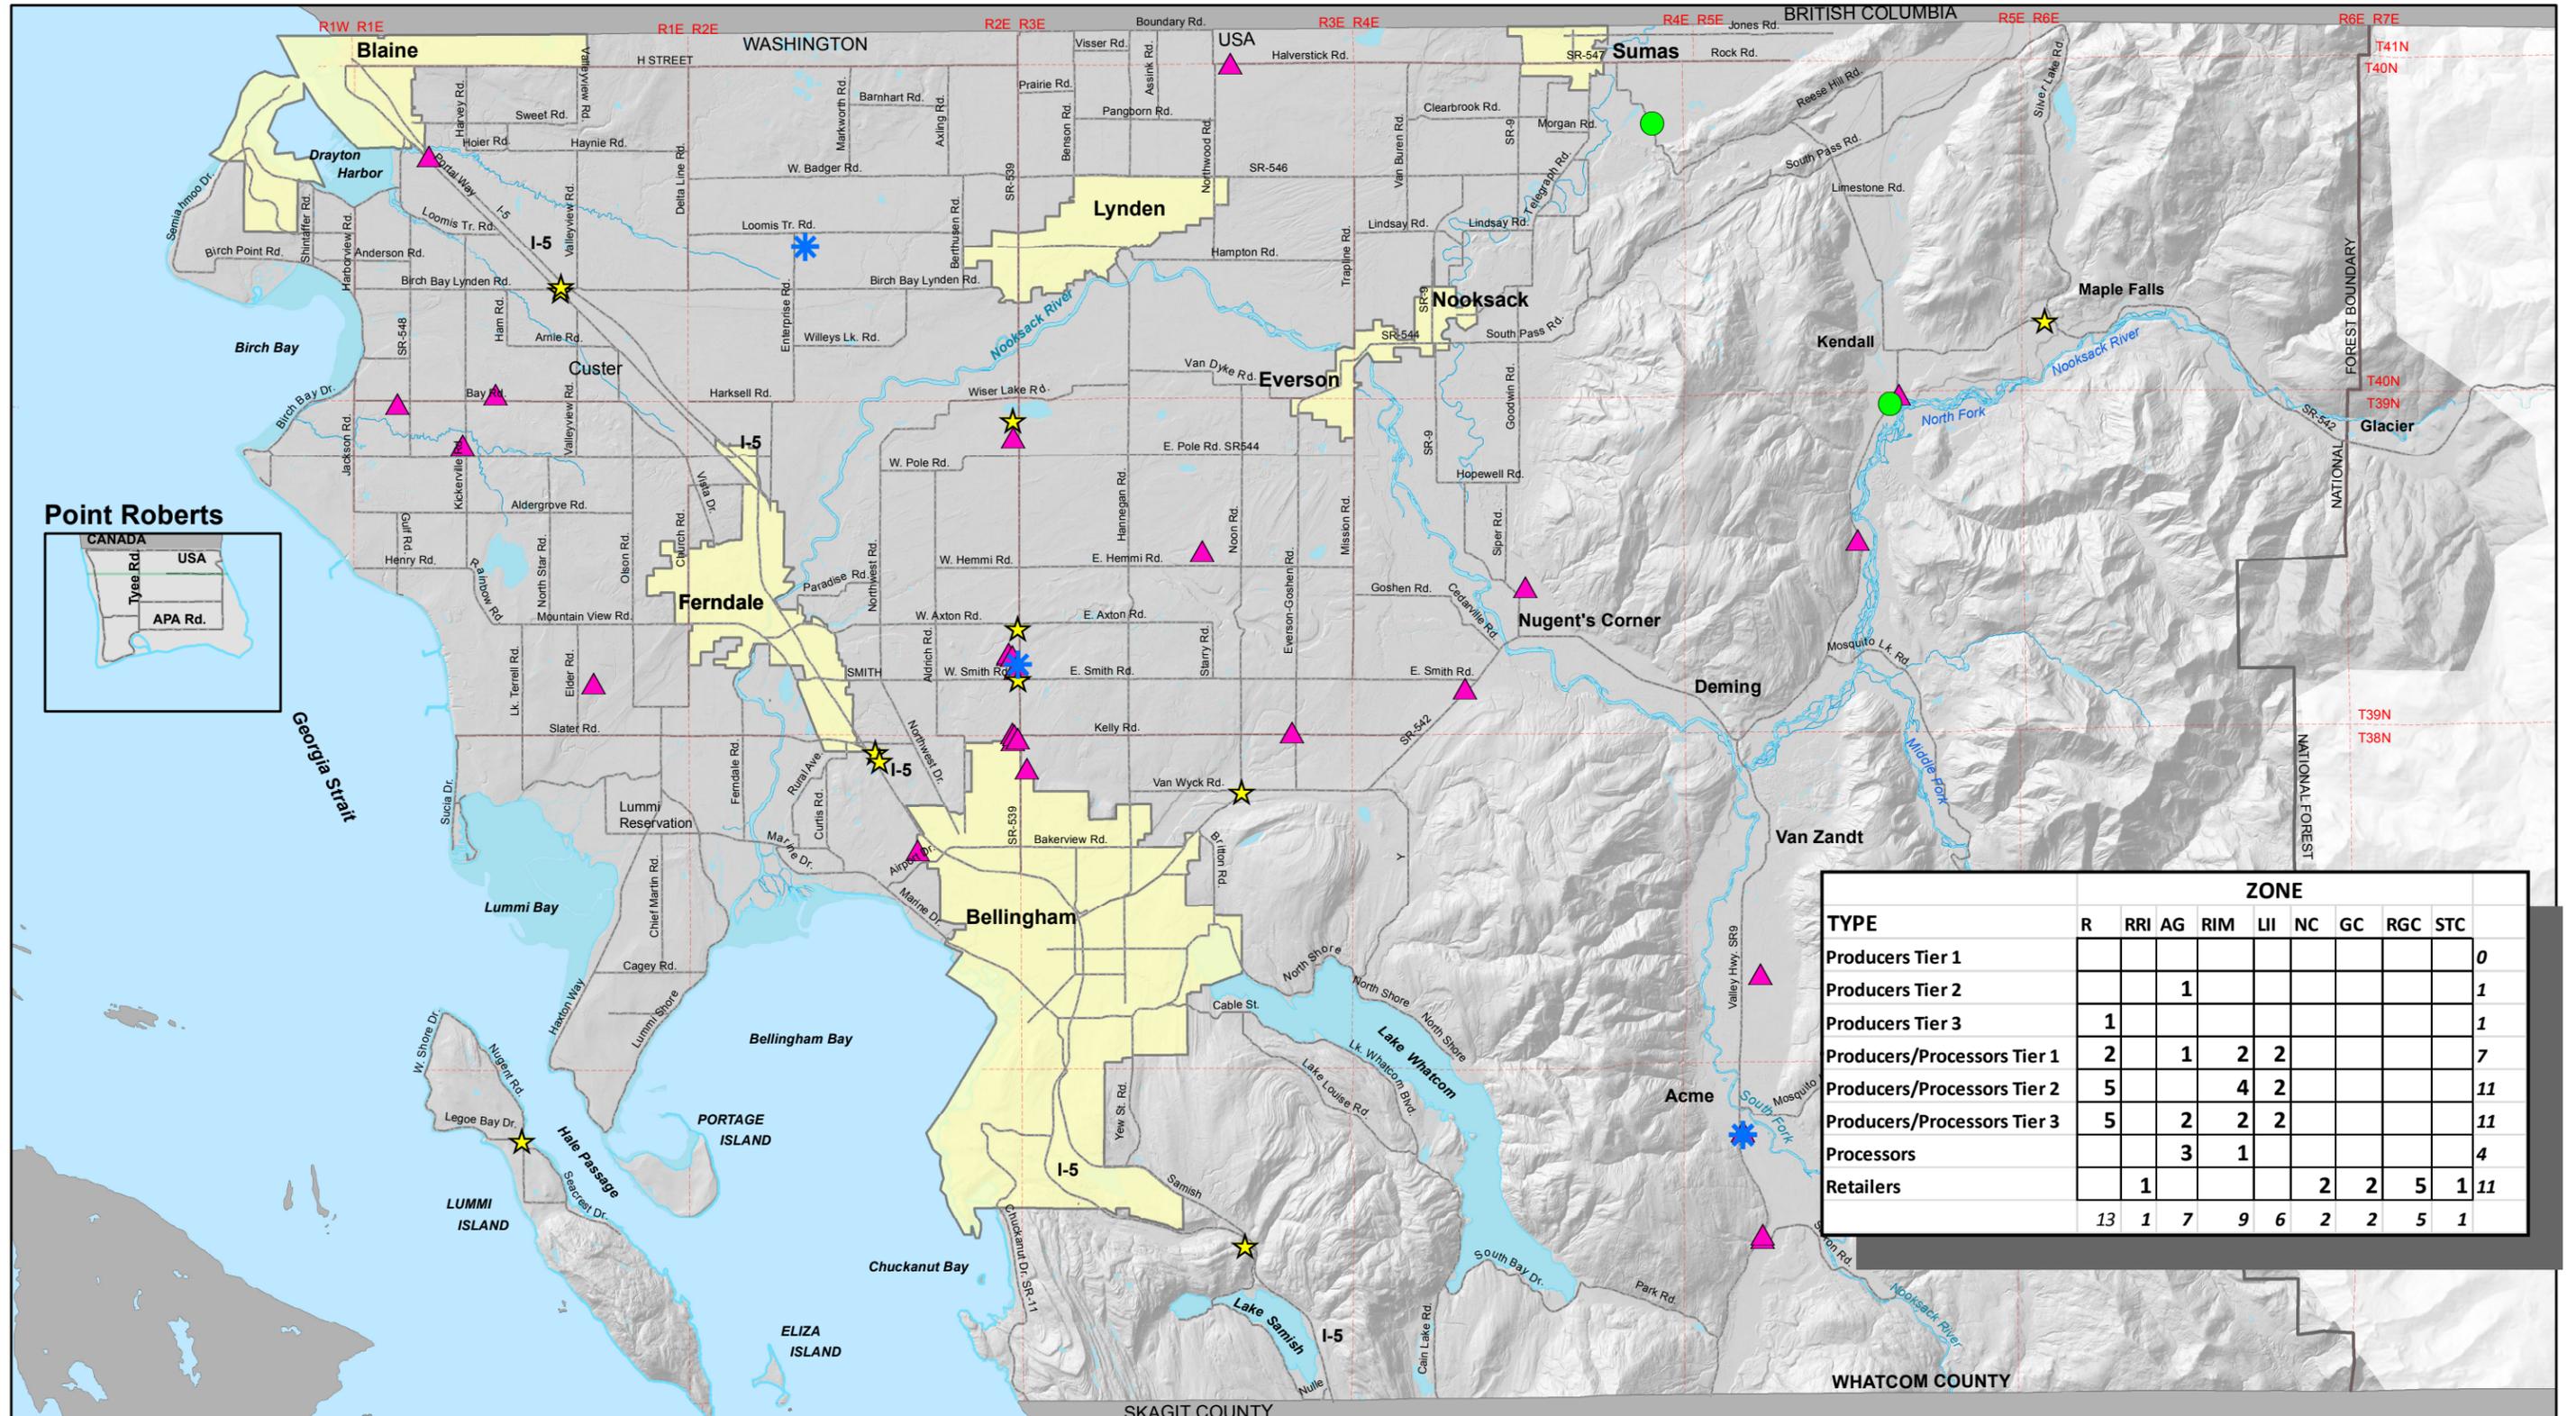

“Marijuana production facility” means a facility licensed by the state Liquor and Cannabis Board to produce, harvest, trim, dry, cure, ~~and package marijuana,~~ and sell marijuana at wholesale to state-licensed marijuana processors and other state-licensed marijuana producers. A marijuana producer may also produce and sell marijuana plants, seed, and plant tissue culture to other state-licensed marijuana producers. The area of a marijuana production facility includes all the area enclosed within a structure or fence that is required by the state Liquor and Cannabis Board for the production of marijuana. Where limitations on size are imposed pursuant to §20.80.690, the “facility” shall include all structures related

to the production or processing of marijuana and any ground in which marijuana is grown. For the purposes of this code, Whatcom

- A. “Type 1 Marijuana Outdoor Production Facilities” shall mean production ~~may take~~ place outdoors, including in an expanse of open or cleared ground, or in ~~nonrigid greenhouses, other structures that have no artificial lighting for aiding in the growth cycle, or an expanse of open or cleared ground fully enclosed by a physical barrier.~~; except that Type 1 facilities may allocate up to 10% of the total square footage of their allowed facility area to genetic preservation and plant propagation in a designated indoor area with artificial lighting. This area must be clearly identified and described in the permit the application, and is subject to all the supplemental requirements of a Type II Facility; however, no flowering plants are permitted in this area at any time.
- B. “~~Indoor~~ Type 2 Marijuana Production Facilities” shall mean production facilities that use artificial lighting for aiding in the growth cycle ~~be within a fully enclosed secure indoor facility or greenhouse with rigid walls, a roof, and doors.~~

**20.97.228 Marijuana retail facility.**

“Marijuana retail facility” means a facility licensed by the state Liquor and Cannabis Board to sell useable marijuana and marijuana-infused products in a retail outlet. A marijuana retail facility shall include any building or portion thereof that is associated with the sale of marijuana.

### TITLE FOR AGENDA ITEM:

Resolution approving the Shoreline Management Program Periodic Update 2020

### SUMMARY STATEMENT OR LEGAL NOTICE LANGUAGE:

Consideration of a resolution approving the periodic update of Whatcom County’s Shoreline Management Program, which includes amendments to the Whatcom County Comprehensive Plan (shoreline and other policies), WCC Titles 23 (shoreline regulations) and 22 (permitting procedures), WCC Chapter 16.16 (critical areas regulations), and the official Shoreline Map. Additionally, the project addresses Council’s docketed items 1) PLN2019-00011, a directive to amend the CompPlan and codes to allow the seasonal extraction of sand and gravel from dry upland areas under certain conditions (but has been found to be unnecessary); and 2) PLN2018-00010, the addition of a Sustainable Salmon Harvest Goal policy to the CompPlan.

# Whatcom County Planning & Development Services Staff Report

## Shoreline Management Program Periodic Update 2020

### I. File Information

**File #:** PLN2020-00006, PLN2019-00011, & PLN2018-00010

**File Name:** Shoreline Management Program Periodic Update 2020

**Applicant:** Whatcom County Planning and Development Services (PDS)

**Project Summary:** Periodic update of Whatcom County's Shoreline Management Program, which includes amendments to the Whatcom County Comprehensive Plan (shoreline and other policies), WCC Titles 23 (shoreline regulations) and 22 (permitting procedures), WCC Chapter 16.16 (critical areas regulations), and the official Shoreline Map. A list of proposed amendments, and how the draft addresses them, is attached. Additionally, the project addresses Council's docketed items 1) PLN2019-00011, a directive to amend the CompPlan and codes to allow the seasonal extraction of sand and gravel from dry upland areas under certain conditions (but has been found to be unnecessary); and 2) PLN2018-00010, the addition of a Sustainable Salmon Harvest Goal policy to the CompPlan.

**Location:** Countywide.

**Staff Recommendation:** Approve.

### II. Background

Whatcom County (County) is undertaking a periodic review of its Shoreline Management Program (SMP), as required by the Washington State Shoreline Management Act, RCW 90.58.080(4). The Shoreline Management Act (SMA) requires each SMP be reviewed, and revised if needed, on an eight-year schedule established by the state Legislature. The review ensures the SMP stays current with changes in laws and rules, remains consistent with other County plans and regulations, and is responsive to changed circumstances, new information and improved data.

The County adopted its current SMP in 2007 (Ordinance No. 2007-017; approved by Ecology in 2008) through a comprehensive update process, which included an inventory and characterization of shoreline land use and ecological conditions (otherwise known as the "baseline condition"), a shoreline restoration plan, and an evaluation of cumulative impacts to ensure implementation of the SMP would result in no net loss of shoreline ecological functions.

Since then, the Council has amended the SMP numerous times, though those amendments were fairly minor in nature, addressing specific issues. The SMP was most recently amended in 2019 to adopt by reference the 2017 Critical Areas Ordinance (CAO).

#### Periodic Update Requirements

The primary requirement of the periodic update process is to ensure that the SMP remains consistent with updates to the legislative requirements of the SMA. The Washington State Department of Ecology

(DOE) provides a list of legislative amendments which have taken effect between 2007 and 2017 as a Periodic Review Checklist.

The periodic update also provides an opportunity to review the SMP for consistency with the County's Comprehensive Plan and development regulations, including critical areas regulations. The County's SMP regulates critical areas in the shoreline jurisdiction by adopting by reference as part of the SMP the County's CAO as adopted in 2017 (Ordinance No. 2017-077) and codified in Chapter 16.16 of the WCC.

The County's Comprehensive Plan and other development regulations were also reviewed for consistency with the SMP, and amendments are being proposed to maintain consistency.

The periodic review process also represents an opportunity to revise and improve the overall functionality, clarity, and usability of the SMP for both the public and County staff. This includes clarifying permit processes and requirements and improving the overall organization and clarity of the documents. The majority of amendments shown in the documents are to achieve this goal.

Note that this periodic update is not required to: re-evaluate the ecological baseline that was established as part of the 2007 comprehensive update; extensively assess no net loss criteria other than to ensure that proposed amendments do not result in degradation of the baseline condition; or change shoreline jurisdiction or environment designations, unless deemed appropriate and necessary. And doing so was not included in the scope or budget for this update, so staff has not undertaken any amendments that would require such actions. A link to those 2007 documents can be found below under "Attachments."

## Project Scope

In starting this project, staff compiled ideas for amendments from various sources (see Public Outreach, below) and compiled them into a list that the Planning Commission and Council reviewed and adopted as the "Scoping Document." This set the "bookends" for what staff would work on (and by corollary, what we would not work on). It contains a list of 22 topic areas, with 68 specific issues to address. A link to that document can be found below under "Attachments."

Staff understands that through the review process other ideas may arise, but if they are big issues that need a lot of work to accomplish, we will not be able to take them on and meet our update deadline of June 30<sup>th</sup> or stay within budget.

## Public Outreach

The County has provided multiple opportunities for public participation throughout the process using a variety of communication tools to inform the public and encourage participation. This included our SMP Update website (<http://www.co.whatcom.wa.us/3097/Shoreline-Master-Program-Periodic-Update>), a list-serve, news releases, public notices, open houses, and public work sessions with the Planning Commission and County Council.

The early months of the project were used to gather input and outline the extent of the review; three public open houses were held in different parts of the County to illicit amendment ideas<sup>1</sup>. Both the Planning Commission and the County Council then reviewed and adopted a final scope of potential amendments based on input from staff, the public, local jurisdictions, tribes, and other stakeholders.

Based on that scope, County staff and consultants drafted amendments. These draft amendments were issued for a 30-day public review period from August 18 – September 18, 2020, before the Planning

---

<sup>1</sup> Note: Though we had planned on holding three additional open houses to present the draft to the public, due to the COVID-19 pandemic we had to cancel those and rely on electronic review.

Commission's work sessions. Prior to the Planning Commission's hearing the revised amendments were reissued for another 30-day public review period, from March 12 – April 12, 2021.

### **Planning Commission Review**

Between October 2020 and April 2021 the Planning Commission held nine public work sessions to review the draft amendments. After a second 30-day public review period they then held a joint Planning Commission/Department of Ecology public hearing on April 22, 2021.

### **County Council/Department of Ecology Review**

Staff expects that the Council will hold multiple work sessions and an additional public hearing prior to adoption. By state law, the SMP update was supposed to be adopted by June 30, 2020; however, as a DOE grant recipient (and in part due to the pandemic) our official deadline is now June 30, 2021. Staff anticipates that Council will provisionally adopt the update via resolution forwarding it to DOE for their final review and approval. After we receive DOE's approval, Council will then need to adopt an ordinance adopting and effecting the update. If the anticipated schedule is kept, the revised SMP should become effective sometime this Fall.

### III. Amendments

The proposed amendments are found in Exhibits A through G. Please refer to those attachments; explanations are provided therein. Following, however, is a list of proposed policy changes.

#### Scoped Amendments

This is the list of items Council directed staff to address, and how we did. Topic #s refer to the topic number assigned in the Scoping Report.

#### Topic #1, Consistency with State law (required amendments)

- a) **Revise language to cite updated substantial development cost threshold or to rely solely on reference to WAC 173-27-040 for exemptions to substantial development permitting.**

Every five years the Office of Financial Management (OFM) recalculates the dollar threshold for projects qualifying as exempt from having to obtain a substantial development permit. Thus, in §22.07.020(B)(1) (Exhibit E), we have updated the dollar amount to the most recent (2017) OFM calculation of \$7,047. Additionally, we have revised the definition of “substantial development” in §23.60.190 to better meet the state definition (Exhibit D).

- b) **Revise the definition of “development” to clarify that development does not include dismantling or removing structures.**

The definition of “development” has been updated to meet DOE guidelines (Exhibit D, §23.60.040(6)).

- c) **Add reference to statutory exceptions to local review to the SMP. Revise or remove existing references to remedial actions and projects certified pursuant to RCW 80.50 to clarify their status as exceptions to local review under the SMA.**

The requisite language has been added (and revised) to §22.07.010(G) (Exhibit E) to clarify the referenced project types’ status as exceptions to local review under the SMA, and deleted from (old) §23.50.060 (Exhibit D).

- d) **Revise language to include a shoreline permit exemption for retrofitting existing structures to comply with the ADA or to rely solely on reference to WAC 173-27-040 for exemptions to substantial development permitting.**

The requisite language has been added as §22.07.020(B)(17) (Exhibit E).

- e) **Revise language in the SMP to cite the updated cost thresholds for dock construction or to rely solely on reference to WAC 173-27-040 for exemptions to substantial development permitting.**

§22.07.020(B)(8) has been revised to meet the statutory requirements (Exhibit E) and the cost threshold has been deleted from the definition of “substantial development” in §23.60.190 (Exhibit D).

- f) **Revise the SMP aquaculture provisions for consistency with WAC 173-26-241(3)(b).**

§23.40.050, in particular subsections (D)(1) and (G), has been revised to be consistent with WAC 173-26-241(3)(b) regarding commercial geoduck farming. (Exhibit D)

- g) Revise the SMP to clarify that the effective date of SMP amendments is 14 days from notice of final approval by Ecology.**

Both §23.05.090 (Effective Date) and §23.10.030(C)(2) (Administrative Duties) have been updated to clarify that the effective date of SMP amendments is 14 days from notice of final approval by Ecology (Exhibit D).

- h) Review the SMP for consistency with 2003 SMP Guidelines and make any necessary changes.**

Numerous amendments are proposed to make our SMP consistent with the SMP Guidelines; too many to list here. However, prior to submitting to DOE for approval, staff will complete the SMP checklist for their use.

## Topic #2, Consistency with State law

- a) Revise the SMP for consistency with Ecology's updated permit filing procedures.**

The requirements for filing permits with DOE have been updated in §22.07.060 (Filing Shoreline Permits with the Department of Ecology) (Exhibit E).

- b) Revise language to clarify that forest practices that involve only timber cutting are not SMA "developments" and do not require Shoreline Substantial Development Permits.**

§23.40.110 (Forest Practices), subsection (A)(3) has been added to clarify that forest practices that involve only timber cutting are not SMA "developments" and do not require Shoreline Substantial Development Permits. (Exhibit D)

- c) Revise language in §23.50.040 to clarify that the SMA does not apply to lands under exclusive federal jurisdiction.**

Subsection (E)(1) has been added to §23.10.020 (Applicability, which used to be §23.50.040) to clarify that the SMA does not apply to lands under exclusive federal jurisdiction. (Exhibit D)

- d) Update definitions to include distinct definitions for "nonconforming use," "nonconforming structure," and "nonconforming development" in accordance with WAC 173-27-080.**

The definitions of "nonconforming lot" (§23.60.140(5)) and "nonconforming use" (§23.60.140(7)) have been amended, and a new definition of "nonconforming structure" (§23.60.140(6)) has been added, to conform to WAC 173-27-080. (Exhibit D)

- e) Define special procedures for WSDOT projects per WAC 173-27-125.**

Subsection (1)(c) has been added to §22.05.130 (Permit Review Time Frames) to define special procedures for WSDOT projects. (Exhibit E)

- f) Incorporate a reference to WAC 173-27-215 for criteria and procedures for instances in which a shoreline restoration project creates a shift in OHWM.**

A reference to WAC 173-27-215 for criteria and procedures for instances in which a shoreline restoration project creates a shift in OHWM has been added as §23.40.180(A)(3) (Restoration and Enhancement) (Exhibit D).

- g) Revise definition of "Floodway" for complete consistency with Ecology's recommended language.**

The definition of "floodway" has been amended to be consistent with DOE's recommended language. (§23.60.060(21), (Exhibit D))

**h) Update the list and maps of streams and lakes that are in shoreline jurisdiction as necessary.**

The list of waters that are in the shoreline jurisdiction has been revised in §23.20.010(B) (Shoreline Jurisdiction), using the language from the WAC 90.58.030 (2)(d). (Exhibit D)

**i) Revise the SMP to include the required provisions in WAC 90.58.140(12).**

§23.40.080 (Dredging and Dredge Material Disposal), subsection (B)(4)(b) has been added to clarify that dredge material disposal at an open water disposal site approved through the Dredged Material Management Program (RCW 79.105.500) is allowed and shall not require a shoreline permit. (Exhibit D)

**Topic #3, Consistency with WCC Ch. 16.16 (Critical Areas)**

**a) Ensure Council changes in Ch. 16.16 regarding standards for view preservation are reflected in the SMP.**

§16.16.235(5) (Activities Allowed with Notification) of the critical areas regulations (Exhibit F) allows for view corridors to be created and maintained (though certain restrictions apply). Subsection (L) has been added to §23.30.030 (Views and Aesthetics) (Exhibit D) that acknowledges and cross-references this allowance (except for in the Natural shoreline environment).

**Topic #4, Consistency with Land Use procedures (Title 22)**

**a) Update SMP to align with recently adopted Title 22 permit procedures.**

In keeping with placing all land use permitting procedures in one place (Title 22) started a couple of years ago, all shoreline permitting procedures in Title 23 (Exhibit D) are being moved to Title 22 (Exhibit E). Where processes overlap with PDS's other project permit types, we refer to and rely on (slightly modified) existing language (Ch. 22.05). However, shoreline permits also have requirements unique to them, so have supplemented the processing rules with a new Ch. 22.07 (Additional Requirements for Shoreline Permits and Exemptions).

**Topic #5, Consistency with Shoreline Management Act (RCW 90.58) and 2003 SMP Update Guidelines (WAC 173-26)**

**a) Clarify permit review no net loss analysis**

The primary regulations ensuring no net loss are:

- §23.10.040(A) (Code Interpretation) requires that the regulations be interpreted to allow development only when a proposal is “designed, constructed, and/or mitigated to provide no net loss of or a net lift to ecological functions and ecosystem wide processes.” (Exhibit D)
- §23.30.010(B) (Ecological Protection) requires that “any unavoidable impacts shall be mitigated to meet no net loss of ecological function and ecosystem-wide processes.” (Exhibit D)
- §23.60.140(4) (Definition) defines what no net loss means. (Exhibit D)
- §16.16.250(2) (Critical Areas Review Process) requires that applicants demonstrate no net loss to the Director’s satisfaction in order to approve a critical areas review (and thus, a project permit). (Exhibit F)
- §16.16.260(C) General Mitigation Requirements allows for alternative mitigation options in order to provide the greatest ecological benefit... to achieve no net loss of ecological functions. (Exhibit F)
- §16.16.260(G) requires that mitigation plans demonstrate no net loss. (Exhibit F)

However, the term is also used in numerous other sections as a reminder of this requirement.

**b) Clarify development mitigation requirements.**

The mitigation standards have been clarified in the following sections as described:

- §16.16.260 (General Mitigation Requirements):
  - Subsection (B) now contains text describing what information the Director may use in determining the extent and type of mitigation required. This text had been found repeated in various Articles of Ch. 16.16, so we've moved it to the overall mitigation section.
  - Subsection (C) is a new policy that will allow for off-site mitigation when it's better for the environment. In the past several years of processing permits, staff has found that the best overall solution is not necessarily "on-site and in-kind" mitigation, since sometimes there's not enough room, or that the mitigation is in a place that can't be guaranteed to remain after the initial 5-year monitoring period. Under this new policy, though the preference is still for "on-site and in-kind" (subsection (1)), off-site and in-kind mitigation may be allowed when the applicant demonstrates that greater biological and/or hydrological functions and values will be achieved (subsection (2), or on-site and out-of-kind mitigation may be allowed when the applicant demonstrates an ecological uplift of biological and/or hydrological functions and values will be achieved (subsection (3). Subsections (4) and (5) also point to our already existing use of Alternative Mitigation Plans and Mitigation Banking.
  - Like subsection (B), subsections (D) and (E) have been moved from the more specific critical areas rules (habitat conservation areas) to the more general so as to apply more broadly.
  - Subsection (G)(3) has been moved from §23.30.010 (Ecological Protection). This text puts the burden on the applicant "demonstrate that all reasonable efforts have been taken to provide sufficient mitigation such that the activity does not have significant adverse impacts and results in no net loss of shoreline and critical area ecological functions." Since WCC Ch. 16.16 (Critical Areas) is considered a part of the Shoreline Management Program, staff thought it more fitting that all the rules for mitigation plans be in one place.
- §16.16.680 (Wetlands – Mitigation Standards)
  - Certain sections that we moved to §16.16.260 (General Mitigation Requirements) have been deleted, since the general now covers the specific.
  - To account for temporal loss of functions, in subsection (C) staff is proposing to amend the wetland buffer<sup>2</sup> mitigation ratio from a standard 1:1 (subsection (C)(1)) to a range of ratios depending on when the mitigation is implemented (subsection (4)) (including at a double ratio for those who don't initially get permits (subsection (c)) and the mitigation is provided long after the impact. This section now mimics the HCA mitigation standards (§16.16.760(E)(3)).
- §16.16.740 (Habitat Conservation Area Buffers). Apart from the clarifying amendments, staff is proposing to modify:
  - Subsection (B) (Habitat Conservation Areas Buffer Widths), which includes Table 4. The mitigation schema in Table 4 moves us from an older system of classifying water types and

---

<sup>2</sup> Note that the ratios for *wetland* mitigation (Table 2, which are from DOE guidance) are not proposed for amendment.

buffer widths to the newer WDFW water-typing system. Though we had already adopted this newer system in identifying surface waters of the state (16.16.710(C)((1)(a)), we had not followed through on using that nomenclature for the various types' buffer widths (the table didn't match the text). Table 4 corrects this. The buffer widths themselves are the same except for Type S – Freshwater. It is currently 150 feet, but staff is proposing to increase it to 200 feet, which is the federal court's recommended width based on National Wildlife Federation v. FEMA (Federal District Court Case No. 2:11cv-02044-rsm; NMFS Doc. #2006-00472).

- §16.16.760 (Habitat Conservation Areas – Mitigation Standards)
  - Certain sections that we moved to §16.16.260 (General Mitigation Requirements) have been deleted, since the general now covers the specific.
  - We have added subsection (D) as a reminder to applications that the Army Corps of Engineer Regional General Permit 6 for inland marine waters may apply to their project(s). RGP-6 is a permit issued by the Corps that authorizes the construction of new residential in- and overwater structures in inland marine waters of Washington State while meeting the Endangered Species Act, though it has conditions on the construction.
  - Like with wetland buffer mitigation, we have added subsection (E)(3), doubling the mitigation ratio for those who don't initially get permits (subsection (c)) and the mitigation is provided long after the impact.
- §16.16.640 (Wetland Buffer Modification) and §16.16.745 (Habitat Conservation Area Buffer Modification). In Articles 6 (Wetlands) and 7 (Habitat Conservation Areas) staff is proposing to combine their respective buffer modification rules into one section for each Article, each covering the types of buffer modifications allowed (increase, averaging, reduction, and variance). For wetlands, we have also modified some of the text to be consistent with DOE guidance (Wetlands in Washington State, Volume 2, Appendix 8C, updated 2018).

**c) Align appeal procedures with State statutes.**

Subsection (3) has been added to §22.05.160 (Appeals) to align the County's shoreline permit appeals process with the state statutes. (Exhibit E)

**d) Shoreline permit review (Exemption, Substantial, Conditional Use, or Variance) should reflect State statutes and level of review required.**

The rules for shoreline permit review have been updated to meet state standards in Ch. 22.07. (Exhibit E)

**e) Align Use standards with State statutes.**

Staff is proposing numerous amendments throughout Ch. 23.40 (Shoreline Use and Modification Regulations) that we believe better aligns them with State statutes, in most cases using the language from the WAC. Furthermore, in the existing code Table 23.100.010 is fairly meager and many uses allowed or prohibited are included only in the text of the various use and modification categories, making it difficult to find them all. We have updated that table as Table 1 Shoreline Use by Environment Designation and moved all allowances and prohibitions from the text to the table, hopefully making it easier to see what one can or can't do in the various environment designations.

**f) Incorporate improved permit streamlining for priority salmon recovery projects**

§22.07.020 (Exemptions from Shoreline Substantial Development Permits) subsection (B)(16) already exempts projects whose primary purpose is to improve fish or wildlife habitat or fish passage. (Exhibit E)

**Topic #6, Climate Change/Sea Level Rise**

**a) Develop and/or strengthen policies regarding climate change/sea level rise, including the incorporation and use of new data (as it becomes available), to review and revise, if warranted, shoreline use regulations.**

Chapter 10 of the CompPlan (Exhibit A) already contains a section on Climate Change (starting on page 10-8), including Goal 10D and Policies 10D-1 through 10D-10. However, these are aimed at how the County should respond overall and are not specific to the shoreline itself.

There is no requirement to address climate change or sea level rise in the state statutes, including the Shoreline Management Act (SMA). Nonetheless, Council’s direction through the Scoping Document was to:

“Develop and/or strengthen policies regarding climate change/sea level rise (CC/SLR), including the incorporation and use of new data (as it becomes available), to review and revise, if warranted, shoreline use regulations.”

The direction did not address regulations. But based on Council’s direction staff has developed seven new policies specific to our management of the shoreline in light of anticipated impacts due to climate change (Exhibit B, C/P Ch. 11, Policies 11AA-1 – 11AA-7), including proposed Policy 11AA-5, which reads:

“Whatcom County should periodically assess the best available sea level rise projections and incorporate them into future program updates, as relevant”

This policy specifically addresses *“the incorporation and use of new data (as it becomes available), to review and revise, if warranted, shoreline use regulations.”*

We understand that some folks would like to see more directive policies<sup>3</sup>, as well as actual regulations<sup>4</sup>; however, before adopting (and then implementing) something along those lines, we’d need to know the details of likely sea level rise (location, elevation, magnitude, etc.). As we mentioned when the Commission and Council were scoping this project, staff anticipates this year the completion of the CoSMoS model, on which the City of Bellingham and Whatcom County Public Works are working, which should provide the Best Available Science to Whatcom County. The Department of Ecology has also advised us that any such regulations should be built on data, which is what PS-CoSMoS will be providing. Furthermore, once the data is available, we should perform vulnerability and risk assessments to see what kind and where the problems might be, and update our shoreline inventory and characterizations. Without such science, we would be open to challenges. The policies being introduced would set us up for developing regulations once this model is completed.

It should also be noted that in reviewing development proposals, Planning and Development Services already requires structures to be built above the anticipated flood/sea level rise stage through the County’s critical area (i.e., geohazard/tsunami) and flood regulations.

---

4 See Exhibit H, Public Comments FW/WEC12, FW/WEC21, WCPW08, WCPW09, WCPW10, & RES03.

## Topic #7, Definitions

### a) Add definitions for common words with a specific meaning in the SMP.

In Ch. 23.600 (Exhibit D) we added many definitions of words that were undefined, amended others to meet current standards and/or to be consistent amongst Titles, and deleted those words already defined elsewhere but added the sentence to §23.60.005, “Any words not defined herein shall be defined pursuant to WWC Chapter 16.16 (Critical Areas) or Titles 20 (Zoning) or 22 (Land Use and Development), or their common meanings when not defined in code.”

### b) Add definitions for regional, local, and accessory utilities. Ensure consistency with Zoning.

Said definitions have been added to §23.60.210(6). (Exhibit D)

### c) Define a single use dock and joint use dock.

“Shared moorage” was already defined in §23.60.190. Additionally, definitions of all moorage types have been added to §23.60.130(17) “Moorage Structure.” (Exhibit D)

## Topic #8, Habitat

### a) Reference WDFW and DNR’s Shore Friendly Program

Staff has amended C/P Policy 11I-2 (Exhibit B) to reference this program as an example of “voluntary and incentive-based public and private programs.”

### b) Consider strengthening ecological connectivity and wildlife corridor requirements.

§23.40.030 (General Shoreline Use and Modification Regulations), subsection J (which is existing language moved from elsewhere), already requires that buildings, fencing, walls, hedges, and similar features shall be designed, located, and constructed in a manner that does not preclude or significantly interfere with wildlife movement to or from important habitat areas.

Apart from all the existing rules about maintaining connectivity in WCC Ch. 16.16 (Critical Areas) (Exhibit F), new rules to strengthen ecological connectivity and wildlife corridor requirements in that document include:

- In §16.16.225 (General Regulations), new subsection (C) has been added, requiring development proposals to maintain ecological connectivity and habitat corridors;
- In §16.16.255 (Critical Areas Assessment Reports) new subsection( C)(3) has been added, strengthening the requirement that connectivity be addressed in assessment reports;
- In §16.16.640 (Wetland Buffer Modification), subsection (A) allows the Director to increase wetland buffers to protect wetland functions and provide connectivity to other wetland and habitat areas;
- In §16.16.745 (Habitat Conservation Area Buffer Modification) subsection (A)(2) allows the Director to increase wetland buffers to protect wetland functions and provide connectivity when a Type S or F waterbody is (among other things) located within 300 feet of another Type S or F water body, a fish and wildlife HCA, or A Category I, II or III wetland;

### c) Consider ways to improve protections for salmon and forage fish habitat.

Policy 11LL-4 in C/P Ch. 11 (Exhibit B) is proposed to be amended in support of this task by adding additional critical saltwater habitats to the list of where moorage structures ought to be avoided.

And while the protection of fish and wildlife habitat is already required throughout various sections of Title 23 (Exhibit D), additional language has been added in:

- §23.30.040 (Vegetation Management) has been amended to strengthen and better tie the protection and/or revegetation of native shoreline vegetation to the protection of salmon and forage fish habitat.
- In §23.40.060 (Marinas and Launch Ramps) (Exhibit D), subsection (E)(8) has been added to the standards requiring that boat launches be designed to minimize impacts to critical saltwater habitats.
- In §23.40.140 (Mining):
  - Subsection (A)(3) now states that “Preference shall be given to mining proposals that result in the creation, restoration, or enhancement of habitat for priority species.”
  - Subsection (A)(6) has been added to prohibit “motorized or gravity siphon aquatic mining or discharge of effluent from such activity to any waters of the state that has been designated under the endangered species act as critical habitat, or would impact critical habitat for salmon, steelhead, or bull trout” pursuant to RCW 90.48.615.
  - Subsection (B)(1) has been added for consistency with WAC 173-26-241(3)(h), prohibiting mining waterward of the ordinary high-water mark of a river if it would cause a net loss of ecological functions of the shoreline.
- In §23.40.150 (Moorage Structures):
  - Subsections (A)(6) and (7) ( moved from the existing Boating Facilities section) prohibits moorage structures in certain shoreline habitats.
  - Subsections (B) & (C), having to do with construction and locational standards for moorage structures have been amended and augmented to meet current state and federal habitat protection requirements and guidance.
- In §23.40.190 (Shoreline Stabilization), subsection (A)(10) has been amended to prohibit hard shoreline stabilization in jurisdictional shoreline streams on estuarine shores, in wetlands, and in salmon spawning areas, except for the purpose of fish or wildlife habitat enhancement or restoration.
- In §23.40.220 (Utilities), subsection (B)(5)(a) has been added, require that hydropower facilities shall be located, designed, and operated to minimize impacts to fish and wildlife resources.

Similarly, while the protection of fish and wildlife habitat is already required throughout various sections of WCC 16.16 (Critical Areas) (Exhibit F), in §16.16.255 (Critical Areas Assessment Reports) new subsection (C)(3) has been added, strengthening the requirement that impacts to salmon and forage fish habitat be address in assessment reports to improve protections for salmon and forage fish.

**d) Clarify functional disconnect standards for protection of Fish & Wildlife Habitat Conservation Areas**

The term “functional disconnect,” which many people have interpreted differently and is not widely used anymore, has been eliminated in §16.16.630(B) (Wetland Buffers) and §16.16.740 (Habitat Conservation Area Buffers), which now say, “Buffers shall not include areas of an existing, legally established substantially developed surface.”

**Topic #9, Layout and Structure of the SMP**

**a) Reorganize the SMP, putting the background information, discussions, and goals and policies into the Comprehensive Plan as a chapter**

One of the biggest changes was to reorganize the SMP to shorten it and make it easier to use. One of the ways we’re doing this is to move the SMP policies into the Comprehensive Plan. The SMP was already adopted by reference as part of the CompPlan; it just wasn’t contained in it. However, in

modern code construction, code normally doesn't contain policies (or appendices) as our current Title 23 does. Staff is proposing to create a new Chapter 11 of the CompPlan entitled "Shorelines" (Exhibit B). We have moved all the SMP policies from Title 23 (Exhibit D) as well as related policies from Chapter 10, Environment (Exhibit A), to this chapter, putting all the shoreline policies into one place. Thus, the amendments to Chapter 10 are mostly showing the deletion of policies that are moving to Chapter 11.

Most of the changes shown in C/P Ch. 11 (Exhibit B) are also in support of this effort. We have moved everything from Title 23 that appeared to be policy (rather than regulation) into this chapter. We've also put it in the same format as other chapters of the CompPlan, struck redundancies, and corrected grammar and tenses. There are, however a few proposed new policies and/or amendments that we discuss below.

Another major organizational change is to move all permitting regulations to WCC Title 22 (Exhibit E). Title 22 was created a few years ago to eventually contain all of the County's procedures for land use permitting and code administration. However, moving sections to this Title is continuing to occur as we progress through various code amendments (e.g., the annual code scrub, upcoming code enforcement amendments, this SMP update, etc.).

Similarly, since WCC Chapter 16.16 (Exhibit F, Critical Areas) is adopted as part of the SMP, they are to be read together, and where there are redundancies between Ch. 16.16 and Title 23, we are proposing to delete those redundancies in Title 23 (Exhibit D).

**b) Simplify the language as much as possible and remove redundancies**

See response to 18.a.

**Topic #10, Nonconforming**

**a) Ensure consistency with Zoning, CAO, and SMP regarding nonconforming uses and structures.**

Staff has rewritten Chapter 23.50 (Nonconforming Uses, Structures, and Lots) to conform to the latest DOE guidance addressing nonconforming uses, development, and lots as separate issues. Additionally, definitions for each term have been added to §23.60.140. (Exhibit D)

In §16.16.275 (Nonconforming Uses, Structures, and Lots) (Exhibit F) two amendments are proposed to align this chapter with Title 20 (Zoning) and Title 23 (SMP):

- In subsection (B), the time within which an intentionally abandoned *nonagricultural* nonconforming use or structure may maintain its nonconforming status is changed from 5 years to 12 months, the same timeframe in Title 20 (Zoning).
- In subsection (E), a new (1) is being added, stating that "intentional demolition or removal is not a casualty," as in Title 23 (SMP).

**b) Add standards for nonconforming structures to meet current construction standards.**

In §23.50.020 (Nonconforming Structures) (Exhibit D):

- (A)(4) now allows legal nonconforming non-overwater structures to be maintained, repaired, renovated, or remodeled to the extent that nonconformance with the standards and regulations of this program is not increased, *provided that a nonconforming structure that is moved any distance must be brought into conformance with this program and the Act.*
- (A)(5) allows overwater nonconforming structures to be maintained or repaired to the extent that nonconformance with the standards and regulations of this program is not increased; *provided that when replacement is the common method of repair, the replaced components shall meet the construction and materials standards of §23.40.150 (Moorage Structures).*

**c) Address nonconforming expansion dimensional standards.**

§23.50.010 (Nonconforming Uses), subsection (B) now clearly states that the expansion, alteration, and/or intensification of a nonconforming use is prohibited, and §23.50.020 (Nonconforming Structures), subsections (E) & (F) clearly address when and how expansion of nonconforming structures are handled. (Exhibit D)

**d) Clarify administratively approved single-family dimensional standards.**

To §23.50.020 (Nonconforming Structures), subsection (F), we have added clear standards as to how to address the enlargement or expansion of nonconforming single-family structures. (Exhibit D)

### Topic #11, Overwater Structures

**a) Add dimensional standards for overall square footage.**

§23.40.150 (Moorage Structures) has been completely revamped to meet current state and federal standards. To meet this scoped recommendation, thorough design and dimensional standards, including for overall square footage, have been added to subsection (B) (Exhibit D).

**b) Add shared moorage standards.**

Dimensional standards for shared moorage have been added to §23.40.150 (Moorage Structures), subsection (B). Subsection (D) prioritizes shared moorage over individual use structures. And subsection (F) provides additional standards for shared moorage. (Exhibit D)

### Topic #12, Permitting

**a) Consider simplifying utility repair and maintenance permitting.**

In §16.16.235 (Activities Allowed with Notification), though subsection (B)(2) already allows maintenance and repair of infrastructure (including utilities), it has been amended to be clearer by adding the term “utility corridors.” Additionally, a new subsection (B)(3) has been added regarding utility installation.

**b) Add a reference to the Swift Creek Sediment Management Action Plan so as to clarify permitting procedures for actions necessitated by this plan.**

To §23.10.020 (Applicability) we have added subsection (H), which lists what activities the SMP does not apply to. Subsection (H)(1) applies to “Activities undertaken to comply with a United States Environmental Protection Agency Superfund-related order, or a Washington Department of Ecology order pursuant to the Model Toxics Control Act (such as the Swift Creek Sediment Management Action Plan), or a Department of Homeland Security order that specifically preempts local regulations in the findings of the order.”

**c) Single-Family Residential Development on Constrained Lots**

Staff is proposing to redefine what and how **reasonable use exceptions and variances** are used and who decides them. Our Hearing Examiner has questioned our current schema, in particular why he isn't the final decision maker, as the current code allows an administrative determination to be made *after* a quasi-judicial decision, and in the hierarchy of permitting, applicants should have to exhaust any administrative remedies before seeking a quasi-judicial decision. Staff is proposing that reasonable use exceptions be the last method of altering standards to allow reasonable economic use of constrained property, and that they be decided upon by the Hearing Examiner (see 16.16.270 Reasonable Use Exceptions). Under the proposed schema we would use (in hierarchical order):

- **Administrative Reduction/Average** – Staff would have the ability to administratively reduce or average a buffer by 25% if the impacts can be fully mitigated, though avoidance and minimization criteria are applied. This allows for flexibility in project design and road alignments. If this doesn't work, then...
- **Administrative Variance** – Staff would have the ability to administratively grant an administrative variance<sup>5</sup> to reduce a buffer by 25-50% if the impacts can be fully mitigated and the variance criteria are met. If this doesn't work, then...
- **Hearing Examiner Variance** – The Hearing Examiner would have the ability to grant a variance from *any* dimensional standard by any degree if the impacts can be fully mitigated and the variance criteria are met. If this doesn't work, then...
- **Hearing Examiner Reasonable Use Exception** – The Hearing Examiner would have the ability to grant a Reasonable Use Exception to allow up to 2,500 square feet of impacts, and the homeowner would only have to mitigate what can actually fit on the property (which conceivably could be none).

In this schema, the degree to which one can vary standards while providing the least amount of mitigation moves up a level at each step, with the Hearing Examiner making the tougher decisions through a quasi-judicial process. This would return the reasonable use exception to truly the last effort of avoiding a taking.

However, to counter the additional time and cost of this process, staff is also proposing to create a new category of variances, called minor variances (16.16.273 Variances). They would be limited to variances for a 25% to 50% reduction of critical area buffers (when mitigated and they meet certain criteria) but would address most of the instances that reasonable use exceptions are currently applied for. We believe that overall, these changes would significantly reduce the number of cases having to go to the Hearing Examiner and cost less to the citizens of Whatcom County overall.

Note, too, that under the reasonable use rules, the Planning Commission is proposing to amend the maximum impact area to a range of "10% of the lot area or 2,500 square feet<sup>6</sup>, whichever is greater; provided that in no instance shall it exceed 4,000 square feet." Since the property would not need to fully mitigate, a smaller footprint is warranted. This returns the reasonable use exception to truly the last effort of avoiding a taking.

### Topic #13, Public Access

#### a) Clarify standards for construction in the aquatic designation (work occurring in the water).

This issue had to do with what materials are allowed for structures built in contact with water (e.g., moorage structures). The list of such materials (untreated wood, concrete, approved plastic composites, or steel) are already found in §23.30.020(D) (Water Quality and Quantity), §23.40.125(E)(1)(e) (Cherry Point Management Area), §23.40.150(C)(2) (Moorage Structures), §23.40.210(B)(8) (Transportation), & §23.50.020(D) (Nonconforming Structures), with no distinction between galvanized or non-galvanized steel, as had been scoped. However, state law and guidance makes no such distinction, so the list has been unaltered. (Exhibit D)

---

<sup>5</sup> This mechanism was created by Council in 2020 and is found in WCC 22.05.024 (Variances).

<sup>6</sup> What it was prior to the 2017 Critical Areas update.

**b) Add ADA standards consistent with federal statutes.**

In §23.40.020 (Shoreline Bulk Provisions), subsection (G) (Uses Allowed in Buffers and Setbacks) (6), we have added language that allows stairs and walkways to exceed standard width requirements to meet ADA requirements. (Exhibit D)

In both §16.16.620 (Wetlands – Use and Modification) subsection (H) and §16.16.720 (Habitat Conservation Areas – Use and Modification) subsection (G)(1), text has been added to allow trails to exceed standard width requirements to meet ADA requirements. (Exhibit F)

**c) Consider revising dimensions for stairs and walkways located within the shoreline or critical area buffers to accommodate public trails.**

In §23.40.160 (Recreation), subsection (A)(6) has been added, directing applicants to WCC Chapter 16.16 (Critical Areas), which contains the standards for trails in critical areas (including the shoreline setback (i.e., HCA buffer). (Exhibit D)

In §16.16.325 (Landslide Hazard Areas – Use and Modification), a new subsection (A)(3) has been added to allow trails (meeting certain conditions) in landslide hazard areas. (Exhibit F)

In §16.16.620 (Wetlands – Use and Modification), subsection (H) (Recreation) has been amended to allow public trails to include viewing platforms, and to be closer than the outer 25 percent of the buffer “when necessary to provide wetland educational opportunities or for public health and safety,” and to be wider than the standard widths when necessary to meet ADA requirements. Corresponding amendments have also been made to 16.16.720(G)(1) (Habitat Conservation Areas – Use and Modification) (Exhibit F).

**d) Consider amending trail location standards to allow trails to be located closer than in the outer 50% of a critical area buffer.**

In §23.40.020 (Shoreline Bulk Provisions), subsection (G) (Uses Allowed in Buffers and Setbacks), we have added subsection (11) that allows passive recreation facilities that are part of a non-motorized trail system or environmental education program, including walkways, wildlife viewing structures, or public education trails in the shoreline buffer. (Exhibit D)

In §16.16.620 (Wetlands – Use and Modification), subsection (H) (Recreation) has been amended to allow public trails to include viewing platforms, and to be closer than the outer 25% of the buffer “when necessary to provide wetland educational opportunities or for public health and safety,” and to be wider than the standard widths when necessary to meet ADA requirements. Corresponding amendments have also been made to 16.16.720(G)(1) (Habitat Conservation Areas – Use and Modification) (Exhibit F).

## **Topic #14, Shoreline Designations**

**a) Consider changing the shoreline designation for certain, more urban parks to an urban designation.**

It turned out that changing shoreline (environment) designations on certain properties would have entailed updating the 2007 shoreline inventory and characterization reports, which was beyond the scope of this periodic update.

## Topic #15, Shoreline Jurisdiction and Environment Designation Map

### a) **Revise the Shoreline Jurisdiction and Environment Designation map to conform to the latest FEMA FIRM maps**

The Shoreline map has been updated to include all areas of the FEMA floodway and floodplain. This primarily widened the Resource designation on the Nooksack from Ferndale to Lynden and portions of the South Fork of the Nooksack though narrowed it in some areas. Floodway and Floodplain are differentiated in the database. It should be noted that the actual shoreline jurisdiction has not changed, as that is set by state law and our code (§23.20.010), but the map now more accurately displays the jurisdiction.

A few other changes have been made as well. These include:

- UGA and City boundaries have been updated.
- On the Lummi Nation, parcels that have been put under Tribal jurisdiction since the last update were updated with the “Tribal” shoreline designation.
- Designations were adjusted, where necessary, to match the updated and spatially corrected parcel boundaries. This was just a housekeeping task and no designations were changed.
- Shoreline designation breaks (thick black bars) have been removed from the map as they made it difficult to read.
- The complex of beaver ponds north and south of H Street Road between Sunrise and Markwork Roads (NE of Lynden) were added to the Conservancy designation. These ponds have grown in size and now surpass the 20-acre threshold for being a Water of the State. Since these ponds were identified and characterized in the 2007 Characterization report, we did not need to update that report; the data is still valid.
- At the request of the owners of APN 390302-428076-0000, 390302-485039-0000, and 390302-440200-0000 we have removed the Resource environment designation from a mining pond located to the NW of the intersection of E. Pole X Everson-Goshen Roads, just southeast of Everson. This designation was applied during the last SMP update, but has been determined to have been an error. Though it is a waterbody greater than 20 acres, it is a mineral extraction pond and DOE guidance is that such ponds do not qualify as a Water of the State until mineral extraction is complete and the restoration plan is realized. Once that happens, it automatically is designated as Conservancy under state law and our SMP. The County would then have 3 years to amend the map and finalize its designation.

## Topic #16, Shoreline Modifications

### a) **Review for consistency with the 2SHB 1579 regarding HPAs, and with State guidelines regarding prioritizing living shorelines over hardscape solutions.**

In §23.40.010 (Shoreline Use and Modification), Table 1 (Shoreline Use by Environment Designation), the various types of stabilization have been broken out into their respective types. Bioengineering Approaches & other Soft-Shore Measures are shown as permissible, while hardscape solutions are either prohibited or require a Conditional Use Permit, and then allowed only when necessary for shoreline restoration or to support a water-dependent use that cannot be located elsewhere. Then throughout §23.40.190 (Shoreline Stabilization) language has been added to prioritize soft- over

hardscape stabilization measures, in particular in subsection (A)(5), where an order of preference has been established. (Exhibit D)

**b) Consider allowing interpretive, wayfinding, safety, and park identification signs, based on park standards.**

In §23.40.020 (Shoreline Bulk Provisions), subsection (G) (Uses Allowed in Buffers and Setbacks) (10) (Signs) we have added language that allows interpretive, wayfinding, and park identification signs on publicly owned park properties. (Exhibit D)

### Topic #17, Shoreline Uses

**a) Revise as necessary any SMP policies or regulations pertaining to the Cherry Point area as directed by Council.**

In 2018 the Council started a process of amending the policies and regulations related to fossil fuel facilities in the Cherry Point Management Area. The Council hired consultants specifically for this task and it is principally being administered under a separate process. Their amendments affecting C/P Ch. 2 (Land Use), WCC Ch. 16.08 (SEPA), WCC Title 20 (Zoning), and WCC Title 22 (Land Use & Development) have already been reviewed by the Commission. None of the Council's amendments to C/P Ch. 2, WCC Ch. 16.08, or WCC Title 20 affects the documents the Planning Commission reviewed as part of this SMP Update.

Their amendments to Title 22, however, have been incorporated into Exhibit E, and are being show as new as they are not yet adopted. We have also incorporated the Commission's recommended changes to this specific language, also flagged by comments in the document.

Their amendments also affect WCC Title 23 (Exhibit D) and (by way of this update) C/P Ch. 11 (Exhibit B). As we are proposing to do with the rest of the SMP policies, we're moving the Cherry Point Management Area policies from Title 23 to C/P Ch. 11 (Exhibit B). As such, they're not shown as new policies (i.e., no underline) in Exhibit B, but Council's proposed amendments to them are being show in strikeout/ underline. Other changes to Title 23 regarding this topic are flagged as Council-proposed language in §23.40.125 (Cherry Point Management Area). (Exhibit D)

**b) Revise as necessary any SMP policies or regulations pertaining to sand and gravel extraction as directed by Council.**

In 2019 the County Council placed the following proposal (PLN2019-00011) on the docket:

Amend the Whatcom County Comprehensive Plan and Whatcom County Code to allow the seasonal extraction of sand and gravel from dry upland areas located within the 1,000 year meander zone of the Nooksack River, provided that such extraction has no negative impact on salmon spawning habitat. The intent is to (a) reduce the conversion of land currently used for farming, forestry and wildlife habitat into gravel pits, and (b) safely remove some of the significant sediment load that enters the Nooksack River every year in an effort to reduce flooding and the need to build higher flood prevention berms along the river as the climate continues to change.

To carry out this directive we have tried to mimic the language of the WAC, eliminating language that is not required but adding (or retaining) required language. (§23.40.140 (Mining), Exhibit D)

This matter was forwarded to the Surface Mining Advisory Committee (SMAC) for their advice. At their June 26, 2019, meeting the SMAC reviewed this matter and found that no changes were necessary to

the SMP code in order to allow for extraction of sand and gravel from dry upland areas located within shoreline jurisdiction and/or the FEMA 100-year floodplain. Furthermore, it was confirmed that the lack of recent sand and gravel extraction within the Nooksack River shoreline jurisdiction/FEMA floodplain/floodway is primarily a function of the time and costs for studies associated with permitting and review at the state and federal level, compared to the economic return on investment.

At the federal level, the Endangered Species Act (ESA) is the primary law affecting this activity. It requires that any activities be done in such a manner as to not cause a “take” of any listed species, which also means protecting their habitat from impacts. At the state level, the Shoreline Management Act requires that there be no net loss of shoreline ecological functions and processes. As one can imagine, either of these requirements would make it difficult to make it easier to extract sand and gravel.

**c) Ensure internal consistency with allowed uses in the code and the Use Table.**

In the existing code, the allowances/permit type required for some uses are specified in Table 1 and others are sprinkled about the text, making it difficult to find whether something is allowed or not. So throughout Ch. 23.40 (Shoreline Use and Modification Regulations) we have removed any use allowances found in the text and expanded the table to include these (as well as other uses that hadn’t been specified). Thus, almost all rules about whether something’s allowed or not, and with what type of permit, are found in Table 1. There were also several footnotes that modified the table. We have replaced these footnotes with just one, telling the reader to look to the text for certain uses in certain environment designations, as there remain a few specific provisions in the text, typically stating that certain uses have caveats in certain environment designations. In short, we believe we have made things easier to find, and the text and the table should be internally consistent now.

**d) Modify the accessory structure height standards.**

In §23.40.020 Shoreline Bulk Provisions, subsection (E) (Height), two new subsections have been added. Subsection (4) would allow equipment necessary for the functions of water-dependent uses or the servicing of vessels to extend above the applicable maximum height limit provided in Table 1, provided that such structures shall be designed to minimize view obstruction. Subsection (5) would allow residential accessory structures that are not waterward of the primary structure to be built to the maximum height for the environment designation.

**e) Add standards for retaining walls.**

In §23.40.020 (Shoreline Bulk Provisions), subsection (G) (Uses Allowed in Buffers and Setbacks), we have added subsection (8) to allow retaining walls or similar slope stabilization structures, when associated with an approved shoreline use or development; and in (9) have clarified that retaining walls can exceed the standard 4-foot height limit for fences, walls, and hedges. (Exhibit D)

**f) Update Memorandum of Understanding with Department of Archaeology and Historic Preservation.**

Through this update process, staff was not able to actually update the MOU with DAHP, as that will take some time and involve many others. But based on the language in it, we are proposing some new policies to the cultural resources sections of both the Overall SMP Goals and Objectives (Exhibit B, page 11-9) and the General Polices (page 11-27) sections (see policies 11G-3, 11G-4, & 11X-9).

We are also proposing to revise the regulations in §23.30.050 (Cultural Resources) (Exhibit D). The existing regulations are full of rules about how reports are supposed to be done and what they need to contain. However, Department of Archaeologic and Historic Preservation (DAHP) now has standard

practices outlined in their guidance, and we are proposing to remove all of our extraneous rules and just refer to DAHP's standards; this cuts down on the amount of text considerably and ensures that practices and reports follow state standards. The proposed text has been collaboratively developed with us, DAHP, and the Lummi Nation Tribal Historic Preservation Office (LNTHPO).

That said, there are three policy issues posed by the revised text:

- Subsection (A)(1) reads:

Upon receipt of an application for a permit, exemption, or other approval for a proposed project, the County shall determine whether the project lies within 500 feet of a site known to *or could* contain a cultural resource based on the Washington State Department of Archaeology & Historic Preservation's (DAHP) Inventory of Cultural Resources.

Currently, regulations require applicants to prepare a cultural resources report (and adhere to any recommendations therein) if their project lies within 500 feet of a site known to contain a cultural resource based on the Washington State Department of Archaeology & Historic Preservation's (DAHP) Inventory of Cultural Resources. The LNTHPO has proposed that we insert the phrase "or could" in this sentence. They would like to be consulted on all projects within the shoreline, not just ones within 500 ft of a previously recorded site, as they believe they may have additional information regarding an area that is not included in the State's inventory. They would like an opportunity to review and comment on the report no matter what may be found. However, this would expand the scope beyond what we regulate now.

- Subsection (A)(4) reads:

Based upon consultation with DAHP and the affected Tribe(s), the Director may approve the report *with tribal concurrence* or reject or request revision of the conclusions reached and/or management recommendations when the assessment is inaccurate or does not fully address the cultural resource management concerns involved.

The LNTHPO recommends that we include the phrase "with tribal concurrence." This would mean that the Tribe would have to agree with a report before PDS could approve it.

Staff believes that requiring their concurrence runs contrary to the GMA's permitting requirements of expeditious review and issuance, as it could hold up projects while we're awaiting their concurrence. A simple fix may be to set a time limit for how long they have to respond.

- Subsection (A)(5) reads:

If the cultural resource report identifies the presence of a cultural resource, any permit issued shall be conditioned on meeting the approved report's management recommendations. *If no cultural resources are found, then the permit may be issued without conditions regarding cultural resources.*

The LNTHPO commented that an Inadvertent Discovery Plan (IDP) should be required regardless of whether cultural resources are found, as there are times when additional requirements are necessary (e.g., when there is a site documented just outside of the project area, monitoring may be recommended). However, this does go beyond what we do now and so raise it as a policy issue.

**g) Clarify Forest Practice standards.**

§23.40.110 (Forest Practices) has been updated to reflect the WAC provisions for Forest Practices in shorelines. (Exhibit D)

Additionally, the current Ch. 16.16 (Critical Areas) does not have guidance for Conversion Option Harvest Plans as allowed by WAC 222. For other permits this would allow for a limited removal of trees, while retaining larger trees to help with managing a riparian buffer. When development alters a functioning forested system some level of continued forest management is required (see 16.16.720(V)). To alleviate this issue, staff is proposing to add to 16.16.720 (Habitat Conservation Areas – Use and Modification) subsection (P). The section sets performance standards for removing timber in Habitat Conservation Areas (e.g., riparian areas) and would allow timber harvesting to occur within buffers while still retaining the HCA's functions. These standards vary by water type, and are tied to existing buffer conditions. This amendment is aimed at closing a loophole wherein applicants remove trees before applying for a development permit, which is when the CAO becomes applicable (except for Class IV Conversions, forest practices are not reviewable under the CAO).

**h) Add temporary use standards.**

This was a task staff had proposed, thinking we might be able to develop a temporary use permit for short-term uses. However, we could not find a good example from other jurisdictions, nor is there any guidance from Ecology. Thus, we determined it is probably best to review such uses at the time of a request for a temporary easement, temporary use permit, etc.

**i) Clarify utility standards for regional, local, and accessory.**

Under the existing code, the only categories for utilities are local or regional transmission lines, which has led some people to believe that utility installation, repair, or maintenance to single-family homes (accessory utilities) needs the same level of permitting and scrutiny as a power substation or regional transmission line.

In the proposed amendments to §23.40.010 (Shoreline Use and Modification), Table 1 (Shoreline Use by Environment Designation), utilities have been broken out into three categories: accessory, local, and regional. Each are now distinctly defined in §23.60.210(6), and have distinct permitting paths, depending on what environment designation they are located, making it clear that running an electrical line (or something similar) to a house is outright permitted.

Additionally, in §23.40.220 (Utilities) we have moved all the utility requirements that had been spread throughout in various sections into one, cohesive section.

**j) Add standards for live-aboard vessels in marinas.**

In §23.40.060 (Marinas and Launch Ramps) standards for live-aboard vessels have been added as subsection (F) (Exhibit D). Staff is also proposing to add Policy 11DD-13 to CompPlan Ch. 11 (Exhibit B) to support the proposed addition of standards to Title 23.

## **Topic #18, Shoreline Setbacks/ Riparian Management**

**a) Update vegetation conservation standards to prefer limbing over removal.**

§23.30.030 (Views and Aesthetics) (Exhibit D), subsection (M) now points to the regulations in §16.16.235(B)(5) (Activities Allowed with Notification) (Exhibit F).

§16.16.235(B)(5) (Activities Allowed with Notification) has been updated to stress limbing over removal of trees to provide view corridors (Exhibit F).

**b) Provide incentives to enhance Fish and Wildlife Habitat Conservation Areas (FWHCA).**

This was another task staff had scoped. We had hoped to create an incentive for new single-family residential development to maintain and/or improve shoreline vegetation by allowing those who do so to have a reduced shoreline buffer. Unfortunately, we could not figure out a way of doing this without impacting existing homeowners' views. Furthermore, it would have required an update to the inventory and characterization background documents, which was not included in the scope or budget of the project.

Additionally, given that the shoreline is defined and regulated as a Habitat Conservation Area, theoretically we should not allow uses (other than water-oriented uses and single-family residences which are SMA 'preferred uses') within the shoreline, as they would necessitate vegetation clearing. However, we know that folks that have waterfront property want and expect to have access (for swimming, boating, relaxation, etc.) and recreational amenities near the shore (e.g., fire pits, kayak sheds, etc.), so we have added to 16.16.720 (Habitat Conservation Areas – Use and Modification) subsection (G)(4), which sets limits on how much of the shoreline can be cleared of vegetation for such uses and requires mitigation to offset the impacts so as to achieve No Net Loss.

**c) Clarify setback standards for protection of views to and from the water.**

To protect views of the shoreline from existing structures when new development is proposed, §23.30.030 (Views and Aesthetics) (Exhibit D), new subsection (B) now allows setbacks to be modified pursuant to WCC 23.400.020(D) (Shoreline Bulk Provisions, Setbacks, Common-Line Setback for Single-Family Residences). That section (incorporated from former Appendix F) allows for setbacks to be reduced or increased, depending on how existing homes are situated, to provide the greatest view opportunities for both the existing and new development (though when reduced, mitigation (i.e., planting of the shoreline setback) may be required).

To minimize impacts to views from the water, §23.30.030 (Views and Aesthetics) (Exhibit D), new subsection (C) also now allows the Director to require the planting of vegetation to mitigate the impacts.

Furthermore, §23.30.030 (Views and Aesthetics) (Exhibit D), new subsection (L) precludes new uses or development from substantially obscuring shoreline views within shoreline view areas or from existing residences on adjacent property.

## **Topic #19, Water Quality**

**a) Include language/policies about the importance of Lake Whatcom as the source of drinking water for most of the County and the water quality improvement plan (TMDL).**

After reviewing the existing CompPlan, staff believes that it already addresses this issue sufficiently. In Chapter 10, under *Water Resources* (Exhibit A, page 10-11), subsection *Lake Whatcom Watershed Management* (pages 10-22 – 10-25) there are four pages of text describing Lake Whatcom's importance as a source of drinking water and the efforts the County (and City of Bellingham) are under taking to protect it. Under Goal 10-J alone there are 14 specific policies (Policies 10J-1 - 10J-14) regarding protecting Lake Whatcom, and there are numerous other, more generic goals and policies that deal with water quality protection more generically.

## **Topic #20, Wetland Buffers**

**a) PDS will conduct a parallel process, convening a group of local wetland consultants, to consider revisions to the CAO regulations regarding wetland habitat function score break**

**points, buffer widths, reduction, averaging to meet DOE guidelines, and having buffers based on habitat performance instead of static/standard buffers. If they complete this work in time, it can be incorporated into this update; otherwise it can follow.**

In July 2018 the Washington Department of Ecology (DOE) modified the habitat score ranges and recommended buffer widths in their wetland buffer tables in the DOE guidance, with some minor text changes to ensure consistency. Some citizens, local environmental consulting firms, and the Building Industry Association of Whatcom County then requested that we amend our code to meet this new guidance, and it was docketed as PLN2019-00008.

The project was brought before the Planning Commission on March 14, 2019. But there was confusion as to what we actually *had* to do at that time and what impacts it would have on development. DOE had informed staff that, while we didn't need to amend our code at that point (having just updated Ch. 16.16 (Critical Areas) (Exhibit F) that they would review our code for consistency with their guidance when Ch. 16.16 was opened for amendment again, noting that that would occur during the 2020 SMP Periodic Update.

So at the Commission's request, staff worked with the local wetlands consultants to review the issue and try to determine what effects it might have. Three consulting firms<sup>7</sup> provided analyses based on data from projects they had worked on. From these analyses, it appears that many of Whatcom County's lower quality wetlands (e.g., small Category IV wetlands in agricultural fields) would end up with smaller buffers, but that our higher quality wetlands (Categories II and III) would end up with larger buffers. (But even this is speculation, as ATSI noted that the comparison results are not statistically significant.<sup>8</sup>) Thus, farmers may benefit but developers/ builders may suffer, as many of our lower quality wetlands are those found in agriculture fields, while our higher quality wetlands are typically found in non-agriculture rural areas.

Nonetheless, given the Department of Ecology's statements that they'll be monitoring the SMP Update to ensure that we meet their latest guidance (which is based on Best Available Science), and given that Comprehensive Plan Policy 10M-2 directs the County to "Develop and adopt criteria to identify and evaluate wetland functions that meet the Best Available Science standard and that are consistent with state and federal guidelines," staff is proposing to amend §16.16.630 (Wetland Buffers) Table 1 (Standard Wetland Buffer Widths) to meet DOE guidance. As indicated, these changes would lessen buffers on lower quality wetlands, and increase them on higher quality ones.

## **Topic #21, Marine Resource Lands**

### **a) Consider adding a Marine Resource Lands policy section as developed by the Marine Resources Committee**

When the Council amended the CompPlan in 2016 they included a new section entitled "Marine Resource Lands" that contained one goal and one policy that directed staff to assist in developing the section more thoroughly:

---

<sup>7</sup> NW Ecological Services, NW Wetlands Consulting, and Aqua-Terr Systems, Inc.

<sup>8</sup> Paired sample t-tests were conducted to compare the proposed buffer results with categories of the wetlands impacted.

**Goal 8T: Conserve and enhance Whatcom County’s marine land base for the long-term and sustainable production of commercial and recreational economic activities.**

**Policy 8T-1:** Whatcom County will work with committees including but not limited to the Marine Resource Committee, the Shellfish Protection Advisory Committee, and other local marine land experts to create a new section of this chapter to support Goal 8T to be docketed and processed for consideration no later than 2017.

The project was docketed as (PLN2017-00005), and staff worked with these groups to help develop some language, goals, and policies for this section, which is shown as Exhibit C (C/P Ch. 8). However, there was mixed recommendations from the groups who reviewed the language.

- The **Marine Resources Committee** reviewed the proposal at their June 7, 2018, meeting, and after adding Policy 8V-4 (addressing educational efforts and programs) they recommended that the County Council adopt the proposed language.
- The **Birch Bay Watershed and Aquatic Resources Management Committee** (BBWARM) reviewed the proposal at their June 20, 2018, meeting. They recommended that the Council *not* adopt the proposed language. They felt that the new Marine Resource Lands section of the CompPlan was already covered by the existing Shoreline Management Program and that including it would add unnecessary complication/duplication. They recommended that the Council postpone any action on the Marine Resource Lands amendment until the SMP update commenced.
- The **Portage/Drayton Shellfish Protection Districts** reviewed the proposal at their July 25, 2018, meeting. However, they did not have a quorum and could not act.
- The **Planning Commission** held a workshop on June 14 and a public hearing on June 28, 2018. They recommended that the Council *not* adopt the Marine Resource Lands proposal. There was concern amongst some of the Commissioners that regulations adopted subsequent to these policies could affect farmers, even though staff explained that it was not our nor CM Weimer’s intent to address agricultural runoff. They also thought it would be better to consider this during our SMP update, perhaps incorporating some of the goals and policies into that rather than having a separate section.

When staff brought the project forward to Council’s Planning & Development Committee for review they decided to consider it with the (then) upcoming SMP update.

## Topic #22, No Net Loss

### a) Prepare a No Net Loss technical memo

On September 10, 2019, staff presented to the Council’s Natural Resources Committee an overview of how No Net Loss is achieved.

No net loss incorporates the following concepts:

- The existing condition or baseline of shoreline ecological functions, documented in the 2007 documented in the shoreline inventory and characterization, should not deteriorate due to permitted development.
- Shoreline functions may improve through shoreline restoration.
- New adverse impacts to the shoreline environment that result from planned development should be avoided.

- When this is not possible, impacts should be minimized through mitigation sequencing.
- Mitigation for development projects alone cannot prevent all cumulative on-going impacts and shoreline violations, so restoration is also needed.

Based on past practice, current science tells us that most, if not all, shoreline development produces some impact to ecological functions. However, the recognition that future development will occur is basic to the no net loss standard. The challenge is in maintaining shoreline ecological functions while allowing appropriate new development and ensuring adequate land for preferred shoreline uses and public access. With due diligence, local governments can properly locate and design development projects and require conditions to avoid or minimize impacts.

In 2007 Whatcom County underwent a comprehensive update of its Shoreline Management Program (SMP). At that time the County prepared an Inventory and Characterization Report (Vol. I), a Scientific Literature Review (Vol. II), a Restoration Plan (Vol. III), and a Cumulative Effects Analysis (Vol. IV), all of which were approved by County Council and the Department of Ecology. These documents formed the basis for developing the County's Shoreline Management Program and determining that it would achieve no net loss of ecological functions when implemented.

Whatcom County is now undergoing a periodic update. For such an update the County is not required to re-do all these documents except to augment them if something changes that might negatively affect the shoreline's ecological functions. For the most part there are few significant policy changes in this update; most of the proposed amendments are an effort to reorganize the SMP so as to make it easier to use and understand.

There are a few policy changes, though, and the No Net Loss Statement, prepared by The Watershed Company as an addendum to the 2007 Cumulative Effects Analysis, addresses these (Exhibit I). The conclusion is that each of these amendments works to strengthen the shoreline ecological protections provided by the SMP.

#### **b) Shoreline Restoration Plan Addendum**

Simply stated, the no net loss standard is designed to halt the introduction of new impacts to shoreline ecological functions resulting from new development by requiring mitigation. However, over all, protection, restoration, and mitigation are needed to achieve no net loss. Restoration is the only mechanism by which we can improve shoreline functions and ecosystem-wide processes over time. Local governments must achieve this standard through both the SMP planning process and by appropriately regulating individual developments as they are proposed in the future.

The concept of no net loss of shoreline ecological functions is rooted in the Act and in the goals, policies, and governing principles of the state's shoreline guidelines. These principles suggest that no net loss is achieved primarily through regulatory approaches and that restoration occurs mainly via goals, policies, and voluntary or incentive-based mechanisms. It is also important to note that more than simply preventing further loss of ecological functions, master program provisions must also "...achieve overall improvements in shoreline ecological functions over time when compared to the status upon adoption of the master program."

The mandate to improve functions over time provides the basis for restoration planning and creates a distinction between mitigation and restoration. As mentioned, applicants for shoreline permits must fully mitigate new impacts caused by their proposed development. However, applicants are not required to restore past permitted ecosystem damages as a condition of permit approval. Permit applicants will not be required to implement the restoration measures identified in the plan as mitigation for project

impacts, but they may elect to implement elements of this plan as mitigation for shoreline development if appropriate. And they may be required to mitigate for recurring impacts.

## SMP updates: Achieving no net loss of ecological function

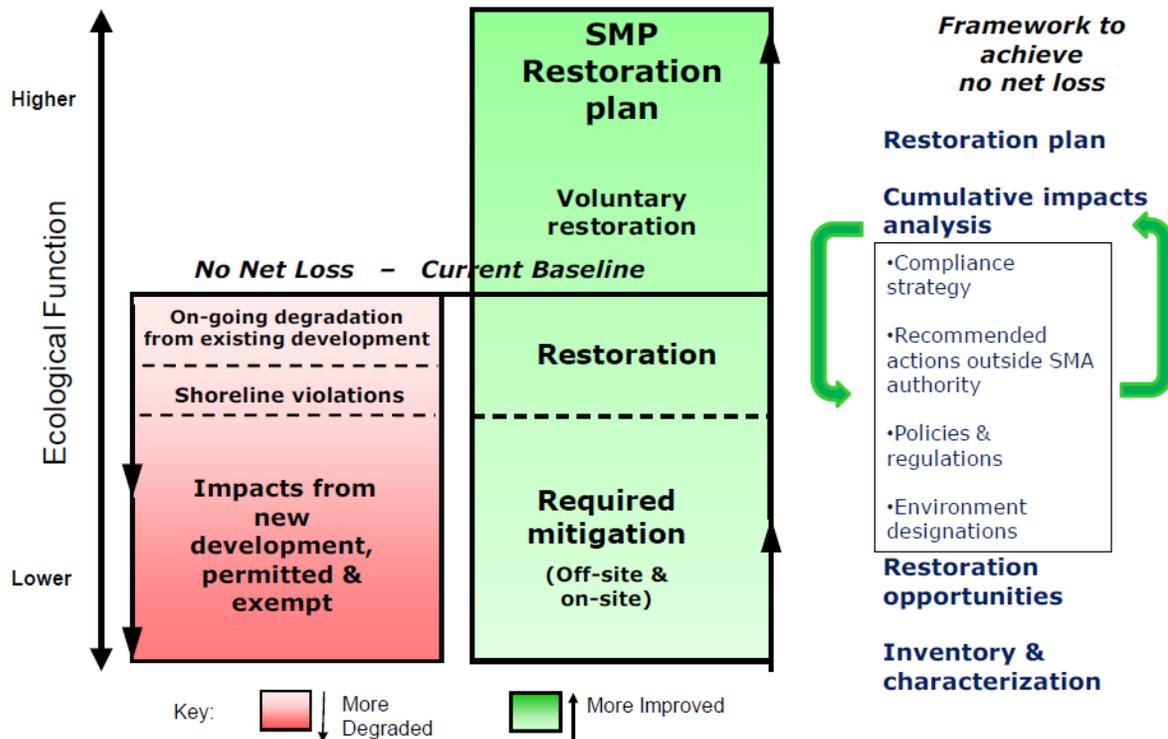

Figure 4-1: During the SMP update process, local governments should use existing shoreline conditions as the baseline for measuring no net loss of shoreline ecological functions.

Exhibit J is an addendum to the 2007 Shoreline Restoration Plan. It references projects listed in the Shoreline Restoration Plan containing enhancement and restoration project proposals and updates them based on information received by the County, agencies, tribes, and stakeholder organizations. It also lists several projects that were not included in that Plan, but nonetheless have been undertaken and completed, and that improve shoreline ecological functions.

It is important to note that to continue to achieve NNL over time the County should continue to fund and implement the projects listed in the restoration plan.

## Other Amendments

### Sustainable Salmon Harvest Goal

There is a new Policy 10L-19 proposed to be added to Chapter 10 regarding a sustainable salmon harvest goal (Exhibit A, page 11-47). Adding this policy is not a part of the SMP Update per se, and in fact was not part of the scope. Rather, it is a policy the Council expressed in interest in adding in support of the fisheries co-manager's Sustainable Salmon Harvest Goal. Adding such a policy was placed on the docket by Council in 2018 (#PLN2018-00010). Rather than process its addition as a separate CompPlan amendment, staff is proposing to add it while we're already amending the CompPlan for the SMP

Update. We should note, however, that through the Salmon Recovery Staff Team the fisheries co-managers (WDFW, Lummi Nation, and Nooksack Tribe) are reviewing this draft language and may propose some additional amendment(s) to it. If so, we will inform the Planning Commission later in your review.

### **Short-Term Rentals**

Though already approved by Council via Resolution 2016-039 and by the Department of Ecology, Council's actions on short-term rentals has not been finalized by ordinance. Thus, staff has included in the draft Title 23 those amendments on short-term rentals already approved. Please note that there are similar amendments to Title 20 that Council has not acted on, and these would need to be followed up shortly after the SMP amendments are approved.

### **UGA Wetlands**

In 16.16.225 (General Regulations) staff is proposing to add subsection (B)(7), which would allow "alteration of Type III or IV wetlands that have a habitat area score of less than 6 when associated with an approved commercial development within an Urban Growth Area" when impacts are mitigated. This would allow the alteration of certain wetlands in Urban Growth Areas (UGAs) (in particular, Birch Bay) so as to encourage development of commercially zoned property. Commercial development in Birch Bay is challenging because so much of the remaining commercially zoned property contains small, isolated wetlands. Yet under the Growth Management Act we're supposed to encourage development within UGAs so that development doesn't sprawl to less developed areas of the County.

## **IV. Comprehensive Plan Evaluation**

The proposed amendments to the regulations (WCC Titles 22 and 23 and Ch. 16.16) have been developed using the guidance of the Comprehensive Plan so as to remain consistent. Generally, the specific guiding goals and policies would be listed here so as to inform the Council of consistency; however, that would just be a relisting of each, as every goal and policy of Comprehensive Plan Chapter 11 is relevant. Those goals and policies may be reviewed in Exhibit B. Suffice it to say that staff finds no inconsistencies.

## **V. Draft Findings of Fact and Reasons for Action**

Staff recommends the Council adopts the following findings of fact and reasons for action:

1. The Shoreline Management Act (SMA) requires Whatcom County to develop and administer a Shoreline Master Program (SMP); and
2. Whatcom County is subject to the requirements of the Washington State Growth Management Act (GMA), RCW 36.70A.480 'Shorelines of the State.'
3. On February 27, 2007 (Ordinance # 2007-017), Whatcom County adopted a comprehensive update to the SMP as required by law. This comprehensive SMP update review included but was not limited to assessment of ecological functions, baseline conditions, and SMP environmental designations. This local adoption was approved by the Washington State Department of Ecology (Ecology); and
4. The Washington State Shoreline Management Act (SMA), RCW 90.58.080 (4)(a)(ii), mandates Whatcom County shall periodically review its SMP every 8-years. This periodic update is due June 30, 2021. The purpose of this periodic review is to update the local SMP to reflect changes to state

- law and associated rules and guidance, ensure internal consistency with the Whatcom County Comprehensive Plan and associated development regulations, as well as provide an opportunity to improve usability and predictability of the SMP; and
5. The GMA, RCW 36.70A.130(1), also mandates that Whatcom County's Comprehensive Plan and development regulations are subject to continuing review and evaluation; and
  6. The review process is intended to bring the SMP into compliance with requirements of the act or state rules that have been added or changed since the last SMP amendment, ensure the SMP remains consistent with amended comprehensive plans and regulations, and incorporate amendments deemed necessary to reflect changed circumstances, new information, or improved data; and
  7. Whatcom County Planning and Development Services (PDS) submitted an application (PLN2020-00006) to make various amendments to Whatcom County's Shoreline Management Program; and,
  8. On May 21, 2019, and in accordance with WAC 173-26-090(3)(a), Whatcom County developed a public participation program for this periodic review in to inform, involve and encourage participation of interested persons and private entities, tribes, and applicable agencies having interests and responsibilities relating to shorelines, which was submitted to Ecology; and
  9. Whatcom County has followed its adopted public participation program, including:
    - a. A dedicated project webpage;
    - b. Legal notices published in the official newspaper of record for Whatcom County;
    - c. Electronic announcements and notifications to:
      - Subscribers of relevant lists in the Kitsap County Electronic Notification System;
      - Relevant County advisory groups; and
      - Relevant local, state and federal agencies, and community groups;
      - Federally recognized tribes with usual and accustomed areas in Whatcom County and relevant tribal organizations;
    - d. Three public open houses;
    - e. Meetings with citizen advisory groups and various interested parties;
    - f. Two 30-day public review periods of the amendments, one prior to the Planning Commission review workshops (August – September 2020) and a joint public comment period with the Department of Ecology prior to their joint public hearing (March – April 2021).
    - g. Eleven public workshops and a joint public hearing with the Planning Commission and Department of Ecology; and
    - h. Ten public workshops and a public hearing with the County Council.
  10. Whatcom County used Ecology's checklist of legislative and rule amendments to review amendments to chapter 90.58 RCW and department guidelines that have occurred since the master program was last amended, and determine if local amendments are needed to maintain compliance in accordance with WAC 173-26-090(3)(b)(i); and
  11. With the assistance of a consultant and development of a consistency analysis, Whatcom County PDS proposed amendments to the Whatcom County Comprehensive Plan (Chapters 8 (Resource Lands), 10 (Environment), and 11 (Shorelines)) and WCC Titles 22 (Land Use & Development) and 23 (Shoreline Management Regulations), and WCC Chapter 16.16 (Critical Areas).

12. Following review and approval by the Whatcom County Council, a public participation plan, consistency analysis, and scoping document was developed to aid in developing the draft amendments.
13. Whatcom County reviewed changes to the comprehensive plan and development regulations to determine if the shoreline master program policies and regulations remain consistent with them in accordance with WAC 173-26-090(3)(b)(ii); and
14. Whatcom County considered whether to incorporate any amendments needed to reflect changed circumstances, new information or improved data in accordance with WAC 173-26-090(3)(b)(iii); and
15. The Whatcom County Planning Commission and County Council held public hearings on July 25 and August 7, 2019 (respectively) to receive testimony on topics the public believed should be addressed during the periodic review; and
16. The Whatcom County Planning Commission completed a review of staff recommendations and prepared initial amendments; and
17. Whatcom County consulted with the Department of Ecology early and often during the drafting of the amendments. Whatcom County worked collaboratively with the Department of Ecology to address local interests while ensuring proposed amendments are consistent with the policy of RCW 90.58.020 and applicable guidelines in accordance with WAC 173-26-104; and
18. A State Environmental Policy Act (SEPA) environmental checklist was prepared and the Whatcom County SEPA responsible official issued and circulated a copy of the checklist and a Determination of Non-Significance (DNS) on February 18, 2021; and
19. Whatcom County conducted a formal joint public comment period with the Department of Ecology in compliance with requirements of WAC 173-26-104; and
20. Whatcom County published a legal notice in the Bellingham Herald on April 17, 2021, for a public hearing on the proposed staff recommendations, including a statement that the hearings were intended to address the periodic review in accordance with WAC 173-26-090(3)(c)(ii); and
21. The Planning Commission took public testimony on the proposed staff recommendations at a public hearing on April 22, 2021; and
22. The Planning Commission reviewed the public testimony and written comments on the proposed SMP revisions, and suggested revisions to the proposed amendments; and
23. The Planning Commission recommended approval of the proposed amendments and forwarded it to the County Council for review and adoption on May 13, 2021; and
24. Notice of the subject amendments was submitted to the Washington State Department of Commerce on March 12, 2021, for their 60-day review in accordance with WAC 173-26-100(5); and
25. The Council held six public workshops to review the Planning Commission's recommendations; and
26. A Council Public Hearing Notice was posted in the Bellingham Herald on November 14, 2021; and

27. The Council received public testimony at the public hearing of November 23, 2021, and reviewed said public testimony and written comments at a study session on December 7, 2021; and
28. After considering all public comments and evidence, the Council determined that the proposed amendments comply with all applicable laws and rules; and
29. As evidenced by the recommendation of the Surface Mining Advisory Committee, Title 23 already meets Council's intent to allow sand and gravel extraction within shoreline jurisdiction under certain circumstances as described in PLN2019-00011 and thus no amendments are proposed to achieve this; and,
30. RCW 36.32.120(7) provides that the county legislative authorities shall make and enforce, by appropriate resolutions or ordinances, all such police and sanitary regulations as are not in conflict with state law; and
31. The amendments are consistent with the Shoreline Management Act, Growth Management Act, Whatcom County Comprehensive Plan, and other applicable requirements.
32. The proposed amendments reflect current local circumstances and promote the general public health, safety, morals and welfare.
33. This completes the County's required process for periodic review in accordance with RCW 90.58.080(4) and applicable state guidelines (WAC 173-26).

## **VI. Proposed Conclusions**

1. The amendments are in the public interest.
2. The amendments are consistent with the Whatcom County Comprehensive Plan.

## **VII. Recommendation**

Planning and Development Services recommends that the County Council approve the draft resolution included in your packet, which would approve the proposed amendments to Whatcom County's Shoreline Management Program and authorize staff to forward them to the Department of Ecology for final review and approval.

PROPOSED BY: \_\_\_\_\_  
INTRODUCTION DATE: \_\_\_\_\_

**RESOLUTION NO. \_\_\_\_\_**

**A WHATCOM COUNTY RESOLUTION, DECLARING THE COUNCIL'S APPROVAL AND INTENTION TO ADOPT THE OCTOBER 29, 2021, AMENDMENTS TO WHATCOM COUNTY CODE, TITLE 23 - SHORELINE MANAGEMENT PROGRAM;**

**WHEREAS**, the Shoreline Management Act (SMA) requires Whatcom County to develop and administer a Shoreline Master Program (SMP); and

**WHEREAS**, Whatcom County is subject to the requirements of the Washington State Growth Management Act (GMA), RCW 36.70A.480 'Shorelines of the State.'

**WHEREAS**, on February 27, 2007 (Ordinance # 2007-017), Whatcom County adopted a comprehensive update to the SMP as required by law. This comprehensive SMP update review included but was not limited to assessment of ecological functions, baseline conditions, and SMP environmental designations. This local adoption was approved by the Washington State Department of Ecology (Ecology); and

**WHEREAS**, the Washington State Shoreline Management Act (SMA), RCW 90.58.080 (4)(a)(ii), mandates Whatcom County shall periodically review its SMP every 8-years. This periodic update is due June 30, 2021. The purpose of this periodic review is to update the local SMP to reflect changes to state law and associated rules and guidance, ensure internal consistency with the Whatcom County Comprehensive Plan and associated development regulations, as well as provide an opportunity to improve usability and predictability of the SMP; and

**WHEREAS**, the GMA, RCW 36.70A.130(1), also mandates that Whatcom County's Comprehensive Plan and development regulations are subject to continuing review and evaluation; and

**WHEREAS**, the review process is intended to bring the SMP into compliance with requirements of the act or state rules that have been added or changed since the last SMP amendment, ensure the SMP remains consistent with amended comprehensive plans and regulations, and incorporate amendments deemed necessary to reflect changed circumstances, new information, or improved data; and

**WHEREAS**, Whatcom County Planning and Development Services (PDS) submitted an application (PLN2020-00006) to make various amendments to Whatcom County's Shoreline Management Program; and,

**WHEREAS**, on May 21, 2019, and in accordance with WAC 173-26-090(3)(a), Whatcom County developed a public participation program for this periodic review in to inform, involve and encourage participation of interested persons and private entities, tribes, and applicable agencies having interests and responsibilities relating to shorelines, which was submitted to Ecology; and

**WHEREAS**, Whatcom County has followed its adopted public participation program, including:

- a. A dedicated project webpage;
- b. Legal notices published in the official newspaper of record for Whatcom County;

- c. Electronic announcements and notifications to:
  - Subscribers of relevant lists in the Kitsap County Electronic Notification System;
  - Relevant County advisory groups; and
  - Relevant local, state and federal agencies, and community groups;
  - Federally recognized tribes with usual and accustomed areas in Whatcom County and relevant tribal organizations;
- d. Three public open houses;
- e. Meetings with citizen advisory groups and various interested parties;
- f. Two 30-day public review periods of the amendments, one prior to the Planning Commission review workshops (August – September 2020) and a joint public comment period with the Department of Ecology prior to their joint public hearing (March – April 2021).
- g. Eleven public workshops and a joint public hearing with the Planning Commission and Department of Ecology; and
- h. Ten public workshops and a public hearing with the County Council.

**WHEREAS**, Whatcom County used Ecology’s checklist of legislative and rule amendments to review amendments to chapter 90.58 RCW and department guidelines that have occurred since the master program was last amended, and determine if local amendments are needed to maintain compliance in accordance with WAC 173-26-090(3)(b)(i); and

**WHEREAS**, with the assistance of a consultant and development of a consistency analysis, Whatcom County PDS proposed amendments to the Whatcom County Comprehensive Plan (Chapters 8 (Resource Lands), 10 (Environment), and 11 (Shorelines)) and WCC Titles 22 (Land Use & Development) and 23 (Shoreline Management Regulations), and WCC Chapter 16.16 (Critical Areas).

**WHEREAS**, following review and approval by the Whatcom County Council, a public participation plan, consistency analysis, and scoping document was developed to aid in developing the draft amendments.

**WHEREAS**, Whatcom County reviewed changes to the comprehensive plan and development regulations to determine if the shoreline master program policies and regulations remain consistent with them in accordance with WAC 173-26-090(3)(b)(ii); and

**WHEREAS**, Whatcom County considered whether to incorporate any amendments needed to reflect changed circumstances, new information or improved data in accordance with WAC 173-26-090(3)(b)(iii); and

**WHEREAS**, the Whatcom County Planning Commission and County Council held public hearings on July 25 and August 7, 2019 (respectively) to receive testimony on topics the public believed should be addressed during the periodic review; and

**WHEREAS**, the Whatcom County Planning Commission completed a review of staff recommendations and prepared initial amendments; and

**WHEREAS**, Whatcom County consulted with the Department of Ecology early and often during the drafting of the amendments. Whatcom County worked collaboratively with the Department of Ecology to address local interests while ensuring proposed amendments are consistent with the policy of RCW 90.58.020 and applicable guidelines in accordance with WAC 173-26-104; and

**WHEREAS**, a State Environmental Policy Act (SEPA) environmental checklist was prepared and the Whatcom County SEPA responsible official issued and circulated a copy of the checklist and a Determination of Non-Significance (DNS) on February 18, 2021; and

**WHEREAS**, Whatcom County conducted a formal joint public comment period with the Department of Ecology in compliance with requirements of WAC 173-26-104; and

**WHEREAS**, Whatcom County published a legal notice in the Bellingham Herald on April 17, 2021, for a public hearing on the proposed staff recommendations, including a statement that the hearings were intended to address the periodic review in accordance with WAC 173-26-090(3)(c)(ii); and

**WHEREAS**, the Planning Commission took public testimony on the proposed staff recommendations at a public hearing on April 22, 2021; and

**WHEREAS**, the Planning Commission reviewed the public testimony and written comments on the proposed SMP revisions, and suggested revisions to the proposed amendments; and

**WHEREAS**, the Planning Commission recommended approval of the proposed amendments and forwarded it to the County Council for review and adoption on May 13, 2021; and

**WHEREAS**, Notice of the subject amendments was submitted to the Washington State Department of Commerce on March 12, 2021, for their 60-day review in accordance with WAC 173-26-100(5); and

**WHEREAS**, the Council held six public workshops to review the Planning Commission's recommendations; and,

**WHEREAS**, a Council Public Hearing Notice was posted in the Bellingham Herald on November 14, 2021; and

**WHEREAS**, the Council received public testimony at the public hearing of November 23, 2021, and reviewed said public testimony and written comments at a study session on December 7, 2021; and

**WHEREAS**, after considering all public comments and evidence, the Council determined that the proposed amendments comply with all applicable laws and rules; and

**WHEREAS**, as evidenced by the recommendation of the Surface Mining Advisory Committee, Title 23 already meets Council's intent to allow sand and gravel extraction within shoreline jurisdiction under certain circumstances as described in PLN2019-00011 and thus no amendments are proposed to achieve this; and,

**WHEREAS**, RCW 36.32.120(7) provides that the county legislative authorities shall make and enforce, by appropriate resolutions or ordinances, all such police and sanitary regulations as are not in conflict with state law; and

**WHEREAS**, the amendments are consistent with the Shoreline Management Act, Growth Management Act, Whatcom County Comprehensive Plan, and other applicable requirements.

**WHEREAS**, the proposed amendments reflect current local circumstances and promote the general public health, safety, morals and welfare.

**WHEREAS**, this completes the County's required process for periodic review in accordance with RCW 90.58.080(4) and applicable state guidelines (WAC 173-26).

**NOW, THEREFORE, BE IT RESOLVED** BY THE WHATCOM COUNTY COUNCIL:

**Section 1. Review and Evaluation.** The Council hereby finds that the review and evaluation required by RCW 90.58.080(4) has occurred, as described in the recitals above.

**Section 2. Revisions.** That the Whatcom County Comprehensive Plan, Chapters 8 (Exhibit C), 10 (Exhibit A), and 11 (Exhibit B); Whatcom County Code Titles 22 (Exhibit E) and 23 (Exhibit D) and Chapter 16.16 (Exhibit F); the Official Shoreline Map (Exhibit G); Whatcom County’s No Net Loss Analysis (Exhibit I); and Whatcom County’s Shoreline Restoration Plan (Exhibit J) are hereby amended to read as set forth in the noted exhibits, which are attached to this resolution and incorporated herein by this reference. The remaining portions of the County’s SMP shall remain unchanged.

**Section 3. Approval.** The Council hereby approves the October 29, 2011, versions of the above referenced SMP revisions and finds the amended SMP consistent with the requirements of RCW 90.58 and WAC 173-26, as they apply to these amendments, with the understanding that in accordance with RCW 90.58.190(3), and if Ecology adopts the amendments, the Whatcom County Council intends to adopt (and codify), by ordinance, the subject shoreline master program amendments.

**Section 4. Submission to Department of Ecology.** The Director of Planning and Development Services is directed to submit the SMP and associated documents to the Department of Ecology for their review and approval prior to formal adoption. If/Once approved by the Department of Ecology no further action is necessary for compliance with RCW 90.58.080(4) for the periodic review update due on June 30, 2021.

**Introduction**

Each person in Whatcom County has a fundamental right to a healthful and safe environment in which to live and grow. With this right comes a responsibility to contribute to the protection and enhancement of our natural environment. Consequently, an important goal of the Whatcom County Comprehensive Plan is to protect or enhance the county's environmental quality. This means that, individually and collectively, we have the obligation to protect these resources for our children and their children. Essential to this is the establishment of safe development practices and patterns that do not significantly disrupt ecosystems and that ensure the continuation of ample amounts of clean water, natural areas, farmlands, forest lands, and fish and wildlife habitat.

**Chapter Organization**

This chapter is composed of an introduction and four sections organized by topic heading. The first section, entitled "General Environmental Management," addresses general environmental goals and policies. The remaining three sections deal with Natural Hazards, Water Resources, and Ecosystems. Together, the sections of this chapter provide the direction necessary to ensure and promote long-term sustainability of the environment in Whatcom County.

**Purpose**

Whatcom County's natural environment, with its seasonally abundant supply of water, its beauty, and its other natural resources, has attracted people to our community for generations. This setting is important to our sense of well-being, to our health, to our economic well-being, and to our future. Sustaining these assets in the face of increasingly intense human activity becomes more difficult each year. The challenge of protecting this environment while accommodating growth requires maintaining guidelines for development so that growth does not ultimately overrun the very assets that brought most of us here. The purpose of this chapter is to create such guidelines.

**GMA Goals and Countywide Planning Policies**

GMA Planning Goal 10, "Environment" (RCW 36.70A.020(10)), provides the directive for much of this chapter. It requires Whatcom County to "protect the environment and enhance the state's high quality of life, including air and water quality, and the availability of water." In addition, some of the goals and policies of this chapter support Planning Goal 9, "Open Space and Recreation" (RCW 36.70A.020(9)), which directs the county to "conserve fish and wildlife habitat."

Relative to environmental protection, Whatcom County's Countywide Planning Policies (CWPP) give the most attention to water issues. They state, "The quality of life and economic health of Whatcom County communities depend on the maintenance of a safe and reliable water supply. All jurisdictions and water

## Exhibit A – Planning Commission Approved Draft

October 29, 2021

Chapter 10 - Environment

1 purveyors should cooperate to ensure the protection and quality of the area's water  
2 resources." Specific policies address water, promoting inter-jurisdictional  
3 cooperation in conserving, protecting, and managing the water resource, and in  
4 reducing water pollution (CWPP Policies N.1 – 6). The CWPPs also support  
5 protecting wildlife habitat and corridors, natural drainage features, and "other  
6 environmental, cultural and scenic resources."

### 7 **GMA Requirements**

8 The GMA requires Whatcom County to identify and manage critical areas in such a  
9 manner as to prevent destruction of the resource base and reduce potential losses  
10 to property and human life. The GMA has identified Critical Areas to include the  
11 following areas and ecosystems:

- 12 • Wetlands
- 13 • Critical Aquifer Recharge Areas
- 14 • Fish and wildlife habitat conservation areas
- 15 • Frequently flooded areas
- 16 • Geologically hazardous areas

### 17 **Environmental Setting**

18 Whatcom County bedrock geology can be divided into five bedrock geologic  
19 provinces. From east to west these provinces are the Methow terrain, the Cascade  
20 Crystalline Core, the Northwest Cascades System, the Fraser Lowland, and the San  
21 Juan Island system. Tectonic activity over the past 15 million years has created the  
22 present North Cascades and the formation of Mount Baker, a 10,000-foot high  
23 composite volcano.

24 The mountains of Whatcom County, as well as the streams, lakes, valleys, hills, and  
25 shoreline features are the result of millions of years of geologic events. Over 2.5  
26 million years ago, during the Ice Ages, glacial ice invaded the Puget Sound lowlands  
27 from the north at least four times, with the last major glacial event, the Fraser  
28 Glaciation, ending approximately 12,000 years ago. A minor advance of glacial ice,  
29 the Sumas Advance, ended approximately 10,000 years ago. The ice formed from  
30 the accumulation of snow in the British Columbia Coast Range and interior of British  
31 Columbia. Numerous glaciers are still present within the mountains of Whatcom  
32 County, and some of these mountain glaciers formerly extended far down the  
33 mountain valleys of the County. The underlying bedrock was deeply eroded during  
34 these glacial events creating very steep mountainsides, and in some areas,  
35 particularly in northwestern Whatcom County, a thick sequence of glacial related  
36 sediments was deposited. The glacial ice was approximately 6,000 feet thick in the  
37 vicinity of Bellingham.

38 Two main glacial advances are the most important to our area, the Salmon Springs  
39 glaciation and the later Vashon glaciation. Each time the massive glacier advanced,  
40 it dammed up the Puget lowlands to form a huge lake. As the floating ice melted,  
41 sand, gravel, clay and occasional boulders would melt out of the ice and fall to the  
42 sea floor. This deposit, the Bellingham Drift, covers the ground surface over a large  
43 area of western Whatcom County. Each time the Ice Age glacier advanced, it also  
44 compacted underlying sediments with its great weight. It created a concrete-like

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

1 material called "till" (also known as "hardpan") beneath it. Because the Bellingham  
2 Drift consists primarily of clay and silt, it is relatively impermeable; water tends to  
3 accumulate on the ground surface. Wetlands are common on the Bellingham Drift.

4 On the bottom of the lake, "rock flour", the finely ground remains of rocks  
5 pulverized by glacial action, settled out. These deposits became the familiar "blue  
6 clays" of the Puget lowland. The milky color of the Nooksack River is due to the  
7 same kind of rock flour, created by glacial activity on the slopes of Mount Baker.

8 Additionally, each time the glacier retreated, water from the melting ice deposited  
9 thick layers of sand and gravel known as "outwash." The outwash areas are  
10 typically where we find our most productive aquifers, since these loose sands and  
11 gravel are porous and drain rapidly. While these areas absorb rainwater for our  
12 later use from wells, they are also vulnerable to contamination. An example of this  
13 phenomenon is found in the outwash sands and gravels resulting from the Sumas  
14 Advance. Large meltwater streams and rivers flowed from this glacier depositing  
15 the Sumas Outwash sands and gravels. The Sumas Outwash sands and gravels  
16 make up the best non-floodplain farmland in the County and some of the highest  
17 quality construction gravel deposits. Abandoned outwash channels were formerly  
18 used as sources of peat.

19 Each of these glacial sediments, lake bed deposits, till and outwash is present in  
20 various places and in varied combinations in Whatcom County. These sediments  
21 provide both the formations that hold the groundwater for many of the area's wells,  
22 and the parent material for most of the different soils.

23 Out of these long physical processes a complex natural ecology has emerged that  
24 supports a diversity of wildlife. Many of our lakes, rivers, and streams support fish  
25 including, but not limited to, native species such as the five pacific salmon  
26 (Chinook, Coho, Sockeye, Chum, Pink) as well as Steelhead, Rainbow Trout,  
27 Cutthroat (coastal and resident), Bull Trout, and Dolly Varden. Every year salmon  
28 return to spawn in the streams and rivers of Whatcom County. Whatcom County is  
29 located within the Pacific Migratory Flyway and serves as a stopover and critical  
30 habitat area for many migratory birds. Bufflehead and goldeneye ducks winter here.  
31 Additionally, numerous bird species including scoters, snow geese, trumpeter  
32 swans, canvasbacks, cormorants, grebes, loons, and other migrating waterfowl  
33 pass through every spring and fall as they travel between their breeding grounds in  
34 Alaska and Canada and their wintering grounds in California and Mexico. Mallards,  
35 Canada geese, great blue herons, and numerous songbirds live in the county  
36 year-round. Maintaining these unique resources is a high priority for both present  
37 and future county residents. Whatcom County is home to a distinct subspecies of  
38 the Great Blue Heron, which has the third largest colony in the Puget Sound area.  
39 The wetlands, fields, streams, and nearshore habitat in the county support many  
40 birds of special concern, such as the bald eagle (protected under the Bald and  
41 Golden Eagle Protection Act), the pileated woodpecker (candidate for State  
42 threatened list), and the peregrine falcon (ESA candidate species). The National  
43 Audubon Society has designated Semiahmoo, Drayton Harbor, and Birch Bay as  
44 "Important Bird Areas."

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

**1 Environmental Management**

**2 Introduction**

3 General environmental goals and policies are intended to provide guidance for  
4 environmental management that will promote environmental protection and good  
5 stewardship practices through a balance of public education and involvement;  
6 incentives, acquisition, and voluntary programs; land use planning and regulations;  
7 environmental monitoring; and intergovernmental cooperation. These goals and  
8 policies are also intended to provide guidance to County government as it assists its  
9 citizens in maintaining a balance between individual property rights, economic  
10 development, and environmental protection.

**11 Background Summary**

12 Development in the last 100 years has had a significant impact on the natural  
13 environment in Whatcom County. At the turn of the 20<sup>th</sup> century, some areas  
14 surrounding Lynden, Sumas, and Ferndale were logged, drained, and converted to  
15 agricultural land and other types of development. In the intervening years, many of  
16 the remaining forests were logged, many streams re-routed and channelized, and  
17 much of the native vegetation removed and replaced with a wide variety of  
18 introduced vegetative types. Roads now crisscross most areas, with homes, farms,  
19 businesses, and industries scattered throughout the county.

**20 Issue, Goals, and Policies**

21 There are designated lands in Whatcom County that can still accommodate  
22 development. Whatcom County also has areas that are sensitive to human activity,  
23 including wetlands, streams, lakes, and marine shorelines, and lands that can pose  
24 a hazard to the community, including floodplains and unstable slopes. In these  
25 areas development must be carefully planned or limited to maintain environmental  
26 quality and public safety. This can be done through the creation and  
27 implementation of goals and policies that seek to reduce hazards and prevent  
28 adverse environmental impacts.

**29 Community and Environmental Protection**

30 The elements of the natural environment: water, air, soil, plants, and animals; are  
31 interconnected and interdependent, functioning as one dynamic ecosystem.  
32 Environmental resources within this ecosystem are extensive and, in some cases,  
33 irreplaceable. They provide important beneficial uses to the community such as: the  
34 supply of clean drinking water; management of stormwater run-off and flood  
35 hazard management; support for a wide variety of fish and wildlife; fresh air; and a  
36 sense of place in which residents invest, enjoy, and expect.

37 Some of these same resources result in serious environmental constraints or pose a  
38 hazard to development and a danger to the community. Flooding in the Nooksack  
39 River is frequent and impacts much of the valley floor. There are numerous  
40 wetlands and hydric soils throughout the lowlands that provide critical wetland  
41 functions and are generally unsuitable for development. The steep gradient and

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

- 1 geologic structure of the mountain ranges in conjunction with heavy annual  
2 precipitation can contribute to slope instability and flood-prone drainage basins.
- 3 Much of the environmental degradation and destruction to property occurs as a  
4 result of a lack of information or understanding rather than willful action.  
5 Ecosystems are subtle and complex. Too often both their benefits and hazards are  
6 not readily apparent to the community. Additionally, baseline information is not  
7 always available to help identify the real costs or hazards of building in Whatcom  
8 County. There is a need for further research and education.
- 9 **Goal 10A: Protect natural resources and systems, life, and property**  
10 **from potential hazards.**
- 11 Policy 10A-1: Support good stewardship of Whatcom County lands, and apply  
12 this principle to the management of public lands.
- 13 Policy 10A-2: Protect the environment through a comprehensive program that  
14 includes voluntary activity, education, incentives, regulation,  
15 enforcement, restoration, monitoring, acquisition, mitigation,  
16 and intergovernmental coordination.
- 17 Policy 10A-3: Continue to identify, designate, and protect Critical Areas and  
18 other important environmental features.
- 19 Policy 10A-4: Manage designated Critical Areas as needed, to minimize or  
20 protect against environmental degradation and reduce the  
21 potential for losses to property and human life.
- 22 Policy 10A-5: Actively pursue voluntary, cooperative, and mutually beneficial  
23 efforts aimed at advancing county environmental goals.
- 24 Policy 10A-6: Aim to meet or exceed national, state, and regional air quality  
25 standards. Work with the Northwest Clean Air Agency to ensure  
26 compliance with applicable air quality standards.
- 27 Policy 10A-7: Using Best Available Science, support efforts to educate and  
28 inform the public as to the benefits of a healthy and viable  
29 environment, ecologically fragile areas, and their economic and  
30 social value.
- 31 Policy 10A-8: Lead and/or coordinate efforts with property owners, citizen  
32 groups, and governmental and non-governmental agencies in  
33 furthering Whatcom County's environmental goals and policies.
- 34 Policy 10A-9: Cooperate with state and federal agencies and neighboring  
35 jurisdictions to identify and protect threatened and endangered  
36 fish and wildlife species and their habitats.
- 37 Policy 10A-10: Support acquisition, conservation easements, open space, and  
38 other such programs to protect high-value natural areas as  
39 identified through the GMA planning process, the Natural  
40 Heritage Plan, the state Priority Habitats and Species (PHS)  
41 program, the Lake Whatcom Management Program, and other  
42 sources.

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

1 Policy 10A-11: Designate high-value open space and natural areas for  
2 acquisition, conservation easements, open space, and other  
3 such programs to protect these natural areas upon request or  
4 consent of the property owner.

5 Policy 10A-12: Broadly inform the people of Whatcom County of the locations  
6 of potential development constraints associated with natural  
7 conditions. Information should include known natural hazards  
8 and an assessment of the potential danger to both the property  
9 owner and the public.

10 **Administration and Regulation**

11 There are currently a multitude of regulations and administrative processes at the  
12 federal, state and local level that, together, have become excessive and difficult to  
13 understand. Conflicting regulations and complicated administrative processes can  
14 create undue hardship on community members and result in reduced levels of  
15 environmental protection.

16 **Goal 10B: Simplify and harmonize regulations relating to the**  
17 **identification, delineation, and protection of**  
18 **environmental features.**

19 Policy: 10B-1: Develop, as a significant component of a comprehensive  
20 environmental management program, non-regulatory measures  
21 that include voluntary activity, education, incentives,  
22 restoration, acquisition, advanced mitigation (i.e., mitigation  
23 done in advance of impacts), and intergovernmental  
24 coordination.

25 Policy 10B-2: Provide incentives for good stewardship of the land through the  
26 use of non-regulatory and innovative land use management  
27 techniques.

28 Policy 10B-3: Support education as an important tool in developing public  
29 appreciation for the value of ecosystems and provide the public  
30 with informational materials and presentations relating to  
31 natural system functions, regulations, and issues.

32 Policy 10B-4: Promote cooperation and coordination among involved  
33 government agencies when multiple agencies have jurisdiction  
34 over aspects of a single project.

35 Policy 10B-5: Process the environmental review of building and development  
36 permit applications within an established timeframe that is  
37 predictable and expeditious.

38 Policy 10B-6: Provide clear, timely, appropriate, and understandable direction  
39 to citizens, developers, and property owners.

40 Policy 10B-7: Ensure regulations are as simple and easy to understand as  
41 possible and maintain effective inspection, compliance, and  
42 enforcement measures as necessary.

**Exhibit A – Planning Commission Approved Draft**

October 29, 2021

Chapter 10 - Environment

1 ~~Policy 10B-8: Recognize the policies of the Whatcom County Shoreline~~  
2 ~~Management Program as constituting a "Shoreline Element" of~~  
3 ~~this plan. The shoreline program regulations and policies shall~~  
4 ~~be considered to be consistent with this plan.~~

**Comment [CES1]:** No longer needed, as a new Chapter 11, Shorelines, has been created.

5 **The Environment and Property Rights**

6 Prior to the 1970s, growth in Whatcom County was relatively slow and received  
7 little management. As a result, private property owners were left to their own  
8 resources as they determined how best to use their land. However, as increasing  
9 numbers of people moved to this area and settled, a greater demand was placed on  
10 Whatcom County's natural resources.

11 The problems that arise from this situation have caused many to realize what one  
12 person does with his/her property may have an impact on the larger environmental  
13 system that sustains us as a community and on the rights of other property  
14 owners.

15 Land use decisions can no longer be considered exclusively private matters. We are  
16 aware public actions impact every private citizen in Whatcom County and private  
17 actions may have public consequences as well. To that end, the law must protect  
18 the public good from detrimental private actions. Nevertheless, the right of the  
19 individual to use his or her property, within the bounds permitted by law, is a value  
20 supported by law and the community and must be recognized when making land  
21 use decisions in Whatcom County.

22 **Goal 10C: In implementing environmental policies, provide for**  
23 **protection of private property rights, economic**  
24 **opportunities, and plan appropriately for growth.**

25 Policy 10C-1: Actively pursue voluntary and cooperative efforts that advance  
26 Whatcom County's goals in a mutually beneficial manner.

27 Policy 10C-2: When adopting new environmental protection programs,  
28 consider multiple economic parameters including development  
29 objectives, impacts, and the economic benefits of the natural  
30 environment as both a resource and an amenity.

31 Policy 10C-3: Emphasize an approach to environmental protection by  
32 encouraging the use of conservation easements, open space  
33 taxation, land acquisition, purchase/voluntary, workable transfer  
34 of development rights, and other mechanisms that assist  
35 affected property owners.

36 Policy 10C-4: Avoid standards and procedures likely to require compensation  
37 to property owners or invalidation of such rules.

38 **Climate Change**

39 Climate change is a global phenomenon that has the potential for significant local  
40 impacts to natural resources, ecosystem functions, as well as human health,  
41 infrastructure, and the economy. In Washington State, the Climate Impacts Group  
42 (CIG), a consortium of scientists at the University of Washington, has done the

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

1 most extensive analysis of potential local climate change impacts in the Pacific  
2 Northwest. Based on a range of climate change model projections, as well as peer-  
3 reviewed scientific publications, the CIG concludes that during the next 20-40 years  
4 the Pacific Northwest climate may change significantly. See *Climate Change*  
5 *Impacts and Adaptation in Washington State: Technical Summaries for Decision*  
6 *Makers, Climate Impacts Group, University of Washington, December 2013*. The  
7 CIG confirms that global climate models project mid-21<sup>st</sup> century temperatures in  
8 the Pacific Northwest higher than the natural range of temperature observed in the  
9 20<sup>th</sup> century. The CIG reports that as a result of likely climate change, causing  
10 slightly higher average annual temperature, impacts to the Pacific Northwest will  
11 likely affect a broad spectrum of the natural environment, but most notably  
12 changes to water resources, including:

- 13 • More precipitation falls as rain rather than snowfall in the Cascades due to an  
14 increased snow-line elevation;
- 15 • Decreased (winter) mountain snowpack and earlier (spring) snowmelt;
- 16 • Higher winter streamflow in rivers that depend on snowmelt;
- 17 • Higher winter streamflow in rain-fed river basins resulting in scouring floods  
18 that negatively affect salmon populations if winter precipitation and rain-on-  
19 snow events increases in the future as projected;
- 20 • Earlier peak (spring) streamflow in rivers that depend on snowmelt;
- 21 • Lower summer streamflow in rivers and streams; and,
- 22 • Decreased water in summer for irrigation, fish, human consumption and  
23 recreational use (more drought-like conditions).

24 Climate change impacts are likely to include longer-term shifts in forest types and  
25 species, potentially increasing wildfire risk and greater exposure to insects and  
26 disease. Nearshore and riverine fisheries may be subjected to increased stress due  
27 to even lower average summer stream flows (and higher summer stream  
28 temperatures) and increased acidity in Puget Sound. Agricultural sector concerns  
29 include the cost of climate adaptation, development of more climate-resilient  
30 technologies, and management and availability of adequate water supplies.  
31 Susceptibility to natural hazards is also expected to intensify due to climate change,  
32 including increased landslides, erosion, and coastal and riverine flooding due to  
33 more winter rainfall, and potential rising sea levels.

34 In 2007, Whatcom County completed a Climate Protection and Energy Conservation  
35 Action Plan that laid out specific actions and targets for reducing greenhouse gas  
36 emissions and increasing energy conservation efforts in response to potential  
37 climate change.

38 In addition many insurance industry experts are now factoring in the costs of  
39 climate change into insurance premiums as the increase in the frequency and  
40 severity of extreme weather events around the world results in a corresponding  
41 increase in claims costs.

42 Local government, residents and businesses must anticipate that as the climate  
43 changes, more frequent and severe damage to private and public infrastructure will

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

- 1 occur. Maintenance costs and insurance premiums can be expected to increase  
2 accordingly.
- 3 **Goal 10D: Strengthen the sustainability of Whatcom County's**  
4 **economy, natural environment, and built communities by**  
5 **responding and adapting to the impacts of climate**  
6 **change.**
- 7 Policy 10D-1: Whatcom County's natural resource-based economic sectors,  
8 ecosystems, water resources, infrastructure, emergency  
9 management, and public health all face climate change related  
10 risks in the future. The County should consider potential long-  
11 range climate change implications into its on-going functional  
12 planning and implementation actions. The County should:
- 13 1. Study the resilience of its natural and built environments to  
14 the potential impacts of climate change;
  - 15 2. Identify the relative vulnerability of these sectors to climate  
16 change; and,
  - 17 3. Examine the adaptive capacity of these sectors to cope with  
18 or mitigate climate change and take advantage of any  
19 beneficial opportunities.
- 20 Policy 10D-2: Develop strategies that encourage a diversified and sustainable  
21 economy that is resilient to the impacts of climate change.
- 22 Policy 10D-3: Promote the efficient use, conservation, and protection of water  
23 resources.
- 24 Policy 10D-4: Pursue strategies to reduce the vehicle miles traveled (VMT) in  
25 the county by encouraging expanded availability and use of  
26 public transportation, carpooling, and non-vehicular modes of  
27 transportation.
- 28 Policy 10D-5: Establish land use patterns that minimize transportation-related  
29 greenhouse gas emissions and encourage preservation of  
30 natural resource lands and the protection of water resources.
- 31 Policy 10D-6: Convene a climate impact advisory committee by 2017. The  
32 advisory committee should consist of (but not be limited to)  
33 experts in energy efficiency and carbon emission reduction,  
34 representatives from Whatcom County, and interested  
35 community members. The committee will be tasked with:
- 36 • Evaluating Whatcom County's compliance with meeting  
37 targets set forth in the 2007 Climate Plan;
  - 38 • Establishing new targets that meet or exceed state and  
39 federal climate impact goals;
  - 40 • Updating the Climate Plan, at minimum every five years, or  
41 as needed to meet targets;
  - 42 • Recommending updates to the Whatcom County

**Exhibit A – Planning Commission Approved Draft**

October 29, 2021

Chapter 10 - Environment

- 1 Comprehensive Plan in accordance with meeting Whatcom  
2 County's emission reduction goals;
- 3 • Ensuring that Whatcom County government facilities and  
4 operations are designed to meet or exceed goals and  
5 standards resolved in the current Climate Protection and  
6 Energy Conservation Action Plan; and
- 7 • Recommend updates to Whatcom County land use policies  
8 and development regulations to support renewable energy  
9 development goals.
- 10 Policy 10D-7: Encourage sustainability by developing strategies and practices  
11 to increase the use of renewable, net-neutral carbon energy in  
12 Whatcom County facilities and County vehicles, with a goal of  
13 net zero man-made carbon emission by 2050.
- 14 Policy 10D-8: Encourage sustainability by developing strategies and practices  
15 to reduce landfill waste from Whatcom County government  
16 facilities to near zero.
- 17 Policy 10D-9: Identify responsible parties and agencies and encourage them  
18 to identify and properly seal and/or burn methane that is  
19 escaping into the atmosphere from wells.
- 20 Policy 10D-10: Create updates to Whatcom County land use policies and  
21 development regulations to support renewable energy  
22 development goals.
- 23 Policy 10D-11: Protect ecological functions and ecosystem-wide processes of  
24 Marine Resource Lands and critical areas in anticipation of  
25 climate change impacts, including sea level rise.

**Comment [P/C2]:** Suggested by Re-Sources, Futurewise, & WEC. P/C approved 8-0-0 (1 absence).

26 **Natural Hazards**

27 **Introduction**

28 The location, climate, and geology of Whatcom County combine to create many  
29 natural hazards to people and their developments. Earthquakes, volcanoes,  
30 landslides, and flooding are some of the major natural hazards found in our region.  
31 Additionally, old mines are scattered around the county that could be dangerous to  
32 the community. Natural Hazards goals and policies are intended to provide  
33 guidance to county government as it assists its citizens in effectively managing  
34 natural hazards in a manner that minimizes the danger to each member of this  
35 community, while continuing to provide for economic opportunities.

36 **Background Summary**

37 Natural Hazards include the following (**Map 10-4**):

38 **Landslide Hazards** – The geologically recent retreat of glaciers from the Whatcom  
39 County landscape, succeed by contemporaneous geomorphic processes of erosion,  
40 sediment transport, deposition, isostatic rebound and tectonic uplift, has left many

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

1 hillsides over-steepened and susceptible to naturally occurring and human-  
2 triggered slope failure and erosion. Several large, well-known landslides are  
3 presently active in Whatcom County, such as the Swift Creek Slide on Sumas  
4 Mountain. In addition, numerous large-scale, pre-historic slope failure deposits  
5 have been mapped by past workers and are readily identified in more recently  
6 available LiDar imagery. Various slope failure processes contribute to the mosaic of  
7 landslide hazards present in the county and the potential exists for a multitude of  
8 impacts ranging from periodic small- to large-scale rockfall and slides, massive  
9 debris slides and avalanches, destructive debris flows, and deep-seated earthflows,  
10 slumps and slides. These landslide processes act on large- and small-scale, and  
11 though much less catastrophic in nature, smaller landslides occur more frequently  
12 and pose a continual hazard to County residents and infrastructure. Certain types of  
13 geologic conditions and formations commonly cause landslides, namely the  
14 Chuckanut Formation and the Darrington Phyllite, but are also frequently observed  
15 in unconsolidated glacial sediments, in the presence of day-lighting groundwater  
16 seams and springs, on slopes in excess of 35 percent, along coastal bluffs, and in  
17 areas of fluvial erosion.

18 **Alluvial Fan Hazards** – Alluvial fan hazards areas exist where steep mountain  
19 streams flow onto floodplains or into lakes and deposit debris and sediment.  
20 Because these streams are steep and flow in confined canyons, they can carry more  
21 sediment and debris than a similar-sized stream flowing over flat land. During a  
22 large storm, streams on alluvial fans can create catastrophic flooding and debris  
23 floods, such as were experienced in 1983 in the Lake Whatcom area. During this  
24 storm event, the Sudden Valley development on Lake Whatcom incurred significant  
25 damage to property from flooding and debris flows on the Austin Creek alluvial fan.

26 **Flood Hazards** – Heavy winter rains and a transient snowpack combined with the  
27 steep and sometimes unstable slopes of Whatcom County's foothills create  
28 conditions ideal for flooding and debris flows along many of our rivers and streams.  
29 The Nooksack River floodplain alone covers 38,000 acres in Whatcom County. In  
30 1989 and 1990, the Nooksack River overflowed and flooded lowland Whatcom  
31 County causing millions of dollars of damage. During some extreme floods, the  
32 Nooksack River overflows near Everson and adversely impacts residents along  
33 Johnson Creek in Sumas, and in the Abbotsford area of British Columbia. It is  
34 projected that climate change will increase flood risk, due to increased sea level  
35 and changes in rainfall patterns. Significant damage may result from such floods. In  
36 1991, Whatcom County formed a countywide Flood Control Zone District to address  
37 the major flooding issues in the county.

38 **Volcanic Hazards** – The presence of Mt. Baker is an asset to our region. Its  
39 10,778-foot peak is one of the dominant features of Whatcom County's landscape.  
40 However, Mt. Baker is also considered one of the most active volcanoes in the  
41 Cascade Range, and of the six major volcanoes in the range, Mt. Baker is  
42 considered by geologists to be very hazardous during and after an eruption.  
43 Pyroclastic flows, ash flows, and especially volcanic mudflows, also known as  
44 lahars, are believed to be the greatest dangers to human life and development in  
45 Whatcom County. Geologic evidence indicates that an eruption on Mt. Baker caused

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

1 a major lahar about 6,600 years ago that inundated the Middle Fork Nooksack  
2 Valley from its headwaters downstream past the confluence with the North Fork at  
3 Welcome. The same lahar is now known to have been over 300 feet deep in the  
4 upper reaches of the Middle Fork and extended as far west as Nugent’s Corner. A  
5 major lahar along the Nooksack would divert the river from its channel and cause  
6 mass flooding. Fortunately, volcanic eruptions are infrequent with periods of  
7 hundreds and thousands of years between events, but this infrequency also makes  
8 forecasting a volcanic eruption extremely difficult. However, a major eruption of Mt.  
9 Baker would pose a serious threat to human life and property. The deeply  
10 weathered nature of the rocks forming Mt. Baker may also fail, triggering a  
11 mudflow that would travel rapidly down the stream channels ringing the volcano  
12 and result in damage similar to that from a volcanic eruption trigger. Mapping over  
13 the past decade of other Cascade volcanoes has demonstrated massive mudflows  
14 extending from the volcanoes to Puget Sound, and from Mount Rainier and Glacier  
15 Peak.

16 **Earthquake Hazards** – Whatcom County lies within the influence of the  
17 convergent plate margin between the Pacific and North American Plate termed the  
18 Cascadia Subduction Zone. Regionally-extensive and damaging earthquakes,  
19 termed mega-thrusts, are possible when stress generated between the subducting  
20 Pacific Plate and over-riding North American Plate is released. A mega-thrust  
21 earthquake is capable of generating an earthquake of magnitude 9, or greater, and  
22 research has indicated an approximate recurrence interval of 500-600 years.  
23 Associated with the stresses generated at the convergent plate margin are shallow,  
24 crustal faults that are mapped throughout Whatcom County. Earthquake activity on  
25 these fault systems is much more frequent than that observed at the Cascadia  
26 Subduction Zone, and the Deming area is considered one of the most seismically  
27 active areas in Washington. Recent research has shown these crustal faults are  
28 capable of generating a magnitude 7 earthquake with an average recurrence  
29 interval of 30 to 50 years. While all buildings are susceptible to damage from  
30 seismic-shaking, structures built on peat soils, large areas of non-structural fill, or  
31 liquefiable soils are prone to more severe shaking during an earthquake. If the  
32 shaking is strong enough, or of sufficient duration, structures may collapse or  
33 become damaged due to building fatigue, ground settlement/liquefaction, and/or  
34 lateral spreading. In addition to seismic hazards posed by the Cascadia Subduction  
35 Zone, a significant mega-thrust earthquake has the potential to generate a large  
36 and destructive tsunami that has the potential to affect most low-bank areas of the  
37 County.

38 **Mine Hazards** – Mine hazard areas are sites of abandoned underground mine  
39 shafts, adits, and mine tailings. Coal mining was a major industry in Whatcom  
40 County in the early part of the 20<sup>th</sup> century, and several major mines were  
41 developed in various parts of the county. All of the formerly active mines are now  
42 no longer worked and are abandoned. For the most part these mine locations are  
43 known and mapped, such as the extensive coal mines under the northern part of  
44 the City of Bellingham and in the Blue Canyon area of South Lake Whatcom.

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

1 **Issues, Goals, and Policies**

2 **Landslides** – Siting human development on or adjacent to known landslide hazard  
3 areas can create health and safety risks. The risks can be elevated due to extreme  
4 weather events and earthquakes, but may also occur with little or no warning. In  
5 the case of the Swift Creek Landslide, the release of asbestos-laden sediment poses  
6 an additional risk to public health. Development activity can de-stabilize naturally  
7 unstable slopes and impact ecosystems. However, predicting the exact timing,  
8 location, or extent of a damaging landslide is difficult, and in particular areas of the  
9 county landslide hazards are not possible to completely mitigate or avoid. In some  
10 circumstances, the development of upland properties may place downslope  
11 neighbors and ecosystems at risk from rockfall or landslides. A similar relationship  
12 holds true for development at the toe of a potentially unstable slope. In either  
13 event, development in proximity to landslide hazards must proceed in consideration  
14 of potential impacts in order to ensure life safety and preserve and protect public  
15 and private infrastructure.

16 **Alluvial Fans** – Because alluvial fan areas are associated with streams, are  
17 generally gently sloping and elevated above the adjacent floodplain, and are  
18 located at the base of mountains, they have historically been popular places to  
19 develop. However, once every 10-25 years, a large storm event occurs in our area  
20 and streams flood homes and developments, causing damage to property,  
21 ecosystems, and sometimes loss of lives.

22 **Flooding** – Floodwaters from the Nooksack River can damage homes, agricultural  
23 areas, businesses, and industries in the small cities situated along the river; fish  
24 and wildlife habitat and other ecosystems; and disrupt transportation and utility  
25 corridors. Storm tides can flood homes and roads along low, exposed marine  
26 shorelines in the Birch Bay, Sandy Point, Point Roberts, and Gooseberry Point  
27 areas. Homes along Lake Whatcom, Lake Samish, and Cain/Reed Lakes have also  
28 been impacted by flooding during extreme storm events. Property and public safety  
29 are also impacted by rapid channel morphology events.

30 **Volcanos** – A volcanic eruption or mudflow at Mount Baker could potentially  
31 severely affect river flow on the Nooksack River or Baker River and cause severe  
32 property damage near the volcanoes or along lahar routes. A lahar is an extremely  
33 rare and unpredictable occurrence. Evacuation routes should be planned and made  
34 public. Development should be regulated according to the Critical Areas Ordinance.

35 **Earthquakes** – A major earthquake may likely and significantly affect Whatcom  
36 County. If the shaking is strong enough, buildings may collapse, roads could be  
37 damaged, and/or communications, power, and utilities could be severely disrupted,  
38 mud and rock slides could occur on unstable slopes, and local sea levels may  
39 change as shorelines assume altered post-quake elevations.

40 **Mines** – Some abandoned mine areas may pose a risk of ground subsidence from  
41 the collapse of abandoned mine shafts. Air and water pollution may also be hazards  
42 associated with abandoned mine tailings and trapped toxic gases. Development on  
43 or near mine hazards could be adversely impacted.

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

1 **Gas wells** – Several exploratory oil & gas wells have been drilled around the  
2 county over the last 70+years. Some of these present potential environmental  
3 hazards due to ongoing leakage of gas.

4 **Old Landfills** – There are known abandoned landfills in the County and possibly  
5 some that are unknown. There are also several sites around the County that  
6 contain large numbers of abandoned vehicles and other debris. As with most  
7 landfills these locations pose some degree of risk of hazardous substances leaking  
8 into local aquifers.

9 **Balanced Management** – A central issue common to all development in natural  
10 hazard areas is the need for Whatcom County to balance the responsibility of local  
11 government to protect the public interest and provide for a safe and healthy  
12 environment while safeguarding the rights of private property owners.

13 **Economic Impact** – Damage to private and public property resulting from the  
14 siting of human development in areas of natural hazards is significant to the people  
15 of Whatcom County. The 1990 Nooksack River floods caused over \$20 million  
16 dollars in damage to roads, bridges, buildings, and farmland. Disaster relief efforts  
17 are expensive and dangerous to conduct during an emergency. Public efforts to  
18 reduce hazards, such as the establishment of the Flood Control Zone District, are  
19 also expensive.

20 **Goal 10E:** **Minimize potential loss of life, damage to property, the**  
21 **expenditure of public funds, and degradation of**  
22 **ecosystems resulting from development in hazardous**  
23 **areas such as floodplains, landslide-prone areas, seismic**  
24 **hazards areas, volcanic impact areas, abandoned mine**  
25 **and exploratory gas well locations, potentially dangerous**  
26 **alluvial fans, and other known natural hazards by**  
27 **advocating the use of land acquisition, open space**  
28 **taxation, conservation easements, growth planning,**  
29 **regulations, and other options to discourage or minimize**  
30 **development, or prohibit inappropriate development in**  
31 **such areas.**

32 Policy 10E-1: Avoid or minimize public investments for future infrastructure  
33 development on known natural hazard areas.

34 Policy 10E-2: Use Best Available Science and data to research and investigate  
35 the nature and extent of known natural hazards in the county  
36 and make this information available to the general public and  
37 policy makers in an accessible and understandable form.

38 Policy 10E-3: Broadly inform the people of Whatcom County of the locations  
39 of known natural hazards, and the potential for adverse impacts  
40 of such natural hazards to the health, safety, and welfare of  
41 people and their properties.

42 Policy 10E-4: Establish acceptable levels of public risk for development in  
43 known natural hazard areas based upon the nature of the  
44 natural hazard and levels of public risk, and maintain regulatory

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

- 1 criteria for approving, disapproving, conditioning, or mitigating  
2 development activity.
- 3 Policy 10E-5: Prohibit the siting of critical public facilities in known natural  
4 hazard areas unless the siting of the facility can be shown to  
5 have a public benefit that outweighs the risk of siting in the  
6 particular hazard area.
- 7 Policy 10E-6: Maintain a comprehensive program of regulatory and non-  
8 regulatory mechanisms to achieve Natural Hazard goals and  
9 policies. This program should include such mechanisms as  
10 education, tax incentives, zoning, land use regulations,  
11 conservation easements, purchase of development rights,  
12 transfer of development rights, and public acquisition.
- 13 Policy 10E-7: Be consistent with the Natural Hazard goals and policies and  
14 consider the locations of Natural Hazard Areas when establishing  
15 or changing zoning patterns and densities.
- 16 Policy 10E-8: To address the causes of flooding and avoid expensive and  
17 maintenance-intensive bank protection measures, the County  
18 should prioritize its floodplain property acquisition program.
- 19 Policy 10E-9: Discourage new development in the floodplain.
- 20 Policy 10E-10: Require applicants for development permits located in natural  
21 hazard areas to provide development plans designed to  
22 minimize the potential to exacerbate the natural hazard as well  
23 as the risk of damage to property or threats to human health  
24 and safety. In natural hazard areas where engineering solutions  
25 cannot be designed to withstand the forces expected to occur  
26 under the design event of a particular natural hazard, or off-site  
27 adverse impacts to adjacent properties or ecosystems cannot be  
28 adequately mitigated, Whatcom County may deny development  
29 permits intended for permanent or seasonal human habitation  
30 as described in the Critical Areas Ordinance.
- 31 Policy 10E-11: Consider conducting a public process with affected citizens,  
32 technical experts, and decision-makers to establish  
33 recommended levels of public risk for each of the identified  
34 natural hazards. In developing recommended levels of public  
35 risk for natural hazards, consider the appropriate variables  
36 affecting developments in hazardous areas. These variables may  
37 include:
- 38 • Specific types of risk associated with the particular hazard  
39 area;
  - 40 • The gradation of hazards associated with a particular geo-  
41 hazard;
  - 42 • Level of detail necessary to map hazard areas;

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

- 1 • Different levels of risk associated with different ownership  
2 classes (e.g. public ownership versus private ownership);
  - 3 • Different levels of risk associated with different types of land  
4 uses; and,
  - 5 • Mitigation measures related to specific adverse impacts of  
6 development in hazard areas.
- 7 Once a set of risk levels has been identified, propose these risk  
8 levels for adoption of legislation by the County Council as the  
9 level to which future development must be designed.
- 10 Policy 10E-12: Consider establishing acceptable levels of public risk for use in  
11 approving and conditioning development activity in known  
12 natural hazard areas. The established level of risk may be  
13 expressed as the potential hazard posed as determined by  
14 scientific and historical methods applicable to each specific  
15 natural hazard.
- 16 Policy 10E-13: Review the findings and recommendations of alluvial fan hazard  
17 evaluations and make appropriate recommendations for land  
18 use and zoning regulations to the County Council to assist in  
19 reducing the hazards posed on these fans. Whatcom County has  
20 completed or nearly completed alluvial fan evaluations of  
21 Canyon Creek, Jones Creek, and Glacier-Gallop Creeks.
- 22 Policy 10E-14: Review the findings and recommendations of the  
23 Comprehensive Flood Hazard Management Plan (CFHMP) and  
24 make appropriate recommendations for land use and zoning  
25 regulations to the County Council to assist in the  
26 implementation of the CFHMP.
- 27 Policy 10-15E: Identify known locations of abandoned wells that could produce  
28 methane and/or other hazardous substances and where  
29 immediate danger of methane and hazardous substance leaking  
30 exists, condition development approvals on affected parcels to  
31 mitigate those impacts.

**Water Resources**

**Introduction**

34 Water resources refer to the numerous surface waters such as lakes, streams,  
35 wetlands; groundwater; estuaries; and marine waterbodies within Whatcom County  
36 (**Map 10-1**). These waterbodies are often integrally linked through the complex  
37 network referred to as the water cycle. The water cycle describes the series of  
38 transformations that occur in the circulation of water from the atmosphere onto the  
39 surface and into the subsurface regions of the earth, and then back from the  
40 surface to the atmosphere. Water resources of Whatcom County provide: natural  
41 beauty; recreation; habitat for fish and wildlife; water for drinking, agriculture, and  
42 industry; and other benefits essential to the quality of life and economic health of

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

1 the community. The quality of life and economic health of our county's communities  
2 depend on the maintenance of a safe and reliable water supply. Decisions affecting  
3 any element of the water environment must be based on consideration of the  
4 effects on other elements.

5 **Background Summary**

6 Whatcom County has 16 major freshwater lakes, 3,012 miles of rivers and streams,  
7 over 37,000 acres of wetlands, 134 miles of marine shoreline, and aquifers  
8 containing an undetermined amount of groundwater. These water resources serve  
9 multiple uses, including providing a source of drinking water for the people of  
10 Whatcom County. Surface water sources such as Lake Whatcom, the Nooksack  
11 River, and Lake Samish provide water to more than half the county residents, with  
12 the remainder relying on groundwater, either from individual wells or from about  
13 300 public water systems. Agriculture relies on both ground and surface water for a  
14 variety of uses, including irrigation and drinking water for livestock. Businesses and  
15 industries may also require water, sometimes in substantial quantities, from non-  
16 potable and potable supplies. Water is also essential to meet many of what are  
17 referred to as "instream" uses, such as recreation, shellfish growing and harvesting,  
18 fish and wildlife habitat, aesthetics, and other uses and benefits.

19 Groundwater is contained in aquifers, which are subterranean layers of porous rock  
20 or soil. Most of the surficial aquifers in Whatcom County are replenished by  
21 rainwater. Aquifers are often integrally linked with surface water systems and are  
22 essential for meeting instream and out-of-stream water needs such as for drinking  
23 water, agriculture, industry, and other uses.

24 Rainfall that runs into drainage courses such as ditches, streams, wetlands, rivers,  
25 lakes, and the Strait of Georgia supports local surface and marine waters. Natural  
26 drainage systems have many important functions, including storing excess water  
27 flow, purifying surface water, recharging groundwater, conveying water, and  
28 supporting important biological activities. As more areas in Whatcom County are  
29 being urbanized, natural water resource systems are being replaced with built  
30 systems, leading to permanent changes in hydrology.

31 Whatcom County government has a major role in helping to maintain these benefits  
32 through its many responsibilities and programs, particularly in the areas of health,  
33 safety, land use, and development. The intent of the following goals and policies is  
34 to provide guidance to Whatcom County government as it assists its citizens in  
35 effectively managing our water resources in a manner that ensures that the  
36 benefits of those resources are maintained far into the future. The water resource  
37 section focuses primarily on groundwater and surface water management. Surface  
38 water management relates generally to watershed protection and stormwater/  
39 drainage systems. However, some policy direction may indirectly be provided for  
40 areas such as wetlands, estuaries, streams, and marine waterbodies within the  
41 Water Resource section. Some of these areas are covered in more detail in other  
42 sections within the Environment Chapter.

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

**1 Whatcom County Water Resource Programs**

2 Whatcom County has and/or participates in numerous water resource programs  
3 aimed at protecting and enhancing water quality and quantity, including:

- 4 • WRIA 1 Watershed Management Project;
- 5 • Lake Whatcom Watershed Management;
- 6 • Groundwater Protection & Management;
- 7 • Flood Hazard Management; and,
- 8 • Stormwater Management.

**9 WRIA 1 Watershed Management Project**

10 The WRIA 1 Watershed Management Project is the result of the 1998 Washington  
11 State Watershed Management Act, which required all participating local  
12 governments to address water quantity, with the option of addressing water  
13 quality, instream flows, and fish habitat. The WRIA 1 Watershed Management  
14 Project has brought together citizens, local governments, tribes, and state and  
15 federal agencies to address these issues.

16 The framework for watershed management in the state is based on geographic  
17 areas known as Water Resource Inventory Areas (WRIAs). WRIA 1 includes the  
18 Nooksack River basin and several adjoining smaller watersheds, such as the coastal  
19 drainages of Dakota and California Creeks, as well as Lake Whatcom.

20 Watershed planning in WRIA 1 started in 1998 with the signing of a Memorandum  
21 of Agreement (MOA) between the *Initiating Governments*. In the WRIA 1 the  
22 Initiating Governments are Whatcom County, City of Bellingham, Public Utility  
23 District No. 1, Lummi Nation, and Nooksack Tribe (the latter joining slightly later  
24 through a Letter of Agreement). The role of the Initiating Governments was to  
25 review a recommended Watershed Plan and take it to their governments' councils  
26 for adoption.

**27 Historical Organization (1999-2016)**

**28 *WRIA 1 Joint Board***

29 In 1999, an Interlocal Agreement further formalized the government-to-  
30 government relationship essential to the tribes' participation in the process by  
31 creating a *Joint Board*. The Joint Board is comprised of the Initiating Governments,  
32 including the mayor of the City of Bellingham, executive for Whatcom County,  
33 manager of Public Utility District No. 1, and designated policy representatives of  
34 Lummi Nation and Nooksack Tribe. The Board manages the project's administrative  
35 functions such as contracts and budgets. Members of the Joint Board also sit on the  
36 Joint Policy Boards.

**37 *WRIA 1 Joint Policy Boards***

38 The WRIA 1 Joint Policy Boards are comprised of members of the WRIA 1 Joint  
39 Board and Salmon Recovery Board. This organizational level interacts with federal,  
40 state, and regional organizations at a policy-level to coordinate the implementation

## Exhibit A – Planning Commission Approved Draft

October 29, 2021

Chapter 10 - Environment

1 and management of the WRIA 1 Watershed Management Plan – Phase 1, the WRIA  
2 1 Salmonid Recovery Plan and other related activities.

### 3 *Local Integrating Organization (LIO)*

4 The Whatcom Local Integrating Organization (LIO) is a function of the WRIA 1  
5 Watershed Joint Board and WRIA 1 Salmon Recovery Board (Joint Policy Boards).  
6 Local integrating organizations are designated by the Puget Sound Partnership. The  
7 two WRIA 1 Boards accepted the function of the Whatcom LIO in October 2010  
8 under the integrated program structure, and was officially recognized by the Puget  
9 Sound Partnership's Leadership Council in November 2010. The purpose of the  
10 Whatcom LIO is to coordinate implementation of Puget Sound Action Agenda  
11 priorities that are consistent with or complement local priorities. One of its functions  
12 is to provide a local update to the Action Agenda for Puget Sound. Local updates  
13 are intended to identify local priorities in the form of near-term actions (NTAs),  
14 which are priority actions with measurable outcomes that can be implemented in  
15 the next two years and that align with strategies in the Action Agenda for Puget  
16 Sound.

### 17 *WRIA 1 Planning Unit*

18 The Initiating Governments established the Planning Unit to ensure representation  
19 of a broad range of water resource interests. The Planning Unit's role is to  
20 recommend actions for a Watershed Plan and to contribute knowledge, interests,  
21 technical expertise, and other resources to its development. The Planning Unit is  
22 made up of representatives from the Initiating Governments, other governments,  
23 and various caucuses. There are 16 total caucuses on the WRIA 1 Planning Unit.

### 24 *Organizational Update (2016)*

25 Through an interlocal agreement entered into in 2016, the Watershed Management  
26 Project Joint Board and the WRIA 1 Salmon Recovery Board were dissolved and the  
27 duties and functions of those boards were assumed by the new WRIA 1 Watershed  
28 Management Board, consisting of one representative from the Lummi Nation, the  
29 Nooksack Tribe, the Washington State Department of Fish and Wildlife, Whatcom  
30 County, Whatcom County PUD No. 1, and the cities of Bellingham, Blaine, Everson,  
31 Ferndale, Lynden, Nooksack, and Sumas.

32 The primary functions of the WRIA 1 Watershed Management Board are to:

- 33 • Facilitate implementation and adaptive management of the WRIA 1  
34 Watershed Management Plan-Phase 1 as currently constituted or  
35 subsequently amended;
- 36 • Coordinate the implementation and adaptive management of the WRIA 1  
37 Salmonid Recovery Plan and associated implementation documents,
- 38 • Serve as the WRIA 1 Salmon Recovery Lead Entity pursuant to RCW 77.85,
- 39 • Coordinate participation in Puget Sound salmon recovery efforts,
- 40 • Coordinate the development, implementation and adaptive management of  
41 WRIA 1 watershed chapters of recovery plans for ESA listed salmonids and  
42 other salmonid species as warranted;

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

- 1 • Coordinate planning, implementation, monitoring and adaptive management  
2 of ecosystem recovery actions in WRIA 1 consistent with agreed local goals  
3 and objectives,
- 4 • Serve as the WRIA 1 Local Integrating Organization and a partner in the  
5 Puget Sound Partnership in representing WRIA 1 goals and priorities; and
- 6 • Participate in other related activities as agreed to by the Board.

7 The roles of the Local Integrating Organization and Planning Unit did not change.

8 2005 WRIA 1 Watershed Management Plan – Phase 1

9 The 2005 WRIA 1 Watershed Management Plan was approved in 2005 by the Joint  
10 Administrative Board, Planning Unit (by consensus), and the County Council.  
11 Pursuant to subsequent state requirements, a WRIA 1 Watershed Detailed  
12 Implementation Plan was approved by the Joint Administrative Board, Planning  
13 Unit, and County Council in 2007. It provides a roadmap for addressing water  
14 quantity, water quality, instream flow, and fish habitat challenges. The goals of the  
15 WRIA 1 Watershed Management Project are: water of sufficient quantity and quality  
16 to meet the needs of current and future human generations; restoration of salmon,  
17 steelhead, and trout populations to healthy harvestable levels; and the  
18 improvement of habitats on which fish and shellfish rely. These goals are addressed  
19 more specifically below:

- 20 • **Water Quantity** – To assess water supply and use, and develop strategies  
21 to meet current and future needs. The strategies should retain or provide  
22 adequate amounts of water to protect and restore fish habitat, provide water  
23 for future out-of-stream-uses, and ensure adequate water supplies are  
24 available for agriculture, energy production, and population and economic  
25 growth under the requirements of the state’s Growth Management Act.
- 26 • **Water Quality** – To ensure the quality of our water is sufficient for current  
27 and future uses, including restoring and protecting water quality to meet the  
28 needs of salmon and shellfish, recreational uses, cultural uses, protection of  
29 wildlife, providing affordable and safe domestic water supplies, and other  
30 beneficial uses. The initial objectives of the water quality management  
31 strategy will be to meet the water quality standards.
- 32 • **Instream Flow** – To supply water in sufficient quantities to restore salmon,  
33 steelhead, and trout populations to healthy and harvestable levels and  
34 improve habitats on which fish rely.
- 35 • **Fish Habitat** – To protect or enhance fish habitat in the management area  
36 and to restore salmon, steelhead, and trout populations to healthy and  
37 harvestable levels and improve habitats on which fish rely.

38 In 2010, the WRIA 1 Joint Board adopted a work plan, budget, and financing  
39 strategy, called the Lower Nooksack Strategy, to advance a negotiated settlement  
40 of Tribal and state instream flow water rights on the mainstem of the Nooksack  
41 River, while maximizing the economic and environmental benefits of out-of-stream  
42 water use in the Lower Nooksack sub-basin. The Joint Board adopted the Lower  
43 Nooksack Strategy consistent with WRIA 1 Watershed Management Plan priorities.

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

- 1 Lower Nooksack Strategy Objectives:
- 2 • Develop and implement a process for negotiating settlement of water rights
- 3 on the Mainstem Nooksack River.
- 4 • Update and verify the Lower Nooksack River sub-basin water budget and
- 5 develop a groundwater model.
- 6 • Determine out-of-stream water user needs:
- 7 o Public water system needs determined by updated the Whatcom County
- 8 Coordinated Water System Plan (CWSP).
- 9 o Other out-of-stream user needs (e.g., agriculture, private domestic wells,
- 10 industrial, etc.) determined through a regional water supply planning
- 11 process.
- 12 • Continue and, if appropriate, enhance targeted streamflow and water quality
- 13 sampling.
- 14 • Advance work on tools that foster water resource allocations consistent with
- 15 long-term economic and environmental land-use goals for implementation in
- 16 five years.

17 Streamflow Restoration Act (ESSB 6091)

18 The Streamflow Restoration Act (ESSB 6091), enacted by the Washington State

19 Legislature on January 18, 2018 and effective on January 19, 2018, directs the

20 Department of Ecology to work with the initiation governments (i.e., the WRIA 1

21 Watershed Management Board), in collaboration with the planning unit established

22 pursuant to chapter 90.82 RCW, on updating the WRIA 1 Watershed Management

23 Plan for approval by the Whatcom County Council by February 1, 2019.

24 The Act requires that the updated plan include recommendations for projects and

25 actions that will measure, protect, and enhance instream resources and improve

26 watershed functions that support the recovery of threatened and endangered

27 salmonids. Such recommendations may include, but are not limited to, acquiring

28 senior water rights, water conservation, water reuse, stream gaging, groundwater

29 monitoring, and developing natural and constructed infrastructure, which includes,

30 but is not limited to, such projects as floodplain restoration, off-channel storage,

31 and aquifer recharge. Qualifying projects must be specifically designed to enhance

32 streamflows and not result in negative impacts to ecological functions or critical

33 habitat.

34 At a minimum, the watershed plan must include those actions determined to be

35 necessary to offset potential impacts to instream flows associated with permit-

36 exempt domestic water use. The highest priority recommendations must include

37 replacing the quantity of consumptive water use during the same time as the

38 impact and in the same basin or tributary. Lower priority projects include projects

39 not in the same basin or tributary and projects that replace consumptive water

40 supply impacts only during critical flow periods. The watershed plan may include

41 projects that protect or improve instream resources without replacing the

42 consumptive quantity of water where such projects are in addition to those actions

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

1 determined to be necessary to offset potential consumptive impacts to instream  
2 flows associated with permit-exempt domestic water use.

3 Until the updated watershed plan is approved and rules are adopted by the  
4 Department of Ecology, the County, in issuing building permits under RCW  
5 19.27.097(1)(c) or approving subdivisions under chapter 58.17 RCW in WRIA 1, will  
6 comply with all of the specific requirements of ESSB 6091.

**7 Lake Whatcom Watershed Management**

8 Lake Whatcom is a large multi-purpose reservoir that is the source of drinking  
9 water for the City of Bellingham, Lake Whatcom Water and Sewer District, several  
10 other smaller water districts/associations, and about 250 homes that draw water  
11 directly from the lake. The lake provides water to about half the population of  
12 Whatcom County.

13 Lake Whatcom is a multiple use lake and watershed. In addition to providing water  
14 for drinking, commercial, and industrial uses, the lake is used for boating,  
15 swimming, and fishing. The majority of the watershed is forested, mainly  
16 surrounding the large southernmost portion of the lake. Other land uses include  
17 residential development (approximately 5,300 homes are located within the  
18 watershed), limited agriculture and commercial development, parks, and other  
19 public facilities. The on-going management challenge is trying to determine the  
20 extent to which these practices can occur while maintaining safe, clean drinking  
21 water. The challenge is further complicated by possible requirements related to the  
22 Endangered Species Act, tribal water rights, and the potential impact these issues  
23 may have on how the City's diversion from the Nooksack River is operated.

24 The watershed contains four developed areas: the City of Bellingham, which  
25 straddles the upper portion of the northern-most basin of the lake; Geneva, which  
26 is immediately south and east of Bellingham's city limits and is part of the city's  
27 urban growth area; Hillsdale, which is immediately north and east of Bellingham's  
28 city limits and is also part of the city's urban growth areas; and the Sudden Valley  
29 Rural Community. In addition, it includes a variety of other zones, including  
30 resource, rural, and residential rural zones. Outside the Bellingham City limits,  
31 approximately 70% of the watershed is in Forestry zoning and more than 75% of  
32 the current land use is forestry.

33 Water and sewer service are provided by the Lake Whatcom Water and Sewer  
34 District. Capacity problems in the district's sewer line, which serves Geneva and  
35 Sudden Valley, have caused overflows into the lake in the past. An aggressive  
36 program to preclude stormwater infiltration has reduced the overflow problems to a  
37 large extent. In addition, the district has a contractually limited flow capacity to  
38 Bellingham. The Lake Louise Road sewage interceptor was constructed in January  
39 2003 to carry waste water from Sudden Valley and Geneva and serves as a  
40 complement to the Lake Whatcom Boulevard trunk line. The interceptor was  
41 designed to service full build-out of Sudden Valley and Geneva.

42 The City of Bellingham and Lake Whatcom Water and Sewer District are responsible  
43 for ensuring drinking water standards are met for their customers. To date water  
44 supplies have consistently met standards. The ability to continue to economically

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

1 meet drinking water standards requires maintaining source water that requires  
2 minimal treatment. For this reason the City of Bellingham maintains an on-going  
3 source water-monitoring program. Other agencies including Western Washington  
4 University, Department of Natural Resources, Department of Fish and Wildlife,  
5 Department of Ecology, Lake Whatcom Water and Sewer District, and Whatcom  
6 County, have also conducted monitoring, studies, and/or evaluations of the lake  
7 and watershed.

8 Studies on Lake Whatcom conducted over a number of years indicate water quality  
9 in the lake has declined. In 1998, the Washington State Department of Ecology  
10 listed Lake Whatcom as an impaired water body and placed Lake Whatcom on the  
11 Federal Clean Water Act 303(d) list because of low oxygen levels in the Lake and  
12 high bacteria levels in streams that flow into the Lake. The 303(d) listing requires  
13 the establishment of a Total Maximum Daily Loads (TMDLs). The Department of  
14 Ecology issued the “Lake Whatcom Watershed Total Phosphorus and Bacteria Total  
15 Maximum Daily Loads: Volume 1, Water Quality Study Findings” in 2008. This study  
16 documented Lake Whatcom is impaired for dissolved oxygen due to phosphorus  
17 loading and that streams flowing into Lake Whatcom do not meet fecal coliform  
18 bacteria standards. Loading capacities for total phosphorus and bacteria reduction  
19 targets were set forth in this document. In 2013 The Department of Ecology issued  
20 a draft “Lake Whatcom Watershed Total Phosphorus and Bacteria Total Maximum  
21 Daily Loads: Volume 2, Water Quality Improvement Report and Implementation  
22 Strategy.” This report identifies how much phosphorus can be discharged to the  
23 Lake and identifies how the bacteria load should be allocated between the County  
24 and City of Bellingham, in order to meet water quality standards.

25 A significant cause of declining oxygen levels has been from residential  
26 development in the watershed. Past development permitted by the City of  
27 Bellingham and Whatcom County has led to increased phosphorus loading into the  
28 lake, which stimulates algae growth. Bacteria that consume the dying algae deplete  
29 the dissolved oxygen, leading to lower oxygen levels in the lake. Past poorly  
30 managed forest practices may have led to significant increases in phosphorus  
31 loading to the lake.

32 Whatcom County has taken a number of actions to reduce phosphorus and  
33 otherwise address Lake Whatcom water quality. These include rezoning land to  
34 allow less development in the watershed, adoption of the Lake Whatcom  
35 Comprehensive Stormwater Management Plan, revising stormwater management  
36 standards for private development to significantly reduce potential phosphorus  
37 runoff, construction of stormwater capital improvement projects and adoption of  
38 regulations that restrict the application of commercial fertilizers.

39 In 2014, approximately 8,800 acres of forest lands around Lake Whatcom were  
40 transferred to Whatcom County from the Washington Department of Natural  
41 Resources through reconveyance. These lands will provide passive recreation  
42 opportunities with hiking and biking trails connecting various communities,  
43 neighborhoods, and parks throughout the watershed. Under County ownership, the  
44 forests will be allowed to mature to an older growth environment benefiting the  
45 watershed and helping to stabilize steep slopes that surround the lake.

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

1 In 2004, the Department of Natural Resources (DNR) Board on Natural Resources  
2 adopted the Lake Whatcom Landscape Plan. This plan provides additional  
3 protections on remaining state managed lands within the Lake Whatcom watershed.  
4 The plan provides additional protections on streams and potentially unstable slopes  
5 not normally included in forest practices in Washington State.

6 *Lake Whatcom Watershed Management Program*

7 A variety of agencies, organizations, and individuals play a role in managing and  
8 protecting Lake Whatcom. In an effort to coordinate efforts of these various  
9 players, in 1990, the City of Bellingham, Whatcom County, and Water District 10  
10 (now known as the Lake Whatcom Water and Sewer District) began meeting to  
11 develop a joint management strategy for the Lake Whatcom watershed.

12 In November/December 1992, a joint resolution was passed by the Bellingham City  
13 Council, Whatcom County Council, and the Lake Whatcom Water and Sewer District  
14 (formerly Water District 10) Commissioners, which reaffirmed this position with six  
15 general goal statements and a set of specific goal statements in various categories.  
16 The specific goal statements for urbanization were the following:

- 17 • Prevent water quality degradation associated with development within the  
18 watershed.
- 19 • Review and recommend changes in zoning and development potential that  
20 are compatible with a drinking-water reservoir environment.
- 21 • In addition to zoning, identify and promote other actions to minimize  
22 potential for increased development in the watershed (i.e. land trust,  
23 development rights, cost incentives, etc.).
- 24 • Develop specific standards which reduce the impacts of urbanization, such as  
25 minimal lot clearing; clustered development to reduce infrastructure;  
26 collection and treatment of stormwater before entering the lake.
- 27 • Develop appropriate interlocal agreements with governing agencies to  
28 prohibit the potential for additional development once an agreed upon level is  
29 set.

30 The joint resolution included goals for watershed management that extended  
31 beyond urbanization. Goals were included for stormwater management, on-site  
32 waste systems, conservation, forest management, spill response, hazardous  
33 materials transport and handling, data/information management, education/public  
34 involvement, and other topics. A joint strategy was approved for developing specific  
35 plans to meet the adopted goals. Eight high priority goals were selected first and  
36 plans have been completed and jointly adopted for each of the goals.

37 In 1998, the City, County, and District 10 formalized their joint commitment to  
38 protect and manage the lake through the joint adoption of an interlocal agreement  
39 and allocation of funding toward protection and management efforts in the  
40 watershed. A five-year program plan was developed for ten program areas. Specific  
41 priority was placed on activities related to watershed ownership, stormwater  
42 management, and urbanization/land development.

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

1 The resulting Lake Whatcom Management Program guides actions to protect Lake  
2 Whatcom as a long-term supply of drinking water for the City of Bellingham and  
3 portions of Whatcom County. The program emphasizes protection over treatment in  
4 managing Lake Whatcom and its watershed. The structure of the Lake Whatcom  
5 Management Program includes legislative bodies, a management team, an  
6 interjurisdictional coordinating team, agency staff, and advisory committees.

7 The Lake Whatcom Watershed Management Program website  
8 (<http://www.lakewhatcom.whatcomcounty.org/resources>) contains the management  
9 plans, reports, and work programs, as well as the jurisdictions' pertinent  
10 regulations and brochures on the different programs aimed at the various efforts to  
11 improve water quality.

12 *Sudden Valley*

13 Sudden Valley is a community within the Lake Whatcom Watershed. It was  
14 established in the early 1970s as a recreation/resort area but over the last thirty  
15 years has developed into a significant residential area.

16 Since 1985, Sudden Valley has mandated the use of appropriate stormwater best  
17 management practices through standards for individual stormwater detention for all  
18 new construction. Any new building permits on existing lots must be able to  
19 demonstrate that stormwater detention is included in the plan as a precondition to  
20 issuance of a permit. Sudden Valley is also subject to additional regulatory  
21 protections that apply to the Lake Whatcom Watershed under the Water Resource  
22 Protection Overlay District, Stormwater Special District, and Water Resource Special  
23 Management Area requirements. Under the provisions of these special districts,  
24 potential impacts from impervious surfaces, stormwater runoff, and clearing  
25 activities are required to be addressed either on-site or through a community-wide  
26 process.

27 **Groundwater Protection & Management**

28 Groundwater is contained in aquifers, which are subterranean layers of porous rock  
29 or soil. Most aquifers are replenished by rainwater, though some may contain water  
30 trapped during glacial periods. Aquifers are often integrally linked with surface  
31 water systems and are essential for meeting instream and out-of-stream water  
32 needs, such as for drinking water, agriculture, and industry. Whatcom County  
33 residents rely heavily on groundwater for drinking water, agriculture, and  
34 commercial and industrial needs. Groundwater also plays an important role in  
35 maintaining stream flows.

36 Many studies have been conducted related to groundwater quality in Whatcom  
37 County documenting water quality issues, such as exceedances of standards for  
38 nitrate, ethylene dibromide (EDB) and 1,2-dichloropropane (1,2-D), pesticides, iron  
39 and other agricultural-related contaminants, particularly in the northern portion of  
40 the County. In general, groundwater in Whatcom County is very vulnerable to  
41 contamination because much of the County's groundwater lies within a shallow  
42 unconfined aquifer. Activities that occur on the surface of the ground directly affect  
43 groundwater quality. Shallow wells that draw water from unconfined water table  
44 aquifers are at highest risk.

## Exhibit A – Planning Commission Approved Draft

October 29, 2021

Chapter 10 - Environment

1 Whatcom County's Critical Areas Regulations protect Critical Aquifer Recharge Areas  
2 (CARAs) during the development process, by precluding certain uses in CARAs  
3 and/or requiring certain precautions be taken in handling certain chemicals.

### 4 **Flood Hazard Management**

5 A comprehensive approach to flood hazard management planning provides a better  
6 understanding of the river and floodplain system. It also ensures flooding and  
7 channel morphology problems are not simply transferred to another location within  
8 the basin, but are addressed in a comprehensive, basinwide manner. This approach  
9 directs future flood hazard management expenditures in the most efficient and cost  
10 effective manner.

11 Whatcom County Public Works coordinates with the Flood Control Zone District  
12 Advisory Committee (FCZDAC) to identify and characterize flooding problems and  
13 provide recommendations for achieving consistent, long-term flood hazard  
14 reduction strategies. Some activities typically involved in developing a  
15 Comprehensive Flood Hazard Management Plan (CFHMP) include data collection,  
16 hydraulic modeling, alternatives analysis, floodplain mapping, and meander limit  
17 identification. In addition to the technical components in comprehensive flood  
18 planning, extensive coordination with the public and other agencies is required  
19 throughout the planning process.

20 Other County flood management programs include:

21 **Early Flood Warning** –Work with the United States Geological Survey (USGS)  
22 to maintain a network of early flood warning stations to help citizens prepare and  
23 take appropriate measures to protect lives and property from flood damages.

24 **Flood Hazard Reduction Program** – Implement projects to reduce future  
25 flood damages and public expenditures to repair damaged areas. Examples include  
26 construction of setback levees and overflow spillways, and designation of overflow  
27 corridors in overbank areas. Two alluvial fan studies have been completed for Jones  
28 Creek and Canyon Creek. For Jones Creek, review of potential mitigation measures  
29 and concept design of a preferred approach has also been completed.

30 **Comprehensive Flood Hazard Management Planning** – Identify flooding  
31 problems and provide recommendations for achieving long-term flood hazard  
32 reduction strategies. The Lower Nooksack River Comprehensive Flood Hazard  
33 Management Plan was adopted in 1999. Implementation of the plan is ongoing.

34 **Preparedness and Response** – Plan for and implement a coordinated  
35 response during flood events to ensure public safety and minimize flood damages.

36 **National Flood Insurance Program** – Participate in the Congress-initiated  
37 National Flood Insurance Program (NFIP) of 1968, to make affordable flood  
38 insurance available to citizens of communities that adopt approved flood  
39 management regulations.

40 **Repair and Maintenance Program** – Address problem areas with rivers,  
41 streams, and coastlines of Whatcom County, and mitigate future flood damages in a  
42 proactive and cost-effective manner.

**Exhibit A – Planning Commission Approved Draft**

October 29, 2021

Chapter 10 - Environment

1 **Technical Assistance** – Provide technical assistance regarding drainage and  
2 flood issues to private citizens and businesses located along the many waterbodies  
3 within Whatcom County.

4 **Organization**

5 Flood Control Zone District (FCZD)

6 Following the severe floods of 1989 and 1990, in 1992 Whatcom County created  
7 the countywide Flood Control Zone District (FCZD), including both incorporated and  
8 unincorporated areas of the County. The FCZD is a quasi-municipal corporation that  
9 is a separate legal entity from Whatcom County government. Even though this legal  
10 separation exists, the Whatcom County Council and the County Executive (Board of  
11 Supervisors) and the Public Works Department (staff) perform the governance and  
12 administrative support for the district.

13 The primary purpose of the FCZD is flood hazard management. Revenue generated  
14 to for this purpose is accomplished in two ways: (1) a county-wide uniformly  
15 applied tax; and, (2) supplemental revenue generated within localized Diking  
16 Districts and Sub-Flood Districts where specific local project activity is planned.

17 While the primary purpose of the FCZD is flood hazard management, the district is  
18 allowed to address a wide variety of water resource issues. Due to this ability,  
19 revenue generated by the district is currently used to finance additional water  
20 supply and water quality related improvement projects.

21 **Pertinent Documents**

22 Lower Nooksack River Comprehensive Flood Hazard Management Plan (CFHMP)

23 In 1999, the county adopted the Lower Nooksack River Comprehensive Flood  
24 Hazard Management Plan (CFHMP). The CFHMP identifies projects, programs, and  
25 other recommendations aimed at reducing future flood damages along the Lower  
26 Nooksack River.

27 Critical Areas Regulations (WCC 16.16)

28 Whatcom County's Critical Areas Regulations aim to protect people and property in  
29 Frequently Flooded Area (FFAs) by requiring development in these areas conforms  
30 to WCC Title 17, Flood Damage Prevention.

31 **Stormwater Management**

32 Stormwater runoff occurs when precipitation from rain or snowmelt flows over the  
33 land surface. The addition of roads, driveways, parking lots, rooftops, and other  
34 surfaces that prevent water from soaking into the ground greatly increases the  
35 runoff volume created during storms. This runoff is swiftly carried to our local  
36 streams, lakes, wetlands and rivers and can cause flooding and erosion.  
37 Stormwater runoff also picks up and carries with it many different pollutants that  
38 are found on paved surfaces, such as sediment, nitrogen, phosphorus, bacteria, oil  
39 and grease, trash, pesticides, and metals.

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

**1 County Stormwater Management Programs**

**2 *National Pollutant Discharge and Elimination System (NPDES) Phase II Permit***

3 Stormwater runoff picks up pollutants as it travels over our developed landscapes  
4 and is a major source of water quality problems. In 1987, the Federal Clean Water  
5 Act was amended to address stormwater pollution. As a result, the United States  
6 Environmental Protection Agency (EPA) created the National Pollutant Discharge  
7 Elimination System (NPDES) to address stormwater runoff. States are required to  
8 administer permits to local jurisdictions to regulate runoff as part of the NPDES  
9 Program. The Permit is referred to as the "NPDES Phase II Permit" or "Phase II  
10 Municipal Stormwater Permit".

11 In February of 2007, the Washington State Department of Ecology issued Whatcom  
12 County's Phase II Municipal Stormwater Permit. This permit regulates discharges  
13 from Small Municipal Separate Storm Sewers, and is part of the National Pollutant  
14 Discharge and Elimination System (NPDES) and State Waste Discharge General  
15 Permit. It sets forth requirements of municipalities to address stormwater runoff in  
16 areas determined to have population densities reaching urban standards. Whatcom  
17 County is required to implement various stormwater management strategies to  
18 comply with this State permit.

19 The current Permit boundary covers approximately 15,000 acres and generally  
20 includes the following areas (Figure 1):

- 21 • Bellingham Urban Growth Area
- 22 • Sudden Valley
- 23 • Portions of the Hillsdale and Emerald Lake area
- 24 • Portions along North Shore Drive on Lake Whatcom and Lake Whatcom  
25 Boulevard
- 26 • Ferndale Urban Growth Area
- 27 • Portions along Chuckanut Drive and Chuckanut Bay
- 28 • Birch Bay Urban Growth Area

29 Additionally, though not within the NPDES permit area, the County has made the  
30 entire Lake Whatcom watershed is subject to the illicit discharge detection and  
31 elimination requirements of the Permit through ordinance and agreement with the  
32 Department of Ecology.

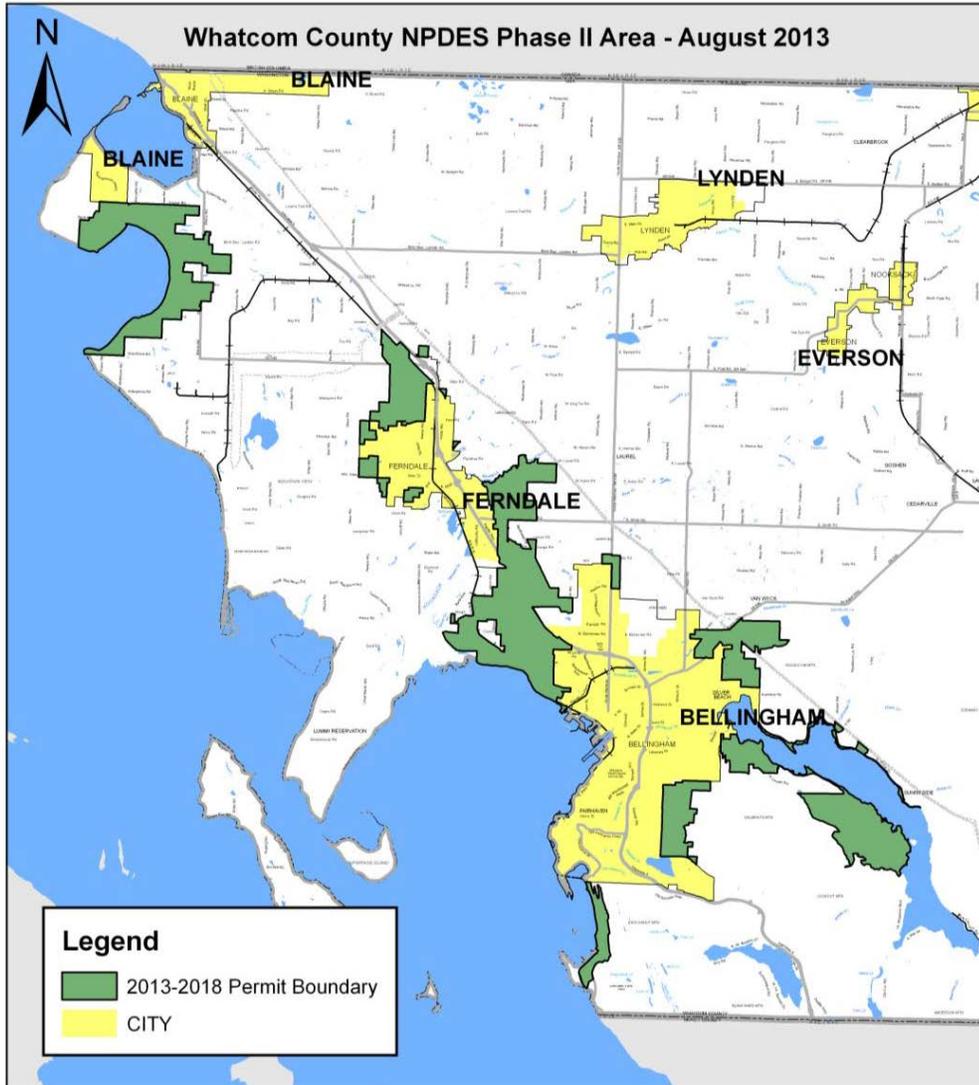

33 Jurisdictions are allowed to discharge runoff into waterbodies of the State (such as  
34 rivers, lakes, and streams) as long as they implement programs that protect water  
35 quality by reducing pollutants to the maximum extent possible through  
36 requirements of the NPDES Phase II Permit. Those requirements are reported and  
37 submitted to the Department of Ecology through the Stormwater Management  
38 Program (SWMP) and the Annual Compliance Report.

39 The Western Washington Phase II Municipal Stormwater Permit is required by the  
40 State of Washington Water Pollution Control Law Chapter 90.48 RCW, and the  
41 Federal Water Pollution Control Act Title 33 United States Code (Clean Water Act).  
42 The Permit is administered by the Washington State Department of Ecology.

7  
8  
9  
10

Figure 1. NPDES Phase II Boundaries

Pollution Identification and Correction (PIC) Program

Clean water supports healthy drinking water, safe recreational uses, quality water for irrigation and livestock, healthy fish, and shellfish that are safe to consume. Currently, many streams in Whatcom County do not meet water quality standards for fecal coliform bacteria. Fecal coliform bacteria are found in the intestinal tract of warm-blooded animals and when found in streams are an indicator of human or animal waste in the water. The higher the bacteria level, the greater the public health risk to people drinking water, wading, fishing, or consuming shellfish. The

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

1 Pollution Identification and Correction (PIC) Program was created to help implement  
2 community solutions to clean water.

3 **Pollution** – The key potential sources of bacteria that have been identified in  
4 Whatcom County coastal drainages are (1) **animal waste** from agricultural  
5 operations, domestic pets, waterfowl, and wildlife, and (2) **human sewage** from  
6 failing on-site sewage systems (OSS), leaking sewers, or cross-connections.

7 **Identification** – Whatcom County coordinates a routine water quality  
8 monitoring program at approximately 90 stations in watersheds that discharge to  
9 marine waters. Samples are collected on at least a monthly basis and analyzed for  
10 fecal coliform bacteria. Results are evaluated annually to identify focus areas with  
11 the largest bacteria problems. Within the focus areas, stream segments are  
12 monitored and potential bacteria sources are identified.

13 **Correction** – Technical and financial resources are offered to landowners to  
14 identify and implement solutions on their property. Residents can help improve the  
15 community's water quality by inspecting and maintaining septic systems and by  
16 fencing animals out of streams, ditches and swales. By actively managing pastures,  
17 creating protected heavy use areas, and covering manure storage areas, residents  
18 can prevent manure-contaminated mud from polluting surface water. Planting  
19 shrubs and trees along stream banks and picking up after dogs also contributes to  
20 better water quality.

21 **Issues, Goals, and Policies**

22 **Watershed Planning and Management**

23 **Goal 10F:** **Protect and enhance water quantity and quality and**  
24 **promote sustainable and efficient use of water resources.**

25 Policy 10F-1: Maintain as a high priority the protection of water quality and  
26 quantity.

27 Policy 10F-2: Actively participate in and support efforts to coordinate local,  
28 federal, tribal, and state agencies to achieve integration and/or  
29 consistency between the various levels of environmental  
30 regulations relating to the County.

31 Policy 10F-3: Work cooperatively with Federal, State, and local jurisdictions,  
32 Tribal governments, municipal corporations, and the public to  
33 implement the goals and policies of the Comprehensive Plan as  
34 well as state water resources and water quality laws.

35 Policy 10F-4: Participate in the coordination of all local water and land  
36 management efforts, plans, and data to ensure adequate  
37 oversight of water quantity and quality issues.

38 Policy 10F-5: Manage water resources for multiple instream and out-of-  
39 stream beneficial uses, including instream flows set by the State  
40 Department of Ecology.

41 Policy 10F-6: Actively promote and participate in education, research, and  
42 information opportunities that improve our understanding of the

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

- 1 county's complex water resource systems. New information  
2 should be considered in the development and evaluation of  
3 management actions.
- 4 Policy 10F-7: Pursue the most effective methods for protecting water quantity  
5 and quality, through both regulatory (e.g. zoning, enforcement,  
6 fines) and non-regulatory approaches (education, incentives,  
7 and technical/financial assistance). Emphasis shall be placed on  
8 non-regulatory approaches where possible and effective.
- 9 Policy 10F-8: Track the development of policies and regulations at the local,  
10 state, and federal level. Provide input to those regulations and  
11 policies as necessary to ensure that the interests of Whatcom  
12 County are considered.
- 13 Policy 10F-9: In conjunction with all jurisdictions, develop and adopt  
14 programs to protect water quality and quantity within  
15 watersheds, aquifers, and marine waterbodies that cross  
16 jurisdictional boundaries.
- 17 Policy 10F-10: Promote awareness and participation in management and  
18 protection efforts by individual citizens and the community as a  
19 whole.
- 20 Policy 10F-11 Pursuant to ESSB 6091, Whatcom County will work through the  
21 **Planning Unit and** WRIA 1 Watershed Management Board and its  
22 established processes to update the WRIA 1 Watershed  
23 Management Plan, consistent with ESSB 6091, for approval by  
24 the Whatcom County Council by February 1, 2019. The updated  
25 plan shall include recommendations for projects and actions that  
26 will measure, protect, and enhance instream resources and  
27 improve watershed functions that support the recovery of  
28 threatened and endangered salmonids.
- 29 At a minimum, the watershed plan must include those actions  
30 determined to be necessary to offset potential impacts to  
31 instream flows associated with permit-exempt domestic water  
32 use. The highest priority recommendations must include  
33 replacing the quantity of consumptive water use during the  
34 same time as the impact and in the same basin or tributary.  
35 Lower priority projects include projects not in the same basin or  
36 tributary and projects that replace consumptive water supply  
37 impacts only during critical flow periods. The watershed plan  
38 may include projects that protect or improve instream resources  
39 without replacing the consumptive quantity of water where such  
40 projects are in addition to those actions determined to be  
41 necessary to offset potential consumptive impacts to instream  
42 flows associated with permit-exempt domestic water use.
- 43 Watershed plan recommendations may include, but are not  
44 limited to, acquiring senior water rights, water conservation,  
45 water reuse, stream gaging, groundwater monitoring, and

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

1 developing natural and constructed infrastructure, which  
2 includes, but is not limited to, such projects as floodplain  
3 restoration, off-channel storage, and aquifer recharge.  
4 Qualifying projects must be specifically designed to enhance  
5 streamflows and not result in negative impacts to ecological  
6 functions or critical habitat.

7 Until the updated watershed plan is approved and rules are  
8 adopted, the County, in issuing building permits under RCW  
9 19.27.097(1)(c) or approving subdivisions under chapter 58.17  
10 RCW in WRIA 1 will comply with all of the specific requirements  
11 of ESSB 6091.

**Surface Water and Groundwater**

13 **Goal 10G:** **Protect and enhance Whatcom County's surface water**  
14 **and groundwater quality and quantity for current and**  
15 **future generations.**

16 Policy 10G-1: Manage surface water systems on a watershed basis.

17 Policy 10-2G: Coordinate efforts to bring all water users in Whatcom County  
18 into compliance with state and federal water laws in a way that  
19 enhances stream flows, water quality, and fish and wildlife  
20 habitat while advocating for adequate water for existing  
21 agriculture.

22 Policy 10G-3: In conjunction with the public and appropriate local, state,  
23 Tribal, and federal jurisdictions, define, identify, and develop  
24 management strategies for watershed basins and subbasins that  
25 may require special protection. These areas may include  
26 aquifers, critical aquifer recharge areas as defined under the  
27 Growth Management Act, Groundwater Management Areas,  
28 wellhead protection areas, and high priority watersheds such as  
29 those specified under WAC 400 (Local Planning and  
30 Management of Non-point Source Pollution), WRIA Watershed  
31 Management Planning, and under legislative policy direction  
32 (e.g. Nooksack Basin, Lake Whatcom, Lake Samish and Drayton  
33 Harbor).

34 Policy 10G-4: Management efforts should consider both water quality and  
35 quantity. Water quality efforts should help reduce the likelihood  
36 that potential contaminant sources will pollute water supplies.  
37 Water quantity efforts should include consideration and  
38 protection of recharge areas and potential effects on stream  
39 flow.

40 Policy 10G-5: Support the implementation of local and state Watershed  
41 Management Plans, the Lower Nooksack Strategy, the Lake  
42 Whatcom Management Program, NPDES Phase II Permitting,  
43 and the WRIA Watershed Management Projects.

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

- 1 Policy 10G-6: Pursue the adoption and implementation of ground and/or  
2 surface water management plans and their integration into local  
3 comprehensive plans. Designate the Lake Whatcom and Lake  
4 Samish Watersheds as high priorities in this effort.
- 5 Policy 10G-7: Oppose the use of hydraulic fracturing in oil and gas wells (also  
6 known as “fracking”) to avoid the potential degradation of water  
7 quality in aquifers and other groundwater.
- 8 Policy 10G-8: Monitor, prevent, and reduce the establishment of invasive  
9 species in Whatcom County waterbodies.
- 10 Policy 10G-9: Identify and/or update wellhead protection areas and critical  
11 aquifer recharge areas and incorporate into the Critical Areas  
12 Ordinance. This information should be available to the public.

**13 Stormwater and Drainage**

**14 Goal 10H: Protect water resources and natural drainage systems by  
15 controlling the quality and quantity of stormwater runoff.**

- 16 Policy 10H-1: Manage stormwater runoff to minimize surface water quality and  
17 quantity impacts and downstream impacts on channel  
18 morphology, property owners, and aquatic species and habitats.
- 19 Policy 10H-2: Maintain or enhance, when appropriate, natural drainage  
20 systems and natural water storage sites in order to better  
21 protect water quality, moderate water quantity, minimize  
22 environmental degradation, and reduce public costs.
- 23 Policy 10H-3: Limit the alteration of natural drainage systems and natural  
24 water storage sites without mitigating measures. Such  
25 measures should not degrade water quality or fish and wildlife  
26 habitat and should not increase hazards to the community.
- 27 Policy 10H-4: Support the use by resource industries—such as agriculture,  
28 forestry, and mineral resource extraction—of management  
29 practices that minimize erosion and sedimentation, and  
30 significantly reduce pollutants.
- 31 Policy 10H-5: Evaluate the role of watersheds in the maintenance of water  
32 quality and quantity and determine what cumulative impacts  
33 development activity may have on watershed hydrology.
- 34 Policy 10H-6: Develop specific stormwater management programs for each  
35 drainage basin within the county's jurisdiction that may be  
36 impacted by urban levels of development. Recognize the Lake  
37 Whatcom Watershed, Lake Samish, and Drayton Harbor as high  
38 priorities in this effort. Coordinate efforts with the Lake  
39 Whatcom Policy Group, the various shellfish protection districts,  
40 and other watershed management entities.

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

- 1 Policy 10H-7: Establish, as a high priority, a stormwater maintenance program  
2 that ensures that stormwater systems are adequately  
3 maintained and function at or near design capacity.
- 4 Policy 10H-8: Strongly incentivize the use of low impact development  
5 strategies. Minimize the amount of impervious surface whenever  
6 practicable by using natural engineering design methods such as  
7 the use of open, grassed, street swales and rain gardens instead  
8 of curbs and gutters. Where feasible, encourage alternate  
9 surfacing options and other techniques associated with low  
10 impact development (see Glossary).
- 11 Policy 10H-9: Develop and administer stormwater management standards as  
12 required by the NPDES Phase II Permit.
- 13 Policy 10H-10: Develop and administer regulations and incentives such that  
14 there is no net loss of ecological functions and values of  
15 regulated wetlands and fish and wildlife habitats.
- 16 Policy 10H-11: Place a high priority on integrating impervious surface reduction  
17 incentives into policies, regulations, and standards.
- 18 Policy 10H-12: Develop and implement comprehensive stormwater  
19 management programs and strategies designed to address  
20 runoff from all private and public developments and facilities  
21 within regulated and sensitive watersheds.
- 22 1. Implement the Western Washington Phase II Municipal  
23 Stormwater Permit as part of the National Pollutant  
24 Discharge Elimination System (NPDES) Program. Incorporate  
25 watershed considerations into the development of a  
26 comprehensive stormwater management strategy for  
27 designated areas.
- 28 2. Review Stormwater Special Districts Standards, Watershed  
29 Protection Districts, and other related codes that address  
30 runoff treatment from potentially polluting surfaces for their  
31 applicability to other sensitive watersheds with the Technical  
32 Advisory Committee and other appropriate agencies.  
33 Coordinate efforts for ongoing monitoring and evaluation  
34 within the sensitive watersheds and NPDES areas.
- 35 3. Amend subdivision, zoning, and other land use regulations  
36 and design standards to encourage that land use activities  
37 minimize the amount of impervious surface.
- 38 4. Identify and implement a long-term funding source to  
39 provide for water resource protection services, including non-  
40 point source identification and enforcement of applicable  
41 county regulations.
- 42 5. Focus on the Lake Whatcom watershed as a high priority in  
43 developing a stormwater management program. Develop a

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

- 1 stormwater management plan that achieves a uniform level
- 2 of protection throughout the Lake Whatcom watershed.
- 3 Ensure coordination and communication with the public and
- 4 affected jurisdictions, such as the Lake Whatcom Water and
- 5 Sewer District, the Sudden Valley Community Association,
- 6 and the City of Bellingham.
- 7 6. Ensure existing stormwater standards are adequately
- 8 enforced within Stormwater Special Districts, Watershed
- 9 Protection Districts, and the NPDES areas.
- 10 7. Prioritize stormwater polluting areas and develop retrofits for
- 11 areas most likely to impact sensitive waters.

**Water Conservation**

13 **Goal 10-I: Support water conservation, reclamation, reuse**  
14 **measures, and education as a means to ensure sufficient**  
15 **water supplies in the future.**

16 Policy 10I-1: Support and assist water users in the development of cost-  
17 effective means of improving efficiency of water use.

18 Policy 10I-2: Support efforts to establish and protect sustainable water  
19 supplies to meet existing and future demands for water in the  
20 county.

21 Policy 10I-3: Develop and implement plans to comply with the Department of  
22 Ecology's instream flow and water management rules and water  
23 resources management programs.

24 Policy 10I-4: Coordinate local water and land management efforts, plans,  
25 and data to ensure adequate oversight of water quality and  
26 quantity issues.

27 Policy 10I-5: Quantify water use to promote conservation.

28 Policy 10I-6: Use water use data to encourage conservation and maintain  
29 availability of water for agriculture and instream flow.

30 Policy 10I-7: Encourage the Department of Ecology to provide flexibility in the  
31 application of the water relinquishment rule simultaneous with  
32 establishing a water bank/water exchange program in Whatcom  
33 County in cooperation with stakeholders.

**Lake Whatcom Watershed**

35 **Goal 10-J: Prioritize the Lake Whatcom watershed as an area in**  
36 **which to minimize development, repair existing**  
37 **stormwater problems (specifically for phosphorus), and**  
38 **ensure forestry practices do not negatively impact water**  
39 **quality. Provide sufficient funding and support to be**  
40 **successful.**

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

- 1 Policy 10J-1: Work with property owners to find acceptable development  
2 solutions at lower overall densities than the present zoning  
3 allows.
- 4 Policy 10J-2: Develop and implement the fair and equitable funding  
5 mechanisms called for in the 2008 Lake Whatcom  
6 Comprehensive Stormwater Plan to support lake water quality  
7 protections by 2018.
- 8 Policy 10J-3: Recognize that all users of Lake Whatcom water have an  
9 interest in the resource and should share in the cost of its  
10 protection.
- 11 Policy 10J-4: Work cooperatively with the City of Bellingham, the Lake  
12 Whatcom Water and Sewer District, and applicable associations  
13 and organizations to identify, review, and, as appropriate,  
14 recommend changes to existing monitoring programs to better  
15 improve lake water quality.
- 16 Policy 10J-5: Evaluate and pursue, as appropriate, the use of incentives to  
17 encourage voluntary lot consolidation, transfer or purchase of  
18 development rights, current use taxation, and participation in  
19 open space conservation programs.
- 20 Policy 10J-6: Do not allow density bonuses within the Lake Whatcom  
21 Watershed.
- 22 Policy 10J-7: Work cooperatively with the City of Bellingham and the Lake  
23 Whatcom Water and Sewer District to develop and track  
24 benchmarks to determine: the effectiveness of management  
25 options; when goals have been achieved; and/or when  
26 additional actions are necessary.
- 27 Policy 10J-8: Continue to develop and refine structural and non-structural  
28 best management practices (BMPs), both voluntary and  
29 required, to minimize development impacts within the Lake  
30 Whatcom watershed.
- 31 Policy 10J-9: Work to keep publicly-owned forest lands within the Lake  
32 Whatcom watershed in public ownership, and support managing  
33 forestry on these lands in a manner that minimizes sediment  
34 and phosphorus yields from streams, and is consistent with Best  
35 Available Science (BAS) data, in order to protect and enhance  
36 water quality.
- 37 Policy 10J-10: Encourage the location of public services, such as schools,  
38 libraries, parks/open space, and post offices within Sudden  
39 Valley in an attempt to reduce the vehicle miles traveled within  
40 the watershed.
- 41 Policy 10J-11: Continue to work with Bellingham and Lake Whatcom Water and  
42 Sewer District to protect and manage the Lake Whatcom  
43 watershed in accordance with the 1998 jointly adopted interlocal

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

- 1 agreement. Focus on continued implementation of the 5-Year
- 2 Work Plans of the Lake Whatcom Management Program. In
- 3 addition, work with the affected jurisdictions and secure funding
- 4 for programs that protect and enhance water quality.
- 5 Policy 10J-12: Review and modify (as needed) the current development review
- 6 process for projects in the Lake Whatcom Watershed to ensure
- 7 coordination with other jurisdictions to streamline regulations
- 8 that improve and protect water quality.
- 9 Policy 10J-13: The existence of sewer lines in the Rural and Rural Forestry
- 10 comprehensive plan designations will not be used to justify
- 11 rezoning property in the Lake Whatcom watershed to allow
- 12 higher density land uses.
- 13 Policy 10J-14: Existing Urban Growth Areas shall not be ~~designated or~~
- 14 expanded nor new Urban Growth Areas designated within the
- 15 Lake Whatcom Watershed, and rezones that allow greater
- 16 residential densities will not be allowed.

Comment [P/C3]: P/C struck

**17 Ecosystems**

**18 Introduction**

19 Ecological systems, or ecosystems, refer to the natural systems that have  
20 developed within the geologic and geographic setting of Whatcom County.  
21 Whatcom County contains a significant number of distinct ecosystem types, with  
22 associated fish, wildlife, and plant species, as well as many other living organisms.  
23 This biodiversity has evolved and adapted according to the specific physical and  
24 climatic conditions of the county (Map 10-2, Map 10-3). Ecosystem goals and  
25 policies are intended to provide guidance to county government as it assists people  
26 to manage and protect these ecosystems. Additionally they ensure other benefits  
27 are maintained far into the future.

**28 Background Summary**

29 Whatcom County provides a wide variety of natural habitats that support and  
30 shelter a diverse array of fish and wildlife species. The county's wildlife is  
31 particularly varied and abundant when compared to many other areas of  
32 Washington State. There are a number of factors that have contributed to this:  
33 abundant water resources, rich soils, mild climate conditions, and a moderate  
34 degree of urbanization are among the most important. Among the habitats of  
35 importance to fish and wildlife are the following:

- 36 • wetlands, lakes, and streams;
- 37 • nearshore, intertidal, estuarine habitats, and marine habitats including,
- 38 but not limited to, kelp and eelgrass beds;
- 39 • riparian areas and other travel corridors;
- 40 • snags and downed logs;
- 41 • forested habitats in a variety of successional stages;

**Exhibit A – Planning Commission Approved Draft**

October 29, 2021

Chapter 10 - Environment

- 1 • caves, cliffs, rocky balds, and talus slopes;
- 2 • grasslands and cultivated fields; and,
- 3 • thickets and fence rows.

4 Aquatic habitats include rivers, streams, ponds, lakes, and their riparian borders.  
5 Together, these habitats are essential to Whatcom County's fish and wildlife.  
6 Twenty-six species of fish—including twelve economically important stocks of  
7 salmon and trout—inhabit fresh water in Whatcom County for all or part of their life  
8 cycles. Healthy flowing streams and rivers, as well as off-channel wetland habitats,  
9 are essential to the survival of the majority of these fish. Wetland ponds, especially  
10 beaver ponds, provide optimal habitats for rearing and over-wintering of young  
11 fish, particularly Coho salmon and cutthroat trout juveniles.

12 Most wildlife species regularly use aquatic and riparian habitats for breeding,  
13 feeding, shelter, and migratory activities. Of this large grouping, over half are  
14 dependent upon wetland habitats at some point in their life cycles, and would  
15 decline or disappear in the absence of wetlands. Wetlands also contain unique  
16 vegetative communities that harbor many species of rare and unusual plants.

**17 Fish and Wildlife Populations and Habitat**

18 Optimum habitat for Pacific Northwest salmon and other fish is one that resembles  
19 the riparian landscape of pre-settlement times: braided streams wandering freely  
20 through nearly continuous forest; trees overhanging and partly fallen into streams;  
21 stream beds with abundant logs, step waterfalls, pools, and cutbanks; and  
22 vegetated marine and estuarine communities. In most cases, it is not realistic to  
23 return to that state. However, measures can be taken to retain or regain those  
24 features that provide the minimum requirements of a viable fishery.

25 The best habitat for native wildlife includes native plants, which are more closely  
26 matched to local soils, climate, and wildlife. They provide the right kinds of food,  
27 shelter, and diversity needed by wildlife. Native plants frequently need less  
28 watering, spraying, pruning, fertilizing, or other maintenance than do exotic or  
29 imported plants. Loss of native vegetation through conversion to ornamental  
30 vegetation and non-native species can result in loss of wildlife habitat, increased  
31 competition to native wildlife from introduced species, such as starlings, and  
32 increased maintenance needs. Loss of native vegetation also can occur through  
33 invasions of non-native species, such as the spread of *Spartina*, which can  
34 drastically displace important native eelgrass and mudflat communities.

**35 Salmon Recovery Program**

36 The decline of salmonids throughout Washington and the Pacific Northwest over the  
37 past century is well established. Since 1991, numerous evolutionarily significant  
38 units (ESUs) of Pacific salmonids have been listed as endangered or threatened  
39 under the Endangered Species Act (ESA), including those of chinook, coho, chum,  
40 sockeye, and steelhead. Decline in wild salmonid abundances have been attributed  
41 to widespread loss and degradation of habitat, due to hydropower, residential and  
42 urban development, agriculture, forestry, and fishing and hatchery production.

**Exhibit A – Planning Commission Approved Draft**

October 29, 2021

Chapter 10 - Environment

1 In the Nooksack basin, abundances of several salmonid stocks have diminished  
2 substantially from historical levels. The declines in local salmonid stocks, especially  
3 Chinook salmon, have had profound economic, cultural, and social impacts on the  
4 greater WRIA 1 community. Direct impacts include reduced jobs and income for  
5 commercial fisherman, severe curtailment of tribal and subsistence catch, and loss  
6 of tourism associated with recreational fishing. In addition, ESA listings impose  
7 constraints on the activities of local and tribal governments, businesses, the  
8 agricultural community, and citizens, who must seek to avoid or minimize take of  
9 listed species. Nonetheless, salmon remain an integral part of the natural and social  
10 landscape of Whatcom County and the Nooksack River Watershed. Recent  
11 watershed recovery planning and restoration efforts by federal, state, local, and  
12 tribal governments, non-profit organizations, businesses, and private citizens  
13 demonstrate a commitment to salmon recovery in WRIA 1.

14 The WRIA 1 Salmon Recovery Program is a multi-government planning effort with a  
15 WRIA-wide scope to address salmon recovery and protection of ESA and non-ESA  
16 listed salmonids.

17 WRIA 1 Salmon Recovery Strategy

18 The ultimate goal for salmon recovery in WRIA 1 is to recover self-sustaining  
19 salmonid runs to harvestable levels through the restoration of healthy rivers and  
20 natural stream, river, estuarine, and nearshore marine processes; careful use of  
21 hatcheries; and responsible harvest, with the active participation and support of  
22 local landowners, businesses, and the larger community. The purpose of the *WRIA*  
23 *1 Salmonid Recovery Plan* is to identify the actions necessary to recover WRIA 1  
24 salmonid populations, especially listed species, and to outline the framework for  
25 implementation of recommended actions that have been agreed to by local, state,  
26 tribal, and federal governments and stakeholders in WRIA 1. In the near term, the  
27 objectives are to:

- 28 1. Focus and prioritize salmon recovery efforts to maximize benefit to the  
29 two Nooksack early chinook populations;
- 30 2. Address late-timed Chinook through adaptive management, focusing in  
31 the near-term on identifying hatchery versus naturally-produced  
32 population components;
- 33 3. Facilitate recovery of WRIA 1 bull trout and steelhead by implementing  
34 actions with mutual benefit to early chinook, bull trout, and steelhead, by  
35 removing fish passage barriers in presumed bull trout and steelhead  
36 spawning and rearing habitats in the upper Nooksack River watershed;  
37 and
- 38 4. Address other salmonid populations by (a) protecting and restoring WRIA  
39 1 salmonid habitats and habitat-forming processes through regulatory and  
40 incentive based programs; and (b) encouraging and supporting voluntary  
41 actions that benefit other WRIA 1 salmonid populations without diverting  
42 attention from early chinook recovery.

43 Focusing efforts on early chinook is consistent with regional salmon recovery,  
44 current abundance and productivity for the two populations is very low and

## Exhibit A – Planning Commission Approved Draft

October 29, 2021

Chapter 10 - Environment

1 recovery of both populations is critical to delisting and recovery of the Puget Sound  
2 Evolutionarily Significant Unit (ESU) for Chinook salmon.

### 3 Salmon Recovery Board (SRB)

4 WRIA 1 Salmon Recovery Board membership includes the County Executive,  
5 Bellingham Mayor, Mayors of the Small Cities of Whatcom County, the regional  
6 director of the Washington Department of Fish and Wildlife, and policy  
7 representatives from Lummi Nation and Nooksack Indian Tribe.

8 The WRIA 1 Salmonid Recovery Plan (2005), a chapter of the Puget Sound Salmon  
9 Recovery Plan, guides restoration in the Nooksack River and adjacent watersheds.  
10 This plan was developed in partnership with Nooksack Tribe, Lummi Nation,  
11 Washington Department of Fish and Wildlife, Bellingham, Whatcom County  
12 Government, and the small cities of Whatcom County. Chinook salmon populations  
13 (listed as threatened with extinction under the Federal Endangered Species Act) are  
14 prioritized, yet the plan also provides the template for recovery of threatened  
15 steelhead and bull trout and the other salmon and trout populations native to  
16 Whatcom County.

17 The salmon plan was developed in parallel with the WRIA 1 Watershed Management  
18 Plan. Salmon habitat is intricately linked to watershed management; salmon  
19 recovery will be most successful when fish habitat objectives are carefully  
20 coordinated with watershed management objectives. Integrating salmon recovery  
21 with flood hazard management and restoring fish passage under County roads are  
22 two primary areas of focus.

### 23 **Marine Resources Management**

24 Marine habitats include all saltwater bodies and their shorelines, kelp and macro  
25 algae beds, eelgrass meadows, salt marshes, beaches, and mudflats. These  
26 habitats play a vital role in the health of the local environment, as well as of the  
27 broader Puget Sound region. They provide spawning, rearing, and feeding grounds  
28 for a wide variety of marine life, as well as refuge for juvenile and adult fish, birds,  
29 and shellfish. The vegetation on back-shore marshes and within estuaries buffers  
30 adjacent upland areas by absorbing wave energy and slowing erosion.

31 Symptoms of ecosystem stress include: declining stocks of salmon, bottomfish, and  
32 forage fish; closures of recreational and commercial shellfish beds; degradation and  
33 losses of eelgrass beds, kelp forests, and other marine habitats; and dwindling  
34 populations of seabirds and marine mammals.

35 The Northwest Straits Marine Conservation Initiative was authorized by Congress in  
36 1998. The Initiative established the Northwest Straits Commission and Marine  
37 Resources Committees (MRCs) in seven western Washington counties, including  
38 Whatcom County. The MRCs' main purpose is to guide local communities, using up-  
39 to-date information and scientific expertise, to achieve the important goals of  
40 resource conservation and habitat protection within the Northwest Straits. The  
41 Whatcom County MRC acts as an advisory committee to the Whatcom County  
42 Council.

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

Shellfish Recovery

Many of the marine waterbodies in Whatcom County support natural and cultured bivalve shellfish, including oysters and many species of clams. The warm, nutrient-rich tide flats in and around Lummi, Portage, and Birch Bays; Drayton Harbor; and Eliza and Lummi Islands represent unique water resources in this regard. Commercial shellfish growers, recreational clam and oyster harvesters, and Native Americans have used this resource for many years. It is an important part of our community's heritage.

Our ability to grow and harvest shellfish that is safe for human consumption is directly linked to surface water quality and the influence it has on marine waters. The primary measure of water quality for shellfish harvesting is bacterial contamination. There are many potential sources of fecal bacteria, such as municipal sewage treatment plants, on-site sewage systems, boat waste, farm animals, pets, and wildlife. Since 1995, valuable shellfish beds in Portage Bay and Drayton Harbor have been downgraded (harvest prohibited) due to non-point pollution impacting recreational, tribal, and commercial harvesting. In 2014, Portage Bay was identified as a threatened Shellfish Growing Area by the Washington Department of Health. (Washington Department of Health, 2014)

*Shellfish Protection Advisory Boards*

Whatcom County has three Shellfish Protection District Advisory Committees, one for each of the Shellfish Protection Districts: Birch Bay, Drayton Harbor, and Portage Bay. Each advises the County Council on proposed actions and operations relating to the restoration of water quality in their respective watersheds.

*Shellfish Recovery Plans*

Shellfish Recovery Plans have been created for each of three districts. The plans outline the primary sources of bacteria and actions to improve water quality:

- Drayton Harbor Shellfish Recovery Plan (2007)
- Portage Bay Shellfish Recovery Plan (2014), Portage Bay Initial Closure Response Strategy (1998)
- Birch Bay Initial Closure Response Strategy (2009)

*Pertinent Documents*

- Whatcom Marine Resources Committee 2011 - 2015 Strategic Plan (2010)

This document outlines the MRC's mission, vision, values, goals, objectives, and strategies for achieving them.

~~Shoreline Management Program~~

~~The State Legislature passed the Washington State Shoreline Management Act (SMA) in June 1971. The SMA was overwhelmingly passed by public initiative in 1972. Under the SMA, each county and city was required to prepare a shoreline "master program" in accordance with the shoreline guidelines issued by the State Department of Ecology in 1972.~~

~~The Whatcom County Shoreline Management Program (SMP), WCC Title 23, is the document that implements the goals and policies of the SMA at the local level. It was adopted in 1976 in accordance with RCW 90.58. The goals and policies of the~~

Comment [CES4]: Moved to Ch. 11.

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

~~Whatcom County Shoreline Management Program also constitute the shoreline component of the Whatcom County Comprehensive Plan.~~

~~Under the provisions of the SMA, all development along shorelines of the state is required to comply with the provisions of local shoreline master programs. The Whatcom County Shoreline Management Program works with other chapters of the Whatcom County Code to protect and preserve saltwater and freshwater shorelines throughout the county by managing natural resources and directing development and land use suitable for the shoreline environment.~~

~~The Whatcom County Shoreline Management Program jurisdiction includes:~~

- ~~• More than 130 miles of marine shoreline;~~
- ~~• More than 60 miles of lake shoreline;~~
- ~~• More than 220 miles of stream channels; and,~~
- ~~• All wetlands and floodways associated with the above shorelines, together with all upland areas within 200 feet of the Ordinary High Water Mark (OHWM).~~

~~Whatcom County and the Washington State Department of Ecology (DOE) share joint authority and responsibility for the Whatcom County SMP. Whatcom County Planning and Development Services is the primary agency responsible for implementation of the Whatcom County Shoreline Management Program.~~

**Issues, Goals, and Policies**

**General – Ecosystems**

Development and urbanization of the land base have and may continue to result in the degradation and reduction of ecosystem functions. Wetlands and estuaries continue to be lost incrementally. Streams and their adjacent riparian habitat are affected by land clearing, ditching, erosion, and road building. Lakeshore development degrades the foreshore environment for waterfowl and other species, as well as negatively affecting water quality. It is estimated that Washington has also lost approximately one-third of its historic eelgrass beds from a variety of causes, including dredging, shading, and filling. Large-diameter snags and downed logs, an essential feature for dozens of wildlife species, are lost during clearing or intensive forest management. Forested habitats are lost to a number of development processes including urbanization, agriculture, increased rural/suburban housing density, and timber harvesting. The delicate environment of cliffs and caves may be affected by housing development, mining, and other activities. Conversely, grasslands, thickets, fields, and fence rows are habitats largely provided and enhanced by human activities, and are thus fairly abundant and stable within the developing county. The existence of farms, in particular, has contributed to an abundance of these more open, pastoral habitats.

Many stream systems in Whatcom County have been altered by agriculture, forestry, development, and flood control practices, contributing to low stream flows, fisheries loss, water pollution, sedimentation and other problems. These impacts can directly affect the fisheries resources by depositing silt and debris into spawning beds, by removing trees that shade and cool the water, bank armoring,

*October 29, 2021*

*Chapter 10 - Environment*

1 interfering with the recruitment and establishment of large woody debris (LWD), by  
2 obstructing fish passage with culverts and roads, by altering natural channels  
3 through filling, bank hardening, and channelizing. In addition, the physical  
4 processes that create functional habitats for fish life stages are altered by  
5 increasing flows through stormwater runoff or consuming water volume for other  
6 out-of-stream uses.

7 Finally, a healthy and functioning ecosystem, including forests, wetlands, fish,  
8 wildlife, and native plants they harbor, is an identified resource. A healthy  
9 ecosystem supports diverse and abundant wildlife, fish, and plant populations, and  
10 is necessary. The gathering of fish, game, and other natural resources forms a  
11 central aspect of many cultures in Whatcom County. The mere presence of these  
12 natural resources constitutes a community amenity that is a substantial part of our  
13 local economic base.

14 **Goal 10K: Protect and enhance ecosystems, which provide**  
15 **economic, ecological, aesthetic, and cultural benefit.**

16 Policy 10K-1: Define and identify species, habitats, and habitat features  
17 important to a balanced and sustainable web of life, biodiversity,  
18 and especially important to fish, native plants, and wildlife.  
19 Create, and regularly update an Ecosystem Report.

20 Policy 10K-2: Develop and adopt programs that protect habitats essential to  
21 the conservation of species that have been identified as  
22 endangered, threatened, or sensitive by the state or federal  
23 government as well as habitats identified as necessary in the  
24 Ecosystem Report. These programs should maintain and  
25 encourage restoration of habitat conditions for listed species of  
26 concern, as well as habitats identified as having significant  
27 biodiversity, connectivity, and other important features and  
28 functions.

29 Policy 10K-3: Develop incentives for protection of environmentally fragile  
30 areas or critical plant and wildlife habitats as well as habitats  
31 that provide connectivity (corridors).

32 Policy 10K-4: Where feasible, incorporate fish and wildlife habitats into public  
33 capital improvement projects.

34 Policy 10K-5: Provide measures to mitigate negative water quality and  
35 quantity impacts from both public and private alterations of  
36 natural drainage systems.

37 Policy 10K-6: Consider sensitive fish, shellfish, and wildlife species and their  
38 habitats when establishing zoning densities and patterns.

39 Policy 10K-7: Promote voluntary fish and wildlife habitat enhancement  
40 projects through educational and incentive programs, such as  
41 purchase of development rights or habitat conservation  
42 easements. These projects, which can be done by individuals,  
43 organizations, and businesses, will buffer and expand fish,  
44 plant, and wildlife habitat.

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

- 1 Policy 10K-8: Give careful consideration to the siting of industrial, commercial,  
2 residential, and other land use designations when located near  
3 important marine, terrestrial, or other critical habitats.
- 4 Policy 10K-9: Protect, retain, and enhance the beneficial uses and functions of  
5 streams and rivers. Define and identify the beneficial uses and  
6 functions of streams and rivers, including wildlife and fisheries  
7 habitat, water quality, open space, aesthetics, and recreation.
- 8 Policy 10K-10: Protect and enhance ecosystem functions when flood hazard  
9 management measures are used.
- 10 Policy 10K-11: Regulate the operation of river gravel extraction activities in  
11 such a manner so as to provide long-term protection of fish and  
12 wildlife habitat and water quality.
- 13 Policy 10K-12: Ensure design and development of residential and industrial  
14 development minimizes disturbance to rivers, streams, and  
15 functioning riparian areas.
- 16 Policy 10K-13: Evaluate the full value of the fishery; including its cultural and  
17 economic value; in land use decisions that may impact that  
18 fishery. Unavoidable impacts to an individual habitat or fishery  
19 shall be mitigated.
- 20 Policy 10K-14: Continue to consider the value of wildlife populations for which  
21 habitat conservation areas have been identified in PDS’s wildlife  
22 habitat mapping, their associated habitats, and connectivity in  
23 land use planning that may impact them. This is not intended to  
24 require landowners to pay for any additional studies.
- 25 Policy 10K-15: Mitigation to Habitat Conservation Areas should be tracked and  
26 monitored to ensure no net loss to natural area.
- 27 Policy 10K-16: Monitor Habitat Conservation Areas to obtain a baseline of  
28 current conditions and to ensure no net loss and avoidance of  
29 cumulative impacts.

**Fish and Wildlife Populations and Habitat**

- 31 **Goal 10L: Protect and enhance ecosystems that support native fish**  
32 **and wildlife populations and habitat.**
- 33 Policy 10L-1: Strongly discourage any activity that might cause significant  
34 degradation of the fishery resource or habitat.
- 35 Policy 10L-2: Support the protection and enhancement of significant fish  
36 spawning and rearing habitat, food resources, refugia (shelter),  
37 and travel passages.
- 38 Policy 10L-3: Establish non-regulatory mechanisms and incentives for  
39 development that accommodates the habitat needs of fish and  
40 wildlife and encourages good stewardship practices.

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

- 1 Policy 10L-4: Support protection and enhancement of fish and wildlife habitat  
2 through site design in new development.
- 3 Policy 10L-5: Native vegetation and soils on streambanks and shorelines  
4 should be disturbed as little as possible. In situations where re-  
5 vegetation is necessary to restore streambank or shoreline  
6 stability and provide shading, site-specific native plants should  
7 be used. Retention of vegetated riparian areas on all lake and  
8 marine shorelines shall also be encouraged.
- 9 Policy 10L-6: Discourage shoreline armoring. Instead, encourage natural or  
10 bio-engineering solutions such as planting native vegetation,  
11 engineered log jams/LWD, and beach nourishment along  
12 eroding banks to address stream and shoreline bank erosion  
13 problems. Riparian buffers should be replanted with suitable  
14 native vegetation as a part of all bank stabilization projects.
- 15 Policy 10L-7: Encourage native vegetation and soil retention and plantings  
16 that provide or maintain the beneficial uses and functions of  
17 streams, rivers, lakes, and marine shorelines.
- 18 Policy 10L-8: Maintain and encourage restoration of habitat functions for  
19 threatened and endangered fish species.
- 20 Policy 10L-9: Use Best Available Science to inform the creation of regulations  
21 to mitigate adverse impacts of development adjacent to rivers,  
22 streams, and marine shorelines.
- 23 Policy 10L-10: Encourage landowners to voluntarily protect surface water  
24 quality with filter strips or other appropriate water cleansing  
25 mechanisms installed between lawns, landscaping, livestock  
26 pens, or agricultural fields and waterbodies.
- 27 Policy 10L-11: Formulate and implement a comprehensive, landscape-based,  
28 environmental management program to protect fish and wildlife.  
29 The program should include the following:
- 30 1. Formulate an administrative approach to the review of  
31 development and planning proposals that consider natural  
32 system policies;
- 33 2. Investigate and develop programs for acquisition and  
34 restoration of important fish and wildlife habitat areas;
- 35 3. Develop and enter into cooperative agreements with State  
36 and Federal agencies and neighboring jurisdictions to identify  
37 and protect ecosystems;
- 38 4. Identify and map important habitat corridors and  
39 connectivity throughout the county; and,
- 40 5. Support the development of educational materials which list,  
41 describe, and characterize the appropriate use of native  
42 vegetation to enhance ecosystem functions in Whatcom  
43 County.

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

- 1 Policy 10L-12: Consider establishing formal meander limits for the Nooksack  
2 River, precluding additional development within this zone, and  
3 promote the River and Flood property acquisition program  
4 within these areas.
- 5 Policy 10L-13: Diligently work to prevent and/or reduce the establishment  
6 and/or spread of invasive species.
- 7 Policy 10L-14: Actively participate in and support WRIA 1 Salmon Recovery  
8 efforts to return self-sustaining salmonid runs to harvestable  
9 levels through: the restoration of healthy rivers, marine  
10 shorelines, and natural processes; the careful use of hatcheries;  
11 and responsible harvest.
- 12 Policy 10L-15: Participate in protection and improvement of biodiversity.
- 13 Policy 10L-16: Consider establishing important habitat areas as sending  
14 areas after creating a voluntary, workable transfer of  
15 development rights (TDR) program.
- 16 Policy 10L-17: Mitigation of wetlands should be reviewed and tracked over time  
17 to ensure no net loss of wetland function.
- 18 Policy 10L-18: A baseline of wetland identification and function should be made  
19 to track and prevent net loss and avoid cumulative impacts.
- 20 Policy 10L-19: The County will support the work of the Fisheries Co-managers  
21 (Lummi Nation, Nooksack Tribe, and the State Department of  
22 Fish and Wildlife) and stakeholders to establish a sustainable  
23 salmon harvest goal for the Nooksack Basin.

**Comment [P/C5]:** This proposed amendment is not part of the SMP Update. Rather, it is a policy the Council expressed in interest in adding in support of the fisheries co-manager's Sustainable Salmon Harvest Goal. Adding such a policy was placed on the docket by Council in 2018 (#PLN2018-00010).

**24 Wetlands**

25 Wetlands are crucial environmental features in Whatcom County. Wetlands provide  
26 invaluable functions in aquifer recharge, groundwater storage, floodwater  
27 detention, pollutant removal and purification of water supplies, as well as provision  
28 of fish and wildlife habitat. Loss of wetlands has been due to many factors,  
29 including urbanization, agricultural development, and drainage projects.

30 A plethora of complex and often confusing laws govern the definition, delineation,  
31 and protection of wetlands. These laws originate at national, state, and county  
32 levels. Land managers and private citizens often experience difficulty in  
33 interpreting, synthesizing, and applying wetland regulations. In general, however,  
34 state regulations must comply with federal standards and local regulations must  
35 comply with both federal and state standards.

**36 Goal 10M: Conserve and enhance regulated wetlands.**

- 37 Policy 10M-1: Recognize natural wetlands such as swamps, bogs, saltwater  
38 marshes, and ponds for their value in cleaning water, reducing  
39 flood damage, providing valuable habitat for plants, fish and  
40 wildlife, and as sites for groundwater recharge.

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

- 1 Policy 10M-2: Develop and adopt criteria to identify and evaluate wetland  
2 functions that meet the Best Available Science standard and  
3 that are consistent with state and federal guidelines.
- 4 Policy 10M-3: Biological functions of wetlands are complex and interwoven.  
5 Evaluate the full range of potential and immediate economic  
6 impacts in land use decisions relating to wetlands, including  
7 fisheries, wildlife, recreation, farmlands, sustainable resources,  
8 air and water quality, flood hazard management, real estate,  
9 cultural attributes, and other uses.
- 10 Policy 10M-4: Encourage land development to avoid wetland impacts. Impacts  
11 to regulated wetlands should be contingent upon full mitigation  
12 measures that equitably compensate for wetlands impacts, on a  
13 case-by-case basis. Approved mitigation measures shall include  
14 resources for long-term monitoring and adaptive management  
15 of mitigation outcomes to assure effectiveness. Strongly  
16 discourage alteration of land that results in the degradation of  
17 type 1 and 2 wetlands.
- 18 Policy 10M-5: Property rights and public services are essential components of  
19 our political and economic system. Where such rights and public  
20 services are significantly compromised by the goal of wetland  
21 preservation, adverse wetland impacts may be permitted  
22 through standardized mitigation. This may include avoidance,  
23 impact minimization, restoration, enhancement, creation, or off-  
24 site compensation for loss of wetland functions in accordance  
25 with mitigation sequencing.
- 26 Policy 10M-6: Recognize beneficial wetland uses, functions, and values.  
27 Support protection of fish and wildlife habitat, water quality,  
28 plant diversity, flood attenuation and low-flow contribution, and  
29 water storage through planning, acquisition, incentive programs,  
30 and mitigation.
- 31 Policy 10M-7: Development applications should be assessed on a case-by-case  
32 basis so that marginal wetlands are not preserved at the  
33 expense of upland areas with higher habitat value.

34 **Marine Habitat**

35 **Goal 10N: Protect and enhance marine ecosystems and resources in**  
36 **Whatcom County.**

- 37 Policy 10N-1: Support the Whatcom County Marine Resources Committee in  
38 its pursuit of the Northwest Straits Commission benchmarks as  
39 follows:
- 40 ▪ Broad county participation in MRCs;
  - 41 ▪ A net gain in high-value habitat and ecosystem functions;
  - 42 ▪ A net reduction in shellfish bed closures;

**Exhibit A – Planning Commission Approved Draft**

*October 29, 2021*

*Chapter 10 - Environment*

- 1 Policy 10P-10: Continue to partner with jurisdictions in British Columbia to  
2 minimize impacts on water quality, including what affects  
3 shellfish habitat.
- 4 Policy 10P-11: Work within the structure of County programs such as the WRIA  
5 Watershed Management Planning process to achieve  
6 improvements in land use Best Management Practices that will  
7 positively affect change in marine water quality.
- 8 Policy 10P-12: Continue to develop programs that identify potential pollution  
9 sources and ensure timely and science-based approaches are  
10 used in response to problems as they arise.
- 11 Policy 10P-13: Develop educational tools and opportunities to raise public  
12 awareness of marine issues and to inform them of how they can  
13 have a positive impact by helping preserve these marine  
14 resources.
- 15 Policy 10P-14: Identify areas (such as wetlands and the nearshore  
16 environment) that are important to shellfish habitat  
17 preservation. Also identify river and stream processes that  
18 adversely impact shellfish habitat. Use this information when  
19 making land use management and preservation decisions.
- 20 Policy 10P-15: Create a tracking mechanism to document progress made  
21 toward improving downgraded shellfish areas. This information  
22 will be useful not only in supporting an upgrade when water  
23 quality shows improvement, but also in preventing degradation  
24 in currently approved shellfish areas.
- 25 Policy 10P-16: Work with the County Shellfish Advisory Committees, Marine  
26 Resources Committee, Salmon Recovery Fund Board, WRIA  
27 Watershed Management Board, and other local, state, federal,  
28 and tribal agencies to address issues associated with shellfish,  
29 shellfish area closures, and shellfish habitat.
- 30 Policy 10P-17: Consider establishing the Drayton Harbor Watershed as a  
31 sending area when considering a transfer of development rights  
32 (TDR) program in.
- 33 Policy 10P-18 Support the Department of Health's On-Site Sewage System  
34 (OSS) Program as a means to lower degradation of our  
35 waterways.

36 **Other Marine and Marine Dependent Organisms and Systems**

37 Our Marine system supports not only local, critical, and global fisheries resources,  
38 but also a myriad of interdependent organisms, the importance of which we lack  
39 the capacity to fully grasp. The Marine ecosystem is a complex web of life that is  
40 increasingly affected by anthropogenic impacts. Toxics, hormones, heavy metals,  
41 and other harmful substances flushed into nearshore and marine environments with  
42 stormwater have been shown to have deleterious cumulative impacts on a range of  
43 aquatic and marine dependent organisms. Whatcom County will take steps to halt

**Exhibit A – Planning Commission Approved Draft**

October 29, 2021

Chapter 10 - Environment

- 1 the practice of treating its streams and rivers as a storm sewer and the marine  
2 system as a water treatment facility.
- 3 Policy 10P-19: Promote Best Management Practices, land use, and stormwater  
4 policies that result in a minimal release of harmful chemicals  
5 and metallic substances into surface water and the marine  
6 environment.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

**Chapter Eleven  
Shorelines**

**Comment [CES1]:** The P/C reviewed this version at their 11.12/20 mtg but didn't quite finish with it. Does include some of their changes.

Moved to tentatively approve for public hearing at their 12/10/20 mtg. Passed 8-0-1

**Comment [CES2]:** Much of text was moved from either C/P Ch. 10 or Title 23, and is not shown as being new. Proposed amendments to the existing text are shown as strikeout/underline.

**Introduction**

The State Legislature passed the Washington State Shoreline Management Act (SMA) in June 1971. The SMA was overwhelmingly passed by public initiative in 1972. Under the SMA, each county and city was required to prepare a shoreline "master program" in accordance with the shoreline guidelines issued by the State Department of Ecology in 1972.

The Whatcom County Shoreline Management Program (SMP), ~~WCC Title 23~~, is the set of policies and regulations document that implements the goals and policies of the SMA at the local level. It was first adopted in 1976 in accordance with RCW 90.58. The goals and policies of the Whatcom County ~~Shoreline Management Program SMP~~ also constitute the shoreline component of the Whatcom County Comprehensive Plan.

The Whatcom County Shoreline Management Program jurisdiction includes:

- More than 130 miles of marine shoreline;
- More than 60 miles of lake shoreline;
- More than 220 miles of stream channels; and,
- All wetlands and floodways associated with the above shorelines, together with all upland areas within 200-feet of the Ordinary High Water Mark (OHWM).

Whatcom County and the Washington State Department of Ecology (DOE) share joint authority and responsibility for the Whatcom County SMP. Whatcom County Planning and Development Services is the primary agency responsible for its implementation of the ~~Whatcom County Shoreline Management Program~~.

**Chapter Organization**

This chapter is composed of an introduction and five sections organized by topic heading. The first section, entitled "Overall SMP Goals and Objectives," addresses general shoreline goals and objectives. The next provides the purposes, designation criteria, and policies for the County's various shoreline area designations. The third section contains the County's policies for Shorelines of Statewide Significance. The fourth section provides the general policies that apply to all area designations. And the fifth section provides the policies specific to the type of use proposed. Together with the regulations of WCC Title 23, the sections of this chapter provide the direction necessary to ensure and promote long-term sustainability of the shorelines in Whatcom County.

**Purpose**

This chapter together with WCC Title 23 comprises Whatcom County's Shoreline Management Program. This chapter contains the SMP's goals, objectives, and policies, while its regulations are found in WCC Title 23. All development proposed

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

1 within jurisdictional shorelines must be consistent with both the policies of this  
2 chapter and the regulations of WCC Title 23.

3 The Shoreline Management Act (SMA) was developed and adopted to protect “the  
4 most valuable and fragile of [the state’s] natural resources from the “inherent harm  
5 in uncoordinated and piecemeal development of the state’s shorelines” (quotes  
6 from RCW 90.58.020). The SMA in Chapter 90.58 RCW contains three distinct but  
7 related priorities:

8 1. The promotion of shoreline uses that are both water-oriented and  
9 appropriate for the broader environmental context. Developments such as  
10 single family residences, recreational areas, and water-dependent businesses  
11 such as marinas are considered priority uses provided they are constructed in  
12 a manner “consistent with control of pollution and prevention of damage to  
13 the environment” (quote from RCW 90.58.020).

14 2. The SMA requires local governments to take an active role in protecting the  
15 shoreline ecology: the water, the land, the vegetation and the wildlife. The  
16 state guidelines are explicit: “Local master programs shall include regulations  
17 and mitigation standards ensuring that each permitted development will not  
18 cause a net loss of ecological functions of the shoreline.” (WAC 173-26-  
19 186(8)(b)(i).)

20 3. The SMA also promotes public access to the shoreline by requiring protection  
21 of existing public access features and requiring certain types of new  
22 development to include public access.

23 The SMP regulations (WCC Title 23) apply to individual projects, and impacts of  
24 shoreline development are evaluated on a project-by-project basis. However, the  
25 SMP goals and policies, shoreline designations, regulations, and the restoration plan  
26 are comprehensively structured to achieve no net loss of shoreline ecological  
27 functions as a whole in Whatcom County.

28 **GMA Goals and Countywide Planning Policies**

29 First adopted in 1990, The Growth Management Act (GMA) is a series of state  
30 statutes that requires fast-growing cities and counties to develop a comprehensive  
31 plan to manage their population growth. It is primarily codified under Chapter  
32 36.70A RCW, although it has been amended and added to in several other parts of  
33 the RCW. Under RCW 36.70A.020, the GMA established a series of 13 goals that  
34 should act as the basis of all comprehensive plans. In 2003, the legislature added  
35 the goals and policies of the Shoreline Management Act as the fourteenth GMA goal  
36 (RCW 36.70A.480). The shoreline goals may be found at RCW 90.58.020.

37 As of this time, there are no Countywide Planning Policies that address  
38 development in the shoreline.

39 **~~GMA~~ SMA Requirements**

40 Under the provisions of the SMA, all development along shorelines of the state is  
41 required to comply with the provisions of local shoreline master programs. The  
42 Whatcom County ~~Shoreline Management Program~~SMP works with other chapters of

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

1 the Whatcom County Code to protect and preserve saltwater and freshwater  
2 shorelines throughout the county by managing natural resources and directing  
3 development and land use suitable for the shoreline environment.

4 **~~23.10.030~~ Governing Principles**

Comment [CES3]: These principles have been moved from 23.10.030.

5 The following principles, along with the policy statements of RCW 90.58.020 and  
6 the principles of Chapter 173-26 WAC, establish basic concepts that underpin the  
7 goals, policies, and regulations of the ~~SMP~~ Shoreline Management Plan (SMP) ~~this~~  
8 program:

- 9 A. Any inconsistencies between the ~~SMP~~ ~~this program~~ and the Shoreline  
10 Management Act (SMA) must be resolved in accordance with the SMA.
- 11 B. The policies of the ~~SMP~~ ~~this program~~ may be achieved by diverse means, one  
12 of which is regulation. Other means, authorized by the SMA, include, but  
13 are not limited to: acquisition of lands and/or easements by purchase or gift,  
14 incentive programs, and implementation of capital facility and/or  
15 nonstructural programs.
- 16 C. Protecting the shoreline environment is an essential statewide policy goal,  
17 consistent with other policy goals. Permitted and/or exempt development,  
18 actions taken prior to the SMA's adoption, and/or unregulated activities  
19 can impair shoreline ecological processes and functions. The SMP ~~this~~  
20 ~~program~~ protects shoreline ecology from such impairments in the following  
21 ways:
  - 22 1. By using a process that identifies, inventories, and ensures meaningful  
23 understanding of current and potential ecological functions provided by  
24 shorelines.
  - 25 2. By including policies and regulations that require mitigation of **significant**  
26 adverse impacts in a manner that ensures no net loss of shoreline  
27 ecological functions. The required mitigation shall include avoidance,  
28 minimization, and compensation of impacts in accordance with the  
29 policies and regulations for mitigation sequencing in WCC 23-~~90.030~~ and  
30 the Whatcom County Critical Areas Ordinance (CAO, Chapter 16.16 WCC).  
31 The SMP ~~this program~~ and any future amendment thereto shall ensure no  
32 net loss of shoreline ecological functions and processes on a  
33 programmatic basis in accordance with the baseline functions present as  
34 of the date of adoption of the comprehensive SMP update ~~this program~~,  
35 February 27, 2007.
  - 36 3. By including policies and regulations to address cumulative impacts,  
37 including ensuring that the cumulative effect of exempt development will  
38 not cause a net loss of shoreline ecological functions, and by fairly  
39 allocating the burden of addressing such impacts among development  
40 opportunities.
  - 41 4. By including regulations and regulatory incentives designed to protect  
42 shoreline ecological functions, and restore impaired ecological functions  
43 where such opportunities have been identified, consistent with the

Comment [MD4]: Deleting "significant," as there is no such threshold under SMA.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 Shoreline Management Program Restoration Plan developed by Whatcom
- 2 County.
- 3 D. Regulation of private property to implement ~~SMP~~program goals such as
- 4 public access and protection of ecological functions and processes must be
- 5 consistent with all relevant constitutional and other legal limitations. These
- 6 include, but are not limited to, civil rights guaranteed by the U.S. and state
- 7 Constitutions, ~~recent~~pertinent federal and state case law, and state statutes,
- 8 such as RCW 34.05.328 and 43.21C.060 and Chapter 82.02 RCW.
- 9 E. Regulatory or administrative actions ~~contained herein~~ must be implemented
- 10 consistent with the public trust doctrine and other applicable legal principles
- 11 as appropriate and must not unconstitutionally infringe on private property
- 12 rights or result in an unconstitutional taking of private property.
- 13 F. The regulatory provisions of ~~the SMP~~this program are limited to jurisdictional
- 14 shorelines~~shorelines of the state~~, whereas the planning functions of the
- 15 SMP~~this program~~ may extend beyond the designated shoreline boundaries.
- 16 G. The policies and regulations established by the ~~SMP~~program must be
- 17 integrated and coordinated with those policies and rules of the ~~Whatcom~~
- 18 ~~County~~ Comprehensive Plan and development regulations adopted under the
- 19 ~~Growth Management Act (GMA)~~ and RCW 34.05.328.
- 20 H. Consistent with the policy and use preferences of RCW 90.58.020, Whatcom
- 21 County should balance the various policy goals of ~~the SMP~~this program giving
- 22 consideration to other relevant local, state, and federal regulatory and non-
- 23 regulatory programs.

**Chapter 23.20 – Overall SMP Shoreline Management Program Goals and Objectives**

~~23.20.005 Generally.~~

This ~~section~~chapter describes ~~contains~~ overall ~~program~~SMP goals and objectives. They provide the ~~comprehensive~~ foundation and framework upon which the shoreline area designations, policies, regulations, and administrative procedures are based.

The general policies and regulations (in a later section of this chapter and in Chapter Title 23.90 WCC, respectively) and the specific use policies and regulations (in a later section of this chapter and in WCC Chapter Title 23.100 WCC, respectively) are the means by which these goals and objectives are implemented.

**Comment [MD5]:** Moved all policy content from Chapter 23.20. This section reviewed and coordinated with Title 23 updates.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

**~~23.20.010~~ Adoption:**

In addition to the policy adopted in WCC 23.10.020(C), the following goals and objectives relating to the program elements specified in RCW 90.58.100(2) are hereby adopted. They provide the comprehensive foundation and framework upon which the shoreline area designations, policies, regulations, and administrative procedures are based.

Comment [MD6]: Moved up.

**~~23.20.020~~ Economic Development:**

The economic development element provides for the location and design of industries, transportation facilities, port facilities, tourist facilities, commerce, and other developments that are particularly dependent upon a shoreline location and/or use of the shorelines of the state.

**Goal 11A:** ~~Goal. To create and maintain an economic environment that can coexist harmoniously with the natural and human environment.~~

**B. Objectives:**

**11A-1:** Encourage economic development that has minimal adverse effects and mitigates unavoidable impacts upon shoreline ecological functions and processes and the built environment.

**11A-2:** Encourage shoreline development that has a positive effect upon economic and social activities of value to the region.

**11A-3:** Encourage new water-dependent, water-related, and water-enjoyment economic development in priority order.

**11A-4:** Encourage economic development that is consistent with the adopted Comprehensive Economic Development Strategy (CEDS) for Whatcom County.

**11A-5:** Implement economic development policies contained in other chapters of the Whatcom County Comprehensive Plan in shoreline areas consistent with this chapter, WCC Title 23 program and the SMA Act.

**11A-6:** Encourage new economic development to locate in areas that are already developed with similar uses.

**11A-7:** Discourage expansion of existing development that is incompatible with the Comprehensive Plan~~this program, WCC Title 23, or the character of the local area, or the Whatcom County Comprehensive Plan.~~

**~~23.20.030~~ Public Access:**

The public access element provides for public access to publicly owned or privately owned shoreline areas where the public is granted a right of use or access.

**Goal 11B:A:** ~~Goal. To increase the general public's ability of the general public to reach, touch, and enjoy the water's~~

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

1 edge, to travel on the waters of the state, and/or to view  
2 the water and the shoreline from adjacent locations;  
3 provided, that private rights, ~~the~~ public safety, and  
4 shoreline ecological functions and processes are  
5 protected consistent with the U.S. and state  
6 Constitutions, state case law, and state statutes.

7 ~~B.~~ Objectives:-

8 11B-1: Locate, design, manage, and maintain public access in a manner  
9 that protects shoreline ecological functions and processes and  
10 the public health and safety.

11 11B-2: Design and manage public access in a manner that ensures  
12 compatibility with water-dependent uses.

13 11B-3: Where appropriate, acquire access to publicly owned tidelands  
14 and shorelands. Encourage cooperation among the County,  
15 landowners, developers, and other agencies and organizations  
16 to enhance and increase public access to shorelines as specific  
17 opportunities arise.

18 11B-4: Provide and protect visual access to shorelines and tidelands.

19 11B-5: Require physical or visual access to shorelines as a condition of  
20 approval for shoreline development activities commensurate  
21 with the impacts of such development and the corresponding  
22 benefit to the public, ~~and~~ consistent with constitutional  
23 limitations.

24 11B-6: Develop and manage public access to prevent adverse impacts  
25 to adjacent private shoreline properties and developments.

26 ~~23.20.040 Recreation-~~

27 The recreation element provides for the preservation and expansion of water-  
28 oriented recreational opportunities that facilitate the public's ability to enjoy the  
29 physical and aesthetic qualities of the shoreline through parks, public access to  
30 tidelands and beaches, bicycle and pedestrian paths, viewpoints, and other  
31 recreational amenities.

32 Goal 11C:A- ~~Goal To p~~ Provide opportunities and space for diverse  
33 forms of water-oriented recreation.

34 ~~B.~~ Objectives:-

35 11C-1: Locate, develop, manage, and maintain recreation areas in a  
36 manner that protects shoreline ecological functions and  
37 processes.

38 11C-2: Provide a balanced choice of water-oriented public recreational  
39 opportunities regionally. Ensure that shoreline recreation  
40 facilities serve projected County growth in accordance with the  
41 level of service standards established in the ~~Whatcom County~~  
42 Comprehensive Plan and related goals and policies; ~~the~~

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 Comprehensive Park and Recreation Open Space Plan, the  
2 Whatcom County Bicycle Plan, and the Natural Heritage Plan.
- 3 11C-3: Acquire additional recreation areas and public access areas with  
4 a high recreation value prior to demand to assure that sufficient  
5 shoreline recreation opportunities are available to serve future  
6 recreational needs.
- 7 11C-4: Encourage cooperation among public agencies, nonprofit  
8 groups, and private landowners, and developers to increase and  
9 diversify recreational opportunities through a variety of means  
10 including incorporating water-oriented recreational opportunities  
11 into mixed use developments and other innovative techniques.
- 12 11C-5: Recognize and protect the interest of all people of the state by  
13 providing increased recreational opportunities within shorelines  
14 of statewide significance and associated shorelands.
- 15 11C-6: Encourage private and public investment in recreation facilities.
- 16 11C-7: Locate, design, and operate recreational development in a  
17 manner that minimizes adverse effects on adjacent properties  
18 as well as other social, recreational, or economic activities.
- 19 ~~23-20-050~~ **Transportation and Essential Public Facilities:**
- 20 The transportation and essential public facilities element provides for the general  
21 location and extent of existing and proposed public thoroughfares, transportation  
22 routes, terminals, and other public utilities and facilities.
- 23 **Goal 11D:A: ~~Goal. To provide~~ Provide transportation systems and essential**  
24 **public facilities in shoreline areas without adverse effects**  
25 **on existing shoreline use and development or shoreline**  
26 **ecological functions and/or processes.**
- 27 ~~B.~~ Objectives:
- 28 11D-1: Locate, develop, manage, and maintain transportation systems  
29 and essential public facilities in a manner that protects shoreline  
30 ecological functions and processes. Minimize and mitigate  
31 unavoidable impacts.
- 32 11D-2: Locate and design transportation systems and essential public  
33 facilities to be harmonious with the existing and future economic  
34 and social needs of the community.
- 35 11D-3: Discourage the development of non-water-dependent  
36 transportation systems and essential public facilities unless no  
37 feasible alternatives exist. Devote roads within the shoreline  
38 jurisdiction to low volume local access routes and shoreline  
39 public access where feasible.
- 40 11D-4: When appropriate, require adequate ~~appropriate~~ compensation  
41 where transportation systems and essential public facilities  
42 reduce the benefits people derive from their property.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 | 11D-5: Provide for alternate modes of travel, encourage freedom of  
2 | choice among travel modes, and provide multiple use  
3 | transportation corridors where compatible in association with  
4 | shoreline transportation development.
- 5 | 11D-6: Require transportation system and essential public facility  
6 | development in shoreline areas to protect and enhance physical  
7 | and visual shoreline public access.
- 8 | ~~23-20-060~~ **Shoreline Use:**
- 9 | The shoreline use element ~~considers~~ prioritizes the use and development of  
10 | shorelines and adjacent land areas for housing, business, industry, transportation,  
11 | agriculture, forestry, natural resources, recreation, education, public institutions,  
12 | utilities, and other categories of public and private land use with respect to the  
13 | type, general distribution, location, and extent of such uses and developments.
- 14 | **Goal 11E:A: ~~Goal. To p~~Preserve and develop shorelines in a manner**  
15 | **that allows for an orderly balance of uses.**
- 16 | ~~B.~~ Objectives:-
- 17 | 11E-1: Give preference to water-dependent and single-family  
18 | residential uses that are consistent with preservation of  
19 | shoreline ecological functions and processes. Give secondary  
20 | preference to water-related and water-enjoyment uses. Allow  
21 | non-water-oriented uses only when substantial public benefit is  
22 | provided with respect to the goals of the ~~SMAAct~~ for public  
23 | access and ecological restoration.
- 24 | 11E-2: Designate and maintain appropriate areas for protecting and  
25 | restoring shoreline ecological functions and processes to control  
26 | pollution and prevent damage to the shoreline environment  
27 | and/or public health.
- 28 | 11E-3: Ensure shoreline uses are consistent with the ~~Whatcom County~~  
29 | Comprehensive Plan.
- 30 | 11E-4: Balance the location, design, and management of shoreline uses  
31 | throughout the County to prevent a net loss of shoreline  
32 | ecological functions and processes over time.
- 33 | 11E-5: Encourage mixed use developments that include and support  
34 | water-oriented uses and provide a substantial public benefit  
35 | consistent with the public access and ecological restoration  
36 | goals and policies of the ~~SMAAct~~.
- 37 | 11E-6: Encourage shoreline uses and development that enhance  
38 | shoreline ecological functions and/or processes or employ  
39 | innovative features that further the purposes of the SMP  
40 | ~~this~~ program.
- 41 | 11E-7: Encourage shoreline uses and development that enhance and/or  
42 | increase public access to the shoreline.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

~~23-20-070~~ **Conservation-**

The shoreline conservation element provides for the protection of natural resources, and shoreline ecological functions and processes. Resources to be conserved and protected include, but are not limited to, wetlands; riparian, nearshore, and aquatic habitats; priority fish and wildlife habitats and species; floodplains; feeder bluffs and other geological features; cultural and historic resources; as well as scenic vistas and aesthetics.

**Goal 11F:A:** ~~Goal. To c~~**onserve shoreline resources and important shoreline features, and protect shoreline ecological functions and the processes that sustain them to the maximum extent practicable.**

~~B.~~ Objectives:-

~~11F-1:~~ ~~Develop~~ Maintain regulations and mitigation standards that ensure new shoreline developments prevent a net loss of shoreline ecological functions and processes. Implement such regulations and standards in a manner consistent with all relevant constitutional and other legal limitations on the regulation of private property.

~~11F-2:~~ Protect critical areas in accordance with ~~the policies and regulations in the County's critical areas regulations (WCC Chapter 16.16), as adopted by reference in the SMP.~~

~~11F-3:~~ Manage renewable natural resources on a sustained yield basis. Extract nonrenewable natural resources in a manner that maintains the quality of other resources and shoreline ecological functions and processes.

~~11F-4:~~ Prioritize protection and/or conservation of shoreline areas that are ecologically intact and minimally developed or degraded.

~~23-20-080~~ **Archaeological, historical and Cultural Resources**

The ~~archaeological-historical-cultural resource~~ element provides for protection, preservation and/or restoration of buildings, sites, and areas having archaeological, historical, cultural, or scientific value or significance. “Cultural resource” refers to any archaeological, historic, cemetery, or other cultural sites or artifacts; as well as those traditional food, medicine, fibers, and objects that sustain the religious, ceremonial, and social activities of affected Native American tribes that may be regulated under state or federal laws administered by the Washington State Department of Archaeologic and Historic Preservation (DAHP).

Comment [CES7]: DAHP definition.

**Goal 11G:A:** ~~Goal.~~**Protect shoreline features of historic, cultural, archeological, or scientific value or significance to prevent damage or destruction through coordination and consultation with the appropriate local, state and federal authorities, including affected Indian tribes.**

~~B.~~ Objectives:-

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 | 11G-1: Protect cultural resources sites in collaboration with appropriate
- 2 | tribal, state, federal, and local governments.
- 3 | 11G-2 Engage in and encourage public agencies and private parties to
- 4 | cooperate in the identification, protection and management of
- 5 | cultural resources.
- 6 | 11G-3: Consult with the Washington State Department of Archaeology
- 7 | and Historic Preservation (DAHP) and affected Native American
- 8 | tribes when developing local policies and regulations for
- 9 | identifying, protecting, and preserving cultural resources.
- 10 | 11G-4: Where appropriate, restore unique resources that have cultural,
- 11 | archaeological, historic, educational, or scientific value or
- 12 | significance to further enhance the value of the shorelines.
- 13 | 11G-5: Where appropriate, provide access to cultural resources in a
- 14 | manner that is culturally sensitive and does not degrade the
- 15 | resource or impact the quality of the environment, make access
- 16 | to such sites available to parties of interest; provided, that
- 17 | access to such sites must be designed and managed in a
- 18 | manner that gives maximum protection to the resource.
- 19 | 11G-3: Provide opportunities for education related to archaeological,
- 20 | historical, and cultural features where appropriate and
- 21 | incorporated into public and private programs and development.

**Comment [CES8]:** New proposed policies consistent with our MOU with DAHP and Lummi Nation.

22 | ~~23-20-090~~ **Views and Aesthetics:**

23 | This element provides for preservation and/or protection of scenic vistas, views of

24 | the water, and other aesthetic qualities of shorelines for public enjoyment.

25 | **Goal 11H:A: Goal. To assure that the public's ability and opportunity**

26 | **to enjoy shoreline views and aesthetics is protected.**

27 | ~~B.~~ Objectives:-

28 | 11H-1: Identify and protect areas with scenic vistas and areas where

29 | the shoreline has high aesthetic value.

30 | 11H-2: Design development to minimize adverse impacts on views from

31 | public property or views enjoyed by a substantial number of

32 | residences.

33 | ~~23-20-100~~ **Restoration and Enhancement:**

34 | This element provides for the timely restoration and enhancement of ecologically

35 | impaired areas in a manner that achieves a net gain in shoreline ecological

36 | functions and processes above baseline conditions set as of the date of adoption of

37 | the comprehensive SMP update, February 27, 2007 ~~as of the adoption of this~~

38 | ~~program.~~

39 | **Goal 11I:A: Goal. To reestablish, rehabilitate and/or otherwise**

40 | **improve impaired shoreline ecological functions and/or**

41 | **processes through voluntary and incentive-based public**

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

1 and private programs and actions that are consistent with  
2 the Shoreline Management Program Restoration Plan  
3 ~~(County Resolution 2007-011)~~ and other approved  
4 restoration plans.

5 B. Objectives:-

6 111-1: Encourage and facilitate cooperative restoration and  
7 enhancement programs between local, state, and federal public  
8 agencies, tribes, nonprofit organizations, and landowners to  
9 address shorelines with impaired ecological functions and/or  
10 processes.

11 111-2: Restore and enhance shoreline ecological functions, and  
12 processes, and as well as shoreline features through voluntary  
13 and incentive-based public and private programs, such as the  
14 Shore Friendly Program developed by the Washington State  
15 Department of Fish and Wildlife, Washington State Department  
16 of Natural Resources, and the Environmental Protection Agency.

17 111-3: Target restoration and enhancement towards improving habitat  
18 requirements of priority and/or locally important wildlife species.

19 111-4: Ensure restoration and enhancement is consistent with and,  
20 where practicable, prioritized based on the biological recovery  
21 goals for early Chinook and bull trout populations and other  
22 species and/or populations for which a recovery plan is  
23 available.

24 111-5: Integrate restoration and enhancement with other parallel  
25 natural resource management efforts such as the WRIA 1  
26 Salmonid Recovery Plan, Drayton Harbor and Portage Bay  
27 Shellfish Protection District Plans, WRIA 1 Watershed  
28 Management Plan, ~~Whatcom County Comprehensive Plan~~, and  
29 the Puget Sound Salmon Recovery Draft Plan.

31 ~~Chapter 23.30 Shoreline Jurisdiction and Area Environment~~  
32 ~~Designations~~

33 ~~23.30.022 Shoreline area designations.~~

34 A. A set of 10 shoreline area designations has been developed as a part of the  
35 SMP ~~this program~~. The purpose of the shoreline area designations is to provide a  
36 systematic, rational, and equitable basis upon which to guide and regulate  
37 development within specific shoreline reaches.

38 B. Shoreline area designations have been determined after consideration of:

- 39 1. The ecological functions and processes that characterize the shoreline,  
40 together with the degree of human alteration; and

Comment [AP9]: Draft revision per Scoping Document, Item #8a, Reference WDFW and DNR's Shore Friendly Program.

Comment [MD10]: Moved some content from Chapter 23.30. Section reviewed and coordinated with Title 23 updates.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 2. Existing development patterns together with WCC Title 207 Zoning,  
2 designations, the ~~County~~ Comprehensive Plan designations, and other  
3 officially adopted plans; ~~and~~
- 4 3. Federal and tribal ownership status; ~~and~~
- 5 4. The goals of Whatcom County citizens for their shorelines; ~~and~~
- 6 5. Pursuant to RCW 90.58.100(4), in designating state-owned shorelines,  
7 consideration has been given to public demand for wilderness beaches,  
8 ecological study areas, and other recreational activities; and,
- 9 6. Other state policies in the ~~SMA~~ Act and the ~~SMP~~ Shoreline Master Program  
10 Guidelines (RCW 90.58.020 and Chapter 173-26 WAC, respectively).

11 ~~23.30.030 Urban Shoreline Area~~

12 ~~23.30.031 Urban shoreline area – Purpose~~

13 The purpose of the urban shoreline area is to provide for intensive development of  
14 water-oriented commercial, transportation, and industrial uses and accommodate  
15 mixed use developments such as those consisting of urban density residential,  
16 commercial, and industrial uses, while protecting existing shoreline ecological  
17 functions and processes and restoring shoreline ecological functions and/or  
18 processes in areas that have been previously degraded.

19 ~~23.30.032 Urban shoreline area – Designation Criteria~~

20 The urban shoreline area is applied to shoreline areas zoned commercial, industrial,  
21 and urban density residential within urban growth areas and ~~limited~~ industrial or  
22 commercial areas in Limited Areas of More Intense Rural Development (LAMIRDs),  
23 if they:

- 24 A. Are currently characterized by high intensity development and/or uses; are  
25 designated by the Comprehensive Plan for high intensity uses or intensive  
26 uses related to commerce, transportation or navigation; or are suitable and  
27 planned for high intensity mixed use; and
- 28 B. Do not contain limitations to urban use such as geologic hazards, and have  
29 adequate utilities and access; and
- 30 C. Do not provide important ecological functions that would be significantly  
31 compromised by high intensity residential, commercial, or industrial use.

32 ~~23.30.033 Urban shoreline area – Policies~~

33 Development within urban shoreline areas shall be consistent with the following  
34 policies:

- 35 ~~Policy 11J-1:A-~~ New urban character development should be directed toward  
36 already developed or developing areas where compatible.
- 37 ~~Policy 11J-2:B-~~ First priority should be given to water-dependent uses. Second  
38 priority should be given to water-related and then water-  
39 enjoyment uses. Non-water-oriented uses should not be allowed

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

1 except as part of mixed use developments. Non-water-oriented  
2 uses may also be allowed in limited situations where they do not  
3 conflict with or limit opportunities for water-oriented uses or on  
4 sites where there is no direct access to the shoreline, or where  
5 the needs of existing and future water-dependent uses are met.

6 ~~23.30.040~~ **Urban Resort Shoreline Area**

7 ~~23.30.041~~ **Urban resort shoreline area – Purpose**

8 The purpose of the urban resort shoreline area is to provide for intensive residential  
9 and commercial uses geared to the needs of tourists and day visitors while  
10 protecting existing shoreline ecological functions and processes. Emphasis is on  
11 hotels, motels, shops, restaurants, commercial rental campgrounds, rental cabins,  
12 and shoreline-related recreation facilities.

13 ~~23.30.042~~ **Urban resort shoreline area – Designation Criteria**

14 The urban resort shoreline area is applied to shoreline areas identified in the  
15 Comprehensive Plan as suitable for resort commercial development with substantial  
16 features that might reasonably attract resort development compatible with other  
17 development in the area, and which have existing and/or planned infrastructure  
18 sufficient to support such development.

19 ~~23.30.043~~ **Urban resort shoreline area – Policies**

20 Development within urban resort shoreline areas shall be consistent with the  
21 following policies:

22 Policy 11K-1:A- Scale and design of resort development should assure  
23 compatibility with allowed uses of adjacent shoreline areas and  
24 shoreline ecological functions and processes.

25 Policy 11K-2:B- Buildings over 35 feet in height may be permitted if additional  
26 open space, view areas, public access and/or other amenities  
27 are provided.

28 ~~23.30.050~~ **Urban Conservancy Shoreline Area**

29 ~~23.30.051~~ **Urban conservancy shoreline area – Purpose**

30 The purpose of the urban conservancy shoreline area is to protect shoreline  
31 ecological functions and processes in urban growth areas and Limited Areas of More  
32 Intense Rural Development (LAMIRDS) that are not designated for high intensity  
33 residential use and are not generally suitable for water-dependent uses. The  
34 primary management goal is to preserve shoreline ecological functions and  
35 processes by avoiding forms of development that would be incompatible with  
36 existing functions and processes, as well as identify and focus restoration efforts in  
37 areas where benefits to overall functions and processes can be realized. This policy  
38 should be furthered by maintaining most of the area’s natural character.

**Comment [CES11]:** Copied from Conservancy Shoreline Area, as these two are similar though intended for different areas with different levels of existing development.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

**~~23.30.052 Urban conservancy shoreline area~~ – Designation Criteria**

The urban conservancy shoreline area is applied to shoreline areas inside urban growth areas where any of the following characteristics apply:

- A. They support or retain important shoreline ecological functions and/or processes, even though partially developed.
- B. They have the potential for development at an intensity and character that is compatible with preserving and restoring ecological functions. They are generally not designated for high intensity residential use, commercial use, or industrial use.
- C. They are characterized by critical areas or ~~indicate~~ the presence of other valuable or sensitive ecological resources.

**~~23.30.053 Urban conservancy shoreline area~~ – Policies**

Development within urban conservancy shoreline areas shall be consistent with the following policies:

- ~~Policy 11L-1:A-~~ Primary permitted uses should consist of low intensity residential uses or other low intensity uses that preserve the natural character of the area or promote preservation of open space and critical areas.
- ~~Policy 11L-2:B-~~ Moderate to high intensity residential use may be permitted if the proposed uses and design result in substantial open space, public access and/or restoration of shoreline ecological functions and/or processes, and if compatible with surrounding uses.
- ~~Policy 11L-3:C-~~ Public access and public recreation facilities are a preferred use if they will not cause substantial ecological impacts and when restoration of ecological functions is incorporated.
- ~~Policy 11L-4:D-~~ Low intensity commercial uses may be permitted if the specific uses and design result in substantial open space, public access, and/or restoration of ecological functions, and if compatible with surrounding uses.

**~~23.30.060 Shoreline Residential Area~~**

**~~23.30.061 Shoreline residential area~~ – Purpose**

The shoreline residential shoreline area accommodates residential development and accessory structures that are consistent with this chapter.

**~~23.30.062 Shoreline residential area~~ – Designation Criteria**

The shoreline residential shoreline area is applied to shorelines if they have been predominantly developed with single-family or multifamily residential uses or are planned and platted for residential development. The designation is generally applied to residential densities of greater than one unit per acre.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

~~23.30.063 Shoreline residential area – Policies~~

Development within shoreline residential shoreline areas shall be consistent with the following policies:

Policy 11M-1:A. The scale and density of new uses and development should be compatible with, and protect or enhance, the existing residential character of the area while sustaining shoreline ecological functions and processes.

Policy 11M-2:B. Public or private outdoor recreation facilities should be encouraged if compatible with the character of the area. Preferred uses include water-dependent and water-enjoyment recreation facilities that provide opportunities for substantial numbers of people to access and enjoy the shoreline.

~~Policy 11M-3:C.~~ Commercial development should be limited to water-oriented uses. Non-water-oriented commercial uses may be permitted as part of mixed use developments where the primary use is residential; provided, that such uses ~~should~~ provide a substantial benefit with respect to the goals and policies of the SMP~~this program~~, such as providing public access or restoring degraded shorelines.

~~23.30.070 Rural Shoreline Area~~

~~23.30.071 Rural shoreline area – Purpose~~

The purpose of the rural shoreline area is to protect shoreline ecological functions in areas having a rural character characterized by open space and low density development including, but not limited to: residences, agriculture, forestry, and outdoor recreation. Uses should be compatible with the physical capabilities and limitations, natural resources, and shoreline ecological functions and processes of the area.

~~23.30.072 Rural shoreline area – Designation Criteria~~

The rural shoreline area is applied to shoreline areas outside urban growth areas, particularly areas designated as Rural in the ~~Whatcom County~~ Comprehensive Plan, and includes areas:

- A. Where the shoreline currently accommodates residential uses outside urban growth areas and is characterized by low density development, pasture, agriculture, woodlots, home occupations, and cottage industries. The distribution of rural land use is adjacent to agricultural, forestry, and urban land uses and often provides a transition between urban areas and commercial agriculture and forestry uses. Natural vegetative cover and topography have been altered in many rural areas, but substantial ecological functions, and/or the potential for restoration of ecological functions, are present.
- B. That are now used or potentially usable for a mix of agriculture, forestry, and residential use.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 C. Where residential development is or should be of low density, because of
- 2 | limitations by physical features, infrastructure, the presence of critical areas,
- 3 and/or lack of utilities or access.
- 4 D. That have high recreational value or unique historic or cultural resources.
- 5 E. Where low intensity outdoor recreation use or development would be
- 6 appropriate and compatible with other uses and the physical environment.
- 7 F. Where the shoreline has been developed with low intensity water-dependent
- 8 uses.

9 | ~~23.30.073 Rural shoreline area~~ — **Policies**

10 Development within rural shoreline areas shall be consistent with the following

11 policies:

12 | Policy 11N-1:A- Uses in rural areas should protect or enhance the rural character

13 of the shoreline and sustain the shoreline ecological functions

14 and processes by limiting building density and height, and

15 | providing effective setbacks, buffers, and open space.

16 | Policy 11N-2:B- Residential development consistent with the rural character of

17 the area is permitted, provided it includes measures to protect

18 ecological functions and processes. Related uses consistent with

19 the rural character of the area are permitted.

20 | Policy 11N-3:C- Public or private outdoor recreation facilities should be

21 encouraged if compatible with the rural character of the area

22 and developed in a manner that maintains shoreline ecological

23 functions and processes. Preferred uses include water-oriented

24 recreation facilities that do not deplete shoreline resources over

25 time, such as boating facilities, angling, wildlife viewing trails,

26 and swimming beaches.

27 | Policy 11N-4:D- Industrial or commercial development should be limited to

28 water-oriented commercial and industrial uses in the limited

29 locations where such uses have been established or at sites in

30 rural communities that possess appropriate shoreline conditions

31 and services sufficient to support such developments. Non-

32 | water-dependent uses should only be allowed when they

33 provide a substantial benefit with respect to the goals and

34 | policies of the SMP~~this program~~, such as providing public access

35 and/or restoring degraded shorelines.

36 | Policy 11N-5:E- Agriculture and forestry consistent with rural character and the

37 maintenance of shoreline ecological functions and processes

38 should be encouraged.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

~~23.30.080 Resource Shoreline Area~~

~~23.30.081 Resource shoreline area – Purpose~~

The purpose of the resource shoreline area is to protect shoreline ecological functions and processes in areas designated in the ~~Whatcom County~~ Comprehensive Plan as agriculture ~~resource lands~~, rural forestry, commercial forestry, and mineral resource lands and to protect the economic base of those lands and limit incompatible uses.

~~23.30.082 Resource shoreline area – Designation Criteria~~

The resource shoreline area is applied to shoreline areas designated as agriculture, rural forestry, commercial forestry, and mineral resource lands in the ~~Whatcom County~~ Comprehensive Plan and includes areas where the shoreline currently accommodates ongoing resource management, where natural vegetation cover has been altered but substantial ecological functions, or the potential for restoring ecological functions, are present.

~~23.30.083 Resource shoreline area – Policies~~

Development within resource shoreline areas shall be consistent with the following policies:

~~Policy 110-1:A-~~ Uses in resource areas should protect the economic base of those lands, limit incompatible uses, and sustain the shoreline area ecological processes and functions by limiting uses and intensity. Residential use is generally limited to one dwelling per existing parcel. The dwelling may be located within the shoreline jurisdiction, only where no other building site is feasible on the parcel.

~~Policy 110-2:B-~~ Public or private outdoor recreation facilities should be permitted if they do not displace designated resource lands and if they are developed in a manner that maintains shoreline ecological functions. Preferred uses include water-dependent and water-enjoyment recreation facilities.

~~Policy 110-3:C-~~ Industrial or commercial use and development should be limited to uses that serve resource uses. Such uses may be located within the shoreline only if they are water-dependent, water-related, or if no other feasible location exists within the contiguous property.

~~23.30.090 Conservancy Shoreline Area~~

~~23.30.091 Conservancy shoreline area – Purpose~~

The purpose of the conservancy shoreline area is to retain shoreline ecological functions in areas outside of urban growth areas and LAMIRDS where important ecological processes have not been substantially degraded by human activities. ~~Conservancy areas are designated outside of urban growth areas. The primary~~

**Comment [CES12]:** Clarification, as per the SMA, Conservancy is only to be applied outside of urban areas.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

1 management goal is to preserve shoreline ecological functions and processes by  
2 avoiding forms of development that would be incompatible with existing functions  
3 and processes, as well as identify and focus restoration efforts in areas where  
4 benefits to overall functions and processes can be realized. This policy should be  
5 furthered by keeping overall intensity of development or use low, and by  
6 maintaining most of the area's natural character.

7 ~~23.30.092 Conservancy shoreline area~~ — **Designation Criteria**

8 The conservancy shoreline area is applied to shoreline areas outside urban growth  
9 areas and LAMIRDs that include areas:

- 10 A. Where development activities and uses are buffered from and do not  
11 substantially degrade ecological processes and functions.
- 12 B. Where ecological functions are more intact than in areas designated rural or  
13 resource.
- 14 C. Of outstanding scenic quality or other aesthetic qualities of high value to the  
15 region, which would likely be diminished unless development is strictly  
16 controlled.
- 17 D. Containing critical areas or other sensitive natural or cultural features that  
18 require more than normal restrictions on development and use.
- 19 E. Having the potential to influence ecological processes in a manner that will  
20 produce ecosystem-wide benefits upon restoration.
- 21 F. That contain valuable or sensitive natural or cultural features that preclude  
22 more than a low overall density of residents, recreation use, structures, or  
23 livestock, as well as extensive alterations to topography or other features.
- 24 G. Have recreational value to the region that would likely be diminished unless  
25 development is strictly controlled.

26 ~~23.30.093 Conservancy shoreline area~~ — **Policies**

27 Development within conservancy shoreline areas shall be consistent with the  
28 following policies:

- 29 Policy 11P-1:A- Natural ecological processes should be protected and renewable  
30 resources managed so that ecological functions and the  
31 resource base are maintained. Nonrenewable resources should  
32 only be consumed in a manner compatible with conservation of  
33 other resources and other appropriate uses.
- 34 Policy 11P-2:B- Permitted uses should be limited to those compatible with each  
35 other and with conservation of shoreline ecological processes  
36 and resources.
- 37 Policy 11P-3:C- Shorelines should be protected from ~~harmful~~ concentrations of  
38 people, livestock, buildings, or structures that would adversely  
39 impact shoreline ecological functions and processes.

Comment [AP13]: Revised for clarity and usability.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

1 | ~~Policy 11P-4:D-~~ Opportunities for ecological restoration should be pursued,  
2 | prioritizing those areas with the greatest potential to restore  
3 | ecosystem-wide processes and functions.

4 | ~~Policy 11P-5:E-~~ Outstanding recreational or scenic values should be protected  
5 | from incompatible development.

6 | ~~**23.30.100 Natural Shoreline Area**~~

7 | ~~**23.30.101 Natural shoreline area – Purpose**~~

8 | The purpose of the natural shoreline area is to ensure long-term preservation of  
9 | ~~ecologically intact~~ shorelines inside or outside urban growth areas ~~that are~~  
10 | ~~ecologically intact~~.

11 | ~~**23.30.102 Natural shoreline area – Designation Criteria**~~

12 | The natural shoreline area is applied to shoreline areas where any of the following  
13 | characteristics apply:

14 | A. The majority of natural ecological shoreline functions and/or processes are  
15 | retained, often evidenced by the shoreline configuration and the presence of  
16 | native vegetation. Generally, but not necessarily, they include ecologically  
17 | intact shorelines that are free of structural shoreline modifications,  
18 | structures, and intensive human uses.

19 | B. Forested areas that generally include native vegetation with diverse plant  
20 | communities, multiple canopy layers, and the presence of large woody debris  
21 | available for recruitment to adjacent water bodies.

22 | C. Valuable functions are provided for the larger aquatic and terrestrial  
23 | environments, which could be lost or significantly reduced by human  
24 | development.

25 | D. Ecosystems or geologic types that are of particular scientific and educational  
26 | interest are represented.

27 | E. Largely undisturbed areas of wetlands, estuaries, unstable bluffs, coastal  
28 | dunes, and spits are present.

29 | F. New development, extractive uses, or physical modifications cannot be  
30 | supported without significant adverse impacts to ecological functions and/or  
31 | processes or risk to human safety.

32 | ~~**23.30.103 Natural shoreline area – Policies**~~

33 | Development within natural shoreline areas shall be consistent with the following  
34 | policies:

35 | ~~Policy 11Q-1:A-~~ Preservation of the area’s ecological functions, natural features  
36 | and overall character must receive priority over any other  
37 | potential use. Uses should not degrade shoreline ecological  
38 | functions or processes or the natural character of the shoreline  
39 | area. New development or significant vegetation removal that

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 would reduce the capability of the shoreline to perform a full  
2 range of ecological functions or processes should not be  
3 permitted.
- 4 | ~~Policy 11Q-2-B-~~ Private and/or public enjoyment of natural shoreline areas  
5 should be encouraged and facilitated through low intensity  
6 recreational, scientific, historical, cultural, and educational  
7 research uses; provided, that no significant ecological impact on  
8 the area will result.
- 9 | ~~Policy 11Q-3-C-~~ Agricultural and forestry uses of a very low intensity nature may  
10 be consistent with the natural shoreline area when such use is  
11 subject to appropriate limitations or conditions to assure that  
12 the use does not expand or alter practices in a manner  
13 inconsistent with the purpose of the designation.
- 14 | ~~Policy 11Q-4-D-~~ The following uses should not be permitted in the natural  
15 shoreline area:  
16 1. Commercial uses.  
17 2. Industrial uses.  
18 3. Non-water-oriented recreation.  
19 4. Roads, utility corridors, and parking areas that can be  
20 located outside of natural shoreline areas.

21 | ~~23.30.110 Aquatic Shoreline Area~~

22 | ~~23.30.111 Aquatic shoreline area—Purpose~~

23 The purpose of the aquatic shoreline area is to protect, restore, and manage the  
24 characteristics and resources of the areas waterward of the ordinary high water  
25 mark.

26 | ~~23.30.112 Aquatic shoreline area—Designation Criteria~~

27 The aquatic shoreline area is defined as the area waterward of the ordinary high  
28 water mark of all streams, rivers, lakes, and marine water-bodies; ~~and lakes,~~  
29 constituting shorelines of the state together with their underlying lands and their  
30 water column.

31 | ~~23.30.113 Aquatic shoreline area—Policies~~

32 Development within aquatic shoreline areas shall be consistent with the following  
33 policies:

- 34 | ~~Policy 11R-1-A-~~ New over-water structures should only be permitted for water-  
35 dependent uses, public access, or ecological restoration. The  
36 size of new over-water structures should be limited to the  
37 minimum necessary to support the structure's intended use. In  
38 order to reduce the impacts of shoreline development and  
39 increase effective use of water resources, multiple use of over-  
40 water facilities should be encouraged.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 | ~~Policy 11R-2:B-~~ All developments and uses on navigable waters or their beds
- 2 | should be located and designed to minimize interference with
- 3 | surface navigation, to consider impacts to public views, and to
- 4 | allow for the safe, unobstructed passage of fish and wildlife,
- 5 | particularly those species dependent on migration.
- 6 | ~~Policy 11R-3:C-~~ Uses that adversely impact the ecological functions of critical
- 7 | saltwater and freshwater habitats should not be permitted
- 8 | except where necessary to achieve the objectives of RCW
- 9 | 90.58.020, and then only when all potential impacts are
- 10 | mitigated as necessary to assure maintenance of shoreline
- 11 | ecological functions and processes.
- 12 | ~~Policy 11R-4:D-~~ Shoreline uses and modifications should be designed and
- 13 | managed to prevent degradation of water quality and alteration
- 14 | of natural conditions.

15 | ~~23.30.120~~ **Cherry Point Management Area**

16 | **Purpose**

17 | ~~Washington State natural resource agencies and Whatcom County have identified~~  
 18 | ~~certain portions of the Cherry Point management area as providing herring~~  
 19 | ~~spawning habitat and other key habitat characteristics that warrant special~~  
 20 | ~~consideration due to their importance to regional fisheries and other elements of~~  
 21 | ~~the aquatic environment. The purpose of the Cherry Point management area is to~~  
 22 | ~~provide a regulatory framework that recognizes and balances the special port,~~  
 23 | ~~industrial, and natural resource needs associated with the development of this~~  
 24 | ~~marine resource.~~

**Comment [P/C14]:** Moved from Use & Modification section, CPMA, Policies 11TT-1 & 2, to fit the layout of other sections where in purpose is located in the Shoreline Environments section.

25 | **Designation Criteria**

26 | ~~The Cherry Point Management Area is a geographic area lying between the eastern~~  
 27 | ~~property boundary of Tax Lots 2.27 and 2.28 within the SE 1/4 of Section 11,~~  
 28 | ~~Township 39 North, Range 1 West, as it existed on June 18, 1987, and the southern~~  
 29 | ~~boundary of Section 32, Township 39 North, Range 1 East, extending waterward a~~  
 30 | ~~distance of 5,000 feet and extending landward for 200 feet as measured on a~~  
 31 | ~~horizontal plane from the OHWM. This area shall have the Cherry Point~~  
 32 | ~~Management Area shoreline environment designation.~~

**Comment [CES15]:** Copied from original definition of the CPMA in Title 23

33 | **Policies**

34 | ~~The pPolicies applicable to the Cherry Point Management Area are found in the~~  
 35 | ~~Shoreline Use and Modifications Policies section of this chapter; applicable r~~  
 36 | ~~regulations and standards, etc., applicable to the Cherry Point management area~~  
 37 | ~~are found in WCC Title 23.400.170, except as otherwise specified therein.~~

38 | **Shorelines of Statewide Significance**

39 | ~~23.40.010 Adoption of policy:~~  
 40 | In accordance with RCW 90.58.020, the following management and administrative  
 41 | policies are hereby adopted for all shorelines of statewide significance in  
 42 | unincorporated Whatcom County, as defined in RCW 90.58.030(2)(e) and identified

**Comment [MD16]:** Moved some content from Chapter 23.40. Section reviewed and coordinated with Title 23 updates.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

1 | in WCC ~~23.06040-020~~. Consistent with the policy contained in RCW 90.58.020,  
2 | preference shall be given to the uses that are consistent with the statewide interest  
3 | in such shorelines. In the following order or preference, these are uses that:

Comment [CES17]: The language of WAC 173-26-181 recognizes an order of preference

- 4 | A. Recognize and protect the statewide interest over local interest.
- 5 | B. Preserve the natural character of the shoreline.
- 6 | C. Result in long-term over short-term benefit.
- 7 | D. Protect the resources and ecology of the shoreline.
- 8 | E. Increase public access to publicly owned areas of the shoreline.
- 9 | F. Increase recreational opportunities for the public in the shoreline.
- 10 | G. Provide for any other element as defined in RCW 90.58.100 deemed
- 11 | appropriate or necessary.

12 | Uses that are not consistent with these policies should not be permitted on  
13 | shorelines of statewide significance.

14 | ~~**23.40.030 Policies for Shorelines of Statewide Significance**~~

15 | The statewide interest should be recognized and protected over the local interest in  
16 | shorelines of statewide significance. To ensure that statewide interests are  
17 | protected over local interests, the County shall review all development proposals  
18 | within shorelines of statewide significance for consistency with RCW 90.58.030 and  
19 | the following policies:

20 | Policy 11-1:A.      Redevelopment of shorelines should be encouraged where it  
21 |                           restores or enhances shoreline ecological functions and  
22 |                           processes impaired by prior development activities.

23 | Policy 11S-2:B-    The Washington Departments of Fish and Wildlife and Ecology,  
24 |                           the Lummi Nation, the Nooksack Tribe, and other resources  
25 |                           agencies should be consulted for development proposals that  
26 |                           could affect anadromous fisheries.

27 | Policy 11S-3:C-    Where commercial timber cutting takes place pursuant to WCC  
28 |                           ~~23.40.11023-90-110~~ and RCW 90.58.150, reforestation should  
29 |                           take place as soon as possible.

30 | Policy 11S-4:D-    Activities that use shoreline resources on a sustained yield or  
31 |                           non-consuming basis and that are compatible with other  
32 |                           appropriate uses should be given priority over uses not meeting  
33 |                           these criteria.

34 | Policy 11S-5:E-    The range of options for shoreline use should be preserved to  
35 |                           the maximum possible extent for succeeding generations.  
36 |                           Development that consumes valuable, scarce, sensitive, or  
37 |                           irreplaceable natural resources should be protected to the  
38 |                           maximum extent feasible and should not be permitted if  
39 |                           alternative sites are available.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 | ~~Policy 11S-6:F-~~ Potential short-term economic gains or convenience should be
- 2 | measured against potential long-term and/or costly impairment
- 3 | of natural features.
- 4 | ~~Policy 11S-7:G-~~ Protection or enhancement of aesthetic values should be
- 5 | actively promoted in design review of new or expanding
- 6 | development.
- 7 | ~~Policy 11S-8:H-~~ Resources and ecological systems of shorelines of statewide
- 8 | significance should be protected. Shorelands and submerged
- 9 | lands should be protected to accommodate current and
- 10 | projected demand for economic resources of statewide
- 11 | importance, such as commercial shellfish beds.
- 12 | ~~t. Those limited shorelines containing unique, scarce and/or~~
- 13 | ~~sensitive resources should be protected to the maximum extent~~
- 14 | ~~feasible.~~
- 15 | ~~Policy 11S-9:J-~~ Erosion and sedimentation from development sites should be
- 16 | controlled to minimize adverse impacts on ecosystem processes.
- 17 | If site conditions preclude effective erosion and sediment
- 18 | control, excavations, land clearing, or other activities likely to
- 19 | result in significant erosion should be severely limited.
- 20 | ~~Policy 11S-10:K-~~ Public access development in extremely sensitive areas should
- 21 | be restricted or prohibited. All forms of recreation or access
- 22 | development should be designed to protect the resource base
- 23 | upon which such uses in general depend.
- 24 | ~~Policy 11S-11:L-~~ Public and private developments should be encouraged to
- 25 | provide trails, viewpoints, water access points and shoreline-
- 26 | related recreation opportunities whenever possible. Such
- 27 | development is recognized as a high priority use.
- 28 | ~~Policy 11S-12:M-~~ Development not requiring a ~~waterside or~~ shoreline location
- 29 | should be located inland so that lawful public enjoyment of
- 30 | shorelines is ~~enhanced~~ preserved.
- 31 | ~~Policy 11S-13:N-~~ Lodging and related facilities should be located inland and
- 32 | provide for appropriate means of access to the shoreline.

**Comment [AP18]:** Incorporated into Policy 11X-5 above to avoid redundancy.

~~Chapter 23.90 General Policies and Regulations~~

~~The following general policies apply to all use and development activities on shorelines.~~

~~23.90.020 Land Use~~

~~The following land use policies delineate the use preferences of the Act and this program and are intended to support the goals and objectives of the program:~~

~~A. Policies:~~

- 40 | ~~Policy 11T-1:~~ Single-family residences should be given preference for location
- 41 | on shorelines in those limited instances when an alteration of

**Comment [MD19]:** Moved most policy content from Chapter 23.90. Section reviewed and coordinated with Title 23 updates.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

the shorelines is authorized (RCW 90.58.020). ~~Single-family residences occupied prior to January 1, 1992, and their appurtenant structures should be protected against damage or loss caused by shoreline erosion; provided, that measures to protect single-family residences should be designed to minimize harm to the shoreline environment. However, After that date, all new single-family residences permitted after January 1, 1992, and their appurtenant structures should be built in a manner so as to not need protective structures.~~

**Comment [CES20]:** Moved to Shoreline Stabilization section at P/C's request, as it's a separate concept from the 1<sup>st</sup> sentence.

Policy 11T-2:

Shoreline uses that are water-dependent or water-related should be given preference (RCW 90.58.020). Such uses should be located, designed, and maintained in a manner that minimizes adverse impacts to shoreline ecological functions and/or processes. Non-water-oriented development may be allowed; provided, that existing water-dependent uses are not displaced and the future supply of sites for water-dependent or water-related uses is not compromised.

Policy 11T-3:

Adequate space should be reserved on shorelines to meet the current and projected demand for water-dependent uses, in conjunction with areas provided in cities, towns and areas under tribal jurisdiction.

~~23-90-030~~ **Ecological Protection and Critical Areas**

A. ~~\_\_\_\_\_~~ Policies:

Policy 11U-1:

Shoreline use and development should be carried out in a manner that prevents or mitigates adverse impacts so that the resulting ecological condition does not become worse than the current condition. This means assuring no net loss of ecological functions and processes and protecting critical areas designated in WCC Chapter 16.16, in a manner consistent with all relevant constitutional and other legal limitations on the regulation of private property. Permitted uses shall be designed and conducted to minimize, insofar as practical, any resultant damage to the ecology and environment (RCW 90.58.020). Shoreline ecological functions that should be protected include, but are not limited to, fish and wildlife habitat, food chain support, and water temperature maintenance. Shoreline processes that should be protected include, but are not limited to, water flow; littoral drift; erosion and accretion; infiltration; ground water recharge and discharge; sediment delivery, transport, and storage; large woody debris recruitment; organic matter input; nutrient and pathogen removal; and stream channel formation/maintenance.

Policy 11U-2:

In assessing the potential for net loss of ecological functions or processes, project-specific and cumulative impacts should be considered.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

1 | Policy 11U-3: Development standards for density, frontage, setbacks,  
2 | impervious surface, shoreline stabilization, vegetation  
3 | conservation, buffers, critical areas, and water quality should  
4 | protect existing shoreline ecological functions and processes.  
5 | During permit review, the administrator should consider the  
6 | expected impacts associated with proposed shoreline  
7 | development when assessing compliance with this policy.

8 | ~~23.90.040~~ **Water Quality and Quantity**

9 | A. ~~\_\_\_\_\_~~ Policies.

10 | Policy 11V-1: The location, construction, operation, and maintenance of all  
11 | shoreline uses and developments should maintain ~~or enhance~~  
12 | the quantity and maintain or enhance the quality of surface and  
13 | ground-water over the long term.

**Comment [CES21]:** Development shouldn't enhance the quantity of surface water. We're not supposed to *increase* stormwater runoff.

14 | Policy 11V-2: Shoreline use and development should minimize the need for  
15 | chemical fertilizers, pesticides, or other similar chemical  
16 | treatments to prevent contamination of surface and ground  
17 | water and/or soils, and adverse effects on shoreline ecological  
18 | functions and values.

19 | Policy 11V-3: Appropriate buffers along all wetlands, streams, lakes, and  
20 | marine water bodies should be provided and maintained in a  
21 | manner that avoids the need for chemical treatment.

22 | ~~23.90.050~~ **Views and Aesthetics**

23 | A. ~~\_\_\_\_\_~~ Policies.

24 | Policy 11W-1: Shoreline use and development activities should be designed  
25 | and operated to minimize obstructions of the public's visual  
26 | access to the water and shoreline.

27 | Policy 11W-2: Shoreline use and development should not significantly detract  
28 | from shoreline scenic and aesthetic qualities that are derived  
29 | from natural or cultural features, such as shoreforms, vegetative  
30 | cover and historic sites/structures.

31 | Policy 11W-3: Aesthetic objectives should be implemented through regulations  
32 | and criteria for site planning, maximum height, setbacks, siting  
33 | of buildings and accessories, screening, vegetation  
34 | conservation, architectural standards, sign control regulations,  
35 | appropriate development siting, designation of view corridors,  
36 | and maintenance of natural vegetative buffers.

37 | Policy 11W-4: To protect shoreline ecological functions and aesthetics,  
38 | vegetation conservation should be preferred over the creation or  
39 | maintenance of views from shoreline properties. Clearing,  
40 | thinning, and/or limbing for limited view corridors should only  
41 | be allowed where it does not adversely impact ecological and/or  
42 | aesthetic values, and/or slope stability. ~~Vegetation conservation~~

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

1 should be preferred over the creation or maintenance of views  
2 from property on the shoreline to protect shoreline ecological  
3 functions and aesthetics.

4 **~~23.90.060~~ Vegetation Conservation**

5 A. ~~\_\_\_\_\_~~ Policies.

6 Policy 11X-1: Where new developments and/or uses are proposed, native  
7 shoreline vegetation should be conserved to maintain shoreline  
8 ecological functions and/or processes and mitigate the direct,  
9 indirect and/or cumulative impacts of shoreline development,  
10 wherever feasible.

11 ~~Important functions of shoreline vegetation include, but are not limited to:~~

12 ~~Providing shade necessary to maintain water temperatures~~  
13 ~~required by salmonids, forage fish, and other aquatic biota.~~

14 ~~Regulating microclimate in riparian and nearshore areas.~~

15 ~~Providing organic inputs necessary for aquatic life, including~~  
16 ~~providing food in the form of various insects and other benthic~~  
17 ~~macroinvertebrates.~~

18 ~~Stabilizing banks, minimizing erosion and sedimentation, and~~  
19 ~~reducing the occurrence/severity of landslides.~~

20 ~~Reducing fine sediment input into the aquatic environment by~~  
21 ~~minimizing erosion, aiding infiltration, and retaining runoff.~~

22 ~~Improving water quality through filtration and vegetative uptake~~  
23 ~~of nutrients and pollutants.~~

24 ~~Providing a source of large woody debris to moderate flows,~~  
25 ~~create hydraulic roughness, form pools, and increase aquatic~~  
26 ~~diversity for salmonids and other species.~~

27 ~~Providing habitat for wildlife, including connectivity for travel~~  
28 ~~and migration corridors.~~

Comment [MD22]: Importance of veg has been established; don't need to repeat in a policy.

29 **~~23.90.070~~ Archaeological, Historic and Cultural Resources**

30 The following policies apply to cultural resources that are (a) listed on the national,  
31 state, or local registers of historic places; (b) recorded by the Washington State  
32 Department of Archaeology and Historic Preservation (DAHP), a Native American  
33 tribe, and/or a local jurisdiction; or (c) undiscovered, inadvertently uncovered , or  
34 yet unrecorded.

35 Archaeological sites located in (as well as outside of) shoreline jurisdiction are  
36 subject to RCW Chapter 27.44 (Indian graves and records) and RCW Chapter 27.53  
37 (Archaeological sites and records). Shoreline uses or development that may impact  
38 such sites shall comply with WAC Chapter 25-48 as well as the provisions of this  
39 Shoreline Master Program.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

1 Pursuant to RCW 27.53.070, information and documents pertaining to the location  
2 of archaeological sites or resources are confidential and not considered public  
3 records that require disclosure.

4 ~~A.~~ Policies:

5 Policy 11X-1: The County should work with tribal, state, federal, and local  
6 governments as appropriate to maintain an inventory of all  
7 known significant ~~local historic, cultural and archaeological sites~~  
8 resources in observance of applicable state and federal laws  
9 protecting such information from general public disclosure. As  
10 appropriate, such sites should be protected, preserved and/or  
11 restored for study, education, and/or public enjoyment to the  
12 maximum possible extent.

13 Policy 11X-2: Site development plans should incorporate provisions for  
14 ~~historic, cultural and archaeological sites~~resource preservation,  
15 restoration, and education with open space or recreation areas  
16 whenever compatible and possible.

17 ~~3.~~ ~~Cooperation among involved private and public parties is~~  
18 ~~encouraged to achieve the archaeological, historical and cultural~~  
19 ~~element goals and objectives of this program.~~

Comment [AP23]: This is captured in policies #1 and #4 (revised to #3).

20 Policy 11X-3:4- Owners of property containing ~~identified historic, cultural or~~  
21 ~~archaeological sites~~resources are encouraged to make  
22 development plans known well in advance of application, so that  
23 appropriate agencies such as the Lummi Nation, Nooksack  
24 Tribe, Washington State Department of Archaeology and Historic  
25 Preservation, and others may have ~~ample~~adequate time to  
26 assess the site and make arrangements to preserve ~~historic,~~  
27 ~~cultural and archaeological~~ values as applicable.

28 Policy 11X-4:5- Private and public owners of historic sites should be encouraged  
29 to provide public access and educational opportunities in a  
30 manner consistent with long-term protection of both historic  
31 values and shoreline ecological functions.

32 Policy 11X-5:6- ~~Historic, cultural, and archaeological sites~~Development on sites  
33 containing cultural resources should be planned and carried out  
34 so as to prevent impacts to the resource. Impacts to  
35 neighboring properties and other shore uses should be limited to  
36 temporary or reasonable levels.

37 Policy 11X-6:7- If development is proposed adjacent to an identified ~~historic,~~  
38 ~~cultural or archaeological sites~~resource, then the proposed  
39 development should be designed and operated so as to be  
40 compatible with continued protection of ~~the historic, cultural or~~  
41 ~~archaeological~~that sitesresource.

42 Policy 11X-7:8- The cultural resource provisions of this program are consistent  
43 with Chapters 27.44 and 27.53 RCW and WAC 25-48-060. In

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 accordance with state law, all applicants are subject to these  
2 requirements.
- 3 Policy 11X-8: The County shall consult with DAHP and affected Native  
4 American tribes as appropriate in implementing the cultural  
5 ~~archaeological, and historic resources~~ goals, objectives, policies,  
6 and regulations of this ~~program-SMP~~.
- 7 Policy 11X-9: In reviewing development proposals, the County shall take, or  
8 cause project applicants to take, all required actions to:
- 9 1. Minimize the risk of disturbing cultural resources within  
10 Whatcom County shorelines.
  - 11 2. Due to the limited and irreplaceable nature of the  
12 resource(s), prevent the destruction of or damage to any site  
13 having historic, cultural, scientific, or educational value as  
14 identified by the appropriate authorities, including affected  
15 Tribes and the DAHP.
  - 16 3. Consult with professional archaeologists, DAHP, and affected  
17 Tribes before permitting or otherwise approving the use or  
18 development of shoreline areas containing cultural resources.  
19 This consultation shall be accomplished through the  
20 regulations and procedures provided in WCC Title 23.
  - 21 4. Consult with DAHP and affected Tribes and coordinate with  
22 project archaeologists to establish site- and project-specific  
23 procedures for protection and management of cultural  
24 resources.
  - 25 5. Make informed specific land use decisions based upon  
26 information provided by DAHP and Tribes.
  - 27 6. Ensure the use of the best available information, technology,  
28 and techniques in identifying, protecting, preserving, and  
29 restoring cultural resources.

Comment [CES24]: New policy based on language of our MOU with DAHP and Lummi Nation.

30 ~~23.90.080~~ **Public Access**

31 A. ~~Policies:~~

- 32 Policy 11Y-1: Use and development that provide an opportunity for substantial  
33 numbers of ~~the~~ people to enjoy the shorelines of the state are a  
34 preferred use.
- 35 Policy 11Y-2: Physical or visual access to shorelines should be incorporated in  
36 all new development when the development would either  
37 generate a demand for one or more forms of such access,  
38 and/or would impair existing legal access opportunities or rights.  
39 ~~Public health and safety concerns should also be adequately~~  
40 ~~addressed and maintenance of shoreline ecological functions~~  
41 ~~and/or processes should be assured.~~ As required by the  
42 governing principles, all such conditions should be consistent

Comment [MD25]: Addressed in #6 below.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 with all relevant constitutional and other legal limitations on  
2 regulation of private property.
- 3 | Policy 11Y-3: Public access should be provided for water-oriented uses and  
4 non-water-dependent uses and developments that increase  
5 public use of the shorelines and public aquatic lands, or that  
6 would impair existing, legal access opportunities.
- 7 | Policy 11Y-4: Non-water-related uses or activities located on the shoreline  
8 should provide public access as a public benefit.
- 9 | Policy 11Y-5: Public access area and/or facility requirements should be  
10 commensurate with the scale and character of the development  
11 and should be reasonable, effective, and fair to all affected  
12 parties including but not limited to the land-owner and the  
13 public.
- 14 | Policy 11Y-6: Public access design should provide for public safety and  
15 minimize potential impacts to private property, individual  
16 privacy, and shoreline ecological functions and processes.
- 17 | Policy 11Y-7: Shoreline development by public entities, such as local  
18 governments, port districts, state agencies, and public utility  
19 districts, should provide public access measures as part of each  
20 development project, unless such access is shown to be  
21 incompatible due to reasons of safety, security, or impact to the  
22 shoreline.

23 ~~23.90.090~~ **Site Planning**

24 A. ~~\_\_\_\_\_~~ Policies.

- 25 | Policy 11Z-1: Development and use should be designed in a manner that  
26 directs land alteration to the least sensitive portions of the site  
27 to maximize vegetation conservation; minimize impervious  
28 surfaces and runoff; protect riparian, nearshore and wetland  
29 habitats; protect wildlife and habitats; protect archaeological,  
30 historic, and cultural resources; and preserve aesthetic values.  
31 This may be accomplished by minimizing the project footprint,  
32 the use of clustering, and other appropriate design approaches.
- 33 | Policy 11Z-2: To maintain shoreline ecological functions and processes, ~~How~~  
34 impact and sustainable development practices such as rain  
35 gardens, and pervious surfacing methods including, but not  
36 limited to, porous paving blocks, porous concrete, and other  
37 similar materials, should be incorporated in developments where  
38 site conditions allow ~~to maintain shoreline ecological functions~~  
39 ~~and processes~~. Topographic modification, vegetation clearing,  
40 use of impervious surfaces, and alteration of natural drainage or  
41 other features should be limited to the minimum necessary to  
42 accommodate approved uses and development. An engineering

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 geologist should be consulted prior to using infiltration practices  
2 on shore bluffs.
- 3 | Policy 11Z-3: Accessory development or use that does not require a shoreline  
4 location should be located outside of shoreline jurisdiction unless  
5 such development is required to serve approved water-oriented  
6 | uses and/or developments. When sited within shorelines  
7 jurisdiction, uses and/or developments such as parking, service  
8 | buildings or areas, access roads, utilities, signs, and storage of  
9 materials should be located inland away from the land/water  
10 interface and landward of water-oriented developments and/or  
11 other approved uses.
- 12 | Policy 11Z-4: Development should be located, designed, and managed so that  
13 impacts on shoreline or upland uses are minimized through bulk  
14 and scale restrictions, setbacks, buffers, and control of  
15 proximity impacts such as noise or light and glare.
- 16 | Policy 11Z-5: Shoreline uses should not deprive other uses of reasonable  
17 access to navigable waters. Public recreation activities such as  
18 fishing, clam digging, swimming, boating, ~~and~~ wading, and  
19 other water-related recreation should be preserved and  
20 enhanced. The rights of treaty tribes to resources within their  
21 usual and accustomed areas should be accommodated.
- 22 **Climate Change/Sea Level Rise**
- 23 Policy 11AA-1: Coordinate with Tribal, Federal, State, and local agencies to  
24 address issues related to climate change and sea level rise as  
25 related to shoreline management.
- 26 Policy 11AA-2: Whatcom County should plan and prepare for the likely impacts  
27 of climate change on County-owned facilities, infrastructure, and  
28 natural resources and ensure that projects for major  
29 maintenance or replacement of utilities, roads, and other public  
30 infrastructure consider the impacts of sea-level rise in the  
31 location, design, and operation of the projects.
- 32 Policy 11AA-3: Whatcom County should strive to increase resident and business  
33 resiliency to the anticipated impacts of climate change by  
34 implementing land use regulations based on best available  
35 science, such as sea level rise, changes in rainfall patterns,  
36 changes in flood volumes and frequencies, and changes in  
37 average and extreme temperatures.
- 38 Policy 11AA-4: Habitat protection and restoration projects in shoreline  
39 jurisdiction should consider implications of sea-level rise and  
40 other climate change impacts to promote resiliency of habitats  
41 and species. Those that promote climate change and sea-level  
42 rise resiliency should be considered priority actions.

**Comment [CES26]:** New policies based on Scoping Document Topic #6a, *Develop and/or strengthen policies regarding climate change/sea level rise, including the incorporation and use of new data (as it becomes available), to review and revise, if warranted, shoreline use regulations.*

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

1 Policy 11AA-5: Whatcom County should monitor the impacts of climate change  
2 on Whatcom County's shorelands, the shoreline master  
3 program's ability to adapt to sea level rise and other aspects of  
4 climate change at least every periodic update, and revise the  
5 shoreline master program as needed. Whatcom County should  
6 periodically assess the best available sea level rise projections  
7 and other science related to climate change within shoreline  
8 jurisdiction and incorporate them into future program updates,  
9 as relevant.

Comment [P/C27]: P/C approved 9-0-0

10 Policy 11AA-6: Public infrastructure—such as transportation systems, utilities,  
11 flood hazard control, and instream structures—and essential  
12 public facilities in shoreline areas should be built in a manner  
13 that accounts for increased sea level rise and storm surge, and  
14 the flooding that may accompany it.

15 Policy 11AA-7: Whatcom County should evaluate opportunities to protect  
16 shoreline investments and infrastructure from the impacts of  
17 climate change, as necessary and feasible. Specifically, the  
18 County should maintain shoreline protection and erosion control  
19 by:  
20 

- 21 • Facilitating the installation and maintenance of native  
22 vegetation along appropriate areas of shoreline;
- 23 • Revisiting development policies with the objective of  
24 providing additional shoreline buffer area between developed  
25 areas and the shoreline; and
- 26 • Only consider structural shoreline stabilization structures  
when alternative options are unavailable.

27 ~~Chapter 23.100~~ **Shoreline Use and Modification Policies and**  
28 **Regulations**

29 The following shoreline use and modification policies apply to specific development  
30 activities on shorelines.

31 ~~23.100.020~~ **Shoreline Bulk Provisions – Buffers, Setbacks, Height, Open**  
32 **Space and Impervious Surface Coverage**

33 Policy 11BB-1: A. Policies.—Standards for density, setbacks, height, and other  
34 provisions should ensure no net loss of shoreline ecological  
35 functions and/or processes and preserve the existing character  
36 of the shoreline consistent with the purpose of the shoreline  
37 area designation.

38 ~~23.100.030~~ **Agriculture**

39 ~~A. Policies.~~

40 Policy 11BB-1: This program~~The SMP~~ recognizes the importance of agriculture  
41 in Whatcom County and supports its continued economic  
42 viability. ~~The SMP~~This program It allows for ongoing agricultural

Exhibit B – Planning Commission Approved Draft

October 29, 2021

Chapter 11 – Shorelines

1 activities and should protect agricultural lands from conflicting  
2 uses such as intensive or unrelated residential, industrial, or  
3 commercial uses, while also maintaining shoreline ecological  
4 functions and processes.

5 | Policy 11BB-2: Agricultural uses and development in support of agricultural  
6 uses should be conducted in such a manner as to assure no net  
7 loss of shoreline ecological functions and processes and avoid  
8 substantial adverse impacts on other shoreline resources and  
9 values.

10 | Policy 11BB-3: Conversion of agricultural uses to other uses should comply with  
11 all policies and regulations for nonagricultural uses.

12 ~~23.100.040~~ Aquaculture

13 A. ~~\_\_\_\_\_~~ Policies.

14 | Policy 11CC-1: Aquaculture is a water-dependent use and, when consistent with  
15 control of pollution, and avoidance of adverse impacts to the  
16 environment, and preservation of habitat for resident native  
17 species, is a preferred use of the shoreline (WAC 173-26-  
18 241(3)(b)).

19 | Policy 11CC-2: Potential locations for aquaculture activities are relatively  
20 restricted because of specific requirements related to water  
21 quality, temperature, oxygen content, currents, adjacent land  
22 use, wind protection, commercial navigation, and salinity. The  
23 technology associated with some forms of aquaculture is still  
24 experimental and in formative states. Therefore, some latitude  
25 should be given when implementing the policies of this  
26 subsection and the regulations in of this section, WCC  
27 Chapter Title 23.100 WCC; provided, that potential impacts on  
28 existing uses and shoreline ecological functions and processes  
29 should be given due consideration.

30 | Policy 11CC-3: Preference should be given to those forms of aquaculture that  
31 involve lesser environmental and visual impacts and lesser  
32 impacts to native plant and animal species. In general, projects  
33 that require ~~no structures, submerged, structures or intertidal,~~  
34 or no structures are preferred over those that involve  
35 substantial floating structures. Projects that involve little or no  
36 substrate modification are preferred over those that involve  
37 substantial modification. Projects that involve little or no  
38 supplemental food sources, pesticides, herbicides, or antibiotic  
39 application are preferred over those that involve such practices.

40 | ~~Policy 11-4: Community restoration projects associated with aquaculture~~  
41 ~~should be reviewed and permitted in a timely manner.~~

42 | Policy 11CC-54: Aquaculture activities should be designed, located and operated  
43 in a manner that supports long-term beneficial use of the

Comment [AP28]: Don't need, as all projects should be reviewed and permitted in a timely manner. Furthermore, we don't really know what a "community restoration project associated with aquaculture" is.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

1 shoreline and protects and maintains shoreline ecological  
2 functions and processes. Aquaculture should not be permitted  
3 where it would result in a net loss of shoreline ecological  
4 functions; adversely affect the quality or extent of habitat for  
5 | native species, including eelgrass, kelp, and other macroalgae;  
6 | adversely impact other habitat conservation areas; or interfere  
7 | with navigation or other water-dependent uses.

8 | Policy 11CC-65: Aquaculture that involves significant risk of cumulative adverse  
9 | effects on water quality, sediment quality, benthic and pelagic  
10 | organisms, and/or wild fish populations through potential  
11 | contribution of antibiotic resistant bacteria, or escapement of  
12 | nonnative species, or other adverse effects on ESA-listed  
13 | species should not be permitted.

14 | Policy 11CC-76: The County should actively seek substantive comment on any  
15 | shoreline permit application for aquaculture from all appropriate  
16 | federal, state, and local agencies; the Lummi Nation, Nooksack  
17 | Tribe, and other affected tribes; and the general public  
18 | regarding potential adverse impacts. Comments of nearby  
19 | residents or property owners directly affected by a proposal  
20 | should be considered and evaluated, especially in regard to use  
21 | compatibility and aesthetics.

22 | Policy 11CC-87: The rights of treaty tribes to aquatic resources within their usual  
23 | and accustomed areas should be addressed through the permit  
24 | review process. Direct coordination between the  
25 | applicant/proponent and the tribe should be encouraged.

26 | Policy 11CC-98: Consideration should be given to both the potential beneficial  
27 | impacts and potential adverse impacts that aquaculture  
28 | development might have on the physical environment; on other  
29 | existing and approved land and water uses, including  
30 | navigation; and on the aesthetic qualities of a project area.

31 | Policy 11CC-109: Legally established aquaculture enterprises, including authorized  
32 | experimental projects, should be protected from incompatible  
33 | uses that may seek to locate nearby. Use or developments that  
34 | have a high probability of damaging or destroying an existing  
35 | aquaculture operation may be denied.

36 | Policy 11CC-110: Experimental aquaculture projects in water-bodies should be  
37 | limited in scale and should be approved for a limited period of  
38 | time. Experimental aquaculture means an aquaculture activity  
39 | that uses methods or technologies that are unprecedented or  
40 | unproven in the state of Washington.

41 | ~~23.100.050 Boating Facilities – Marinas and Launch Ramps~~  
42 | ~~Boating facilities, including marinas and launch ramp development, are subject~~  
43 | ~~to the following policies. Decks, moorage structures serving four or fewer single-~~

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

~~family residences users are only subject to the policies in Moorage Structures, Docks, Piers, and Mooring Buoys.~~

~~A. Policies.~~

Policy 11DD-1: Boating facilities, including marinas and launch ramps, are water-dependent uses and should be given priority for shoreline location. Boating facilities should also contribute to public access and enjoyment of waters of the state. Shorelines particularly suitable for marinas and launch ramps are limited, and should be identified and reserved to prevent irreversible commitment for other uses having less stringent site requirements.

Policy 11DD-2: Regional needs for marina and boat launch facilities should be carefully considered in reviewing new proposals as well as in allocating shorelines for such development. Such facilities should be coordinated with park and recreation plans and, where feasible, collocated with port or other compatible water-dependent uses. Review of such facilities should be coordinated with recreation providers, including cities, adjacent counties, port districts, the Whatcom County Parks and Recreation department, the Washington State Parks and Recreation Commission, and the Washington State Department of Natural Resources to avoid unnecessary duplication and to efficiently provide recreational resources while minimizing adverse impacts to shoreline ecological functions and processes.

Policy 11DD-3: Upland boat storage is preferred over new in-water moorage. Mooring buoys are preferred over docks and piers. Boating facilities that minimize the amount of shoreline modification are preferred.

Policy 11DD-4: Boating facilities should provide physical and visual public shoreline access and provide for multiple uses, including water-related use, to the extent compatible with shoreline ecological functions and processes and adjacent shoreline use.

Policy 11DD-5: Accessory uses at marinas or launch ramps should be limited to water-oriented uses, or uses that provide physical or visual shoreline access for substantial numbers of the general public.

Policy 11DD-6: New or expanding boating facilities including marinas, launch ramps, and accessory uses should only be sited where suitable environmental conditions are present and should avoid critical saltwater habitat including kelp beds, and eelgrass beds, and spawning and holding areas for forage fish (such as herring, surf smelt and sandlance); subsistence, commercial, and recreational shellfish beds; mudflats, intertidal habitats with vascular plants; and areas with which priority species have a primary association.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 | Policy 11DD-7: Boating facilities should be located and designed to avoid  
2 | adverse effects upon coastal, riverine, and nearshore processes  
3 | such as erosion, littoral or riparian transport, and accretion, and  
4 | should, where feasible, enhance degraded, scarce, and/or  
5 | valuable shore features including accretion shoreforms.
- 6 | Policy 11DD-8: Launch ramps are preferred over marinas on accretion shores  
7 | because associated impacts are often reversible and such  
8 | structures will not normally interfere with littoral drift and  
9 | accretion unless offshore defense structures or dredging are also  
10 | required.
- 11 | Policy 11DD-9: Nonregulatory methods to protect, enhance, and restore  
12 | shoreline ecological functions and processes and other shoreline  
13 | resources should be encouraged during the design,  
14 | development, and operation of boating facilities. Nonregulatory  
15 | methods may include public facility and resource planning,  
16 | education, voluntary protection and enhancement projects, or  
17 | incentive programs.
- 18 | Policy 11DD-10: Boating facilities should be located, designed, and operated so  
19 | that other appropriate water-dependent uses are not adversely  
20 | affected.
- 21 | Policy 11DD-11: Location and design of boating facilities should not unduly  
22 | obstruct navigable waters and should avoid adverse effects to  
23 | recreational opportunities such as fishing, shellfish gathering,  
24 | pleasure boating, commercial aquaculture, swimming, beach  
25 | walking, picnicking, and shoreline viewing.
- 26 | Policy 11DD-12: Boating facilities should be located, designed, constructed, and  
27 | maintained, and operated to avoid adverse proximity impacts  
28 | such as noise, light and glare; aesthetic impacts to adjacent  
29 | land uses; and impacts to public visual access to the shoreline.
- 30 | Policy 11DD-13: Live-aboards should be regulated so as to prevent adverse  
31 | impacts to public health and safety.

**Comment [CES29]:** New policy added to support regulating live-aboards, per #17, "Add standards for live-aboards in marinas."

~~23.100.060~~ **Commercial Use**

~~Commercial development in shoreline areas shall be subject to the policies and regulations of this section and Chapter 23.90 WCC.~~

~~A. Policies:~~

- 36 | Policy 11EE-1: In securing shoreline locations for commercial uses, preference  
37 | should be given first to water-dependent commercial uses, then  
38 | to water-related and water-enjoyment commercial uses.
- 39 | Policy 11EE-2: Restoration of impaired shoreline ecological functions and  
40 | processes should be encouraged as part of commercial  
41 | development.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 | Policy 11EE-3: Commercial development should ensure visual compatibility with
- 2 | adjacent noncommercial properties.
- 3 | Policy 11EE-4: Commercial uses located in the shoreline should provide public
- 4 | access in accordance with constitutional or other legal
- 5 | limitations unless such improvements are demonstrated to be
- 6 | infeasible or present hazards to life and property.

**~~23.100.070~~ Dredging**

**A. ~~\_\_\_\_\_~~ Policies:**

- 9 | Policy 11FF-1: Dredging should be permitted for water-dependent uses of
- 10 | economic importance to the region and/or essential public
- 11 | facilities only when necessary and when alternatives are
- 12 | infeasible or less consistent with the SMP~~this program~~.
- 13 | Policy 11FF-2: Dredging to provide water-oriented recreation should not be
- 14 | permitted.
- 15 | Policy 11FF-3: Minor dredging as part of ecological restoration or enhancement,
- 16 | beach enhancement~~nourishment~~, public access, or public
- 17 | recreation should be permitted if consistent with the SMP~~this~~
- 18 | ~~program~~.
- 19 | Policy 11FF-4: New development should be sited and designed to avoid or,
- 20 | where avoidance is not possible, to minimize the need for new
- 21 | maintenance dredging.
- 22 | Policy 11FF-5: Dredging of bottom materials for the primary purpose of
- 23 | obtaining material for landfill, construction, or beach
- 24 | enhancement~~nourishment~~ should not be permitted.
- 25 | Policy 11FF-6: Spoil disposal on land away from the shoreline is generally
- 26 | preferred over open water disposal.
- 27 | Policy 11FF-7: Long-term cooperative management programs that rely
- 28 | primarily on natural processes, and involve ~~land~~
- 29 | ~~owners~~landowners and applicable local, state, and federal
- 30 | agencies and tribes, should be pursued to prevent or minimize
- 31 | conditions which make dredging necessary.

**~~23.100.080~~ Flood Control Works Hazard Reduction and Instream Structures**

**A. ~~\_\_\_\_\_~~ Policies:**

- 34 | Policy 11GG-1: ~~Purpose and Need:~~
- 35 | a. ~~\_\_\_\_\_~~ New or expanding development or uses in the shoreline,
- 36 | including subdivision of land, that would likely require structural
- 37 | flood hazard reduction control~~control~~ works within a stream, channel
- 38 | migration zone, or floodway should not be allowed.
- 39 | Policy 11GG-2: Flood hazard reduction control~~control~~ works and instream structures
- 40 | should be planned and designed to be compatible with

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 appropriate multiple uses of stream resources over the long  
2 term, especially in shorelines of statewide significance.
- 3 | ~~Policy 11GG-3e:~~ Flood hazard reduction control works should only be allowed in  
4 the shoreline if they are necessary to protect existing  
5 development and where nonstructural flood hazard reduction  
6 measures are infeasible.
- 7 | ~~Policy 11GG-4e:~~ Flood hazard reduction control works to protect existing  
8 development should be permitted only when the primary use  
9 being protected is consistent with ~~the SMP~~this program, and the  
10 works can be developed in a manner that is compatible with  
11 multiple use of streams and associated resources for the long  
12 term, including shoreline ecological functions, fish and wildlife  
13 management, and recreation.

14 ~~23-100-090~~ **Forest Practices**

15 ~~A.~~ Policies:

- 16 Policy 11HH-1: Forest lands should be reserved for long-term forest  
17 management and such other uses as are compatible with the  
18 ~~dominant primary~~ use. Other more intensive and incompatible  
19 uses tending to impair the ~~dominant primary~~ use should be  
20 discouraged from locating on forest lands.
- 21 Policy 11HH-2: Forest practices should maintain high levels of water quality, as  
22 well as surface and ground-water movement patterns.
- 23 Policy 11HH-3: Forest practices should minimize damage to wetlands, fish and  
24 wildlife species, and habitats, especially aquatic habitats.
- 25 ~~4. Extreme caution must be observed whenever chemicals are to~~  
26 ~~be used along shorelines; such use should be avoided altogether~~  
27 ~~if possible.~~
- 28 ~~Policy 11HH-4:5:~~ Forest practices should maintain or improve the quality of soils  
29 and minimize erosion.
- 30 ~~Policy 11HH-5:6:~~ Where slopes are extremely steep or soils are subject to sliding,  
31 rapid erosion, or high water table, special practices should be  
32 employed to minimize damage to shoreland and water features,  
33 and adjacent properties.

**Comment [MD30]:** Addressed by existing policy #2 in Water Quality and Quantity.

34 ~~23-100-100~~ **Industrial and Port Development**

35 The following policies apply to industrial and port development in shoreline areas.

36 ~~A.~~ Policies:

- 37 Policy 11II-1: Shoreline sites particularly suitable for development such as  
38 deep-water harbors with access to adequate rail, highway, and  
39 utility systems should be reserved for water-dependent or  
40 water-related industrial and port development.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 | Policy 11III-2: In order to provide adequate shoreline for future water-  
2 | dependent and water-related uses, industrial or port  
3 | development at deep-water sites should be limited to those uses  
4 | that produce the greatest long-term economic base. Industrial  
5 | and port development that is consistent with ~~this program~~ the  
6 | SMP should be protected from encroachment or interference by  
7 | incompatible uses with less stringent siting requirements, such  
8 | as residential or commercial uses. Mixed use development,  
9 | including non-water-dependent uses, should only be allowed  
10 | when they include and support water-dependent uses.
- 11 | Policy 11III-3: Regional needs for port facilities should be carefully considered  
12 | in reviewing new port proposals and in allocating shorelines for  
13 | such development. Such reviews or allocations should be  
14 | coordinated with port districts, adjacent counties and cities, and  
15 | the state. Existing, officially designated State Harbor Areas  
16 | should be used for new port development to the maximum  
17 | extent whenever possible.
- 18 | Policy 11III-4: Multiple use of industrial and port facilities is encouraged to limit  
19 | duplicative facilities and reduce adverse impacts. Multiple use  
20 | should be implemented in the following manner:
- 21 | a. Cooperative use of piers, cargo handling, storage, parking  
22 | and other accessory facilities among private or public entities  
23 | should be required in industrial or port facilities whenever  
24 | feasible. New facilities for water-dependent uses should be  
25 | allowed only after assessment of the potential for shared use  
26 | of existing facilities.
- 27 | b. Industrial and port developments should provide  
28 | opportunities for physical and/or visual public shoreline  
29 | access in accordance with the public access policies,  
30 | including recreational use of undeveloped shorelines not  
31 | needed for port or industry operations; provided, that such  
32 | uses are safely compatible with facility operations.
- 33 | Policy 11III-5: Industrial and port development in the shoreline should be  
34 | located and designed to avoid significant adverse impacts to  
35 | other shoreline uses, resources, and values, including shoreline  
36 | geomorphic processes, water quality, fish and wildlife habitat,  
37 | commercial aquaculture, and the aquatic food chain.
- 38 | Policy 11III-6: Restoration of impaired shoreline ecological functions and  
39 | processes should be encouraged as part of industrial and port  
40 | development.

41 | ~~23.100.210~~ **Cherry Point Management Area**

42 | A. ~~\_\_\_\_\_~~ Policies:

43 | Policy 11TT-1: ~~Purpose and Intent.~~

**Comment [CES31]:** These policies amended per Council's pending draft fossil fuel amendments.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 a. ~~The purpose of the Cherry Point management area is to~~  
2 ~~provide a regulatory framework that recognizes and balances~~  
3 ~~the special port, industrial and natural resource needs~~  
4 ~~associated with the development of this marine resource.~~  
5 ~~This subsection and WCC 23.100.21040.125 (Cherry Point~~  
6 ~~Management Area) identifies policies and regulations,~~  
7 ~~respectively, for water-dependent industrial activities that~~  
8 ~~apply in addition to specific other elements of the SMPthis~~  
9 ~~program as referenced herein.~~
- 10 b. ~~Washington State natural resource agencies and Whatcom~~  
11 ~~County have identified certain portions of the Cherry Point~~  
12 ~~management area as providing herring spawning habitat and~~  
13 ~~other key habitat characteristics that warrant special~~  
14 ~~consideration due to their importance to regional fisheries~~  
15 ~~and other elements of the aquatic environment.~~
- 16 **Policy 11JJ-1:** Development of the Cherry Point major port/industrial urban  
17 growth area will accommodate uses that require marine access  
18 for marine cargo transfer, including oil and other materials. For  
19 this reason, w
- 20 a. Water-dependent terminal facilities are encouraged as the  
21 preferred use in the Cherry Point management area. Due to  
22 the environmental sensitivity of the area, it is the policy of  
23 Whatcom County to limit the number of piers to one pier, in  
24 addition to those in operation or approved as of January 1,  
25 1998.
- 26 b. Existing legal fossil fuel refineries should be allowed to  
27 continue and maintain their operations with limited  
28 expansions subject to environmental review, greenhouse gas  
29 emission mitigation, and conformance with the Shoreline  
30 Master Program and other applicable land use designation.
- 31 c. It is the policy of Whatcom County to limit the number of  
32 industrial piers at Cherry Point to the existing three piers in  
33 operation or approved as of January 1, 1998, taking into  
34 account the need to:
- 35 • Act conservatively in land use matters at Cherry Point  
36 to prevent further harm to habitat important to the  
37 Cherry Point herring stock and Southern Resident  
38 Orcas;
  - 39 • Optimally implement the Shoreline Master Program  
40 policy regarding shorelines of statewide significance  
41 per WCC 23.40;
  - 42 • Encourage the continued County use of best available  
43 science;

**Comment [CES32]:** Moved to the Shoreline Environment Designations, CPMA section, as they address the purpose of this environment designation.

- Support and remain consistent with the state Department of Natural Resources' withdrawal of Cherry Point tidelands and bedlands from the general leasing program and the species recovery goals of the Cherry Point Aquatic Reserve designation and Management Plan;
- Recognize federal actions upholding treaty rights;
- Protect traditional commercial and tribal fishing; and
- Prevent conflicts with vessel shipment operations of existing refineries that could lead to catastrophic oil or fuel spills.

~~e. Whatcom County should consider participation with local, state, and federal agencies, tribal governments and other stakeholders in the development of a plan to address integrated management of the uplands and public aquatic lands within the Cherry Point management area. The development of such a plan could provide a forum and process for addressing aquatic resources by all stakeholders. Elements of the plan could be adopted as future amendments to this program as appropriate.~~

Policy 11JJ-2: Whatcom County should ensure that shoreline development applicants demonstrate ~~conformance~~ consistency with the State of Washington Department of Natural Resources' Cherry Point Aquatic Reserve Management Plan.

**Comment [P/C33]:** P/C Motion to change. Passes 7-0-1-1

~~All development that is to be located within the Cherry Point Management Area, as defined identified in WCC 23.20.020(E) Chapter 23.110 WCC, shall be subject to the policies in this subsection and the regulations found in WCC 23.40.125 23.100.210. Development that is to be located within the Cherry Point Management Area this section, and shall not be subject to: the General Policies of this chapter; the Shoreline Use and Modification Policies of this chapter, except for those in the Cherry Point Management Area subsection; policies and the regulations found in WCC Chapter 23.930 and WCC Chapter 23.40.23.100.010 through 23.100.160 except WCC 23.40.125, nor Chapter 23.90 WCC, unless otherwise referenced in this subsection. The policies and regulations found in this subsection are applicable only within the geographic boundaries of the Cherry Point management area and do not apply elsewhere in the County. In the event that the provisions of this subsection conflict with other applicable referenced provisions of the SMP this program, the policies and regulations that are most protective of shoreline resources shall prevail.~~

**Comment [P/C34]:** P/C Motion to delete. Passes 8-0-1. This policy makes no sense. Other than updating the references, staff has not changed it. It basically says that any development in the CPMA only has to comply with the policies in this section of Ch. 11 and the regulations of WCC 23.40.125, and specifically says such development doesn't have to comply with any other policies or regulations. But there are many other policies and regulations that should apply, such as ecological protection, cultural resources, vegetation management, moorage facilities, etc.

Policy 11JJ-2: Water-Dependent Industrial Development. Only water-dependent facilities that serve industrial facilities should be

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 allowed in the Cherry Point management area. Industry within  
2 the major port/industrial urban growth area, as designated in  
3 the ~~County~~ Comprehensive Plan, which is not water-dependent  
4 should locate away from shoreline jurisdiction.
- 5 | Policy 11JJ-3: Multiple Use Facilities. Facilities that allow for multiple use of  
6 piers, cargo handling, storage, parking and other accessory  
7 facilities are encouraged.
- 8 | Policy 11JJ-4: Public Access.
- 9 a. Where appropriate, industrial and port development within  
10 the Cherry Point management area should provide public  
11 beach and shoreline access in a manner that does not cause  
12 interference with facility operations or present hazards to life  
13 and property. This may be accomplished through individual  
14 action or by joint, coordinated action with other developers  
15 and landowners, for example, by setting aside a common  
16 public access area.
- 17 b. Special emphasis should be given to providing public beach  
18 and shoreline access for recreational opportunities including  
19 but not limited to crabbing, small craft launching, surf  
20 fishing, picnicking, clamming, and beach walking.
- 21 c. Public access within the Cherry Point management area  
22 should be consistent with the Whatcom County Parks and  
23 Recreation Open Space Plan.
- 24 | Policy 11JJ-5: Shoreline Ecological Functions and Processes. In recognition of  
25 the diverse and vital ecological resources in the Cherry Point  
26 management area, consideration of probable effects of all  
27 development proposals on shoreline ecological functions and  
28 processes should be assessed with the other long-term  
29 statewide interests. New port development that requires dredge  
30 and fill should not be permitted in the Cherry Point management  
31 area due to potential adverse effects on ecological functions,  
32 including fish and shellfish habitat and geohydraulic processes.
- 33 | Policy 11JJ-6: Aesthetics. All development should be designed to avoid or  
34 minimize negative visual impacts on the scenic character of the  
35 area and to ensure visual compatibility with adjacent  
36 nonindustrial zoned properties.
- 37 | Policy 11JJ-7: Site Development. All development should be constructed and  
38 operated in a manner that, while permitting water-dependent  
39 uses, also protects shoreline resources, their ecological  
40 functions and processes, and that incorporates the following:
- 41 a. Low impact development approaches to avoid or minimize  
42 adverse impact to topography, vegetation, water quality, fish  
43 and wildlife habitat, and other natural site conditions;

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1                                    b. Adequate temporary and permanent management measures
- 2                                    to control erosion and sediment impacts during construction
- 3                                    and operation; and
- 4                                    c. Adequate stormwater management facilities.

**~~23.100.110~~ Landfill and Excavation**

~~A. Policies:~~

7 | Policy 11KK-1:        Landfill and excavation should only be permitted to the  
8                                    minimum extent necessary to accommodate an approved  
9                                    shoreline use or development and with assurance of no net loss  
10                                    of shoreline ecological functions and processes. Enhancement  
11                                    and voluntary restoration of landforms and habitat are  
12                                    encouraged.

13 | Policy 11KK-2:        Landfill in water-bodies, floodways, and/or wetlands should not  
14                                    be permitted for creation of new uplands, unless it is part of an  
15                                    approved ecological restoration activity. Landfill should be  
16                                    permitted in limited instances to restore uplands where recent  
17                                    erosion has rapidly reduced upland area, to build beaches and  
18                                    protective berms for shore stabilization or recreation, to restore  
19                                    or enhance degraded shoreline ecological functions and  
20                                    processes, or to moderately elevate low uplands to make such  
21                                    uplands more suitable for purposes consistent with the SMP~~this~~  
22                                    ~~program~~.

23 | Policy 11KK-3:        Fill should not be allowed where shore stabilization works would  
24                                    be required to maintain the materials placed.

25 | Policy 11KK-4:        Landfills and excavation should be located and developed so  
26                                    that water quality, hydrology~~ie,~~ and runoff patterns are not  
27                                    altered.

28 | Policy 11KK-5:        The predicted economic benefits of landfills and excavation  
29                                    should be weighed against long-term cumulative impacts on  
30                                    ecological processes and functions.

**~~23.100.120~~ Mining**

~~A. Policies:~~

33 | Policy 11LL-1:        Mining should not be located on shorelines where unavoidable  
34                                    adverse impacts on other users or resources together equal or  
35                                    outweigh the benefits from mining.

36 | Policy 11LL-2:        Mining should not interfere with public recreation on the  
37                                    shoreline.

38 | Policy 11LL-3:        Mining should be located and operated so as to provide long-  
39                                    term protection of water quality, fish and wildlife, and fish and  
40                                    wildlife habitat.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 | Policy 11LL-4: Mining, particularly surface or strip mining, should provide for  
2 | timely restoration of disturbed areas to a biologically productive,  
3 | semi-natural, or other useful condition through a reclamation  
4 | process consistent with regulations administered by the  
5 | Department of Natural Resources and other applicable county  
6 | standards.
- 7 | Policy 11LL-5: Mining of marine and lake shores or accretional shoreforms,  
8 | such as point bars, that have a high value for recreation or as  
9 | fish or wildlife habitat should generally not be permitted.
- 10 | Policy 11LL-6: Mining should only be permitted on accretion point and channel  
11 | bars where appropriate studies and detailed operation plans  
12 | demonstrate that:  
13 | a. Fish habitat, upland habitat and water quality will not be  
14 | significantly impacted; and  
15 | b. The operation will not adversely affect geohydraulic  
16 | processes, channel alignment, nor increase bank erosion or  
17 | flood damages.
- 18 | Policy 11LL-7: Mining operations should be located, designed, and managed so  
19 | that other appropriate uses are not subjected to substantial or  
20 | unnecessary adverse impacts from noise, dust, or other effects  
21 | of the operation. The operator may be required to implement  
22 | measures such as buffers, limited hours, or other mitigating  
23 | measures for the purpose of minimizing adverse proximity  
24 | impacts.

25 | ~~23-100-130~~ **Moorage Structures – Docks, Piers and Mooring Buoys**

26 | ~~Moorage—including docks, piers and mooring buoys—~~ in shoreline areas are subject  
27 | ~~to the following policies. Shared m~~ Moorage structures serving with more than four  
28 | ~~berths~~ users and boat launching facilities are also subject to the policies in ~~Boating~~  
29 | ~~facilities –Marinas and Launch Ramps.~~

30 | ~~A. Policies.~~

- 31 | Policy 11MM-1: Moorage associated with a single-family residence is considered  
32 | a water-dependent use; provided, that it is designed and used  
33 | as a facility to access watercraft, and other moorage facilities  
34 | are not available or feasible. Moorage for water-related and  
35 | water-enjoyment uses or shared moorage for multifamily use  
36 | should be allowed as part of a mixed use development or where  
37 | it provides public access.
- 38 | Policy 11MM-2: New moorage, excluding docks accessory to single-family  
39 | residences, should be permitted only when the applicant/  
40 | proponent has demonstrated that a specific need exists to  
41 | support the intended water-dependent or public access use.
- 42 | Policy 11MM-3: As an alternative to continued proliferation of individual private  
43 | moorage, mooring buoys are preferred over docks or floats.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 Shared moorage facilities are preferred over single-user  
2 moorage where feasible, especially where water use conflicts  
3 exist or are predictable. New subdivisions of more than two lots  
4 and new multifamily development of more than two dwelling  
5 units should provide shared moorage.
- 6 | Policy 11MM-4: Docks, piers and mooring buoys, including those accessory to  
7 single-family residences, should avoid locations where they will  
8 adversely impact shoreline ecological functions or processes,  
9 including currents and littoral drift, and critical saltwater habitat  
10 including kelp beds, eelgrass beds, spawning and holding areas  
11 for forage fish (such as herring, surf smelt and sandlance);  
12 subsistence, commercial and recreational shellfish beds;  
13 mudflats, intertidal habitats with vascular plants; and areas with  
14 which priority species have a primary association.
- 15 | Policy 11MM-5: Moorage should be spaced and oriented in a manner that  
16 minimizes hazards and obstructions to public navigation rights  
17 and corollary rights thereto such as, but not limited to, fishing,  
18 swimming, and pleasure boating, as well as private riparian  
19 rights of adjacent land-owners.
- 20 | Policy 11MM-6: Moorage should be restricted to the minimum size necessary to  
21 meet the needs of the proposed use. The length, width and  
22 heightsize of piers and docks should be no greater than that  
23 required for safety and practicality for the primary use.
- 24 | Policy 11MM-7: Pile supports are preferred over fills because piles do not  
25 displace water surface and intertidal or aquatic habitat and are  
26 removable and thus more flexible in terms of long-term use  
27 patterns. Floats may be less desirable than pile structures where  
28 aquatic habitat or littoral drift are significant.
- 29 | Policy 11MM-8: The use of buoys for small craft moorage is preferred over pile  
30 or float structures because of lesser long-term impact on shore  
31 features and users; moorage buoys should be placed as close to  
32 shore as possible to minimize obstruction to navigation.
- 33 | Policy 11MM-9: Shoreline resources and water quality should be protected from  
34 overuse by boaters living on vessels (live boards). Boaters living  
35 on vessels are restricted to established marinas with facilities to  
36 address waste handling and other sanitary services.
- 37 | Policy 11MM-10: Vessels should be restricted from extended mooring on waters  
38 of the state unless authorization is obtained from the DNR and  
39 impacts to navigation and public access are mitigated.
- 40 | Policy 11MM-11: Piers and docks should be constructed of materials that will not  
41 adversely affect water quality or aquatic plants and animals in  
42 the long term.
- 43 | Policy 11MM-12: New pier and dock development should be designed so as not to  
44 interfere with lawful public access to or use of shorelines.

**Comment [AP35]:** Draft revision per Scoping Document, Item #8c, "Consider ways to improve protections for salmon and forage fish habitat,"

**Comment [AP36]:** Simplify to "size" for consistency with updated approach to dock standards, which include an overall square footage requirement, rather than prescriptive dimensional standards.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

1 Developers of new piers and shared moorage should be  
2 encouraged to provide physical or visual public access to  
3 shorelines whenever safe and compatible with the primary use  
4 and shore features.

5 ~~23-100-140~~ **Recreation**

6 ~~A.~~ **Policies.**

7 Policy 11NN-1: Shoreline recreational development should be given priority for  
8 shoreline location to the extent that the use facilitates the  
9 public's ability to reach, touch, and enjoy the water's edge, to  
10 travel on the waters of the state, and to view the water and the  
11 shoreline. Where appropriate, such facilities should be dispersed  
12 along the shoreline in a manner that supports more frequent  
13 recreational access and aesthetic enjoyment of the shoreline for  
14 a substantial number of people.

15 Policy 11NN-2: Recreational developments should facilitate appropriate use of  
16 shoreline resources while conserving them. These resources  
17 include, but are not limited to: accretion shoreforms, wetlands,  
18 soils, ground-water, surface water, native plant and animal life,  
19 and shore processes.

20 ~~3.~~ ~~Recreational development requiring extensive structures,~~  
21 ~~utilities and roads and/or substantial modifications of~~  
22 ~~topography or vegetation removal should not be located or~~  
23 ~~expanded in areas where damage to persons, property, and/or~~  
24 ~~shoreline functions and processes is likely to occur.~~

Comment [AP37]: Captured in policy #8 below.

25 Policy 11NN-3: Recreational developments and plans should provide the  
26 regional population a varied and balanced choice of recreation  
27 experiences in appropriate locations. Public agencies and private  
28 developers should coordinate their plans and activities to  
29 provide a wide variety of recreational opportunities without  
30 needlessly duplicating facilities.

31 Policy 11NN-4: Trail links between shoreline parks and public access points  
32 should be encouraged for walking, horseback or bicycle riding,  
33 and other non-motorized vehicle access where appropriate. The  
34 Whatcom County Comprehensive Park and Recreation Open  
35 Space Plan should be considered in design and approval of  
36 public trail systems.

37 Policy 11NN-5: Access to natural character recreational areas, including but not  
38 limited to beaches and fishing streams, should be a combination  
39 of linear shoreline trails or easements and small parking or  
40 access tracts to minimize user concentration on small portions  
41 of the shoreline.

42 Policy 11NN-6: Recreation facilities should incorporate public education  
43 regarding shoreline ecological functions and processes, the role

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 | of human actions on the environment, and the importance of  
2 | public involvement in shorelines management. Opportunities  
3 | incorporating educational and interpretive information should be  
4 | pursued in design and operation of recreation facilities and  
5 | nature trails.
- 6 | Policy 11NN-7: Reasonable physical or visual public access to shorelines should  
7 | be provided and integrated with recreational developments in  
8 | accordance with WCC ~~23.90.080~~23.30.070 (Public Access).
- 9 | Policy 11NN-8: Recreation development should be located only where utility and  
10 | road capability ~~is~~are adequate, or may be provided without  
11 | significant damage to shore features commensurate with the  
12 | number and concentration of anticipated users.
- 13 | Policy 11NN-9: Cooperative efforts among public and private persons toward  
14 | the acquisition and/or development of suitable recreation sites  
15 | or facilities should be explored to assure long-term availability  
16 | of sufficient public sites to meet local recreation needs.
- 17 | ~~23.100.150 Residential~~
- 18 | ~~A. Policies.~~
- 19 | Policy 1100-1: Single-family residences are designated in Chapter [90.58](#) RCW  
20 | as a priority use in those limited instances when authorization is  
21 | given for alterations of the natural condition of shorelines of the  
22 | state.
- 23 | Policy 1100-2: New residential development is encouraged to cluster dwelling  
24 | units together to reduce physical and visual impacts on  
25 | shorelines and to reduce utility and road costs. Planned unit  
26 | developments that include common open space and recreation  
27 | facilities, or a variety of dwelling sizes and types, are  
28 | encouraged at suitable locations as a preferable alternative to  
29 | extensive single-lot subdivisions on shorelines. Planned unit  
30 | developments (Chapter [20.85](#) WCC) may also include a limited  
31 | number of neighborhood commercial business uses where  
32 | consistent with the applicable zoning regulations.
- 33 | Policy 1100-3: Allowable density of new residential development should comply  
34 | with applicable ~~Ce~~omprehensive ~~Pl~~an goals and policies, zoning  
35 | restrictions, and shoreline area designation standards. The  
36 | density ~~per acre~~ of development should be appropriate to local  
37 | natural and cultural features.
- 38 | Policy 1100-4: Structures or development for uses accessory to residential use  
39 | should preserve shoreline open space, be visually and physically  
40 | compatible with adjacent cultural and shoreline features, be  
41 | reasonable in size and purpose, and result in no net loss of  
42 | shoreline ecological functions and processes.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 | Policy 1100-5: Buildings greater than 35 feet above average grade level that  
2 | will obstruct the views of a substantial number of residences on  
3 | areas adjoining such shorelines are limited by the ~~SMAA~~et  
4 | (RCW [90.58.320](#)) to those cases where ~~the SMP~~this program  
5 | does not prohibit such development and then only when  
6 | overriding considerations of the public interest will be served.  
7 | ~~The SMP~~This program provides opportunities for buildings  
8 | greater than 35 feet in height in limited areas where consistent  
9 | with development objectives and the goals and polices of this  
10 | ~~chapter~~program.
- 11 | Policy 1100-6: New residential development should be planned and built ~~in~~  
12 | ~~accordance with the policies and regulations in~~  
13 | ~~WCC 23.90.030~~and to minimize the need for shoreline  
14 | stabilization and flood hazard reduction measures.
- 15 | Policy 1100-7: Measures to conserve native vegetation along shorelines should  
16 | be required for all residential development. Vegetation  
17 | conservation may include avoidance or minimization of clearing  
18 | or grading, restoration of areas of native vegetation, and/or  
19 | control of invasive or nonnative vegetation.
- 20 | Policy 1100-8: Whenever possible, nonregulatory methods to protect, enhance,  
21 | and restore shoreline ecological functions and other shoreline  
22 | resources should be encouraged for residential development.  
23 | Such methods may include resource management planning, low  
24 | impact development techniques, voluntary protection and  
25 | enhancement projects, education, or incentive programs.
- 26 | Policy 1100-9: New multiunit residential development, including subdivision of  
27 | land for more than four parcels, should provide substantial  
28 | shore ~~space~~recreational opportunities for development  
29 | residents and the public, unless public access is infeasible due to  
30 | incompatible uses, safety, impacts to shoreline ecology, or legal  
31 | limitations. Developments of four or fewer units should provide  
32 | private access to the shore for those living in the development  
33 | (non-public).
- 34 | Policy 1100-10: Development should provide open space corridors between  
35 | structures, and along site boundaries, so as to provide space for  
36 | outdoor recreation, preserve views, and minimize use conflicts.
- 37 | Policy 1100-11: Recreation-oriented residential development in the shoreline  
38 | should be located only where substantial recreation  
39 | opportunities are provided on site, and where nearby property  
40 | owners and other appropriate uses will not be adversely  
41 | affected.

**Comment [MD38]:** Deleted for brevity as already required.

**Comment [CES39]:** Amended, as all shoreline development is supposed to provide access, though it need not be public for small developments.

**~~23.100.160~~ Restoration and Enhancement**

**~~A. Policies:~~**

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 | Policy 11PP-1:     ~~The SMP~~~~This program~~ recognizes the importance of restoration  
2 | of shoreline ecological functions and processes and encourages  
3 | cooperative restoration efforts and programs between local,  
4 | state, and federal public agencies, tribes, nonprofit  
5 | organizations, and landowners to address shorelines with  
6 | impaired ecological functions and/or processes.
- 7 | Policy 11PP-2:     Restoration actions should restore shoreline ecological functions  
8 | and processes as well as shoreline features and should be  
9 | targeted towards meeting the needs of sensitive and/or locally  
10 | important plant, fish and wildlife species, ~~as well as~~ the  
11 | biological recovery goals for early Chinook and bull trout  
12 | populations, and other salmonid species and populations.
- 13 | Policy 11PP-3:     Restoration should be integrated with other parallel natural  
14 | resource management efforts such as the WRIA 1 Salmonid  
15 | Recovery Plan and the WRIA 1 Watershed Management Plan.
- 16 | Policy 11PP-4:     Priority should be given to restoration actions that:  
17 |     a. Create dynamic and sustainable ecosystems.  
18 |     b. Restore connectivity between stream/river channels,  
19 |     floodplains and hyporheic zones.  
20 |     c. Restore natural channel-forming geomorphologic processes.  
21 |     d. Mitigate peak flows and associated impacts caused by high  
22 |     stormwater runoff volume.  
23 |     e. Reduce sediment input to streams and rivers and associated  
24 |     impacts.  
25 |     f. Improve water quality.  
26 |     g. Restore native vegetation and natural hydrologic functions of  
27 |     degraded and former wetlands.  
28 |     h. Replant native vegetation in riparian areas to restore  
29 |     functions.  
30 |     i. Restore nearshore ecosystem processes, such as sediment  
31 |     transport and delivery and tidal currents that create and  
32 |     sustain habitat.  
33 |     j. Restore pocket estuaries that support salmon life histories,  
34 |     including feeding and growth, refuge, osmoregulation, and  
35 |     migration.  
36 |     k. Address contamination along industrial shoreline regions.

37 | ~~23-100-170~~ **Shoreline Stabilization**

38 | ~~Shore stabilization in shoreline areas shall be subject to the policies and regulations~~  
39 | ~~of this section and Chapter 23.90 WCC.~~

40 | ~~A. Policies.~~

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 | Policy 11QQ-1: Alternatives to structures for shore protection should be used  
2 | whenever possible. Such alternatives may include no action  
3 | (allow the shoreline to retreat naturally), increased building  
4 | setbacks, building relocation, drainage controls, and  
5 | bioengineering, including vegetative stabilization, and beach  
6 | enhancement~~nourishment~~.
- 7 | Policy 11QQ-2: Single-family residences occupied prior to January 1, 1992, and  
8 | their appurtenant structures should be protected against  
9 | damage or loss caused by shoreline erosion; provided, that  
10 | measures to protect single-family residences should be designed  
11 | to minimize harm to the shoreline environment. After that date,  
12 | all new single-family residences and their appurtenant  
13 | structures should be built in a manner so as to not need  
14 | protective measures.
- 15 | Policy 11QQ-3: New or expanded structural shore stabilization for new primary  
16 | structures should be avoided. Instead, structures should be  
17 | located and designed to avoid the need for future shoreline  
18 | stabilization where feasible. Land subdivisions should be  
19 | designed to assure that future development of the created lots  
20 | will not require structural shore stabilization for reasonable  
21 | development to occur.
- 22 | Policy 11QQ-3: New or expanded structural shore stabilization should only be  
23 | permitted where demonstrated to be necessary to protect an  
24 | existing primary structure that is in danger of loss or substantial  
25 | damage, and where mitigation of impacts would not cause a net  
26 | loss of shoreline ecological functions and processes.
- 27 | Policy 11QQ-4: New or expanded structural shore stabilization for enhancement,  
28 | restoration, or hazardous substance remediation projects should  
29 | only be allowed when nonstructural measures, vegetation  
30 | planting, or on-site drainage improvements would be insufficient  
31 | to achieve enhancement, restoration, or remediation objectives.
- 32 | Policy 11QQ-5: Shore stabilization on streams should be located and designed  
33 | to fit the physical character and hydraulic energy potential of a  
34 | specific shoreline reach, which may differ substantially from  
35 | adjacent reaches.
- 36 | Policy 11QQ-6: Shore stabilization should not be permitted to unnecessarily  
37 | interfere with public access to public shorelines, nor with other  
38 | appropriate shoreline uses including, but not limited to,  
39 | navigation, seafood harvest, or ~~private~~ recreation.
- 40 | Policy 11QQ-7: Provisions for multiple use, restoration, and/or public shore  
41 | access should be incorporated into the location, design, and  
42 | maintenance of shore stabilization for public or quasi-public  
43 | developments whenever safely compatible with the primary  
44 | purpose. Shore stabilization on publicly owned shorelines should

**Comment [CES40]:** Moved from Policy 11T-1 as it contained 2 different concepts.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 not be allowed to decrease long-term public use of the  
2 shoreline.
- 3 | Policy 11QQ-8: Shore stabilization should be developed in a coordinated manner  
4 among affected property owners and public agencies for a whole  
5 drift sector (net shore-drift cell) or reach where feasible,  
6 particularly those that cross jurisdictional boundaries, to address  
7 ecological and geohydraulic processes, sediment conveyance  
8 and beach management issues. Where beach erosion threatens  
9 existing development, a comprehensive program for shoreline  
10 management should be established.
- 11 | Policy 11QQ-9: In addition to conformance with the regulations in ~~this~~  
12 ~~section~~ the SMP, nonregulatory methods to protect, enhance,  
13 and restore shoreline ecological functions and other shoreline  
14 resources should be encouraged for shore stabilization.  
15 Nonregulatory methods may include public facility and resource  
16 planning, technical assistance, education, voluntary  
17 enhancement and restoration projects, or other incentive  
18 programs.
- 19 | Policy 11QQ-10: Shore stabilization should be located, designed, and maintained  
20 to protect and maintain shoreline ecological functions, ongoing  
21 shore processes, and the integrity of shore features. Ongoing  
22 stream, lake, or marine processes and the probable effects of  
23 proposed shore stabilization on other properties and shore  
24 features should be considered. Shore stabilization should not be  
25 developed for the purpose of filling shorelines.
- 26 | Policy 11QQ-11: Failing, harmful, unnecessary, or ineffective structures should  
27 be removed, and shoreline ecological functions and processes  
28 should be restored using nonstructural methods or less harmful  
29 long-term stabilization measures.
- 30 | Policy 11QQ-12: Structural shoreline stabilization measures should only be used  
31 when more natural, flexible, sustainable, nonstructural methods  
32 such as vegetative stabilization, beach enhancement  
33 ~~nourishment~~, and bioengineering have been determined  
34 infeasible. Alternatives for shoreline stabilization should be  
35 based on the following hierarchy of preference:
- 36 a. No action (allow the shoreline to retreat naturally), increase  
37 building setbacks, and relocate structures.
- 38 b. Flexible defense works constructed of natural materials  
39 including soft shore protection, bioengineering, including  
40 beach enhancement ~~nourishment~~, protective berms, or  
41 vegetative stabilization.
- 42 c. Rigid works constructed of artificial materials such as riprap  
43 or concrete.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 Materials used for construction of shoreline stabilization should  
2 be selected for long-term durability, ease of maintenance,  
3 compatibility with local shore features, including aesthetic  
4 values, and flexibility for future uses.
- 5 Policy 11QQ-13: Larger works such as jetties, breakwaters, weirs, or groin  
6 systems should be permitted only for water-dependent uses  
7 when the benefits to the region outweigh resource losses from  
8 such works, and only where mitigated to provide no net loss of  
9 shoreline ecological functions and processes.
- 10 Policy 11QQ-14: Alternative structures, including floating, portable or submerged  
11 breakwater structures, or several smaller discontinuous  
12 structures, should be considered where physical conditions  
13 make such alternatives with less impact feasible.
- 14 ~~23.100.180~~ **Signs**
- 15 ~~A. Policies:~~
- 16 Policy 11RR-1: Whatcom County recognizes the constitutional right for property  
17 owners to communicate using signs on their property. These  
18 policies are intended to ensure that signage within shoreline  
19 areas is consistent with the purpose and intent of the ~~SMA Act~~  
20 and ~~the SMP~~ this program by addressing impacts to ecological  
21 functions, public safety, and visual aesthetics.
- 22 Policy 11RR-2: Signs should be located, designed, and maintained to be visually  
23 compatible with local shoreline scenery as seen from both land  
24 and water, especially on shorelines of statewide significance.
- 25 Policy 11 RR-3: Sign location and design should not significantly impair shoreline  
26 views.
- 27 Policy 11 RR-4: As a preferable alternative to continued proliferation of single-  
28 purpose signs, communities, districts, and/or multiuse or  
29 multitenant commercial developments are encouraged to erect  
30 single, common use gateway signs to identify and give  
31 directions to local premises and public facilities.
- 32 Policy 11 RR-5: Signs of a commercial or industrial nature should be limited to  
33 those areas or premises to which the sign messages refer.
- 34 Policy 11 RR-6: Billboards and other off-premises signs are not water-  
35 dependent, they reduce public enjoyment of or access to  
36 shorelines, and they often lower values of nearby properties.  
37 ~~Such signs should not be located on shorelines.~~ Except for  
38 approved community gateway or directional signs, such signs  
39 should not be located on shorelines.
- 40 Policy 11 RR-7: Signs near scenic vistas and viewpoints should be restricted in  
41 number, location, and height so that enjoyment of these limited  
42 and scarce areas is not impaired.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 | Policy 11 RR-8: Freestanding signs should be located to avoid blocking scenic  
2 | views and be located on the landward side of public  
3 | transportation routes, which generally parallel the shoreline.
- 4 | Policy 11 RR-9: To minimize negative visual impacts and obstructions to  
5 | shoreline access and use, low profile, on-premises wall signs are  
6 | strongly preferred over freestanding signs or off-premises wall  
7 | signs.
- 8 | Policy 11 RR-10: Signs should be designed mainly to identify the premises and  
9 | nature of enterprise without unduly distracting uninterested  
10 | passersby. Moving or flashing signs should be prohibited on  
11 | shorelines.
- 12 | ~~23.100.190~~ **Transportation**
- 13 | A. ~~\_\_\_\_\_~~ Policies:
- 14 | Policy 11SS-1: New public or private transportation facilities should be located  
15 | inland from the land/water interface, preferably out of the  
16 | shoreline, unless:
- 17 |       a. Perpendicular water crossings are required for access to  
18 |       authorized uses consistent with ~~the SMP~~this program; or
- 19 |       b. Facilities are primarily oriented to pedestrian and non-  
20 |       motorized use and provide an opportunity for a substantial  
21 |       number of people to enjoy shoreline areas, and are  
22 |       consistent with the policies and regulations for ecological  
23 |       protection in the General Policies section of this chapter and  
24 |       in WCC 23.30.010 (Ecological Protection)~~23.90.030,~~  
25 |       respectively.
- 26 | Policy 11SS-2: Transportation facilities should be located and designed to avoid  
27 | public recreation and public access areas and significant natural,  
28 | historic, archaeological, or cultural sites.
- 29 | Policy 11SS-3: Parking is not a preferred use in shorelines and should only be  
30 | allowed to support authorized uses where no feasible  
31 | alternatives exist.
- 32 | Policy 11SS-4: New or expanded public transportation facility route selection  
33 | and development should be coordinated with related local and  
34 | state government land use and circulation planning.
- 35 | Policy 11SS-5: Transportation system route planning, acquisition, and design in  
36 | the shoreline should provide space wherever possible for  
37 | compatible multiple uses such as utility lines, pedestrian shore  
38 | access or viewpoints, or recreational trails.
- 39 | Policy 11SS-6: Transportation system plans and transportation projects within  
40 | shorelines should provide safe trail space for non-motorized  
41 | traffic such as pedestrians, bicyclists, or equestrians. Space for  
42 | such uses should be required along roads on shorelines, where

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 appropriate, and should be considered when rights-of-way are  
2 being vacated or abandoned.
- 3 | Policy 11SS-7: Public access should be provided to shorelines where safe and  
4 compatible with the primary and adjacent use, or should be  
5 replaced where transportation development substantially  
6 | impairs lawful public access. Viewpoints, parking, trails, and  
7 similar improvements should be considered for transportation  
8 system projects in shoreline areas, especially where a need has  
9 been identified.
- 10 | Policy 11SS-8: Public transportation routes, particularly arterial highways and  
11 railways, should be located, designed, and maintained to permit  
12 safe enjoyment of adjacent shore areas and properties by other  
13 appropriate uses such as recreation or residences. Vegetative  
14 screening or other buffering should be considered.
- 15
- 16 ~~23-100-200~~ **Utilities**
- 17 ~~A. \_\_\_\_\_ Policies.~~
- 18 | Policy 11TT-1: New public or private utilities should be located inland from the  
19 land/water interface, preferably out of the shoreline jurisdiction,  
20 unless:
- 21 a. Perpendicular water crossings are unavoidable; or
- 22 b. Utilities are required for authorized shoreline uses consistent  
23 | with ~~the SMP~~ this program.
- 24 | Policy 11TT-2: Utilities should be located and designed to avoid public  
25 recreation and public access areas and significant natural,  
26 | historic, archaeological, or cultural resources.
- 27 | Policy 11TT-3: Utilities should be located, designed, constructed, and operated  
28 to result in no net loss of shoreline ecological functions and  
29 processes with appropriate mitigation as provided in  
30 | 23.30.010 (Ecological Protection) ~~WCC 23.90.030~~.
- 31 | Policy 11TT-4: All utility development should be consistent ~~with~~—and  
32 coordinated with all local government and state planning,  
33 including comprehensive plans and single purpose plans to meet  
34 the needs of future populations in areas planned to  
35 accommodate growth. Site planning and rights-of-way for utility  
36 development should provide for compatible multiple uses such  
37 as shore access, trails, and recreation or other appropriate use  
38 whenever possible; utility right-of-way acquisition should also  
39 be coordinated with transportation and recreation planning.
- 40 | Policy 11TT-5: Utilities should be located in existing rights-of-way and corridors  
41 whenever possible.

**Exhibit B – Planning Commission Approved Draft**

October 29, 2021

Chapter 11 – Shorelines

- 1 | Policy 11TT-6: Utilities serving new development should be located
- 2 | underground, wherever possible.
- 3 | Policy 11TT-7: Development of pipelines and cables on aquatic lands and
- 4 | tidelands, particularly those running roughly parallel to the
- 5 | shoreline, and development of facilities that may require
- 6 | periodic maintenance ~~which~~ that would disrupt shoreline
- 7 | ecological functions should be discouraged except where no
- 8 | other feasible alternative exists. When permitted, provisions
- 9 | shall assure that the facilities do not result in a net loss of
- 10 | shoreline ecological functions or significant impacts to other
- 11 | shoreline resources and values.
- 12 | Policy 11TT-8: Given the different scales of regional, local, and accessory
- 13 | utilities and their potential impacts, the County may establish
- 14 | different regulations regarding each.

**Comment [CES41]:** New policy to allow for different regulations regarding the different types of utilities in support of Scope issue #7b, "Add definitions for regional, local, and accessory utilities."

**Exhibit C – Planning Commission Approved Draft**

October 29, 2021

Chapter 8 – Resource Lands

**Proposed Amendment to Chapter 8 of the Comprehensive Plan**

*Marine Resource Lands Working Group's Recommendation*

Note: This text is shown as proposed to accomplish Scoping Report issue #21a: Consider adding a Marine Resource Lands policy section as developed by the Marine Resources Committee.

**Chapter Eight  
Resource Lands**

**Marine Resource Lands**

**Introduction**

**Purpose**

Marine resource lands, for the purpose of this plan, are defined as those marine areas waterward of the ordinary high water mark, together with their underlying lands and their water column, within the jurisdiction of the Whatcom County Shoreline Management Program (WCC Title 23). Marine resource lands have the physical conditions and habitat required to generate and maintain fisheries of all types, including the commercial and recreational harvest of finfish, shellfish, algae, and other invertebrates including but not limited to mollusks, crab, and shrimp, etc. This section is intended to guide Whatcom County in the conservation of functioning marine resource lands of long-term commercial, ecological, cultural, and recreational significance, and to ensure that all water-dependent, water-related, and water-enjoyment uses requiring use or access to marine resource lands thrive in the years to come.

**GMA Requirements**

Goal 8 of the GMA (RCW 36.70A.020) guides the County to “Maintain and enhance natural resource based industries, including productive timber, agricultural, and fisheries industries.” While the GMA does not specifically require the designation of marine resource lands that support aquatic-based uses and industries, functioning marine resource lands are so intrinsically necessary for the creation and sustainability of historical fish and wildlife production that Whatcom County wishes to acknowledge them here.

**Process**

Per County Council direction, staff convened a working group comprised of members of the Marine Resource Committee, the Shellfish Protection Advisory Committee, and other local marine land experts. This working group developed a draft of this section of the Comprehensive Plan, as well as drafts of the goals and policies contained herein. The draft was then presented to the full membership of the Marine Resource Committee and Shellfish Protection Advisory Committees for review and recommendation to the County Planning Commission and Council.

40 **Background Summary**

41 The marine resource lands of Whatcom County have historically been one of the  
42 most important natural resources in the region. For thousands of years the shores  
43 of Whatcom County provided an important shellfish resource, sustaining our local  
44 tribes. More recently the tidelands of Drayton Harbor supported one of the earlier  
45 commercial oyster-farming businesses in the Salish Sea. The shore and nearshore  
46 lands of the County provided spawning, rearing, and forage areas for a diverse  
47 array of finfish and shellfish species which together formed an incredible food web  
48 for ancestral tribes and early commercial fisheries. The County's marine resource  
49 lands are located along the coastal areas bordering the Salish Sea fed by the rivers,  
50 streams, and lakes that drain the upland areas of western Whatcom County. Marine  
51 resource lands include more than 130 miles of marine shoreline.

52 Marine resource lands in the area of Cherry Point are designated in the Shoreline  
53 Management Program as the Cherry Point Management Area to support adjacent  
54 Heavy Impact Industrial (HII) zoned industrial uses that require deep water access,  
55 such as the two existing refineries and an aluminum smelter. The harbor area and  
56 waterways in Bellingham Bay are designated for preservation of commerce and  
57 navigation along the Bellingham shoreline. The tidelands of Drayton Harbor are  
58 designated to support a small commercial wharf, marinas, residential shoreline  
59 development, shellfish production, and natural areas.

60 The majority of marine resource lands in Whatcom County are owned by the State  
61 of Washington (managed by Department of Natural Resources [DNR]), the Lummi  
62 Nation, and the Port of Bellingham (via a Port Management Agreement with DNR).  
63 These include many of the tidelands and subtidal lands in the County. Marine  
64 resource landowners also include some private entities that were sold tidelands  
65 prior to 1971, and who manage their marine resource lands for a variety of uses,  
66 including recreational, commercial, and industrial.

67 Historically, marine resource lands have been managed for natural and farmed  
68 shellfish production and harvest, fishing, transportation, utility corridors  
69 (oil/gas/natural gas pipelines; sewer and stormwater outfall pipes; communication  
70 lines (phone/fiber optic); power (electric) lines, and commercial, recreational and  
71 subsistence/cultural fishing and food gathering. Historic uses also included  
72 commercial and industrial uses, marinas (Bellingham, Blaine), municipal garbage  
73 dumps, public parks, etc.

74 With a growing population, there is increasing interest in improving public access to  
75 marine resource lands through the addition of boat ramps and access points for  
76 motor, wind, and human-powered craft. Over the last 20 years the desire to harvest  
77 more diverse aquatic resources, particularly from tidelands, has driven a number of  
78 significant efforts to improve water quality as well as innovative culturing  
79 techniques such as intertidal geoduck seeding, nori farming, etc.

80 Conservation efforts have resulted in protection of several areas including the  
81 Cherry Point Aquatic Reserve and two areas withdrawn from leasing in Bellingham  
82 Bay. These areas are valuable due to their high productivity of aquatic life that  
83 contributes to the economy and greater ecosystem of Whatcom County. Twenty  
84 years of effort and millions of dollars in public investment have kept Drayton Harbor

**Exhibit C – Planning Commission Approved Draft**

October 29, 2021

Chapter 8 – Resource Lands

85 a viable commercial and recreational shellfish growing area for future generations  
86 to enjoy.

87 Marine resource lands provide a huge economic benefit to the County, and the  
88 health of our stream, river, and estuarine environments and marine resource lands  
89 are the foundation of a critical tribal and non-tribal finfish and shellfish industry. In  
90 2006, non-tribal commercial fish landings from Washington fisheries totaled nearly  
91 109.4 million pounds, generating \$65.1-million in ex-vessel value (i.e., the price  
92 received by commercial fishers for fish). Whatcom County was the State's second-  
93 largest commercial port area that year (after Grays Harbor County), with an ex-  
94 vessel value of commercial fish landings of more than \$13.5-million, accounting for  
95 nearly 21% of the total value of landings from Washington fisheries. Additionally,  
96 the North Puget Sound Region—which the Washington Department of Fish and  
97 Wildlife defines as including San Juan, Skagit, Snohomish and Whatcom counties—  
98 is also the most popular location for recreational shellfishing in the State. In 2006,  
99 the combined recreational shellfish catch in those four counties included more than  
100 3.3-million pounds of Dungeness crab, 23,520 pounds of shrimp, 93,038 pounds of  
101 clams, and more than 19,000 individual oysters.<sup>1</sup> In 2016, the marine trades  
102 provided 6,033 jobs, or 7% of the County's workforce.<sup>2</sup>

103 Whatcom County marine shorelines continue to provide income to over 250 Lummi  
104 Nation registered shellfish harvesters. Many other Lummi and Nooksack tribal  
105 members depend on finfish and crab harvest for a substantial part of their yearly  
106 family income. The Lummi Nation shellfish enterprise is highly productive and  
107 provides clam, oyster, and geoduck seed to a large part of the northwest shellfish  
108 industry. To the extent that the environmental health of these lands impacts the  
109 ability of Tribal Nations to practice fish and wildlife harvests and conduct ceremonial  
110 activities for their cultural, economic, and spiritual welfare, protection of these  
111 lands is a Treaty trust resource supporting Treaty reserved rights to take fish.

112 Other direct and indirect benefits to the County are even more substantial given the  
113 multiplier effect from marina-related boat works, electronics, fuel and supplies,  
114 charter and whale watching businesses, the Alaska Ferry service, sporting goods,  
115 kayaking, rowing, sailing, wind surfing, power boating, and all the sales, repair,  
116 maintenance, and provisioning that goes with these type of activities. Whatcom  
117 County's marine resource areas are not only an international destination for water-  
118 dependent, water-related, and water-enjoyment activities, such as bird and wildlife  
119 watching, sailing and cruising, fishing and gathering, but they are also a gateway to  
120 the San Juan Islands, Gulf Islands, the greater Salish Sea environs, and  
121 international waters. Whatcom County's marine resource lands are a renewable and  
122 sustainable economic driver that will serve this region well into the future.

<sup>1</sup> Whatcom County, March 2015. *Whatcom County Comprehensive Economic Development Strategy*, prepared by the Whatcom Council of Governments.

<sup>2</sup> Center of Economic and Business Research, Western Washington University, July 2016. *Whatcom County Marine Trades Impacts*.

123 **Issues, Goals, and Policies**

124 The following goals and policies apply to marine resource lands and address the  
125 issues of conserving productive aquatic land and meeting the goals of the Growth  
126 Management Act.

127 **Marine Resource Land Base**

128 Tidelands, marine waters, major lakes, and navigable rivers were owned by the  
129 State of Washington at the time of statehood unless reserved for other uses such as  
130 federal facilities or Indian reservations. Between 1889 and 1971, the State sold  
131 many of its tidelands to railroads, timber companies, and shellfish growers as a way  
132 to finance the State. As a result, the State owns only about 30% of the tidelands.  
133 The bulk of tidelands and many shoreland areas are owned or managed by ports,  
134 industries, tribes, and private property owners. The State retains ownership of most  
135 all of the subtidal lands which were not sold.

136 Since their adoption, the marine resource land base in Washington State and in  
137 Whatcom County has largely been protected by the Washington State Shoreline  
138 Management Act, as well as Whatcom County's Shoreline Management Program  
139 (SMP), Critical Areas Ordinance, and other land use regulations such as stormwater,  
140 land disturbance, zoning, and other regulations.

141 Historically, shoreline modification, including filling, hardening, and diking of many  
142 natural shorelines has resulted in a significant reduction in acreage of functioning  
143 marine resource lands in many areas of the County. These modifications came as a  
144 result of transportation improvements (roads, railroads, barge landings, and ferry  
145 terminals), utilities (electrical, communications, sewer, stormwater, etc.),  
146 hydropower, water-dependent uses (marinas, fish processing, ship yards), non-  
147 water dependent uses (large industrial facilities), flood control efforts, residential  
148 development (including bulkheading, armoring,<sup>3</sup> and docks), and parks.

149 The Washington State Legislature passed the State Shoreline Management Act  
150 (SMA) in June 1971. Under the SMA, each county and city is required to adopt and  
151 administer a local shoreline management plan to carry out the provisions of the Act.  
152 The Whatcom County Shoreline Management Program (SMP) is the document that  
153 implements the goals and policies of the SMA at the local level. The SMP was  
154 originally adopted by the County Council in May 1976 in accordance with the SMA  
155 and the shoreline guidelines issued by the Washington Department of Ecology. The  
156 SMP is implemented in coordination with other chapters of the Comprehensive Plan  
157 and the Whatcom County Code to protect and manage shorelines throughout the  
158 county. It is important to note that Whatcom County and Ecology share joint  
159 authority and responsibility for the administration and enforcement of the SMP. In  
160 addition, numerous other local, state and federal regulations, permits, and  
161 approvals apply to development or use in, on or above the County's marine  
162 resource lands. Some of the most common permits and approvals include:

<sup>3</sup> Since adoption of the SMP, shoreline armoring, filling, and bulkheading is only allowed for the purpose of protecting existing structures.

**Exhibit C – Planning Commission Approved Draft**

October 29, 2021

Chapter 8 – Resource Lands

Agency	Permit(s)
<b>Whatcom County</b>	<ul style="list-style-type: none"> <li>• <u>Shoreline statement of exemption</u></li> <li>• <u>Substantial development permit</u></li> <li>• <u>Shoreline conditional use permit</u></li> <li>• <u>Shoreline variance</u></li> <li>• <u>State Environmental Policy Act (SEPA) determination</u></li> </ul>
<b>Washington Department of Ecology</b>	<ul style="list-style-type: none"> <li>• <u>Clean Water Act Section 401 Water Quality Certification</u></li> <li>• <u>Coastal Zone Management Consistency Determination</u></li> </ul>
<b>Washington Department of Fish and Wildlife</b>	<ul style="list-style-type: none"> <li>• <u>Hydraulic project approval (HPA)</u></li> </ul>
<b>Washington Department of Natural Resources</b>	<ul style="list-style-type: none"> <li>• <u>Aquatic use authorization</u></li> <li>• <u>Aquatic lands lease agreements</u></li> </ul>
<b>U.S. Army Corps of Engineers</b>	<ul style="list-style-type: none"> <li>• <u>Clean Water Action Section 404 Permit</u></li> <li>• <u>Rivers and Harbors Act Section 10 Permit</u></li> </ul>

163 **Goal 8T:** Conserve and enhance Whatcom County's marine land  
 164 base for the long-term and sustainable use and operation  
 165 of water-dependent, water-related and water-enjoyment  
 166 activities.

167 Policy 8T-1: Coordinate with public agencies, tribal governments,  
 168 landowners, and private organizations to protect and maintain  
 169 an appropriate, productive, and sustainable marine resource  
 170 land base adequate to support marine-dependent commercial,  
 171 industrial, recreational, and cultural needs.

172 **Aquaculture, Fishing, and other Marine Resource Lands Activities**

173 **Goal 8U:** Support measures to increase the viability and  
 174 sustainability of Whatcom County's aquatic biodiversity  
 175 and production.  
 176

177 Policy 8U-1: Help improve the efficiency, and effectiveness, and flexibility of  
 178 environmental regulations affecting marine resource lands in  
 179 order to support environmental protection and improve  
 180 predictability.

181 Policy 8U-2: ~~Consider~~ Developing a range of non-regulatory programs,  
 182 options, and incentives that owners of marine resource lands  
 183 can employ to meet or exceed County environmental goals.

184 Policy 8U-3: Support the efforts of people in Whatcom County to operate in a  
 185 long-term, sustainable manner as part of a stable, broad-based  
 186 economy.

187 Policy 8U-4: Work cooperatively with the Washington State Departments of  
 188 Natural Resources, Ecology, and Fish and Wildlife to protect  
 189 productive and appropriate use of State marine resource lands  
 190 within Whatcom County.

**Comment [P/C1]:** P/C moved to amend; passed 8-0-1

**Exhibit C – Planning Commission Approved Draft**

October 29, 2021

Chapter 8 – Resource Lands

191 Policy 8U-5      Continue cooperation and funding for a comprehensive Pollution  
192 Identification and Correction (PIC) program as needed to reduce  
193 bacterial pollution to levels that meet National Shellfish  
194 Sanitation Program Growing waters criteria to allow reopening of  
195 closed shellfish beds, and to maintain the operation of those  
196 beds in a commercially viable manner.

197 **Reducing Land Use Impacts**

198 Different land owners have different goals for their property and employ different  
199 practices when using it, whether it be for their business, home, recreation, or  
200 personal enjoyment. But oft times, the practices one property owner employs can  
201 have detrimental effects on another property owner's use or enjoyment of their  
202 property, or the public when using public lands, which can lead to conflict amongst  
203 users. One of the most cited is how poorly managed agriculture or failing septic  
204 systems can cause bacterial pollution of rivers and streams, causing closure of  
205 important shellfish production areas. Other adverse upstream inputs include, but  
206 are not limited to, excess nutrients, heavy metals, and aromatic hydrocarbons. But  
207 there have been other such actions as well, such as piers placed in fish habitat, use  
208 of pesticides in shellfish farming, loading/unloading practices, etc. However, many  
209 such users are employing new practices and technologies to alleviate such impacts,  
210 yet the public many not be aware. Improved communication and education between  
211 these groups would be beneficial for each to understand what the other is doing,  
212 how their actions affect one another, and how they plan to avoid such impacts.

Comment [P/C2]: P/C moved to delete. Passed 8-0

213 **Goal 8V:**      **Aim to reduce land use conflicts between Whatcom**  
214 **County's Marine Resource Lands operations and upland**  
215 **property owners.**

216 Policy 8V-1:      Support improved communication and understanding between  
217 aquatic land landowners and the public through such  
218 mechanisms as community forums and educational programs.

219 Policy 8V-2:      Work cooperatively with local, State, Federal and Tribal  
220 agencies, adjacent upland property owners, and the general  
221 public, as applicable, to address community concerns and land  
222 use conflicts that may affect the productivity of marine resource  
223 lands.

224 Policy 8V-3:      Continue to implement land use, building, and transportation  
225 planning policies, regulations, and practices that help minimize  
226 adverse water quality inputs into waterbodies.

Comment [P/C3]: P/C moved to amend. Passes 8-0-1

227 Policy 8V-4      Support and participate in education efforts and programs that  
228 emphasize the importance of and promote the benefits of  
229 marine resource lands.

230 **Fish and Wildlife**

231 Land use practices on marine resource lands can impact tidelands and other shallow  
232 and deepwater habitats that are important to a wide variety fish and wildlife.

# Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

## Chapter 23.10-05 Purpose and Intent ~~General Provisions~~

### ~~23.1005.010~~ Authority.

Authority for enactment and administration of this program is the Shoreline Management Act of 1971, Chapter 90.58 RCW, also referred to herein as “the Act,” and the Washington Administrative Code 173-27 and 173-26.

### ~~23.1005.020~~ Purpose and Intent.

As provided in the Whatcom County Comprehensive Plan, Chapter 11 (Shorelines), Whatcom County’s shorelines provide valuable habitat for fish and wildlife, economic diversity, and recreational opportunities used by residents of all ages. Shorelines play an important role in enhancing the quality of life for our county’s citizens. Therefore, the purpose of the master program is to guide the future development of the County’s shorelines in a manner consistent with the Shoreline Management Act of 1971 (hereinafter referred to as the “Act”). The Act and this program, in conjunction with other County land use regulations, comprise the basic state and County law regulating use of shorelines in the county.

~~The purposes of this program are:~~

- ~~A. To promote the public health, safety, and general welfare of the community by providing long range, comprehensive policies and effective, reasonable regulations for development and use of Whatcom County shorelines; and~~
- ~~B. To manage shorelines in a positive, effective, and equitable manner; and~~
- ~~C. To further assume and carry out the responsibilities established by the Act for Whatcom County, and to adopt and foster the following policy contained in RCW 90.58.020 for shorelines of the state:~~
- ~~D. It is the policy of the State to provide for the management of the shorelines of the State by planning for and fostering all reasonable and appropriate uses. This policy is designed to insure the development of these shorelines in a manner which, while allowing for limited reduction of rights of the public in the navigable waters, will promote and enhance the public interest. This policy contemplates protecting against adverse effects to the public health, the land and its vegetation and wildlife, and the waters of the State and their aquatic life, while protecting generally public rights of navigation and corollary rights incidental thereto...~~

~~In the implementation of this policy the public’s opportunity to enjoy the physical and aesthetic qualities of natural shorelines of the State shall be preserved to the greatest extent feasible consistent with the overall best interest of the State and the people generally. To this end uses shall be preferred which are consistent with control of pollution and prevention of damage to the natural environment or are unique to or dependent upon use of the State’s shoreline. Alterations of the natural condition of the shorelines of the State, in those limited instances when authorized, shall be given priority for single family residences and their appurtenant structures, ports, shoreline recreational uses including but not limited to parks, marinas, piers, and other improvements facilitating public access to shorelines of the State, industrial and commercial developments which are particularly dependent on their location on or use of~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 ~~the shorelines of the State and other development that will provide an opportunity for substantial~~  
2 ~~numbers of the people to enjoy the shorelines of the State...~~

3 ~~Permitted uses in the shorelines of the State shall be designed and conducted in a manner to minimize,~~  
4 ~~insofar as practical, any resultant damage to the ecology and environment of the shoreline area and any~~  
5 ~~interference with the public's use of the water.~~

### 6 **23.10.030 Governing principles.**

7 The following principles along with the policy statements of RCW 90.58.020 establish basic concepts  
8 that underpin the goals, policies and regulations of this program:

9 A. ~~Any inconsistencies between this program and the Act must be resolved in accordance with the Act.~~

10 B. ~~The policies of this program may be achieved by diverse means, one of which is regulation. Other~~  
11 ~~means, authorized by the Act, include but are not limited to: acquisition of lands and/or easements~~  
12 ~~by purchase or gift, incentive programs, and implementation of capital facility and/or nonstructural~~  
13 ~~programs.~~

14 C. ~~Protecting the shoreline environment is an essential statewide policy goal, consistent with other~~  
15 ~~policy goals. Permitted and/or exempt development, actions taken prior to the Act's adoption,~~  
16 ~~and/or unregulated activities can impair shoreline ecological processes and functions. This program~~  
17 ~~protects shoreline ecology from such impairments in the following ways:~~

18 1. ~~By using a process that identifies, inventories, and ensures meaningful understanding of current~~  
19 ~~and potential ecological functions provided by shorelines.~~

20 2. ~~By including policies and regulations that require mitigation of significant adverse impacts in a~~  
21 ~~manner that ensures no net loss of shoreline ecological functions. The required mitigation shall~~  
22 ~~include avoidance, minimization, and compensation of impacts in accordance with the policies~~  
23 ~~and regulations for mitigation sequencing in WCC 23.90.030 and the Whatcom County critical~~  
24 ~~areas ordinance (Chapter 16.16 WCC). This program and any future amendment hereto shall~~  
25 ~~ensure no net loss of shoreline ecological functions and processes on a programmatic basis in~~  
26 ~~accordance with the baseline functions present as of the date of adoption of this program,~~  
27 ~~February 27, 2007.~~

28 3. ~~By including policies and regulations to address cumulative impacts, including ensuring that the~~  
29 ~~cumulative effect of exempt development will not cause a net loss of shoreline ecological~~  
30 ~~functions, and by fairly allocating the burden of addressing such impacts among development~~  
31 ~~opportunities.~~

32 4. ~~By including regulations and regulatory incentives designed to protect shoreline ecological~~  
33 ~~functions, and restore impaired ecological functions where such opportunities have been~~  
34 ~~identified, consistent with the Shoreline Management Program Restoration Plan developed by~~  
35 ~~Whatcom County.~~

36 D. ~~Regulation of private property to implement program goals such as public access and protection of~~  
37 ~~ecological functions and processes must be consistent with all relevant constitutional and other~~  
38 ~~legal limitations. These include, but are not limited to, civil rights guaranteed by the U.S. and state~~

SMP Update – Title 23 Amendments

October 29, 2021

- 1        ~~Constitutions, recent federal and state case law, and state statutes, such as RCW 34.05.328 and~~  
2        ~~43.21C.060 and Chapter 82.02 RCW.~~
- 3        ~~E. Regulatory or administrative actions contained herein must be implemented consistent with the~~  
4        ~~public trust doctrine and other applicable legal principles as appropriate and must not~~  
5        ~~unconstitutionally infringe on private property rights or result in an unconstitutional taking of~~  
6        ~~private property.~~
- 7        ~~F. The regulatory provisions of this program are limited to shorelines of the state, whereas the~~  
8        ~~planning functions of this program may extend beyond the designated shoreline boundaries.~~
- 9        ~~G. The policies and regulations established by the program must be integrated and coordinated with~~  
10       ~~those policies and rules of the Whatcom County Comprehensive Plan and development regulations~~  
11       ~~adopted under the Growth Management Act (GMA) and RCW 34.05.328.~~
- 12       ~~H. Consistent with the policy and use preferences of RCW 90.58.020, Whatcom County should balance~~  
13       ~~the various policy goals of this program giving consideration to other relevant local, state, and~~  
14       ~~federal regulatory and non-regulatory programs.~~
- 15       **23.10.0405.030 Title.**
- 16       This title, taken together with Chapter 11 (Shorelines) of the Whatcom County Comprehensive Plan,  
17       shall be known and may be cited as “The Whatcom County Shoreline Management Program.” Herein,  
18       this title together with Chapter 11 of the Comprehensive Plan may be referred to as the “SMP” or the  
19       “program.”
- 20       **23.10.050 Short title.**
- 21       This title may be referred to herein as the “SMP,” or the “program.”
- 22       **23.10.0605.040 Relationship to the Comprehensive Plan and other Federal, State, and County Codes**  
23       **and RegulationsReferences to plans, regulations or information sources.**
- 24       A. Consistent with RCW 36.70A.480, the goals and policies of this program approved under Chapter  
25       90.58 RCW are included as Chapter 11 (Shorelines) of the County’s Comprehensive Plan. All  
26       regulatory elements of this program shall be considered a part of the County’s development  
27       regulations.
- 28       B. Uses, developments, and activities regulated by this program may be independently subject to the  
29       Whatcom County Comprehensive Plan, the Whatcom County Code (WCC), the Washington State  
30       Environmental Policy Act, and various other federal, state, and county laws.
- 31       C. Obtaining a shoreline permit or statement of exemption for a development or use does not excuse  
32       the applicant/proponent from complying with any other local, tribal, state, regional, or federal  
33       statutes or regulations applicable to such development or use. The responsibility for determining  
34       applicable statutes and regulations and complying with the same rests with the applicant/proponent  
35       or responsible person carrying out the use or development in question. The applicant must comply  
36       with all applicable laws prior to commencing any uses, development, or activity.
- 37       D. Should a conflict occur between the provisions of this program or between this program and the  
38       laws, regulations, codes, or rules promulgated by Whatcom County or any other authority having

# Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

1 jurisdiction within Whatcom County, the more restrictive requirements shall apply, except when  
2 constrained by federal or state law, or where specifically provided otherwise in this program.  
3 E. Relationship to other County regulations.  
4 1. Incorporation of the Whatcom County critical areas regulations, WCC Chapter 16.16, is  
5 addressed in WCC 23.05.065 (Critical Areas).  
6 4-2. The permitting procedures necessary for implementing this program are found in WCC Chapter  
7 22 (Land Use and Development).  
8 2-a. In the case of development subject to the shoreline permit requirement of this program, the  
9 County Building Official shall not issue a building permit for such development until a  
10 shoreline permit has been granted; provided, that any permit issued by the Building Official  
11 for such development shall be subject to the same terms and conditions that apply to the  
12 shoreline permit. All shoreline permits shall be obtained prior to issuance of a building permit  
13 provided, that any permit issued by the Building Official for such development shall be  
14 subject to the same terms and conditions that apply to the shoreline permit.-  
15 3-b. In the case of development subject to regulations of this program but exempt from the  
16 shoreline substantial development permit requirement, any Arequired statement of  
17 exemption shall be obtained prior to issuance of the building permit; provided, that for  
18 single-family residences, review for compliance with this Title may be completed as part of a  
19 building permit or non-shoreline permit. reviewed and signed off by the administrator may  
20 substitute for a written statement of exemption. A record of review documenting  
21 compliance with bulk and dimensional standards as well as policies and regulations of this  
22 program shall be included in the permit review. Conditions of approval for compliance with  
23 this Title shall be added to such permit. The conditions of approval shall be enforced with  
24 the provisions of this Title: Section 23.10.160 (Violations, Enforcement, and Penalties). The  
25 Building Official shall attach and enforce conditions to the building permit as required by  
26 applicable regulations of this program pursuant to RCW 90.58.140(1).  
27 a.c. In the case of zoning conditional use permits and/or variances, Project permits are subject  
28 to consolidated review pursuant to Chapter 22.05 (Land Use and Development). Trequired  
29 by WCC Title 20 for development that is also within shorelines, the County designated  
30 decision maker for such permits shall document compliance with bulk and dimensional  
31 standards as well as the policies and regulations of this program in consideration of  
32 recommendations from the administrator. The decision maker and shall attach conditions to  
33 such permits and variances approvals as required to make such development consistent with  
34 this program.  
35 4. In the case of land divisions, such as short subdivisions, long plats, and planned unit  
36 developments that require County approval, the decision maker shall document compliance  
37 with bulk and dimensional standards as well as policies and regulations of this program and  
38 attach appropriate conditions and/or mitigating measures to such approvals to ensure the  
39 design, development activities and future use associated with such land division(s) are  
40 consistent with this program.

Comment [PDS3]: Simplified

Comment [PDS4]: Simplified.

Formatted: Indent: Left: 0.5", Hanging: 0.25"

Comment [CES5]: Don't need; subsection (c) amended to include all permits, including land division.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 | 5-3. Other local ordinances that may be applicable to shoreline development or use include, but are  
2 | not limited to:  
3 | a. Building, plumbing, mechanical, and fire codes.  
4 | b. Boating and swimming, WCC Title 11.  
5 | c. On-site sewage system regulations, WCC Chapter 24.05.  
6 | d. Solid waste rules and regulations, WCC Chapter 24.06.  
7 | e. Zoning, WCC Title 20.  
8 | f. Land division regulations, WCC Title 21.  
9 | g. Development standards.
- 10 | F. Relationship to other state, tribal, and federal regulations.  
11 | 1. Where this program makes reference to any RCW, WAC, or other state or federal law or  
12 | regulation, the most recent amendment or current edition shall apply.  
13 | 2. This program shall be applied consistent with all federal, state, and local laws affecting tribal  
14 | rights.  
15 | 3. The rights of treaty tribes to resources within their usual and accustomed areas shall be  
16 | accommodated through the notification and comment provisions of the permit review process.  
17 | Tribal treaty rights may be addressed through specific permit conditions. Direct coordination  
18 | between tribes and the applicant/proponent is encouraged.
- 19 | 6-4. Coastal Zone Management Act consistency reviews for sites within federal jurisdiction shall  
20 | apply the shoreline environment designation criteria of Chapter 11 (Shorelines) of the  
21 | Comprehensive Plan that most closely correspond to the project site in order to determine  
22 | applicable program policies.
- 23 | 7. Obtaining a shoreline permit or statement of exemption for a development or use does not  
24 | excuse the applicant/proponent from complying with any other local, tribal, state, regional, or  
25 | federal statutes or regulations applicable to such development or use.
- 26 | 8. At the time of application or initial inquiry, the administrator shall inform the  
27 | applicant/proponent of other such statutes and regulations relating to shoreline issues that may  
28 | be applicable to the project to the extent that the administrator is aware of such statutes.  
29 | However, the final responsibility for determining applicable statutes and regulations and  
30 | complying with the same rests with the applicant/proponent or responsible person carrying out  
31 | the use or development in question.
- 32 | 9. Stipulated Judgment No. 93-2-02447-6 between Governor's Point Development Company and  
33 | Whatcom County, the state of Washington, and the Department of Ecology is incorporated by  
34 | reference into Whatcom County's shoreline management program. A copy of the judgment is on  
35 | file with the Whatcom County Planning and Development Services department.
- 36 | **23.1005.065 Critical Areas.**  
37 | A. The Whatcom County critical areas ordinance regulations (CAO), WCC Chapter 16.16 (Ordinance No.  
38 | X2017-077, dated XDecember 5, 2017), is are hereby adopted in whole as a part of this program,  
39 | except that the provisions of WCC 16.16.270 (Reasonable Use

Comment [RCE6]: Moved from 23.60.080  
(Notice of Application)

Comment [CES7]: Covered elsewhere.

Comment [CES8]: No longer needed as it no  
longer applies.

Comment [CES9]: To do: Will need to update  
this to the ordinance and date of the CAO we're  
amending as part of this update.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 Exceptions), 16.16.275 (Nonconforming Uses, Structures, and Lots), and 16.16.285 (Penalties and  
2 Enforcement) and as specifically excluded elsewhere within this Title shall not apply within shoreline  
3 jurisdiction. All references to the critical areas ordinance (CAO), WCC Chapter 16.16, are for this  
4 specific version.
- 5 ~~—except that the permit, nonconforming use, appeal and enforcement provisions of the critical areas~~  
6 ~~ordinance (WCC 16.16.270 through 16.16.285) shall not apply within shoreline jurisdiction. All~~  
7 ~~references to the critical areas ordinance (CAO), Chapter 16.16 WCC, are for this specific version.~~
- 8 B. The adopted provisions of WCC Chapter 16.16 (Critical Areas) shall apply to any use, alteration or  
9 development within shoreline jurisdiction whether or not a shoreline permit or statement of  
10 exemption is required.
- 11 ~~—Unless otherwise stated, no development shall be constructed, located, extended, modified,~~  
12 ~~converted, or altered, or land divided, without full compliance with WCC Chapter 16.16 and this~~  
13 ~~program.~~
- 14 **23.1005.1240 Program Effects on Property Values.**
- 15 A. As provided for in RCW 90.58.290, the restrictions imposed upon use of real property through  
16 implementation of policies and regulations of the Act and this program shall be duly considered by  
17 the County Assessor and the County Board of Equalization in establishing the fair market value of  
18 such properties.
- 19 B. Designation of private property as a natural or conservancy shoreline ~~area~~ environment pursuant to  
20 WCC Chapter 23.230 (Shoreline Jurisdiction and Area Environment Designations) shall qualify the  
21 property as meeting the definition of “open space land” under the Open Space Taxation Act of 1970,  
22 as amended (RCW 84.34.020(1)) and shall qualify such land for application for open space taxation  
23 in accordance with RCW 84.34.037 and WCC Chapter 3.28 (Open Space Land Classification).
- 24 **23.1005.1350 Property Rights.**
- 25 A. Regulation of private property to implement program goals, such as public access and protection of  
26 ecological functions and processes, must be consistent with all relevant constitutional and other  
27 legal limitations. These include, but are not limited to, the protections afforded by the federal and  
28 state constitutions, and federal, state, and local laws.
- 29 ~~A.B. Decisions on shoreline permits and/or approvals shall recognize all relevant constitutional and other~~  
30 ~~legal limitations on the regulation of private property. Findings~~ In issuing shoreline permits or  
31 statements of exemptions, the decision maker shall assure that conditions imposed relate to the  
32 governmental authority and responsibility to protect the public health, safety, and welfare, are  
33 consistent with the purposes of the Act, and are roughly proportional to the expected impact.
- 34 ~~B.C.~~ This program does not alter existing law on access to or trespass on private property and does not  
35 give the general public any right to enter private property without the owner’s permission.
- 36 ~~C.D.~~ Consistent with Whatcom County’s high standard of staff conduct, County staff shall observe all  
37 applicable federal, ~~and state, and County~~ laws regarding entry onto privately owned property.

**Comment [DOE-Req10]:** Required Change – Whatcom County is concurrently updating its CAO regulations along with this Shoreline Master Program (SMP) amendment. The final adopting ordinance is required in the provision once known.

The added language clarifies that this provision does not represent an exhaustive list of CAO provisions that do not apply within the context of the SMP. There are numerous other sections of the CAO that conflict with statutory and rule requirements related to shoreline permit processing such as 16.16.230 (Activities Allowed without Notification), 16.16.235 (Activities Allowed with Notification) and 16.16.275 (Variances). These sections contain language either requiring SMP review or excluding their applicability within shoreline jurisdiction.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 ~~23.10.070 Liberal construction.~~  
2 ~~As provided for in RCW 90.58.900, the Act is exempted from the rule of strict construction; the Act and~~  
3 ~~this program shall therefore be liberally construed to give full effect to the purposes, goals, objectives,~~  
4 ~~and policies for which the Act and this program were enacted and adopted, respectively.~~

Comment [CES11]: Moved to 23.10.040 Code Interpretation

5 ~~23.1005.080 Severability.~~  
6 The Act and this program adopted pursuant thereto, in conjunction with other applicable County land  
7 use regulations, comprise the basic state and County law regulating use of shorelines in the county. In  
8 the event provisions of this program conflict with other applicable County policies or regulations, the  
9 more restrictive shall prevail. Should any section or provision of this program be declared invalid, such  
10 decision shall not affect the validity of this program as a whole.

11 ~~23.1005.090 Effective Date.~~  
12 This program and all amendments thereto shall become effective 14 days from immediately upon final  
13 approval and adoption by the Department of Ecology's written notice of final action.

Comment [AP12]: Updated per Periodic Review Checklist, Item 2010.a, and Scoping Document, Item #1g.

# Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

## Chapter 23.20 Goals and Objectives

Comment [MD13]: All content in Chapter 23.20 moved to CompPlan.

### ~~23.20.005 Generally.~~

~~This chapter describes overall program goals and objectives. The general policies and regulations in Chapter 23.90 WCC and the specific use policies and regulations in Chapter 23.10 WCC are the means by which these goals and objectives are implemented.~~

### ~~23.20.010 Adoption.~~

~~In addition to the policy adopted in WCC 23.10.020(C), the following goals and objectives relating to the program elements specified in RCW 90.58.100(2) are hereby adopted. They provide the comprehensive foundation and framework upon which the shoreline area designations, policies, regulations, and administrative procedures are based.~~

### ~~23.20.020 Economic development.~~

~~The economic development element provides for the location and design of industries, transportation facilities, port facilities, tourist facilities, commerce and other developments that are particularly dependent upon a shoreline location and/or use of the shorelines of the state.~~

~~A. Goal. To create and maintain an economic environment that can coexist harmoniously with the natural and human environment.~~

#### ~~B. Objectives.~~

- ~~1. Encourage economic development that has minimal adverse effects and mitigates unavoidable impacts upon shoreline ecological functions and processes and the built environment.~~
- ~~2. Encourage shoreline development that has a positive effect upon economic and social activities of value to the region.~~
- ~~3. Encourage new water dependent, water related, and water enjoyment economic development in priority order.~~
- ~~4. Encourage economic development that is consistent with the adopted Comprehensive Economic Development Strategy (CEDS) for Whatcom County.~~
- ~~5. Implement economic development policies contained in the Whatcom County Comprehensive Plan in shoreline areas consistent with this program and the Act.~~
- ~~6. Encourage new economic development to locate in areas that are already developed with similar uses.~~
- ~~7. Discourage expansion of existing development that is incompatible with this program, the character of the local area, or the Whatcom County Comprehensive Plan.~~

### ~~23.20.030 Public access.~~

~~The public access element provides for public access to publicly owned or privately owned shoreline areas where the public is granted a right of use or access.~~

~~A. Goal. To increase the ability of the general public to reach, touch, and enjoy the water's edge, to travel on the waters of the state, and/or to view the water and the shoreline from adjacent~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 locations; provided, that private rights, the public safety, and shoreline ecological functions and  
2 processes are protected consistent with the U.S. and state Constitutions, state case law, and state  
3 statutes.

### 4 ~~B. Objectives.~~

5 1. ~~Locate, design, manage and maintain public access in a manner that protects shoreline~~  
6 ~~ecological functions and processes and the public health and safety.~~

7 2. ~~Design and manage public access in a manner that ensures compatibility with water-dependent~~  
8 ~~uses.~~

9 3. ~~Where appropriate, acquire access to publicly owned tidelands and shorelands. Encourage~~  
10 ~~cooperation among the county, landowners, developers, other agencies and organizations to~~  
11 ~~enhance and increase public access to shorelines as specific opportunities arise.~~

12 4. ~~Provide and protect visual access to shorelines and tidelands.~~

13 5. ~~Require physical or visual access to shorelines as a condition of approval for shoreline~~  
14 ~~development activities commensurate with the impacts of such development and the~~  
15 ~~corresponding benefit to the public, and consistent with constitutional limitations.~~

16 6. ~~Develop and manage public access to prevent adverse impacts to adjacent private shoreline~~  
17 ~~properties and developments.~~

### 18 **23.20.040 Recreation.**

19 The recreation element provides for the preservation and expansion of water-oriented recreational  
20 opportunities that facilitate the public's ability to enjoy the physical and aesthetic qualities of the  
21 shoreline through parks, public access to tidelands and beaches, bicycle and pedestrian paths,  
22 viewpoints and other recreational amenities.

23 A. ~~Goal. To provide opportunities and space for diverse forms of water-oriented recreation.~~

### 24 ~~B. Objectives.~~

25 1. ~~Locate, develop, manage, and maintain recreation areas in a manner that protects shoreline~~  
26 ~~ecological functions and processes.~~

27 2. ~~Provide a balanced choice of water-oriented public recreational opportunities regionally. Ensure~~  
28 ~~that shoreline recreation facilities serve projected county growth in accordance with the level of~~  
29 ~~service standards established in the Whatcom County Comprehensive Plan and related goals~~  
30 ~~and policies; the Comprehensive Park and Recreation Open Space Plan; the Whatcom County~~  
31 ~~Bicycle Plan; and the Natural Heritage Plan.~~

32 3. ~~Acquire additional recreation areas and public access areas with a high recreation value prior to~~  
33 ~~demand to assure that sufficient shoreline recreation opportunities are available to serve future~~  
34 ~~recreational needs.~~

35 4. ~~Encourage cooperation among public agencies, nonprofit groups, and private landowners and~~  
36 ~~developers to increase and diversify recreational opportunities through a variety of means~~  
37 ~~including incorporating water-oriented recreational opportunities into mixed use developments~~  
38 ~~and other innovative techniques.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 5. Recognize and protect the interest of all people of the state by providing increased recreational  
2 opportunities within shorelines of statewide significance and associated shorelands.  
3 6. Encourage private and public investment in recreation facilities.  
4 7. Locate, design, and operate recreational development in a manner that minimizes adverse  
5 effects on adjacent properties as well as other social, recreational, or economic activities.
- 6 **~~23.20.050 Transportation and essential public facilities.~~**  
7 ~~The transportation and essential public facilities element provides for the general location and extent of~~  
8 ~~existing and proposed public thoroughfares, transportation routes, terminals, and other public utilities~~  
9 ~~and facilities.~~
- 10 ~~A. Goal. To provide transportation systems and essential public facilities in shoreline areas without~~  
11 ~~adverse effects on existing shoreline use and development or shoreline ecological functions and/or~~  
12 ~~processes.~~
- 13 ~~B. Objectives:~~
- 14 1. ~~Locate, develop, manage, and maintain transportation systems and essential public facilities in a~~  
15 ~~manner that protects shoreline ecological functions and processes. Minimize and mitigate~~  
16 ~~unavoidable impacts.~~
- 17 2. ~~Locate and design transportation systems and essential public facilities to be harmonious with~~  
18 ~~the existing and future economic and social needs of the community.~~
- 19 3. ~~Discourage the development of non-water dependent transportation systems and essential~~  
20 ~~public facilities unless no feasible alternatives exist. Devote roads within the shoreline~~  
21 ~~jurisdiction to low volume local access routes and shoreline public access where feasible.~~
- 22 4. ~~When appropriate, require adequate compensation where transportation systems and essential~~  
23 ~~public facilities reduce the benefits people derive from their property.~~
- 24 5. ~~Provide for alternate modes of travel, encourage freedom of choice among travel modes, and~~  
25 ~~provide multiple use transportation corridors where compatible in association with shoreline~~  
26 ~~transportation development.~~
- 27 6. ~~Require transportation system and essential public facility development in shoreline areas to~~  
28 ~~protect and enhance physical and visual shoreline public access.~~
- 29 **~~23.20.060 Shoreline use.~~**  
30 ~~The shoreline use element considers the use and development of shorelines and adjacent land areas for~~  
31 ~~housing, business, industry, transportation, agriculture, forestry, natural resources, recreation,~~  
32 ~~education, public institutions, utilities and other categories of public and private land use with respect to~~  
33 ~~the general distribution, location and extent of such uses and developments.~~
- 34 ~~A. Goal. To preserve and develop shorelines in a manner that allows for an orderly balance of uses.~~
- 35 ~~B. Objectives:~~
- 36 1. ~~Give preference to water dependent and single-family residential uses that are consistent with~~  
37 ~~preservation of shoreline ecological functions and processes. Give secondary preference to~~  
38 ~~water-related and water-enjoyment uses. Allow non-water-oriented uses only when substantial~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 public benefit is provided with respect to the goals of the Act for public access and ecological  
2 restoration.

3 ~~2. Designate and maintain appropriate areas for protecting and restoring shoreline ecological~~  
4 ~~functions and processes to control pollution and prevent damage to the shoreline environment~~  
5 ~~and/or public health.~~

6 ~~3. Ensure shoreline uses are consistent with the Whatcom County Comprehensive Plan.~~

7 ~~4. Balance the location, design, and management of shoreline uses throughout the county to~~  
8 ~~prevent a net loss of shoreline ecological functions and processes over time.~~

9 ~~5. Encourage mixed use developments that include and support water oriented uses and provide a~~  
10 ~~substantial public benefit consistent with the public access and ecological restoration goals and~~  
11 ~~policies of the Act.~~

12 ~~6. Encourage shoreline uses and development that enhance shoreline ecological functions and/or~~  
13 ~~processes or employ innovative features that further the purposes of this program.~~

14 ~~7. Encourage shoreline uses and development that enhance and/or increase public access to the~~  
15 ~~shoreline.~~

### 16 ~~23.20.070 Conservation.~~

17 ~~The shoreline conservation element provides for the protection of natural resources, and shoreline~~  
18 ~~ecological functions and processes. Resources to be conserved and protected include, but are not~~  
19 ~~limited to, wetlands; riparian, nearshore, and aquatic habitats; priority fish and wildlife habitats and~~  
20 ~~species; floodplains; feeder bluffs and other geological features; cultural and historic resources; as well~~  
21 ~~as scenic vistas and aesthetics.~~

22 ~~A. Goal. To conserve shoreline resources and important shoreline features, and protect shoreline~~  
23 ~~ecological functions and the processes that sustain them to the maximum extent practicable.~~

#### 24 ~~B. Objectives.~~

25 ~~1. Develop regulations and mitigation standards that ensure new shoreline developments prevent~~  
26 ~~a net loss of shoreline ecological functions and processes. Implement such regulations and~~  
27 ~~standards in a manner consistent with all relevant constitutional and other legal limitations on~~  
28 ~~the regulation of private property.~~

29 ~~2. Protect critical areas in accordance with the policies and regulations in Chapter 16.16 WCC.~~

30 ~~3. Manage renewable natural resources on a sustained yield basis. Extract nonrenewable natural~~  
31 ~~resources in a manner that maintains the quality of other resources and shoreline ecological~~  
32 ~~functions and processes.~~

33 ~~4. Prioritize protection and/or conservation of shoreline areas that are ecologically intact and~~  
34 ~~minimally developed or degraded.~~

### 35 ~~23.20.080 Archaeological, historical and cultural resources.~~

36 ~~The archaeological historical cultural element provides for protection, preservation and/or restoration~~  
37 ~~of buildings, sites, and areas having archaeological, historical, cultural, or scientific value or significance.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 A.—Goal. Protect shoreline features of historic, cultural, archeological, or scientific value or significance  
2 to prevent damage or destruction through coordination and consultation with the appropriate local,  
3 state and federal authorities, including affected Indian tribes.
- 4 B.—Objectives.
- 5 1.—Protect sites in collaboration with appropriate tribal, state, federal and local governments.  
6 Encourage public agencies and private parties to cooperate in the identification, protection and  
7 management of cultural resources.
- 8 2.—Where appropriate, make access to such sites available to parties of interest; provided, that  
9 access to such sites must be designed and managed in a manner that gives maximum protection  
10 to the resource.
- 11 3.—Provide opportunities for education related to archaeological, historical and cultural features  
12 where appropriate and incorporated into public and private programs and development.
- 13 **~~23.20.090 Views and aesthetics.~~**
- 14 This element provides for preservation and/or protection of scenic vistas, views of the water, and other  
15 aesthetic qualities of shorelines for public enjoyment.
- 16 A.—Goal. To assure that the public’s ability and opportunity to enjoy shoreline views and aesthetics is  
17 protected.
- 18 B.—Objectives.
- 19 1.—Identify and protect areas with scenic vistas and areas where the shoreline has high aesthetic  
20 value.
- 21 2.—Design development to minimize adverse impacts on views from public property or views  
22 enjoyed by a substantial number of residences.
- 23 **~~23.20.100 Restoration and enhancement.~~**
- 24 This element provides for the timely restoration and enhancement of ecologically impaired areas in a  
25 manner that achieves a net gain in shoreline ecological functions and processes above baseline  
26 conditions as of the adoption of this program.
- 27 A.—Goal. To reestablish, rehabilitate and/or otherwise improve impaired shoreline ecological functions  
28 and/or processes through voluntary and incentive based public and private programs and actions  
29 that are consistent with the Shoreline Management Program Restoration Plan (County Resolution  
30 2007-011) and other approved restoration plans.
- 31 B.—Objectives.
- 32 1.—Encourage and facilitate cooperative restoration and enhancement programs between local,  
33 state, and federal public agencies, tribes, nonprofit organizations, and landowners to address  
34 shorelines with impaired ecological functions and/or processes.
- 35 2.—Restore and enhance shoreline ecological functions and processes as well as shoreline features  
36 through voluntary and incentive based public and private programs.
- 37 3.—Target restoration and enhancement towards improving habitat requirements of priority and/or  
38 locally important wildlife species.

# Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

## Chapter 23.05-10 Administrative Procedures Provisions

### 23.10.010 Authorization.

RCW 90.58.140(3) requires local governments to establish a program, consistent with the rules adopted by Ecology, for the administration and enforcement of shoreline development. Also, in accordance with RCW 90.58.050, which provides that This program is intended to establish a cooperative program between Whatcom County and the state. Whatcom County shall have the primary responsibility for administering the regulatory program, and Ecology shall act primarily in a supportive and review capacity, in accordance with RCW 90.58.050.

### 23.10.100-020 Application to persons and development Applicability.

A. Unless specifically exempted by statute, or as excluded below, This program shall apply to any person, as defined in WCC Chapter 23.110. This program shall apply to any proposed development, use, or activity development as defined in WCC Chapter 23.110. All development and use of shorelines of the state shall be carried out in a manner that is consistent with this program and the policy of the Act as required by RCW 90.58.140(1), whether or not a shoreline permit or statement of exemption is required for such development pursuant to Chapter 23.60 WCC, occurring within shoreline jurisdiction. Such development, use, or activity must conform to chapter 90.58 RCW, the Shoreline Management Act, and this master program whether or not a permit is required.

B. Unless otherwise stated, no development shall be constructed, located, extended, modified, converted, or altered, or land divided, without full compliance with this program, including WCC Chapter 16.16 (Critical Areas).

C. No substantial development as defined in WCC Chapter 23.110 shall be undertaken within shorelines by any person on shorelines without first obtaining a substantial development permit from Whatcom County; provided, that such a permit shall not be required for the exempt activities listed in WCC 22.07.020 (Exemptions from Shoreline Substantial Development Permits) 23.60.022.

D. All developments, uses and development activities on shorelines shall be subject to the policies of the Whatcom County Comprehensive Plan Chapter 11 (Shorelines) and regulations of this program in addition to any other applicable regulations of the Whatcom County Code, provided, that all use and development that is to be located within the Cherry Point Management Area, as defined in Chapter 23.90 WCC, shall be subject to the regulations found in WCC 23.40.210 only, and shall not be subject to the regulations found in this chapter and Chapter 23.40 WCC unless otherwise specified.

E. Application within Federal Reserves or Lands.

1. Areas and uses in those areas that are under exclusive federal jurisdiction as established through federal or state statutes are not subject to the jurisdiction of RCW Chapter 90.58 (SMA).
2. As recognized by RCW 90.58.350, nothing in this program shall affect any rights established by treaty to which the United States is a party.
3. The Act and this program, including the permit system, shall apply to all nonfederal developments and uses undertaken on federal lands and on lands subject to nonfederal

Comment [CES19]: From WAC 90.58.350.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 ownership, lease, or agreement, even though such lands may fall within the external boundaries  
2 of a federal ownership.
- 3 F. Direct federal agency activities affecting the uses or resources subject to the Act must be consistent  
4 to the maximum extent practicable with the enforceable provisions of the Act and with this master  
5 program as required by WAC 173-27-060.
- 6 G. This master program shall apply to all unincorporated urban lands until such time as a city meets the  
7 requirements of WAC 173-26-150 or 173-26-160 for pre-designation of urban growth areas (UGAs)  
8 or amends its master program as appropriate.
- 9 H. This program shall not apply to:
- 10 1. Activities undertaken to comply with a United States Environmental Protection Agency  
11 Superfund-related order, or a Washington Department of Ecology order pursuant to the Model  
12 Toxics Control Act (such as the Swift Creek Sediment Management Action Plan), or a  
13 Department of Homeland Security order that specifically preempts local regulations in the  
14 findings of the order.
- 15 2. Pursuant to RCW 90.58.045 regarding environmental excellence program agreements,  
16 notwithstanding any other provision of law, any legal requirement under the Shoreline  
17 Management Act, including any standard, limitation, rule, or order is superseded and replaced  
18 in accordance with the terms and provisions of an environmental excellence program  
19 agreement, entered into under chapter 43.21K RCW.
- 20 3. The holder of a certification from the governor pursuant to chapter 80.50 RCW shall not be  
21 required to obtain a permit under chapter 90.58 RCW.
- 22 I. Pursuant to RCW 90.58.140(12), a permit is not required in order to dispose of dredged materials at  
23 a disposal site approved through the cooperative planning process referenced in RCW 79.105.500,  
24 provided the dredged material disposal proponent obtains a valid site use authorization from the  
25 Dredged Material Management Program office within the Department of Natural Resources.
- 26 **~~23.10.180-030 Administration~~Administrative Duties.**
- 27 A. The Director is hereby ~~vested with the authorized~~ authorized to:
- 28 1. Administer this program.
- 29 2. Determine if a public hearing should be held on a shoreline permit application by the Hearing  
30 Examiner pursuant to WCC Title 22 (Land Use and Development) 23-60-130.
- 31 3. Grant or deny statements of exemption.
- 32 4. Authorize, approve, or deny shoreline substantial development permits, except for those for  
33 which the Hearing Examiner or County Council is the designated decision maker.
- 34 5. Enforce the code pursuant to WCC 23.10.160 (Violations, Enforcement, and Penalties), including  
35 issuing a stop work orders pursuant to the procedure set forth in WAC 173-27-270 and this  
36 program, upon a person undertaking an activity on shorelines in violation of Chapter 90.58 RCW  
37 or this program; and seek remedies for alleged violations of this program's regulations, or of the  
38 provisions of the Act, or of conditions of approval for attached to a all project permits with

**Comment [CES20]:** Added per Periodic Review Checklist, Item 2017.c, and Scoping Document, Item #1c: Update to fully cover the exceptions in WAC 173-27-044 and -045 to satisfy required legislative amendment.

Comment [PDS21]: Not relevant to SMP

Comment [CES22]: Moved from 23.70.040

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

2. Adopt all amendments to this program, after consideration of the recommendation of the Planning Commission and pursuant to the procedural requirements of WCC Chapter 2.02; provided, that substantive amendments shall become effective 14 days from immediately upon adoption by the Department of Ecology's written notice of final action.
3. Make final County decisions or recommendations, as applicable, with regard to shoreline permit, shoreline variance, or shoreline conditional use applications that require County Council action on a consolidated review as provided by WCC Chapter 22.05.

Comment [CES23]: Moved from 23.70.050

### **23.05.010 Authority.**

As described in adopted Whatcom County Ordinance 2008-034, the general administrative sections of Title 23 (Whatcom County Shoreline Management Program) are not part of this program. They are, however, included with the text of this title for consistency and ease of use. Department of Ecology will be notified of any changes to the administrative chapters listed below.

The use of separate local administrative and enforcement procedures is consistent with the 2003 Washington State Shoreline Master Program Guidelines (WAC 173-26-191(2)(a)(iii)(C)), Administrative provisions:

Local governments may include administrative, enforcement, and permit review procedures in the master program or the procedures may be defined by a local government ordinance separate from the master program. In either case, these procedures shall conform to the Shoreline Management Act, specifically RCW 90.58.140, 90.58.143, 90.58.210 and 90.58.220 and to chapter 173-27 WAC.

### **23.05.020 Purpose.**

The purpose of the chapter is to allow Whatcom County to revise local administrative procedures (fees, application meetings, authority of administrator, etc.) without a formal state amendment process. These chapters must still be consistent and remain consistent with the related provisions in the Shoreline Management Act and state shoreline rules (WACs). In the event of a conflict, the state RCW or WAC, as amended, will prevail over the local ordinance.

### **23.05.030 Administrative procedures.**

- A. All applications for project permits covered by this title shall be reviewed and processed in accordance with Chapter 22.05 WCC, except as otherwise stated within this title.
- B. The following administrative sections and chapters were adopted by the Whatcom County Administrative Procedures Ordinance 2008-034, and are separate from this title:
  - WCC 23.60.050 — Minimum application requirements.
  - WCC 23.60.060 — Pre-application conference.
  - WCC 23.60.070 — Fees.
  - WCC 23.60.080 — Notice of application.
  - WCC 23.60.090 — Permit application review.
  - WCC 23.60.100 — Consolidated permit review.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1     — WCC 23.60.110 — State Environmental Policy Act (SEPA) compliance.  
2     — WCC 23.60.130 — Public hearings.  
3     — WCC 23.60.140 — Permit conditions.  
4     — WCC 23.60.150 — Notice of decision, reconsideration and appeal.  
5     — WCC 23.60.160 — Initiation of development.  
6     — WCC 23.60.180 — Rescission and modification.  
7     — WCC 23.60.190 — Expiration.  
8     — Chapter 23.70 WCC — Administration.  
9     — Chapter 23.80 WCC — Legal Provisions.
- 10    **23.10.110 Relationship to other local regulations.**  
11    A. In the case of development subject to the shoreline permit requirement of this program, the county  
12       building official shall not issue a building permit for such development until a shoreline permit has  
13       been granted; provided, that any permit issued by the building official for such development shall be  
14       subject to the same terms and conditions that apply to the shoreline permit.  
15    B. In the case of development subject to regulations of this program but exempt from the shoreline  
16       substantial development permit requirement, any required statement of exemption shall be  
17       obtained prior to issuance of the building permit; provided, that for single family residences, a  
18       building permit reviewed and signed off by the administrator may substitute for a written statement  
19       of exemption. A record of review documenting compliance with bulk and dimensional standards as  
20       well as policies and regulations of this program shall be included in the permit review. The building  
21       official shall attach and enforce conditions to the building permit as required by applicable  
22       regulations of this program pursuant to RCW 90.58.140(1).  
23    C. In the case of zoning conditional use permits and/or variances required by WCC Title 20 for  
24       development that is also within shorelines, the county decision maker shall document compliance  
25       with bulk and dimensional standards as well as policies and regulations of this program in  
26       consideration of recommendations from the administrator. The decision maker shall attach  
27       conditions to such permits and variances as required to make such development consistent with this  
28       program.  
29    D. In the case of land divisions, such as short subdivisions, long plats and planned unit developments  
30       that require county approval, the decision maker shall document compliance with bulk and  
31       dimensional standards as well as policies and regulations of this program and attach appropriate  
32       conditions and/or mitigating measures to such approvals to ensure the design, development  
33       activities and future use associated with such land division(s) are consistent with this program.  
34    E. Other local ordinances that may be applicable to shoreline development or use include, but are not  
35       limited to:  
36       1. Building, plumbing, mechanical, and fire codes.  
37       2. Boating and swimming, WCC Title 11.  
38       3. On site sewage system regulations, Chapter 24.05 WCC.  
39       4. Solid waste rules and regulations, Chapter 24.06 WCC.

Comment [AP24]: Moved to WCC 23.10.060.

SMP Update – Title 23 Amendments

October 29, 2021

1 ~~7. Clean Air Act, as amended.~~

2 ~~8. Endangered Species Act (ESA).~~

3 ~~**23.10.1310 Application within federal reserves.**~~

4 ~~A. As recognized by RCW 90.58.350, the provisions of this program shall not apply to lands held in trust~~  
5 ~~by the United States for Indian nations, tribes or individuals.~~

Comment [CES26]: Moved to 23.10.020,  
Applicability

6 **23.10.040 Code Interpretation.**

7 A. The regulations of this Program shall be interpreted to allow the development, use, or activity as  
8 described in the General Regulations and/or Specific Use Regulations only when the proposal is  
9 designed, constructed, and/or mitigated to provide no net loss of or a net lift to ecological functions  
10 and ecosystem wide processes.

11 B. The policies of Chapter 11 (Shorelines) of the Comprehensive Plan shall guide interpretation of the  
12 regulations.

13 C. Conflict between the provisions of the this Program and the WACs implementing the Act must be  
14 resolved in accordance with the WACs; provided that conflict between the provisions of the WACs  
15 implementing the Act and the Act must be resolved in accordance with the Act.

16 D. In case of conflict between the provisions of this program and Whatcom County Code or the laws,  
17 regulations, codes, or rules promulgated by any other authority having jurisdiction within Whatcom  
18 County, the more restrictive requirements shall apply, except when constrained by federal or state  
19 law.

20 E. As provided for in RCW 90.58.900, the Act is exempt from the rule of strict construction, and this  
21 program, including these regulations, shall therefore be liberally construed to give full effect to the  
22 purposes, goals, objectives, and policies of the Act for which this program was enacted and adopted,  
23 respectively.

24 F. Within shoreline jurisdiction, the regulations of WCC Chapter 16.16 adopted pursuant to 23.05.065  
25 (Critical Areas) shall be liberally construed together with the program to give full effect to the  
26 objectives and purposes of the provisions of the program and Act.

27 **23.10.050 Shoreline Permits Required.**

28 A. To be authorized, all shoreline development, uses, or activities shall be done in a manner consistent  
29 with this program and the Shoreline Management Act as required by RCW 90.58.140(1), regardless  
30 of whether a shoreline permit, statement of exemption, shoreline variance, or shoreline conditional  
31 use permit is required.

32 B. The applicable provisions of WCC Title 22 (Land Use and Development) shall govern the processing  
33 of permits required under this Title. If any conflict should exist between Title 22 and this program,  
34 the provisions of this program shall prevail.

35 **23.10.160 Violations, Enforcement, and Penalties.**

36 A. The Director, when necessary in consultation with the Department of Ecology, is authorized to  
37 adopt such rules as are necessary and appropriate to carry out the provisions of the Shoreline  
38 Management Act (RCW 90.58.200) and Chapter 173-27 WAC, Part II. The Act calls for a cooperative

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 program between local government and the state. It provides for a variety of means of  
2 enforcement, including civil and criminal penalties, orders to cease and desist, orders to take  
3 corrective action, and permit rescission.

4 B. In addition to the following provisions, this Title shall be enforced in accordance with WCC Chapter  
5 20.94 (Enforcement and Penalties) and WAC 173-27-240 through 173-27-300 or their successors.

6 C. To achieve no net loss, if a development, use, or activity has occurred in violation of this program,  
7 prompt restoration or mitigation of any adverse impacts shall be provided. The standard mitigation  
8 ratio for the critical area or buffer impacts shall be doubled to address temporal loss when  
9 appropriate. If this provision is not complied with, the County may restore or mitigate the site and  
10 charge the responsible person for the full cost of such an activity. Additionally, any and all permits or  
11 approvals issued by the County may be denied for that property for a period of up to six years.

12 D. Any responsible party that willfully refuses to complete a required restoration plan pursuant to this  
13 section shall be guilty of a misdemeanor and, in addition to the requirement of subsection (C), shall  
14 provide shoreline restoration equal to double the square footage of the impacted area.

15 E. Pursuant to WCC 22.05.150 (Permit Revocation), the County may revoke a permit if the applicant  
16 violates the conditions or limitations set forth in the permit or exceeds the scope of the work set  
17 forth in the permit.

### ~~23.80.040~~ **23.10.170 Abatement.**

18 Structures or development on shorelines considered by the ~~administrator~~ Director to present a hazard  
19 or other public nuisance to persons, properties, or natural features may be abated by the County under  
20 the provisions of WCC Title 15 (Buildings & Construction) and WCC Chapter 22.15 (Code  
21 Enforcement) ~~the applicable provisions of the Uniform Code for the Abatement of Dangerous Buildings,~~  
22 ~~1997 Edition, or successor as adopted by Whatcom County, or by other appropriate means.~~

### **23.10.180 Financial Sureties.**

24 In approving any application or exemption for a shoreline development, the Director may require the  
25 posting of a financial surety to ensure continued compliance with any conditions imposed, including the  
26 construction of improvements, the adherence to County standards, and/or maintenance, repair or  
27 replacement of such improvements. The financial surety shall be in a form acceptable to the County's  
28 attorney. In the event a condition occurs warranting the use of financial surety, the Director may act  
29 under such financial surety or may perform the work required at the County's expense, which expense  
30 shall be a lien against the property, enforceable as would be a judgment thereon.

**Comment [CES27]:** Added. Though we use financial sureties to ensure performance, there was no authorizing language in the SMP.

### ~~23.80.010~~ **23.10.190 Amendments.**

33 A. Amendments to the Shoreline Management Program—including both Comprehensive Plan polices  
34 and Title 23 regulations—shall be processed pursuant to WCC Chapter 22.10 (Legislative Action  
35 Procedures).

36 B. All regulatory elements of this Program shall be considered a part of the County's development  
37 regulations. Certain non-regulatory elements of this master program, including but not limited to  
38 the Shoreline Restoration Plan or administrative procedures (WCC Title 22), may be updated and  
39 amended at any time without requiring a formal master program amendment. Future changes to

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 WCC Title 22 shall remain consistent with the Shoreline Management Act and associated rules,  
2 specifically RCW 90.58.140, 90.58.143, 90.58.210, 90.58.220 and Chapter 173-27 WAC.

3 C. After approval or disapproval of a program amendment by the Department of Ecology as provided in  
4 RCW 90.58.090, the County shall publish a notice that the program amendment has been approved  
5 or disapproved by the Department of Ecology. For the purposes of RCW 36.70A.290, the date of  
6 publication for the amendment of a program is the date the County publishes notice that the  
7 program amendment has been approved or disapproved by the Department of Ecology.

8 A-D. The Director shall submit an annual report to the County Council reviewing the effectiveness of  
9 the program in achieving its stated purpose, goals, and objectives. Such report may also include any  
10 proposed amendments deemed necessary to increase its effectiveness or equity. If said report  
11 contains proposed amendments, the Council may schedule a public hearing to consider such matter  
12 in accordance with the procedure described in subsection (A). Said report shall also include a  
13 determination of whether or not the goal of no net loss of shoreline ecological function is being  
14 achieved and provide recommendations for achieving and maintaining the goal.

**Comment [DOE-Req28]:** Required Change –  
This change clarifies that while administrative provisions can be codified within a local ordinance separate from the SMP, such changes shall remain consistent with the Shoreline Management Act (SMA) and applicable rules (See SMP Guidelines at WAC 173-26-191(2)(a)(iii)(C).

# Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

## Chapter 23.230 Shoreline Jurisdiction and Area-Environment Designations

### 23.230.010 Shoreline Jurisdiction.

A. The provisions of this program shall apply to all shorelines of the state in unincorporated Whatcom County, including all shorelines of statewide significance (~~Appendix D of this title~~) and all shorelands as defined in WCC Chapter 23.110 and collectively referred to herein as “shorelines.” For the purposes of this program, jurisdictional shorelines are divided into segments or reaches. Each segment is assigned one or more shoreline ~~environmental~~ area designations pursuant to this chapter in order to provide for the management of use and development within shorelines.

B. The shoreline master program jurisdiction applies to all shorelines of the state and their associated shorelands. This includes:

1. All marine waters;
2. Rivers and streams with more than twenty cubic feet per second (cfs) mean annual flow;
3. Lakes and reservoirs twenty acres and greater in area;
4. Floodways and the entire 100-year ~~contiguous floodplain areas landward two hundred feet from such floodways~~; and
5. All associated wetlands and river deltas associated with the streams, lakes, and tidal waters that are subject to the provisions of the Act;
6. Shorelands adjacent to these waterbodies, typically within two hundred feet of the ordinary high water mark (OHWM);
7. Buffers necessary to protect critical areas that are located within shoreline jurisdiction as described in this program.
8. Associated estuarine wetlands: the jurisdictional boundary shall extend two hundred feet landward of the OHWM of the wetland.
9. Associated ~~palustrine~~ wetlands that extend greater than two hundred feet landward of the OHWM of the shoreline: the jurisdictional boundary shall extend to the delineated edge ~~OHWM of the wetland~~.
10. Critical areas designated pursuant to Chapter 36.70A RCW and located within shoreline jurisdiction shall be subject to the regulations of this program.

### 23.20.020 ~~23.230.020~~ Official Shoreline Map.

A. As part of this program, there is one official Whatcom County shoreline environment designations map, which shall be in the custody of the Planning and Development Services Department and available for public inspection during normal business hours and on the Whatcom County website. Unofficial copies of the official map or portions thereof may be included or distributed with copies of this program. Shoreline Area Designations. Shoreline area designations are delineated on a map, hereby incorporated as a part of this program (Appendix E of this title) that shall be known as the Official Shoreline Map. There shall be only one official copy of this map that shall reside in the custody of the Washington State Department of Ecology. Additional copies have been provided to

**Comment [DOE-Req29]:** Required Change – Whatcom County has removed the previously adopted “geomorphic floodplain” on the Official Shoreline Map to determine jurisdiction for the Nooksack and Sumas Rivers and has elected to set its jurisdiction as the extent of the 100-year floodplain recently remapped by FEMA. This change is necessary for consistency with the map change.

**Comment [DOE-Req30]:** Required Change – This change clarifies that while administrative provisions can be codified within a local ordinance separate from the SMP, such changes shall remain consistent with the Shoreline Management Act (SMA) and applicable rules (See SMP Guidelines at WAC 173-26-191(2)(a)(iii)(C).

**Comment [DOE-Req31]:** Required Change – Shoreline associated wetlands are not limited to palustrine wetlands for the purposes of determining shoreline jurisdiction. Also, the latera extent of wetlands is not always consistent with the OHWM of the primary waterbody. As such, these changes are necessary for consistency with the definition of “Shorelands” found in RCW 90.58.030(2)(f).

**Comment [CES32]:** From RCW 90.58.030(2)((f) and DOE SMP Handbook.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 the Whatcom County auditor and the Whatcom County planning and development services  
2 department where they are available for public use.
- 3 B. The purpose of the official shoreline environment designations map is to depict graphically those  
4 areas of Whatcom County falling under the jurisdiction of this program, and the shoreline  
5 environment designations of those areas. ~~Shoreline Jurisdictional Limits. The purpose of the Official  
6 Shoreline Map is to identify shoreline area designations. The map does not necessarily identify or  
7 depict the lateral extent of shoreline jurisdiction nor does it identify all associated wetlands. The  
8 lateral extent of the shoreline jurisdiction shall be determined on a case-by-case basis based on the  
9 location of the ordinary high water mark (OHWM), floodway, floodplain, and presence of associated  
10 wetlands; provided, that, exclusive of associated wetlands, the map identifies the lateral extent of  
11 shoreline jurisdiction on the Sumas River and the Mainstem, North Fork, Middle Fork and South Fork  
12 of the Nooksack River.~~
- 13 C. Where questions arise regarding the precise boundaries of any shoreline designation, the Director  
14 will make the final determination following the guidance of 23.20.030 (Interpretation of Official Map  
15 Boundaries) and 23.20.040 (Mapping Errors). Appeals of such interpretations may be filed pursuant  
16 to WCC 22.05.160 (Appeals).
- 17 D. All shorelines waterward of the OHWM shall be designated aquatic, except that in the Cherry Point  
18 Management Area the aquatic designation shall start waterward of the CPMA boundary (see  
19 subsection E).
- 20 E. The Cherry Point Management Area is a geographic area lying between the eastern property  
21 boundary of Tax Lots 2.27 and 2.28 within the SE 1/4 of Section 11, Township 39 North, Range 1  
22 West, as it existed on June 18, 1987, and the southern boundary of Section 32, Township 39 North,  
23 Range 1 East, extending waterward a distance of 5,000 feet and extending landward for 200 feet as  
24 measured on a horizontal plane from the OHWM. This area shall have the Cherry Point Management  
25 Area shoreline environment designation.
- 26 F. Upland shoreline environment designations shall apply to shorelands, unless specifically stated to be  
27 applied to the aquatic designation by this program.
- 28 ~~F.G.~~ Only one shoreline environment designation shall apply to a given shoreland area. In the case of  
29 designations running parallel to one another (as along the coast), designations shall be divided along  
30 an identified linear feature. Such linear features shall be clearly noted in the metadata associated  
31 with the Official Shoreline Map.
- 32 ~~G.H.~~ All shorelines east of the Mount Baker National Forest western boundary are designated natural  
33 or conservancy unless there are federal projects on federal lands.
- 34 ~~H.I.~~ All areas within shorelines that are not mapped and/or designated and are not directly adjacent to  
35 other shoreline designated areas are automatically assigned a conservancy designation. Within  
36 urban growth areas, such shorelines shall be automatically assigned an urban conservancy  
37 designation until such time that the shoreline environment can be re-designated through a formal  
38 amendment.

Comment [PDS33]: Should be based existing conditions

Comment [DOE-Req34]: Required Change – This change restores existing language and the Official Shoreline Map does not include the western portions of the county, and thus a Conservancy designation would be assigned as a default pursuant to the SMP Guidelines at WAC 173-26-211(2)(e).

Comment [DOE-Req35]: Required Change – This change restores existing language by removing a proviso that is not applicable to unmapped and/or designated shorelines per WAC 173-26-211(2)(e).

Comment [CES36]: Moved from “Interpretation of Map” section, below.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

### ~~23.3020.021-030~~ Interpretation of ~~shoreline area designation boundaries~~ Official Map Boundaries.

Where the exact location of an environment designation boundary line is uncertain, the official shoreline environment designations map will be used to determine the location of such line. When resorting to the shoreline environment designations map does not resolve the conflict, the following rules will apply:

1. Boundaries indicated as approximately following the center lines of streets, highways, alleys, or other roadways, or railroads shall be construed to follow the nearest right-of-way edge;
2. Boundaries indicated as approximately following lot, fractional section, or other subdivision lines shall be construed as following such subdivision lines;
3. Boundaries indicated as approximately following any lines of corporate limits or other local government jurisdictional lines shall be construed as following such lines;
4. Boundaries indicated as parallel to or extensions of features identified in subsections (1) through (3) of this section shall be so construed; and,
5. Boundaries between parallel environment designations along the shoreline shall be construed as the top of the bluff or vegetation line that distinguishes existing development from the critical area abutting the shoreline.

~~When not specifically indicated on the shoreline environment designations map, distances shall be determined by the scale of the map;~~

~~Where existing physical or cultural features are at variance with those shown on the shoreline environment designations map and cannot be determined with certainty by applying subsections (A)(1) through (6) of this section, the director shall determine the location or existence of such feature utilizing the provisions of WAC 173-27-211, the policies of RCW 90.58.020, and the corresponding master program provisions herein; and~~

~~If disagreement develops as to the exact location of a shoreline area designation boundary line, the Official Shoreline Map shall prevail.~~

~~If disagreement develops as to the exact location of a shoreline area designation boundary line, the following rules shall apply:~~

~~Boundaries indicated as approximately following lot, tract, or section lines shall be so construed.~~

~~Boundaries indicated as approximately following roads or railways shall be respectively construed to follow their centerlines.~~

~~Boundaries indicated as approximately parallel to or extensions of features indicated in subsection (B)(1) or (2) of this section shall be so construed.~~

~~Whenever existing physical features are inconsistent with boundaries on the Official Shoreline Map, the administrator shall interpret the boundaries. Appeals of such interpretations may be filed pursuant to WCC 23.60.150(H).~~

~~All shoreline area waterward of the OHWM shall be designated aquatic.~~

~~Upland shoreline area designations shall apply to shorelands.~~

~~Only one shoreline area designation shall apply to a given shoreland area. In the case of parallel designations, designations shall be divided along an identified linear feature. Such linear features shall be clearly noted in the metadata associated with the Official Shoreline Map.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 ~~All shorelines east of the Mount Baker National Forest western boundary are designated~~  
2 ~~conservancy unless there are federal projects on federal lands.~~

3 ~~All areas within shorelines that are not mapped and/or designated are automatically assigned a~~  
4 ~~conservancy designation. Within urban growth areas, such shorelines shall be automatically~~  
5 ~~assigned an urban conservancy designation until such time that the shoreline area can be re-~~  
6 ~~designated through a formal amendment.~~

Comment [CES37]: Moved to 23.20.020 Official Map section

### 7 **23.20.040 Mapping Errors**

8 Some mapping errors may be adjusted prior to a master program amendment to assign the appropriate  
9 designation to that area by the following methods:

- 10 1. The common boundary descriptions and the criteria in RCW 90.58.030(2) and Chapter 173-22  
11 WAC supersede the map when there are mapping error conflicts, other than those with a  
12 solution provided in this section.  
13 ~~In the event that a jurisdictional area, including associated wetlands, is not mapped, it will~~  
14 ~~automatically be assigned a “resource,” “conservancy,” or “urban conservancy” designation~~  
15 ~~depending on its location. If outside a UGA and adjacent to an existing “resource” designation, it~~  
16 ~~shall be “resource;” if adjacent to “conservancy” it shall be “conservancy. If outside or inside of~~  
17 ~~a UGA or LAMIRD it shall be “urban conservancy.” Such designation will apply until a master~~  
18 ~~program amendment is approved that assigns the appropriate designation to the subject area.~~
- 19 2. In the event that a parcel was inadvertently assigned more than one designation, the more  
20 restrictive designation shall apply.
- 21 3. In the event that a parcel on the boundary between two designations appears to be a mapping  
22 error based on the criteria in this section, the County shall apply the most appropriate of the  
23 two designations, until such time as the map can be formally corrected consistent with WAC  
24 173-26-100 and Section 22.500.105(I) (Shoreline Master Program Amendment).
- 25 4. In the event of an environment designation mapping error where the master program update or  
26 amendment record, including the public hearing process, is clear in terms of the correct  
27 environment designation to apply to a property, the County shall apply the environment  
28 designation approved through the master program update or amendment process and correct  
29 the map.
- 30 5. If the environment designation criteria were misapplied, but the update or amendment record,  
31 including the public hearing process, does not clearly show that a different designation was  
32 intended to be shown on the map, a master program amendment may be obtained consistent  
33 with WAC 173-26-100 and Section 22.500.105(I) (Shoreline Master Program Amendment). This  
34 process is intended to allow for reasonable corrections to the shoreline environment  
35 designation process. Such process shall include early consultation with the Department of  
36 Ecology and other agencies with jurisdiction, affected tribes, and appropriate public notification  
37 prior to local approval. Current designations are reflected in the shoreline environment  
38 designations map located pursuant to WCC Chapter 23.20 (Shoreline Jurisdiction and  
39 Environment Designations).

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 **23.3020.022-050 Shoreline Area Environment Designations.**
- 2 A. ~~A set of 10 shoreline area designations has been developed as a part of this program. The purpose~~
- 3 ~~of the shoreline area designations is to provide a systematic, rational, and equitable basis upon~~
- 4 ~~which to guide and regulate development within specific shoreline reaches.~~
- 5 B. ~~Shoreline area designations have been determined after consideration of:~~
- 6 1. ~~The ecological functions and processes that characterize the shoreline, together with the degree~~
- 7 ~~of human alteration; and~~
- 8 2. ~~Existing development patterns together with WCC Title 20, Zoning, designations, the County~~
- 9 ~~Comprehensive Plan designations and other officially adopted plans; and~~
- 10 3. ~~Federal and tribal ownership status; and~~
- 11 4. ~~The goals of Whatcom County citizens for their shorelines; and~~
- 12 5. ~~Pursuant to RCW 90.58.100(4), in designating state owned shorelines, consideration has been~~
- 13 ~~given to public demand for wilderness beaches, ecological study areas, and other recreational~~
- 14 ~~activities; and~~
- 15 6. ~~Other state policies in the Act and the Shoreline Master Program Guidelines (RCW 90.58.020~~
- 16 ~~and Chapter 173-26 WAC, respectively).~~
- 17 A. ~~Development, use and activities use within each designated shoreline area environment shall occur~~
- 18 ~~consistent with the SMP this program, including but not limited to: the shoreline environment~~
- 19 ~~designation purpose, designation criteria, and policies described found in Whatcom County~~
- 20 ~~Comprehensive Plan Chapter 11 (Shorelines) below; the general polices and regulations contained in~~
- 21 ~~Chapter 11 (Shorelines) and WCC Chapter 23.390 (General Regulations), and the use and~~
- 22 ~~modification policies and regulations provided in Chapter 11 (Shorelines) and WCC Chapter 23.4100~~
- 23 ~~(Shoreline Use and Modification Regulations), subject to the provisions of the Whatcom County~~
- 24 ~~Zoning Code, WCC Title 20 (Zoning), and other applicable land use regulations where more~~
- 25 ~~restrictive.~~
- 26 B. ~~Shoreline environment designations in Whatcom County include the following:~~
- 27 1. ~~Urban~~
- 28 2. ~~Urban Resort~~
- 29 3. ~~Urban Conservancy~~
- 30 4. ~~Shoreline Residential~~
- 31 5. ~~Rural~~
- 32 6. ~~Resource~~
- 33 7. ~~Conservancy~~
- 34 8. ~~Natural~~
- 35 9. ~~Aquatic~~
- 36 10. ~~Cherry Point Management Area~~

Comment [MD38]: Moved to CompPlan.

Comment [CES39]: Policy Change. The existing SMP treats the SPMA as a sort of overlay designation. Based on Council's recent actions regarding this area, staff is proposing that it be given its own environment designation.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

### 23.3020.023-060 Designation of Shorelines of Statewide Significance.

In accordance with the criteria of RCW 90.58.030(2)(e), the legislature designated the following shorelines of unincorporated Whatcom County, including the shorelands and associated wetlands as therein defined, as having statewide significance:

#### A. Lakes:

1. Lake Whatcom;
2. Ross Lake; and
3. Baker Lake.

#### B. Rivers:

1. Nooksack River: its Mainstem downstream to Bellingham Bay, its North Fork upstream to the mouth of Glacier Creek, and its South Fork upstream to the mouth of Hutchinson Creek.
2. Skagit River: upstream of the Whatcom-/Skagit County line to the point where the mean annual flow is measured at 1,000 feet per second or more, approximately, at the confluence of Newhalem Creek.

#### C. Marine:

1. Birch Bay from Birch Point to Point Whitehorn.
2. All other marine waters, water columns, and bedlands waterward of extreme low tide.

### ~~23.30.030 Urban shoreline area.~~

#### ~~23.30.031 Urban shoreline area – Purpose.~~

~~The purpose of the urban shoreline area is to provide for intensive development of water-oriented commercial, transportation, and industrial uses and accommodate mixed-use developments such as those consisting of urban density residential, commercial and industrial uses, while protecting existing shoreline ecological functions and processes and restoring shoreline ecological functions and/or processes in areas that have been previously degraded.~~

#### ~~23.30.032 Urban shoreline area – Designation criteria.~~

~~The urban shoreline area is applied to shoreline areas zoned commercial, industrial and urban density residential within urban growth areas and limited industrial or commercial areas of more intense rural development, if they:~~

- ~~Are currently characterized by high intensity development and/or uses; are designated by the Comprehensive Plan for high intensity uses or intensive uses related to commerce, transportation or navigation; or are suitable and planned for high intensity mixed use; and~~
- ~~Do not contain limitations to urban use such as geologic hazards, and have adequate utilities and access; and~~
- ~~Do not provide important ecological functions that would be significantly compromised by high intensity residential, commercial, or industrial use.~~

#### ~~23.30.033 Urban shoreline area – Policies.~~

~~Development within urban shoreline areas shall be consistent with the following policies:~~

- ~~New urban character development should be directed toward already developed or developing areas where compatible.~~

**Comment [CES40]:** The remainder of this chapter has been moved to either the CompPlan (in the case of purpose statements, designation criteria, and policies) or the amended Table 2 (Shoreline Use Table) (in the case of use permissions) so as to make it easier to find all such regulations.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 ~~B. First priority should be given to water dependent uses. Second priority should be given to water-~~  
2 ~~related and then water enjoyment uses. Non water oriented uses should not be allowed except as~~  
3 ~~part of mixed use developments. Non water oriented uses may also be allowed in limited situations~~  
4 ~~where they do not conflict with or limit opportunities for water oriented uses or on sites where~~  
5 ~~there is no direct access to the shoreline, or where the needs of existing and future water-~~  
6 ~~dependent uses are met.~~

7 **~~23.30.034 Urban shoreline area – Permitted uses.~~**

8 The following uses may be permitted subject to the applicable policies and regulations of this program:

- 9 ~~A. Residential.~~  
10 ~~B. Water oriented commercial, industrial and/or port development.~~  
11 ~~C. Water oriented recreation.~~  
12 ~~D. Agricultural.~~

13 **~~23.30.035 Urban shoreline area – Conditional uses.~~**

14 The following uses may be permitted as conditional uses subject to the applicable policies and  
15 regulations of this program:

- 16 ~~A. Non water oriented commercial, industrial and/or port development, subject to the criteria in WCC~~  
17 ~~23.100.050(B)(1)(d) and 23.100.070(B)(1)(c)(iv), respectively.~~  
18 ~~B. Dams, diversions and tailrace structures for hydroelectric power generation.~~  
19 ~~C. Institutional development and essential public facilities, where there is no feasible location outside~~  
20 ~~the shoreline.~~  
21 ~~D. Transportation facilities not serving a specific approved use, including roads, railways, and parking~~  
22 ~~areas, provided there is no feasible location outside the shoreline.~~  
23 ~~E. Regional utility development not serving adjacent uses such as sewage trunk lines, desalinization~~  
24 ~~facilities, solid waste transfer and disposal sites, oil pipelines and gas pipelines other than local~~  
25 ~~distribution, provided there is no feasible location outside the shoreline.~~

26 **~~23.30.036 Urban shoreline area – Prohibited uses.~~**

27 The following uses are prohibited:

- 28 ~~A. Forest practices.~~  
29 ~~B. Surface mining.~~

30 **~~23.30.040 Urban resort shoreline area.~~**

31 **~~23.30.041 Urban resort shoreline area – Purpose.~~**

32 The purpose of the urban resort shoreline area is to provide for intensive residential and commercial  
33 uses geared to the needs of tourists and day visitors while protecting existing shoreline ecological  
34 functions and processes. Emphasis is on hotels, motels, shops, restaurants, commercial rental  
35 campgrounds, rental cabins, and shoreline related recreation facilities.

36 **~~23.30.042 Urban resort shoreline area – Designation criteria.~~**

37 The urban resort shoreline area is applied to shoreline areas identified in the Comprehensive Plan as  
38 suitable for resort commercial development with substantial features that might reasonably attract

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 resort development compatible with other development in the area, and which have existing and/or  
2 planned infrastructure sufficient to support such development.

### ~~23.30.043 Urban resort shoreline area – Policies.~~

4 Development within urban resort shoreline areas shall be consistent with the following policies:

- 5 A. ~~Scale and design of resort development should assure compatibility with allowed uses of adjacent~~  
6 ~~shoreline areas and shoreline ecological functions and processes.~~
- 7 B. ~~Buildings over 35 feet in height may be permitted if additional open space, view areas, public access~~  
8 ~~and/or other amenities are provided.~~

### ~~23.30.044 Urban resort shoreline area – Permitted uses.~~

10 The following uses may be permitted subject to the applicable policies and regulations of this program:

- 11 A. ~~Residential.~~
- 12 B. ~~Water-oriented commercial.~~
- 13 C. ~~Port development, limited to passenger terminals.~~
- 14 D. ~~Water-oriented recreation.~~

### ~~23.30.045 Urban resort shoreline area – Conditional uses.~~

16 The following may be permitted as conditional uses subject to the applicable policies and regulations of  
17 this program:

- 18 A. ~~Non-water oriented commercial, subject to the criteria in WCC 23.100.050(B)(1)(d).~~
- 19 B. ~~Institutional development and essential public facilities, where there is no feasible location outside~~  
20 ~~the shoreline.~~
- 21 C. ~~Transportation facilities not serving a specific approved use, including roads, railways, and parking~~  
22 ~~areas, provided there is no feasible location outside the shoreline.~~
- 23 D. ~~Regional utility development not serving adjacent uses such as sewage trunk lines, desalinization~~  
24 ~~facilities, solid waste transfer and disposal sites, oil pipelines and gas pipelines other than local~~  
25 ~~distribution, provided there is no feasible location outside the shoreline.~~

### ~~23.30.046 Urban resort shoreline area – Prohibited uses.~~

27 The following uses are prohibited:

- 28 A. ~~Agricultural.~~
- 29 B. ~~Forest practices.~~
- 30 C. ~~Surface mining.~~
- 31 D. ~~All other industrial and port development.~~

### ~~23.30.050 Urban conservancy shoreline area.~~

#### ~~23.30.051 Urban conservancy shoreline area – Purpose.~~

34 The purpose of the urban conservancy shoreline area is to protect shoreline ecological functions and  
35 processes in urban growth areas and limited areas of more intense rural development that are not  
36 designated for high intensity residential use and are not generally suitable for water dependent uses.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 **~~23.30.052 Urban conservancy shoreline area – Designation criteria.~~**

2 The urban conservancy shoreline area is applied to shoreline areas inside urban growth areas where any  
3 of the following characteristics apply:

4 A. ~~They support or retain important shoreline ecological functions and/or processes, even though~~  
5 ~~partially developed.~~

6 B. ~~They have the potential for development at an intensity and character that is compatible with~~  
7 ~~preserving and restoring ecological functions. They are generally not designated for high intensity~~  
8 ~~residential use, commercial use, or industrial use.~~

9 C. ~~They are characterized by critical areas or indicate the presence of other valuable or sensitive~~  
10 ~~ecological resources.~~

11 **~~23.30.053 Urban conservancy shoreline area – Policies.~~**

12 Development within urban conservancy shoreline areas shall be consistent with the following policies:

13 A. ~~Primary permitted uses should consist of low intensity residential uses or other low intensity uses~~  
14 ~~that preserve the natural character of the area or promote preservation of open space and critical~~  
15 ~~areas.~~

16 B. ~~Moderate to high intensity residential use may be permitted if the proposed uses and design result~~  
17 ~~in substantial open space, public access and/or restoration of shoreline ecological functions and/or~~  
18 ~~processes, and if compatible with surrounding uses.~~

19 C. ~~Public access and public recreation facilities are a preferred use if they will not cause substantial~~  
20 ~~ecological impacts and when restoration of ecological functions is incorporated.~~

21 D. ~~Low intensity commercial uses may be permitted if the specific uses and design result in substantial~~  
22 ~~open space, public access and/or restoration of ecological functions and if compatible with~~  
23 ~~surrounding uses.~~

24 **~~23.30.054 Urban conservancy shoreline area – Permitted uses.~~**

25 The following uses may be permitted subject to the applicable policies and regulations of this program:

26 ~~1. Single family and duplex residential.~~

27 ~~2. Agricultural.~~

28 ~~3. Low intensity recreation; provided, that facilities do not require substantive alterations to~~  
29 ~~topography, such as public forest preserves, wildlife reserves, natural systems education, and/or~~  
30 ~~interpretive areas, trails, trailheads, with associated restroom facilities and parking areas for no~~  
31 ~~more than 30 vehicles, and buildings for interpretive facilities not exceeding 4,000 square feet,~~  
32 ~~subject to the criteria in WCC 23.100.100.~~

33 **~~23.30.055 Urban conservancy shoreline area – Conditional uses.~~**

34 The following may be permitted as conditional uses subject to the applicable policies and regulations of  
35 this program:

36 A. ~~All other residential development.~~

37 B. ~~Low intensity water-oriented commercial limited to resort, bed and breakfast, campgrounds and~~  
38 ~~similar facilities subject to the criteria in WCC 23.100.050. Low intensity non-water-oriented~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 commercial limited to resort, bed and breakfast, campgrounds and similar facilities, subject to the  
2 criteria in WCC 23.100.050(B)(1)(d).

3 ~~C. Dams, diversions and tailrace structures for hydroelectric power generation.~~

4 ~~D. Institutional development and essential public facilities, where there is no feasible location outside  
5 the shoreline.~~

6 ~~E. Regional utility development not serving adjacent uses such as sewage trunk lines, desalinization  
7 facilities, solid waste transfer and disposal sites, oil pipelines and gas pipelines other than local  
8 distribution, provided there is no feasible location outside the shoreline.~~

9 ~~F. Sewage outfalls and treatment plants, over water communication or power lines, fuel pipelines, or  
10 other types of hazardous materials pipelines, provided there is no feasible location outside of the  
11 shoreline.~~

### 12 ~~23.30.056 Urban conservancy shoreline area—Prohibited uses.~~

13 The following uses are prohibited:

14 ~~A. Forest practices.~~

15 ~~B. Surface mining.~~

16 ~~C. All other industrial and port development.~~

17 ~~D. Transportation facilities not serving a specific approved use.~~

### 18 ~~23.30.060 Shoreline residential area.~~

#### 19 ~~23.30.061 Shoreline residential area—Purpose.~~

20 The shoreline residential shoreline area accommodates residential development and accessory  
21 structures that are consistent with this chapter.

#### 22 ~~23.30.062 Shoreline residential area—Designation criteria.~~

23 The shoreline residential shoreline area is applied to shorelines if they have been predominantly  
24 developed with single family or multifamily residential uses or are planned and platted for residential  
25 development. The designation is generally applied to residential densities of greater than one unit per  
26 acre.

#### 27 ~~23.30.063 Shoreline residential area—Policies.~~

28 Development within shoreline residential shoreline areas shall be consistent with the following policies:

29 ~~A. The scale and density of new uses and development should be compatible with, and protect or  
30 enhance, the existing residential character of the area while sustaining shoreline ecological  
31 functions and processes.~~

32 ~~B. Public or private outdoor recreation facilities should be encouraged if compatible with the character  
33 of the area. Preferred uses include water dependent and water enjoyment recreation facilities that  
34 provide opportunities for substantial numbers of people to access and enjoy the shoreline.~~

35 ~~C. Commercial development should be limited to water oriented uses. Non water oriented  
36 commercial uses may be permitted as part of mixed use developments where the primary use is  
37 residential; provided, that such uses should provide a substantial benefit with respect to the goals  
38 and policies of this program such as providing public access or restoring degraded shorelines.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 **~~23.30.064 Shoreline residential area – Permitted uses.~~**

2 The following uses may be permitted subject to the applicable policies and regulations of this program:

3 A. ~~Residential.~~

4 B. ~~Water-oriented commercial.~~

5 C. ~~Water-oriented recreation.~~

6 D. ~~Agricultural.~~

7 **~~23.30.065 Shoreline residential area – Conditional uses.~~**

8 The following may be permitted as conditional uses subject to the applicable policies and regulations of  
9 this program:

10 A. ~~Non-water-oriented commercial, subject to the criteria in WCC 23.100.050(B)(1)(d).~~

11 B. ~~Dams, diversions and tailrace structures for hydroelectric power generation.~~

12 C. ~~Institutional development and essential public facilities, where there is no feasible location outside  
13 the shoreline.~~

14 D. ~~Transportation facilities not serving a specific approved use, including roads, railways, and parking  
15 areas, provided there is no feasible location outside the shoreline.~~

16 E. ~~Regional utility development not serving adjacent uses such as sewage trunk lines, desalinization  
17 facilities, solid waste transfer and disposal sites, oil pipelines and gas pipelines other than local  
18 distribution, provided there is no feasible location outside the shoreline.~~

19 **~~23.30.066 Shoreline residential area – Prohibited uses.~~**

20 The following uses are prohibited:

21 A. ~~Forest practices.~~

22 B. ~~Surface mining.~~

23 C. ~~All other industrial and port development.~~

24 **~~23.30.070 Rural shoreline area.~~**

25 **~~23.30.071 Rural shoreline area – Purpose.~~**

26 The purpose of the rural shoreline area is to protect shoreline ecological functions in areas having a rural  
27 character characterized by open space and low density development including, but not limited to:  
28 residences, agriculture, forestry and outdoor recreation. Uses should be compatible with the physical  
29 capabilities and limitations, natural resources and shoreline ecological functions and processes of the  
30 area.

31 **~~23.30.072 Rural shoreline area – Designation criteria.~~**

32 The rural shoreline area is applied to shoreline areas outside urban growth areas, particularly areas  
33 designated as rural in the Whatcom County Comprehensive Plan, and includes areas:

34 A. ~~Where the shoreline currently accommodates residential uses outside urban growth areas and is  
35 characterized by low density development, pasture, agriculture, woodlots, home occupations, and  
36 cottage industries. The distribution of rural land use is adjacent to agricultural, forestry, and urban  
37 land uses and often provides a transition between urban areas and commercial agriculture and  
38 forestry uses. Natural vegetative cover and topography have been altered in many rural areas, but~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 substantial ecological functions, and/or the potential for restoration of ecological functions, are  
2 present.
- 3 ~~B. That are now used or potentially usable for a mix of agriculture, forestry, and residential use.~~
- 4 ~~C. Where residential development is or should be of low density, because of limitations by physical~~  
5 ~~features, the presence of critical areas, and/or lack of utilities or access.~~
- 6 ~~D. That have high recreational value or unique historic or cultural resources.~~
- 7 ~~E. Where low intensity outdoor recreation use or development would be appropriate and compatible~~  
8 ~~with other uses and the physical environment.~~
- 9 ~~F. Where the shoreline has been developed with low intensity water dependent uses.~~
- 10 **23.30.073 Rural shoreline area – Policies.**
- 11 Development within rural shoreline areas shall be consistent with the following policies:
- 12 ~~A. Uses in rural areas should protect or enhance the rural character of the shoreline and sustain the~~  
13 ~~shoreline ecological functions and processes by limiting building density and height, and providing~~  
14 ~~effective setbacks, buffers and open space.~~
- 15 ~~B. Residential development consistent with the rural character of the area is permitted, provided it~~  
16 ~~includes measures to protect ecological functions and processes. Related uses consistent with the~~  
17 ~~rural character of the area are permitted.~~
- 18 ~~C. Public or private outdoor recreation facilities should be encouraged if compatible with the rural~~  
19 ~~character of the area and developed in a manner that maintains shoreline ecological functions and~~
