20 ~~processes. Preferred uses include water oriented recreation facilities that do not deplete shoreline~~  
21 ~~resources over time, such as boating facilities, angling, wildlife viewing trails, and swimming~~  
22 ~~beaches.~~
- 23 ~~D. Industrial or commercial development should be limited to, water oriented commercial and~~  
24 ~~industrial uses in the limited locations where such uses have been established or at sites in rural~~  
25 ~~communities that possess appropriate shoreline conditions and services sufficient to support such~~  
26 ~~developments. Non water dependent uses should provide a substantial benefit with respect to the~~  
27 ~~goals and policies of this program such as providing public access and/or restoring degraded~~  
28 ~~shorelines.~~
- 29 ~~E. Agriculture and forestry consistent with rural character and the maintenance of shoreline ecological~~  
30 ~~functions and processes should be encouraged.~~
- 31 **23.30.074 Rural shoreline area – Permitted uses.**
- 32 The following uses may be permitted subject to the applicable policies and regulations of this program:
- 33 ~~A. Residential.~~
- 34 ~~B. Water oriented commercial.~~
- 35 ~~C. Water oriented industrial and/or port development.~~
- 36 ~~D. Water oriented recreation.~~
- 37 ~~E. Agricultural and forest practices.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

### ~~23.30.075 Rural shoreline area – Conditional uses.~~

The following uses may be permitted as conditional uses subject to the applicable policies and regulations of this program:

- ~~A. Non water oriented commercial, industrial and/or port development, subject to the criteria in WCC 23.100.050(B)(1)(d) and 23.100.070(B)(1) (c)(iv), respectively.~~
- ~~B. Dams, diversions and tailrace structures for hydroelectric power generation.~~
- ~~C. Institutional development and essential public facilities, where there is no feasible location outside the shoreline.~~
- ~~D. Transportation facilities not serving a specific approved use, including roads, railways, and parking areas, provided there is no feasible location outside the shoreline.~~
- ~~E. Regional utility development not serving adjacent uses such as sewage trunk lines, desalinization facilities, solid waste transfer and disposal sites, oil pipelines and gas pipelines other than local distribution, provided there is no feasible location outside the shoreline.~~
- ~~F. Surface mining.~~

### ~~23.30.080 Resource shoreline area.~~

#### ~~23.30.081 Resource shoreline area – Purpose.~~

The purpose of the resource shoreline area is to protect shoreline ecological functions and processes in areas designated in the Whatcom County Comprehensive Plan as agriculture resource lands, rural forestry, commercial forestry and mineral resource lands and to protect the economic base of those lands and limit incompatible uses.

#### ~~23.30.082 Resource shoreline area – Designation criteria.~~

The resource shoreline area is applied to shoreline areas designated as agriculture, rural forestry, commercial forestry and mineral resource lands in the Whatcom County Comprehensive Plan and includes areas where the shoreline currently accommodates ongoing resource management, where natural vegetation cover has been altered but substantial ecological functions, or the potential for restoring ecological functions, are present.

#### ~~23.30.083 Resource shoreline area – Policies.~~

Development within resource shoreline areas shall be consistent with the following policies:

- ~~A. Uses in resource areas should protect the economic base of those lands, limit incompatible uses, and sustain the shoreline area ecological processes and functions by limiting uses and intensity. Residential use is generally limited to one dwelling per existing parcel. The dwelling may be located within the shoreline jurisdiction, only where no other building site is feasible on the parcel.~~
- ~~B. Public or private outdoor recreation facilities should be permitted if they do not displace designated resource lands and if they are developed in a manner that maintains shoreline ecological functions. Preferred uses include water dependent and water enjoyment recreation facilities.~~
- ~~C. Industrial or commercial use and development should be limited to uses that serve resource uses. Such uses may be located within the shoreline only if they are water dependent, water related or if no other feasible location exists within the contiguous property.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 **~~23.30.084 Resource shoreline area – Permitted uses.~~**

2 The following uses may be permitted subject to the applicable policies and regulations of this program:

- 3 A. ~~Residential development limited to farm-related residences or one residence and one accessory~~  
4 ~~dwelling unit per existing parcel, where there is no feasible location outside of the shoreline.~~  
5 B. ~~Water-oriented commercial related to natural resource products predominantly produced on site.~~  
6 C. ~~Water-oriented industrial facilities for processing, manufacturing, and storage of natural resource~~  
7 ~~products.~~  
8 D. ~~Low intensity water-oriented recreation, including public forest preserves, wildlife reserves, natural~~  
9 ~~systems education, and/or interpretive areas, trails, trailheads, with associated restroom facilities~~  
10 ~~and parking areas for no more than 30 vehicles, subject to the criteria in WCC 23.100.100.~~  
11 E. ~~Agricultural and forest practices.~~

12 **~~23.30.085 Resource shoreline area – Conditional uses.~~**

13 The following uses may be permitted as conditional uses subject to the applicable policies and  
14 regulations of this program:

- 15 A. ~~Non-water-oriented commercial and industrial development related to natural resource products~~  
16 ~~predominantly produced on site, subject to the criteria in WCC 23.100.050(B)(1)(d) and~~  
17 ~~23.100.070(B)(1)(c)(iv), respectively.~~  
18 B. ~~Water-oriented industrial and port development other than those uses related to products~~  
19 ~~predominantly produced on site.~~  
20 C. ~~Dams, diversions and tailrace structures for hydroelectric power generation.~~  
21 D. ~~Institutional development and essential public facilities, where there is no feasible location outside~~  
22 ~~the shoreline.~~  
23 E. ~~Transportation facilities not serving a specific approved use, including roads, railways, and parking~~  
24 ~~areas, provided there is no feasible location outside the shoreline.~~  
25 F. ~~Regional utility development not serving adjacent uses such as sewage trunk lines, desalinization~~  
26 ~~facilities, solid waste transfer and disposal sites, oil pipelines and gas pipelines other than local~~  
27 ~~distribution, provided there is no feasible location outside the shoreline.~~  
28 G. ~~Surface mining.~~

29 **~~23.30.086 Resource shoreline area – Prohibited uses.~~**

30 The following uses are prohibited:

- 31 A. ~~All other commercial development.~~  
32 B. ~~Other non-water-oriented industrial and port development.~~

33 **~~23.30.090 Conservancy shoreline area.~~**

34 **~~23.30.091 Conservancy shoreline area – Purpose.~~**

35 The purpose of the conservancy shoreline area is to retain shoreline ecological functions in areas where  
36 important ecological processes have not been substantially degraded by human activities. Conservancy  
37 areas are designated outside of urban growth areas. The primary management goal is to preserve  
38 shoreline ecological functions and processes by avoiding forms of development that would be  
39 incompatible with existing functions and processes, as well as identify and focus restoration efforts in

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 areas where benefits to overall functions and processes can be realized. This policy should be furthered  
2 by keeping overall intensity of development or use low, and by maintaining most of the area's natural  
3 character.

### **23.30.092 Conservancy shoreline area – Designation criteria.**

4 The conservancy shoreline area is applied to shoreline areas outside urban growth areas that include  
5 areas:

- 6 A. Where development activities and uses are buffered from and do not substantially degrade  
7 ecological processes and functions.
- 8 B. Where ecological functions are more intact than in areas designated rural or resource.
- 9 C. Of outstanding scenic quality or other aesthetic qualities of high value to the region, which would  
10 likely be diminished unless development is strictly controlled.
- 11 D. Containing critical areas or other sensitive natural or cultural features that require more than  
12 normal restrictions on development and use.
- 13 E. Having the potential to influence ecological processes in a manner that will produce ecosystem-wide  
14 benefits upon restoration.
- 15 F. That contain valuable or sensitive natural or cultural features that preclude more than a low overall  
16 density of residents, recreation use, structures, or livestock, as well as extensive alterations to  
17 topography or other features.
- 18 G. Have recreational value to the region that would likely be diminished unless development is strictly  
19 controlled.
- 20

### **23.30.093 Conservancy shoreline area – Policies.**

21 Development within conservancy shoreline areas shall be consistent with the following policies:

- 22 A. Natural ecological processes should be protected and renewable resources managed so that  
23 ecological functions and the resource base are maintained. Nonrenewable resources should only be  
24 consumed in a manner compatible with conservation of other resources and other appropriate uses.
- 25 B. Permitted uses should be limited to those compatible with each other and with conservation of  
26 shoreline ecological processes and resources.
- 27 C. Shorelines should be protected from harmful concentrations of people, livestock, buildings, or  
28 structures.
- 29 D. Opportunities for ecological restoration should be pursued, prioritizing those areas with the greatest  
30 potential to restore ecosystem-wide processes and functions.
- 31 E. Outstanding recreational or scenic values should be protected from incompatible development.
- 32

### **23.30.094 Conservancy shoreline area – Permitted uses.**

33 The following uses may be permitted subject to the applicable policies and regulations of this program:

- 34 A. Single family and duplex residential development.
- 35 B. Low intensity water-oriented recreation; provided, that facilities do not require substantive  
36 alterations to topography, such as public forest preserves, wildlife reserves, natural systems  
37 education, and/or interpretive areas, trails, trailheads, with associated restroom facilities and  
38

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 parking areas for no more than 30 vehicles, and buildings for interpretive facilities not exceeding  
2 2,000 square feet, subject to the criteria in WCC 23.100.100.
- 3 ~~C. Agricultural and forest practices.~~
- 4 **23.30.095 Conservancy shoreline area – Conditional uses.**  
5 The following uses may be permitted as conditional uses subject to the applicable policies and  
6 regulations of this program:
- 7 ~~A. All other residential development.~~
- 8 ~~B. Low intensity water-oriented commercial limited to resort, bed and breakfast, campgrounds and  
9 similar facilities. Low intensity non-water-oriented commercial uses limited to resort, bed and  
10 breakfast, campgrounds and similar facilities may be permitted as a conditional use, subject to the  
11 criteria in WCC 23.100.050(B)(1)(d).~~
- 12 ~~C. Dams, diversions and tailrace structures for hydroelectric power generation.~~
- 13 ~~D. Institutional development and essential public facilities, where there is no feasible location outside  
14 the shoreline.~~
- 15 ~~E. Regional utility development not serving adjacent uses such as sewage trunk lines, desalination  
16 facilities, solid waste transfer and disposal sites, oil pipelines and gas pipelines other than local  
17 distribution, provided there is no feasible location outside the shoreline.~~
- 18 ~~F. Sewage outfalls and treatment plants, over water communication or power lines, fuel pipelines, or  
19 other types of hazardous materials pipelines, provided there is no feasible location outside of the  
20 shoreline.~~
- 21 ~~G. Surface mining.~~
- 22 **23.30.096 Conservancy shoreline area – Prohibited uses.**  
23 The following uses are prohibited:
- 24 ~~A. All other industrial and port development.~~
- 25 ~~B. Transportation facilities not serving a specific approved use.~~
- 26 ~~23.30.100 Natural shoreline area.~~
- 27 **23.30.101 Natural shoreline area – Purpose.**  
28 The purpose of the natural shoreline area is to ensure long-term preservation of shorelines inside or  
29 outside urban growth areas that are ecologically intact.
- 30 **23.30.102 Natural shoreline area – Designation criteria.**  
31 The natural shoreline area is applied to shoreline areas where any of the following characteristics apply:
- 32 ~~A. The majority of natural ecological shoreline functions and/or processes are retained, often  
33 evidenced by the shoreline configuration and the presence of native vegetation. Generally, but not  
34 necessarily, they include ecologically intact shorelines that are free of structural shoreline  
35 modifications, structures, and intensive human uses.~~
- 36 ~~B. Forested areas that generally include native vegetation with diverse plant communities, multiple  
37 canopy layers, and the presence of large woody debris available for recruitment to adjacent water  
38 bodies.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 C. Valuable functions are provided for the larger aquatic and terrestrial environments, which could be  
2 lost or significantly reduced by human development.
- 3 D. Ecosystems or geologic types that are of particular scientific and educational interest are  
4 represented.
- 5 E. Largely undisturbed areas of wetlands, estuaries, unstable bluffs, coastal dunes, and spits are  
6 present.
- 7 F. New development, extractive uses, or physical modifications cannot be supported without  
8 significant adverse impacts to ecological functions and/or processes or risk to human safety.
- 9 **23.30.103 Natural shoreline area – Policies.**
- 10 Development within natural shoreline areas shall be consistent with the following policies:
- 11 A. Preservation of the area's ecological functions, natural features and overall character must receive  
12 priority over any other potential use. Uses should not degrade shoreline ecological functions or  
13 processes or the natural character of the shoreline area. New development or significant vegetation  
14 removal that would reduce the capability of the shoreline to perform a full range of ecological  
15 functions or processes should not be permitted.
- 16 B. Private and/or public enjoyment of natural shoreline areas should be encouraged and facilitated  
17 through low intensity recreational, scientific, historical, cultural, and educational research uses;  
18 provided, that no significant ecological impact on the area will result.
- 19 C. Agricultural and forestry uses of a very low intensity nature may be consistent with the natural  
20 shoreline area when such use is subject to appropriate limitations or conditions to assure that the  
21 use does not expand or alter practices in a manner inconsistent with the purpose of the designation.
- 22 D. The following uses should not be permitted in the natural shoreline area:
- 23 1. Commercial uses.
- 24 2. Industrial uses.
- 25 3. Non-water oriented recreation.
- 26 4. Roads, utility corridors, and parking areas that can be located outside of natural shoreline areas.
- 27 **23.30.104 Natural shoreline area – Permitted uses.**
- 28 The following uses may be permitted subject to the applicable policies and regulations of this program:
- 29 A. Low intensity water oriented recreation; provided, that facilities do not require substantive  
30 alterations to topography, such as public forest preserves, wildlife reserves, natural systems  
31 education, and/or interpretive areas, trails, trailheads, with associated restroom facilities and  
32 parking areas for no more than 10 vehicles, and buildings for interpretive facilities not exceeding  
33 500 square feet, subject to the criteria in WCC 23.100.100.
- 34 B. Low intensity agricultural.
- 35 **23.30.105 Natural shoreline area – Conditional uses.**
- 36 The following uses may be permitted as conditional uses subject to the applicable policies and  
37 regulations of this program:
- 38 A. Single family residential use and development is only permitted on existing lots of record and where  
39 there is no feasible location outside the shoreline. Further subdivision is not permitted.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 B. Forest practices; provided, that it meets the conditions of the State Forest Practices Act and its  
2 implementing rules and is conducted in a manner consistent with the purpose of this environment  
3 designation.

### **~~23.30.106 Natural shoreline area – Prohibited uses.~~**

4 The following uses are prohibited:

5 A. All other residential.

6 B. Commercial.

7 C. Industrial and port development.

8 D. Non-water-oriented recreation.

9 E. Institutional.

10 F. Transportation facilities not serving a specific approved recreational development.

11 G. Utility development not serving a specific approved use.

12 H. Surface mining.

### **~~23.30.110 Aquatic shoreline area.~~**

#### **~~23.30.111 Aquatic shoreline area – Purpose.~~**

14 The purpose of the aquatic shoreline area is to protect, restore, and manage the characteristics and  
15 resources of the areas waterward of the ordinary high water mark.

#### **~~23.30.112 Aquatic shoreline area – Designation criteria.~~**

16 The aquatic shoreline area is defined as the area waterward of the ordinary high water mark of all  
17 streams, rivers, marine water bodies, and lakes, constituting shorelines of the state together with their  
18 underlying lands and their water column.

#### **~~23.30.113 Aquatic shoreline area – Policies.~~**

19 Development within aquatic shoreline areas shall be consistent with the following policies:

20 A. New over-water structures should only be permitted for water-dependent uses, public access, or  
21 ecological restoration. The size of new over-water structures should be limited to the minimum  
22 necessary to support the structure's intended use. In order to reduce the impacts of shoreline  
23 development and increase effective use of water resources, multiple use of over-water facilities  
24 should be encouraged.

25 B. All developments and uses on navigable waters or their beds should be located and designed to  
26 minimize interference with surface navigation, to consider impacts to public views, and to allow for  
27 the safe, unobstructed passage of fish and wildlife, particularly those species dependent on  
28 migration.

29 C. Uses that adversely impact the ecological functions of critical saltwater and freshwater habitats  
30 should not be permitted except where necessary to achieve the objectives of RCW 90.58.020, and  
31 then only when all potential impacts are mitigated as necessary to assure maintenance of shoreline  
32 ecological functions and processes.

33 D. Shoreline uses and modifications should be designed and managed to prevent degradation of water  
34 quality and alteration of natural conditions.

# Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

## Chapter 23.40 Shorelines of Statewide Significance

### **23.40.010 Adoption of policy.**

In accordance with RCW 90.58.020, the following management and administrative policies are hereby adopted for all shorelines of statewide significance in unincorporated Whatcom County, as defined in RCW 90.58.030(2)(e) and identified in WCC 23.40.020. Consistent with the policy contained in RCW 90.58.020, preference shall be given to the uses that are consistent with the statewide interest in such shorelines. These are uses that:

A. Recognize and protect the statewide interest over local interest.

B. Preserve the natural character of the shoreline.

C. Result in long-term over short-term benefit.

D. Protect the resources and ecology of the shoreline.

E. Increase public access to publicly owned areas of the shoreline.

F. Increase recreational opportunities for the public in the shoreline.

G. Provide for any other element as defined in RCW 90.58.100 deemed appropriate or necessary.

Uses that are not consistent with these policies should not be permitted on shorelines of statewide significance.

Comment [MD41]: Moved to CompPlan.

### **23.40.020 Designation of shorelines of statewide significance.**

In accordance with the criteria of RCW 90.58.030(2)(e), the legislature designated the following shorelines of unincorporated Whatcom County, including the shorelands and associated wetlands as therein defined, as having statewide significance:

D. Lakes:

1. Lake Whatcom;

2. Ross Lake; and

3. Baker Lake.

E. Rivers:

1. Nooksack River: its Mainstem downstream to Bellingham Bay, its North Fork to the mouth of Glacier Creek and its South Fork to the mouth of Hutchinson Creek.

2. Skagit River: upstream of the Whatcom-Skagit County line to the point where the mean annual flow is measured at 1,000 feet per second or more, approximately, at the confluence of Newhalem Creek.

F. Marine:

1. Birch Bay from Birch Point to Point Whitehorn.

2. All other marine waters, water columns, and bedlands waterward of extreme low tide.

### **23.40.030 Policies for shorelines of statewide significance.**

The statewide interest should be recognized and protected over the local interest in shorelines of statewide significance. To ensure that statewide interests are protected over local interests, the county

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 shall review all development proposals within shorelines of statewide significance for consistency with  
2 RCW 90.58.030 and the following policies:
- 3 A. Redevelopment of shorelines should be encouraged where it restores or enhances shoreline  
4 ecological functions and processes impaired by prior development activities.
  - 5 B. The Washington Departments of Fish and Wildlife and Ecology, the Lummi Nation, the Nooksack  
6 Tribe, and other resources agencies should be consulted for development proposals that could  
7 affect anadromous fisheries.
  - 8 C. Where commercial timber cutting takes place pursuant to WCC 23.90.110 and RCW 90.58.150,  
9 reforestation should take place as soon as possible.
  - 10 D. Activities that use shoreline resources on a sustained yield or non-consuming basis and that are  
11 compatible with other appropriate uses should be given priority over uses not meeting these  
12 criteria.
  - 13 E. The range of options for shoreline use should be preserved to the maximum possible extent for  
14 succeeding generations. Development that consumes valuable, scarce or irreplaceable natural  
15 resources should not be permitted if alternative sites are available.
  - 16 F. Potential short-term economic gains or convenience should be measured against potential long-  
17 term and/or costly impairment of natural features.
  - 18 G. Protection or enhancement of aesthetic values should be actively promoted in design review of new  
19 or expanding development.
  - 20 H. Resources and ecological systems of shorelines of statewide significance should be protected.  
21 Shorelands and submerged lands should be protected to accommodate current and projected  
22 demand for economic resources of statewide importance such as commercial shellfish beds.
  - 23 I. Those limited shorelines containing unique, scarce and/or sensitive resources should be protected  
24 to the maximum extent feasible.
  - 25 J. Erosion and sedimentation from development sites should be controlled to minimize adverse  
26 impacts on ecosystem processes. If site conditions preclude effective erosion and sediment control,  
27 excavations, land clearing, or other activities likely to result in significant erosion should be severely  
28 limited.
  - 29 K. Public access development in extremely sensitive areas should be restricted or prohibited. All forms  
30 of recreation or access development should be designed to protect the resource base upon which  
31 such uses in general depend.
  - 32 L. Public and private developments should be encouraged to provide trails, viewpoints, water access  
33 points and shoreline-related recreation opportunities whenever possible. Such development is  
34 recognized as a high priority use.
  - 35 M. Development not requiring a waterside or shoreline location should be located inland so that lawful  
36 public enjoyment of shorelines is enhanced.
  - 37 N. Lodging and related facilities should be located inland and provide for appropriate means of access  
38 to the shoreline.

Comment [MD42]: Moved to CompPlan.

# Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

## Chapter 23.390 General Regulations

### ~~23.90.010 Applicability.~~

All use and development activities on shorelines shall be subject to all of the following general policies and regulations in addition to the applicable use policies and regulations of Chapter 23.100 WCC; provided, that all use and development that is to be located within the Cherry Point management area, as defined in Chapter 23.110 WCC, shall be subject to the policies and regulations found in WCC 23.100.170 and shall not be subject to the policies and regulations found in this chapter and Chapter 23.100 WCC unless otherwise specified.

### ~~23.90.020 Land use.~~

The following land use policies delineate the use preferences of the Act and this program and are intended to support the goals and objectives of the program:

#### ~~A. Policies.~~

- ~~1. Single family residences should be given preference for location on shorelines in those limited instances when an alteration of the shorelines is authorized (RCW 90.58.020). Single family residences occupied prior to January 1, 1992, and their appurtenant structures should be protected against damage or loss caused by shoreline erosion; provided, that measures to protect single family residences should be designed to minimize harm to the shoreline environment.~~
- ~~2. Shoreline uses that are water dependent or water related should be given preference (RCW 90.58.020). Such uses should be located, designed, and maintained in a manner that minimizes adverse impacts to shoreline ecological functions and/or processes. Non water-oriented development may be allowed; provided, that existing water dependent uses are not displaced and the future supply of sites for water dependent or water related uses is not compromised.~~
- ~~3. Adequate space should be reserved on shorelines to meet the current and projected demand for water dependent uses, in conjunction with areas provided in cities, towns and areas under tribal jurisdiction.~~

#### ~~B. Regulations.~~

- ~~1. Single family residential uses shall be allowed on all shorelines not subject to a preference for commercial or industrial water dependent uses and shall be located, designed, and used in accordance with applicable policies and regulations of this program.~~
- ~~2. Resource uses such as agriculture, forestry and mining activities shall be carried out in a manner consistent with the applicable policies and regulations of this program.~~
- ~~3. Restoration of ecological functions and processes shall be allowed on all shorelines and shall be located, designed and implemented in accordance with applicable policies and regulations of this program.~~

**Comment [AP43]:** This chapter has been moved forward as it contains the general regulations and the others more specific regulations. All policies, with exception of regulations and those noted as duplicative, have been moved to the CompPlan.

**Comment [DN44]:** Moved to 23.10 Applicability and slightly reworded

**Comment [AP45]:** Removed. This provision is more appropriate as a policy, which is already captured in the CompPlan. Implementing regulations are included in the Residential Shoreline Use and Modification Section (WCC 23.40.160).

**Comment [AP46]:** Removed for clarity and simplicity. This is established in the use table and the applicable use and modification sections.

**Comment [DN47]:** Moved to WCC 23.40.170 (Restoration and Enhancement)

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 ~~4. Shoreline uses and developments that are water dependent shall be given priority. Permit~~
- 2 ~~conditions may limit the range of uses or sites developed for such uses. Interim non water~~
- 3 ~~dependent uses authorized as a conditional use may be allowed to respond to short term~~
- 4 ~~market conditions; provided, that permit conditions are placed on such uses to provide for a~~
- 5 ~~specific timetable or review process to ensure water dependent use of the development in the~~
- 6 ~~long term.~~
- 7 ~~5. Shoreline uses and developments should be located, designed, and managed so that other~~
- 8 ~~appropriate uses are neither subjected to substantial or unnecessary adverse impacts, nor~~
- 9 ~~deprived of reasonable, lawful use of navigable waters, other publicly owned shorelines, or~~
- 10 ~~private property.~~
- 11 ~~6. Navigable waters should be kept free of obstructions for the general benefit of the region, state,~~
- 12 ~~and nation. No use or development shall be allowed to effectively exclude other appropriate~~
- 13 ~~uses from navigable waters.~~
- 14 ~~7. Shoreline uses and developments should be located in a manner so that shoreline stabilization is~~
- 15 ~~not likely to become necessary in the future.~~

### **23.90.030-30.010 Ecological Protection and critical areas.**

16 A. Ecological protection of shoreline environments shall be achieved through compliance with the

17 applicable provisions of WCC Chapter 16.16 (Critical Areas) and (B) and (C) of this subsection.

#### A. Policies.

- 20 ~~1. Shoreline use and development should be carried out in a manner that prevents or mitigates~~
- 21 ~~adverse impacts so that the resulting ecological condition does not become worse than the~~
- 22 ~~current condition. This means assuring no net loss of ecological functions and processes and~~
- 23 ~~protecting critical areas designated in Chapter 16.16 WCC, in a manner consistent with all~~
- 24 ~~relevant constitutional and other legal limitations on the regulation of private property.~~
- 25 ~~Permitted uses shall be designed and conducted to minimize, insofar as practical, any resultant~~
- 26 ~~damage to the ecology and environment (RCW 90.58.020). Shoreline ecological functions that~~
- 27 ~~should be protected include, but are not limited to, fish and wildlife habitat, food chain support,~~
- 28 ~~and water temperature maintenance. Shoreline processes that should be protected include, but~~
- 29 ~~are not limited to, water flow; littoral drift; erosion and accretion; infiltration; ground water~~
- 30 ~~recharge and discharge; sediment delivery, transport, and storage; large woody debris~~
- 31 ~~recruitment; organic matter input; nutrient and pathogen removal; and stream channel~~
- 32 ~~formation/maintenance.~~
- 33 ~~2. In assessing the potential for net loss of ecological functions or processes, project specific and~~
- 34 ~~cumulative impacts should be considered.~~
- 35 ~~3. Development standards for density, frontage, setbacks, impervious surface, shoreline~~
- 36 ~~stabilization, vegetation conservation, buffers, critical areas, and water quality should protect~~
- 37 ~~existing shoreline ecological functions and processes. During permit review, the administrator~~
- 38 ~~should consider the expected impacts associated with proposed shoreline development when~~
- 39 ~~assessing compliance with this policy.~~

**Comment [DN48]:** These provisions were moved to WCC 23.40.030 (General Shoreline Use and Modifications) since they are applicable to that section. These were also reviewed as policies for the CompPlan.

# Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 B. Regulations.
- 2 A. ~~An assessment of the existing ecological functions and/or processes provided by topographic,~~
- 3 ~~physical, and vegetation characteristics of the site shall accompany development proposals. Such~~
- 4 ~~assessments shall include the following general information:~~
- 5 1. ~~Impacts of the proposed use/development on ecological processes with clear designation of~~
- 6 ~~existing and proposed routes for water flow, wildlife movement, and other features.~~
- 7 ~~Infrastructure requirements such as parking, services, lighting, and other features, together with~~
- 8 ~~the effects of those infrastructure improvements on shoreline ecological functions and/or~~
- 9 ~~processes.~~
- 10 B. Development, use, and activities within the shoreline jurisdiction shall avoid and minimize adverse
- 11 impacts, and any unavoidable impacts shall be mitigated to meet no net loss of ecological function
- 12 and ecosystem-wide processes pursuant to WAC 173-26-186.
- 13 C. To provide for flexibility in the administration of the ecological protection provisions of this
- 14 program, buffer modification and alternative mitigation approaches as provided for in WCC 16.16
- 15 may be approved within shorelines where such approaches provide increased protection of
- 16 shoreline ecological functions and processes over the standard provisions of this program and are
- 17 scientifically supported. Use of WCC 16.16.261 (Alternative Mitigation Plans) and 16.16.262
- 18 (Watershed-Based Management Plans) within shoreline jurisdiction shall require a Shoreline
- 19 Conditional Use Permit.
- 20 B. ~~Mitigation Sequencing. To comply with the policies of subsection A of this section, a shoreline~~
- 21 ~~permit applicant or project proponent shall demonstrate that all reasonable efforts have been taken~~
- 22 ~~to provide sufficient mitigation such that the activity does not have significant adverse impacts.~~
- 23 ~~Mitigation shall occur in the following prioritized order:~~
- 24 C. ~~Avoiding the adverse impact altogether by not taking a certain action or parts of an action, or~~
- 25 ~~moving the action.~~
- 26 D. ~~Minimizing adverse impacts by limiting the degree or magnitude of the action and its~~
- 27 ~~implementation by using appropriate technology and engineering, or by taking affirmative steps to~~
- 28 ~~avoid or reduce adverse impacts.~~
- 29 E. ~~Rectifying the adverse impact by repairing, rehabilitating, or restoring the affected environment.~~
- 30 F. ~~Reducing or eliminating the adverse impact over time by preservation and maintenance operations~~
- 31 ~~during the life of action.~~
- 32 G. ~~Compensating for the adverse impact by replacing, enhancing, or providing similar substitute~~
- 33 ~~resources or environments and monitoring the adverse impact and the mitigation project and taking~~
- 34 ~~appropriate corrective measures. Where appropriate, new development shall use clustering to~~
- 35 ~~minimize adverse impacts on shoreline ecological functions and processes.~~
- 36 H. ~~Accessory uses that do not require a shoreline location shall be sited away from the land/water~~
- 37 ~~interface and landward of the principal use and, unless otherwise specified.~~
- 38 I. ~~Because of its incorporation by reference herein under WCC 23.10.060(A), the provisions of the~~
- 39 ~~Whatcom County critical areas ordinance, Chapter 16.16 WCC, shall apply to any use, alteration, or~~
- 40 ~~development within shoreline jurisdiction whether or not a shoreline permit or written statement of~~

**Comment [AP49]:** Moved from Site Planning section (WCC 23.30.090). Note: Per Scoping Document, Item #5a., removed "provided, that proposals for single-family residences shall be exempt from this requirement."

**Comment [CES50]:** Covered by CAO

**Comment [DOE-Req51]:** Required Change – This change maintains the existing requirement for a CUP for use of select alternative mitigation approaches outlined within the CAO. This change is necessary due to the fact that the impacts from such future proposals using these provisions cannot be reasonably identified at the time of the amendment consistent with the SMP Guidelines at 173-26-201(3)(d)(i)(E)(iii). The CUP requirement maintains the flexibility sought by the proposed language without prohibiting the use of these CAO provisions.

**Comment [CES52]:** Covered by CAO

**Comment [CES53]:** Moved to 23.40.030 (General Shoreline Use and Modification Regulations)

# Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 exemption is required. Unless otherwise stated, no development shall be constructed, located,  
2 extended, modified, converted, or altered, or land divided without full compliance with  
3 Chapter 16.16 WCC and the program; provided, that alteration for a water-oriented use may be  
4 allowed in accordance with WCC 16.16.225(B)(3). Within shoreline jurisdiction, the regulations of  
5 Chapter 16.16 WCC shall be liberally construed together with the program to give full effect to the  
6 objectives and purposes of the provisions of the program and Act. Unless otherwise stated, critical  
7 area buffers shall be protected and/or enhanced pursuant to this program and Chapter 16.16 WCC.  
8 — Accessory uses that do not require a shoreline location shall be sited away from the land/water  
9 interface and landward of the principal use and, unless otherwise specified,  
10 ~~J.A. Use of motor vehicles including unlicensed off-road vehicles is permitted only on roads or trails  
11 specifically designated for such use. Motor vehicle use, except for vessels and float planes, is  
12 prohibited waterward of the ordinary high water mark, on tidelands, public or private beaches,  
13 wetlands and/or their associated buffers, except as necessary for public health and safety or  
14 permitted maintenance activities associated with approved developments or as otherwise  
15 permitted.~~  
16 K. Buildings, fencing, walls, hedges, and similar features shall be designed, located, and constructed in  
17 a manner that does not preclude or significantly interfere with wildlife movement to/ or from  
18 important habitat areas consistent with the applicable provisions of Chapter 16.16 WCC ~~this~~  
19 ~~program~~; provided, that the administrator ~~Director~~ may exempt security fencing associated with  
20 residential, industrial, and/or commercial developments from this requirement on a case-by-case  
21 basis.  
22 L. To provide for flexibility in the administration of the ecological protection provisions of this  
23 program, alternative mitigation approaches as provided for in WCC 16.16.2610(E) may be approved  
24 within shorelines as a conditional use where such approaches provide increased protection of  
25 shoreline ecological functions and processes over the standard provisions of this program and are  
26 scientifically supported.  
27 M. The cumulative effects of individual development proposals shall be identified and evaluated to  
28 assure that no net loss standards are achieved. Whenever the administrator issues a determination  
29 or recommendation and/or conditions of approval on a proposal, which will result in the denial or  
30 substantial alteration of a proposed action, such determinations will be provided in writing stating  
31 the relationship(s) between the ecological factors, the proposed action and the condition(s).  
32 **23.30.020 Critical Areas**  
33 — Because of its incorporation by reference under WCC 23.10.065, the provisions of the Whatcom  
34 County critical areas regulations, Chapter 16.16 WCC, shall apply to any use, alteration or  
35 development within shoreline jurisdiction whether or not a shoreline permit or written statement of  
36 exemption is required. Unless otherwise stated, no development shall be constructed, located,  
37 extended, modified, converted, or altered, or land divided, without full compliance with  
38 Chapter 16.16 WCC and this program; provided, that alteration for a water-oriented use may be  
39 allowed in accordance with WCC 16.16.225. Within shoreline jurisdiction, the regulations of

General Shoreline Use and Modification Regulations

Comment [CES57]: Covered by CAO

# Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 ~~Chapter 16.16 WCC shall be liberally construed together with the program to give full effect to the~~  
2 ~~objectives and purposes of the provisions of the program and Act.~~

3 **23.90.0430.0320 Water Quality and Quantity.**  
4 ~~A. Policies.~~  
5 ~~B. The location, construction, operation, and maintenance of all shoreline uses and developments~~  
6 ~~should maintain or enhance the quantity and quality of surface and ground water over the long~~  
7 ~~term.~~  
8 ~~C. Shoreline use and development should minimize the need for chemical fertilizers, pesticides or~~  
9 ~~other similar chemical treatments to prevent contamination of surface and ground water and/or~~  
10 ~~soils, and adverse effects on shoreline ecological functions and values.~~  
11 ~~D. Appropriate buffers along all wetlands, streams, lakes, and marine water bodies should be provided~~  
12 ~~and maintained in a manner that avoids the need for chemical treatment.~~  
13 ~~E. Regulations.~~  
14 ~~F.A. Shoreline use and development shall incorporate measures to protect and maintain surface and~~  
15 ~~ground water quantity and quality in accordance with all applicable laws, including compliance with~~  
16 ~~Whatcom County stormwater and drainage regulations in WCC 20.80.630 through 20.80.635.~~  
17 ~~1. Development shall meet minimum requirements 1 – 9 of the current stormwater manual, as~~  
18 ~~applicable. Deviations from these standards may be approved where it can be demonstrated~~  
19 ~~that off-site facilities would provide better treatment, or where common retention, detention,~~  
20 ~~and/or water quality facilities meeting such standards have been approved as part of a~~  
21 ~~comprehensive stormwater management plan.~~  
22 ~~2. Best management practices (BMPs) for control of erosion and sedimentation shall be~~  
23 ~~implemented for all development in shorelines through an approved temporary erosion and~~  
24 ~~sediment control (TESC) plan or administrative conditions.~~  
25 ~~B. To avoid water quality degradation by malfunctioning or failing septic systems located within~~  
26 ~~shoreline jurisdiction, on-site sewage systems shall be located and designed to meet all applicable~~  
27 ~~water quality, utility, and health standards. The owner must be in compliance with WCC 24.05.160,~~  
28 ~~(Operation and Maintenance).~~  
29 ~~G.C. Septic tanks and drainfields are prohibited where public sewer is reasonably available.~~  
30 ~~H.D. All materials that may come in contact with water shall be constructed of materials, such as~~  
31 ~~untreated wood, concrete, approved plastic composites, or steel, that will not adversely affect~~  
32 ~~water quality or aquatic plants or animals. Materials used for decking or other structural~~  
33 ~~components shall be approved by applicable state agencies for contact with water to avoid~~  
34 ~~discharge of pollutants from wave splash, rain, or runoff. Wood treated with creosote, copper~~  
35 ~~chromium arsenic, or pentachlorophenol is prohibited in or above shoreline water-bodies.~~  
36 ~~E. Stormwater infiltration systems shall be employed to mimic the natural infiltration and ground~~  
37 ~~water interflow processes where appropriate. Outfalls (including stormwater and sewer outfalls) and~~  
38 ~~discharge pipes shall not be located in critical saltwater habitats or areas where outfall or discharge~~

Comment [CES58]: Covered by CAO

Comment [AP59]: Incorporated reference to stormwater regulations and removed redundant regs from this section.

Comment [DN60]: Relocated from the Utilities section since this applies universally.

Comment [AP61]: Removed to reduce redundancy. Already captured in stormwater regulations (WCC 20.80.630).

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 will adversely affect critical saltwater habitat, unless the applicant can show that all of the following  
2 can be met:

3 1. There is no feasible alternative location for the outfall or pipe;

4 2. The outfall or pipe is placed below the surface of the beach or bed of the waterbody, except at  
5 the point of discharge;

6 3. The discharge point(s) on the outfall or discharge pipe is located so the discharges, including  
7 nutrients and flow, do not adversely affect critical saltwater habitats; and

8 4. For public sewage outfalls:

9 1. The outfall discharges waterward of the intertidal zone.

10 2. The disturbed area will be revegetated with native vegetation.

11 F. The use of existing outfalls shall be maximized to limit the need for additional outfalls, provided the  
12 existing outfall meets the standards of this section, or unless an alternatives analysis demonstrates  
13 the dispersal is less impacting to the shoreline environment.

Comment [AP62]: Added to address potential impacts from stormwater and sewer outfalls

### 14 **23.90.05030.0430 Views and Aesthetics.**

#### 15 **A. Policies.**

16 a. ~~Shoreline use and development activities should be designed and operated to minimize~~  
17 ~~obstructions of the public's visual access to the water and shoreline.~~

18 b. ~~Shoreline use and development should not significantly detract from shoreline scenic and~~  
19 ~~aesthetic qualities that are derived from natural or cultural features, such as shoreforms,~~  
20 ~~vegetative cover and historic sites/structures.~~

21 c. ~~Aesthetic objectives should be implemented through regulations and criteria for site planning,~~  
22 ~~maximum height, setbacks, siting of buildings and accessories, screening, vegetation~~  
23 ~~conservation, architectural standards, sign control regulations, appropriate development siting,~~  
24 ~~designation of view corridors and maintenance of natural vegetative buffers.~~

25 d. ~~Clearing, thinning, and/or limbing for limited view corridors should only be allowed where it~~  
26 ~~does not adversely impact ecological and/or aesthetic values, and/or slope stability. Vegetation~~  
27 ~~conservation should be preferred over the creation or maintenance of views from property on~~  
28 ~~the shoreline to protect shoreline ecological functions and aesthetics.~~

#### 29 **E. Regulations.**

30 **A.** ~~When the two are in conflict, P~~protection and/or enhancement of critical areas and their associated  
31 buffers shall be preferred over provisions for new visual access except where otherwise allowed by  
32 this program, when the two are in conflict.

33 **B.** ~~The following standards shall apply to developments and uses within the jurisdiction of this~~  
34 ~~program:~~

35 **B.** To protect views of the shoreline from existing structures, setbacks may be modified pursuant to  
36 WCC 23.400.020(D) (Shoreline Bulk Provisions, Setbacks)

37 **C.** To minimize impacts to views from the water, the Director may require the planting of vegetation to  
38 mitigate the impacts.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 ~~C.D.~~ Where commercial, industrial, mixed use, multifamily, ~~and/or multi-lot-unit~~ developments are  
2 proposed, primary structures shall provide for reasonable view corridors between buildings.
- 3 ~~D.E.~~ Buildings shall incorporate architectural and/or landscape features that reduce scale or bulk, such as  
4 setbacks, vegetation, pitched roofs, offsets, angled facets, and recesses.
- 5 ~~E.F.~~ Building surfaces on or adjacent to the water shall employ materials that minimize reflected light.
- 6 ~~F.G.~~ Building mechanical equipment shall be incorporated into building architectural features, such as  
7 pitched roofs, to the maximum extent possible. Where mechanical equipment cannot be  
8 incorporated into architectural features, a visual screen shall be provided consistent with building  
9 exterior materials that obstructs views of such equipment.
- 10 ~~G.H.~~ Any other design standards included in community plans or regulations adopted by Whatcom  
11 County shall apply.
- 12 ~~H.I.~~ Fences, walls, other than retaining walls, hedges, and other similar accessory structures, excluding  
13 those associated with agricultural uses, and retaining walls necessary to protect existing primary  
14 structures from erosion, landslides or other geologic hazards, shall be limited to four feet in height  
15 between the ordinary high water mark and structures, and within shoreline view areas as defined in  
16 WCC Chapter 23.4460 (Definitions); provided, that, within shoreline view areas, the  
17 ~~administrator~~ Director may approve a greater height where a fence or other feature is parallel to the  
18 right-of-way and does not extend above a line of sight between the ordinary high water mark and a  
19 point three and one-half feet above the centerline of the road.
- 20 ~~I.~~ Where permitted, fences, walls, hedges and other similar structures shall be limited to four feet in  
21 height within critical area buffers. Outside of critical area buffers, fences shall be limited to six feet  
22 in height.
- 23 ~~J.~~ Fences, walls, hedges, or private accessory structures on public property shall not be permitted to  
24 obscure shoreline views within shoreline view areas as defined in WCC Chapter 23.4460 or from  
25 existing residences on adjacent property, or views from the water, unless specific findings are made  
26 that the proposed view obstruction is justified by overriding considerations of the public interest.
- 27 ~~K.~~ Interior and exterior lighting shall be designed and operated to avoid illuminating nearby properties  
28 or public areas; prevent glare on adjacent properties, public areas, or roadways; to avoid infringing  
29 on the use and enjoyment of such areas; and to prevent hazards. Methods of controlling spillover  
30 light include, but are not limited to, limits on height of structure, limits on light levels of fixtures,  
31 light shields, setbacks, buffer areas, and screening.
- 32 ~~J.L.~~ Where shoreline setbacks or buffers are allowed to be reduced per this program, the proposed use  
33 or development shall not be permitted to substantially obscure shoreline views within shoreline  
34 view areas as defined in WCC Chapter 23.60 (Definitions) or from existing residences on adjacent  
35 property.
- 36 ~~M.~~ Limbing, clearing, and/or thinning for limited view corridors shall only be allowed pursuant to WCC  
37 16.16.235(B)(5) (Activities Allowed with Notification), except that view corridors are not permitted  
38 in the Natural shoreline environment.
- 39 ~~K.~~ Stairs and walkways located within the shoreline or critical area buffers shall not exceed four feet in  
40 width; provided, that where ADA requirements apply, such facilities may be increased to five feet in

Comment [AP63]: Added for clarity per Scoping Document, Item #17e.

Comment [DN64]: Moved to Bulk Provisions since this provision does not address Views and Aesthetics

Comment [DN65]: Moved from the former Site Planning section

Comment [AP66]: Added per Scoping Document, Item #18c.

# Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

width. Stairways shall conform to the existing topography to the extent feasible and minimize impervious surfaces.

Comment [T67]: Removed for clarity. This is fully captured in the Shoreline Bulk Provisions.

## ~~23.90.060~~ **23.0540 Vegetation Conservation Management.**

### 1. Pursuant to WCC 16.16.710, shorelines are designated as Fish & Wildlife Habitat Conservation Areas.

Within these areas and their buffers it is important to protect and enhance vegetation to provide ecological and habitat functions as well as human health and safety. Vegetation management practices consist of retaining or improving vegetated areas to protect the integrity, functions, and values of the affected critical area (shoreline) while allowing the shoreline buffer to be modified to accommodate allowed uses when consistent with the Act and this program.

### 2. Vegetation management within the shoreline buffer shall adhere to the applicable regulations of WCC Chapter 16.16 (Critical Areas). In addition:

1. Vegetation clearing within shoreline jurisdiction shall be limited to the minimum necessary to accommodate approved shoreline development.

2. ~~Design of structures~~ Shoreline development shall conform to natural contours and minimize disturbance to soils and native vegetation, as feasible. Feasible shall include incorporation of trails or stairs from parking areas on steep slopes, and other design elements to lessen the need to alter natural contours and minimize soil and native vegetation disturbance. Foundations shall be tiered with earth retention incorporated into the structural design.

Comment [DN68]: Moved and modified from former Site Planning section.

3. ~~Where compliance with subsection (B)(1) of this section is not feasible or required, new~~ All shoreline developments shall be required to develop and implement a vegetation management plan. ~~When required, vegetation management plans shall be prepared by a qualified professional and shall be consistent with the requirements in WCC 16.16.260(BG) and (CH); provided, that the administrator-Director may establish prescriptive standards for vegetation conservation and management as an alternative to requiring a specific plan for a development. Vegetation management plans shall describe actions that will be implemented to ensure that buffer areas provide ecological functions equivalent to a dense native vegetation community to the extent possible given the area that is feasibly available. Required vegetation shall be maintained over the life of the use and/or development by means of a conservation easement or similar legal instrument recorded with the Whatcom County auditor.~~

### ~~3. Policies.~~

- ~~a. Where new developments and/or uses are proposed, native shoreline vegetation should be conserved to maintain shoreline ecological functions and/or processes and mitigate the direct, indirect and/or cumulative impacts of shoreline development, wherever feasible. Important functions of shoreline vegetation include, but are not limited to:~~
- ~~i. Providing shade necessary to maintain water temperatures required by salmonids, forage fish, and other aquatic biota.~~
  - ~~ii. Regulating microclimate in riparian and nearshore areas.~~
  - ~~iii. Providing organic inputs necessary for aquatic life, including providing food in the form of various insects and other benthic macroinvertebrates.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1           iv. ~~Stabilizing banks, minimizing erosion and sedimentation, and reducing the~~  
2           ~~occurrence/severity of landslides.~~
- 3           v. ~~Reducing fine sediment input into the aquatic environment by minimizing erosion,~~  
4           ~~aiding infiltration, and retaining runoff.~~
- 5           vi. ~~Improving water quality through filtration and vegetative uptake of nutrients and~~  
6           ~~pollutants.~~
- 7           vii. ~~Providing a source of large woody debris to moderate flows, create hydraulic roughness,~~  
8           ~~form pools, and increase aquatic diversity for salmonids and other species.~~
- 9           viii. ~~Providing habitat for wildlife, including connectivity for travel and migration corridors.~~
- 10          4. ~~B. Regulations.~~
- 11          1. ~~Shoreline developments shall comply with the vegetation conservation policies of this program~~  
12           ~~through compliance with the critical area standards of WCC 16.16.335, 16.16.360, 16.16.630 and~~  
13           ~~16.16.740 for protection and maintenance of critical area and buffer vegetation.~~
- 14          3. ~~Nonconforming lots that do not provide sufficient area to meet the standard dimensional~~  
15           ~~requirements for buffers and setbacks as provided for in WCC 23.50.070(N) and are not located~~  
16           ~~within a landslide, alluvial fan, or riverine and coastal erosion hazard areas, as defined in WCC~~  
17           ~~16.16.310, may employ the following standards in lieu of the vegetation management provisions~~  
18           ~~of subsection (B)(2) of this section:~~
- 19           a. ~~An inner management zone shall extend perpendicularly from the shoreline ordinary~~  
20           ~~high water mark or critical area edge a distance equal to 50 percent of the buffer~~  
21           ~~dimension established for nonconforming lots in WCC 23.50.070(N). In the inner~~  
22           ~~management zone:~~
- 23           i. ~~Lawn or turf is prohibited due to its limited functional benefits and need for~~  
24           ~~chemical and fertilizer applications. Understory consisting of native groundcover~~  
25           ~~and shrubs shall be provided at a sufficient density to prevent erosion, stabilize~~  
26           ~~soils, and intercept surface runoff.~~
- 27           ii. ~~Native trees shall be provided at a sufficient density and species composition to~~  
28           ~~mimic natural vegetative conditions for purposes of creating shade, attenuating~~  
29           ~~water temperature, stabilizing soils, and providing large woody debris and other~~  
30           ~~organic inputs critical for aquatic resources.~~
- 31           b. ~~An outer management zone shall extend from the outer boundaries of the inner~~  
32           ~~management zone to the edge of the critical area buffer. Within the outer management~~  
33           ~~zone:~~
- 34           i. ~~Vegetation management shall consist of the requirements of subsection (B)(3)(a) of~~  
35           ~~this section, provided, that on slopes of 25 percent or less, lawn, turf, ornamental~~  
36           ~~vegetation or gardens may be allowed on up to 10 percent of the area or 500 square~~  
37           ~~feet, whichever is greater.~~
- 38           ii. ~~Lawn or turf shall be prohibited on slopes greater than 25 percent.~~
- 39          4. ~~Vegetation clearing shall be limited to the minimum necessary to accommodate approved~~  
40           ~~shoreline development.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 5. Removal of noxious weeds and/or invasive species shall be incorporated in vegetation  
2 management plans, as necessary, to facilitate establishment of a stable community of native  
3 plants.
- 4 6. Clearing, pruning and revegetation of buffer areas, except landslide hazard areas and buffers  
5 and riverine and coastal erosion hazard areas and buffers, may be conducted in accordance with  
6 the regulations in WCC 16.16.235(5).
- 7 7. Selective vegetation clearing and pruning may be allowed in landslide hazard areas and/or  
8 riverine and coastal erosion hazard areas and/or their buffers pursuant to an approved  
9 vegetation management plan designed to improve overall slope or bank stability. The plan shall  
10 be prepared by a qualified professional and reviewed by a licensed geologist or geotechnical  
11 engineer.
- 12 8. Vegetation conservation standards shall not apply retroactively to existing uses and  
13 developments, such as existing agricultural practices.
- 14 9. Vegetation conservation standards do not apply to the removal of hazard trees pursuant to  
15 WCC 16.16.230(F).
- 16 10. Unless otherwise stated, the vegetation conservation regulations of this program do not apply  
17 to commercial forest practices as defined by this program when such activities are covered  
18 under the Washington State Forest Practices Act (Chapter 76.09 RCW), except where such  
19 activities are associated with a conversion to other uses or other forest practice activities over  
20 which local governments have authority. For the purposes of this program, preparatory work  
21 associated with the conversion of land to non-forestry uses and/or developments shall not be  
22 considered a forest practice and shall be reviewed in accordance with the provisions for the  
23 proposed non-forestry use, the general provisions of this program, and Chapter 16.16 WCC, and  
24 shall be limited to the minimum necessary to accommodate an approved use.
- 25 **23.90.07030.0650 Archaeological, Historic, and Cultural Resources.**
- 26 **A. Project Approval Requirements.**
- 27 1. Upon receipt of an application for a permit, exemption, or other approval for a proposed  
28 project, the County shall determine whether the project lies within 500 feet of a site known to  
29 contain a cultural resource based on the Washington State Department of Archaeology &  
30 Historic Preservation's (DAHP) Inventory of Cultural Resources.
- 31 2. If the project meets this criterion, a cultural resources survey and report meeting the  
32 requirements of subsection (B) shall be required.
- 33 3. Whatcom County shall provide the cultural resource report to DAHP—and if Native American  
34 cultural resources are addressed, to the Lummi Nation Tribal Historic Preservation Office, the  
35 Nooksack Tribe, and/or other affected Native American Tribes—for a fifteen (15) day review and  
36 comment opportunity. Said review period may run concurrently with other required public  
37 review periods, such as for SEPA.
- 38 4. Based upon consultation with DAHP and the affected Tribe(s), the Director may approve the  
39 report or reject or request revision of the conclusions reached and/or management

Comment [CES69]: Moved up.

Comment [AP70]: Moved to Forest Practices section (WCC 23.40.100).

Comment [AP71]: Section rewritten in conjunction with the LNTHPO & WA State DAHP for greater clarity and streamlining.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 recommendations when the assessment is inaccurate or does not fully address the cultural  
2 resource management concerns involved.
- 3 5. If the cultural resource report identifies the presence of a cultural resource, any permit issued  
4 shall be conditioned on meeting the approved report’s management recommendations.
- 5 6. Regardless of whether any cultural resources are identified or not, any activities are still subject  
6 to the state and federal regulations, including those regarding inadvertent discoveries (RCWs  
7 68.50.645, 27.44.055, and 68.60.055).
- 8 7. Final cultural resource reports shall be filed with DAHP prior to the County’s issuance of a  
9 permit, exemption, or other approval by the applicant or his/her agent. The project’s cultural  
10 resource professional shall also uploading their reports and site forms to WISAARD, the state’s  
11 digital repository for architectural and archaeological resources and reports maintained by  
12 DAHP.
- 13 8. Any costs associated with a cultural resource review shall be borne by the applicant.
- 14 B. Cultural Resources Report Standards.
- 15 1. Cultural resources reports shall meet the most recent “Washington State Standards for Cultural  
16 Resource Reporting” issued by DAHP ([https://dahp.wa.gov/project-review/washington-state-](https://dahp.wa.gov/project-review/washington-state-standards-for-cultural-resource-reporting)  
17 standards-for-cultural-resource-reporting)
- 18 2. Cultural resources reports addressing archaeological resources shall be conducted by a  
19 professional archaeologist that meets the Secretary of the Interior Professional Qualification  
20 Standards (36 CFR Part 61). Cultural resources reports addressing historic resources shall be  
21 conducted by a qualified historic preservation professional.
- 22 3. If the cultural resource assessment identifies the presence of a cultural resource, the report  
23 must provide management recommendations that, at a minimum, conform to DAHP’s most  
24 current management standards. Such recommendations will depend on the resource identified,  
25 but may include but are not limited to:
- 26 a. Inadvertent Discovery Plan;
- 27 b. On-site monitoring by a qualified professional and/or a Tribal representative;
- 28 c. Avoidance, by redesigning the project; or
- 29 d. When impacts cannot be avoided, obtaining a Cultural Resource Permit (see RCWs 27.44  
30 and 27.53; <https://dahp.wa.gov/archaeology/archaeological-permitting>, and  
31 <https://apps.leg.wa.gov/WAC/default.aspx?cite=25-48-060>).
- 32 G. A. Policies.
- 33 1. The county should work with tribal, state, federal and local governments as appropriate to  
34 maintain an inventory of all known significant local historic, cultural and archaeological sites in  
35 observance of applicable state and federal laws protecting such information from general public  
36 disclosure. As appropriate, such sites should be protected, preserved and/or restored for study,  
37 education and/or public enjoyment to the maximum possible extent.
- 38 2. Site development plans should incorporate provisions for historic, cultural and archaeological  
39 site preservation, restoration and education with open space or recreation areas whenever  
40 compatible and possible.

Comment [PDS72]: Policies moved to the C/P.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

3. Cooperation among involved private and public parties is encouraged to achieve the archaeological, historical and cultural element goals and objectives of this program.
  4. Owners of property containing identified historic, cultural or archaeological sites are encouraged to make development plans known well in advance of application, so that appropriate agencies such as the Lummi Nation, Nooksack Tribe, Washington State Department of Archaeology and Historic Preservation, and others may have ample time to assess the site and make arrangements to preserve historical, cultural and archaeological values as applicable.
  5. Private and public owners of historic sites should be encouraged to provide public access and educational opportunities in a manner consistent with long term protection of both historic values and shoreline ecological functions.
  6. Historic, cultural and archaeological site development should be planned and carried out so as to prevent impacts to the resource. Impacts to neighboring properties and other shore uses should be limited to temporary or reasonable levels.
  7. If development is proposed adjacent to an identified historic, cultural or archaeological site, then the proposed development should be designed and operated so as to be compatible with continued protection of the historic, cultural or archaeological site.
  8. The cultural resource provisions of this program are consistent with Chapters 27.44 and 27.53 RCW and WAC 25-48-060. In accordance with state law, all applicants are subject to these requirements.
- H. Regulations.
- A. Known Archaeological, Historic, and Cultural Resources.
- i. Upon receipt of application for a shoreline permit or request for a statement of exemption for development on properties within 500 feet of a site known to contain an historic, cultural, or archaeological resource(s), the county shall require a cultural resource site assessment; provided, that the provisions of this section may be waived if the administrator determines that the proposed development activities do not include any ground disturbing activities and will not impact a known historic, cultural, or archaeological site. The site assessment shall be conducted by a professional archaeologist or historic preservation professional, as applicable, to determine the presence of significant historic or archaeological resources. The fee for the services of the professional archaeologist or historic preservation professional shall be paid by the landowner or responsible. The applicant shall submit a minimum of five copies of the site assessment to the administrator for distribution to the applicable parties for review.
  - ii. If the cultural resource site assessment identifies the presence of significant historic or archaeological resources, a cultural resource management plan (CRMP) shall be prepared by a professional archaeologist or historic preservation professional, as applicable. The fee for the services of the professional archaeologist or historic preservation professional shall be paid by the landowner or responsible party. In the preparation of such plans, the professional archaeologist or historic preservation professional shall solicit comments from the Washington State Department of Archaeology and Historic Preservation, the Lummi Nation Tribal Historic Preservation Office, and Nooksack Tribe. Comments received shall be incorporated into the

SMP Update – Title 23 Amendments

October 29, 2021

1 conclusions and recommended conditions of the CRMP to the maximum extent practicable. The  
2 applicant shall submit a minimum of five copies of the CRMP to the administrator for  
3 distribution to the applicable parties for review.

4 a. A CRMP shall contain the following minimum elements:

5 i. The purpose of the project; and

6 ii. A site plan for proposed on-site development; and

7 iii. Depth and location of all ground-disturbing activities including, but not limited to,  
8 utilities, driveways, clearing, and grading; and

9 iv. An examination of project on-site design alternatives; and

10 v. An explanation of why the proposed activity requires a location on, or access across  
11 and/or through, a significant historic or archaeological resource; and

12 vi. A description of the historic/archaeological resources affected by the proposal; and

13 vii. An assessment of the historic/archaeological resource and an analysis of the potential  
14 adverse impacts as a result of the activity; and

15 viii. An analysis of how these impacts have been avoided, or w

16 ix. Where avoidance is not possible, how these impacts have been mitigated/minimized;  
17 and

18 x. A recommendation of appropriate mitigation measures, which may include but are  
19 not limited to the following:

20 A. Recording the site with the State Department of Archaeology and Historic  
21 Preservation, or listing the site in the National Register of Historic Places,  
22 Washington Heritage Register, as applicable, or any locally developed historic  
23 registry formally adopted by the Whatcom County Council;

24 B. Preservation in place;

25 C. Re-interment, in the case of grave sites;

26 D. Covering an archaeological site with a nonstructural surface to discourage  
27 pilferage (e.g., maintained grass or pavement);

28 E. Excavation and recovery of archaeological resources;

29 F. Inventorying prior to covering of archaeological resources with structures or  
30 development; and

31 G. Monitoring of construction excavation.

32 xi. An outline of actions to be taken by the property owner, developer, archaeologist, or  
33 historic preservation professional, as applicable, in the event that an inadvertent  
34 discovery of historic, cultural, or archaeological sites or artifacts occurs during site  
35 development, which includes the following:

36 A. A statement that work on that portion of the development site shall be stopped  
37 immediately and the find reported as soon as possible to the administrator and  
38 other appropriate governments and agencies.

39 B. Contact information for applicable parties, agencies, and governments including  
40 the county administrator, the Washington State Department of Archaeology and

- 25 xiii. ~~Where provision of public access for purposes of public education related to an~~  
26 ~~archaeological or cultural resource site is desired by the property owner, the~~  
27 ~~Washington State Department of Archaeology and Historic Preservation, Lummi~~  
28 ~~Nation Tribal Historic Preservation Office, Nooksack Tribe, and/or other agencies, as~~  
29 ~~appropriate, shall be in agreement prior to providing public access to the site. An~~  
30 ~~access and resource management plan shall be developed in consultation with the~~  
31 ~~Washington State Department of Archaeology and Historic Preservation, the Lummi~~  
32 ~~Nation Tribal Historic Preservation Office, and the Nooksack Tribe.~~
- 33 b. ~~The recommendations and conclusions of the CRMP shall be used to assist the administrator~~  
34 ~~in making final administrative decisions concerning the presence and extent of historic/~~  
35 ~~archaeological resources and appropriate mitigating measures. The administrator shall~~  
36 ~~consult with the Washington State Department of Archaeology and Historic Preservation,~~  
37 ~~Lummi Nation Tribal Historic Preservation Office, and Nooksack Tribe prior to approval of~~  
38 ~~the CRMP.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1        ~~e. The administrator may reject or request revision of the conclusions reached in a CRMP~~  
2        ~~when the administrator can demonstrate that the assessment is inaccurate or does not fully~~  
3        ~~address the historic/archaeological resource management concerns involved.~~  
4        ~~d. Upon receipt of a complete development permit application in an area of known historic/~~  
5        ~~archaeological resources, the county shall notify and request a recommendation from~~  
6        ~~appropriate agencies such as the Washington State Department of Archaeology and Historic~~  
7        ~~Preservation, the Lummi Nation Tribal Historic Preservation Office, and Nooksack Tribe.~~  
8        ~~Recommendations of such agencies and other affected persons shall be duly considered and~~  
9        ~~adhered to whenever possible and reasonable. Notification shall include the following~~  
10       ~~information:~~  
11       ~~i. The date of application, the date of notice of completion for the application, and the~~  
12       ~~date of the notice of application;~~  
13       ~~ii. A site map including the street address, tax parcel number, township, range, and section~~  
14       ~~of the proposed project area;~~  
15       ~~iii. A description of the proposed project action and a list of the project permits included in~~  
16       ~~the application, and, if applicable, a list of any studies requested by the cCounty;~~  
17       ~~iv. The identification of other permits not included in the application to the extent known~~  
18       ~~by the cCounty;~~  
19       ~~v. The identification of existing environmental documents that evaluate the proposed~~  
20       ~~project and, if not otherwise stated on the document providing notice of application,~~  
21       ~~the location where the application and any studies can be reviewed;~~  
22       ~~vi. Any other information determined appropriate by the cCounty;~~  
23       ~~vii. A statement indicating those development regulations that will be used for project~~  
24       ~~mitigation or a determination of consistency if they have been identified at the time of~~  
25       ~~notice;~~  
26       ~~viii. A statement of the limits of the comment period and the right of each agency to~~  
27       ~~comment on the application within a 15-day time period, request a copy of the decision~~  
28       ~~once made, and to appeal a decision when allowed by law.~~  
29       ~~e. In granting shoreline permits or statements of exemption for such development, the~~  
30       ~~cCounty may attach conditions to provide sufficient time and/or conditions for consultation~~  
31       ~~with the Washington State Department of Archaeology and Historic Preservation, Lummi~~  
32       ~~Nation Tribal Historic Preservation Office, and Nooksack Tribe, and to assure that historic/~~  
33       ~~archaeological resources are properly protected, or for appropriate agencies to contact~~  
34       ~~property owners regarding purchase or other long-term arrangements. Provision for the~~  
35       ~~protection and preservation of historic/archaeological sites shall be incorporated to the~~  
36       ~~maximum extent practicable. Permit or other requirements administered by the~~  
37       ~~Washington State Department of Archaeology and Historic Preservation pursuant to~~  
38       ~~Chapters 27.44 and 27.53 RCW may apply in addition.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 ~~B. Inadvertent Discovery.~~

- 2 1. ~~Whenever historic, cultural, or archaeological sites or artifacts are discovered in the process of~~  
3 ~~development on shorelines, work on that portion of the development site shall be stopped~~  
4 ~~immediately, the site secured, and the find reported as soon as possible to the administrator.~~  
5 ~~Upon notification of such find, the property owner shall notify the Washington State~~  
6 ~~Department of Archaeology and Historic Preservation, Lummi Nation Tribal Historic Preservation~~  
7 ~~Office, and Nooksack Tribe, and the administrator, shall conduct a site investigation to~~  
8 ~~determine the significance of the discovery. Based upon the findings of the site investigation~~  
9 ~~and consultation with the Washington State Department of Archaeology and Historic~~  
10 ~~Preservation, Lummi Nation Tribal Historic Preservation Office, and Nooksack Tribe, the~~  
11 ~~administrator may require that an immediate site assessment be conducted or may allow~~  
12 ~~stopped work to resume.~~
- 13 2. ~~If a site assessment is required, the area of inadvertent discovery shall be stabilized, contained,~~  
14 ~~or otherwise protected until the site assessment and/or CRMP is completed. The site~~  
15 ~~assessment shall be prepared pursuant to subsection (B)(1)(a) of this section to determine the~~  
16 ~~significance of the discovery and the extent of damage to the resource and shall be distributed~~  
17 ~~to the Washington State Department of Archaeology and Historic Preservation, the Lummi~~  
18 ~~Nation Tribal Historic Preservation Office, and Nooksack Tribe for a 15-day review period or, in~~  
19 ~~the case of inadvertent discovery of human remains, a 30-day review period to determine the~~  
20 ~~significance of the discovery. If the site has been determined not to be significant by the above-~~  
21 ~~listed agencies or governments, or if the above-listed agencies or governments have failed to~~  
22 ~~respond within the applicable review period following receipt of the site assessment, such~~  
23 ~~stopped work may resume.~~
- 24 3. ~~Upon receipt of a positive determination of a site's significance, the administrator may invoke~~  
25 ~~the provisions of subsections (B)(1)(b) through (d) of this section for a cultural resource~~  
26 ~~management plan, if such action is reasonable and necessary to implement related SMP~~  
27 ~~objectives.~~

28 ~~C. The requirements of subsection (B)(1) of this section do not apply where an applicant/project~~  
29 ~~proponent has obtained an approved archeological excavation and removal permit from the~~  
30 ~~Washington State Department of Archaeology and Historic Preservation pursuant to WAC 25-48-~~  
31 ~~060; provided, that the applicant must adhere to the requirements of said approved permit.~~

32 **23.90.08030.0760 Public Access.**

33 ~~a. Policies.~~

- 34 i. ~~Use and development that provide an opportunity for substantial numbers of the people to~~  
35 ~~enjoy the shorelines of the state are a preferred use.~~
- 36 ii. ~~Physical or visual access to shorelines should be incorporated in all new development when the~~  
37 ~~development would either generate a demand for one or more forms of such access, and/or~~  
38 ~~would impair existing legal access opportunities or rights. Public health and safety concerns~~  
39 ~~should also be adequately addressed and maintenance of shoreline ecological functions and/or~~

Comment [AP73]: Removed several provisions below that are beyond WAC requirements.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

- 1 processes should be assured. As required by the governing principles, all such conditions should  
 2 be consistent with all relevant constitutional and other legal limitations on regulation of private  
 3 property.
- 4 ~~iii. Public access should be provided for water-oriented uses and non-water dependent uses and~~  
 5 ~~developments that increase public use of the shorelines and public aquatic lands, or that would~~  
 6 ~~impair existing, legal access opportunities.~~
- 7 ~~iv. Non-water related uses or activities located on the shoreline should provide public access as a~~  
 8 ~~public benefit.~~
- 9 ~~v. Public access area and/or facility requirements should be commensurate with the scale and~~  
 10 ~~character of the development and should be reasonable, effective and fair to all affected parties~~  
 11 ~~including but not limited to the land owner and the public.~~
- 12 ~~vi. Public access design should provide for public safety and minimize potential impacts to private~~  
 13 ~~property, individual privacy, and shoreline ecological functions and processes.~~
- 14 ~~vii. Shoreline development by public entities, such as local governments, port districts, state~~  
 15 ~~agencies, and public utility districts, should provide public access measures as part of each~~  
 16 ~~development project, unless such access is shown to be incompatible due to reasons of safety,~~  
 17 ~~security, or impact to the shoreline.~~
- 18 ~~b. Regulations.~~
- 19 A. ~~In the review of~~ All shoreline substantial development, shoreline conditional use permits, or  
 20 developments of more than four residential lots or dwelling units, ~~consideration of~~ shall provide  
 21 public access ~~shall be required, subject to the test stated in subsection (A)(2) of this section.~~ When  
 22 appropriate, provisions for adequate public access shall be incorporated into such proposals,  
 23 including land division. An applicant shall not be required to provide public access if the decision-  
 24 maker determines that one or more of the following conditions apply unless the  
 25 applicant/proponent demonstrates that one or more of the following provisions apply:
- 26 1. ~~Unavoidable health or safety hazards to the public exist that cannot be prevented by any~~  
 27 ~~practical means;~~
- 28 2. ~~Inherent security requirements of the use cannot be satisfied through the application of~~  
 29 ~~alternative design features or other solutions;~~
- 30 3. ~~The cost of providing the access, easement, alternative amenity, or mitigating the impacts of~~  
 31 ~~public access is unreasonably disproportionate to the total long-term cost of the proposed~~  
 32 ~~development;~~
- 33 4. ~~Significant environmental impacts will result from the public access that cannot be mitigated;~~  
 34 ~~Significant undue and unavoidable conflict between any access provisions and the proposed use~~  
 35 ~~and/or adjacent uses would occur and cannot be mitigated.~~
- 36 ~~The parcel is separated from the water by an existing developed road or an additional parcel~~  
 37 ~~that serves to create a distinct break in connectivity to the shoreline.~~
- 38 ~~Other reasonable and safe opportunities for public access to the shoreline are located within~~  
 39 ~~one-quarter mile of the proposed development site.~~

**Comment [CES74]:** Deleted, as WAC 173-26-221 does not list cost.

**Comment [DOE-Req75]:** Required Change – This change deletes this new exception to consideration of public access as it is overly prescriptive and inconsistent with the SMP Guidelines at WAC 173-26-221(4). Direct connectivity is not a requirement to accomplish proportionate public access. Public access includes the ability of the general public to reach, touch and enjoy the water’s edge, travel on the waters of the state, and to view the water from adjacent locations [WAC 173-26-211(4)(a)]. Visual access to the shoreline is not necessarily precluded due to the presence of a developed road or additional parcel between the subject development and the shoreline.

**Comment [DOE-Req76]:** Required Change – This change deletes this new exception to consideration of public access as it is inconsistent with the SMP Guidelines at WAC 173-26-211(4). Increased development within shoreline areas can provide a nexus for the need for increased locations and forms of public access proportionate to such impacts.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1     2. The proposed development has already been considered as site is part of a larger development
- 2     project that has previously provided public access as part of the development permitting
- 3     process.
- 4     3. The proposed development is for the subdivision of property into four or fewer parcels.
- 5     4. The proposed development consists of only agricultural activities.
- 6     5. Provision of public access on the site would pose a health or safety risk to the public due to the
- 7     nature of the proposed use or activity or the location of public access, or would be infeasible
- 8     due to security requirements associated with the proposed development.
- 9     6. Provision of public access at the proposed development site would result in a net loss of
- 10    shoreline ecological function that cannot be effectively mitigated or avoided, or would pose a
- 11    risk to threatened and/or endangered species listed under the Endangered Species Act.
- 12    5-7. The proposal consists solely of a new or expanded utility crossing through shoreline jurisdiction,
- 13    servicing development located outside shoreline jurisdiction, provided that no adverse impacts to
- 14    existing public access result.
- 15    B. When provisions for public access are required as a condition of project approval, the administrator
- 16    shall prepare written findings, pursuant to Chapter 23.60 WCC, demonstrating consistency with the
- 17    principles of nexus and proportionality and the test stated in subsection (A)(2) of this section and
- 18    WCC 23.50.080(A).
- 19    C. B. Prior to deciding public access is not required pursuant to subsection (B)(1)(a) through (e) of this
- 20    section, the county must determine that all reasonable alternatives have been exhausted; including,
- 21    but not limited to:
  - 22    1. Regulating access by such means as maintaining a gate and/or limiting hours of use;
  - 23    2. Designing separation of uses and activities (e.g., fences, terracing, use of one-way glazing,
  - 24    hedges, landscaping, etc.); and
  - 25    3. Providing for access at a site geographically separated from the proposal such as a street end,
  - 26    vista, tideland, or trail system.
- 27    D. Public access shall not be required for the following uses except as determined on a case-by-case
- 28    basis in conjunction with the provisions of subsection A of this section and this subsection B:
  - 29    1. Single-family residential development of four or fewer lots.
  - 30    2. Dredging.
  - 31    3. Forest practices.
  - 32    4. Landfill and excavation.
  - 33    5. Mining.
  - 34    6. Private docks serving four or fewer dwelling units.
  - 35    7. Instream structures.
  - 36    8. Shoreline stabilization.
  - 37    9. Ecological restoration or enhancement activities not associated with development when the
  - 38    purpose of the project would be undermined.
  - 39    10. Agriculture.

**Comment [DOE-Req77]:** Required Change – This change is necessary to ensure consistency with the SMP Guidelines at WAC 173-26-221(4) and clarifies the applicability of this exemption only if it had previously been analyzed through a broader development review such as a Planned Unit Development or other similar process.

**Comment [CES78]:** Combined existing text w/ WAC 173-26 -221 text.

**Comment [DOE-Req79]:** Required Change – Utility development is not specifically exempted from the requirement to consider public access in the SMP Guidelines. The proposed change modifies this new exemption to require public access considerations if impacts to existing forms of public access provide such a nexus.

**Comment [DOE-Req80]:** Section restored. Required Change – This additional language added to the end of 23.60.060.A restores existing language proposed for deletion. The change is necessary for consistency with the SMP Guidelines at 173-26-221(4)(d)(B) which requires consideration of alternative methods of providing access when potential conflicts are identified with traditional forms of access.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 | B. Public access shall consist of a dedication of land or a physical improvement in the form of a  
2 | walkway, trail, bikeway, corridor, viewpoint, park, deck, observation tower, pier, boat launching  
3 | ramp, dock or pier area, or other area serving as a means ~~of to~~ view and/or physically approach ~~to~~  
4 | public waters, and may include interpretive centers and displays.
- 5 | C. Where public access planning as described in WAC 173-26-221(4)(c) demonstrates that a more  
6 | effective public access system can be achieved through alternate means, such as focusing public  
7 | access at the most desirable locations, the County may institute master program provisions for  
8 | public access based on that approach in lieu of uniform site-by-site public access requirements.
- 9 | D. Where there is an irreconcilable conflict between water-dependent shoreline uses or physical public  
10 | access and the maintenance of views from adjacent properties, the water-dependent uses and  
11 | physical public access shall have priority.
- 12 | E. Alternate off-site provision of public access to shorelines may be used upon approval, as a means of  
13 | offsetting identifiable on-site impacts. If public access is demonstrated to be infeasible or  
14 | inappropriate on site due to significant interference to operations or hazards to life and property,  
15 | alternative visual access opportunities ~~may be provided at a location not directly adjacent to the~~  
16 | ~~water~~ (such as a viewpoint, observation tower, or other areas serving as a means to view public  
17 | waters (such as an interpretive center and displays explaining maritime history and industry) may be  
18 | provided at a location not directly adjacent to the water; provided, that visual access to the water is  
19 | provided.
- 20 | F. Public access provided by shoreline street ends, public utilities, and rights-of-way shall not be  
21 | diminished (RCW 35.79.035 and 36.87.130).
- 22 | ~~F.G.~~ Shoreline development by public entities shall include public access measures as part of each  
23 | development project.
- 24 | H. Development shall be located, designed, and managed so that impacts on public use of the  
25 | shoreline are minimized.
- 26 | I. Public access shall incorporate the following location and design criteria:
- 27 | 1. Where open space is provided along the shoreline, and public access can be provided in a  
28 | manner that will not adversely impact shoreline ecological functions and/or processes, a public  
29 | pedestrian access walkway parallel to the ordinary high water mark of the property is preferred.  
30 | The walkway shall be buffered from sensitive ecological features and provide limited and  
31 | controlled access to sensitive features and the water's edge where appropriate. Fencing may be  
32 | provided to control damage to plants and other sensitive ecological features and where  
33 | appropriate. Trails shall be constructed of permeable materials and limited to five feet in width  
34 | to reduce impacts to ecologically sensitive resources.
- 35 | 2. Public access shall be located adjacent to other public areas, accesses and connecting trails,  
36 | connected to the nearest public street; and include provisions for differently-abled persons  
37 | where feasible.
- 38 | 3. Where views of the water or shoreline are available and physical access to the water's edge is  
39 | not present or appropriate, a public viewing area shall be provided.

Comment [CES81]: Language from WAC

Comment [AP82]: Added for consistency with WAC 173-26-221(4)(d)

Comment [DN83]: Moved from the Site Planning section.

Comment [DOE-Req84]: Section resorted. Required Change – This change restores existing standards necessary for meaningful implementation of the public access requirements as required by the SMP Guidelines at WAC 173-26-222(4)(d)(iii).

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 4. Design shall minimize intrusions on privacy by avoiding locations adjacent to windows and/or
- 2 outdoor private open spaces or by screening or other separation techniques.
- 3 5. Design shall provide for the safety of users, including the control of offensive conduct through
- 4 public visibility of the public access area, or through provisions for oversight. The administrator
- 5 may authorize a public access to be temporarily closed in order to develop a program to address
- 6 offensive conduct. If offensive conduct cannot be reasonably controlled, alternative facilities
- 7 may be approved through a permit revision.
- 8 6. Public amenities appropriate to the use of a public access area such as benches, picnic tables
- 9 and sufficient public parking to serve the users shall be provided.
- 10 7. Commercial developments that attract a substantial number of persons and developments by
- 11 government/public entities may be required to provide public restrooms, facilities for disposal
- 12 of animal waste and other appropriate public facilities.
- 13 8. The minimum width of public access easements shall be 10 feet, unless the administrator
- 14 determines that undue hardship would result. In such cases, easement widths may be reduced
- 15 only to the extent necessary to relieve the hardship.
- 16 9. The requirement for public access on a specific site may be fulfilled by:
- 17 a. Participation in a public access plan incorporated in the program; or
- 18 b. Provision of facilities specified in a permit approval.
- 19 10. Required public access sites shall be fully developed and available for public use at the time of
- 20 occupancy of the use or activity or in accordance with other provisions for guaranteeing
- 21 installation through a monetary performance assurance.
- 22 11. Public access facilities shall be maintained over the life of the use or development. Future
- 23 actions by successors in interest or other parties shall not diminish the usefulness or value of
- 24 required public access areas and associated improvements.
- 25 12. Public access provisions shall run with the land and be recorded via a legal instrument such as an
- 26 easement, or as a dedication on the face of a plat or short plat. Such legal instruments shall be
- 27 recorded with the county auditor's office prior to the time of building permit approval,
- 28 occupancy or plat recordation, whichever comes first.
- 29 13. Maintenance of the public access facility shall be the responsibility of the owner unless
- 30 otherwise accepted by a public or nonprofit agency through a formal agreement recorded with
- 31 the county auditor's office.
- 32 14. Public access facilities shall be available to the public 24 hours per day unless specific exceptions
- 33 are granted though the shoreline permit process subject to the provisions of subsection (B)(1) of
- 34 this section.
- 35 15. The standard state-approved logo or other approved signs that indicate the public's right of
- 36 access and hours of access shall be installed and maintained by the owner. Such signs shall be
- 37 posted in conspicuous locations at public access sites.
- 38 16. Incentives for public access improvements such as density or bulk and dimensional bonuses shall
- 39 be considered through applicable provisions of zoning and subdivision regulations.
- 40 ~~23.390.090 Site planning.~~

**Comment [DN85]:** All non-repetitive regulations have been moved, so this section is no longer necessary.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 Policies.

2 Development and use should be designed in a manner that directs land alteration to the least  
3 sensitive portions of the site to maximize vegetation conservation; minimize impervious  
4 surfaces and runoff; protect riparian, nearshore and wetland habitats; protect wildlife and  
5 habitats; protect archaeological, historic and cultural resources; and preserve aesthetic values.  
6 This may be accomplished by minimizing the project footprint, the use of clustering and other  
7 appropriate design approaches.

8 Low impact and sustainable development practices such as rain gardens, and pervious surfacing  
9 methods including, but not limited to, porous paving blocks, porous concrete and other similar  
10 materials should be incorporated in developments where site conditions allow to maintain  
11 shoreline ecological functions and processes. Topographic modification, vegetation clearing, use  
12 of impervious surfaces and alteration of natural drainage or other features should be limited to  
13 the minimum necessary to accommodate approved uses and development. An engineering  
14 geologist should be consulted prior to using infiltration practices on shore bluffs.

15 Accessory development or use that does not require a shoreline location should be located  
16 outside of shoreline jurisdiction unless such development is required to serve approved water-  
17 oriented uses and/or developments. When sited within shoreline jurisdiction, uses and/or  
18 developments such as parking, service buildings or areas, access roads, utilities, signs and  
19 storage of materials should be located inland away from the land/water interface and landward  
20 of water oriented developments and/or other approved uses.

21 Development should be located, designed, and managed so that impacts on shoreline or upland  
22 uses are minimized through bulk and scale restrictions, setbacks, buffers, and control of  
23 proximity impacts such as noise or light and glare.

24 Shoreline uses should not deprive other uses of reasonable access to navigable waters. Public  
25 recreation activities such as fishing, clam digging, swimming, boating, and wading, and water-  
26 related recreation should be preserved and enhanced. The rights of treaty tribes to resources  
27 within their usual and accustomed areas should be accommodated.

28 Regulations.

29 Where appropriate new development shall use clustering to minimize adverse impacts on  
30 shoreline ecological functions and processes.

31 An assessment of the existing ecological functions and/or processes provided by topographic,  
32 physical and vegetation characteristics of the site shall accompany development proposals;  
33 provided, that proposals for single family residences shall be exempt from this requirement.

34 Such assessments shall include the following general information:

35 Impacts of the proposed use/development on ecological processes with clear designation of  
36 existing and proposed routes for water flow, wildlife movement and other features.

37 Infrastructure requirements such as parking, services, lighting and other features, together with  
38 the effects of those infrastructure improvements on shoreline ecological functions and/or  
39 processes.

Comment [DN86]: Moved to Ecological Protection and Critical Areas Section (WCC 23.30.020).

# Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

1 ~~Vehicle and pedestrian circulation systems shall be designed to minimize clearing, grading and~~  
 2 ~~alteration of topography and natural features. Roadway and driveway alignment shall follow the~~  
 3 ~~natural contours of the site and minimize width to the maximum extent feasible. Elevated~~  
 4 ~~walkways should be utilized to cross wetlands.~~  
 5 ~~Impervious surfacing for parking lot/space areas shall be minimized through the use of~~  
 6 ~~alternative surfaces where feasible, consistent with the May 2005 Low Impact Development~~  
 7 ~~Technical Guidance Manual for Puget Sound.~~  
 8 ~~Utilities shall be located within roadway and driveway corridors and rights-of-way wherever~~  
 9 ~~feasible.~~  
 10 ~~Design of structures should conform to natural contours and minimize disturbance to soils and~~  
 11 ~~native vegetation. Foundations shall be tiered with earth retention incorporated into the~~  
 12 ~~structure.~~  
 13 ~~Stormwater infiltration systems shall be employed to mimic the natural infiltration and ground~~  
 14 ~~water interflow processes where appropriate.~~  
 15 ~~Fencing, walls, hedges and similar features shall be designed in a manner that does not preclude~~  
 16 ~~or significantly interfere with wildlife movement to/from important habitat areas.~~  
 17 ~~Accessory uses that do not require a shoreline location shall be sited away from the land/water~~  
 18 ~~interface and landward of the principal use and, unless otherwise specified, shall observe critical~~  
 19 ~~area regulations and buffers in Chapter 16.16 WCC.~~  
 20 ~~Development shall be located, designed, and managed so that impacts on public use of the~~  
 21 ~~shoreline are minimized.~~  
 22 ~~Public recreation activities such as fishing, clam digging, swimming, boating, and wading, and~~  
 23 ~~water-related recreation shall be protected through specific provisions to avoid impacts, or~~  
 24 ~~provide access as applicable.~~  
 25 ~~Interior and exterior lighting shall be designed and operated to avoid illuminating nearby~~  
 26 ~~properties or public areas, prevent glare on adjacent properties, public areas or roadways to~~  
 27 ~~avoid infringing on the use and enjoyment of such areas, and to prevent hazards. Methods of~~  
 28 ~~controlling spillover light include, but are not limited to, limits on height of structure, limits on~~  
 29 ~~light levels of fixtures, light shields, setbacks, buffer areas and screening.~~  
 30 ~~All facilities shall be located and designed to avoid impediments to navigation and to avoid~~  
 31 ~~depriving other properties of reasonable access to navigable waters. Review and approval by~~  
 32 ~~the U.S. Coast Guard may be required as a condition of issuance of building or development~~  
 33 ~~permits to assure compliance. All in-water structures shall be marked and lighted in compliance~~  
 34 ~~with U.S. Coast Guard regulations.~~  
 35 ~~All shoreline use and development shall provide setbacks from adjacent properties in~~  
 36 ~~accordance with WCC Table 23.90.130(C). Setbacks shall be of adequate width to attenuate~~  
 37 ~~proximity impacts such as noise, light and glare, and may address scale and aesthetic impacts.~~  
 38 ~~Fencing or landscape areas may be required to provide a visual screen.~~  
 39 ~~G.~~

**Comment [DN87]:** Moved to Transportation Section for Shoreline Uses and Modifications (WCC 23.40.190).

**Comment [CES88]:** Moved to Utilities section.

**Comment [DN89]:** Moved to 23.30.040 Vegetation Management.

**Comment [DN90]:** Moved to Water Quality section

**Comment [AP91]:** Removed to reduce redundancy. This is fully captured in the General Regulation provisions for Ecological Protection and Critical Areas (WCC 23.30.020).

**Comment [DN92]:** Moved to Ecological protection and critical areas section.

**Comment [DN93]:** Moved to the Public Access section

**Comment [DN94]:** This is more applicable as a policy rather than a regulation and is already included as a policy above under former subsection (A)(5).

**Comment [DN95]:** Moved to Views and Aesthetics 23.30.030

**Comment [DN96]:** Moved to both the Boating facilities and the Moorage sections.

**Comment [DN97]:** This is more of a policy rather than a regulation and is already included above under former subsection (A)(4). Dimensional standards already implement such a policy so this additional regulation is not necessary.

**Planning Commission Approved Draft with Department of Ecology  
Required & Recommended Amendments**

**Chapter ~~23.100~~23.40 Shoreline Use and Modification Regulations**

**Comment [AP98]:** This chapter has been moved from later in the document (previously number 23.100).

**~~23.100~~23.40.010 Shoreline Use and Development Modification.**

A. All uses and modifications in shoreline areas shall be subject to the policies and regulations of this program.

B. Table 1. Shoreline Use by Environment Designation generally sets forth the permissible uses within the respective shoreline environment designations in the county. It should be read in close conjunction with the definitions in Chapter 23.60 (Definitions) and the other provisions in this program. The contents of Table 1 provisions are subject to limitations, conditions, and exceptions listed under of each of the categories of this chapter. Such text modifies the requirements of Table 14, and in the event there is a conflict between the use(s) identified in Table 23.100.010 Table 14 and the policies or regulations, the policies and regulations shall prevail apply.

C. Shoreline use and development shall be classified by the administrator/Director and regulated under one or more of the following applicable sections of WCC Chapter ~~23.100~~23.40 (Shoreline Use and Modification Regulations). Unless otherwise stated, all use and development shall also comply with all of the general policies and regulations of Chapter 23.90 WCC and, if applicable, the policies of Chapter 23.40 WCC. A proposed development may contain different types of uses and/or modifications, and may be classified under and be subject to multiple categories (e.g., a marina may fall under and be subject to Marinas, Moorage, Commercial, and Industrial, depending on what is proposed).

D. ~~(b) In the Aquatic; shoreline environment designation, only water-dependent uses shall be allowed only,~~ subject to the use and development regulations of the abutting upland shoreline area environment designation.

P = Permitted, ~~may be~~ subject to policies and regulations of this program and subject to shoreline substantial development permit requirements.  
 C = Shoreline conditional use, subject to policies and regulations of this program and may be subject to shoreline substantial development permit requirements.  
 (-) Subject to limitations.  
 (+) Subject to conditions.

X = Prohibited.  
 N/A = Not applicable.  
 \* = Refer to the regulations under this use and modification category for certain caveats.

**Comment [AP108]:** Revised per Scoping Document, Item #17i.

**Comment [CES109]:** Moved from Industrial and Port

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

---

(\*) Subject to exceptions.

(a) In the event that there is a conflict between the use(s) identified in Table 23.1040.010 and the policies or regulations in Chapters 23.230, 23.390, or 23.4100 WCC, the policies and regulations shall apply.

(b) Aquatic: Water dependent use only, subject to the use and development regulations of the abutting upland shoreline area designation.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

### 23.4100.020 Shoreline Bulk Provisions – Buffers, Setbacks, Height, Open Space and Impervious Surface Coverage.

~~A. Policies. Standards for density, setbacks, height, and other provisions should ensure no net loss of shoreline ecological functions and/or processes and preserve the existing character of the shoreline consistent with the purpose of the shoreline area designation.~~

~~B. Regulations.~~

~~A. Table 2. Bulk Regulations for Shoreline Development, Table of Bulk Regulations, WCC Table 23.90.130(C) establishes the minimum required dimensional requirements for development, uses, and activities including all structures and substantial alteration of natural topography. Dimensional standards relating to critical areas are governed by the provisions of WCC Chapter 16.16. Dimensional standards specified in this program shall not exceed the geographic limit of the Act's jurisdiction. Additional standards may be established in WCC, Chapter 23.10023.40 (Shoreline Use and Modification Policies and Regulations).~~

~~B. Where the bulk provisions of other County regulations (e.g., Title 20, Zoning) differ, the stricter shall apply.~~

~~A.C. All measurements except height and area shall be measured outward on the horizontal plane and in the direction that results in the greatest dimension from property lines, or from other features specified.~~

~~A. Except as otherwise stated, the Whatcom County Comprehensive Plan, zoning regulations, critical areas regulations, flood control regulations, subdivision regulations, health regulations and other adopted regulatory provisions apply within shoreline jurisdiction. In the event the provisions of this program conflict with provisions of other county regulations, the more protective of shoreline resources shall prevail.~~

~~B. All use and development activities shall conform to all applicable plans, policies, standards, guidelines and regulations of other agencies with jurisdiction in shoreline areas.~~

**D. Setbacks.**

1. Setbacks shall be pursuant to Table 2; except as allowed by subsection (D)(2).

2. **Common-Line Setback for Single-Family Residences.** For the purpose of accommodating views to be adequate and similar, but not necessarily equivalent, for new residences while protecting predominant shoreline views of the water from legally existing primary residences in developed residential areas, the shoreline buffer (setback) may be modified for primary residential structures in the Urban, Shoreline Residential, and Rural environments (only), consistent with the following. The presence of nearby shacks, sheds, or dilapidated structures does not constitute the existence of a residence, nor can such structures be used to determine a common-line setback.

a. Where there are legally established single-family residential primary structures within ~~150~~ feet on both sides of the proposed residence, the setback shall be determined as the greater of either:

i. A common line drawn between the nearest corners of the foundation closest to the sideyard property line of the proposed residence to each adjacent residence, or

**Comment [AP110]:** Moved from the General Regulations section (previously WCC 23.90.130).

**Formatted:** Indent: Left: 0", Numbered + Level: 4 + Numbering Style: A, B, C, ... + Start at: 1 + Alignment: Left + Aligned at: 0.25" + Indent at: 0.5"

**Formatted:** Indent: Left: 0.25", Numbered + Level: 5 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 2.5" + Indent at: 2.75"

**Comment [CES111]:** Incorporated from former Appendix F of Title 23.

**Formatted:** Indent: Left: 0.25", Space After: 0 pt, Numbered + Level: 5 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 2.5" + Indent at: 2.75"

**Comment [DOE-Req112]:** Required Change. – This change restores the existing language to apply the common-line setback provisions only to existing structures within 50-feet of a proposed residence. The amendment record contains no justification to extend this distance to 150-feet, which is most cases is two to three times the width of most existing lots where view these provisions would apply. The No Net Loss analysis related to this change does not take into consideration the increase in applicability if these setback reductions county-wide by increasing the distance from 50-feet to 100-feet.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- ii. A common line calculated by the average of both adjacent residences' existing setbacks.
    - b. Where there is a legally established single-family residential primary structure within ~~150~~ feet on only one side of the proposed residence, the common line setback shall be determined as the greater of either:
      - i. A common line drawn between nearest corner of the foundation closest to the sideyard property line of the proposed residence to the adjacent residence and the nearest point of the standard buffer on the adjacent vacant lot, or
      - ii. A common line calculated by the average of the adjacent residence's setback and the standard buffer for the adjacent vacant lot.
    - c. When the use of a common-line setback is allowed, compliance with buffer width reduction and mitigation pursuant to WCC 23.30.010 (Ecological Protection) shall be required.
    - d. In no case shall development be located waterward of the common-line setback or a minimum of 50 feet from the ordinary high water mark, ~~unless approved to be closer as part of a constrained lot review WCC 23.40.170(B).~~
    - e. The lot shall not be subject to landslide hazard areas, or riverine or coastal erosion hazard areas or associated buffers (see WCC 16.16.310).
  - 3. Sideyard setbacks shall be measured from all property lines that intersect the shore side of a lot or tract; provided, that for development not requiring a wider shoreline buffer, five feet of the total required sideyard setbacks may be provided on one side and the balance on the other side,
    - 1. and provided further, that, for a single family residence or duplex on a nonconforming lot that does not provide sufficient area to meet the standard dimensional requirements for buffers and setbacks, the nonconforming provisions of WCC 23.50.070 apply.
- B-E. Height.** Table 2 23.90.130(C) establishes the maximum allowed building height for all primary and accessory structures within the shoreline jurisdiction. Height is measured according to the definition in WCC 23.60.080(7) ~~110~~; provided, that:
- 1. provided further, that, pursuant to RCW 90.58.320, and except as allowed by subsections (2 - 4) of this section, no permit may be issued for any ~~new or expanded~~ building or structure more than 35 feet above average grade level that will obstruct the view of a substantial number of residences on or adjoining such shorelines except where the program does not prohibit such development and only when overriding considerations of the public interest will be served. The applicant/proponent shall be responsible for providing sufficient information ~~to the administrator to determine that such development will not obstruct the view of a substantial number of residences on or adjoining such shorelines whether this standard is met.~~
  - 2. In the Urban Resort shorelines designation only, commercial and multifamily unit residential development more than 100 feet from the ordinary high water mark may exceed the standard height limit, up to a maximum height of 75 feet when approved ~~with through~~ a shoreline conditional use permit, ~~up to a maximum height of 75 feet~~; provided, that specific location design and other conditions may be imposed to meet the policies and regulations of this program;

**Comment [DOE-Req113]:** Required Change – This change restores the existing language to apply the common-line setback provisions only to existing structures within 50-feet of a proposed residence. The amendment record contains no justification to extend this distance to 150-feet, which is most cases is two to three times the width of most existing lots where view these provisions would apply. The No Net Loss analysis related to this change does not take into consideration the increase in applicability if these setback reductions county-wide by increasing the distance from 50-feet to 100-feet.

**Comment [DOE-Req114]:** Required Change – This change is necessary for consistency with the referenced constrained lot provisions found at WCC 23.40.170.c.4. This section states that consideration shall be given to view impacts in accordance with the common-line setback standards of 23.40.020.d.2. The change eliminates an endless loop to where the two provisions continue to refer to one another without resolve, and clarifies that new residential development should not be allowed waterward of existing development through either process.

**Comment [CES115]:** Shouldn't this be "is not"?

**Comment [DOE-Req116]:** Required Change – This change adds the same standard found in the constrained lot provisions at 23.40.170.B.5. In no case should the common line setback be used that would place a single-family residence within a hazardous area.

**Comment [DN117]:** Now covered by nonconforming lot section (23.50.030)

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

3. In the Urban Resort shoreline environment designation, lodging developments over 35 feet in height may be allowed. However, due to the potential for adverse impacts upon adjacent uses and the community from such development, special consideration must be given to the following factors during review of such proposals:
- Urban services, including sanitary sewers, public water supply, fire protection, storm drainage, and police protection, must be provided at adequate levels to protect the public health, safety, and welfare.
  - Circulation, parking areas, and outdoor storage or loading areas should be adequate in size and designed so that the public safety and local aesthetic values are not diminished. Such areas should be screened from open space areas by landscaping, fences or similar structures, or grade separation.
  - Recreational needs of building clientele must be provided for through on-site recreation facilities and access to shorelines. The variety and number of on-site recreation facilities should increase proportionately as density increases.
4. In the Cherry Point Management Area, cranes, gantries, mobile conveyors, light standards, and similar equipment necessary for the functions of water-dependent uses or the servicing of vessels may extend above the applicable maximum height limit provided in Table 1, provided that such structures shall be designed to minimize view obstruction.
5. Residential accessory structures that are not waterward of the primary structure may be built to the maximum height for the environment designation.
- F. **Open Space.** Open space shall be provided for certain types of development, use, or activities. The amount of open space, as a percentage of lot coverage, shall be as provided in Table 2, below.
- G. **Uses Allowed in Buffers and Setbacks.** The following development activities are not subject to ~~be~~ allowed in buffers and setbacks; provided, that they are constructed and maintained in a manner that minimizes adverse impacts on shoreline functions and processes; and provided further, that they comply with all the applicable regulations in WCC Chapter 16.16, including mitigation:
- Those portions of approved private water-dependent development or public water-oriented development that require a location waterward of the ordinary high water mark of streams, rivers, lakes, ponds, marine shorelines, associated wetlands, and/or within their associated buffers.
  - Accessory and uUnderground utilities.
  - Necessary power poles and transmission towers are not subject to height limits but shall not be higher than necessary to achieve the intended purpose.
  - Modifications to existing development that are necessary to comply with environmental requirements of any state or federal agency, when otherwise consistent with this program; provided, that the decision maker determines that the facility cannot meet the dimensional standard and accomplish the purpose for which it is intended and the facility is located, designed, and constructed to meet specified dimensional standards to the maximum extent feasible, and the modification is in conformance with the provisions of Chapter WCC 23.50.070 (Nonconforming Uses, Structures, and Lots) ~~for nonconforming development and uses.~~

Comment [CES118]: Moved from 23.40.040 (Commercial)

Comment [CES119]: Added to accommodate equipment necessary for operations of permitted uses.

Comment [CES120]: Moved up from below

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

5. Roads, railways, and other essential public facilities that must cross shorelines and are necessary to access approved water-dependent development.
6. Stairs and walkways no greater than four feet in width and no higher than ~~nor~~ 18 inches in height above grade, except for railings; provided, that where ADA requirements apply, such facilities may be increased to five feet in width and the height requirement may be waived to provide for site-specific ADA compliance. Stairways shall conform to the existing topography to the extent feasible and minimize impervious surfaces.
7. Shared moorages ~~shall not be subject to sideyard setbacks~~ when located on or adjacent to a property line shared in common by the project proponents and where appropriate easements or other legal instruments have been executed providing for ingress and egress to the facility.
8. Retaining walls or similar slope stabilization structures, when associated with an approved shoreline use or development consistent with the provisions of this program and demonstrated to be necessary for the approved use or development through a geotechnical analysis.
9. Where permitted, fences, walls ~~other than those allowed by 23.70.020(G)(8) above~~ retaining walls, hedges and other similar structures shall be limited to four feet in height within shoreline setbacks and six feet in height outside of shoreline setbacks; provided, that the Director may exempt security fencing from this requirement as required by federal or state regulations.
10. Signs.
  - a. On publicly owned park properties, interpretive, wayfinding, and park identification signs.
  - b. Signage required by state or federal security requirements.
11. Passive recreation facilities that are part of a non-motorized trail system or environmental education program, including walkways, wildlife viewing structures, or public education trails; provided, that all the criteria in WCC 23.40.160(A)(6) (Recreation) are met.
12. ~~Residential accessory structures that are not waterward of the primary structure may be built to the maximum height for the designation.~~ Accessory sStructures, as allowed by 16.16.720(G)(4) Habitat Conservation Areas – Use and Modification. When located in the shoreline jurisdiction, residential water-oriented-recreational accessory structures—such as a boat equipment storage shed, an small uncovered boat storage rack, a fire pit, and a pathway leading to the shoreline—may be permitted in an HCA buffer; provided,
  - a. Such structures are located as far from the shoreline as feasible and on previously-impacted buffer areas;
  - b. The maximum area, inclusive of existing lawfully-established accessory structures, ~~They shall~~ be limited to 10% of the buffer’s area or 500 square feet, whichever is less;
  - c. No more than 20% of the linear length of shoreline is occupied by a building or structure;
  - d. Individual structures shall be limited to a total footprint area of 100-square feet and 10-feet in height; and
  - e. The shoreline is 75% or at ratios outlined in WCC 16.16.760, whichever is greater, planted (or replanted) with native vegetation to a minimum depth of 15 feet landward from the ordinary high water mark.

**Comment [AP121]:** Revised per Parks comment (Scoping Document Items #13b, 13c, and 14a)

**Comment [AP122]:** Added per Scoping Document, Item #17e.

**Comment [AP123]:** Added for clarity per Scoping Document, Item #17e.

**Comment [AP124]:** Added per Scoping Document, Item #16b.

**Comment [AP125]:** Revised per Scoping Document, Item #13d.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- f. This provision shall not apply to residential developments authorized using the constrained lot provisions of WCC 23.40.150(B).
- 13. Residential structures which share a common wall with the primary structure shall be considered an extension of the primary structure (i.e., an attached garage) and may be built to the maximum height for the designation.
- 14. Height limits contained in this program for accessory structures in the Rural, Resource, or Conservancy shoreline environments, accessory structures that are 150 feet or greater from the OHWM of the Nooksack or Sumas Rivers may be built to the maximum height for the designation. ~~shall not apply within shoreline jurisdiction of the Nooksack and Sumas Rivers beyond 150 feet from the OHWM.~~

**Comment [DOE-Req126]:** Required Changes – These changes are required for consistency with the SMP Guidelines governing principle that SMP regulations must be designed to achieve no net loss of ecological functions (WAC 173-26-186(8)). The changes add appropriate sideboards to allow a limited and predictable list of common residential developments that may be located within regulated buffers. The changes include more emphasis on the required mitigation sequence including avoidance, minimization and mitigation of impacts to buffers [WAC 173-26-201(2)(e)]

Impervious Surface Coverage	Per the underlying zone-district, WCC Title 20.						10% <sup>(9)</sup>	10% <sup>(9)</sup>	Per the underlying zone-district, WCC Title 20.		

**Footnotes:**

- (1) = Water dependent development shall have a buffer of zero feet. Unless specifically exempted from setback requirements in WCC 23.40.020, minimum required setbacks for permanent freestanding signs are 50 feet from the OWHM where not subject to critical areas or buffers. Other non-water dependent uses that may be allowed within the shoreline buffer are identified in WCC 23.40.020(G).
- (2) = Roof overhangs or other architectural features shall not project further than 18 inches into the side setbacks.
- (3) = A side setback of 5 feet applies to residential decks and accessory structures 15 feet tall or less.
- (4) = Maximum height for accessory structures is 15 feet, except as provided in WCC 23.40.020(E).
- (5) = Maximum height is as shown, except as provided in WCC 23.40.020(E).
- (6) = Add five feet of setback for each five feet of height over 15 feet.
- (7) = See WCC 23.40.200 (Signs) for additional allowances and restrictions.
- (8) = Maximum allowable development density shall be calculated pursuant to the applicable underlying zone district, per WCC Title 20; provided, that maximum allowable density in dwelling units/acre shall not exceed the density ratios identified above. Density shall be calculated based on the total area of the parent parcel including those areas located outside of shoreline jurisdiction. Submerged lands and/or tidelands within the boundaries of any waterfront parcel that are located waterward of the ordinary high water mark shall not be used in density calculations.
- (9) = Where the maximum total impervious surface percentage does not allow 2,500 square feet of total impervious surface area, 2,500 square feet shall be allowed.
- (a/b) = "a" Applies to structures within 100 feet of OHWM or wetland edge;
- "b" a=Applies to structures more than 100 feet from OHWM or wetland edge.
- (c/d) = "c" aApplies to development that includes overnight lodging;
- "d" =Aapplies to development that does not include overnight lodging.
- (e/f) e= "e" Applies to structures not more than 35 feet high;
- "f" =Aapplies to structures more than 35 feet high.
- g= Height limit may be increased to 75 feet via conditional use permit – see WCC 23.00.130(B)(5).
- \* = Add five feet of setback for each five feet of height over 15 feet.
- † = Maximum height for accessory buildings is 15 feet.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

~~\*\* = See WCC 23.100.140(B)(10) through (14).~~

~~^ = Roof overhangs or other architectural features shall not project further than 18 inches into the side yard setbacks.~~

~~◇ = Maximum allowable development density shall be calculated pursuant to the applicable underlying zone district, per WCC Title 20; provided, that maximum allowable density in dwelling units/acre shall not exceed the density ratios identified above. Density shall be calculated based on the total area of the parent parcel including those areas located outside of shoreline jurisdiction. Submerged lands and/or tidelands within the boundaries of any waterfront parcel that are located waterward of the ordinary high water mark shall not be used in density calculations.~~

~~◇◇ = Where the maximum total impervious surface percentage does not allow 2,500 square feet of total impervious surface area, 2,500 square feet shall be allowed.~~

N/A = Not applicable.

# Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 **23.40.030 General Shoreline Use and Modification Regulations**  
2 A. Proposed uses and developments shall limit the number and extent of shoreline modifications.  
3 B. Shoreline uses and developments that are water-dependent shall be given priority. Permit  
4 conditions may limit the range of uses or sites developed for such uses.  
5 ~~B.C.~~ Interim non-water-dependent uses authorized as a shoreline conditional use may be allowed to  
6 respond to short-term market conditions; provided, that permit conditions are placed on such uses  
7 to provide for a specific timetable or review process to ensure water-dependent use of the  
8 development in the long term.  
9 ~~C.D.~~ Shoreline uses and developments shall be located, designed, and managed so that other  
10 appropriate uses are neither subjected to substantial or unnecessary adverse impacts, nor deprived  
11 of reasonable, lawful use of navigable waters, other publicly owned shorelines, or private property.  
12 ~~D.E.~~ Navigable waters shall be kept free of obstructions for the general benefit of the region, state, and  
13 nation. No use or development shall be allowed to effectively exclude other appropriate uses from  
14 navigable waters.  
15 F. Shoreline uses and developments shall be located in a manner so that shoreline stabilization is not  
16 likely to become necessary in the future.  
17 G. Accessory uses and structures that do not require a shoreline location shall be sited away from the  
18 land/water interface and not placed waterward of the principal use unless otherwise allowed by this  
19 Program.  
20 ~~E.H.~~ Nothing in the policies or regulations may be construed as to impinge on tribal treaty rights  
21 exercised within usual and accustomed areas.  
22 I. No flood control works or instream structures shoreline use or development may commence without  
23 the proponent/developer having obtained all applicable federal, state, and local permits and  
24 approvals, including but not limited to a Hydraulic Permit Application (HPA) from the State  
25 Department of Fish and Wildlife.  
26 J. Use of motor vehicles including unlicensed off-road vehicles is permitted only on roads or trails  
27 specifically designated for such use. Motor vehicle use, except for vessels and float planes, is  
28 prohibited waterward of the ordinary high water mark, on tidelands, public or private beaches,  
29 wetlands and/or their associated buffers; except as necessary for public health and safety or  
30 permitted maintenance activities associated with approved developments or as otherwise  
31 permitted.  
32 K. Buildings, fencing, walls, hedges, and similar features shall be designed, located, and constructed in  
33 a manner that does not preclude or significantly interfere with wildlife movement to or from  
34 important habitat areas consistent with the applicable provisions of this program; provided, that the  
35 Director may exempt security fencing associated with residential, industrial, and/or commercial  
36 developments from this requirement on a case-by-case basis.

37 **23.4100.030-040 Agriculture.**

- 38 A. Policies.

Comment [CES127]: From WAC 173-26-231(2)(b)

Comment [DN128]: Moved from the General Regulations section since this pertains specifically to uses and mods.

Comment [DOE-Req129]: Recommended Change – The added language clarifies that there are exceptions to this general regulation (See 16.16.720.G.4

Comment [CES130]: Moved from 23.90.030 Ecological Protection

Comment [AP131]: Moved from Aquaculture section.

Comment [AP132]: Moved and revised to apply more universally.

Comment [CES133]: Moved from 23.90.030 30.010 Ecological Protection

Comment [CES134]: Moved from 23.90.030 30.010 Ecological Protection

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 ~~1. This program recognizes the importance of agriculture in Whatcom County and supports its~~  
2 ~~continued economic viability. This program allows for ongoing agricultural activities and should~~  
3 ~~protect agricultural lands from conflicting uses such as intensive or unrelated residential,~~  
4 ~~industrial or commercial uses, while also maintaining shoreline ecological functions and~~  
5 ~~processes.~~  
6 ~~2. Agricultural uses and development in support of agricultural uses should be conducted in such a~~  
7 ~~manner as to assure no net loss of shoreline ecological functions and processes and avoid~~  
8 ~~substantial adverse impacts on other shoreline resources and values.~~  
9 ~~3. Conversion of agricultural uses to other uses should comply with all policies and regulations for~~  
10 ~~nonagricultural uses.~~  
11 ~~B. Regulations.~~  
12 A. General.  
13 1. Agricultural activities within shorelines are governed by the critical areas regulations in WCC  
14 Chapter 16.16, including the conservation program on agricultural lands (CPAL) provided for in  
15 therein WCC 16.16.290.  
16 ~~1.2. Accessory uses and buildings shall observe critical area buffer requirements as defined in (see~~  
17 ~~WCC Chapter 16.16); except that utility development associated with an approved agriculture~~  
18 ~~activity or development may encroach on critical area buffers where it can be demonstrated~~  
19 ~~that the proposed utility development is essential to the agriculture activity or development and~~  
20 ~~that such development complies with the general provisions of WCC Chapter 16.16; such~~  
21 ~~utilities shall be placed underground where feasible.~~  
22 ~~2.3. Intentional discharge of any manure storage facility into ground or surface water is prohibited.~~  
23 ~~3.4. Feedlots are prohibited in critical areas and their buffers as defined in (see WCC Chapter 16.16).~~  
24 ~~4.5. Conversion of agricultural uses to other uses shall comply with the provisions of WCC~~  
25 ~~Chapter 16.16 and this program for the proposed use.~~  
26 B. Regulations for Specific Shoreline Environment Designations.  
27 ~~5.1. In the Natural shoreline environment, only low-intensity agricultural activities are permitted;~~  
28 ~~provided, that the use does not expand or alter agricultural practices in a manner inconsistent~~  
29 ~~with the purpose of this designation.~~  
30 ~~C. Shoreline Area Regulations.~~  
31 ~~1. Urban. Agricultural activities are permitted subject to policies and regulations of this program,~~  
32 ~~except that new liquid manure storage facilities and liquid manure spreading are not permitted.~~  
33 ~~2. Urban Resort. New agricultural activities are prohibited.~~  
34 ~~3. Urban Conservancy. Agricultural activities are permitted subject to policies and regulations of~~  
35 ~~this program, except that new animal feeding operations/concentrated animal feeding~~  
36 ~~operations (AFO/CAFOs) are not permitted.~~  
37 ~~4. Shoreline Residential. Agricultural activities are permitted subject to policies and regulations of~~  
38 ~~this program, except that new liquid manure storage facilities and liquid manure spreading are~~  
39 ~~not permitted.~~  
40 ~~5. Rural. Agricultural activities are permitted subject to policies and regulations of this program.~~

# Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 ~~6. Resource. Agricultural activities are permitted subject to policies and regulations of this~~  
2 ~~program.~~
- 3 ~~7. Conservancy. Agricultural activities are permitted subject to policies and regulations of this~~  
4 ~~program.~~
- 5 ~~8. Natural. Low intensity agricultural activities are permitted subject to policies and regulations of~~  
6 ~~this program; provided, that the use does not expand or alter agricultural practices in a manner~~  
7 ~~inconsistent with the purpose of this designation. All other agricultural activities are prohibited.~~  
8 ~~— Aquatic. New agricultural activities are prohibited. Farming of fin fish, shellfish and management~~  
9 ~~of other aquatic products are subject to the policies and regulations for aquaculture under~~  
10 ~~WCC 23.100.030.~~
- 11 **23.4100.040-050 Aquaculture.**  
12 Aquaculture in shoreline areas shall be subject to the policies and regulations of this section and  
13 Chapter 23.90 WCC.
- 14 Nothing in these policies or regulations may be construed as to impinge on tribal treaty rights exercised  
15 within usual and accustomed areas. See also the policy in subsection (A)(8) of this section and the  
16 regulation in subsection (B)(1)(u) of this section.
- 17 A. Policies.
- 18 A. Aquaculture is a water dependent use and, when consistent with control of pollution and  
19 avoidance of adverse impacts to the environment and preservation of habitat for resident native  
20 species, is a preferred use of the shoreline (WAC ~~173-26-241(3)(b)~~).
- 21 B. Potential locations for aquaculture activities are relatively restricted because of specific  
22 requirements related to water quality, temperature, oxygen content, currents, adjacent land  
23 use, wind protection, commercial navigation, and salinity. The technology associated with some  
24 forms of aquaculture is still experimental and in formative states. Therefore, some latitude  
25 should be given when implementing the regulations of this section; provided, that potential  
26 impacts on existing uses and shoreline ecological functions and processes should be given due  
27 consideration.
- 28 C. Preference should be given to those forms of aquaculture that involve lesser environmental and  
29 visual impacts and lesser impacts to native plant and animal species. In general, projects that  
30 require no structures, submerged structures or intertidal structures are preferred over those  
31 that involve substantial floating structures. Projects that involve little or no substrate  
32 modification are preferred over those that involve substantial modification. Projects that involve  
33 little or no supplemental food sources, pesticides, herbicides or antibiotic application are  
34 preferred over those that involve such practices.
- 35 D. Community restoration projects associated with aquaculture should be reviewed and permitted  
36 in a timely manner.
- 37 E. Aquaculture activities should be designed, located and operated in a manner that supports long-  
38 term beneficial use of the shoreline and protects and maintains shoreline ecological functions

Comment [CES135]: Addressed in use table now.

Comment [CES136]: Most amendments shown herein are to make this section consistent w/ WAC 173-26-241(3)(b)

Comment [AP137]: Moved to Use and Mods General Regs

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 and processes. Aquaculture should not be permitted where it would result in a net loss of  
2 shoreline ecological functions; adversely affect the quality or extent of habitat for native species  
3 including eelgrass, kelp, and other macroalgae; adversely impact other habitat conservation  
4 areas; or interfere with navigation or other water-dependent uses.

5 ~~F. Aquaculture that involves significant risk of cumulative adverse effects on water quality,  
6 sediment quality, benthic and pelagic organisms, and/or wild fish populations through potential  
7 contribution of antibiotic resistant bacteria, or escapement of nonnative species, or other  
8 adverse effects on ESA listed species should not be permitted.~~

9 ~~G. The county should actively seek substantive comment on any shoreline permit application for  
10 aquaculture from all appropriate federal, state and local agencies; the Lummi Nation, Nooksack  
11 Tribe, and other affected tribes; and the general public regarding potential adverse impacts.  
12 Comments of nearby residents or property owners directly affected by a proposal should be  
13 considered and evaluated, especially in regard to use compatibility and aesthetics.~~

14 ~~H. The rights of treaty tribes to aquatic resources within their usual and accustomed areas should  
15 be addressed through the permit review process. Direct coordination between the  
16 applicant/proponent and the tribe should be encouraged.~~

17 ~~I. Consideration should be given to both the potential beneficial impacts and potential adverse  
18 impacts that aquaculture development might have on the physical environment; on other  
19 existing and approved land and water uses, including navigation; and on the aesthetic qualities  
20 of a project area.~~

21 ~~J. Legally established aquaculture enterprises, including authorized experimental projects, should  
22 be protected from incompatible uses that may seek to locate nearby. Use or developments that  
23 have a high probability of damaging or destroying an existing aquaculture operation may be  
24 denied.~~

25 ~~K. Experimental aquaculture projects in water bodies should be limited in scale and should be  
26 approved for a limited period of time. Experimental aquaculture means an aquaculture activity  
27 that uses methods or technologies that are unprecedented or unproven in the state of  
28 Washington.~~

29 ~~B. Regulations.~~

30 ~~A. General Site Design and Operation.~~

31 ~~1. Aquaculture activities proposed within Shorelines of Statewide Significance shall be subject to,  
32 first, the policies contained in Chapter 23.40 WCC, Shorelines of Statewide Significance, and,  
33 second, the policies and regulations contained in this section.~~

34 ~~2.1~~ Aquaculture that involves little or no substrate modification shall be given preference over  
35 those that involve substantial modification. The applicant/proponent shall demonstrate that the  
36 degree of proposed substrate modification is the minimum necessary for feasible aquaculture  
37 operations at the site.

38 ~~3.2~~ The installation of submerged structures, intertidal structures, and floating structures shall be  
39 allowed only when the applicant/proponent demonstrates that no alternative method of  
40 operation is feasible.

Comment [CES138]: Covered by general use & mod regs.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 | ~~4.3.~~ Aquaculture proposals that involve substantial substrate modification or sedimentation through  
2 | dredging, trenching, digging, mechanical clam harvesting, or other similar mechanisms, shall not  
3 | be permitted in areas where the proposal would adversely impact ~~existing kelp beds or other~~  
4 | ~~macroalgae, eelgrass beds, critical saltwater habitat, or other fish and wildlife habitat~~  
5 | conservation areas.
- 6 | ~~5.4.~~ Aquaculture activities, ~~which that~~ would have a significant adverse impact on natural, dynamic  
7 | shoreline processes or ~~which that~~ would result in a net loss of shoreline ecological functions,  
8 | shall be prohibited.
- 9 | ~~6.~~ Aquaculture uses and facilities shall be located at least 600 feet from any national wildlife refuge  
10 | lands, except that:
- 11 | i. ~~Projects involving substantial substrate modification and/or fish net pens, if authorized,~~  
12 | ~~shall be located 1,500 feet or more from such areas.~~
- 13 | ii. ~~Lesser distances may be authorized by permit if it is demonstrated by the~~  
14 | ~~applicant/proponent that the wildlife resource will be protected and if the change is~~  
15 | ~~supported by the WDFW, the Lummi Nation and/or Nooksack Tribe.~~
- 16 | iii. ~~Greater distances may be required if supported by the reviewing resource agencies and/or~~  
17 | ~~where there is sound evidence demonstrating that a greater distance is required.~~
- 18 | ~~7.5.~~ Unless otherwise provided in the shoreline permit issued by the County, repeated introduction  
19 | of an approved organism in the same location shall require approval by the County only at the  
20 | time the initial aquaculture use permit is issued. Introduction, for purposes of this section, shall  
21 | mean the placing of any aquatic organism in any area within the waters of Whatcom County  
22 | regardless of whether it is a native or resident organism within the county and regardless of  
23 | whether it is being transferred from within or without the waters of Whatcom County.
- 24 | ~~8.6.~~ The rights of treaty tribes to aquatic resources within their usual and accustomed areas shall be  
25 | addressed through direct coordination between the applicant/proponent and the affected  
26 | tribe(s) through the permit review process.
- 27 | B. Site Design and Operation.
- 28 | 1. Aquaculture ~~practices~~ shall be designed to minimize use of artificial substances and shall use  
29 | chemical compounds that are least persistent and have the least impact on plants and animals.
- 30 | 2. Aquaculture structures and equipment shall be of sound construction and shall be so  
31 | maintained. Abandoned or unsafe structures and/or equipment shall be removed or repaired  
32 | promptly by the owner, including when a business ceases operations. Where any structure  
33 | might constitute a potential hazard to the public in the future, the County shall require the  
34 | posting of a bond commensurate with the cost of removal or repair. The County may abate an  
35 | abandoned or unsafe structure, following notice to the owner, if the owner fails to respond in  
36 | 30 days and may impose a lien on the related shoreline property or other assets in an amount  
37 | equal to the cost of the abatement. Bonding requirements shall not duplicate requirements of  
38 | other agencies.
- 39 | 3. All floating and submerged aquaculture structures and facilities in navigable waters shall be  
40 | marked in accordance with U.S. Coast Guard requirements.

**Comment [AP139]:** Removed, since these rules are identified in Ecology's guidance as an "obsolete net pen recommendation."

*Local governments should use caution relying on other recommendations of the 1986 interim net pen guidelines and related environmental impact statement (Washington Department of Fisheries, 1990). The interim guidelines document is largely out of date. Ecology has reviewed the original rationale for the 1986 guidelines and found many recommendations are obsolete, unnecessary or inadequate given today's operations (Appendix 4).*

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 4. Predator control shall not involve the killing or harassment of birds or mammals. Approved  
2 controls include, but are not limited to, double netting for seals, overhead netting for birds, and  
3 three-foot-high fencing or netting for otters. The use of other nonlethal, non-abusive predator  
4 control measures shall be contingent upon receipt of written approval from the National Marine  
5 Fisheries Service and/or the U.S. Fish and Wildlife Service, as required.
  - 6 5. Aquaculture wastes shall be disposed of in a manner that will ensure strict compliance with all  
7 applicable governmental waste disposal standards, including but not limited to the Federal  
8 Clean Water Act, Section 401, and the Washington State Water Pollution Control Act  
9 (Chapter 90.48 RCW). No garbage, wastes, or debris shall be allowed to accumulate at the site of  
10 any aquaculture operation.
  - 11 6. No processing of any aquaculture product, except for the sorting or culling of the cultured  
12 organisms and the washing or removal of surface materials or organisms after harvest, shall  
13 occur in or over the water unless specifically approved by permit. All other processing and  
14 processing facilities shall be located on land and shall be subject to the policies of the ~~Whatcom~~  
15 ~~County Comprehensive Plan Chapter 11 (Shorelines)~~ and regulations of  
16 WCC ~~23.40.100~~ 23.40.120 (Industrial and Port Development), in addition to the regulations in  
17 this section.
  - 18 7. For aquaculture projects using over-water structures, storage of necessary tools and apparatus  
19 waterward of the ordinary high water mark shall be limited to containers of not more than three  
20 feet in height, as measured from the surface of the raft or dock; provided, that in locations  
21 where the visual impact of the proposed aquaculture structures will be minimal, the County may  
22 authorize storage containers of greater height. In such cases, the burden of proof shall be on the  
23 applicant/proponent. Materials ~~which~~ that are not necessary for the immediate and regular  
24 operation of the facility shall not be stored waterward of the ordinary high water mark.
  - 25 8. The County shall reserve the right to require aquaculture operations to carry liability insurance  
26 in an amount commensurate with the risk of injury or damage to any person or property as a  
27 result of the project. Insurance requirements shall not be required to duplicate requirements of  
28 other agencies.
  - 29 9. Where aquaculture activities are authorized to use ~~public~~ County facilities, such as boat  
30 launches or docks, the County shall reserve the right to require the applicant/proponent to pay  
31 a portion of the cost of maintenance and any required improvements commensurate with the  
32 use of such facilities.
- 33 C. Additional Standards for Net Pens.
- 34 1. Fish net pens and rafts shall meet the following criteria in addition to the other applicable  
35 regulations of this section:
    - 36 a. Fish net pens shall meet, at a minimum, state-approved administrative guidelines for the  
37 management of net pen cultures. In the event there is a conflict in requirements, the more  
38 restrictive requirement shall prevail.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 b. Fish net pens shall not occupy more than two surface acres of water area, excluding  
2 booming and anchoring requirements. Anchors that minimize disturbance to substrate, such  
3 as helical anchors, shall be employed. Such operations shall not use chemicals or antibiotics.  
4 c. Aquaculture proposals that include net pens or rafts shall not be located closer than one  
5 nautical mile to any other aquaculture facility that includes net pens or rafts; provided, that  
6 a lesser distance may be authorized if the applicant/proponent can demonstrate that the  
7 proposal will be consistent with the environmental and aesthetic policies ~~and objectives~~ of  
8 the Whatcom County Comprehensive Plan Chapter 11 (Shorelines). If a lesser distance is  
9 requested, the burden of proof shall be on the applicant/proponent to demonstrate that the  
10 cumulative impacts of existing and proposed operations would not be contrary to the  
11 policies of the Comprehensive Plan and regulations of this program.  
12 d. Net cleaning activities shall be conducted on a frequent enough basis so as not to violate  
13 state water quality standards. When feasible, the cleaning of nets and other apparatus shall  
14 be accomplished by air drying, spray washing, or hand washing.  
15 e. In the event of a significant fish kill at the site of a net pen facility, the fin fish aquaculture  
16 operator shall submit a timely report to the Whatcom County Health Department,  
17 Environmental Health division, and the Whatcom County Planning and Development  
18 Services Department stating the cause of death and shall detail remedial action(s) to be  
19 implemented to prevent reoccurrence.  
20 2. ~~Commercial salmon net pen facilities shall not be located in Whatcom County waters, except for~~  
21 ~~limited nonprofit penned cultivation of wild salmon stocks during a limited portion of their~~  
22 ~~lifecycle to enhance restoration of native stocks when such activities involve minimal~~  
23 ~~supplemental feeding and no use of chemicals or antibiotics. shall not be considered~~  
24 ~~commercial salmon net pen facilities and may be permitted.~~

### D. Additional Standards for Commercial Geoduck Aquaculture.

- 26 1. Commercial geoduck aquaculture shall only be allowed where sediments, topography, land, and  
27 water access support geoduck aquaculture operations without significant clearing or grading.  
28 2. Shoreline conditional use permits are required for new commercial geoduck aquaculture and  
29 existing aquaculture being converted to commercial geoduck aquaculture. However, shoreline  
30 conditional use permits must take into account that commercial geoduck operators have a right  
31 to harvest geoduck once planted and all subsequent cycles of planting and harvest shall not  
32 require a new shoreline conditional use permit.  
33 3. A substantial development permit is not required for the planting, growing, and harvesting of  
34 farm-raised geoduck clams unless a specific project or practice causes substantial interference  
35 with normal public use of the surface waters.  
36 ~~Shoreline conditional use permits must take into account that commercial geoduck operators~~  
37 ~~have a right to harvest geoduck once planted.~~  
38 4. A single shoreline conditional use permit application may be submitted for multiple sites within  
39 an inlet, bay, or other defined feature, provided the sites are all under control of the same  
40 applicant and under the County's shoreline permitting jurisdiction.

**Comment [AP140]:** This prohibition is already covered by the Use Table, so it has been removed from the text here. The language for the exception to the prohibition remains.

**Comment [AP141]:** Updated per Periodic Review Checklist, Item 2011.b, and Scoping Document, Item #1f.

**Comment [AP142]:** Revised language for clarity.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

### 1 | E. Additional Standards for Experimental Aquaculture.

- 2 | 1. If uncertainty exists regarding potential impacts of a proposed aquaculture activity, and for all  
3 | experimental aquaculture activities, baseline and periodic operational monitoring by a County-  
4 | approved consultant (unless otherwise provided for) may be required, at the  
5 | applicant's/proponent's expense, and shall continue until adequate information is available to  
6 | determine the success of the project and/or the magnitude of any probable significant adverse  
7 | environmental impacts. Permits for such activities shall include specific performance measures  
8 | and provisions for adjustment or termination of the project at any time if monitoring indicates  
9 | significant, adverse environmental impacts that cannot be adequately mitigated.
- 10 | 2. Aquaculture developments, not including net pens, approved on an experimental basis shall not  
11 | exceed five acres in area (except land-based projects and anchorage for floating systems) and  
12 | three years in duration; provided, that the County may issue a new permit to continue an  
13 | experimental project as many times as is deemed ~~necessary and~~ appropriate.
- 14 | 3. ~~New~~ Aquatic species that are not previously cultivated in Washington State shall not be  
15 | introduced into Whatcom County salt ~~waters~~ or freshwaters without prior written approval of  
16 | the Director of the Washington State Department of Fish and Wildlife and the Director of the  
17 | Washington Department of Health. In saltwaters, the County shall not issue permits for projects  
18 | that include the introduction of such organisms until it has also received written comment from  
19 | the Marine Resources Committee, the Lummi Nation, and the Nooksack Tribe; provided, that  
20 | such comment is received in a timely manner. This regulation does not apply to Pacific, Olympia,  
21 | Kumamoto, Belon, or Virginica oysters; Manila, Butter, or Littleneck clams; or geoduck clams.

### 22 | B.F. Supplemental Application Requirements – General Aquaculture.

- 23 | 1. In addition to the minimum application requirements specified in WCC Title 22 (Land Use and  
24 | Development), Applications for aquaculture use or development shall include in their  
25 | applications all information necessary to conduct a thorough evaluation of the proposed  
26 | aquaculture activity, including but not limited to the following:
  - 27 | a. A site plan map including:
    - 28 | i. The perimeter of the proposed aquaculture operations area.
    - 29 | ii. Existing bathymetry depths based on mean lower low water (MLLW datum).
    - 30 | iii. Adjacent upland use, vegetation, presence of structures, docks, bulkheads and other  
31 | modifications. If there are shore stabilization structures, provide the beach elevation at  
32 | the toe of the structure and the top of the structure (MLLW datum).
    - 33 | iv. Areas where specific substrate modification will take place or structures will be  
34 | constructed or installed.
    - 35 | v. Access provisions for barges or track equipment.
    - 36 | vi. Location of storage or processing structures or facilities.
  - 37 | b. A baseline description of existing conditions, including best available information on:
    - 38 | i. Water quality.
    - 39 | ii. Tidal variations.
    - 40 | iii. Prevailing storm wind conditions.

**Comment [CES143]:** All general application requirements have been moved into one general section. Subsections have items specific to that to Pic.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1           iv. Current flows.  
2           v. Flushing rates.  
3           vi. Littoral drift.  
4           vii. Areas of differing substrate composition.  
5           viii. Areas of aquatic, intertidal, and upland vegetation complexes. A vegetation habitat  
6           survey must be conducted. WDFW must be contacted prior to the survey to ensure it is  
7           conducted according to their most current eelgrass/macroalgae survey guidelines.  
8           ix. Existing shoreline or water uses and structures.  
9           x. Aquatic and benthic organisms. Information must include an assessment of aquatic  
10           species, including forage fish, and spawning and other lifecycle use of, or adjacent to,  
11           the site.  
12           ~~xi. A vegetation habitat survey must be conducted. The WDFW must be contacted prior to~~  
13           ~~the survey to ensure it is conducted according to the most current WDFW~~  
14           ~~eelgrass/macroalgae survey guidelines.~~  
15           ~~xii. Assessment of aquatic species, including forage fish, and spawning and other lifecycle~~  
16           ~~use of, or adjacent to, the site.~~  
17           Further baseline studies including surveys and sampling may be required depending upon  
18           the adequacy of available information, existing conditions, and the nature of the proposal.  
19           c. A detailed description of the project proposal including:  
20           i. Species to be reared.  
21           ii. Substrate modification or vegetation removal.  
22           iii. Planting, harvest and processing location, method and timing, including work proposal  
23           and construction techniques proposed (list all hand tools, machinery used (such as track  
24           hoes, trucks or barges), type of work, frequency, and duration.  
25           d. Anticipated use of any feed, pesticides, herbicides, antibiotics, vaccines, growth stimulants,  
26           antifouling agents, or other chemicals, and an assessment of predicted impacts. Approvals  
27           for the use of ~~no~~ such materials shall be used until approval is obtained from all appropriate  
28           state and federal agencies, including but not limited to the U.S. Food and Drug  
29           Administration, and the Washington State Departments of Ecology, Fish and Wildlife, and  
30           Agriculture, as required, and ~~proof thereof is submitted to the County. Compounds with the~~  
31           ~~least persistence shall be used.~~ An annual report of antibiotic use shall be submitted to the  
32           Whatcom County Department of Health, Environmental Health division. The report shall  
33           indicate the type and amount of antibiotics used during the previous calendar year. Actual  
34           usage data for all chemicals and antibiotics shall be maintained for review by County  
35           inspectors at all times.  
36           e. Number of employees/workers necessary for the project, including average and peak  
37           employment.  
38           f. Methods of waste disposal and predator control.  
39           g. Methods to address pollutant loading, including biological oxygen demand (BOD).

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 h. Assessment of potential impacts on shoreline ecological functions and processes addressing  
2 the baseline conditions identified, including but not limited to indirect and cumulative  
3 effects.
- 4 i. A visual impact analysis ~~for floating culture facilities or other structures, if required by the~~  
5 ~~County may require a visual impact analysis.~~ (See the Department of Ecology’s “Aquaculture  
6 Siting Study” 1986 for general approach.) Depending on the size and complexity of the  
7 proposal, such analysis may be prepared by the applicant/proponent, without professional  
8 assistance; provided, that it includes an adequate assessment of impacts.
- 9 j. Information demonstrating that the site has natural potential for the type(s) of aquaculture  
10 proposed, due to necessary substrate or other conditions, as well as water quality suitable  
11 for the type(s) of aquaculture proposed.
- 12 k. Information demonstrating that the proposed aquaculture activities will not result in a net  
13 loss of shoreline ecological functions or processes or adversely affect habitat conservation  
14 areas ~~as defined by~~ (see WCC Chapter 16.16 (Critical Areas)).
- 15 l. Information demonstrating that the proposed aquaculture activities will not substantially  
16 and materially conflict with areas devoted to established uses of the aquatic environment.  
17 Such uses include but are not limited to navigation, moorage, sport or commercial fishing,  
18 log rafting, underwater utilities, and scientific research. Existing public opportunities for  
19 gathering wild stock aquatic resources on public lands shall be addressed in any application  
20 for aquaculture on public tidelands or bedlands. Compensation for loss of public access to  
21 public aquatic resources may be required.
- 22 m. Other pertinent information deemed necessary by the ~~administrator~~ Director.
- 23 2. Applications for aquaculture activities must demonstrate that the proposed activity will be  
24 compatible with surrounding existing and planned uses.
- 25 a. Aquaculture activities shall comply with all applicable noise, air, and water quality  
26 standards. All projects shall be designed, operated and maintained to minimize odor and  
27 noise.
- 28 b. ~~Aquaculture activities shall be restricted to reasonable hours and/or days of operation when~~  
29 ~~necessary to minimize substantial, adverse impacts from noise, light, and/or glare on nearby~~  
30 ~~residents, other sensitive uses, or critical habitat.~~
- 31 c. ~~Aquaculture facilities shall not significantly impact~~ ~~introduce incompatible visual elements~~  
32 ~~or substantially degrade~~ the aesthetic qualities of the shoreline. Aquaculture structures and  
33 equipment, except navigation aids, shall be designed, operated and maintained to blend  
34 into their surroundings through the use of appropriate colors and materials.

Comment [CES144]: Amended based on public comment (TSF07)

### G. Supplemental Application Requirements – Commercial Geoduck Aquaculture.

- 35 1. In addition to the general application requirements of WCC Title 22 (Land Use and  
36 Development), subsection F, above, and chapter 173-27 WAC, applications for new geoduck  
37 aquaculture use or development shall include all information necessary to conduct a thorough  
38 evaluation of the proposed activity, including but not limited to the following:  
39

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 a. A narrative description and timeline for all anticipated geoduck planting and harvesting  
2 activities if not already contained in the federal or state permit application or comparable  
3 information mentioned above;  
4 b. A baseline ecological survey of the proposed site to allow consideration of the ecological  
5 effects if not already contained in the federal or state permit application or comparable  
6 information mentioned above; and  
7 c. Management practices that address impacts from mooring, parking, noise, lights, litter, and  
8 other activities associated with geoduck planting and harvesting operations.
- 9 H. Regulations for Specific Shoreline Environment Designations.
- 10 1. In the Urban Resort, Shoreline Residential, and Rural shoreline environments, proposals  
11 containing net pen facilities shall be located no closer than 1,500 feet from the OHWM of this  
12 environment, unless a specific lesser distance is determined to be appropriate based upon a  
13 visual impact analysis. Other types of floating culture facilities may be located within 1,500 feet  
14 of the OHWM but in such cases a visual analysis shall be mandatory.
- 15 ~~1-2. In the Natural shoreline environment, aquaculture activities that do not require structures,~~  
16 ~~facilities, or mechanized harvest practices and that will not result in the alteration of natural~~  
17 ~~systems or features are permitted.~~
- 18 C. Shoreline Area Regulations.
- 19 A. ~~Urban. Aquaculture activities are permitted subject to policies and regulations of this program.~~
- 20 B. ~~Urban Resort. Aquaculture activities are permitted subject to policies and regulations of this~~  
21 ~~program. Proposals containing net pen facilities shall be located no closer than 1,500 feet from~~  
22 ~~the OHWM of this environment, unless a specific lesser distance is determined to be~~  
23 ~~appropriate based upon a visual impact analysis. Other types of floating culture facilities may be~~  
24 ~~located within 1,500 feet of the OHWM but in such cases a visual analysis shall be mandatory.~~
- 25 C. ~~Urban Conservancy. Aquaculture activities are permitted subject to policies and regulations of~~  
26 ~~this program.~~
- 27 D. ~~Shoreline Residential. Aquaculture activities are permitted subject to policies and regulations of~~  
28 ~~this program. Proposals containing net pen facilities shall be located no closer than 1,500 feet~~  
29 ~~from the OHWM of this environment, unless a specific lesser distance is determined to be~~  
30 ~~appropriate based upon a visual impact analysis. Other types of floating culture facilities may be~~  
31 ~~located within 1,500 feet of the OHWM but in such cases a visual analysis shall be mandatory.~~
- 32 E. ~~Rural. Aquaculture activities are permitted subject to policies and regulations of this program.~~  
33 ~~Proposals containing net pen facilities shall be located no closer than 1,500 feet from the~~  
34 ~~OHWM of this environment, unless a specific lesser distance is determined to be appropriate~~  
35 ~~based upon a visual impact analysis.~~
- 36 F. ~~Resource. Aquaculture activities are permitted subject to policies and regulations of this~~  
37 ~~program.~~
- 38 G. ~~Conservancy. Aquaculture activities are permitted subject to policies and regulations of this~~  
39 ~~program.~~

Comment [AP145]: Updated per Periodic Review Checklist, Item 2011.b, and Scoping Document, Item #1f.

Comment [AP146]: Reorganized and revised for clarity.

Comment [CES147]: The below are addressed in the use table or above now.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 H. Natural Aquaculture activities that do not require structures, facilities or mechanized harvest  
2 practices and that will not result in the alteration of natural systems or features are permitted  
3 subject to policies and regulations of this program.

### 4 ~~23.4100.050060~~ **Boating Facilities—Marinas and Launch Ramps.**

#### 5 A. Policies.

6 A. Boating facilities, including marinas and launch ramps, are water dependent uses and should be  
7 given priority for shoreline location. Boating facilities should also contribute to public access and  
8 enjoyment of waters of the state. Shorelines particularly suitable for marinas and launch ramps  
9 are limited and should be identified and reserved to prevent irreversible commitment for other  
10 uses having less stringent site requirements.

11 B. Regional needs for marina and boat launch facilities should be carefully considered in reviewing  
12 new proposals as well as in allocating shorelines for such development. Such facilities should be  
13 coordinated with park and recreation plans and, where feasible, collocated with port or other  
14 compatible water dependent uses. Review of such facilities should be coordinated with  
15 recreation providers, including cities, adjacent counties, port districts, the Whatcom County  
16 parks and recreation department, the Washington State Parks and Recreation Commission, and  
17 the Washington State Department of Natural Resources to avoid unnecessary duplication and to  
18 efficiently provide recreational resources while minimizing adverse impacts to shoreline  
19 ecological functions and processes.

20 C. Upland boat storage is preferred over new in water moorage. Mooring buoys are preferred over  
21 docks and piers. Boating facilities that minimize the amount of shoreline modification are  
22 preferred.

23 D. Boating facilities should provide physical and visual public shoreline access and provide for  
24 multiple use, including water related use, to the extent compatible with shoreline ecological  
25 functions and processes and adjacent shoreline use.

26 E. Accessory uses at marinas or launch ramps should be limited to water oriented uses, or uses  
27 that provide physical or visual shoreline access for substantial numbers of the general public.

28 F. New or expanding boating facilities including marinas, launch ramps, and accessory uses should  
29 only be sited where suitable environmental conditions are present and should avoid critical  
30 saltwater habitat including kelp beds, eelgrass beds, spawning and holding areas for forage fish  
31 (such as herring, surf smelt and sandlance); subsistence, commercial and recreational shellfish  
32 beds; mudflats, intertidal habitats with vascular plants; and areas with which priority species  
33 have a primary association.

34 G. Boating facilities should be located and designed to avoid adverse effects upon coastal, riverine,  
35 and nearshore processes such as erosion, littoral or riparian transport, and accretion, and  
36 should, where feasible, enhance degraded, scarce, and/or valuable shore features including  
37 accretion shoreforms.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 H. ~~Launch ramps are preferred over marinas on accretion shores because associated impacts are~~  
2 ~~often reversible and such structures will not normally interfere with littoral drift and accretion~~  
3 ~~unless offshore defense structures or dredging are also required.~~  
4 I. ~~Nonregulatory methods to protect, enhance, and restore shoreline ecological functions and~~  
5 ~~processes and other shoreline resources should be encouraged during the design, development~~  
6 ~~and operation of boating facilities. Nonregulatory methods may include public facility and~~  
7 ~~resource planning, education, voluntary protection and enhancement projects, or incentive~~  
8 ~~programs.~~  
9 J. ~~Boating facilities should be located, designed and operated so that other appropriate water~~  
10 ~~dependent uses are not adversely affected.~~  
11 K. ~~Location and design of boating facilities should not unduly obstruct navigable waters and should~~  
12 ~~avoid adverse effects to recreational opportunities such as fishing, shellfish gathering, pleasure~~  
13 ~~boating, commercial aquaculture, swimming, beach walking, picnicking and shoreline viewing.~~  
14 L. ~~Boating facilities should be located, designed, constructed and maintained to avoid adverse~~  
15 ~~proximity impacts such as noise, light and glare; aesthetic impacts to adjacent land uses; and~~  
16 ~~impacts to public visual access to the shoreline.~~

17B. ~~Regulations:~~

### 18 **A. Marinas and Launch Ramps – General.**

- 19 1. ~~Boating facilities, including marinas and launch ramp development, in shoreline areas shall be~~  
20 ~~subject to the policies and regulations of this section and Chapter 23.90 WCC. This section~~  
21 ~~applies to marinas and public boat launches, though the moorage structures of such facilities~~  
22 ~~shall also comply with WCC 23.40.150 (Moorage Structures). For ~~Docks~~moorage structures~~  
23 ~~-serving four or fewer single-family residences users, only are subject to the policies and~~  
24 ~~regulations of WCC 23.40.150-100.090, (Moorage Moorage Structures) applies — Docks, piers, and~~  
25 ~~mooring buoys.~~  
26 2. ~~Accessory uses shall be limited to those that are water-dependent, related to boating, and~~  
27 ~~necessary for facility operation, or which provide physical or visual shoreline access to~~  
28 ~~substantial numbers of the general public. Accessory uses shall be consistent in scale and~~  
29 ~~intensity with the marina and/or launch ramp and surrounding uses.~~  
30 3. ~~All developments shall provide boater education addressing boater impacts on water quality~~  
31 ~~and other shoreline resources, boater safety, and requirements for boater use of sewage pump-~~  
32 ~~outs.~~

### 33 **B. Marinas – Location Standards.**

- 34 1. ~~When marina sites are considered, sufficient evidence must be presented to show there is a~~  
35 ~~regional demand and existing marinas are inadequate and cannot be expanded to meet regional~~  
36 ~~demand.~~  
37 2. ~~Marinas shall be sited to prevent any restrictions in the use of commercial and recreational~~  
38 ~~shellfish beds or commercial aquaculture operations. The specific distance shall be determined~~  
39 ~~in conjunction with the Washington State Department of Health, the Washington State~~

Comment [CES148]: Moved from below

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 Department of Ecology, and other agencies with expertise. Criteria for determining the specific  
2 distance may include:  
3 a. The size and depth of the waterbody;  
4 b. Tidal flushing action in the project area;  
5 c. Size of the marina and projected intensity of use;  
6 d. Whether fuel will be handled or stored;  
7 e. Location of a sewer hook-up; and  
8 f. Expected or planned changes in adjacent land uses that could result in additional water  
9 quality impacts or sanitary treatment requirements.  
10 3. Marinas shall be allowed only on stable shoreline areas where water depth is adequate to  
11 eliminate or minimize the need for channel dredging (for construction or maintenance), soil  
12 disposal, filling, beach enhancement, and other harbor and channel maintenance activities.  
13 4. Marinas shall be located only in areas where there is adequate water mixing and flushing and  
14 shall be designed so as not to reduce or negatively influence flushing characteristics.  
15 5. Fixed breakwaters are discouraged.  
16 6. Marinas shall be clearly separated from beaches commonly used for swimming and shall provide  
17 signage and protection measures to ensure the safety of swimmers.  
18 7. Marinas shall not be located at or along:  
19 a. Significant littoral drift cells, including resource material areas, such as feeder bluffs and  
20 accretion beaches, barrier beaches, points, sand spits and hooks; or  
21 b. Wetlands, marshes, bogs, swamps and lagoons; or  
22 c. Mud flats and salt marshes; or  
23 d. Fish and shellfish spawning and rearing areas.  
24 8. Solid structures shall not be permitted to extend without openings from the shore to zero tide  
25 level (mean lower low water, or MLLW), but shall stop short to allow sufficient shallow fringe  
26 water for fish passage.  
27 C. **Marinas – Site Design.**  
28 1. Proposals for marinas shall include public launch facilities unless the applicant can demonstrate  
29 that providing such facilities is not feasible.  
30 2. Marinas shall be designed, constructed, and maintained to:  
31 a. Provide thorough flushing of all enclosed water areas and shall not restrict the movement of  
32 aquatic life requiring shallow water;  
33 b. Minimize interference with geo-hydraulic processes and disruption of existing shore forms;  
34 c. Be aesthetically compatible with existing shoreline features and uses;  
35 d. Avoid adverse proximity impacts such as noise, light, and glare;  
36 e. Include vegetative screening for parking, and upland storage areas and facilities consistent  
37 with landscaping standards prescribed in WCC 20.80.300, et seq. (Landscaping); and,  
38 f. Include public restrooms, accessory parking, or other recreational uses according to the  
39 scale of the facility.

Comment [CES149]: Moved from below

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

3. Short-term loading/unloading areas and hand-launch storage areas may be located at ramps or near berthing areas and should be constructed of pervious material.
4. Public access, both visual and physical, such as viewpoints or walkways, shall be an integral part of all marina design and development commensurate with the particular proposal and must meet the standards of WCC 23.30.0760 (Public Access).
5. Innovative construction techniques and construction methods of foreshore marinas may be allowed when demonstrated to the satisfaction of the Director that the design will prevent degradation of fish migration, critical saltwater habitat, and/or shellfish resources.

### D. Operations and Management.

1. The discharge of sewage and/or toxic material from boats and/or shore installations is prohibited. The responsibility for the adequate and approved collection and disposal of marina-originated sewage, solid waste, and petroleum waste is that of the marina operator. An emergency spill kit and use instructions shall be provided for tenants in an easy-to-access area and be accessible twenty-four (24) hours a day.
2. Commercial fish or shellfish processing and the discharge or discarding of unused bait, scrapfish, or viscera shall be prohibited.
3. Swimming shall be prohibited within marina facilities unless the swimming area is adequately separated, protected, and posted.
4. If dredging at marina entrances changes the littoral drift processes and adversely affects adjacent shores, the marina operator shall be required to periodically replenish these shores with the appropriate quantity and quality of aggregate as determined by a geohydraulic study, paid for by the operator or owner and completed to the satisfaction of the Director.
5. Temporary vacant moorage spaces shall be made available for “transient moorage” (less than two-week stay) when at least one of the following applies:
  - a. The marina is owned, operated, or franchised by a governmental agency for use by the public;
  - b. The marina provides more than three thousand (3,000) lineal feet of moorage; or
  - c. The marina is part of a mixed-use development which includes restaurants or other water-enjoyment uses.
6. Marina operators shall execute a lease, contract, or deed that establishes permission to use a slip for a stated period of time and that establishes conditions for use of the slip, including the requirement that all boats meet applicable sanitation regulations.
7. Marinas shall meet the following before occupancy:
  - a. Marinas that dispense fuel shall have adequate facilities and post procedures for fuel handling and storage to prevent/minimize accidental spillage.
  - b. Marinas shall have facilities, equipment, such as emergency spill kits, and post procedures for containment, recovery, and mitigation of spilled petroleum, sewage, and toxic products.
  - c. Marina operators shall post signs where they are readily visible to all marina users describing regulations:
    - i. Pertaining to handling and disposal of waste, wastewater, toxic materials, and recycling;

Comment [CES150]: Moved from below

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1            ii. Prohibiting the discharge of marine toilets (i.e., no untreated sewage discharge);  
2            iii. Prohibiting the disposal of fish and shellfish cleaning wastes; and  
3            iv. Describing best management practices (BMPs) for boat maintenance and repairs on site.  
4            d. Garbage or litter receptacles shall be provided and maintained by the marina operator at  
5            several locations convenient to users in sufficient numbers to properly store all solid waste  
6            generated on site.  
7            e. Marina docks shall be equipped with adequate lifesaving equipment, such as:  
8            i. Life rings, hooks, ropes and ladders, or equivalent, on the end of fingers; and/or  
9            ii. One ladder (per side) either every one hundred (100) linear feet of the dock, or every six  
10           (6) slips whichever is greater. This regulation does not apply to a float which is less than  
11           one hundred (100) feet from a shoreline; or  
12           iii. At least one ladder to serve a float with six (6) or more slips and is one hundred (100)  
13           linear feet in length or less.  
14           **E. Additional Standards for Boat Launches.**  
15           1. Boat launches are prohibited in:  
16           a. Significant littoral drift cells, including resource material areas such as feeder bluffs and  
17           accretion beaches, points, spits and hooks;  
18           b. Wetlands, marshes, bogs, swamps, and lagoons;  
19           c. Mud flats and salt marshes; and  
20           d. Fish spawning and rearing areas and commercial or recreational shellfish areas.  
21           2. Launch ramps shall be:  
22           a. Located on stable shorelines where water depths are adequate to eliminate or minimize the  
23           need for:  
24           i. Offshore or foreshore channel construction dredging; or  
25           ii. Maintenance dredging; or  
26           iii. Spoil disposal; or  
27           iv. Filling; or  
28           v. Beach enhancement; or  
29           vi. Other harbor and channel maintenance activities.  
30           b. Located in areas where there is adequate water mixing and flushing.  
31           c. Designed so as not to negatively influence flushing characteristics.  
32           3. Innovative or hinged boat launches may be permitted on marine accretion shoreforms, provided  
33           that continual grading is not required. When grading is permitted it must not adversely affect  
34           ecological functions and ecosystem-wide processes. Accessory facilities shall be located out of  
35           critical areas.  
36           4. Boat launches may be allowed on stable banks where current deflectors or other stabilization  
37           structures will not be necessary.  
38           5. Boat launches shall not be permitted where the upland within twenty-five (25) feet of the  
39           OHWL has a slope that exceeds twenty-five percent (25%) grade and/or where substantial  
40           cutting, grading, filing, or defense works is necessary.

Comment [CES151]: Moved from below

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 6. Boat launches, minor accessory buildings, and haul-out facilities shall be designed to be in  
2 character and scale with the surrounding shoreline.
- 3 7. Boat launches shall be built from flexible, hinge-segmented pads that can adapt to changes in  
4 beach profiles, unless a solid structure is demonstrated to be more appropriate for the intended  
5 level of use.
- 6 8. Boat launches shall be placed and kept near flush with the foreshore slope to minimize the  
7 interruption of geo-hydraulic processes and impacts to critical saltwater habitats.
- 8 9. Marine rails for boat launching shall be located the minimum distance necessary above existing  
9 grade to minimize impact on littoral drift and navigation along the shoreline.
- 10 10. Boat launch facilities shall be clearly separated from beaches commonly used for swimming and  
11 shall provide signage and protection measures to ensure the safety of swimmers.
- 12 F. Additional Standards for Live-Aboard Vessels.
- 13 1. Live-aboard vessels are only allowed in marinas and only as follows:
- 14 a. Vessels must be for residential use only;
- 15 b. Slips occupied by live-aboard vessels shall not exceed 10 percent of the total slips in the  
16 marina;
- 17 c. Vessels shall be owner-occupied; and
- 18 a-d. Vessels must be operational for cruising.
- 19 2. Live-aboard vessels must comply with all marine regulations, policies, and procedures of the U.S.  
20 Coast Guard, and any other federal and state government agencies that pertain to health, safety  
21 and/or environmental protection. Proof of seaworthiness of the vessel and the adequacy of the  
22 mooring arrangement must be provided and laws governing all the citizens of Whatcom County  
23 must be obeyed.
- 24 A.G. Additional Standards for Boat Storage.
- 25 1. Marinas shall provide dry upland boat storage with a launch mechanism to protect shoreline  
26 ecological functions and processes, efficiently use shoreline space, and minimize consumption of  
27 public water surface area unless:
- 28 a. No suitable upland locations exist for such facilities; or
- 29 b. It can be demonstrated that wet moorage would result in fewer impacts to ecological  
30 functions and processes; or
- 31 c. It can be demonstrated that wet moorage would enhance public use of the shoreline.
- 32 2. Dry moorage and other storage areas shall be located away from the shoreline and be  
33 landscaped pursuant to WCC 20.80.300, et seq. (Landscaping) with native vegetation to provide  
34 a visual and noise buffer for adjoining dissimilar uses or scenic areas.
- 35 B.H. Additional Standards for Parking and Vehicle Access.
- 36 1. Parking facilities shall meet County zoning design and location standards; provided, that at a  
37 minimum, one vehicle space shall be maintained for every four moorage spaces and for every  
38 400 square feet of interior floor space devoted to accessory retail sales or service use. Bicycle  
39 parking shall be provided commensurate with the anticipated demand.

**Comment [AP152]:** Added per Scoping Document, Item #17].

From WAC 332-30-171:

*(b) Upon the effective date of this rule, the ten percent limit can be changed by local government, through amendments to the local shoreline master program and/or issuance of a shoreline substantial development conditional use permit, if all of the following conditions are met:*

- (i) Methods to handle the upland disposal and best management practices for the increased waste associated with residential use are expressly addressed and required; and*
- (ii) Specific locations for residential use slips do not adversely impact habitat or interfere with water-dependent uses.*

The County can opt to set a different limit, though 10 percent is in line with DNR regulations.

Per the Port of Bellingham Harbor Rules, Regulations, and Rates Handbook – 2019, at Squalicum Harbor there are currently 100 designated Live-aboard licenses and 50 Live-aboard licenses at Blaine Harbor. However, it is unclear what percentage of slips these numbers represent. May want to confirm that a proposed regulation here will not conflict with the Port's current regulations.

Blaine Harbor – 629 slips total (~8% live-aboard)  
Squalicum Harbor – 1,400+ slips total (~7% live-aboard)

As such, the proposed provision should not conflict with the Port's regulations.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 | 2. ~~Public or quasi-public~~ Launch ramps shall provide trailer spaces, at least 10 feet by 40 feet,  
2 | commensurate with projected demand.
- 3 | 3. Parking ~~that does not require a shoreline location in order to carry out its functions~~ shall:  
4 | a. Be sited away from the land/water interface unless no feasible alternative location exists  
5 | outside of the shoreline;  
6 | b. Be planted or landscaped pursuant to WCC 20.80.300, et seq. (Landscaping) ~~preferably~~ with  
7 | native vegetation, to provide a visual and noise buffer for adjoining dissimilar uses or scenic  
8 | areas; and  
9 | ~~c. Observe critical area buffers in Chapter 16.16 WCC; and~~  
10 | ~~d. c.~~ Be designed to incorporate low impact development practices, such as pervious surfaces,  
11 | and bioswales, ~~to the extent feasible~~ pursuant to WCC 20.80.630, et seq. (Stormwater and  
12 | drainage).
- 13 | C.1. Supplemental Application Requirements. In addition to the general application requirements of  
14 | WCC Title 22 (Land Use and Development), applications for marinas or launch ramps shall include all  
15 | information necessary to conduct a thorough evaluation of the proposed activity, including but not  
16 | limited to the following:
  - 17 | 1. ~~Applications for new boating facilities, including marinas and launch ramps, shall be approved~~  
18 | ~~only if enhanced public access to public waters outweighs the potential adverse impacts of the~~  
19 | ~~use. Applications shall bProvide accompanied by supporting application materials a level of~~  
20 | service needs analysis that documents the market demand for such facilities, including:
    - 21 | a. The total amount of moorage proposed;
    - 22 | b. The proposed supply, as compared to the existing supply within the service range of the  
23 | proposed facility, including vacancies or waiting lists at existing facilities;
    - 24 | c. The expected service population and boat ownership characteristics of the population;
    - 25 | d. Existing approved facilities or pending applications within the service area of the proposed  
26 | new facility.
  - 27 | 2. ~~New marinas with in water moorage and expansion of in water moorage facilities in existing~~  
28 | ~~marinas shall be approved only when:~~
  - 29 | 3. ~~Opportunities for upland storage sufficient to meet the demand for moorage are not available~~  
30 | ~~on site; and~~
  - 31 | 4. ~~Expansion of upland storage at other existing marinas is not feasible.~~
  - 32 | 5. ~~2. Applications shall d~~ Document that a preferred method of providing moorage facilities is not  
33 | feasible. Review of proposals involving public aquatic lands may be required to include an  
34 | analysis of other alternative sites not controlled by the applicant/proponent.
  - 35 | 6. ~~3. Applications for launch ramps shall Provide a critical area assessment report pursuant to WCC~~  
36 | 16.16 (Critical Areas), including contain:
    - 37 | 7. ~~A habitat survey.~~
    - 38 | 8. ~~4.~~ A slope bathymetry map.
    - 39 | 9. ~~5.~~ Evaluation of effects on littoral drift.

**Comment [AP153]:** Removed since there's already have a section that says the CAO applies in the shoreline jurisdiction.

**Comment [CES154]:** Moved, as this is an approval criterion, not an application requirement.

**Comment [DN155]:** Moved to application requirements

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 | ~~10.6. Applications for marinas, launch ramps, and accessory uses shall include~~ Provide an  
2 | assessment of existing water-dependent uses in the vicinity including, but not limited to,  
3 | navigation, fishing, shellfish harvest, pleasure boating, swimming, beach walking, picnicking, and  
4 | shoreline viewing, and ~~shall~~ document potential impacts and mitigating measures. Impacts on  
5 | these resources shall be considered in review of proposals and specific conditions to avoid or  
6 | minimize impacts may be imposed.
- 7 | ~~11.7. A Marina and launch ramp proposals may be required to prepare a~~ Provide a visual  
8 | assessment of views from surrounding residential properties, public viewpoints, and the view of  
9 | the shore from the water surface, ~~if required~~.
- 10 | ~~D. Tabular Regulations – Setbacks, Height and Open Space for Marinas and Launch Ramp Development.~~  
11 | Minimum required setbacks from shorelines and side property lines, maximum height limits, and  
12 | open space requirements are contained in WCC 23.90.130, Shoreline bulk provisions – Buffers,  
13 | setbacks, height, open space, and impervious surface coverage.
- 14 | ~~J. Regulations for Specific Shoreline Environment Designations.~~
- 15 | 1. ~~In the Natural shoreline area environment, marinas or launch ramps are prohibited; except~~  
16 | ~~that primitive ramps to facilitate hand launching of small craft are permitted if materials and~~  
17 | ~~design are compatible with the site.~~
- 18 | 2. ~~In the Aquatic shoreline area environment, covered over-water structures may be permitted~~  
19 | ~~only where vessel construction or repair work is to be the primary activity and covered work~~  
20 | ~~areas are demonstrated to be the minimum necessary over water.~~
- 21 | ~~2. Site Design and Operation.~~
- 22 | a. ~~Marinas or launch ramps shall not be permitted on the following marine shores unless it can be~~  
23 | ~~demonstrated that interference with littoral drift and/or degradation or loss of shoreline~~  
24 | ~~ecological functions and processes, especially those vital to maintenance of nearshore habitat,~~  
25 | ~~will not occur. Such areas include:~~
- 26 | b. ~~Feeder bluffs exceptional.~~
- 27 | c. ~~High energy input driftways.~~
- 28 | d. ~~Marinas or launch ramps shall not be permitted within the following marine shoreline~~  
29 | ~~habitats because of their scarcity, biological productivity, and sensitivity unless no~~  
30 | ~~alternative location is feasible, the project would result in a net enhancement of shoreline~~  
31 | ~~ecological functions, and the proposal is otherwise consistent with this program:~~
- 32 | e. ~~Marshes, estuaries and other wetlands;~~
- 33 | f. ~~Tidal pools on rock shores;~~
- 34 | g. ~~Kelp beds, eelgrass beds, spawning and holding areas for forage fish (such as herring, surf~~  
35 | ~~smelt and sand lance);~~
- 36 | h. ~~Subsistence, commercial and recreational shellfish beds; and~~
- 37 | i. ~~Other critical saltwater habitats.~~
- 38 | j. ~~Marinas or launch ramps shall not be permitted on the following marine accretion~~  
39 | ~~shoreforms unless it can be demonstrated that no other alternative location is feasible, the~~  
40 | ~~project would result in a net enhancement of shoreline ecological functions, and the~~

Comment [AP156]: Carried over from removed  
'Shoreline Area Regulations.'

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1           proposal is otherwise consistent with this program. Hoists are preferred over dredged  
2           marinas or launch ramps at such locations:
- 3           k. Open points;
  - 4           l. Spits and hooks;
  - 5           m. Tomboles;
  - 6           n. Open bay barrier beaches;
  - 7           o. Accretional pocket beaches.
- 8           b. ~~Foreshore marinas or launch ramps may be permitted on low erosion rate marine feeder bluffs~~  
9           ~~or on low energy input erosional driftways if the proposal is otherwise consistent with this~~  
10           ~~program. Foreshore marinas or launch ramps are prohibited on accretional lake shores because~~  
11           ~~these natural features are uncommon on lakes and are highly valuable for recreation.~~
- 12           c. ~~Backshore marinas and launch ramps may be permitted on closed accretional points, closed~~  
13           ~~accretional bluff and bay barrier beaches, or low energy input driftways, except where wetlands~~  
14           ~~are present or it can be demonstrated that a foreshore location would result in fewer impacts to~~  
15           ~~shoreline ecological functions and processes, natural features and uses.~~
- 16           d. ~~Marinas or launch ramps may be permitted on low bank lake shores where backshore wetlands~~  
17           ~~are protected, or where wetlands are not present, if most of the beach and backshore are~~  
18           ~~preserved in a natural condition for public or quasi-public recreation.~~
- 19           e. ~~Marinas shall not be permitted in low gradient, broad meander stream channel reaches, except~~  
20           ~~where located on outer, concave bends or straight, moderately eroding or stable banks, so that~~  
21           ~~dredging and/or shore protection will not be necessary.~~
- 22           f. ~~Marina basins or structures shall not be permitted on river point bars or other accretional~~  
23           ~~beaches. A limited number of launch ramps may be permitted on accretion shoreforms;~~  
24           ~~provided, that any necessary grading will not adversely affect shoreline ecological functions or~~  
25           ~~fluvial processes, and any accessory facilities are located out of the floodway.~~
- 26           g. ~~Marinas shall not be permitted in areas of active channel migration, where channel dredging will~~  
27           ~~be required, if a flood hazard will be created, or if valuable shoreline ecological functions and~~  
28           ~~processes will be degraded.~~
- 29           h. ~~Launch ramps may be located immediately downstream of accretion shoreforms, or on other~~  
30           ~~non-erosional banks, where no or a minimum number of current deflectors will be necessary.~~
- 31           i. ~~Floating piers shall be required in rivers and streams unless it can be demonstrated that fixed~~  
32           ~~piers will result in substantially less impact on geohydraulic processes and flood hazards can be~~  
33           ~~minimized or mitigated.~~
- 34           j. ~~Where foreshore marinas are permitted:~~
- 35           i. ~~Open pile or floating breakwater designs shall be used unless it can be demonstrated that~~  
36           ~~riprap or other solid construction would not result in any greater net impacts to shoreline~~  
37           ~~ecological functions or processes or shore features.~~
  - 38           ii. ~~Solid structures shall not be permitted to extend without openings from the shore to zero~~  
39           ~~tide level (mean lower low water, or MLLW), but shall stop short to allow sufficient shallow~~  
40           ~~fringe water for fish passage.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 k. ~~Foreshore and backshore marinas shall be designed to allow the maximum possible circulation~~  
2 ~~and flushing of all enclosed water areas.~~
- 3 ~~— New or expanding marinas with dredged entrances that adversely affect littoral drift to the~~  
4 ~~detriment of other shores and their users shall be required to periodically replenish such shores~~  
5 ~~with the requisite quantity and quality of aggregate as determined by professional coastal~~  
6 ~~geologic engineering studies.~~
- 7 l. ~~All facilities shall be located and designed to avoid impediments to navigation and to avoid~~  
8 ~~depriving other properties of reasonable access to navigable waters. Review and approval by~~  
9 ~~the U.S. Coast Guard may be required as a condition of issuance of building or development~~  
10 ~~permits to assure compliance. All in-water structures shall be marked and lighted in compliance~~  
11 ~~with U.S. Coast Guard regulations.~~
- 12 m. ~~Design and other standards for physical improvement of docks and piers are found in~~  
13 ~~WCC 23.100.090, Moorage — Docks, piers and mooring buoys.~~
- 14 E. ~~Public Access.~~
- 15 ~~— New launch ramps shall be approved only if they provide public access to public waters, which~~  
16 ~~are not adequately served by existing access facilities, or if use of existing facilities is~~  
17 ~~documented to exceed the designed capacity. Prior to providing ramps at a new location,~~  
18 ~~documentation shall be provided demonstrating that expansion of existing launch facilities~~  
19 ~~would not be adequate to meet demand.~~
- 20 a. ~~Public access areas shall provide space and facilities for physical and/or visual access to water~~  
21 ~~bodies, including feasible types of public shore recreation.~~
- 22 b. ~~Marinas and boat launches shall provide public access for as many water dependent~~  
23 ~~recreational uses as possible, commensurate with the scale of the proposal. Features for such~~  
24 ~~access could include, but are not limited to, docks and piers, pedestrian bridges to offshore~~  
25 ~~structures, fishing platforms, artificial pocket beaches, and underwater diving and viewing~~  
26 ~~platforms.~~
- 27 3. ~~Site Considerations.~~
- 28 a. ~~Marinas, launch ramps, and accessory uses shall be designed so that lawfully existing or planned~~  
29 ~~public shoreline access is not unnecessarily blocked, obstructed nor made dangerous.~~
- 30 b. ~~Public launch ramps and/or marina entrances shall not be located near beaches commonly used~~  
31 ~~for swimming, valuable fishing and shellfish harvest areas, or sea lanes used for commercial~~  
32 ~~navigation unless no alternative location exists, and mitigation is provided to minimize impacts~~  
33 ~~to such areas and protect the public health, safety and welfare.~~
- 34 c. ~~Marinas and accessory uses shall be located only where adequate utility services are available,~~  
35 ~~or where they can be provided concurrent with the development.~~
- 36 d. ~~Marinas, launch ramps, and accessory uses shall be located where water depths are adequate to~~  
37 ~~avoid the need for dredging and minimize potential loss of shoreline ecological functions or~~  
38 ~~processes.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 e. ~~Marinas, launch ramps, and accessory uses shall be located and designed with the minimum~~  
2 ~~necessary shoreline stabilization to adequately protect facilities, users, and watercraft from~~  
3 ~~floods, abnormally high tides, and/or destructive storms.~~
- 4 ~~4. Boat Storage.~~
- 5 ~~3. Marinas shall provide dry upland boat storage with a launch mechanism to protect shoreline~~  
6 ~~ecological functions and processes, efficiently use shoreline space, and minimize consumption of~~  
7 ~~public water surface area unless:~~
- 8 ~~i. No suitable upland locations exist for such facilities; or~~  
9 ~~ii. It can be demonstrated that wet moorage would result in fewer impacts to ecological~~  
10 ~~functions and processes; or~~  
11 ~~iii. It can be demonstrated that wet moorage would enhance public use of the shoreline.~~
- 12 ~~4. Dry moorage and other storage areas shall be located away from the shoreline and be~~  
13 ~~landscaped with native vegetation to provide a visual and noise buffer for adjoining dissimilar~~  
14 ~~uses or scenic areas.~~
- 15 ~~— New covered moorage for boat storage is prohibited.~~
- 16 ~~5. Covered over-water structures may be permitted only where vessel construction or repair~~  
17 ~~work is to be the primary activity and covered work areas are demonstrated to be the~~  
18 ~~minimum necessary over water.~~
- 19 ~~5. Waste Disposal.~~
- 20 ~~1. Marinas shall provide pump out, holding, and/or treatment facilities for sewage contained on~~  
21 ~~boats or vessels.~~
- 22 ~~2. Discharge of solid waste or sewage into a water body is prohibited. Marinas and boat launch~~  
23 ~~ramps shall provide adequate restroom and sewage disposal facilities in compliance with~~  
24 ~~applicable health regulations.~~
- 25 ~~3. Garbage or litter receptacles shall be provided and maintained by the operator at several~~  
26 ~~locations convenient to users.~~
- 27 ~~4. Disposal or discarding of fish or shellfish cleaning wastes, scrap fish, viscera, or unused bait into~~  
28 ~~water or in other than designated garbage receptacles is prohibited.~~
- 29 ~~5. Marina operators shall post all regulations pertaining to handling, disposal, and reporting of~~  
30 ~~waste, sewage, fuel, oil, or toxic materials where all users may easily read them.~~
- 31 ~~1. Oil Product Handling, Spills, and Wastes. Fail-safe facilities and procedures for receiving, storing,~~  
32 ~~dispensing, and disposing of oil or hazardous products, as well as a spill response plan for oil and~~  
33 ~~other products, shall be required of new marinas and expansion or substantial alteration of~~  
34 ~~existing marinas. Compliance with federal or state law may fulfill this requirement. Handling of~~  
35 ~~fuels, chemicals or other toxic materials must be in compliance with all applicable federal and~~  
36 ~~state water quality laws as well as health, safety and engineering requirements. Rules for spill~~  
37 ~~prevention and response, including reporting requirements, shall be posted on site.~~
- 38 ~~6. Parking and Vehicle Access.~~
- 39 ~~1. Parking facilities shall meet County zoning standards; provided, that at a minimum, one vehicle~~  
40 ~~space shall be maintained for every four moorage spaces and for every 400 square feet of~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 interior floor space devoted to accessory retail sales or service use. Bicycle parking shall be  
2 provided commensurate with the anticipated demand.
- 3 2. Public or quasi public launch ramps shall provide trailer spaces, at least 10 feet by 40 feet,  
4 commensurate with projected demand.
- 5 3. Parking that does not require a shoreline location in order to carry out its functions shall:  
6 e. Be sited away from the land/water interface unless no feasible alternative location exists  
7 outside of the shoreline;  
8 f. Be planted or landscaped preferably with native vegetation, to provide a visual and noise  
9 buffer for adjoining dissimilar uses or scenic areas;  
10 g. Observe critical area buffers in Chapter 16.16 WCC; and  
11 h. Be designed to incorporate low impact development practices, such as pervious surfaces,  
12 and bioswales, to the extent feasible.
- 13 a. Connecting roads between marinas and public streets shall have all weather surfacing, and be  
14 satisfactory to the County Engineer in terms of width, safety, alignment, sight distance, grade  
15 and intersection controls.
- 16 7. Launch Ramp Design.
- 17 a. Preferred ramp designs, in order of priority, are:  
18 i. Open grid designs with minimum coverage of beach substrate.  
19 ii. Seasonal ramps that can be removed and stored upland.  
20 iii. Structures with segmented pads and flexible connections that leave space for natural beach  
21 substrate and can adapt to changes in beach profile.
- 22 b. Ramps shall be placed and maintained near flush with the foreshore slope.
- 23 8. Accessory Uses.
- 24 a. Accessory uses at marinas or launch ramps shall be limited to those water oriented uses, or uses  
25 that provide physical or visual shoreline access for substantial numbers of the general public.  
26 Accessory development includes, but is not limited to, parking, open air storage, waste storage  
27 and treatment, stormwater management facilities, utility, and upland transportation  
28 development.
- 29 b. Water oriented accessory uses reasonably related to marina operation may be located over  
30 water or at the water's edge by conditional use if an over water or water's edge location is  
31 essential to the operation of the use or if opportunities are provided for public access for a  
32 substantial number of persons.
- 33 a. Application Requirements.
- 34 12. Applications for new boating facilities, including marinas and launch ramps, shall be  
35 approved only if enhanced public access to public waters outweighs the potential adverse  
36 impacts of the use. Applications shall be accompanied by supporting application materials  
37 that documents the market demand for such facilities, including:  
38 i. The total amount of moorage proposed;  
39 ii. The proposed supply, as compared to the existing supply within the service range of the  
40 proposed facility, including vacancies or waiting lists at existing facilities;

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1           iii. ~~The expected service population and boat ownership characteristics of the population;~~  
2           iv. ~~Existing approved facilities or pending applications within the service area of the~~  
3           ~~proposed new facility.~~  
4           13. ~~New marinas with in-water moorage and expansion of in-water moorage facilities in~~  
5           ~~existing marinas shall be approved only when:~~  
6           14. ~~Opportunities for upland storage sufficient to meet the demand for moorage are not~~  
7           ~~available on-site; and~~  
8           15. ~~Expansion of upland storage at other existing marinas is not feasible.~~  
9           16. ~~Applications shall document that a preferred method of providing moorage facilities is~~  
10           ~~not feasible. Review of proposals involving public aquatic lands may be required to include~~  
11           ~~an analysis of other alternative sites not controlled by the applicant/proponent.~~  
12           17. ~~Applications for launch ramps shall contain:~~  
13           ~~(A) A habitat survey.~~  
14           ~~(B) A slope bathymetry map.~~  
15           ~~(C) Evaluation of effects on littoral drift.~~  
16           18. ~~Applications for marinas, launch ramps, and accessory uses shall include An~~  
17           ~~assessment of existing water dependent uses in the vicinity including, but not limited to,~~  
18           ~~navigation, fishing, shellfish harvest, pleasure boating, swimming, beach walking, picnicking~~  
19           ~~and shoreline viewing and document potential impacts and mitigating measures. Impacts on~~  
20           ~~these resources shall be considered in review of proposals and specific conditions to avoid~~  
21           ~~or minimize impacts may be imposed.~~  
22           19. ~~Marina and launch ramp proposals may be required to prepare a visual assessment of~~  
23           ~~views from surrounding residential properties, public viewpoints and the view of the shore~~  
24           ~~from the water surface.~~  
25   9. ~~Tabular Regulations – Setbacks, Height and Open Space for Marinas and Launch Ramp Development.~~  
26   ~~Minimum required setbacks from shorelines and side property lines, maximum height limits, and~~  
27   ~~open space requirements are contained in WCC 23.90.130, Shoreline bulk provisions – Buffers,~~  
28   ~~setbacks, height, open space, and impervious surface coverage.~~  
29   C. ~~Shoreline Area Regulations.~~  
30   1. ~~Urban. Marinas and launch ramps are permitted subject to policies and regulations of this~~  
31   ~~program.~~  
32   2. ~~Urban Resort. Marinas and launch ramps are permitted subject to policies and regulations of~~  
33   ~~this program.~~  
34   3. ~~Urban Conservancy. Launch ramps are permitted subject to policies and regulations of this~~  
35   ~~program. Marinas may be permitted as a conditional use.~~  
36   4. ~~Shoreline Residential. Marinas and launch ramps are permitted subject to policies and~~  
37   ~~regulations of this program.~~  
38   5. ~~Rural. Marinas and launch ramps are permitted subject to policies and regulations of this~~  
39   ~~program.~~

Comment [CES157]: Moved above and reorganized.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 ~~6. Resource. Marinas and launch ramps are permitted subject to policies and regulations of this~~  
2 ~~program.~~
- 3 ~~7. Conservancy. Launch ramps are permitted subject to policies and regulations of this program.~~  
4 ~~Marinas may be permitted as a conditional use.~~
- 5 ~~8. Natural. Marinas or launch ramps are prohibited; except that primitive ramps to facilitate hand~~  
6 ~~launching of small craft are permitted if materials and design are compatible with the site.~~
- 7 ~~9. Aquatic.~~  
8 ~~a. Marinas and launch ramps are permitted subject to the use and development regulations of~~  
9 ~~the abutting upland shoreline area designation.~~
- 10 **23.100.060-23.40.070 Commercial Uses.**
- 11 Commercial development in shoreline areas shall be subject to the policies and regulations of this  
12 section and Chapter 23.90 WCC.
- 13 ~~A. Policies.~~
- 14 ~~A. In securing shoreline locations for commercial use, preference should be given first to water~~  
15 ~~dependent commercial uses, then to water related and water enjoyment commercial uses.~~
- 16 ~~B. Restoration of impaired shoreline ecological functions and processes should be encouraged as part~~  
17 ~~of commercial development.~~
- 18 ~~C. Commercial development should ensure visual compatibility with adjacent noncommercial~~  
19 ~~properties.~~
- 20 ~~D. Commercial uses located in the shoreline should provide public access in accordance with~~  
21 ~~constitutional or other legal limitations unless such improvements are demonstrated to be~~  
22 ~~infeasible or present hazards to life and property.~~
- 23 ~~B. Regulations.~~
- 24 ~~—General.~~
- 25 A. Allowed Use. Commercial uses that result in no net loss of shoreline ecological functions and  
26 processes are allowed subject to the policies and regulations of WCC 23.90.030 and the specific  
27 criteria below: Prior to approval of an application, the Director shall review a proposal for design,  
28 layout, and operation of the use and determine whether the proposed use is water-dependent,  
29 water-related, water-enjoyment, or a non-water-oriented commercial use.
- 30 1. Water-dependent commercial uses shall be given first preference over non-water dependent  
31 water-related and water enjoyment commercial uses. Prior to approval of water dependent  
32 uses, the administrator shall review a proposal for design, layout and operation of the use and  
33 shall make specific findings that the use qualifies as a water dependent use.
- 34 2. Water-related commercial uses may shall not be approved if they displace existing water-  
35 dependent uses. Prior to approval of a water related commercial use, the administrator shall  
36 review a proposal for design, layout and operation of the use and shall make specific findings  
37 that the use qualifies as a water related use.
- 38 3. Water-enjoyment commercial uses may shall be not be approved if they displace existing water-  
39 dependent or water-related uses or if they occupy space designated for water-dependent or

Comment [CES158]: Amended to be consistent w/ WAC 173-26-241(3)(d)

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 water-related use identified in a substantial development permit or other approval. ~~Prior to~~  
2 ~~approval of water enjoyment uses, the administrator shall review a proposal for design, layout~~  
3 ~~and operation of the use and shall make specific findings that the use qualifies as a water-~~  
4 ~~enjoyment use.~~

- 5 4. ~~Non-water oriented commercial uses may be permitted as a conditional use where located on a~~  
6 ~~site physically separated from the shoreline by another property in separate ownership or a~~  
7 ~~public right of way such that access for water-oriented use is precluded; provided, that such~~  
8 ~~conditions were lawfully established prior to the effective date of this program. All other non-~~  
9 ~~water-oriented commercial uses are prohibited in the shoreline unless the use provides~~  
10 ~~significant public benefit with respect to the objectives of the Act and is the proposed use:~~

- 11 a. ~~Is part of a mixed use project that includes a water-oriented use; or~~  
12 ~~b. Is on a site where navigability is severely limited; or,~~  
13 ~~c. Does not occupy space designated for water-dependent or water-related use identified in a~~  
14 ~~project permit approval; or,~~

15 ~~b.d. In areas designated for commercial use and the site is physically separated from the~~  
16 ~~shoreline by another property or public right of way.~~

- 17 5. ~~When permitted, non-w~~Water-oriented commercial uses shall provide public access in  
18 accordance with the provisions of WCC 23.30.060 (Public Access).

- 19 5-6. ~~Non-water oriented commercial uses shall provide public access and/or restoration as follows:~~

- 20 a. ~~Non-water oriented commercial uses shall provide p~~Public access shall be in the form of  
21 unrestricted open space. The administrator shall determine the amount of access in  
22 accordance with the provisions of WCC 23.90.080 on a case-by-case basis.
- 23 b. If no water-oriented commercial uses are located on or adjacent to the water as part of a  
24 mixed use development, 80% of the shoreline and associated buffers shall be preserved or  
25 restored to provide shoreline ecological functions that approximate the functions provided  
26 by the site in natural conditions.
- 27 c. The requirements ~~in subsections (B)(1)(e)(i) and (ii) of this section may be modified when:~~  
28 i. The site is designated as a public access area by a shoreline public access plan, in which  
29 case public access consistent with that plan element shall be provided; or  
30 ii. Specific findings are made demonstrating that the size of the parcel and the presence of  
31 adjacent uses preclude restoration of shoreline ecological functions. Where on-site  
32 restoration is infeasible, equivalent off-site restoration shall be provided ~~consistent with~~  
33 ~~the policies and regulations of this program.~~
- 34 d. Where restoration is proposed, buffers shall be designed as appropriate to protect shoreline  
35 resources based on a site-specific restoration plan assessment and may differ from the  
36 standard critical area buffer dimensions provided in Chapter 16.16 WCC; provided, that the  
37 building envelope for the proposed non-water-oriented use shall be based on current site  
38 conditions.

Comment [AP159]: Language revised for greater clarity and consistency with the use table.

Comment [CES160]: Added to be consistent w/ WAC 173-26-241(3)(d)

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 | i. ~~The requirements of this subsection (B)(1)(e) shall not apply to those non-water-oriented~~  
2 | ~~commercial uses located on a site physically separated from the shoreline where access to the~~  
3 | ~~land/water interface is precluded.~~
- 4 | ~~6.7.~~ If water-oriented commercial uses are located on or adjacent to the water, the remaining  
5 | undeveloped water frontage that is not devoted to water-dependent use shall be preserved in a  
6 | substantially undeveloped condition until such time that an appropriate water-dependent use  
7 | has been identified for the area. If the site has been previously altered by past development, the  
8 | balance of the site may be reserved for future water-related use.
- 9 | B. Site Design and Operation.
- 10 | 1. Commercial recreation-oriented uses, including commercial resorts and ~~rental~~ campgrounds,  
11 | shall provide adequate access to water areas for their patrons or shall provide adequate on-site  
12 | outdoor recreation facilities so that such resorts or campgrounds will neither be dependent on  
13 | nor place undue burdens upon public access and recreational facilities.
- 14 | 2. ~~New and expanded~~ Commercial development shall install or establish access roads of sufficient  
15 | capacity and with appropriate improvements to provide vehicular and pedestrian access to the  
16 | site. Utilities shall be adequate to serve the demands of the proposed uses.
- 17 | 3. Over-Water Structures.
- 18 | a. Only those portions of water-dependent commercial uses that require over-water facilities  
19 | such as boat fuel stations shall be permitted to locate waterward of the OHWM, provided  
20 | they are located on floats, piling, or other open-work structures.
- 21 | b. Non-water-dependent commercial uses shall not be allowed over water except in limited  
22 | instances where they are appurtenant to existing structures and necessary in support of  
23 | water-dependent uses.
- 24 | 4. Marine rails shall be located the minimum distance necessary above existing grade to minimize  
25 | impact on littoral drift and navigation along the shoreline.
- 26 | ~~4. Building Height.~~
- 27 | a. ~~As mandated by the Act (RCW 90.58.320), no permit may be issued for any new or~~  
28 | ~~expanded building or structure of more than 35 feet above average grade level on~~  
29 | ~~shorelines that will obstruct the view of a substantial number of residences on areas~~  
30 | ~~adjoining such shorelines, except where this program does not prohibit such development~~  
31 | ~~and only when overriding considerations of the public interest will be served.~~
- 32 | b. ~~Lodging developments over 35 feet in height may be allowed in resort communities within~~  
33 | ~~the Urban Resort shoreline area designation, subject to the requirements of~~  
34 | ~~WCC 23.90.130(5). However, due to the potential for adverse impact upon adjacent uses~~  
35 | ~~and the community from such development, special consideration must be given to the~~  
36 | ~~following factors during review of such proposals:~~
- 37 | i. ~~Urban services, including sanitary sewers, public water supply, fire protection, storm~~  
38 | ~~drainage, and police protection, must be provided at adequate levels to protect the~~  
39 | ~~public health, safety, and welfare.~~

Comment [PDS161]: Already covered by 23.40.020(E)(1).

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1           ii. ~~Circulation, parking areas, and outdoor storage or loading areas should be adequate in~~  
2           ~~size and designed so that the public safety and local aesthetic values are not diminished.~~  
3           ~~Such areas should be screened from open space areas by landscaping, fences or similar~~  
4           ~~structures, or grade separation.~~  
5           iii. ~~Recreational needs of building clientele must be provided for through several on-site~~  
6           ~~recreation facilities and access to shorelines. The variety and number of on-site~~  
7           ~~recreation facilities should increase proportionately as density increases.~~

Comment [PDS162]: Moved to 23.40.020(E)(1).

8 ~~C. Tabular Regulations – Setbacks, Height and Open Space for Commercial Development. Minimum~~  
9           ~~required setbacks from shorelines and side property lines, maximum height limits and open space~~  
10           ~~requirements are contained in WCC 23.90.130, Shoreline bulk provisions – Buffers, setbacks, height,~~  
11           ~~open space and impervious surface coverage.~~

### 12 C. Regulations for Specific Shoreline Environment Designations.

- 13           1. In the Conservancy and Urban Conservancy shoreline environments, only low intensity  
14           commercial use and development—either water-oriented or non-water-oriented, and limited to  
15           resort, campground, and similar facilities—may be permitted as a shoreline conditional use.  
16           Non-water-oriented uses are subject to the criteria for such uses of this section.  
17           2. In the Urban Resort shoreline environment, water-oriented resort-oriented commercial use and  
18           developments are permitted. Non-water-oriented commercial uses and developments may be  
19           permitted as a shoreline conditional use subject to the criteria for such uses in this section.  
20           Commercial uses in this shoreline environment are permitted either by themselves or as part of  
21           a structure or development also containing residential uses.  
22           3. In the Resource shoreline environment, water-oriented commercial use and development  
23           related to natural resource products predominantly produced on site is permitted. Non-water-  
24           oriented commercial related to natural resource products predominantly produced on site may  
25           be permitted as a shoreline conditional use subject to the criteria for such uses in this section.

### 26 ~~1. Shoreline Area Regulations:~~

27 ~~Urban. Water-oriented commercial use and development is permitted subject to policies and~~  
28 ~~regulations of this program. Non-water-oriented commercial may be permitted as a conditional use~~  
29 ~~subject to the criteria for such uses in subsection (B)(1)(d) of this section.~~

Comment [CES163]: Addressed in use table now.

30 ~~Urban Resort. Water-oriented resort-oriented commercial use and development is permitted subject to~~  
31 ~~policies and regulations of this program. Non-water-oriented commercial may be permitted as a~~  
32 ~~conditional use subject to the criteria for such uses in subsection (B)(1)(d) of this section. Commercial~~  
33 ~~uses allowed in this designation are permitted either by themselves or as part of a structure or~~  
34 ~~development also containing residential uses, subject to policies and regulations of this program.~~

35 ~~Urban Conservancy. Low intensity water-oriented commercial use and development limited to resort,~~  
36 ~~bed and breakfast, campgrounds and similar facilities may be permitted as a conditional use. Low~~  
37 ~~intensity non-water-oriented commercial limited to resort, bed and breakfast, campgrounds and similar~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 facilities may be permitted as a conditional use subject to the criteria for such uses in subsection  
2 ~~(B)(1)(d) of this section.~~
- 3 ~~Shoreline Residential. Water-oriented commercial use and development is permitted subject to policies~~  
4 ~~and regulations of this program. Non-water-oriented commercial may be permitted as a conditional use~~  
5 ~~subject to the criteria for such uses in subsection (B)(1)(d) of this section.~~
- 6 ~~Rural. Water-oriented commercial use and development is permitted subject to policies and regulations~~  
7 ~~of this program. Non-water-oriented commercial may be permitted as a conditional use subject to the~~  
8 ~~criteria for such uses in subsection (B)(1)(d) of this section.~~
- 9 ~~Resource. Water-oriented commercial use and development related to natural resource products~~  
10 ~~predominantly produced on site is permitted subject to policies and regulations of this program. Non-~~  
11 ~~water-oriented commercial related to natural resource products predominantly produced on site may~~  
12 ~~be permitted as a conditional use subject to the criteria for such uses in subsection (B)(1)(d) of this~~  
13 ~~section.~~
- 14 ~~Conservancy. Low intensity water-oriented commercial use and development limited to resort, bed and~~  
15 ~~breakfast, campgrounds and similar facilities may be permitted as a conditional use. Low intensity non-~~  
16 ~~water-oriented commercial limited to resort, bed and breakfast, campgrounds and similar facilities may~~  
17 ~~be permitted as a conditional use subject to the criteria for such uses in subsection (B)(1)(d) of this~~  
18 ~~section.~~
- 19 ~~Natural. Commercial use and development is prohibited.~~
- 20 ~~— Aquatic. Commercial use and development is prohibited, except that water dependent uses and~~  
21 ~~appurtenant structures may be permitted subject to the use and development regulations of the~~  
22 ~~abutting upland shoreline area designation.~~
- 23 **23.4100.070-080 Dredging and Dredge Material Disposal.**
- 24 ~~A. Policies.~~
- 25 ~~1. Dredging should be permitted for water dependent uses of economic importance to the region~~  
26 ~~and/or essential public facilities only when necessary and when alternatives are infeasible or~~  
27 ~~less consistent with this program.~~
- 28 ~~2. Dredging to provide water oriented recreation should not be permitted.~~
- 29 ~~3. Minor dredging as part of ecological restoration or enhancement, beach nourishment, public~~  
30 ~~access or public recreation should be permitted if consistent with this program.~~
- 31 ~~4. New development should be sited and designed to avoid or, where avoidance is not possible, to~~  
32 ~~minimize the need for new maintenance dredging.~~
- 33 ~~5. Dredging of bottom materials for the primary purpose of obtaining material for landfill,~~  
34 ~~construction, or beach nourishment should not be permitted.~~
- 35 ~~6. Spoil disposal on land away from the shoreline is generally preferred over open water disposal.~~

**Comment [AP164]:** This section has been moved from the General Regulations section (previously WCC 23.90.120). Added to title for clarity of section contents and consistency with WAC 173-26-231.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 7. Long-term cooperative management programs that rely primarily on natural processes, and  
2 involve land owners and applicable local, state and federal agencies and tribes, should be  
3 pursued to prevent or minimize conditions which make dredging necessary.

### 4 ~~B.~~ Regulations.

#### 5 A. General.

6 ~~8.1.~~ Dredging shall only be permitted for the following activities:

7 a. Development of approved ~~wet moorages, harbors, ports and~~ water-dependent uses of  
8 economic importance to the region and/or essential public facilities industries of economic  
9 importance to the region only when there are no feasible alternatives.

10 ~~b.~~ Development of essential public facilities when there are no feasible alternatives.

11 ~~e.b.~~ Maintenance dredging for the purpose of restoring a lawfully established development or  
12 the previously permitted or authorized hydraulic capacity of streams.

13 ~~d.c.~~ Maintenance of irrigation reservoirs, drains, canals, or ditches for agricultural purposes.

14 ~~e.d.~~ Establishing, expanding, relocating, or reconfiguring navigation channels where necessary to  
15 assure safe and efficient accommodation of existing navigational uses. Maintenance  
16 dredging of established navigation channels and basins shall be restricted to maintaining  
17 previously dredged and/or existing authorized location, depth, and width.

18 ~~f.e.~~ Removal of gravel for flood management purposes consistent with an adopted flood hazard  
19 reduction plan and only after a biological and geomorphological study demonstrates that  
20 extraction has a long-term benefit to flood hazard reduction, does not result in a net loss of  
21 shoreline ecological functions and processes, and is part of a comprehensive flood  
22 management solution.

23 ~~g.f.~~ Restoration or enhancement of shoreline ecological functions and processes benefiting  
24 water quality and/or fish and wildlife habitat.

25 ~~h.g.~~ Minor in-water trenching to allow the installation of necessary underground pipes or cables  
26 if no alternative, including boring, is feasible, and:

27 i. Impacts to fish and wildlife habitat are avoided to the maximum extent possible.

28 ii. The utility installation shall not increase or decrease the natural rate, extent, or  
29 opportunity of channel migration.

30 iii. Appropriate best management practices are employed to prevent water quality  
31 impacts or other environmental degradation.

32 h. Dredging for the purpose of obtaining ~~landfill~~ material is prohibited, except that:

33 i. ~~4.~~ Limited bar scalping of gravel in streams is permitted subject to policies of the  
34 Whatcom County Comprehensive Plan and regulations for mining under  
35 WCC 23.100.08023.40.140 (Mining), and WCC Title 20 (Zoning).

36 ~~4.~~ii. Dredging to obtain fill for restoration projects is permitted for approved  
37 MTCA/CERCLA projects and may be approved as a shoreline conditional use for other  
38 restoration projects.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 | ~~9.2.~~ The physical alignment and ecological functions and processes of streams, lakes, or marine  
2 | shorelines shall be maintained, except to improve hydraulic function, water quality, fish or  
3 | wildlife habitat, or fish passage.
- 4 | ~~3. Limitations on~~ To protect public safety and compatibility with surrounding uses, dredge or  
5 | disposal operations may be ~~conditioned~~ imposed to reduce proximity impacts, protect the public  
6 | safety and assure compatibility with the interests of other shoreline users. Conditions may  
7 | ~~include~~ limits on periods and hours of operation, and type of machinery, and may require  
8 | provision of landscaped buffers, strips and/or fencing to address noise and visual impacts ~~at land~~  
9 | ~~disposal or transfer sites.~~
- 10 | ~~10.4.~~ Regular maintenance of an approved barge landing site shall not be considered  
11 | dredging.
- 12 | ~~A. B.~~ Additional Standards for Spoil Dredge Material Disposal.
- 13 | 1. Any dredge material disposal shall be used as part of a program to restore or enhance shoreline  
14 | ecological functions and processes, unless found to be infeasible.
- 15 | ~~1-2.~~ Dredge material Spoil disposal on uplands away from the within shoreline jurisdiction is  
16 | permitted only under the following conditions:
- 17 | a. Shoreline ecological functions and processes will be preserved, including protection of  
18 | surface and ground water.
- 19 | b. Erosion, sedimentation, floodwaters, or runoff will not increase adverse impacts to  
20 | shoreline ecological functions and processes or property.
- 21 | c. Sites will be adequately screened from view of local residents or passersby on public rights-  
22 | of-way.
- 23 | 3. Disposal of dredge material on shorelands or wetlands within a river's channel migration zone  
24 | shall be discouraged. In the limited instances where it is allowed for restoration or enhancement  
25 | of shoreline ecological functions and processes, such disposal shall require a shoreline  
26 | conditional use permit.
- 27 | 4. Dredge material Spoil disposal is prohibited on marine shorelines between the line of extreme  
28 | low tide and below the ordinary high water mark, on lake shorelines or beds, and in streams;  
29 | except that:
- 30 | a. ~~d~~ Dredge spoil material may be used in approved projects for the restoration or  
31 | enhancement of shoreline ecological functions and processes, such as beach nourishment.
- 32 | b. Spoil disposal in open waters may be approved only in accordance with the Puget Sound  
33 | Dredged Disposal Analysis (PSDDA) evaluation procedures for managing in-water disposal of  
34 | dredged material; when approved by applicable agencies, which may include the U.S. Army  
35 | Corps of Engineers pursuant to Section 10 (Rivers and Harbors Act) and Section 404 (Clean  
36 | Water Act) permits, and Washington State Department of Fish and Wildlife hydraulic project  
37 | approval (HPA); and when found to meet the following conditions:
- 38 | e. Land disposal is infeasible, less consistent with this program, or prohibited by law.
- 39 | d. Nearshore disposal as part of a program to restore or enhance shoreline ecological functions  
40 | and processes is not feasible.

**Comment [CES165]:** This provision applies to upland areas within shoreline jurisdiction, away from the OHWM. Revised language for greater clarity.

**Comment [DN166]:** This language is pulled directly from WAC 173-26-231. Revised language to clarify that restoration and enhancement is the only instance in which this would be permitted.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 e. ~~Offshore habitat will be protected, restored, or enhanced.~~  
2 f. ~~Adverse effects on water quality or biologic resources from contaminated materials will be~~  
3 ~~mitigated.~~  
4 g. ~~Shifting and dispersal of spoil will be minimal.~~  
5 ~~Water quality will not be adversely affected.~~  
6 h.b. Dredge material disposal at an open water disposal site approved through the auspices of  
7 the Dredged Material Management Program (RCW 79.105.500) is allowed and shall not  
8 require a shoreline permit.
- 9 C. Supplemental Application Requirements.
- 10 B.D. In addition to the minimum application requirements specified in ~~WCC 23.60.050~~ WCC Title 22  
11 (Land Use and Development), applications for dredging and material disposal use or development  
12 shall include all information necessary to conduct a thorough evaluation of the proposed activity,  
13 including but not limited to the following::
- 14 a. A description of the purpose of the proposed dredging and an analysis of compliance with  
15 the policies and regulations of this program and WCC Title 20 (Zoning).
- 16 b. A detailed description of the existing physical character, shoreline geomorphology, and  
17 biological resources provided by the area proposed to be dredged, including:
- 18 i. A site plan map outlining the perimeter of the proposed dredge area. The map must also  
19 include the existing bathymetry depths based on mean lower low water (MLLW) and  
20 have data points at a minimum of two-foot depth increments.
- 21 ii. A habitat survey must be conducted and WDFW must be contacted to ensure the survey  
22 is conducted according to the most recent WDFW eelgrass/macroalgae survey  
23 guidelines.
- 24 iii. Information on stability of bedlands adjacent to proposed dredging and spoils disposal  
25 areas.
- 26 c. A detailed description of the physical, chemical and biological characteristics of the dredge  
27 spoils to be removed.
- 28 i. Physical analysis of material to be dredged: material composition and amount, grain  
29 size, organic materials present, source of material, etc.
- 30 ii. Chemical analysis of material to be dredged: volatile solids, chemical oxygen demand  
31 (COD), grease and oil content, mercury, lead and zinc content, etc.
- 32 iii. Biological analysis of material to be dredged.
- 33 d. A description of the method of materials removal, including facilities for settlement and  
34 movement.
- 35 i. Dredging procedure: length of time it will take to complete dredging, method of  
36 dredging and amount of materials removed.
- 37 ii. Frequency and quantity of project maintenance dredging.
- 38 e. Detailed plans for dredge spoil disposal, including specific land disposal sites and relevant  
39 information on the disposal site, including but not limited to:
- 40 i. Spoils disposal area:

Comment [CES167]: Don't need this, since it doesn't need a shoreline permit

Comment [AP168]: Added per Periodic Review Checklist, Item 2019.b, and Scoping Document Item #2i.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 (A) Physical characteristics including location, topography, existing drainage patterns,  
2 surface and ground water;
- 3 (B) Size and capacity of disposal site;
- 4 (C) Means of transportation to the disposal site;
- 5 (D) Proposed dewatering and stabilization of spoils;
- 6 (E) Methods of controlling erosion and sedimentation; and
- 7 (F) Future use of the site and conformance with land use policies and regulations.
- 8 ii. Total initial spoils volume.
- 9 iii. Plan for disposal of maintenance spoils for at least a 50-year period.
- 10 f. Hydraulic modeling studies sufficient to identify existing geohydraulic patterns and probable  
11 effects of dredging.

### E. Regulations for Specific Shoreline Environment Designations.

- 13 ~~2.1. In the Natural shoreline area environment, dredging is prohibited except that dredging is~~  
14 ~~permitted as an essential element of an approved shore restoration or enhancement plan,~~  
15 ~~subject to policies and regulations of this program.~~
- 16 ~~2. In the Aquatic shoreline area environment;~~
  - 17 ~~a. Dredging may be permitted as a shoreline conditional use subject to the use and~~  
18 ~~development regulations of the abutting upland shoreline area environment designation;~~
  - 19 ~~b. Dredging for a mutually designated reach of river with a provided, that the conditional use~~  
20 ~~permit requirement may be waived upon county County and Ecology approval of a~~  
21 ~~sediment management plan component for a mutually designated reach of river is permitted~~  
22 ~~subject to the use and development regulations of the abutting upland shoreline~~  
23 ~~area environment designation.~~
  - 24 ~~c. Maintenance dredging pursuant to WAC 173-27-140 is permitted subject to the policies of~~  
25 ~~and regulations of this program without a conditional use permit, provided the original~~  
26 ~~constructed bottom contours have been established and documented in a prior shoreline~~  
27 ~~permit or authorization.~~

Comment [AP169]: Carried over from removed 'Shoreline Area Regulations.'

### C. Shoreline Area Regulations.

- 29 ~~A. Urban. Dredging may be permitted as a conditional use subject to policies and regulations of this~~  
30 ~~program.~~
- 31 ~~B. Urban Resort. Dredging may be permitted as a conditional use subject to policies and~~  
32 ~~regulations of this program.~~
- 33 ~~C. Urban Conservancy. Dredging may be permitted as a conditional use subject to policies and~~  
34 ~~regulations of this program.~~
- 35 ~~D. Shoreline Residential. Dredging may be permitted as a conditional use subject to policies and~~  
36 ~~regulations of this program.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 E. ~~Rural. Dredging may be permitted as a conditional use subject to policies and regulations of this~~  
2 ~~program.~~
- 3 F. ~~Resource. Dredging may be permitted as a conditional use subject to policies and regulations of~~  
4 ~~this program.~~
- 5 G. ~~Conservancy. Dredging may be permitted as a conditional use subject to policies and regulations~~  
6 ~~of this program.~~
- 7 H. ~~Natural. Dredging is prohibited except that dredging is permitted as an essential element of an~~  
8 ~~approved shore restoration or enhancement plan, subject to policies and regulations of this~~  
9 ~~program.~~
- 10 I. ~~Aquatic. Dredging may be permitted as a conditional use subject to the use and development~~  
11 ~~regulations of the abutting upland shoreline area designation; provided, that the conditional use~~  
12 ~~permit requirement may be waived upon county and Ecology approval of a sediment~~  
13 ~~management plan component for a mutually designated reach of river. Maintenance dredging~~  
14 ~~pursuant to WCC 23.60.022(B) is permitted subject to the policies and regulations of this~~  
15 ~~program without a conditional use permit, provided the original constructed bottom contours~~  
16 ~~have been established and documented in a prior shoreline permit or authorization.~~

### ~~23.100.110~~ **23.40.090 Landfill and Excavation.**

- 17 **23.40.090 Landfill and Excavation.**
- 18 A. ~~Policies.~~
- 19 A. ~~Landfill and excavation should only be permitted to the minimum extent necessary to~~  
20 ~~accommodate an approved shoreline use or development and with assurance of no net loss of~~  
21 ~~shoreline ecological functions and processes. Enhancement and voluntary restoration of~~  
22 ~~landforms and habitat are encouraged.~~
- 23 B. ~~Landfill in water bodies, floodways, and/or wetlands should not be permitted for creation of~~  
24 ~~new uplands, unless it is part of an approved ecological restoration activity. Landfill should be~~  
25 ~~permitted in limited instances to restore uplands where recent erosion has rapidly reduced~~  
26 ~~upland area, to build beaches and protective berms for shore stabilization or recreation, to~~  
27 ~~restore or enhance degraded shoreline ecological functions and processes, or to moderately~~  
28 ~~elevate low uplands to make such uplands more suitable for purposes consistent with this~~  
29 ~~program.~~
- 30 C. ~~Fill should not be allowed where shore stabilization works would be required to maintain the~~  
31 ~~materials placed.~~
- 32 D. ~~Landfills and excavation should be located and developed so that water quality, hydrologic and~~  
33 ~~runoff patterns are not altered.~~
- 34 E. ~~The predicted economic benefits of landfills and excavation should be weighed against long-~~  
35 ~~term cumulative impacts on ecological processes and functions.~~

36 A. ~~Regulations.~~

**Comment [CES170]:** Addressed by use table now.

**Comment [AP171]:** This section is re-located from the General Regulations section (previously WCC 23.90.100) and revised to distinguish between fill and dredge material disposal, dredging, excavation, or mining.

# Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 A. General.
- 2 1. ~~Landfill~~ and excavation shall be avoided to the extent feasible, and shall be minimized to the
- 3 ~~maximum extent practicable and~~ allowed only along with approved shoreline use and
- 4 development activities that are consistent with this program. Where necessary, fill in shoreline
- 5 jurisdiction shall be located, designed, and constructed to protect shoreline ecological functions
- 6 and ecosystem-wide processes, including channel migration.
- 7 ~~1.2. Excavation waterward of the OHWM or within wetlands shall be considered dredging or gravel~~
- 8 ~~bar scalping mining~~ for purposes of this program.
- 9 3. Fill materials shall only be clean sand, gravel, soil, rock, or similar material. Use of polluted
- 10 dredge spoils or other solid or dangerous wastes is prohibited.
- 11 ~~2.4. Landfill and excavation within wetlands or waterward of the ordinary high water mark shall~~
- 12 only be permitted through a shoreline conditional use permit in limited instances for the
- 13 following purposes ~~only~~, with due consideration given to specific site conditions, and only along
- 14 with approved shoreline use and development activities ~~that are consistent with this program:~~
- 15 a. ~~Port development for~~ Water-dependent uses where other upland alternatives or structural
- 16 solutions, including pile or pier supports, are infeasible.
- 17 b. Expansion or alteration of transportation facilities of statewide significance currently located
- 18 on the shoreline where alternatives to fill are infeasible.
- 19 c. Ecological restoration, mitigation, or enhancement such as beach nourishment, habitat
- 20 creation, or bank restoration when consistent with an approved restoration plan.
- 21 d. Cleanup and disposal of contaminated sediments as part of an interagency environmental
- 22 clean-up plan.
- 23 e. Public access.
- 24 d. ~~Maintenance of lawfully established development.~~
- 25 e. ~~Development of shore stabilization projects, flood control, and instream structures.~~
- 26 f. ~~Except for landfill for county approved ecological restoration, fill and excavation waterward~~
- 27 ~~of the OHWM or in a wetland may only be authorized as a conditional use.~~
- 28 5. Fill shall not be used to create land to serve residential development.
- 29 ~~3.6. Landfills~~ or excavation shall not be located where shore stabilization will be necessary to
- 30 protect materials placed or removed. Disturbed areas shall be immediately stabilized and
- 31 revegetated, as applicable.
- 32 ~~4. On marine shores, fill may be permitted in the foreshore where located at drift sector ends in~~
- 33 ~~low energy driftways, or on erosional pocket beaches for restoration and enhancement~~
- 34 ~~programs where the effect of the landfill's interruption of the littoral process can be mitigated.~~
- 35 ~~5.7. Landfills~~, beach nourishment, and excavation shall be designed to blend physically and visually
- 36 with existing topography whenever possible, so as not to interfere with long-term appropriate
- 37 use including lawful access and enjoyment of scenery.
- 38 6. ~~Perimeter banks shall generally be sloped no steeper than one foot vertical for every three feet~~
- 39 ~~horizontal unless a specific engineering analysis has been provided, and the administrator~~
- 40 ~~determines that the landfill blends physically and visually with existing topography.~~

Comment [CES172]: Added pursuant to WAC 173-26-231(3)(c)

Comment [CES173]: By definition, excavation in water is considered dredging and is covered in that section.

Comment [CES174]: Updated to comply with WAC 173-26-231(3)(c)

Comment [CES175]: Amended to be consistent w/ WAC 173-26-231(3)(c)

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 7-8. Fill shall be designed to avoid water quality impacts in accordance with local, state and federal  
2 regulations. A temporary erosion and sediment control (TESC) plan shall be ~~provided~~ required  
3 for all proposed ~~landfill~~ and excavation activities.

### 4 ~~23.4010.090~~ **23.4010.100 Flood Hazard Reduction Control Works and Instream Structures.**

5 ~~c.~~ Flood control works and instream structures in shoreline areas shall be subject to the policies and  
6 regulations of this section and Chapter 23.90 WCC.

#### 7 ~~A.~~ Policies.

##### 8 ~~A.~~ Purpose and Need.

9 b. ~~New or expanding development or uses in the shoreline, including subdivision of land, that~~  
10 ~~would likely require structural flood control works within a stream, channel migration zone, or~~  
11 ~~floodway should not be allowed.~~

12 c. ~~Flood control works and instream structures should be planned and designed to be compatible~~  
13 ~~with appropriate multiple uses of stream resources over the long term, especially in shorelines~~  
14 ~~of statewide significance.~~

15 d. ~~Flood control works should only be allowed in the shoreline if they are necessary to protect~~  
16 ~~existing development and where nonstructural flood hazard reduction measures are infeasible.~~

17 e. ~~Flood control works to protect existing development should be permitted only when the~~  
18 ~~primary use being protected is consistent with this program, and the works can be developed in~~  
19 ~~a manner that is compatible with multiple use of streams and associated resources for the long~~  
20 ~~term, including shoreline ecological functions, fish and wildlife management, and recreation.~~

##### 21 ~~A.~~ Design Considerations.

22 f. ~~Flood control works should incorporate native vegetation to enhance ecological functions,~~  
23 ~~create a more natural appearance, improve ecological processes, and provide more flexibility for~~  
24 ~~long term shoreline management. Such features include vegetated berms; vegetative~~  
25 ~~stabilization including brush matting and buffer strips; and retention of existing trees, shrubs~~  
26 ~~and grasses on stream banks.~~

27 g. ~~Flood control works and instream structures should be located, designed, constructed and~~  
28 ~~maintained so their resultant effects on geohydraulic shoreline processes will not cause~~  
29 ~~significant damage to other properties or valuable shoreline resources, and so that the physical~~  
30 ~~integrity of the shoreline process corridor is maintained.~~

31 h. ~~To minimize flood damages and to maintain natural resources associated with streams, overflow~~  
32 ~~corridors and other alternatives to traditional bank levees, revetments and/or dams should be~~  
33 ~~considered. Setback levees and similar measures should be employed where they will result in~~  
34 ~~lower flood peaks and velocities, and more effective conservation of resources than with high~~  
35 ~~bank levees.~~

36 i. ~~Recognizing the large number of physical variables to be considered in properly locating and~~  
37 ~~designing flood control works and instream structures, such as dams and weirs, and the high~~  
38 ~~probability that poorly located and inadequately designed works will fail and/or adversely affect~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 properties and shore features, such works should be sited and designed consistent with  
2 appropriate engineering principles and WCC Title 17.
- 3 j. ~~Nonstructural and nonregulatory methods to protect, enhance, and restore shoreline ecological  
4 functions and processes and other shoreline resources should be encouraged as an alternative  
5 to structural flood control works and instream structures. Nonregulatory and nonstructural  
6 methods may include public facility and resource planning, land or easement acquisition,  
7 education, voluntary protection and enhancement projects, or incentive programs.~~
- 8 k. ~~Design of flood control works should incorporate continued long-term multiple use of shoreline  
9 resources by all appropriate user groups.~~
- 10 ~~l.a. Design of flood control works should provide access to public shorelines whenever possible,  
11 unless it is demonstrated that public access would cause unavoidable public health and safety  
12 hazards, security problems, unmitigatable ecological impacts, unavoidable conflicts with  
13 proposed uses, or unreasonable cost. At a minimum, flood control works should not decrease  
14 public access or use potential of shorelines.~~
- 15 A. ~~Coordination.~~
- 16 m. ~~In cooperation with other applicable agencies and persons, the county should continue to  
17 develop long-term, comprehensive flood hazard management plans, such as the Lower  
18 Nooksack River Comprehensive Flood Hazard Management Plan, to prevent needless flood  
19 damage, maintain the natural hydraulic capacity of floodways, and conserve valuable, limited  
20 resources such as fish, water, soil, and recreation and scenic areas.~~
- 21 n. ~~Planning and design of flood control works and instream structures should be consistent with  
22 and incorporate elements from applicable watershed management plans, restoration plans  
23 and/or surface water management plans.~~
- 24A. ~~Regulations.~~
- 25 A. ~~Purpose and Need-General.~~
- 26 1. Applicability. This section applies to actions taken to reduce flood damage or hazard and to  
27 uses, development, and shoreline modifications that may increase flood hazards. Flood hazard  
28 reduction measures may consist of nonstructural measures, such as setbacks, land use controls,  
29 wetland restoration, dike removal, use relocation, biotechnical measures, and stormwater  
30 management programs, and of structural measures, such as dikes, levees, revetments,  
31 floodwalls, channel realignment, and elevation of structures consistent with the National Flood  
32 Insurance Program. Additional relevant critical area provisions are in WAC 173-26-221(2).
- 33 2. Development in floodplains should not significantly or cumulatively increase flood hazard or be  
34 inconsistent with a comprehensive flood hazard management plan adopted pursuant to chapter  
35 86.12 RCW, provided the plan has been adopted after 1994 and approved by the Department of  
36 Ecology.
- 37 3. New development or new uses in shoreline jurisdiction should not be established when it would  
38 be reasonably foreseeable that the development or use would require structural flood hazard  
39 reduction measures within the channel migration zone or floodway.

Comment [CES176]: Language from WAC 173-26-221(3)(a).

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1     4. The following uses and activities may be appropriate and/or necessary within the channel  
2     migration zone or floodway:  
3     a. Actions that protect or restore the ecosystem-wide processes or ecological functions.  
4     b. Forest practices in compliance with the Washington State Forest Practices Act and its  
5     implementing rules.  
6     c. Existing and ongoing agricultural practices, provided that no new restrictions to channel  
7     movement occur.  
8     d. Mining when conducted in a manner consistent with the environment designation and with  
9     the provisions of Chapter 23.40.140 (Mining).  
10    e. Bridges, utility lines, flood Hazard Reduction works, and other public utility and  
11    transportation structures where no other feasible alternative exists or the alternative would  
12    result in unreasonable and disproportionate cost. Where such structures are allowed,  
13    mitigation shall address impacted functions and processes in the affected section of  
14    watershed or drift cell.  
15    f. Repair and maintenance of an existing legal use, provided that such actions do not cause  
16    significant ecological impacts or increase flood hazards to other uses.  
17    g. Development with a primary purpose of protecting or restoring ecological functions and  
18    ecosystem-wide processes.  
19    h. Modifications or additions to an existing nonagricultural legal use, provided that channel  
20    migration is not further limited and that the new development includes appropriate  
21    protection of ecological functions.  
22    i. Measures to reduce shoreline erosion, provided that it is demonstrated that the erosion  
23    rate exceeds that which would normally occur in a natural condition, that the measure does  
24    not interfere with fluvial hydrological and geomorphological processes normally acting in  
25    natural conditions, and that the measure includes appropriate mitigation of impacts to  
26    ecological functions associated with the river or stream.  
27    4-5. Structural flood hazard reduction ~~control~~ works shall be permitted only when it is demonstrated  
28    by engineering and scientific evaluations that:  
29    a. They are necessary to protect health/safety and/or existing development;  
30    b. Nonstructural flood hazard reduction measures are infeasible; and  
31    c. Measures are consistent with an adopted comprehensive flood hazard management plan  
32    that evaluates cumulative impacts to the watershed system, ~~or otherwise approved by~~  
33    ~~Whatcom County Public Works' River and Flood Division.~~  
34    2-6. Place new structural flood hazard reduction measures landward of the associated wetlands, and  
35    designated vegetation conservation areas, except for actions that increase ecological functions,  
36    such as wetland restoration, or as noted below. Provided that such flood hazard reduction  
37    projects be authorized if it is determined that no other alternative to reduce flood hazard to  
38    existing development is feasible. The need for, and analysis of feasible alternatives to, structural  
39    improvements shall be documented through an ~~geotechnical~~ analysis performed by a qualified  
40    professional.

Comment [CES177]: Updated text from WAC 173-26-221((3)(c))

Comment [DOE-Req178]: Required Change – There is nothing within the SMP Flood Hazard Reduction Guidelines (WAC 173-26 221(3)) that allow a local government entity to override when new structural flood hazard reduction measures should be allowed within shoreline jurisdiction.

Comment [RCE179]: Updated text from WAC 173-26-221((3)(c))

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 | ~~3-7.~~ New flood hazard reduction control works are prohibited on estuarine shores, on point and  
2 | channel bars, and in salmon and trout spawning areas, except for the purpose of fish or wildlife  
3 | habitat enhancement or restoration.
- 4 | ~~4-8.~~ Revetments shall only be permitted for public projects, and shall not be placed waterward of  
5 | the OHWM, except for weirs and current deflectors where necessary to protect bridges and  
6 | roads.
- 7 | ~~5-~~ Revetments and levees shall be designed consistent with appropriate engineering standards and  
8 | WCC Title 17. Height shall be limited to the minimum required to protect the adjacent lands  
9 | from the designed flood and demonstrated through hydraulic modeling that the height will not  
10 | adversely impact shoreline ecological functions and processes.
- 11 | 9. Weirs and current deflectors are permitted only when necessary to protect public bridges,  
12 | roads, and levees.
- 13 | ~~6-10.~~ Channelization projects that damage fish and wildlife resources, degrade recreation and  
14 | aesthetic resources, or result in high flood stages and velocities shall not be permitted when  
15 | feasible alternatives are available.
- 16 | ~~7-11.~~ Flood hazard reduction control works and instream structures shall be constructed and  
17 | maintained in a manner that does not degrade the quality of affected waters. The County may  
18 | require reasonable conditions such as setbacks, buffers, or storage basins to achieve this  
19 | objective.
- 20 | ~~8-12.~~ Flood hazard reduction works should shall provide access to public shorelines whenever  
21 | possible, unless it is demonstrated that public access would cause unavoidable public health and  
22 | safety hazards, security problems, unmitigatable ecological impacts, unavoidable conflicts with  
23 | proposed uses, or unreasonable cost. At a minimum, flood hazard reduction works should not  
24 | decrease public access or use potential of shorelines.
- 25 | B. Site Design and Operation.
- 26 | 1. The County shall require professionally engineered design of any proposed flood hazard  
27 | reduction control works or instream structure.
- 28 | 2. The design of all dams and the suitability of the proposed site for dam construction shall be  
29 | certified by a professional engineer licensed in the state of Washington. The professional design  
30 | shall include a maintenance schedule.
- 31 | 3. For all dams that are not regulated by either the Federal Energy Regulatory Commission  
32 | licensing procedures, or the State Department of Ecology reservoir permit requirements, a  
33 | maintenance agreement and construction bond for 150% of the cost of the structure shall be  
34 | filed with the director of the Public Works Department prior to construction. The maintenance  
35 | agreement shall specify who is responsible for maintenance, shall incorporate the maintenance  
36 | schedule specified by the design engineer, shall require annual inspections by a civil engineer  
37 | licensed in the state of Washington and shall stipulate abandonment procedures which shall  
38 | include, where appropriate, provisions for site restoration.
- 39 | 4. Natural instream features such as snags, uprooted trees, or stumps should be left in place unless  
40 | it can be demonstrated that they are actually causing bank erosion or higher flood stages.

**Comment [DOE-Req180]:** Required Change – The consideration for public access associated with new flood hazard reduction measures is a requirement of the SMP Guidelines at WAC 173-26-221(3)(c)(iv).

**Comment [CES181]:** Moved from above.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 | 5. Flood ~~hazard reduction control~~ works and instream structures shall allow for normal  
2 | groundwater movement and surface runoff.
- 3 | ~~6.~~ Flood ~~hazard reduction control~~ works and instream structures shall preserve valuable recreation  
4 | resources and aesthetic values such as point and channel bars, islands, and braided banks.
- 5 | ~~6,7.~~ ~~New s~~ Structural flood ~~hazard reduction control~~ works shall be placed landward of associated  
6 | wetlands, and designated habitat conservation areas, except for works that improve ecological  
7 | functions, such as wetland restoration.
- 8 | ~~7,8.~~ Where flood ~~hazard reduction control~~ works are necessary, they shall be set back at convex  
9 | (inside) bends to allow streams to maintain point bars and associated aquatic habitat through  
10 | normal accretion. Levees that have already cut off point bars should be relocated where feasible  
11 | to lower flood stages and current velocities.
- 12 | ~~8,9.~~ Where levees are necessary to protect floodway fringe areas, they shall be located and designed  
13 | to protect shoreline ecological functions and processes. Such works should be located near the  
14 | tangent to outside meander bends so that the stream can maintain normal meander  
15 | progression and ~~utilize~~ use most of its natural flood water storage capacity.
- 16 | ~~9,10.~~ No motor vehicles, appliances, other similar structures or parts thereof; nor structure  
17 | demolition debris; nor any other solid waste shall be used for flood ~~hazard reduction control~~  
18 | works.
- 19 | 11. Cut-and-fill slopes and back-filled areas shall be stabilized with brush matting and buffer strips  
20 | and revegetated with native grasses, shrubs, or trees to prevent loss of shoreline ecological  
21 | functions and processes.
- 22 | A. Shoreline Area Regulations:
- 23 | ~~1.~~ Urban. Flood control works and instream structures are permitted subject to policies and  
24 | regulations of this program.
- 25 | ~~2.~~ Urban Resort. Flood control works and instream structures are permitted subject to policies and  
26 | regulations of this program.
- 27 | ~~3.~~ Urban Conservancy. Flood control works and instream structures are permitted subject to  
28 | policies and regulations of this program; provided, that channelization or dams for flood control  
29 | are prohibited.
- 30 | ~~4.~~ Shoreline Residential. Flood control works and instream structures are permitted subject to  
31 | policies and regulations of this program.
- 32 | ~~5.~~ Rural. Flood control works and instream structures are permitted subject to policies and  
33 | regulations of this program; provided, that channelization or dams for flood control may be  
34 | permitted as a conditional use.
- 35 | ~~6.~~ Resource. Flood control works and instream structures are permitted subject to policies and  
36 | regulations of this program; provided, that channelization or dams for flood control may be  
37 | permitted as a conditional use.
- 38 | ~~7.~~ Conservancy. Flood control works and instream structures are permitted subject to policies and  
39 | regulations; provided, that channelization or dams for flood control are prohibited.

Comment [CES182]: Covered by use table now.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 ~~8. Natural. Flood control works and instream structures are prohibited except for normal~~  
2 ~~maintenance and repair.~~

3 ~~9. Aquatic. Flood control works and instream structures are permitted subject to the use and~~  
4 ~~development regulations of the abutting upland shoreline area designation.~~

### 5 **23.4100.090-110 Forest Practices.**

#### 6 ~~A. Policies.~~

7 ~~A. Forest lands should be reserved for long-term forest management and such other uses as are~~  
8 ~~compatible with the dominant use. Other more intensive and incompatible uses tending to~~  
9 ~~impair the dominant use should be discouraged from locating on forest lands.~~

10 ~~B. Forest practices should maintain high levels of water quality, as well as surface and ground~~  
11 ~~water movement patterns.~~

12 ~~C. Forest practices should minimize damage to wetlands, fish and wildlife species and habitats,~~  
13 ~~especially aquatic habitats.~~

14 ~~D. Extreme caution must be observed whenever chemicals are to be used along shorelines; such~~  
15 ~~use should be avoided altogether if possible.~~

16 ~~E. Forest practices should maintain or improve the quality of soils and minimize erosion.~~

17 ~~F. Where slopes are extremely steep or soils are subject to sliding, rapid erosion or high water~~  
18 ~~table, special practices should be employed to minimize damage to shoreland and water~~  
19 ~~features, and adjacent properties.~~

#### 20 ~~B. Regulations.~~

##### 21 ~~A. General.~~

22 1. All forest practices undertaken on shorelines shall comply with the applicable policies and  
23 provisions of the Forest Practices Act, Chapter 76.09 RCW as amended, and any regulations  
24 adopted pursuant thereto (WAC Title 222), as administered by the Department of Natural  
25 Resources.

26 2. Unless otherwise stated, the vegetation conservation management regulations of this program  
27 do not apply to commercial forest practices as defined by this program when such activities are  
28 covered under the Washington State Forest Practices Act (Chapter 76.09 RCW), except where  
29 such activities are associated with a conversion to other uses or other forest practice activities  
30 over which local governments have authority. For the purposes of this program, preparatory  
31 work associated with the conversion of land to non-forestry uses and/or developments shall not  
32 be considered a forest practice and shall be reviewed in accordance with the provisions for the  
33 proposed non-forestry use, the general provisions of this program, and WCC  
34 Chapter 16.16 (Critical Areas), and shall be limited to the minimum necessary to accommodate  
35 an approved use.

36 3. A forest practice that only involves timber cutting is not a development under the Act and does  
37 not require a shoreline substantial development permit or a shoreline exemption. A forest  
38 practice that includes activities other than timber cutting may be a development under the act  
39 and may require a substantial development permit, as required by WAC 222-50-020.

**Comment [AP183]:** This section has been moved from the General Regulations section (previously WCC 23.90.110).

**Comment [CES184]:** Revised section per Scoping Document, Item #17g.

**Comment [AP185]:** Moved from Vegetation Management section (WCC 23.30.040).

**Comment [CES186]:** Added per Periodic Review Checklist, Item 2017.e, and Scoping Document Item #2b. This has also been addressed in the definitions section.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1     4. ~~For the purposes of this program, preparatory work associated with the Any conversion of land~~  
2     ~~to a non-forestry uses and/or development use not compatible with forestry shall not be~~  
3     ~~considered forest practices and shall be reviewed in accordance with the provisions for the~~  
4     ~~proposed non-forestry use, the general provisions of this program, including vegetation~~  
5     ~~conservation, and shall be must:~~  
6     ~~a. Comply with the applicable policies and regulations of this program;~~  
7     ~~b. Limited the conversion to the minimum necessary, while complying with the purpose of the~~  
8     ~~shoreline environment designation, general policies and regulations, and specific shoreline~~  
9     ~~use and modification policies and regulations on the subject property;~~  
10    ~~a-c. Ensure no net loss of shoreline ecological functions or significant adverse impacts to other~~  
11    ~~shoreline uses, resources, and values provided for in RCW 90.58.020, such as navigation,~~  
12    ~~recreation, and public access.~~  
13    ~~1. Forest practices roads are prohibited on marine or lake shores where slopes exceed 35~~  
14    ~~percent except when necessary to obtain access to road networks on land outside the Act's~~  
15    ~~jurisdiction.~~  
16    ~~2. Cutting of more than 30 percent of the merchantable trees over a 10-year period within 50~~  
17    ~~feet of the bank rim on feeder bluffs and landslide hazard areas is prohibited. Only selective~~  
18    ~~thinning methods that minimize erosion potential shall be employed.~~  
19    5. ~~Per RCW 90.58.150, W~~with respect to timber situated within shoreline jurisdiction along  
20    shorelines of statewide significance, only selective commercial timber cutting may be permitted  
21    so that no more than 30 percent of the merchantable timber may be harvested in any 10-year  
22    period; ~~provided that:~~  
23    a. ~~Other timber harvesting methods may be permitted as a conditional use permit in those~~  
24    ~~limited instances where topography, soil conditions, or silviculture practices necessary for~~  
25    ~~regeneration render selective logging ecologically detrimental; and~~  
26    b. ~~Timber removal that is to the minimum necessary for the conversion of land for other uses~~  
27    ~~may be permitted.~~  
28    A. ~~Shoreline Area Regulations.~~  
29    ~~3. Urban. Forest practices are prohibited.~~  
30    ~~4. Urban Resort. Forest practices are prohibited.~~  
31    ~~5. Urban Conservancy. Forest practices are prohibited.~~  
32    ~~6. Shoreline Residential. Forest practices are prohibited.~~  
33    ~~7. Rural. Forest practices are permitted subject to policies and regulations of this program and~~  
34    ~~critical areas buffer regulations.~~  
35    ~~8. Resource. Forest practices are permitted subject to policies and regulations of this program and~~  
36    ~~critical areas buffer regulations.~~  
37    ~~9. Conservancy. Forest practices are permitted subject to policies and regulations of this program~~  
38    ~~and critical areas buffer regulations.~~

Comment [CES187]: Addressed by use table now.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

### **23.100.170-40.120 Industrial and Port Development.**

~~a. Industrial and port development in shoreline areas outside of the Cherry Point management area shall be subject to the policies and regulations of this section and Chapter 23.90 WCC.~~

**Cherry Point Management Area.** All industrial and port development in shorelines within the Cherry Point management area as defined in Chapter 23.110 WCC shall be subject to the policies and regulations found in WCC 23.100.170 instead of the policies and regulations of this section, unless otherwise specified therein.

#### **A. Policies.**

~~A. Shoreline sites particularly suitable for development such as deep water harbors with access to adequate rail, highway and utility systems should be reserved for water dependent or water-related industrial and port development.~~

~~B. In order to provide adequate shoreline for future water dependent and water related uses, industrial or port development at deep water sites should be limited to those uses that produce the greatest long-term economic base. Industrial and port development that is consistent with this program should be protected from encroachment or interference by incompatible uses with less stringent siting requirements, such as residential or commercial uses. Mixed use development, including non-water dependent uses, should only be allowed when they include and support water dependent uses.~~

~~C. Regional needs for port facilities should be carefully considered in reviewing new port proposals and in allocating shorelines for such development. Such reviews or allocations should be coordinated with port districts, adjacent counties and cities, and the state. Existing, officially designated State Harbor Areas should be used for new port development to the maximum extent whenever possible.~~

~~D. Multiple use of industrial and port facilities is encouraged to limit duplicative facilities and reduce adverse impacts. Multiple use should be implemented in the following manner:~~

~~b. Cooperative use of piers, cargo handling, storage, parking and other accessory facilities among private or public entities should be required in industrial or port facilities whenever feasible. New facilities for water dependent uses should be allowed only after assessment of the potential for shared use of existing facilities.~~

~~c. Industrial and port developments should provide opportunities for physical and/or visual public shoreline access in accordance with the public access policies, including recreational use of undeveloped shorelines not needed for port or industry operations; provided, that such uses are safely compatible with facility operations.~~

~~A. Industrial and port development in the shoreline should be located and designed to avoid significant adverse impacts to other shoreline uses, resources, and values, including shoreline geomorphic processes, water quality, fish and wildlife habitat, commercial aquaculture, and the aquatic food chain.~~

~~B. Restoration of impaired shoreline ecological functions and processes should be encouraged as part of industrial and port development.~~

**Comment [P/C188]:** P/C voted 9-0 to make 23.40.125 a subset of these rules, so that 23.40.120 applies to all industrial and port development and 23.40.125 are additional rules for the CPMA; and to remove redundancies.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 ~~B. Regulations.~~  
2 A. ~~Purpose and Need~~General.
- 3 1. ~~Water dependent industrial and port uses designed, developed and operated consistent with~~  
4 ~~the policies and regulations of this program shall be given preference over all other uses on the~~  
5 ~~shoreline.~~
- 6 1. Prior to approval of an application ~~water dependent industrial or port uses, the~~  
7 ~~administrator~~Director shall review a proposal for design, layout, and operation of the proposed  
8 use and shall ~~determine whether~~make specific findings that the use ~~qualifies as a~~is water-  
9 dependent, ~~water-related, water-enjoyment or non-water-oriented industrial and port use.~~
- 10 2. All harbor areas, established pursuant to Article XV of the Washington State Constitution, that  
11 have reasonable commercial navigational accessibility and necessary support facilities such as  
12 transportation shall be reserved for water-dependent and water-related uses that are  
13 associated with commercial navigation unless a specific finding is made in the permit review  
14 process that adequate shoreline is reserved for navigation use elsewhere in the affected harbor  
15 area.
- 16 3. ~~Industrial and port uses that result in no net loss of shoreline ecological functions and processes~~  
17 ~~are allowed subject to the policies and regulations of WCC 23.90.030 and the specific criteria~~  
18 ~~below:~~
- 19 a. ~~Water-dependent industrial and port uses shall be given first preference over non-~~  
20 ~~waterdependent, water-related and water-enjoyment industrial and port uses. Prior to~~  
21 ~~approval of water dependent industrial or port uses, the administrator shall review a~~  
22 ~~proposal for design, layout and operation of the proposed use and shall make specific~~  
23 ~~findings that the use qualifies as a water dependent use.~~
- 24 a.b. ~~Water-related industrial and port uses shall be given second preference over non-water~~  
25 ~~dependent industrial and port uses.~~
- 26 b.c. ~~Water-related industrial and port uses may not be approved if they displace existing water-~~  
27 ~~dependent uses. Prior to approval of water-related industrial or port uses, the administrator~~  
28 ~~shall review a proposal for design, layout and operation of the proposed use and shall make~~  
29 ~~specific findings that the use qualifies as a water-related use.~~
- 30 e.d. ~~Water-enjoyment industrial and port uses may not be approved if they displace existing~~  
31 ~~water-dependent or water-related uses or if they occupy space designated for water-~~  
32 ~~dependent or water-related use identified in a substantial development permit or other~~  
33 ~~approval. Prior to approval of water-enjoyment industrial or port uses, the administrator~~  
34 ~~shall review a proposal for design, layout and operation of the proposed use and shall make~~  
35 ~~specific findings that the use qualifies as a water-enjoyment use.~~
- 36 d.e. ~~Non-water oriented industrial and port uses may be permitted where located on a site~~  
37 ~~physically separated from the shoreline by another property in separate ownership or a~~  
38 ~~public right of way such that access for water-oriented use is precluded. All other non-~~  
39 ~~water-oriented industrial and port uses are prohibited in the shoreline, except for those~~

Comment [CES189]: To be consistent w/ WAC 173-26-241(3)(f)

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 identified above; provided that ~~unless~~ the use provides significant public benefit with  
2 respect to the objectives of the Act and the following is:

3 i. ~~The proposal is Part of a mixed use project that includes a water-oriented use; or~~

4 ii. ~~The proposal is on a site where navigability is severely limited; or~~

5 ~~iii. The proposal does not occupy space designated for water-dependent or water-related~~  
6 ~~use identified in a project permit approval.~~

7 f. ~~Water-oriented industrial and port uses shall provide public access in accordance with the~~  
8 ~~provisions of WCC 23.30.060 (Public Access).~~

9 e.g. ~~When permitted, non-water-oriented industrial and port uses shall provide public access~~  
10 ~~and/or restoration as follows:~~

11 i. ~~Non water oriented industrial and port uses shall provide public access shall be in the~~  
12 ~~form of unrestricted open space. The administrator shall determine the amount of~~  
13 ~~required access in accordance with the provisions of WCC 23.90.080 on a case-by-case~~  
14 ~~basis.~~

15 ii. If no water-oriented uses are located on or adjacent to the water as part of a mixed use  
16 development, 80% of the shoreline and associated buffers shall be restored to provide  
17 shoreline ecological functions that approximate the functions provided by the site in  
18 natural conditions.

19 iii. The requirements in subsections ~~(B)(1)(c)(v)(A) and (B)~~ of this section may be modified  
20 when:

21 (A) The site is designated as a public access area by a shoreline public access plan, in  
22 which case public access consistent with that plan element shall be provided; or

23 (B) Specific findings are made demonstrating that the size of the parcel and the  
24 presence of adjacent uses preclude restoration of shoreline ecological functions.

25 Where on-site restoration is infeasible, equivalent off-site restoration shall be  
26 provided ~~consistent with the policies and regulations of this program.~~

27 iv. ~~Buffers shall be designed as appropriate to protect shoreline resources based on a site-~~  
28 ~~specific restoration assessment plan, and may differ from the standard critical area~~  
29 ~~buffer dimensions provided in Chapter 16.16 WCC; provided, that the building envelope~~  
30 ~~for the proposed non-water-oriented use shall be based on current site conditions.~~

31 v. If water-oriented uses are located on or adjacent to the water, the remaining  
32 undeveloped water frontage that is not devoted to water-dependent use shall be  
33 preserved in a substantially unaltered condition. If the site has been previously altered  
34 by past development, the balance of the site may be reserved for future water-related  
35 use.

36 vi. The requirements of this section shall not apply to those ~~non-water-oriented~~ industrial  
37 or port uses located on a site physically separated from the shoreline where access to  
38 the land/water interface is precluded; provided, that such conditions were lawfully  
39 established prior to the effective date of this program.

Comment [AP190]: Updated per Commercial example.

Comment [CES191]: To be consistent w/ WAC 173-26-241(3)(f)

Comment [CES192]: Updated for clarity.

Comment [AP193]: Updated per Commercial example.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 ~~f.h.~~ Interim use of facilities approved and/or permitted for water-dependent use for non-water-  
2 dependent uses may be approved by a shoreline conditional use permit under the following  
3 conditions:

- 4 i. A specific occupancy plan has been approved that allows interim uses for a specific  
5 period while the market for water-dependent uses is being developed, and the  
6 proposed interim use is consistent with the occupancy plan.
- 7 ii. The period of interim lease or commitment of the space shall not exceed five years. At  
8 the end of five years, a new application for interim use shall be submitted.
- 9 iii. A good faith effort to obtain water-dependent uses has been made and suitable tenants  
10 were not found. The period of the search for water-dependent uses, the notice of  
11 availability, listing or advertising employed, and any inquiries received shall be  
12 documented.
- 13 iv. No permanent improvements will be made to the space that requires more than five  
14 years of occupancy to repay the investment. No permanent improvements will be made  
15 that will reduce the suitability of the space for water-dependent use.

- 16 4. Required setback areas shall not be used for storage of industrial equipment or materials, or  
17 waste disposal, but may be used for outdoor recreation. Portions of such setbacks may be used  
18 for motor vehicle parking if design of such facilities is consistent with this program and critical  
19 area regulations in WCC Chapter 16.16.
- 20 5. Disposal or storage of solid or other industrial wastes is not permitted on shorelines; except that  
21 liquid waste treatment facilities may be permitted as a shoreline conditional use if it is  
22 demonstrated that a shoreline location is required or where it is demonstrated that an  
23 alternative site outside of the shoreline is not feasible; and further excepted, that land  
24 application of waters used in the processing of fruits and vegetables within the shoreline is  
25 permitted as a shoreline conditional use.
- 26 6. Marine rafts shall be located the minimum distance necessary above existing grade to minimize  
27 impact on littoral drift and navigation along the shoreline.

28 ~~b. Minimum required setbacks from shorelines and side property lines, maximum height limits~~  
29 ~~and open space requirements are contained in WCC 23.90.130, Shoreline bulk provisions –~~  
30 ~~Buffers, setbacks, height, open space and impervious surface coverage.~~

### 31 A.B. Additional Standards for Log Rafts and Storage.

- 32 1. Storage of logs is prohibited in water-bodies, except where an upland location is not feasible;  
33 provided, that no ~~new~~ log storage may be allowed in marine or estuarine waters or tidelands.
- 34 2. Log rafting shall be allowed in cases where overland transportation of logs would produce  
35 unacceptable transportation impacts, or for transportation of logs from islands or from other  
36 locations in Puget Sound. Areas for assembly and disassembly of log rafts shall meet all  
37 standards below for log storage.
- 38 3. Offshore log storage shall only be allowed on a temporary basis, and should be located where  
39 natural tidal or current flushing and water circulation are adequate to disperse polluting wastes.
- 40 4. Log rafting or storage operations are required to implement the following, whenever applicable:

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 | ~~b.a.~~ Logs shall not be dumped, stored, or rafted where grounding will occur.
- 2 | ~~e.b.~~ Easy let-down devices shall be provided for placing logs in water.
- 3 | ~~d.c.~~ Bark and wood debris controls and disposal shall be implemented at log dumps, raft building
- 4 | areas, and mill-side handling zones. Accumulations of bark and other debris on the land and
- 5 | docks around dump sites shall be fully contained and kept out of the water.
- 6 | ~~e.d.~~ Where water depths will permit the floating of bundled logs, they shall be secured in
- 7 | bundles on land before being placed in the water. Bundles shall not be broken again except
- 8 | on land or at mill sites.
- 9 | 5. Impervious pavement is required for log yards where the wet season water table is less than
- 10 | four feet below surface level in order to reduce waste buildup and impacts on ground ~~water~~ and
- 11 | surface water.
- 12 | 6. Stormwater management facilities shall be provided to protect the quality of affected waters.
- 13 | 7. Log storage facilities shall be located upland and properly sited to avoid fish and wildlife habitat
- 14 | conservation areas.
- 15 | 8. Log storage facilities must be sited to avoid and minimize the need for dredging in order to
- 16 | accommodate ~~new~~ barging activities at the site.
- 17 | 9. Log storage facilities shall be located in existing developed areas to the greatest extent feasible.
- 18 | If a ~~new~~ log storage facility is proposed along an undeveloped shoreline, an alternatives analysis
- 19 | shall be required.
- 20 | 10. A berm must be located around the outer edge of the upland sort surface using rocks, or other
- 21 | suitable materials to prevent loss of wood debris into the water.
- 22 | 11. Log booming shall only be allowed offshore in sub-tidal waters in order to maintain unimpeded
- 23 | nearshore migration corridors for juvenile salmonids and to minimize shading impacts from log
- 24 | rafts. Log booming activities include the placement in or removal of logs and log bundles from
- 25 | the water, and the assembly and disassembly of rafts for water-borne transportation.
- 26 | 12. A debris management plan describing the removal and disposal of wood waste must be
- 27 | developed and submitted to the County. Debris monitoring reports shall be provided, when ~~re~~
- 28 | stipulated.
- 29 | 13. Existing in-water log storage and log booming facilities in critical habitats ~~utilized~~ ~~used~~ by
- 30 | threatened or endangered species classified under ESA shall be reevaluated if use is
- 31 | discontinued for two years or more, or if substantial repair or reconstruction is required. The
- 32 | evaluation shall include an alternatives analysis in order to determine if logs can be stored
- 33 | upland and out of the water, or if the site should be used for other purposes that would have
- 34 | lesser impacts on ESA-listed species. The alternatives analysis shall include evaluation of the
- 35 | potential for moving all, or portions of, log storage and booming to uplands.
- 36 | ~~B. Hydropower Development.~~
- 37 | ~~b. Hydropower facilities shall be located, designed, and operated to minimize impacts to fish and~~
- 38 | ~~wildlife resources including spawning, nesting, and rearing habitat, and migratory routes, and~~
- 39 | ~~critical areas. Mitigation measures to achieve no net loss of shoreline ecological functions and~~
- 40 | ~~processes shall be implemented in accordance with WCC.~~

Comment [CES194]: Moved to Utilities section

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 e. ~~Hydropower facilities shall be located, designed, and operated to protect and minimize impacts~~  
2 ~~to geohydraulic processes; waterfalls; erosion and accretion shoreforms; agricultural land;~~  
3 ~~scenic vistas; recreation sites; and sites having significant historical, cultural, scientific, or~~  
4 ~~educational value.~~
- 5 d. ~~Hydropower facilities shall accommodate public access to, and multiple use of, the shoreline.~~
- 6 e. ~~For all dams that are not regulated by either the Federal Energy Regulatory Commission~~  
7 ~~licensing procedures, or the State Department of Ecology reservoir permit requirements, a~~  
8 ~~maintenance agreement and construction bond for 150 percent of the cost of the structure shall~~  
9 ~~be filed with the director of the Public Works Department prior to construction. The~~  
10 ~~maintenance agreement shall specify who is responsible for maintenance, shall incorporate the~~  
11 ~~maintenance schedule specified by the design engineer, shall require annual inspections by a~~  
12 ~~civil engineer licensed in the state of Washington and shall stipulate abandonment procedures~~  
13 ~~which shall include, where appropriate, provisions for site restoration.~~
- 14 f. ~~The design of all dams and the suitability of the proposed site for dam construction shall be~~  
15 ~~certified by a professional engineer licensed in the state of Washington. The professional design~~  
16 ~~shall include a maintenance schedule.~~

### C. Regulations for Specific Shoreline Environment Designations.

- 17 1. In the Rural shoreline environment, permitted water-oriented port development and industrial  
18 facilities are limited to those used for processing, manufacturing, and storage of finished or  
19 semi-finished goods.
- 20 2. In the Resource shoreline environment, water-oriented facilities for the processing,  
21 manufacturing, and storage of natural resource products are permitted. Other water-oriented  
22 industrial or port use and development may be permitted as a shoreline conditional use. Non-  
23 water-oriented oriented facilities for the processing, manufacturing, and storage of natural  
24 resource products may be permitted as a shoreline conditional use subject to the criteria for  
25 such uses in this section.
- 26 3. In the Aquatic shoreline environment, water-dependent industrial or port use and development  
27 are permitted, subject to the use and development regulations of the abutting upland shoreline  
28 environment designation.
- 29 4. In the Cherry Point Management Area, WCC 23.40.125 shall also apply. Where this section  
30 differs from WCC 23.40.125, the regulation(s) of that section shall govern.

### A. ~~Shoreline Area Regulations.~~

- 31 ~~1. Urban. Water oriented industrial and port use and development are permitted subject to~~  
32 ~~policies and regulations of this program. Non water oriented industrial or port use and~~  
33 ~~development may be permitted as a conditional use, subject to criteria for such uses in~~  
34 ~~subsection (B)(1)(c)(iv) of this section. Dams, diversion, and tailrace structures and accessory~~  
35 ~~development for hydroelectric power generation may be permitted as a conditional use.~~
- 36 ~~2. Urban Resort. Port development limited to passenger terminals is permitted. All other industrial~~  
37 ~~or port use and development is prohibited.~~

Comment [CES195]: Moved from 'Shoreline  
Area Regulations.'

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 31 ~~3. Urban Conservancy. Industrial or port use and development are prohibited, except that dams,~~  
32 ~~diversion, and tailrace structures and accessory development for hydroelectric power~~  
33 ~~generation may be permitted as a conditional use.~~
- 34 ~~4. Shoreline Residential. Industrial or port use and development are prohibited, except that dams,~~  
35 ~~diversion, and tailrace structures and accessory development for hydroelectric power~~  
36 ~~generation may be permitted as a conditional use.~~
- 37 ~~5. Rural.~~
  - 38 ~~a. Water oriented port development and industrial facilities for processing, manufacturing,~~  
39 ~~and storage of finished or semi finished goods are permitted.~~
  - 40 ~~b. Non water oriented industrial or port use and development may be permitted as a~~  
41 ~~conditional use, subject to criteria for such uses in subsection (B)(1)(c)(iv) of this section.~~
  - 42 ~~c. Dams, diversion and tailrace structures and accessory development for hydroelectric power~~  
43 ~~generation may be permitted as a conditional use.~~
- 44 ~~6. Resource.~~
  - 45 ~~a. Water oriented facilities for processing, manufacturing, and storage of natural resource~~  
46 ~~products are permitted subject to the policies and regulations of this program.~~
  - 47 ~~b. Non water oriented facilities for processing, manufacturing and storage of natural resource~~  
48 ~~products, subject to criteria for such uses in subsection (B)(1)(c)(iv) of this section, and other~~  
49 ~~water oriented industrial or port use and development may be permitted as a conditional~~  
50 ~~use.~~
  - 51 ~~c. Dams, diversion and tailrace structures and accessory development for hydroelectric power~~  
52 ~~generation may be permitted as a conditional use.~~
  - 53 ~~d. Other non water oriented industrial or port use and development are prohibited.~~
- 54 ~~7. Conservancy. Industrial or port use and development are prohibited, except that dams,~~  
55 ~~diversion, and tailrace structures and accessory development for hydroelectric power~~  
56 ~~generation may be permitted as a conditional use.~~
- 57 ~~8. Natural. Industrial or port use and development are prohibited.~~
- 58 ~~9. Aquatic. Water dependent industrial or port use and development are permitted, subject to the~~  
59 ~~use and development regulations of the abutting upland shoreline area designation. Log storage~~  
60 ~~may be permitted as a conditional use.~~

### **23.4100.210-125 Cherry Point Management Area.**

A. Policies.

B. Purpose and Intent.

C. The purpose of the Cherry Point management area is to provide a regulatory framework that recognizes and balances the special port, industrial and natural resource needs associated with the development of this marine resource. This section identifies policies and regulations for water-dependent industrial activities that apply in addition to specific other elements of this program as referenced herein.

Comment [AP196]: Moved from 23.40.220.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 ~~D.— Washington State natural resource agencies and Whatcom County have identified certain portions~~  
2 ~~of the Cherry Point management area as providing herring spawning habitat and other key habitat~~  
3 ~~characteristics that warrant special consideration due to their importance to regional fisheries and~~  
4 ~~other elements of the aquatic environment.~~
- 5 ~~E.— Development of the Cherry Point major port/industrial urban growth area will accommodate uses~~  
6 ~~that require marine access for marine cargo transfer, including oil and other materials. For this~~  
7 ~~reason, water dependent terminal facilities are encouraged as the preferred use in the Cherry Point~~  
8 ~~management area. Due to the environmental sensitivity of the area, it is the policy of Whatcom~~  
9 ~~County to limit the number of piers to one pier, in addition to those in operation or approved as of~~  
10 ~~January 1, 1998.~~
- 11 ~~F.— Whatcom County should consider participation with local, state, and federal agencies, tribal~~  
12 ~~governments and other stakeholders in the development of a plan to address integrated~~  
13 ~~management of the uplands and public aquatic lands within the Cherry Point management area. The~~  
14 ~~development of such a plan could provide a forum and process for addressing aquatic resources by~~  
15 ~~all stakeholders. Elements of the plan could be adopted as future amendments to this program as~~  
16 ~~appropriate.~~
- 17 ~~G.— All development that is to be located within the Cherry Point management area, as defined in~~  
18 ~~Chapter 23.110 WCC, shall be subject to the policies and regulations found in this section, and shall~~  
19 ~~not be subject to the policies and regulations found in WCC 23.100.010 through 23.100.160, nor~~  
20 ~~Chapter 23.90 WCC, unless otherwise referenced in this section. The policies and regulations found~~  
21 ~~in this section are applicable only within the geographic boundaries of the Cherry Point~~  
22 ~~management area and do not apply elsewhere in the county. In the event that the provisions of this~~  
23 ~~section conflict with other applicable referenced provisions of this program, the policies and~~  
24 ~~regulations that are most protective of shoreline resources shall prevail.~~
- 25 ~~H.— Water Dependent Industrial Development. Only water dependent facilities that serve industrial~~  
26 ~~facilities should be allowed in the Cherry Point management area. Industry within the major~~  
27 ~~port/industrial urban growth area, as designated in the County Comprehensive Plan, which is not~~  
28 ~~water dependent should locate away from shoreline jurisdiction.~~
- 29 ~~I.— Multiple Use Facilities. Facilities that allow for multiple use of piers, cargo handling, storage, parking~~  
30 ~~and other accessory facilities are encouraged.~~
- 31 ~~J.— Public Access.~~
- 32 ~~K.— Where appropriate, industrial and port development within the Cherry Point management area~~  
33 ~~should provide public beach and shoreline access in a manner that does not cause interference with~~  
34 ~~facility operations or present hazards to life and property. This may be accomplished through~~  
35 ~~individual action or by joint, coordinated action with other developers and landowners, for example,~~  
36 ~~by setting aside a common public access area.~~
- 37 ~~L.— Special emphasis should be given to providing public beach and shoreline access for recreational~~  
38 ~~opportunities including but not limited to crabbing, small craft launching, surf fishing, picnicking,~~  
39 ~~clamming, and beach walking.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 ~~M. Public access within the Cherry Point management area should be consistent with the Whatcom~~  
2 ~~County Parks and Recreation Open Space Plan.~~
- 3 ~~N. Shoreline Ecological Functions and Processes. In recognition of the diverse and vital ecological~~  
4 ~~resources in the Cherry Point management area, consideration of probable effects of all~~  
5 ~~development proposals on shoreline ecological functions and processes should be assessed with the~~  
6 ~~other long-term statewide interests. New port development that requires dredge and fill should not~~  
7 ~~be permitted in the Cherry Point management area due to potential adverse effects on ecological~~  
8 ~~functions, including fish and shellfish habitat and geohydraulic processes.~~
- 9 ~~O. Aesthetics. All development should be designed to avoid or minimize negative visual impacts on the~~  
10 ~~scenic character of the area and to ensure visual compatibility with adjacent nonindustrial zoned~~  
11 ~~properties.~~
- 12 ~~P. Site Development. All development should be constructed and operated in a manner that, while~~  
13 ~~permitting water-dependent uses, also protects shoreline resources, their ecological functions and~~  
14 ~~processes, and that incorporates the following:~~
- 15 ~~Q. Low impact development approaches to avoid or minimize adverse impact to topography,~~  
16 ~~vegetation, water quality, fish and wildlife habitat, and other natural site conditions;~~
- 17 ~~R. Adequate temporary and permanent management measures to control erosion and sediment~~  
18 ~~impacts during construction and operation; and~~
- 19 ~~S. Adequate stormwater management facilities.~~
- 20 ~~T. Regulations.~~
- 21 A. All uses and modifications within the Cherry Point Management Area shall be subject to the  
22 regulations found in this section (as well as those of Title 20, Zoning), and not those of WCC  
23 23.40.120 (Industrial and Port Development). Where this section differs from WCC 23.40.120, the  
24 regulation(s) of this section shall govern.
- 25 ~~A.B. Allowed Uses.~~
- 26 1. Water-dependent industrial and port uses are allowed within the Cherry Point management  
27 area only upon finding; provided, that specific findings are made in a shoreline substantial  
28 development permit or conditional use permit that:
- 29 a. Policies for optimum implementation of the statewide interest have been achieved through  
30 protection of shoreline ecological functions and processes;
- 31 b. The long-term statewide benefits of the development have been considered with the  
32 potential adverse impacts on ecological functions; and
- 33 c. Proposed mitigation measures to achieve no net loss of ecological functions and processes  
34 are incorporated in the proposal.
- 35 2. Fuel Uses – Shoreline Permits and Requirements:
- 36 a. Existing legal fossil or renewable fuel refinery operations or existing legal fossil or renewable  
37 fuel transshipment facilities [as of XXX effective date] are considered permitted shoreline  
38 substantial developments.
- 39 b. Expansions of existing legal fossil-fuel refineries or expansions of existing legal fossil-fuel  
40 transshipment facilities shall require a shoreline conditional use permit.

**Comment [CES197]:** To do: need to add date once it's finalized.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 c. New or expansion of existing legal renewable fuel refinery or renewable fuel transshipment  
2 facility shall require a shoreline conditional use permit.

Comment [DN198]: Added per Council's pending draft fossil fuel amendments.

3 ~~2.3.~~ Water-related and water-enjoyment uses are allowed only as part of public access and public  
4 recreation development, subject to the ~~findings criteria~~ in subsection (B)(1)(a) of this section.

5 ~~3.4.~~ Accessory ~~development uses~~, which does not require a shoreline location in order to carry out ~~its~~  
6 ~~their~~ support functions, shall be sited away from the land/water interface and landward of the  
7 principal use. Accessory ~~development uses~~ shall observe critical area buffers in WCC  
8 Chapter 16.16. Accessory ~~development uses~~ includes, but ~~are~~ is not limited to, parking,  
9 warehousing, open air storage, waste storage and treatment, stormwater control facilities,  
10 utility and land transport ~~development~~.

11 ~~4.5.~~ Road, railway and utility facilities serving approved waterfront facilities related to water-  
12 dependent uses that are located and designed to minimize shoreline alteration are permitted.

13 6. Waste water disposal/treatment facilities for storage or disposal of industrial or domestic waste  
14 water are prohibited, except that elements such as conveyances and outfalls shall be allowed if  
15 alternate inland sites have been demonstrated to be infeasible. Waste water conveyance  
16 systems for ships at berth shall be permitted.

17 ~~5.7.~~ Liquid manure storage facilities and spreading and animal feeding operations and confined  
18 animal feeding operations shall be prohibited.

19 ~~B.C.~~ Public Access.

- 20 1. Public access shall be provided in accordance with WCC 23.930.0780 (Public Access) unless it is  
21 demonstrated that public access poses significant interference with facility operations or  
22 hazards to life or property.
- 23 2. If public access meeting the criteria above is demonstrated to be infeasible or inappropriate,  
24 alternative access may be provided in accordance with WCC 23.930.0780 at a location not  
25 directly adjacent to the water such as a viewpoint, observation tower, or other areas serving as  
26 a means to view public waters. Such facilities may include interpretive centers and displays that  
27 explain maritime history and industry; provided, that visual access to the water is also provided.
- 28 3. As an alternative to on-site public access facilities, public access may be provided in accordance  
29 with a public access plan adopted as an element of the Whatcom County Parks and Recreation  
30 Open Space Plan.

31 ~~C.D.~~ Critical Areas. In addition to meeting the provisions of WCC 23.30.01090-030, (Ecological  
32 Protection) ~~and critical areas~~, development and alteration shall not be located or expanded within  
33 critical areas designated pursuant to WCC Chapter 16.16 except where the site is approved for  
34 water-dependent use, and the following are met:

- 35 1. Mitigation to achieve no net loss of ecological functions and processes shall be conducted in  
36 accordance with WCC 23.930.0130 (Ecological Protection).
- 37 2. Development and alteration shall not be allowed in wetlands in the backshore area. Upland  
38 development shall demonstrate that changes in local hydrology will not decrease the viability of  
39 the wetland environment nor degrade the existing water quality within the wetland.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 3. The minimum required setback from the OHWM for all industrial and port facilities, including  
2 development components, which do not require a water's edge or water surface location shall  
3 be 150 feet; provided, that bluffs and banks greater than 10 feet in height and sloping greater  
4 than 30 percent and wetland shorelines shall have such setbacks measured from the crest of the  
5 bank or the edge of the wetland in addition to the OHWM.
- 6 4. Development and alteration other than recreation development for public and quasi-public  
7 shoreline access is prohibited on the accretion shoreforms identified on the map in Appendix C  
8 of this title, ~~subject to the regulations in this section and consistent with the conservancy and~~  
9 ~~aquatic shoreline area designation policies and regulations of Chapters 23.90 and 23.100 WCC;~~  
10 provided, that lawfully established uses or developments may be maintained subject to the  
11 provisions of WCC ~~23.50.070~~ Chapter 23.50 (Nonconforming Uses, Structures, and Lots).

### D.E. Location and Design.

#### 1. Piers.

- 14 a. Due to the environmental sensitivity of the area, Whatcom County shall limit the number of  
15 piers to ~~one pier, in addition to~~ those in operation as of January 1, 1998.
- 16 a.b. Piers shall be designed to accommodate only the necessary and intrinsic activities  
17 associated with the movement of material and cargo from land to water and water to land.  
18 The length of piers shall not extend beyond that which is necessary to accommodate the  
19 draft of the vessels intending to use the facility.
- 20 b.c. Piers shall be designed to minimize interference in the intertidal zone and adverse impacts  
21 to fish and wildlife habitats.
- 22 c.d. Piers shall be designed to minimize impacts on steep shoreline bluffs.
- 23 d.e. All pilings in contact with water shall be constructed of materials such as concrete, steel, or  
24 other materials that will not adversely affect water quality or aquatic plants or animals.  
25 Materials used for decking or other structural components shall be approved by applicable  
26 state agencies for contact with water to avoid discharge of pollutants from wave splash,  
27 rain, or runoff. Wood treated with creosote, copper chromium arsenic or  
28 pentachlorophenol is prohibited; provided, that replacement of existing wood pilings with  
29 chemically treated wood is allowed for maintenance purposes where use of a different  
30 material such as steel or concrete would result in unreasonable or unsafe structural  
31 complications; further provided, that where such replacement exceeds 20 percent of the  
32 existing pilings over a 10-year period, such pilings shall conform to the standard  
33 construction provisions of this section.
- 34 e.f. All piers on piling structures shall have a minimum vertical clearance of one foot above  
35 extreme high water.
- 36 f.g. Bulk storage of gasoline, oil and other petroleum products for any use or purpose is not  
37 allowed on piers, except for temporary storage under emergency situations, including oil  
38 spill cleanup. Bulk storage means non-portable storage in fixed tanks. Secondary  
39 containment shall be provided for portable containers.

Comment [CES199]: Deleted per Council's pending draft fossil fuel amendments.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 | ~~g-h.~~ All piers shall be located and designed to avoid impediments to navigation and to avoid  
2 | depriving other properties of reasonable access to navigable waters. All piers shall be  
3 | marked with navigational aids and approved for compliance with U.S. Coast Guard  
4 | regulations.
- 5 | 2. Dredging.
- 6 | a. Dredging to accommodate water access to, or construction of, new development is  
7 | prohibited. New development shall be located and designed to avoid the need for dredging.  
8 | Dredging for existing development shall be the minimum necessary and shall minimize  
9 | interference in the intertidal zone and impacts to fish and wildlife habitats.
- 10 | ~~b. Dredging operations, including spoil disposal, shall be conducted in accordance with policies  
11 | and regulations in WCC-23.90.120\_(B)(4) and (5), Dredging.~~
- 12 | ~~e.b.~~ Dredging is prohibited in the accretion shoreform and backshore wetland areas ~~described in~~  
13 | Appendix C of this title.
- 14 | 3. ~~Landfill~~ is prohibited, except for the minimum necessary to access piers or other structures that  
15 | provide access to the water. Pier design should accommodate the connection between the pier  
16 | and uplands by employing a pile-supported structure to the point of intersection with stable  
17 | upland soils. ~~Limited landfill may be allowed for pier access that does not extend further toward~~  
18 | ~~the OHWM than existing topography. Any fill or excavation waterward of the OHWM requires a~~  
19 | shoreline conditional use permit.
- 20 | 4. Excavation/Stabilization.
- 21 | a. Excavation/stabilization of bluffs is prohibited, except for the minimum necessary to access  
22 | piers or other structures that provide access to the water; provided, that active feeder bluffs  
23 | shall not be altered if alteration will adversely affect the existing littoral drift process. ~~New~~  
24 | ~~d~~Development shall avoid, rather than modify, feeder bluffs.
- 25 | b. Excavation/stabilization is prohibited on accretion shoreforms and in wetlands in the  
26 | backshore area.
- 27 | 5. ~~Shoreline stabilization defense works~~ shall be regulated in accordance with  
28 | ~~WCC 23.100.130~~23.40.190 and be consistent with the conservancy and aquatic shoreline  
29 | environment regulations of that section.
- 30 | ~~E.F.~~ Adjacent Use.
- 31 | 1. ~~New or expanded p~~Port or industrial development adjacent to properties which are zoned for  
32 | nonindustrial purposes shall provide setbacks of adequate width, to attenuate proximity  
33 | impacts such as noise, light and glare; and may address scale and aesthetic impacts. Fencing or  
34 | landscape areas may be required to provide a visual screen.
- 35 | 2. Exterior lighting shall be designed and operated to avoid illuminating nearby properties zoned  
36 | for non-port or non-industrial purposes so as to not unreasonably infringe on the use and  
37 | enjoyment of such property, and to prevent hazards for public traffic. Methods of controlling  
38 | illumination of nearby properties include, but are not limited to, limits on height of structure,  
39 | limits on light levels of fixtures, light shields and screening.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

3. The minimum setback from side property lines which intersect the OHWM for industrial and port development shall be 60 feet; provided, that:
  - i. The side yard setback shall not apply to utility or security structures such as poles, meters, fences, guard houses, power vaults or transformers; and
  - ii. The side yard setbacks for parcels adjoining the NW and SE boundaries of the Cherry Point management area shall be administered in accordance with WCC 20.68.550 (Buffer Area).
4. Required setbacks shall not be used for storage of industrial equipment or materials, or for waste disposal, but may be used for public access or outdoor recreation.

### ~~F.G.~~ Oil and Hazardous Materials.

1. Release of oil or hazardous materials on shorelines is prohibited.
2. A management plan shall be developed for ~~new~~ permitted or conditionally permitted development for the safe handling of cargo, fuels, bilge water, and toxic or hazardous materials to prevent them from entering aquatic waters, surface or ground water. Specific provisions shall address prompt and effective clean-up of spills that may occur. Management plans shall be coordinated with state or federal spill response plans. Where a spill management/response plan has been approved by the state, said plan may be used to satisfy the requirements of this section.
3. Necessary spill containment facilities associated with existing development may be permitted within shoreline jurisdiction where there are no feasible alternatives.
- ~~4. Recreational Development. All recreational development shall comply with the policies and regulations of WCC 23.100.100 and be consistent with the conservancy and aquatic shoreline area regulations of that section.~~
- ~~5. Archaeological, Historic and Cultural Resource Management. All development associated with archaeological, historic or cultural site activities shall comply with the policies and regulations of WCC 23.90.070.~~

### **23.40.130 Land Division**

#### ~~A. Additional Standards for Residential Divisions~~General.

1. Land divisions, including boundary line adjustments, shall not be allowed in a configuration that will require significant vegetation removal or shoreline modification or result in a net loss of shoreline ecological functions and processes at the time of development of the subdivision and/or use of each new parcel.
- ~~2. All new subland divisions shall provide for vegetation conservation to mitigate cumulative impacts of intensification of use within or adjacent to the shoreline that shall include compliance with vegetation conservation requirements of WCC ~~23.30.050~~23.30.040, together with replanting and control of invasive species within setbacks and open space to assure establishment and continuation of a vegetation community characteristic of a native climax community.~~
- ~~2. Residential lots created through land division in the shoreline shall only be permitted when the following standards are met:~~

**Comment [CES200]:** Moved from Residential section, as there are more than just residential land divisions (e.g., commercial, industrial, etc.)

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 3. Land division may not be approved in cases when it can be reasonably foreseeable that the  
2 development or use would require structural flood hazard reduction measures within a channel  
3 migration zone or floodway during the life of the development or use.
- 4 4. ~~New~~ Land division shall assure that the lots created will not require shoreline stabilization in  
5 order for reasonable development to occur. ~~New~~ Land division that would require shoreline  
6 stabilization is prohibited.
- 7 ~~5. New or expanded subdivisions and all multiunit residential developments shall provide a  
8 community recreation and/or open space area for the benefit of all residents or property  
9 owners in the development; provided, that such provisions shall not apply to lot line  
10 adjustment, lot consolidation, and subdivision of land into four or fewer lots.~~
- 11 6.5. New or amended subLand divisions of four or fewer lots adjacent to the shoreline shall provide  
12 common access to the shoreline for all lots, consistent with, except those for lot line  
13 adjustment and lot consolidation purposes, shall provide public access as provided for in  
14 WCC 23.930.0780 (Public Access) and this section.
- 15 ~~7.6. All new sub~~ land divisions shall record a prohibition on ~~new~~ private docks on the face of the plat.  
16 An area for shared moorage may be approved if it meets all requirements for shared moorage in  
17 WCC 23.40.150100.099 (Moorage), including demonstration that ~~public and private~~ marinas and  
18 ~~other boating facilities~~ launch ramps are not sufficient to meet the moorage needs of the  
19 subdivision.
- 20 ~~8.7. Subdividing tidelands for sale or lease in connection with individual building lots is prohibited.~~
- 21 ~~9.8. Substandard shoreline lots unsuitable for development of a primary permitted use under the  
22 WCC Official Zoning Ordinance (Title 20 (Zoning) and this program shall not be subdivided.~~
- 23 ~~10.9. Land divisions of more than four lots and, including subdivision of land for more than  
24 four parcels, shall incorporate public access to publicly owned shorelines or public water  
25 bodies~~ shorelines of the state as provided for in WCC 23.390.0780 unless the site is designated in  
26 a shoreline public access plan for a greater component of public access or public access is  
27 demonstrated to be infeasible or inappropriate. The amount and configuration of public access  
28 shall depend on the proposed use(s) and the following criteria:
- 29 a. Subdivisions ~~within the shoreline~~ that have views of water areas shall provide a public  
30 pedestrian viewing area.
- 31 b. Subdivisions adjacent to ~~public waterways, waters of the state and marine waters~~ shall  
32 provide access to a point ~~that abuttings~~ the water that will provide visual access, and shall  
33 provide physical access to public waterways, public marine waters, and public tidelands that  
34 are physically accessible at low tide or low water.
- 35 c. Subdivisions subject to requirements for dedication of land to provide open space or  
36 mitigate recreation demands of the development shall dedicate such land on or adjacent to  
37 public waterways or marine shorelines, as applicable, unless the ecological sensitivity of  
38 such land precludes public access. Portions of the area dedicated may be fenced or  
39 otherwise restricted to limit public access to ecologically sensitive areas.

Comment [CES201]: Covered elsewhere.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 ~~11.10.~~ Clustering and other low-impact development techniques may be required where  
2 appropriate to minimize physical and visual impacts on shorelines.

### 3 ~~23.4100.120-140~~ Mining.

4 Mining in shoreline areas shall be subject to the policies and regulations of this section and  
5 Chapter 23.90 WCC.

#### 6 A. Policies.

7 A. Mining should not be located on shorelines where unavoidable adverse impacts on other users  
8 or resources together equal or outweigh the benefits from mining.

9 B. Mining should not interfere with public recreation on the shoreline.

10 C. Mining should be located and operated so as to provide long term protection of water quality,  
11 fish and wildlife, and fish and wildlife habitat.

12 D. Mining, particularly surface or strip mining, should provide for timely restoration of disturbed  
13 areas to a biologically productive, semi-natural, or other useful condition through a reclamation  
14 process consistent with regulations administered by the Department of Natural Resources and  
15 other applicable county standards.

16 E. Mining of marine and lake shores or accretional shoreforms, such as point bars, that have a high  
17 value for recreation or as fish or wildlife habitat should generally not be permitted.

18 F. Mining should only be permitted on accretion point and channel bars where appropriate studies  
19 and detailed operation plans demonstrate that:

20 a. Fish habitat, upland habitat and water quality will not be significantly impacted; and

21 b. The operation will not adversely affect geohydraulic processes, channel alignment, nor  
22 increase bank erosion or flood damages.

23 G. Mining operations should be located, designed, and managed so that other appropriate uses are  
24 not subjected to substantial or unnecessary adverse impacts from noise, dust or other effects of  
25 the operation. The operator may be required to implement measures such as buffers, limited  
26 hours, or other mitigating measures for the purpose of minimizing adverse proximity impacts.

#### 27 B. Regulations.

##### 28 A. General.

29 1. The removal of gravel for flood management purposes shall be regulated in accordance with the  
30 ~~policies-regulations for under of WCC 23.100.06023.40.100 (Flood Hazard Reduction Control~~  
31 ~~Works and Instream Structures) as well as this section.~~

32 ~~1-2. New m~~ Mining and associated activities shall be designed and conducted to result in no net loss  
33 of shoreline ecological functions and processes in accordance with WCC ~~23.90.03023.30.010~~  
34 ~~(Ecological Protection). Mining should not be approved where it could interfere with shoreline~~  
35 ~~ecological functions or processes or cause irreparable damage to shoreline resources or features~~  
36 ~~such as accretion shoreforms.~~ Application of this standard shall include avoidance and  
37 mitigation of adverse impacts during the course of mining and reclamation. The determination  
38 of whether there will be no net loss of ecological function shall be based on an evaluation of the  
39 reclamation plan required for the site and shall consider impacts on ecological functions during

Comment [DN202]: Removed sections which are not required by the WAC and provided only WAC specific requirements, except for the retained section on scalping, below.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 operation. Preference shall be given to mining proposals that result in the creation, restoration,  
2 or enhancement of habitat for priority species.

- 3 3. Permit requirements for mining should be coordinated with the requirements of RCW  
4 Chapters 78.44 (Surface Mining) and 77.55 (Construction Projects in State Waters).
- 5 4. The proposed subsequent use of mined property shall be consistent with the provisions of the  
6 environment designation in which the property is located. Reclamation of disturbed shoreline  
7 areas shall provide appropriate ecological functions consistent with the setting.
- 8 5. Pursuant to RCW 90.48.615, motorized or gravity siphon aquatic mining or discharge of effluent  
9 from such activity to any waters of the state that has been designated under the endangered  
10 species act as critical habitat, or would impact critical habitat for salmon, steelhead, or bull trout  
11 is prohibited. This section does not apply to:
- 12 a. Aquatic mining using nonmotorized methods, such as gold panning, if the nonmotorized  
13 method does not involve use of a gravity siphon suction dredge;
- 14 b. Mining operations where no part of the operation or discharge of effluent from the  
15 operation is to waters of the state;
- 16 c. Surface mining operations regulated by the State Department of Natural Resources under  
17 Title 78 RCW;
- 18 d. Metals mining and milling operations as defined in chapter 78.56 RCW; or  
19 e. Activities related to an industrial facility, dredging related to navigability, or activities subject  
20 to a clean water act section 404 individual permit.
- 21 ~~a. Mining shall not be permitted in critical areas except as a part of an approved flood control~~  
22 ~~program or in conjunction with a habitat restoration or enhancement plan; provided, that such~~  
23 ~~activities may be permitted where demonstrated to be water dependent. A determination of~~  
24 ~~water dependency shall be based on evaluation of geologic factors such as the distribution and~~  
25 ~~availability of mineral resources for that jurisdiction, as well as evaluation of need for such~~  
26 ~~mineral resources, economic, transportation, and land use factors. This showing may rely on~~  
27 ~~analysis or studies prepared for purposes of GMA designations, be integrated with any relevant~~  
28 ~~environmental review conducted under SEPA (Chapter 43.21C RCW), or otherwise be shown in a~~  
29 ~~manner consistent with RCW 90.58.100(1) and WAC 173-26-201(2)(a).~~
- 30 ~~b. Application for permits for mining operations shall be accompanied by operation plans,~~  
31 ~~reclamation plans and analysis of environmental impacts in accordance with WCC 20.73.700.~~  
32 ~~Such information shall provide sufficient documentation to make a determination as to whether~~  
33 ~~the project will result in net loss of shoreline ecological functions and processes during the~~  
34 ~~course of mining and after reclamation. Creation, restoration, or enhancement of habitat for~~  
35 ~~priority species and the future productivity of the site may be considered in determining no net~~  
36 ~~loss of ecological functions.~~
- 37 ~~c. The applicant/proponent must show that mining is dependent on a shoreline location, and that~~  
38 ~~demand cannot reasonably be accommodated in operations outside shoreline jurisdiction.~~  
39 ~~Information required to meet this criterion shall evaluate geologic factors such as the~~

Comment [CES203]: From RCW 90.48.615.

Comment [AP204]: Covered by CAO.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 distribution and availability of mineral resources as well as evaluation of need for such mineral  
2 resources, economic, transportation, and land use factors.
- 3 ~~d. Where a lawfully established mining operation has resulted in the creation of a lake(s) greater  
4 than 20 acres and such lake(s) is subject to the provisions of the shoreline management program  
5 and the Act, such lake(s) shall be given a resource shoreline area designation. Notwithstanding  
6 any other applicable regulations, such mining operations shall be permitted to continue and  
7 may be expanded subject to approval of a shoreline conditional use permit.~~
- 8 ~~e. Reclamation Plan.~~
- 9 ~~i. A reclamation plan that complies with the format and detailed minimum standards of  
10 Chapter 78.44 RCW shall be included with any shoreline permit application for mining.~~
- 11 ~~ii. A reclamation plan that is inconsistent with this program or the Act shall constitute  
12 sufficient grounds for denial of a shoreline permit; provided, that the applicant/proponent  
13 shall be given reasonable opportunity to revise the plan.~~
- 14 ~~f. Overburden.~~
- 15 ~~i. Overburden or other mining spoil or non-putrescible solid wastes shall be disposed of in an  
16 appropriate manner to protect shoreline ecological functions and processes, other uses, and  
17 aesthetic values.~~
- 18 ~~ii. Disposal of overburden or mining spoil on shorelines shall comply with landfill policies and  
19 regulations of WCC 23.90.100.~~
- 20 ~~g. Surface Oil, Coal Bed or Gas Drilling. As provided in the Act (RCW 90.58.160), surface drilling for  
21 oil or gas is prohibited in the waters of Puget Sound north to the Canadian boundary and the  
22 Strait of Juan de Fuca waterward from OHWM and on all lands within 1,000 feet landward  
23 therefrom. Coal bed drilling is also prohibited.~~
- 24 ~~B. Marine and Lake Shores.~~
- 25 ~~a. Mining of, including but not limited to, sand, gravel, cobbles, or boulders from any marine or  
26 lake shore is prohibited.~~
- 27 ~~b. Mining of quarry rock may be permitted as a conditional use; provided, that shore processes  
28 and resources are not adversely affected.~~
- 29 ~~B. Additional Standards for Rivers and Streams.~~
- 30 1. Mining waterward of the ordinary high-water mark of a river shall not be permitted unless:
- 31 a. Removal of specified quantities of sand and gravel or other materials at specific locations  
32 will not adversely affect the natural processes of gravel transportation for the river system  
33 as a whole; and
- 34 b. The mining and any associated permitted activities will not have significant adverse impacts  
35 to habitat for priority species nor cause a net loss of ecological functions of the shoreline.
- 36 a.c. The determinations required by this section shall be made consistent with RCW  
37 90.58.100(1) and WAC 173-26-201(2)(a). Such evaluation of impacts should be appropriately  
38 integrated with relevant environmental review requirements of SEPA (chapter 43.21C RCW)  
39 and the SEPA rules (chapter 197-11 WAC).

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 | d. In considering renewal, extension, or reauthorization of gravel bar and other in-channel  
2 | mining operations in locations where they have previously been conducted, the County shall  
3 | require compliance with this subsection to the extent that no such review has previously  
4 | been conducted. Where there has been prior review, the County shall review previous  
5 | determinations comparable to the requirements of this section to assure compliance with  
6 | this section under current site conditions.

7 | ~~b.e.~~ The provisions of this section do not apply to dredging of authorized navigation channels  
8 | when conducted in accordance with WCC 23.40.080 (Dredging and Dredge Material  
9 | Disposal).

10 | 2. Mining within any designated channel migration zone (CMZ) may be approved as shall require a  
11 | shoreline conditional use.

12 | ~~1-3.~~ Scalping of accretional point bars may be permitted as a shoreline conditional use for flood  
13 | hazard reduction control purposes and or market demands commercial purposes under the  
14 | following conditions:

- 15 | a. Removal of specified quantities of sand and gravel or other materials at specific locations  
16 | will not adversely affect the natural processes of gravel transportation for the river system  
17 | as a whole. Specific studies accompanying the application shall demonstrate that no adverse  
18 | flood, erosion, or other environmental impacts occur either upstream or downstream of  
19 | extraction sites. Mining extraction amounts, rates, timing, and locations shall be based on a  
20 | scientifically determined sediment budget adjusted periodically according to data provided  
21 | by a regular monitoring plan.
- 22 | b. Aggregate washing and ponding of waste water are prohibited in floodways.
- 23 | c. Storage within the FEMA floodway is prohibited in the shoreline during the flood season  
24 | (November 1<sup>st</sup> through March 1<sup>st</sup>); provided, that temporary stockpiling is permitted during  
25 | working hours if all such materials are removed from the floodway at the end of each day's  
26 | operation.
- 27 | d. All applicable permits and approvals, including, but not limited to, hydraulic project approval  
28 | (HPA) from the Department of Fish and Wildlife and a Whatcom County flood permit, shall  
29 | be obtained and all applicable provisions attached thereto shall be adhered to.

30 | ~~c. Open pit mining may be permitted in a floodplain; provided, that all of the following criteria are~~  
31 | ~~met:~~

- 32 | ~~i. All pits and other operations should be located outside of the channel migration zone.~~
- 33 | ~~ii. All pits of each operation should be located and excavated to a depth so as to function as a~~  
34 | ~~self-flushing chain of lakes whenever the pits are overtopped by floods in order to prevent~~  
35 | ~~eutrophication and fish entrapment.~~
- 36 | ~~iii. The entire operation should be sized and designed so that neither additional bank erosion,~~  
37 | ~~catastrophic changes in channel location, nor adverse impact to fish resources or water~~  
38 | ~~quality will likely result in the long term.~~

Comment [AP205]: Updated for consistency with WAC 173-26-241(3)(h).

Comment [DN206]: Not specifically required by the WAC. Proposed for removal.

# Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 ~~iv. The scale and mode of operation will not have adverse impacts on fish resources, water~~
- 2 ~~quality, and recreation resources, nor adversely impact a stream's natural capacity to erode,~~
- 3 ~~shift, accrete, and/or flood.~~
- 4 ~~v. All equipment, works and structures are designed to withstand flooding without becoming a~~
- 5 ~~hazard in themselves nor causing adverse effects on shore features, without the necessity~~
- 6 ~~for shore stabilization structures.~~
- 7 ~~vi. All structures or equipment which are not flood-proof shall be located outside of the 100-~~
- 8 ~~year floodplain during the flood season (November 1st through March 1st); provided, that~~
- 9 ~~such equipment is permitted during daily operations.~~

## C. Regulations for Specific Shoreline Environment Designations

- 11 1. In the Aquatic shoreline environment mining is prohibited, except that accretional bar scalping
- 12 in streams may be permitted as a shoreline conditional use; provided, that upon approval by the
- 13 County and Ecology of a sediment management plan component for a mutually designated
- 14 reach of river, including incorporating the findings of a programmatic environmental impact
- 15 statement, the shoreline conditional use requirement will no longer be in effect unless mutually
- 16 agreed to in said management plan.

## D. ~~Shoreline Area Regulations.~~

18 ~~Urban. Mining is prohibited.~~

19 ~~Urban Resort. Mining is prohibited.~~

20 ~~Urban Conservancy. Mining is prohibited.~~

21 ~~Shoreline Residential. Mining is prohibited.~~

22 ~~Rural. Mining may be permitted as a conditional use subject to policies and regulations of this program.~~

23 ~~Resource. Mining may be permitted as a conditional use subject to policies and regulations of this~~

24 ~~program.~~

25 ~~Conservancy. Mining may be permitted as a conditional use subject to policies and regulations of this~~

26 ~~program.~~

27 ~~Natural. Mining is prohibited.~~

- 28 1. Aquatic. Mining is prohibited, except that accretional bar scalping in streams may be permitted
- 29 as a conditional use subject to policies and regulations of this program; provided, that upon
- 30 approval by the county and Ecology of a sediment management plan component for a mutually
- 31 designated reach of river, including incorporating the findings of a programmatic environmental
- 32 impact statement, the conditional use requirement will no longer be in effect unless mutually
- 33 agreed to in said management plan.

Comment [CES207]: Moved from removed 'Shoreline Area Regulations.'

Comment [CES208]: Addressed in the use table now.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

### ~~23.4100.130-150~~ **Moorage Structures – Docks, Piers and Mooring Buoys.**

#### ~~A. Policies.~~

- ~~A. Moorage associated with a single family residence is considered a water dependent use; provided, that it is designed and used as a facility to access watercraft, and other moorage facilities are not available or feasible. Moorage for water related and water enjoyment uses or shared moorage for multifamily use should be allowed as part of a mixed use development or where it provides public access.~~
- ~~B. New moorage, excluding docks accessory to single family residences, should be permitted only when the applicant/proponent has demonstrated that a specific need exists to support the intended water dependent or public access use.~~
- ~~C. As an alternative to continued proliferation of individual private moorage, mooring buoys are preferred over docks or floats. Shared moorage facilities are preferred over single user moorage where feasible, especially where water use conflicts exist or are predictable. New subdivisions of more than two lots and new multifamily development of more than two dwelling units should provide shared moorage.~~
- ~~D. Docks, piers and mooring buoys, including those accessory to single family residences, should avoid locations where they will adversely impact shoreline ecological functions or processes, including currents and littoral drift.~~
- ~~E. Moorage should be spaced and oriented in a manner that minimizes hazards and obstructions to public navigation rights and corollary rights thereto such as, but not limited to, fishing, swimming and pleasure boating, as well as private riparian rights of adjacent land owners.~~
- ~~F. Moorage should be restricted to the minimum size necessary to meet the needs of the proposed use. The length, width and height of piers and docks should be no greater than that required for safety and practicality for the primary use.~~
- ~~G. Pile supports are preferred over fills because piles do not displace water surface and intertidal or aquatic habitat and are removable and thus more flexible in terms of long term use patterns. Floats may be less desirable than pile structures where aquatic habitat or littoral drift are significant.~~
- ~~H. The use of buoys for small craft moorage is preferred over pile or float structures because of lesser long term impact on shore features and users; moorage buoys should be placed as close to shore as possible to minimize obstruction to navigation.~~
- ~~I. Shoreline resources and water quality should be protected from overuse by boaters living on vessels (live aboards). Boaters living on vessels are restricted to established marinas with facilities to address waste handling and other sanitary services.~~
- ~~J. Vessels should be restricted from extended mooring on waters of the state unless authorization is obtained from the DNR and impacts to navigation and public access are mitigated.~~
- ~~K. Piers and docks should be constructed of materials that will not adversely affect water quality or aquatic plants and animals in the long term.~~
- ~~L. New pier and dock development should be designed so as not to interfere with lawful public access to or use of shorelines. Developers of new piers and shared moorage should be encouraged to~~

**Comment [AP209]:** Revised per Scoping Document, Items #11a and 11b and includes a general overhaul to include more specifications.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 provide physical or visual public access to shorelines whenever safe and compatible with the  
2 primary use and shore features.
- 3 ~~B. Regulations.~~
- 4 A. General.
- 5 1. This section applies to all moorage structures. Marinas and boat launches are regulated  
6 pursuant to Moorage including docks, piers and mooring buoys in shoreline areas shall be  
7 subject to the policies and regulations of this section and Chapter 23.90 WCC. Shared moorage  
8 with more than four berths and Boat launching facilities are regulated under  
9 WCC 23.40.060-100.040, (~~Boating Facilities—Marinas and Launch Ramps~~).
- 10 2. No pier or dock shall be used for a residence.
- 11 3. Public access facilities shall be regulated pursuant to WCC 23.30.0760 (Public Access).
- 12 4. Commercial moorage shall be permitted only for water-dependent uses, and only if the  
13 applicant/proponent demonstrates that existing facilities in the vicinity, including marinas and  
14 shared moorage, are not adequate or feasible for the proposed water-dependent use.
- 15 5. Commercial covered moorage may be permitted only where vessel construction or repair work  
16 is to be the primary activity and covered work areas are demonstrated to be the minimum  
17 necessary over water, including demonstration that adequate upland sites are not feasible.
- 18 6. Moorage structures shall not be permitted within the following shoreline habitats because of  
19 their scarcity, biological productivity, and sensitivity:
- 20 a. Feeder bluffs and accretion shoreforms;
- 21 b. Marshes and other wetlands;
- 22 c. Kelp and eelgrass beds; and,
- 23 d. Areas of high energy or shallow sloping bottoms (<2% gradient) in the marine environment.
- 24 7. Moorage structures shall not be permitted within the following shoreline habitats because of  
25 their scarcity, biological productivity, and sensitivity unless no alternative location is feasible,  
26 the project would result in a net enhancement of shoreline ecological functions, and the  
27 proposal is otherwise consistent with this program:
- 28 a. Estuaries;
- 29 b. Tidal pools on rock shores;
- 30 c. Spawning and holding areas for forage fish (such as herring, surf smelt and sandlance);
- 31 d. Subsistence, commercial and recreational shellfish beds; and
- 32 e. Other critical saltwater or freshwater habitats.
- 33 8. Other than for day use, all vessels mooring on waters of the state must obtain a lease or  
34 permission from the State Department of Natural Resources, except as allowed by applicable  
35 state regulations.
- 36 9. ~~No moorage shall impact the rights of navigation or public access, unless mitigated.~~
- 37 ~~10.~~ 10. When there is not a moorage structure, marine rails are permissible, but shall be  
38 supported with as few piles as practicable.
- 39 B. Dimensional Standards—~~Freshwater.~~

**Comment [CES210]:** Revised per Scoping Document, Item #8c. This language is carried over from an existing regulation in the Boating Facilities section of the SMP related to marinas and boat launches.

**Comment [CES211]:** Added per DOE recommendation.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 | 1. Freshwater – New overwater Moorage structures in freshwater environments may be  
2 permitted, subject to the following:  
3

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

Design and Dimensional Standards	
<u>Maximum Area: surface coverage, including all attached float decking, platform lifts, covered moorage, ramps, ells, and fingers</u>	<ul style="list-style-type: none"> <li>• 480 sq. ft. for an individual use dock or pier</li> <li>• 700 sq. ft. for a shared moorage facility used by 2 residential property owners</li> <li>• 1,000 sq. ft. for a shared moorage facility used by 3 or more residential property owners</li> <li>• Public and commercial moorage structures shall be limited to the minimum area needed to accommodate the intended use.</li> <li>• These area limitations shall include platform lifts</li> <li>• Where a pier or dock cannot reasonably be constructed under the area limitation above to obtain a moorage depth of 5.5 feet measured below ordinary high water mark, an additional 4 sq. ft. of area may be added for each additional foot of pier or dock length needed to reach 5.5 feet of water depth at the waterward end of the pier or dock; provided, that all other area dimensions, such as maximum width and length, have been minimized.</li> </ul>
<u>Maximum Width</u>	<ul style="list-style-type: none"> <li>• For moorage structures accessory to a residential use:                             <ul style="list-style-type: none"> <li>○ 4 feet for pier or dock walkway or ramp</li> <li>○ 6 feet for ells</li> <li>○ 2 feet for fingers</li> <li>○ 6 feet for float decking</li> </ul> </li> <li>• Public and marina moorage structures shall be a maximum of 6 feet for all elements unless a need for a larger size is demonstrated</li> </ul>
<u>Height</u>	<ul style="list-style-type: none"> <li>• Minimum of 1.5 feet above ordinary high water to bottom of pier stringers, except the floating section of a dock and float decking attached to a pier</li> </ul>
<u>Maximum Length</u> ○ Marine Rails ○ Floats  ○ Overall Dock Length	<ul style="list-style-type: none"> <li>• 20 feet waterward from the ordinary high water mark</li> <li>• 20 feet per user (e.g. single user – 20 feet, 2-users – 40 feet, etc.)<del>for float decking</del></li> <li>• Minimum necessary to obtain a moorage depth of 5.5 feet measured below ordinary high watermark at the waterward end of the dock.</li> </ul>
<u>Decking for piers, docks, walkways, platform lifts, ells, and fingers</u>	<ul style="list-style-type: none"> <li>• Floats 6 feet wide or less must have at least 30% of the deck surface covered in functional grating</li> <li>• Floats greater than 6 feet wide must have at least 50% of the deck surface covered in functional grating</li> <li>• All other dock components must have 100% of the deck surface covered in functional grating</li> <li>• The open area of functional grating must be at least 60%</li> <li>• Replacement of more than 33% or 250 sq. ft., whichever is greater, of decking or replacement of decking substructure requires installation of functional grating in the replaced portion only</li> </ul>

- 1
- 2 C. ~~Dimensional Standards – Marine:~~
- 3 1-2. ~~Marine – New overwater Moorage~~ structures in marine environments may be permitted, subject
- 4 to the following; provided that port, industrial, and commercial piers and floats shall be the
- 5 minimum area, length, and width necessary for the intended use:

Design and Dimensional Standards	
<u>Maximum Area: surface coverage, including all <del>componants</del></u>	<ul style="list-style-type: none"> <li>• 480 sq. ft. for an individual use dock or pier</li> <li>• 700 sq. ft. for a shared moorage facility used by 2 residential property owners</li> <li>• 1,000 sq. ft. for a shared moorage facility used by 3 or more residential property owners</li> </ul>

**Comment [CES212]:** Standards updated to meet the requirements of the Army Corps of Engineers' Regional General Permit 6 (RGP-6): Structures in Inland Marine Waters of Washington State, updated 2/12/20.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

	<ul style="list-style-type: none"> <li>Where a pier or dock cannot reasonably be constructed under the area limitation above to obtain a moorage depth of -9.5 feet mean low low water as measured at the waterward end of the dock, an additional 4 sq. ft. of area may be added for each additional foot of pier or dock length needed to reach -9.5 feet mean low low water as measured at the waterward end of the pier or dock; provided, that all other area dimensions, such as maximum width and length, have been minimized</li> </ul>
<b>Maximum Width</b>	<ul style="list-style-type: none"> <li>For moorage structures accessory to a residential use:                             <ul style="list-style-type: none"> <li>4 feet for single use or 6 feet for joint use for pier or dock walkway or ramp</li> <li>6 feet for ells</li> <li>2 feet for fingers</li> <li>8 feet for float decking</li> <li>For a joint use structure pier – 86 feet</li> </ul> </li> <li>Public and marina moorage structures shall be a maximum of 6 feet for all elements unless a need for a larger size is demonstrated</li> </ul>
<b>Height</b>	<ul style="list-style-type: none"> <li>Maximize height over the bed to improve light transmission</li> <li>The bottom of the pier must be at least six feet above the bed at the landward end</li> </ul>
<b>Maximum Length</b>	<ul style="list-style-type: none"> <li>Marine Rails – 20 feet</li> <li>Floats – 30 feet per user (e.g., single-user – 30 feet, 2-users – 60 feet, etc)</li> <li>Overall Dock Length – Minimum necessary to obtain a moorage depth of -9.5 feet mean low low water as measured at the waterward end of the dock.</li> </ul>
<b>Decking</b>	<ul style="list-style-type: none"> <li>Floats must have at least 50% of the deck surface covered in functional grating.</li> <li>Piers, stairs, ramps, and platform lifts must have 100% of the deck surface covered in functional grating</li> <li>Grating openings should be oriented lengthwise in the eastwest direction to the maximum extent practicable.</li> <li>Grating must not be covered (on the surface or underneath) with any items (e.g., kayaks, planters, sheds, lawn chairs, etc.) except utility boxes.</li> <li>Grating must be either multi-directional grating with a minimum of 40% open space or square grating with a minimum of 60% open space. Provide documentation to show amount of % open area.</li> <li>Replacement of more than 10% or 48 sq. ft. of decking or replacement of decking substructure requires installation of functional grating in the replaced portion only</li> </ul>

**Comment [DOE-Req213]:** Required Change – This change removes the ambiguous reference to an 8-foot maximum associated with joint use structures. After consultation with Whatcom County PDS staff, these changes clarify the original intent that the 8-foot width maximum applied to joint-use residential moorage structures. Staff also suggested limiting the maximum width of such structures to 6-feet.

**Comment [CES214]:** Revised based on USACE standards.

- 1 | **C. Construction Standards for ~~Overwater~~-Moorage Structures.**
- 2 | 1. Piers and docks shall be the minimum size necessary to meet the needs of the proposed water-
- 3 | dependent use, ~~and shall observe the following criteria:~~
- 4 | 2. ~~Piers and docks~~Moorage structures shall be constructed of materials that will not adversely
- 5 | affect water quality or aquatic plants and animals over the long term. Materials used for
- 6 | submerged portions of a pier or dock, decking and other components that may come in contact
- 7 | with water shall be approved by applicable state agencies for use in water to avoid discharge of
- 8 | pollutants from wave splash, rain or runoff. Wood treated with creosote, pentachlorophenol or
- 9 | other similarly toxic materials is prohibited. Piers and docks in lakes providing a public water
- 10 | supply shall be constructed of untreated materials, such as untreated wood, approved plastic
- 11 | composites, concrete or steel.
- 12 | 3. Piers and docks shall use pile supports unless engineering studies demonstrate that pile
- 13 | supports are insufficient to ensure public safety. Riprapped or bulkheaded fills may be approved

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 | for public projects only and only as a shoreline conditional use and only when demonstrated  
2 | that no feasible alternative is available. Mitigation shall be provided to ensure no net loss of  
3 | shoreline ecological functions and processes.
- 4 | 4. Approaches to piers and docks shall use piers or other structures to span the entire upper  
5 | foreshore to the point of intersection with stable upland soils and shall be design to avoid  
6 | interference with littoral drift or wave refraction. Limited fill or excavation may be allowed  
7 | landward of the OHWM to match the upland with the elevation of the pier or dock.
- 8 | 5. Pile diameter shall be the minimum necessary and pile spacing shall be the maximum feasible to  
9 | minimize shading and avoid a “wall” effect that would block or baffle wave patterns, currents,  
10 | littoral drift, or movement of aquatic life forms, or result in structure damage from driftwood  
11 | impact or entrapment. ~~Piles supporting a new pier must be spaced no closer than 20 feet apart.~~
- 12 | ~~5-6.~~ Offshore and foreshore pile structures shall allow for continuity of hydraulic energy patterns,  
13 | unless specifically designed to reduce wave impact on shores.
- 14 | 7. Flotation for the float shall be fully enclosed and contained in a shell (e.g., polystyrene tubs not  
15 | shrink wrapped or sprayed coatings) that prevents breakup or loss of the flotation material into  
16 | the water and is not readily subject to damage by ultraviolet radiation and/or abrasion caused  
17 | by rubbing against piling and/or waterborne debris.
- 18 | 8. Flotation components shall be installed under the solid portions of the float, not under the  
19 | grating.
- 20 | 9. If the project includes the replacement of existing piling, they should be either partially cut with  
21 | a new piling secured directly on top, fully extracted, or cut 2 feet below the mudline. If treated  
22 | piling are fully extracted or cut, the holes or piles must be capped with clean, appropriate  
23 | material.
- 24 | ~~6-10.~~ A maximum of two moorage pilings may be installed to accommodate the moorage of  
25 | boats exceeding the length of the floats.
- 26 | 11. Overhead wiring or plumbing is not permitted on moorage structures.
- 27 | 12. Moorage facilities shall be marked with reflectors, or otherwise identified to prevent  
28 | unnecessarily hazardous conditions for water surface users during the day or night. Exterior  
29 | finish shall be generally non-reflective.
- 30 | 13. Moorage facilities shall be constructed and maintained so that no part of a facility creates  
31 | hazardous conditions nor damages other shore property or natural features during predictable  
32 | flood conditions. Floats shall be securely anchored.
- 33 | 14. Water supply, sewage disposal and disposal of nonhazardous materials associated with activities  
34 | on docks and piers shall conform to applicable health standards.
- 35 | 15. No private or shared moorage may be constructed to within 200 feet of OHWM on the opposite  
36 | shore of any lake or semi-enclosed body of water such as a bay, cove, or natural channel. This  
37 | restriction shall not apply within marinas, dredged canal systems or approved marina-home  
38 | developments.
- 39 | 16. Storage of fuel, oils, and other toxic materials is prohibited on docks and piers except portable  
40 | containers when provided with secondary containment.

**Comment [AP215]:** Added per Scoping Document, Item #5e. This provision is consistent with WAC requirements to require a CUP for any fill waterward of the OHWM.

**Comment [CES216]:** Updated to meet the requirements of the Army Corps of Engineers' Regional General Permit 6 (RGP-6): Structures in Inland Marine Waters of Washington State, updated 2/12/20.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 17. The width of landings, stairways, or steps must not exceed 4 feet for single-use and 6 feet for  
2 joint-use.
- 3 18. Additional standards for marine moorage sturctures:
- 4 a. Floats may be held in place with lines anchored with a helical screw or “duckbill” embedded  
5 anchor, piles with stoppers and/or float support/stub piles. (1) For a single-user float, a  
6 maximum of 4 piles (not including stub piles) or embedded anchors may be installed. (2) For  
7 a joint-use float, a maximum of 8 piles (not including stub piles) or embedded anchors may  
8 be installed. (3) If embedded anchors need to be utilized, the anchor lines shall not rest on  
9 the substrate at any time; each must contain a mid-line float. (4) Only if the substrate  
10 prohibits use of piles or embedded anchors may a Corps-approved alternative be used. (5) If  
11 a concrete anchor or other Corps-approved alternative is needed to hold the float,  
12 calculations showing that it will hold without dragging or breaking during storm events are  
13 required. This analysis should include the size of the float and the dry weight and  
14 dimensions of the anchor.
- 15 b. If the float is positioned perpendicular to the ramp, a small access float may be installed to  
16 accommodate tidal movement of the ramp. The access float cannot be larger than 6 feet  
17 wide and 10 feet long.
- 18 c. No floats may be installed in the Upper Shore Zone (area landward of +5 MLLW).
- 19 d. Float Stops:
- 20 i. To suspend the float above the substrate at all tides, float stops should be installed on  
21 piles anchoring floats. This method is preferred over (d)(ii) and(d)(iii) because float  
22 stops are less impacting to the marine environment.
- 23 ii. If float stops attached to piles are not feasible (provide explanation) then up to four  
24 10-inch diameter stub piles may be installed.
- 25 iii. Float “feet” attached to the float are an option if the substrate consists of coarse  
26 material as described in the column to the right
- 27 19. Additional standards for marine mooring buoys:
- 28 a. Mooring buoys shall be placed at a distance specified by the Washington Department of Fish  
29 and Wildlife, the Washington Department of Natural Resources, and the U.S. Coast Guard to  
30 balance the goals of avoiding nearshore habitat and minimizing obstruction to navigation.  
31 Anchor and other design features shall meet Washington Department of Fish and Wildlife  
32 standards.
- 33 b. The location (latitude/longitude) of the anchor for the buoy must be identified on the  
34 project drawings.
- 35 c. Anchor lines must not rest or drag on the substrate, and a midline float must be installed to  
36 prevent this.
- 37 d. Anchors should be helical screw or another type of embedded anchor. Only if the substrate  
38 prohibits use of embedded anchors may alternative anchors (i.e., concrete block) be used. If  
39 an embedded anchor cannot be used and a concrete anchor is needed, calculations showing  
40 that the anchor will hold without dragging or breaking during storm events is required. This

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 analysis should include the size of the vessel and the dry weight and dimensions of the  
2 anchor.
- 3 e. No other moorage structures may be anchored within a 117-foot radius (with the proposed  
4 buoy in the center of the 117-foot radius circle, which would result in a concentration of no  
5 more than one per acre) of the proposed buoy.
- 6 f. New mooring buoys may not be installed in any waterbody the Washington State  
7 Department of Health has designated as “threatened” or “closed” to shellfish harvesting due  
8 to the number of boats moored there.
- 9 ~~D. Private recreational moorage for individual lots is permitted in existing subdivisions approved on or~~  
10 ~~before January 28, 1993, only where shared moorage has not already been developed. Prior to~~  
11 ~~development of a new dock for a single residential lot, the applicant/proponent shall demonstrate~~  
12 ~~that:~~
- 13 ~~E. Existing facilities in the vicinity, including marinas and shared moorage, are not adequate or feasible~~  
14 ~~for use;~~
- 15 ~~F. On marine shorelines, alternative moorage, such as mooring buoys or a dock sized to accommodate~~  
16 ~~a tender to provide access in conjunction with a mooring buoy, are not adequate or feasible; and~~
- 17 ~~G. The applicant/proponent has contacted abutting property owners and none have indicated a~~  
18 ~~willingness to share an existing dock or develop a shared moorage in conjunction with the~~  
19 ~~applicant/proponent.~~
- 20 ~~H. If allowed, only one private dock shall be permitted on a shoreline residential lot.~~
- 21 ~~I. Shared moorage shall be required in accordance with the following to prevent the proliferation of~~  
22 ~~moorage facilities:~~
- 23 ~~J. Shared moorage shall be provided for all new residential developments of more than two dwelling~~  
24 ~~units. New subdivisions shall contain a restriction on the face of the plat prohibiting individual docks.~~  
25 ~~A site for shared moorage should be owned in undivided interest by property owners within the~~  
26 ~~subdivision. Shared moorage facilities shall be available to property owners in the subdivision for~~  
27 ~~community access and may be required to provide public access depending on the scale of the~~  
28 ~~facility. If shared moorage is provided, the applicant/proponent shall file at the time of plat~~  
29 ~~recordation a legally enforceable joint use agreement or other legal instrument that, at minimum,~~  
30 ~~addresses the following:~~
- 31 ~~K. Apportionment of construction and maintenance expenses;~~
- 32 ~~L. Easements and liability agreements; and~~
- 33 ~~M. Use restrictions.~~
- 34 ~~N. On marine shorelines a dock or pier may be approved only if it is not feasible to provide mooring~~  
35 ~~buoys with an adequate landing area or a dock sized to accommodate tenders.~~
- 36 ~~O. Where a multifamily residential development, camping club or subdivision development provides~~  
37 ~~shared moorage, space for the number of waterfront lots or dwelling units may be provided with an~~  
38 ~~additional provision for sites without water frontage up to a ratio of 1.25 moorage spaces per total~~  
39 ~~lots or units.~~

**Comment [CES217]:** Added to meet the requirements of the Army Corps of Engineers' Regional General Permit 6 (RGP-6): Structures in Inland Marine Waters of Washington State, updated 2/12/20.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 P. ~~Prior to issuing a permit for shared moorage, a proponent shall file with the Whatcom County~~  
2 ~~auditor a legally enforceable joint use agreement that, at minimum, addresses the following:~~
- 3 Q. ~~Apportionment of construction and maintenance expenses;~~
- 4 R. ~~Easements and liability agreements; and~~
- 5 S. ~~Use restrictions.~~
- 6 T. ~~Commercial docks shall be permitted only for water dependent uses, and only if the~~  
7 ~~applicant/proponent demonstrates that existing facilities in the vicinity, including marinas and~~  
8 ~~shared moorage, are not adequate or feasible for the proposed water dependent use.~~
- 9 U. ~~Private moorage for float planes may be permitted as a conditional use where construction will not~~  
10 ~~adversely affect shoreline functions or processes, including wildlife use. Ecological restoration may~~  
11 ~~be required to compensate for the greater intensity of activity associated with the use.~~
- 12 V. ~~If allowed under the provisions of this program, only one private dock with one accessory float, one~~  
13 ~~boat lift, and one covered moorage accessory to a permitted moorage, shall be permitted on a~~  
14 ~~shoreline lot owned for residential or private recreational use.~~
- 15 W. ~~Docks with or without a float shall be the minimum size required to provide for moorage. Single-~~  
16 ~~family docks and floats shall not exceed 40 feet in length measured perpendicularly from the OHWM~~  
17 ~~nor exceed three feet in height above the extreme high water level. Shared moorage may extend to~~  
18 ~~80 feet in length if demonstrated to be necessary to provide adequate moorage. In the case of pile~~  
19 ~~docks at marine or river locations, the height shall be limited to that which may be reasonably~~  
20 ~~necessary to accommodate landing and moorage of watercraft. Commercial docks shall be the~~  
21 ~~minimum length necessary to serve the type of vessel served.~~
- 22 X. ~~Private docks up to 60 feet in length or shared moorage up to 100 feet in length measured~~  
23 ~~perpendicularly from the OHWM, including floats, may be permitted by the administrator in shallow~~  
24 ~~areas where a dock sized to accommodate a tender to provide access to a mooring buoy is not~~  
25 ~~feasible and where existing docks on adjacent properties presently extend out as far as that which is~~  
26 ~~proposed, and where such added length is necessary in order to allow a reasonable use of the dock,~~  
27 ~~as determined based upon adjacent uses; and where the extension in dock length will not adversely~~  
28 ~~affect ecological processes and functions, provided the required dock length is the minimum~~  
29 ~~necessary to achieve such purposes. Docks that cannot reasonably meet this standard may request a~~  
30 ~~review under the variance provisions of this program.~~
- 31 Y. ~~Moorage shall be designed to avoid the need for maintenance dredging. The moorage of a boat~~  
32 ~~larger than provided for in the original moorage design shall not be grounds for approval of d~~
- 33 Z. ~~In order to minimize impacts on nearshore areas and avoid reduction in ambient light level:~~
- 34 AA. ~~The width of piers, docks and floats shall be the minimum necessary and shall not exceed four feet~~  
35 ~~in width, except where specific information on use patterns justifies a greater width. Marine floats~~  
36 ~~shall not exceed eight feet in width nor 40 feet in length and freshwater floats shall not exceed six~~  
37 ~~feet in width and 20 feet in length unless authorized by a variance. Exceptionally large vessels or~~  
38 ~~vessels that require a relatively deep draft may be required to use a buoy, other alternative mooring~~  
39 ~~scheme, or to moor in a marina. Materials that will allow light to pass through the deck may be~~  
40 ~~required where width exceeds four feet.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 ~~BB.~~ Dock surfaces designed to allow maximum light penetration shall be used on walkways or  
2 gangplanks in nearshore areas.
- 3 ~~CC.~~ Piers, docks and floats shall be located along a north/south orientation to the maximum extent  
4 feasible.
- 5 ~~DD.~~ Private docks shall not encroach into the required sideyard setbacks for residential development  
6 (both onshore and offshore); provided, that a shared moorage may be located adjacent to or upon a  
7 side property line of the affected properties upon filing of an easement agreement or other legal  
8 instrument by the affected property owners.
- 9 ~~EE.~~ Dock and Pier Design.
- 10 ~~FF.~~ Moorage buoys shall be placed at a distance specified by the Washington Department of Fish and  
11 Wildlife, the Washington Department of Natural Resources, and the U.S. Coast Guard to balance the  
12 goals of avoiding nearshore habitat and minimizing obstruction to navigation. Anchors and other  
13 design features shall meet Washington Department of Fish and Wildlife standards.
- 14 ~~GG.~~ A covered moorage accessory to a single family pier or dock, not accessory to a marina, shall have  
15 no walls other than an open structural framework to support a roof and shall not cover more than  
16 200 square feet nor exceed 15 feet in height above OHWM. Roof materials shall be translucent, or  
17 at least 50 percent clear skylights.
- 18 ~~HH.~~ Commercial covered moorage may be permitted only where vessel construction or repair work is to  
19 be the primary activity and covered work areas are demonstrated to be the minimum necessary  
20 over water, including demonstration that adequate upland sites are not feasible.
- 21 ~~II.~~ No private or shared moorage may be constructed to within 200 feet of OHWM on the opposite  
22 shore of any lake or semi enclosed body of water such as a bay, cove, or natural channel. This  
23 restriction shall not apply within marinas, dredged canal systems or approved marina-home  
24 developments.
- 25 ~~JJ.~~ If a dock is provided with railing, such railing shall not exceed 36 inches in height and shall be an  
26 open framework that does not unreasonably interfere with shoreline views of adjoining properties  
27 or lawful use of water surface
- 28 ~~KK.~~ Water supply, sewage disposal and disposal of nonhazardous materials associated with activities on  
29 docks and piers shall conform to applicable health standards.
- 30 ~~LL.~~ Moorage facilities shall be marked with reflectors, or otherwise identified to prevent unnecessarily  
31 hazardous conditions for water surface users during the day or night. Exterior finish shall be  
32 generally non reflective.
- 33 ~~MM.~~ Moorage facilities shall be constructed and maintained so that no part of a facility creates  
34 hazardous conditions nor damages other shore property or natural features during predictable flood  
35 conditions. Floats shall be securely anchored.
- 36 ~~NN.~~ No pier or dock shall be used for a residence.
- 37 ~~OO.~~ Storage of fuel, oils, and other toxic materials is prohibited on docks and piers except portable  
38 containers when provided with secondary containment.
- 39 ~~PP.~~ Public access facilities shall be provided in accordance with policies and regulations in  
40 WCC 23.90.080.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

### D. Additional Standards for Individual use docks and piersMoorage.

1. An individual use dock may consist of one pier, one float or platform lift, one boat lift, and one covered moorage.
2. When allowed under the provisions of this program, only one private dock shall be permitted as an accessory use to a primary use.
3. Private recreational moorage for individual lots is permitted in subdivisions approved on or before January 28, 1993, only where shared moorage has not already been developed.
4. Prior to development of a new dock for a single residential lot, the applicant/proponent shall demonstrate that:
  - a. Existing facilities in the vicinity, including marinas and shared moorage, are not adequate or feasible for use;
  - b. Alternative moorage, such as mooring buoys or a dock or marine rail system sized to accommodate a tender to provide access in conjunction with a mooring buoy, are not adequate or feasible; and
  - c. The applicant/proponent has contacted abutting property owners and none have indicated a willingness to share an existing dock or develop a shared moorage in conjunction with the applicant/proponent.
5. Private moorage for float planes may be permitted as a shoreline conditional use where construction will not adversely affect shoreline functions or processes, including wildlife use. Ecological restoration may be required to compensate for the greater intensity of activity associated with the use.
6. Private docks shall not encroach into the required sideyard setbacks for residential development (both onshore and offshore).
- ~~4~~7. Covered moorage accessory to a single-family pier or dock shall have no walls other than an open structural framework to support a roof and shall not cover more than 200 square feet nor exceed 15 feet in height above OHWM. Roof materials shall be translucent, or at least 50 percent clear skylights.

### E. Additional Standards for Shared Moorage.

1. When allowed under the provisions of this program, a shared moorage dock may be permitted for multiple users. Such docks may consist of one pier and multiple floats or platform lifts, boat lifts, and covered moorages, not to exceed the number of authorized users nor the total maximum area allowed per WCC 23.40.140(B).
2. Shared moorage shall be required in accordance with the following to prevent the proliferation of moorage facilities:
  - a. Shared moorage shall be provided for all residential developments of more than two dwelling units.
  - b. Subdivisions shall contain a restriction on the face of the plat prohibiting individual docks.
  - c. Shared moorage facilities shall be available to property owners in the subdivision for community access and may be required to provide public access depending on the scale of

**Comment [CES218]:** Updated to meet current state and federal regs & guidance

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 the facility. A site for shared moorage should be owned in undivided interest by property  
2 owners within the subdivision.
- 3 d. If shared moorage is provided, the applicant/proponent shall file at the time of plat  
4 recordation a legally enforceable joint use agreement or other legal instrument that, at  
5 minimum, addresses the following:
- 6 i. Apportionment of construction and maintenance expenses;  
7 ii. Easements and liability agreements; and  
8 iii. Use restrictions.
- 9 e. On marine shorelines a dock or pier may be approved only if it is not feasible to provide  
10 mooring buoys with an adequate landing area or a dock or marine rail system sized to  
11 accommodate tenders.
- 12 f. Where a new multifamily residential, camping club, or subdivision development proposes to  
13 provide shared moorage, space for the number of waterfront lots or dwelling units may be  
14 provided with an additional provision for sites without water frontage up to a ratio of 1.25  
15 moorage spaces per total lots or units. This provision does not apply to existing  
16 developments.
- 17 3. Shared moorage shall be limited to the amount of moorage needed to serve lots with water  
18 frontage; provided, that a limited number of upland lots may also be accommodated.  
19 Applications for shared moorage shall demonstrate that mooring buoys are not feasible prior to  
20 approval of dock moorage. Shared moorage currently leased or proposed to be leased to upland  
21 property owners shall be reviewed as a marina.
- 22 4. Shared moorage may be located adjacent to or upon a side property line of the affected  
23 properties upon filing of an easement agreement or other legal instrument by the affected  
24 property owners.
- 25 C. Shoreline Area Regulations:
- 26 A. Urban. Private and shared moorage are permitted subject to policies and regulations of this  
27 program. Public, commercial and industrial moorage, including expansion of existing piers, and  
28 covered moorage or floatplane moorage accessory to a permitted moorage may be permitted as  
29 a conditional use.
- 30 B. Urban Resort. Private, shared and public moorage, and covered moorage or floatplane moorage  
31 accessory to a permitted moorage, may be permitted as a conditional use subject to the policies  
32 and regulations of this program. Commercial moorage is prohibited, except piers serving small  
33 passenger vessels may be permitted as a conditional use. Industrial moorage is prohibited.
- 34 C. Urban Conservancy. Private and shared moorage on non marine shorelines are permitted  
35 subject to policies and regulations of this program. Private and shared moorage on marine  
36 shorelines, other than constructed marinas or canals, may be permitted as a conditional use.  
37 Public and commercial moorage, including the expansion of existing piers, and floatplane  
38 moorage accessory to a permitted moorage may be permitted as a conditional use. Industrial  
39 and covered moorage are prohibited.

Comment [CES219]: Addressed by use table now.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 ~~D. Shoreline Residential. Private and shared moorage are permitted subject to policies and~~  
2 ~~regulations of this program. Public and commercial moorage, including expansion of existing~~  
3 ~~piers, and covered moorage or floatplane moorage accessory to a permitted moorage may be~~  
4 ~~permitted as a conditional use. Industrial moorage is prohibited.~~
- 5 ~~E. Rural. Private and shared moorage are permitted subject to policies and regulations of this~~  
6 ~~program. Public, industrial and commercial moorage, including expansion of existing piers, and~~  
7 ~~floatplane moorage accessory to a permitted moorage may be permitted as a conditional use.~~  
8 ~~Covered moorage is prohibited.~~
- 9 ~~F. Resource. Private and shared moorage are permitted subject to policies and regulations of this~~  
10 ~~program. Public, industrial and commercial moorage, including expansion of existing piers, and~~  
11 ~~floatplane moorage accessory to a permitted moorage may be permitted as a conditional use.~~  
12 ~~Covered moorage is prohibited.~~
- 13 ~~G. Conservancy. Private and shared moorage on nonmarine shorelines are permitted subject to~~  
14 ~~policies and regulations of this program. Private and shared moorage on marine shorelines,~~  
15 ~~other than constructed marinas or canals, may be permitted as a conditional use. Public and~~  
16 ~~commercial moorage, including the expansion of existing piers, and floatplane moorage~~  
17 ~~accessory to a permitted moorage may be permitted as a conditional use. Industrial and covered~~  
18 ~~moorages are prohibited.~~
- 19 ~~H. Natural. Moorage is prohibited, except public access, interpretive or nature observation facilities~~  
20 ~~that are compatible with the area's physical and visual character may be conditionally permitted~~  
21 ~~subject to policies and regulations of this program. Covered and floatplane moorage are~~  
22 ~~prohibited.~~
- 23 ~~I. Aquatic. Moorage is permitted, subject to the use and development regulations of the abutting~~  
24 ~~upland shoreline area designation. Unless authorized by WA DNR or its designees, extended~~  
25 ~~moorage longer than 60 consecutive days in one location shall be considered an obstruction~~  
26 ~~which interferes with the normal public use of the surface of the waters of the state, and is~~  
27 ~~prohibited.~~

### **23.4100.140-160 Recreation.**

28 Shoreline recreation shall be subject to the policies and regulations of this section and  
29 Chapter 23.90 WCC.

#### **A. Policies.**

30  
31  
32 A. Shoreline recreational development should be given priority for shoreline location to the extent that  
33 the use facilitates the public's ability to reach, touch, and enjoy the water's edge, to travel on the  
34 waters of the state, and to view the water and the shoreline. Where appropriate, such facilities  
35 should be dispersed along the shoreline in a manner that supports more frequent recreational  
36 access and aesthetic enjoyment of the shoreline for a substantial number of people.

37 B. Recreational developments should facilitate appropriate use of shoreline resources while conserving  
38 them. These resources include, but are not limited to: accretion shoreforms, wetlands, soils, ground  
39 water, surface water, native plant and animal life, and shore processes.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 ~~C. Recreational development requiring extensive structures, utilities and roads and/or substantial~~  
2 ~~modifications of topography or vegetation removal should not be located or expanded in areas~~  
3 ~~where damage to persons, property, and/or shoreline functions and processes is likely to occur.~~  
4 ~~D. Recreational developments and plans should provide the regional population a varied and balanced~~  
5 ~~choice of recreation experiences in appropriate locations. Public agencies and private developers~~  
6 ~~should coordinate their plans and activities to provide a wide variety of recreational opportunities~~  
7 ~~without needlessly duplicating facilities.~~  
8 ~~E. Trail links between shoreline parks and public access points should be encouraged for walking,~~  
9 ~~horseback or bicycle riding and other non-motorized vehicle access where appropriate. The~~  
10 ~~Whatcom County Comprehensive Park and Recreation Open Space Plan should be considered in~~  
11 ~~design and approval of public trail systems.~~  
12 ~~F. Access to natural character recreational areas, including but not limited to beaches and fishing~~  
13 ~~streams, should be a combination of linear shoreline trails or easements and small parking or access~~  
14 ~~tracts to minimize user concentration on small portions of the shoreline.~~  
15 ~~G. Recreation facilities should incorporate public education regarding shoreline ecological functions~~  
16 ~~and processes, the role of human actions on the environment and the importance of public~~  
17 ~~involvement in shorelines management. Opportunities incorporating educational and interpretive~~  
18 ~~information should be pursued in design and operation of recreation facilities and nature trails.~~  
19 ~~H. Reasonable physical or visual public access to shorelines should be provided and integrated with~~  
20 ~~recreational developments in accordance with WCC 23.90.080.~~  
21 ~~I. Recreation development should be located only where utility and road capability is adequate, or~~  
22 ~~may be provided without significant damage to shore features commensurate with the number and~~  
23 ~~concentration of anticipated users.~~  
24 ~~J. Cooperative efforts among public and private persons toward the acquisition and/or development~~  
25 ~~of suitable recreation sites or facilities should be explored to assure long-term availability of~~  
26 ~~sufficient public sites to meet local recreation needs.~~  
27 ~~B. Regulations. Where significant adverse impacts are adequately mitigated, recreational development~~  
28 ~~is a priority use for shoreline location, subject to the following:~~  
29 A. General.  
30 1. Water-related and water-enjoyment uses ~~do shall~~ not displace water-dependent uses ~~and are~~  
31 ~~consistent with existing water-related and water-enjoyment uses.~~  
32 2. Activities provided by recreational facilities must bear a substantial relationship to the shoreline,  
33 or provide physical or visual access to the shoreline. Facilities for water-dependent recreation  
34 such as fishing, clam digging, swimming, boating, and wading, and water-related recreation such  
35 as picnicking, hiking, and walking should be located near the shoreline, while non-water-related  
36 recreation facilities shall be located inland.  
37 3. Recreation areas or facilities ~~on the shoreline~~ shall provide physical or visual public access  
38 consistent with the criteria of WCC 23.30.06090-080 (Public Access).  
39 4. Recreational facilities with large grass areas, such as golf courses and playing fields, and facilities  
40 with extensive impervious surfaces shall incorporate means to prevent erosion, control the

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 amount of runoff, and prevent harmful concentrations of chemicals and sediment from entering  
2 waterbodies in accordance with the ~~policies and~~ regulations of WCC 23.390.0340 (Water Quality  
3 and Quantity).

4 5. Recreational use of motor vehicles including unlicensed off-road vehicles is permitted only on  
5 roads or trails specifically designated for such use. Such use is prohibited on tidelands,  
6 backshore beaches, streams, or wetlands; except as necessary for public health and safety or  
7 maintenance.

8 6. Trails shall meet the requirements of WCC Chapter 16.16 (Critical Areas).

### 9 B. Regulations for Specific Shoreline Environment Designations.

10 1. In the Urban Conservancy shoreline environment, low intensity water-oriented recreational use  
11 and development is permitted subject to the following criteria:

12 a. Structures will not result in more than 10 percent building coverage or 4,000 square feet,  
13 whichever is greater, and total impervious surface will not exceed 20 percent, or 10,000  
14 square feet, whichever is greater.

15 b. Alteration of topography shall be limited to the minimum necessary to accommodate  
16 allowed development, and generally less than 30 inches.

17 c. Use of areas or facilities will not result in use patterns that lead to degradation of shoreline  
18 ecological functions.

19 2. In the Resource shoreline environment, low intensity water-oriented recreational use and  
20 development is permitted; provided, that no designated agricultural or forest resource lands of  
21 long-term significance are displaced.

22 3. In the Conservancy shoreline environment, low intensity water-oriented recreational use and  
23 development is permitted subject to the following criteria:

24 a. Structures on sites of one acre or less will not result in more than 10 percent building  
25 coverage or 2,000 square feet, whichever is greater, and total impervious surface will not  
26 exceed 20 percent or 5,000 square feet, whichever is greater.

27 b. Structures on sites greater than one acre will not result in more than five percent building  
28 coverage or 2,000 square feet, whichever is greater, and total impervious surface will not  
29 exceed 10 percent or 10,000 square feet, whichever is greater.

30 c. Alteration of topography shall be limited to the minimum necessary to accommodate  
31 allowed development, and generally less than 30 inches.

32 d. Use of areas or facilities will not result in use patterns that lead to degradation of shoreline  
33 ecological functions.

34 4. In the Natural shoreline environment, low intensity water-oriented recreational use and  
35 development consisting of primitive trails or primitive campsites is permitted subject to the  
36 following criteria:

37 a. Essential minor structures such as trails, stairs, small picnic areas, primitive roads,  
38 viewpoints, restrooms, interpretive facilities, or development that will not adversely affect  
39 shoreline ecological functions and processes are permitted.

40 b. Any necessary landscaping shall use native or similar self-maintaining vegetation.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1           c. Recreational development requiring extensive structures or substantial alterations to  
2           topography or native vegetation is prohibited.
- 3           5. In the Aquatic shoreline area environment, water-oriented recreational use and development is  
4           permitted, subject to the use and development regulations of the abutting upland shoreline  
5           area environment designation; provided, that underwater parks may be permitted as a  
6           shoreline conditional use.
- 7           A. Shoreline Area Regulations.
- 8           1. ~~Urban. Water-oriented recreational use and development is permitted subject to policies and~~  
9           ~~regulations of this program.~~
- 10           2. ~~Urban Resort. Water-oriented recreational use and development is permitted subject to policies~~  
11           ~~and regulations of this program.~~
- 12           3. ~~Urban Conservancy. Low intensity water-oriented recreational use and development is~~  
13           ~~permitted subject to policies and regulations of this program and the following criteria:~~
- 14           a. ~~Structures will not result in more than 10 percent building coverage or 4,000 square feet,~~  
15           ~~whichever is greater, and total impervious surface will not exceed 20 percent, or 10,000~~  
16           ~~square feet, whichever is greater.~~
- 17           b. ~~Alteration of topography shall be limited to the minimum necessary to accommodate~~  
18           ~~allowed development, and generally less than 30 inches.~~
- 19           c. ~~Use of areas or facilities will not result in use patterns that lead to degradation of shoreline~~  
20           ~~ecological functions.~~
- 21           4. ~~Shoreline Residential. Water-oriented recreational use and development is permitted subject to~~  
22           ~~policies and regulations of this program.~~
- 23           5. ~~Rural. Water-oriented recreational use and development is permitted subject to policies and~~  
24           ~~regulations of this program.~~
- 25           6. ~~Resource. Low intensity water-oriented recreational use and development is permitted subject~~  
26           ~~to policies and regulations of this program; provided, that no designated agricultural or forest~~  
27           ~~resource lands of long term significance are displaced.~~
- 28           7. ~~Conservancy. Low intensity water-oriented recreational use and development is permitted~~  
29           ~~subject to policies and regulations of this program and the following criteria:~~
- 30           a. ~~Structures on sites of one acre or less will not result in more than 10 percent building~~  
31           ~~coverage or 2,000 square feet, whichever is greater, and total impervious surface will not~~  
32           ~~exceed 20 percent or 5,000 square feet, whichever is greater.~~
- 33           b. ~~Structures on sites greater than one acre will not result in more than five percent building~~  
34           ~~coverage or 2,000 square feet, whichever is greater, and total impervious surface will not~~  
35           ~~exceed 10 percent or 10,000 square feet, whichever is greater.~~
- 36           c. ~~Alteration of topography shall be limited to the minimum necessary to accommodate~~  
37           ~~allowed development, and generally less than 30 inches.~~
- 38           d. ~~Use of areas or facilities will not result in use patterns that lead to degradation of shoreline~~  
39           ~~ecological functions.~~

Comment [AP220]: Carried over from removed 'Shoreline Area Regulations.'

Comment [CES221]: Addressed in use table now.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 ~~8. Natural. Low intensity water oriented recreational use and development consisting of primitive~~  
2 ~~trails or primitive campsites is permitted subject to policies and regulations of this program and~~  
3 ~~the following criteria:~~

4 ~~a. Essential minor structures such as trails, stairs, small picnic areas, primitive roads,~~  
5 ~~viewpoints, restrooms, interpretive facilities, or development that will not adversely affect~~  
6 ~~shoreline ecological functions and processes are permitted, subject to policies and~~  
7 ~~regulations of this program.~~

8 ~~b. Any necessary landscaping shall use native or similar self-maintaining vegetation.~~

9 ~~c. Recreational development requiring extensive structures or substantial alterations to~~  
10 ~~topography or native vegetation is prohibited.~~

11 ~~9. Aquatic. Water oriented recreational use and development is permitted, subject to the use and~~  
12 ~~development regulations of the abutting upland shoreline area designation; provided, that~~  
13 ~~underwater parks may be permitted as a conditional use.~~

### 14 ~~23.4100.150-170 Residential.~~

15 ~~Residential development in shoreline areas shall be subject to the policies and regulations of this section~~  
16 ~~and Chapter 23.90 WCC. This section applies to residential development, uses, and activities as~~  
17 ~~defined in WCC Chapter 23.110 includes multifamily development and the The creation of new~~  
18 ~~residential lots through land division is regulated pursuant to WCC 23.40.130 (Land Division).~~

#### 19 ~~B. Policies.~~

20 ~~A. Single family residences are designated in Chapter 90.58 RCW as a priority use in those limited~~  
21 ~~instances when authorization is given for alterations of the natural condition of shorelines of the~~  
22 ~~state.~~

23 ~~B. New residential development is encouraged to cluster dwelling units together to reduce physical~~  
24 ~~and visual impacts on shorelines and to reduce utility and road costs. Planned unit developments~~  
25 ~~that include common open space and recreation facilities, or a variety of dwelling sizes and types,~~  
26 ~~are encouraged at suitable locations as a preferable alternative to extensive single lot subdivisions~~  
27 ~~on shorelines. Planned unit developments (Chapter 20.85 WCC) may also include a limited number~~  
28 ~~of neighborhood commercial business uses where consistent with the applicable zoning regulations.~~

29 ~~C. Allowable density of new residential development should comply with applicable comprehensive~~  
30 ~~plan goals and policies, zoning restrictions, and shoreline area designation standards. The density~~  
31 ~~per acre of development should be appropriate to local natural and cultural features.~~

32 ~~D. Structures or development for uses accessory to residential use should preserve shoreline open~~  
33 ~~space, be visually and physically compatible with adjacent cultural and shoreline features, be~~  
34 ~~reasonable in size and purpose, and result in no net loss of shoreline ecological functions and~~  
35 ~~processes.~~

36 ~~E. Buildings greater than 35 feet above average grade level that will obstruct the views of a substantial~~  
37 ~~number of residences on areas adjoining such shorelines are limited by the Act (RCW 90.58.320) to~~  
38 ~~those cases where this program does not prohibit such development and then only when overriding~~  
39 ~~considerations of the public interest will be served. This program provides opportunities for~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 buildings greater than 35 feet in height in limited areas where consistent with development  
2 objectives and the goals and policies of this program.
- 3 ~~F. New residential development should be planned and built in accordance with the policies and  
4 regulations in WCC 23.90.030 and to minimize the need for shoreline stabilization and flood hazard  
5 reduction measures.~~
- 6 ~~G. Measures to conserve native vegetation along shorelines should be required for all residential  
7 development. Vegetation conservation may include avoidance or minimization of clearing or  
8 grading, restoration of areas of native vegetation, and/or control of invasive or nonnative  
9 vegetation.~~
- 10 ~~H. Whenever possible, nonregulatory methods to protect, enhance, and restore shoreline ecological  
11 functions and other shoreline resources should be encouraged for residential development. Such  
12 methods may include resource management planning, low impact development techniques,  
13 voluntary protection and enhancement projects, education, or incentive programs.~~
- 14 ~~I. New multiunit residential development, including subdivision of land for more than four parcels,  
15 should provide substantial shore space for development residents and the public, unless public  
16 access is infeasible due to incompatible uses, safety, impacts to shoreline ecology or legal  
17 limitations.~~
- 18 ~~J. Development should provide open space corridors between structures, and along site boundaries,  
19 so as to provide space for outdoor recreation, preserve views, and minimize use conflicts.~~
- 20 ~~K. Recreation oriented residential development in the shoreline should be located only where  
21 substantial recreation opportunities are provided on site, and where nearby property owners and  
22 other appropriate uses will not be adversely affected.~~
- 23 ~~C. Regulations.~~
- 24 A. General.
- 25 1. New ~~o~~Over-water residential structures, including floating homes, are prohibited.
- 26 ~~1-2. New r~~Residential development may not be approved in cases when it can be reasonably  
27 foreseeable that the development or use would require structural flood hazard reduction  
28 measures within a channel migration zone or floodway during the life of the development or  
29 use.
- 30 3. New ~~r~~Residential development shall assure through a geotechnical analysis that the  
31 development will not require shoreline stabilization for the life of structure (100 years). Prior to  
32 approval, geotechnical analysis of the site and shoreline characteristics shall demonstrate that  
33 shoreline stabilization is unlikely to be necessary; setbacks from steep slopes, bluffs, landslide  
34 hazard areas, seismic hazard areas, riparian and marine shoreline erosion areas shall be  
35 sufficient to protect structures during the life of the structure (100 years); and impacts to  
36 adjacent, downslope or down-current properties are not likely to occur. The greater setback  
37 resulting from this regulation or WCC 23.90.13023.40.020 (Shoreline Bulk Provisions) shall apply.
- 38 2. Clustering and low impact development techniques may be required where appropriate to  
39 minimize physical and visual impacts on shorelines in accordance with policies and regulations  
40 of WCC 23.90.090.

Comment [CES222]: Moved to land division

# Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 4. Residential structures, accessory uses, and related facilities shall be designed and located so as  
2 to minimize view obstructions to and from shorelines and waterbodies.
- 3 5. Utilities shall be located within roadway and driveway corridors and rights-of-way wherever  
4 feasible.
- 5 B. Standards for Single-Family Residential Use on Constrained Lots.
- 6 1. Legally existing lots with a depth (the distance from the ordinary high water mark to the inside  
7 edge of the frontage setback) that would not allow for compliance with the reduced standard  
8 buffer may be allowed without a shoreline variance when the following criteria are met:
- 9 2. The lot is vacant or existing structures are removed; provided an existing primary single family  
10 residential structure may be enlarged, consistent to WCC 23.50.020, to the maximum building  
11 area allowed in (3) below.
- 12 1-3. The building area lying landward of the shoreline buffer and interior to required side yard  
13 setbacks shall not exceed 2,500 square feet or less. The building area means the proposed  
14 residence, normal appurtenances (except drainfields), and any proposed residential accessory  
15 structures the entire area that will be disturbed to construct the home, sidewalks and similar  
16 structures (except the single path allowed for shoreline access), parking areas, normal  
17 appurtenances (except drainfields). Additionally, and another 500 square feet of low-impact  
18 development (LID) landscaping, including any lawn, turf, ornamental vegetation, or gardens is  
19 allowed, provided that it is set back as far as feasible from the shoreline.
- 20 4. In no case shall the proposed residence be located waterward of the common-line setback as  
21 determined in applicable sections of Consideration shall be given to view impacts in accordance  
22 with WCC 23.40.020(D)(2) (Common-Line Setback).
- 23 2-5. The lot is not subject to landslide hazard areas, alluvial fan hazard areas, or riverine and coastal  
24 erosion hazard areas or associated buffers as defined in (see WCC 16.16.310);
- 25 3-6. The nonconforming lot was created prior to the effective date of this program (August 8, 2008);
- 26 7. Appropriate measures are taken to mitigate all adverse impacts, including but not limited to  
27 locating the building area and landscaping allowance residence in the least environmentally  
28 damaging location relative to the shoreline and any critical areas and their buffers, and  
29 provided, that;
- 30 8. All administrative reductions to side yard and/or frontage setbacks are pursued. Such reductions  
31 may be approved administratively without a zoning variance, when doing so will not create a  
32 hazardous condition or a condition that is inconsistent with this program and WCC Title 20.
- 33 4-9. There is no opportunity to consolidate lots under common ownership that will alleviate the  
34 nonconformity;
- 35 10. The shoreline jurisdiction shoreline area outside of the approved development is retained if fully  
36 functional, and/or enhanced with native trees, shrubs and groundcovers through development  
37 of a mitigation plan, including monitoring and maintenance contingencies per WCC  
38 16.16.260(G) optimized to provide the maximum shoreline ecological functions and ecosystem  
39 wide functions;
- 40 11. Development may not take place waterward of the ordinary high water mark; and

Comment [CES223]: Moved from Site Planning section. Required to meet WAC 173-26-241(3)(l).

Comment [CES224]: Moved from old nonconforming section.

Comment [DOE-Req225]: Required Change – It is unclear what the term “optimized” means but this change restores the exiting requirement that the remaining buffer areas are enhanced with trees, shrubs and groundcovers and maintained in perpetuity.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 12. Accessory utilities ~~Facilities such as a conventional drainfield system may be allowed within~~  
2 ~~critical areas or their buffers, subject to specific criteria in Chapter 16.16 WCC.~~
- 3 C. Additional Standards for Multifamily Residential Development.
- 4 ~~1. Due to the potential for adverse impact upon adjacent uses and the community from such high-~~  
5 ~~rise and multiunit buildings that exceed 35 feet in height, the County must find proposals for~~  
6 ~~such buildings to be consistent with this program and the Act, particularly as related to~~  
7 ~~RCW 90.58.320, and the following factors:~~
- 8 2.1. Open space areas and setbacks shall be required along shorelines and between buildings  
9 wherever feasible. These areas should be large enough so that ~~local~~ views are not extensively  
10 blocked, and building residents have privacy and ample space for outdoor recreation and  
11 circulation. The amount of open space shall increase proportionately as density and/or height  
12 increase. In general, a view corridor must be maintained across 30 percent of the average parcel  
13 width with additional width provided for the percentage increase above 35 feet to a maximum  
14 of 50 percent of the lot width. The increased area within a view corridor due to increased height  
15 must be devoted to landscaping or other open space.
- 16 ~~3. Urban services, including sanitary sewers, public water supply, fire protection, stormwater~~  
17 ~~drainage, and police protection shall be provided at adequate levels to protect the public health,~~  
18 ~~safety, and welfare.~~
- 19 4.2. Circulation, parking areas, and outdoor storage or loading areas shall be adequate in size and  
20 designed so that the public safety and local aesthetic values are not diminished. Such areas shall  
21 be screened where appropriate from open space areas by landscaping, fences or other similar  
22 structures, or grade separation.
- 23 3. New multiunit multifamily development with more than four units and, including subdivision  
24 of land for more than four parcels, shall incorporate public access to publicly owned shorelines  
25 or public waterbodies waters of the state as provided for in WCC 23.390.0780 (Public Access)  
26 unless the site is designated in a shoreline public access plan for a greater component of public  
27 access or public access is demonstrated to be infeasible or inappropriate. The amount and  
28 configuration of public access shall depend on the proposed use(s) and the following criteria:
- 29 a. Multifamily development that have views of water areas shall provide a public pedestrian  
30 viewing area.
- 31 b. Multifamily development adjacent to waters of the state shall provide access to a point  
32 abutting the water that will provide visual access, and shall provide physical access to public  
33 waterways, public marine waters, and public tidelands that are physically accessible at low  
34 tide or low water.
- 35 c. Multifamily development subject to requirements for dedication of land to provide open  
36 space or mitigate recreation demands of the development shall dedicate such land on or  
37 adjacent to public waterways or marine shorelines, as applicable, unless the ecological  
38 sensitivity of such land precludes public access. Portions of the area dedicated may be  
39 fenced or otherwise restricted to limit public access to ecologically sensitive areas.

Comment [CES226]: Already addressed by 23.40.020(C)(2)

Comment [CES227]: Covered by Title 20.

Comment [DOE-Req228]: Required Change – This change restores the existing language that requires consideration for all multifamily development. There is nothing in the public access standards of the SMP Guidelines that exempt multifamily developments under a certain unit size [WAC 173-26-221(4)]

Comment [CES229]: Mimicking the public access requirements for land divisions.

# Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 5.4. Recreational needs of building residents shall be provided through on-site recreation facilities  
2 and access to shorelines. The variety and number of on-site recreation facilities should increase  
3 proportionately as density increases. ~~Where appropriate, public access should be provided and~~  
4 ~~integrated with the development.~~

## 5 A. ~~Location and Design.~~

- 6 1. ~~As mandated by the Act (RCW 90.58.320), no shoreline permit may be issued for any new or~~  
7 ~~expanded building or structure of more than 35 feet above average grade level on shorelines~~  
8 ~~that will obstruct the view of a substantial number of residences on areas adjoining such~~  
9 ~~shorelines, except where this program does not prohibit such development and only when~~  
10 ~~overriding considerations of the public interest will be served.~~  
11 2. ~~Minimum required setbacks from shorelines and side property lines, maximum height limits and~~  
12 ~~open space requirements are contained in WCC 23.90.130, Shoreline bulk provisions – Buffers,~~  
13 ~~setbacks, height, open space and impervious surface coverage.~~

Comment [CES230]: Deleted throughout, as every use has to meet the general setbacks.

## 14 B.D. Additional Standards for Accessory Uses and Development.

- 15 1. ~~Accessory development common to residences includes, but is not limited to, recreational~~  
16 ~~moorage (mooring buoys, docks and floats), garages and shops, parking areas, water craft~~  
17 ~~storage, shoreline stabilization, fences, cabanas, tennis courts, swimming pools, saunas,~~  
18 ~~antennas, decks, walkways and landscaping.~~  
19 2.1. ~~Shoreline permits shall be required for accessory development that does not meet the intent~~  
20 ~~and definition of an appurtenance as defined in WCC 23.110.010(16).~~  
21 2. ~~Such Non-water dependent accessory uses development shall not be located~~  
22 ~~are prohibited in required shoreline setbacks; except, as provided in WCC Chapter 16.16 (Critical Areas).~~  
23 3. ~~Non-water dependent development uses and shall be prohibited over the water, unless clearly~~  
24 ~~water dependent such as moorage (mooring buoys, docks and floats) for recreational or~~  
25 ~~personal use.~~  
26 4. ~~For projects involving two or more dwelling units, only shared moorage consisting of mooring~~  
27 ~~buoys, or shared moorage and/or floats, is permitted. Individual private docks are prohibited.~~  
28 ~~Shared moorage may be approved if it meets all requirements in WCC 23.100.090.~~  
29 5.4. ~~Private recreational docks and floats for individual lots are permitted in existing subdivisions~~  
30 ~~which were approved on or before January 28, 1993, only where shared moorage has not~~  
31 ~~already been developed and subject to the policies and regulations in WCC 23.100.090~~  
32 ~~For docks and piers, see WCC 23.40.150 (Moorage Structures).~~

Comment [DN231]: Deleted, as this is a definition and is covered there.

## 33 E. Regulations for Specific Shoreline Environment Designations.

- 34 1. ~~In the Natural shoreline environment, residential development is prohibited, except that one~~  
35 ~~single-family residence per legal lot may be permitted as a shoreline conditional use where~~  
36 ~~there is no feasible location outside of the shoreline.~~

Comment [AP232]: Moved from 'Shoreline Area Regulations.'

## 37 D. ~~Shoreline Area Regulations.~~

- 38 A. ~~Urban. Residential development is permitted subject to policies and regulations of this program.~~

Comment [CES233]: Addressed in use table now.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 ~~B. Urban Resort. Residential development is permitted subject to policies and regulations of this~~  
2 ~~program.~~
- 3 ~~C. Urban Conservancy. Single family and duplex development is permitted subject to policies and~~  
4 ~~regulations of this program. Subdivision of property shall not be allowed in a configuration that~~  
5 ~~will require significant vegetation removal or shoreline modification or result in a net loss of~~  
6 ~~shoreline ecological functions and processes at the time of development of the subdivision~~  
7 ~~and/or use of each new parcel. All other residential development may be permitted as a~~  
8 ~~conditional use.~~
- 9 ~~D. Shoreline Residential. Residential development is permitted subject to policies and regulations~~  
10 ~~of this program.~~
- 11 ~~E. Rural. Residential development is permitted subject to policies and regulations of this program.~~
- 12 ~~F. Resource. Residential development limited to farm related residences or one residence and one~~  
13 ~~accessory dwelling unit is permitted per existing parcel where there is no feasible location~~  
14 ~~outside of the shoreline.~~
- 15 ~~G. Conservancy. Single family and duplex development is permitted subject to policies and~~  
16 ~~regulations of this program. Subdivision of property shall not be allowed in a configuration that~~  
17 ~~will require significant vegetation removal or shoreline modification or result in a net loss of~~  
18 ~~shoreline ecological functions and processes at the time of development of the subdivision~~  
19 ~~and/or use of each new parcel. All other residential development may be permitted as a~~  
20 ~~conditional use.~~
- 21 ~~H. Natural. Residential development is prohibited, except that one single family residence per~~  
22 ~~existing lot of record may be permitted as a conditional use where there is no feasible location~~  
23 ~~outside of the shoreline.~~
- 24 ~~I. Aquatic. Residential development is prohibited.~~
- 25 **23.4100.160-180 Restoration and Enhancement.**
- 26 ~~c. Restoration in shoreline areas shall be subject to the policies and regulations of this section and~~  
27 ~~Chapter 23.90 WCC.~~
- 28 ~~A. Policies.~~
- 29 ~~1. This program recognizes the importance of restoration of shoreline ecological functions and~~  
30 ~~processes and encourages cooperative restoration efforts and programs between local, state,~~  
31 ~~and federal public agencies, tribes, nonprofit organizations, and landowners to address~~  
32 ~~shorelines with impaired ecological functions and/or processes.~~
- 33 ~~2. Restoration actions should restore shoreline ecological functions and processes as well as~~  
34 ~~shoreline features and should be targeted towards meeting the needs of sensitive and/or locally~~  
35 ~~important plant, fish and wildlife species as well as the biological recovery goals for early~~  
36 ~~Chinook and bull trout populations, and other salmonid species and populations.~~
- 37 ~~3. Restoration should be integrated with other parallel natural resource management efforts such~~  
38 ~~as the WRIA 1 Salmonid Recovery Plan and the WRIA 1 Watershed Management Plan.~~
- 39 ~~4. Priority should be given to restoration actions that:~~

# Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

- 2. ~~Create dynamic and sustainable ecosystems.~~
- 3. ~~Restore connectivity between stream/river channels, floodplains and hyporheic zones.~~
- 4. ~~Restore natural channel forming geomorphologic processes.~~
- 5. ~~Mitigate peak flows and associated impacts caused by high stormwater runoff volume.~~
- 6. ~~Reduce sediment input to streams and rivers and associated impacts.~~
- 7. ~~Improve water quality.~~
- 8. ~~Restore native vegetation and natural hydrologic functions of degraded and former wetlands.~~
- 9. ~~Replant native vegetation in riparian areas to restore functions.~~
- 10. ~~Restore nearshore ecosystem processes, such as sediment transport and delivery and tidal currents that create and sustain habitat.~~
- 11. ~~Restore pocket estuaries that support salmon life histories, including feeding and growth, refuge, osmoregulation, and migration.~~
- 12. ~~Address contamination along industrial shoreline regions.~~

## A. ~~Regulations-General.~~

- 1. ~~Restoration of ecological functions and processes shall be allowed on all shorelines and shall be located, designed, and implemented in accordance with applicable policies and regulations of this program.~~
- 2. ~~Restoration shall be carried out in accordance with an approved shoreline restoration plan, County Resolution 2007-011, and in accordance with the policies and regulations of this program.~~
- 3. ~~The County may grant relief from shoreline master program development standards and use regulations resulting from shoreline restoration projects within urban growth areas consistent with criteria and procedures in WAC 173-27-215.~~

Comment [DN234]: Moved from General Regulations section (WCC 23.30)

## 1. ~~Shoreline Area Regulations.~~

- a. ~~Urban. Restoration activities are permitted subject to policies and regulations of this program.~~
- b. ~~Urban Resort. Restoration activities are permitted subject to policies and regulations of this program.~~
- c. ~~Urban Conservancy. Restoration activities are permitted subject to policies and regulations of this program.~~
- d. ~~Shoreline Residential. Restoration activities are permitted subject to policies and regulations of this program.~~
- e. ~~Rural. Restoration activities are permitted subject to policies and regulations of this program.~~
- f. ~~Resource. Restoration activities are permitted subject to policies and regulations of this program.~~
- g. ~~Conservancy. Restoration activities are permitted subject to policies and regulations of this program.~~
- h. ~~Natural. Restoration activities are permitted subject to policies and regulations of this program.~~
- i. ~~Aquatic. Restoration activities are permitted subject to policies and regulations of this program.~~

Comment [AP235]: Added per Periodic Review Checklist, Item 2009.a, and Scoping Document, Item #2f.

Comment [CES236]: Addressed in use table now.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

### 23.4100.170-190 Shoreline Stabilization.

#### A. General.

1. All development shall be located and designed to avoid the need for future shoreline stabilization to the extent feasible.
2. Shoreline stabilization measures shall comply with the principals and standards of WAC 173-26-231(3)(a) (Shoreline Stabilization).
3. Shoreline stabilization structures shall not result in a net loss of shoreline ecological functions. If shoreline stabilization is necessary pursuant to a geotechnical analysis, the method, either hard or soft, may be required to provide mitigation.
4. When authorized consistent with these provisions, shoreline stabilization measures shall be designed in accordance with WDFW's Integrated Streambank Protection Guidelines or WDFW's Marine Shoreline Design Guidelines, whichever is relevant to the particular environment.
- 4.5. Alternatives for shoreline stabilization shall be based on the following order of preference:
  - a. No action, increase building setbacks, relocate structures;
  - a-b. Nonstructural shoreline stabilization, including building setbacks, relocation of structures to be protected, and groundwater management;
  - b-c. Other sSoft shoreline stabilization treatment;
  - d. Hybrid shoreline stabilization;
  - e. Hard shoreline stabilization.
6. Soft shoreline stabilization treatment shall be used unless demonstrated through a geotechnical analysis not to be sufficient to protect primary structures, dwellings, or businesses.
7. Hard shoreline stabilization measures shall not be allowed except when necessity is demonstrated in the following manner:
  - a. To protect legally existing primary structures:
    - i. New or enlarged structural shoreline stabilization measures for the existing primary structure, including residences and their primary appurtenant structures or uses, shall not be allowed unless there is conclusive evidence, documented by a geotechnical analysis, that the lawfully established, primary structure will be damaged within three years from shoreline erosion caused by tidal actions, currents, or waves. Where a geotechnical analysis confirms a need to prevent potential damage to a primary structure, but the need is not as immediate as three years, the analysis may still be used to justify more immediate authorization for shoreline stabilization using soft treatment.
    - ii. Normal sloughing, erosion of steep bluffs, or shoreline erosion itself, without a scientific or geotechnical analysis, is not demonstration of need.
  - b. In support of water-dependent development when all of the following apply:
    - i. The erosion is not being caused by upland conditions, such as the loss of vegetation and drainage;
    - ii. Nonstructural shoreline stabilization, planting vegetation, or installing on-site drainage improvements are not feasible or not sufficient;

Comment [CES237]: Added per DOE recommendation.

Comment [CES238]: Added per DOE recommendation.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1            iii. The need to protect primary structures from damage due to erosion is demonstrated  
2            through a geotechnical report;  
3        c. In support of non-water-dependent development, including single-family residences, when  
4            all of the following apply:  
5            i. The erosion is not being caused by upland conditions, such as the loss of vegetation and  
6            drainage;  
7            ii. Nonstructural measures, such as placing the development further from the shoreline,  
8            planting vegetation, or installing on-site drainage improvements, are not feasible or not  
9            sufficient;  
10          iii. The need to protect the primary structures from damage due to erosion is  
11          demonstrated through a geotechnical report. The damage must be caused by natural  
12          processes, such as tidal action, currents and waves;  
13        d. To protect projects for the restoration of ecological functions or hazardous substance  
14          remediation projects pursuant to Chapter 70.105D RCW when nonstructural measures,  
15          planting vegetation, or installing on-site drainage improvements are not feasible or  
16          sufficient.  
17        8. When hard shoreline stabilization measures are demonstrated to be necessary, they must:  
18            a. Limit the size of stabilization measures to the minimum necessary; and  
19            b. Assure no net loss of shoreline ecological functions; and  
20        9. Publicly financed or subsidized shoreline erosion control measures shall provide appropriate  
21          public access to the shoreline except where such access is determined to be infeasible because  
22          of incompatible uses, safety, security, or harm to ecological functions.  
23        10. Bioengineering approaches or other soft treatment shoreline stabilization that provide  
24          restoration of shoreline ecological functions may be permitted waterward of the OHWM.  
25        11. Shoreline stabilization on streams should be located and designed to fit the physical character  
26          and hydraulic energy potential of a specific shoreline reach, which may differ substantially from  
27          adjacent reaches. Hard shoreline stabilization methods are prohibited in jurisdictional shoreline  
28          streams on estuarine shores, in wetlands, and in salmon spawning areas, except for the purpose  
29          of fish or wildlife habitat enhancement or restoration.  
30        12. Revetments are prohibited, except for use in water-dependent and public infrastructure  
31          projects, which may be permitted as conditional use.  
32        13. Gabions are prohibited along marine shorelines, but may be permitted as a conditional use  
33          along freshwater shorelines.  
34        14. Shore stabilization should not be developed for the purpose of filling shorelines. Shoreline  
35          stabilization measures shall not be for the purpose of creating dry land, leveling or extending  
36          property, creating or preserving residential lawns, yards, or landscaping, and shall not be  
37          allowed except when otherwise allowed in this program.  
38        15. Minimize disturbance pertaining to beach access by avoiding trails that may be subject to loss or  
39          damage by erosion require hard stabilization.

Comment [CES239]: Amended to comply with WAC 173-26-231(3)(a)(iii)(E).

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 ~~Bluff stabilization walls shall be prohibited unless proven necessary through a geotechnical~~  
2 ~~report.~~
- 3 16. Placement of shoreline stabilization methods shall follow the natural contour of the existing  
4 shoreline, be parallel to and at or above the OHWM.
- 5 17. When determined to be necessary pursuant to this section ~~Bulkheads and other similar hard~~  
6 ~~structures are shoreline stabilization prohibited on marine feeder bluffs or on marine or lake~~  
7 ~~accretion shoreforms, shall require a except as a conditional use permit where exposure to~~  
8 ~~storm waves and driftwood battering seriously threaten other similar existing structures and no~~  
9 ~~feasible alternatives exist. Such bulkheads shall be set back a minimum of 20 feet landward from~~  
10 ~~the OHWM.~~
- 11 a. Shoreline stabilization on marine feeder bluffs may require additional mitigation measures,  
12 including those necessary to offset the loss of sediment supply.
- 13 b. Shoreline stabilization on accretion shoreforms shall be set back a minimum of 20 feet  
14 landward from the OHWM.
- 15 18. Shoreline stabilization must be designed by a professional engineer licensed in the state of  
16 Washington with demonstrated experience in hydraulic activities of shorelines. Alternatively,  
17 soft treatment shoreline stabilization may be designed by a habitat biologist or a professional  
18 with demonstrated expertise in designing soft treatment shoreline stabilization.
- 19 19. Depending on the degree of hard or soft elements to the project, the County, WDFW, and/or  
20 U.S. Army Corps of Engineers may require varying degrees of mitigation or other permit  
21 conditions.
- 22 20. Shoreline stabilization, as applied in this section, is generally distinguished from shoreline  
23 restoration activities. However, specific shoreline stabilization elements of restoration activities  
24 shall be guided by this section.
- 25 21. Use of shoreline armoring to protect a lot where no primary structure presently exists shall be  
26 prohibited.
- 27 22. Shoreline stabilization structures shall not be constructed with waste materials such as  
28 demolition debris, derelict vessels, tires, concrete or any other materials which might have  
29 adverse toxic or visual impacts on shoreline areas.
- 30 B. Additional Standards for Replacement or Repair of Existing Shoreline Stabilization.
- 31 1. Damaged structural stabilization may be repaired up to 50% of the linear length within a 5-year  
32 period. Repair area that exceeds 50% shall be considered a replacement. Stabilization repair  
33 applications shall consider cumulative approvals of each successive application within a five-year  
34 period.
- 35 2. Any replacement of, additions to, or increases in the dimensions of existing shoreline  
36 stabilization measures shall be considered as a new structure.
- 37 3. An existing stabilization structure may be replaced with a similar structure if there is a  
38 demonstrated need, through a geotechnical report, to protect principal uses or structures from  
39 erosion caused by currents, tidal action or waves.

Comment [CES240]: Deleted since all stabilization requires a geotech report.

Comment [CES241]: Moved from below and modified based on discussion w/ DOE.

Comment [CES242]: DOE recommended we have a threshold to distinguish between repair & replacement. How much has to be left to be considered replair? Language from SMP Handbook chapter 15, pg. 35-36.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1     4. If the OHWM has been re-established, the replacement structure must be located at or near the  
2     new OHWM.
- 3     5. Alternative or soft treatment stabilization shall be considered prior to in-kind replacement  
4     through an alternatives analysis.
- 5     6. The replacement structure shall:
- 6     a. Be designed, located, sized and constructed to assure no net loss of ecological functions.  
7     b. Perform the same stabilization function of the existing structure and not require additions  
8     to or increases in size.
- 9     c. Not encroach waterward of the OHWM or existing structure unless the residence was  
10    occupied prior to January 1, 1992, and there are overriding safety or environmental  
11    concerns. In such cases, the replacement structure shall about the existing shoreline  
12    stabilization structure.
- 13    7. When possible or as an element of mitigation sequencing, failing, harmful, unnecessary, or  
14    ineffective structures should be removed, and shoreline ecological functions and processes  
15    should be restored using nonstructural or soft and/or long-term stabilization measures.
- 16    C. Supplemental Application Materials Requirements.
- 17    2.1 Geotechnical reports required pursuant to this section shall address the need for shoreline  
18    stabilization and shall include the following:
- 19    a. A scaled site plan showing:
- 20       i. The location of existing and proposed shore stabilization, structures, fill, and vegetation,  
21       with dimensions indicating distances to the OHWM; and
- 22       ii. Existing site topography, preferably with two-foot contours.
- 23    b. A description of the processes affecting the site, and surrounding areas that influence or  
24    could be influenced by the site, including areas in which stream processes, lake or marine  
25    geomorphic processes affect the site, including, but not limited to:
- 26       i. Soil erosion, deposition, or accretion;  
27       ii. Evidence of past or potential channel migration;  
28       iii. Evidence of past or potential erosion due to tidal action and/or waves;  
29       iv. Littoral drift; and  
30       v. An estimate of shoreline erosion rates.
- 31    c. A description and analysis of the urgency and risk associated with the specific site  
32    characteristics, an alternative analysis addressing the order of preference as specified in  
33    subsection (A)(4), and demonstrated need as specified in subsection (A)(7).
- 34    d. A discussion and analysis demonstrating conformance with the standards enumerated in  
35    WCC Chapter 16.16 (Critical Areas).
- 36    D. Regulations for Specific Shoreline Environment Designations.
- 37    1. In the Urban Conservancy and Conservancy shoreline environments, breakwaters and jetties  
38    may be permitted as a shoreline conditional use if accessory to a water-dependent use and  
39    littoral sediment transport is not significantly disrupted.

Comment [CES243]: Added at DOE's recommendation.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1     2. In the Natural shoreline area environment, shoreline stabilization is prohibited; except that  
2     using bioengineering approaches may be permitted when necessary to restore an eroding  
3     accretion shoreform or to retard erosion elsewhere.
- 4     3. In the Aquatic shoreline environment:
- 5     a. Bioengineering approaches are permitted on tidelands and shorelands when necessary to  
6     restore an eroding accretion shoreform or to retard erosion elsewhere.
- 7     b. Drift sills, breakwaters, and jetties may be permitted as a shoreline conditional use if such  
8     development is permitted in the abutting upland shoreline environment designation.
- 9     c. Bulkheads or revetments are prohibited except for an approved water-dependent  
10    development.
- 11 Shore stabilization in shoreline areas shall be subject to the policies and regulations of this section and  
12 Chapter 23.90 WCC.
- 13 A. Policies.
- 14 ~~1. Alternatives to structures for shore protection should be used whenever possible. Such alternatives~~  
15 ~~may include no action (allow the shoreline to retreat naturally), increased building setbacks, building~~  
16 ~~relocation, drainage controls, and bioengineering, including vegetative stabilization, and beach~~  
17 ~~nourishment.~~
- 18 ~~2. New or expanded structural shore stabilization for new primary structures should be avoided.~~  
19 ~~Instead, structures should be located and designed to avoid the need for future shoreline~~  
20 ~~stabilization where feasible. Land subdivisions should be designed to assure that future~~  
21 ~~development of the created lots will not require structural shore stabilization for reasonable~~  
22 ~~development to occur.~~
- 23 ~~3. New or expanded structural shore stabilization should only be permitted where demonstrated to be~~  
24 ~~necessary to protect an existing primary structure that is in danger of loss or substantial damage,~~  
25 ~~and where mitigation of impacts would not cause a net loss of shoreline ecological functions and~~  
26 ~~processes.~~
- 27 ~~4. New or expanded structural shore stabilization for enhancement, restoration, or hazardous~~  
28 ~~substance remediation projects should only be allowed when nonstructural measures, vegetation~~  
29 ~~planting, or on-site drainage improvements would be insufficient to achieve enhancement,~~  
30 ~~restoration or remediation objectives.~~
- 31 ~~5. Shore stabilization on streams should be located and designed to fit the physical character and~~  
32 ~~hydraulic energy potential of a specific shoreline reach, which may differ substantially from adjacent~~  
33 ~~reaches.~~
- 34 ~~6. Shore stabilization should not be permitted to unnecessarily interfere with public access to public~~  
35 ~~shorelines, nor with other appropriate shoreline uses including, but not limited to, navigation,~~  
36 ~~seafood harvest, or private recreation.~~
- 37 ~~7. Provisions for multiple use, restoration, and/or public shore access should be incorporated into the~~  
38 ~~location, design and maintenance of shore stabilization for public or quasi-public developments~~

Comment [AP244]: Moved from 'Shoreline Area Regulations.'

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 whenever safely compatible with the primary purpose. Shore stabilization on publicly owned  
2 shorelines should not be allowed to decrease long-term public use of the shoreline.
- 3 ~~8. Shore stabilization should be developed in a coordinated manner among affected property owners  
4 and public agencies for a whole drift sector (net shore drift cell) or reach where feasible, particularly  
5 those that cross jurisdictional boundaries, to address ecological and geohydraulic processes,  
6 sediment conveyance and beach management issues. Where beach erosion threatens existing  
7 development, a comprehensive program for shoreline management should be established.~~
- 8 ~~9. In addition to conformance with the regulations in this section, nonregulatory methods to protect,  
9 enhance, and restore shoreline ecological functions and other shoreline resources should be  
10 encouraged for shore stabilization. Nonregulatory methods may include public facility and resource  
11 planning, technical assistance, education, voluntary enhancement and restoration projects, or other  
12 incentive programs.~~
- 13 ~~10. Shore stabilization should be located, designed, and maintained to protect and maintain shoreline  
14 ecological functions, ongoing shore processes, and the integrity of shore features. Ongoing stream,  
15 lake or marine processes and the probable effects of proposed shore stabilization on other  
16 properties and shore features should be considered. Shore stabilization should not be developed for  
17 the purpose of filling shorelines.~~
- 18 ~~11. Failing, harmful, unnecessary, or ineffective structures should be removed, and shoreline ecological  
19 functions and processes should be restored using nonstructural methods or less harmful long-term  
20 stabilization measures.~~
- 21 ~~12. Structural shoreline stabilization measures should only be used when more natural, flexible,  
22 nonstructural methods such as vegetative stabilization, beach nourishment and bioengineering have  
23 been determined infeasible. Alternatives for shoreline stabilization should be based on the following  
24 hierarchy of preference:~~
- 25 ~~a. No action (allow the shoreline to retreat naturally), increase building setbacks, and relocate  
26 structures.~~
- 27 ~~b. Flexible defense works constructed of natural materials including soft shore protection,  
28 bioengineering, including beach nourishment, protective berms, or vegetative stabilization.~~
- 29 ~~c. Rigid works constructed of artificial materials such as riprap or concrete.~~
- 30 ~~Materials used for construction of shoreline stabilization should be selected for long-term durability,  
31 ease of maintenance, compatibility with local shore features, including aesthetic values and  
32 flexibility for future uses.~~
- 33 ~~13. Larger works such as jetties, breakwaters, weirs or groin systems should be permitted only for  
34 water dependent uses when the benefits to the region outweigh resource losses from such works,  
35 and only where mitigated to provide no net loss of shoreline ecological functions and processes.~~
- 36 ~~14. Alternative structures, including floating, portable or submerged breakwater structures, or several  
37 smaller discontinuous structures, should be considered where physical conditions make such  
38 alternatives with less impact feasible.~~
- 39 ~~B. Regulations.~~
- 40 ~~1. Allowed Use.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 a. ~~New or expanded structural shore stabilization for existing primary structures, including~~  
2 ~~roads, railroads, public facilities, etc., is prohibited unless there is conclusive evidence~~  
3 ~~documented by a geotechnical analysis that there is a significant possibility that the~~  
4 ~~structure will be damaged within three years as a result of shoreline erosion caused by~~  
5 ~~stream processes, tidal action or waves, and only when significant adverse impacts are~~  
6 ~~mitigated to ensure no net loss of shoreline ecological functions and/or processes. Where a~~  
7 ~~geotechnical analysis confirms a need to prevent potential damage to a primary structure,~~  
8 ~~but the need is not as immediate as three years, the analysis may still be used to justify~~  
9 ~~more immediate authorization for shoreline stabilization using bioengineering approaches.~~
- 10 b. ~~New shore stabilization for new development is prohibited unless it can be demonstrated~~  
11 ~~that the proposed use cannot be developed without shore protection, and a geotechnical~~  
12 ~~analysis documents that alternative solutions are not feasible or do not provide sufficient~~  
13 ~~protection. The need for shore stabilization shall be considered in the determination of~~  
14 ~~whether to approve new water dependent uses. Proposed designs for new or expanded~~  
15 ~~shore stabilization shall be designed in accordance with applicable Department of Ecology~~  
16 ~~and Department of Fish and Wildlife guidelines and certified by a qualified professional.~~
- 17 c. ~~Shoreline stabilization is prohibited for new non-water oriented development; provided,~~  
18 ~~that such stabilization may be approved as a conditional use where a geotechnical analysis~~  
19 ~~demonstrates that shore stabilization is necessary to facilitate reasonable use of a property~~  
20 ~~and documents that alternative solutions, including location outside of the shoreline, are~~  
21 ~~not feasible or do not provide sufficient protection, and where ongoing monitoring,~~  
22 ~~maintenance and mitigation for impacts to shoreline ecological functions and processes are~~  
23 ~~provided.~~
- 24 d. ~~Where shore stabilization is allowed, it shall consist of "soft," flexible, and/or natural~~  
25 ~~materials or other bioengineered approaches unless a geotechnical analysis demonstrates~~  
26 ~~that such measures are infeasible.~~
- 27 e. ~~Replacement of an existing shore stabilization structure with a similar structure is permitted~~  
28 ~~if there is a demonstrated need to protect primary uses, structures or public facilities~~  
29 ~~including roads, bridges, railways, and utility systems from erosion caused by stream~~  
30 ~~undercutting or tidal action; provided, that the existing shore stabilization structure is~~  
31 ~~removed from the shoreline as part of the replacement activity. A geotechnical analysis may~~  
32 ~~be required to document that alternative solutions such as those listed in subsections~~  
33 ~~(A)(12)(a) and (b) of this section are not feasible or do not provide sufficient protection.~~  
34 ~~Existing shoreline stabilization structures that are being replaced shall be removed from the~~  
35 ~~shoreline unless removal of such structures will cause significant damage to shoreline~~  
36 ~~ecological functions or processes. Replacement walls, bulkheads or revetments shall not~~  
37 ~~encroach waterward of the ordinary high water mark or the existing shore defense structure~~  
38 ~~unless the primary use being protected is a residence that was occupied prior to January 1,~~  
39 ~~1992, and there are overriding safety or environmental concerns. In such cases, the~~  
40 ~~replacement structure shall abut the existing shoreline stabilization structure.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 f. Groins are prohibited except as a component of a professionally designed community or  
2 public beach management program that encompasses an entire drift sector or reach for  
3 which alternatives are infeasible, or where installed to protect or restore shoreline  
4 ecological functions or processes.
- 5 g. Jetties and breakwaters are prohibited except as an integral component of a professionally  
6 designed harbor, marina, or port. Where permitted, floating, portable or submerged  
7 breakwater structures, or smaller discontinuous structures, are preferred where physical  
8 conditions make such alternatives with less impact feasible. Defense works that  
9 substantially reduce or block littoral drift and cause erosion of downdrift shores, shall not be  
10 allowed unless an adequate long-term professionally engineered beach nourishment  
11 program is established and maintained.
- 12 h. New or expanded shore stabilization may be permitted to protect projects with the primary  
13 purpose of enhancing or restoring ecological functions, or projects for hazardous substance  
14 remediation pursuant to Chapter 70.105D RCW when nonstructural approaches, such as  
15 vegetation planting, and/or on-site drainage improvements are not feasible or do not  
16 provide sufficient protection.
- 17 i. Proposed designs for new or expanded shore stabilization shall be designed and certified by  
18 a qualified professional.
- 19 j. No motor vehicles, appliances, other similar structures nor parts thereof, nor structure  
20 demolition debris, nor any other solid waste shall be used for shore stabilization.
- 21 k. The size of shore stabilization measures shall be limited to the minimum necessary to  
22 provide protection for the primary structure or use it is intended to protect.
- 23 2. Marine Shorelines and Lakes. In those limited cases where a proposed bulkhead meets the  
24 criteria in this section for a shoreline permit or the exemption criteria under WCC 23.60.022,  
25 and to assure that such bulkheads will be consistent with the provisions of this program, the  
26 administrator shall review the proposed design as it relates to local physical conditions and issue  
27 written findings that the location and design meet all criteria of this program, subject to the  
28 following:
- 29 ~~a. Bulkheads and other similar hard structures are prohibited on marine or lake accretion~~  
30 ~~shoreforms, except as a conditional use where exposure to storm waves and driftwood~~  
31 ~~battering seriously threaten other similar existing structures and no feasible alternatives~~  
32 ~~exist. Such bulkheads shall be set back a minimum of 20 feet landward from the OHWM.~~
- 33 b. Bulkheads and other similar hard structures are prohibited on marine feeder bluff and  
34 estuarine shores, and on wetland and rock shores; provided, that such structures may be  
35 permitted as a conditional use where valuable primary structure(s) are at risk and no  
36 feasible alternatives exist and where ongoing monitoring, maintenance and mitigation for  
37 impacts to shoreline ecological functions and processes are provided.
- 38 c. Bulkheads and other similar hard structures shall be located within one foot of the bank toe,  
39 and shall generally parallel the shoreline.

Comment [CES245]: Moved above.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 ~~d. Bulkheads and other similar hard structures shall be designed and constructed with gravel~~  
2 ~~backfill and weep holes so that natural downward movement of surface or ground water~~  
3 ~~may continue without ponding or saturation.~~
- 4 ~~e. Bulkheads exposed to significant wave action shall be designed to dissipate wave energy~~  
5 ~~and scouring.~~
- 6 ~~f. Walls, revetments or other similar hard structures within 10 feet of the OHWM shall be~~  
7 ~~considered bulkheads; provided, that on accretion shoreforms walls or revetments or other~~  
8 ~~similar hard structures within 20 feet of the OHWM shall be considered bulkheads.~~
- 9 ~~3. Shore Stabilization on Streams. In those limited cases where a proposed bulkhead, revetment or~~  
10 ~~other similar structure meets the criteria in this section for a shoreline permit or an exemption~~  
11 ~~under WCC 23.60.022, and to assure that such revetment or similar structure will be consistent~~  
12 ~~with this program, the administrator shall review the proposed design for consistency with state~~  
13 ~~guidelines for stream bank protection as it relates to local physical conditions and issue written~~  
14 ~~findings that the location and design meet all criteria of this program, subject to the following:~~
- 15 ~~a. Revetments or similar hard structures are prohibited on estuarine shores, in wetlands, on~~  
16 ~~point and channel bars, and in salmon and trout spawning areas, except for the purpose of~~  
17 ~~fish or wildlife habitat enhancement or restoration.~~
- 18 ~~b. Revetments or similar hard structures shall be placed landward of associated wetlands~~  
19 ~~unless it can be demonstrated that placement waterward of such features would not~~  
20 ~~adversely affect ecological functions.~~
- 21 ~~c. A geotechnical analysis of stream geomorphology both upstream and downstream shall be~~  
22 ~~performed to assess the physical character and hydraulic energy potential of the specific~~  
23 ~~stream reach and adjacent reaches upstream or down, and assure that the physical integrity~~  
24 ~~of the stream corridor is maintained, that stream processes are not adversely affected, and~~  
25 ~~that the revetment will not cause significant damage to other properties or valuable~~  
26 ~~shoreline resources. In addition:~~
- 27 ~~i. Revetments or similar structures shall not be developed on the low, innermost channel~~  
28 ~~banks in a stream except to protect public works, railways and existing commercial~~  
29 ~~farmsteads.~~
- 30 ~~ii. Where revetments or similar structures are proposed, analysis shall assure that localized~~  
31 ~~shore stabilization will be effective, as compared to more extensive cooperative~~  
32 ~~measures to address reach scale processes. Revetments shall be set back at convex~~  
33 ~~(inside) bends to allow streams to maintain point bars and associated aquatic habitat~~  
34 ~~through normal accretion. Where revetments or similar structures have already cut off~~  
35 ~~point bars from the stream, consideration should be given to their relocation.~~
- 36 ~~iii. Revetments shall be designed in accordance with WDFW streambank protection~~  
37 ~~guidelines.~~
- 38 ~~d. Cut and fill slopes and backfilled areas shall be stabilized with brush matting and buffer~~  
39 ~~strips and revegetated with native grasses, shrubs and/or trees so that there is no net loss of~~  
40 ~~ecological functions.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 e. ~~All forms of shore stabilization shall be constructed and maintained in a manner that does~~  
2 ~~not degrade the quality of affected waters. The county may require reasonable conditions to~~  
3 ~~achieve this objective such as setbacks, buffers, or storage basins.~~  
4 f. ~~Shore stabilization shall allow for normal ground water movement and surface runoff.~~  
5 g. ~~Selection of materials for projects shall be in conformance with applicable engineering~~  
6 ~~standards.~~  
7 ~~4. Viewpoints and Public Access.~~  
8 a. ~~Where appropriate, larger public or private shore stabilization projects shall be required to~~  
9 ~~maintain, replace or enhance existing public access opportunities by incorporating physical~~  
10 ~~or visual access areas and/or facilities into the design of the project.~~  
11 b. ~~Publicly financed or subsidized shoreline stabilization shall not restrict appropriate public~~  
12 ~~access to the shoreline and shall provide new public access except where such access is~~  
13 ~~determined to be infeasible because of incompatible uses, safety, security, or harm to~~  
14 ~~shoreline ecological functions.~~  
15 ~~5. Application Materials. Geotechnical reports required pursuant to this section shall address the~~  
16 ~~need for shoreline stabilization and shall include the following:~~  
17 a. ~~A scaled site plan showing:~~  
18 i. ~~The location of existing and proposed shore stabilization, structures, fill, and vegetation,~~  
19 ~~with dimensions indicating distances to the OHWM; and~~  
20 ii. ~~Existing site topography, preferably with two foot contours.~~  
21 b. ~~A description of the processes affecting the site, and surrounding areas that influence or~~  
22 ~~could be influenced by the site, including areas in which stream processes, lake or marine~~  
23 ~~geomorphic processes affect the site, including, but not limited to:~~  
24 i. ~~Soil erosion, deposition, or accretion;~~  
25 ii. ~~Evidence of past or potential channel migration;~~  
26 iii. ~~Evidence of past or potential erosion due to tidal action and/or waves;~~  
27 iv. ~~Littoral drift; and~~  
28 v. ~~An estimate of shoreline erosion rates.~~  
29 c. ~~A description and analysis of the urgency and risk associated with the specific site~~  
30 ~~characteristics.~~  
31 d. ~~A discussion and analysis demonstrating conformance with the standards enumerated in~~  
32 ~~Chapter 16.16 WCC.~~  
33 ~~C. Shoreline Area Regulations.~~  
34 1. ~~Urban.~~  
35 a. ~~Bulkheads, revetments, and bioengineering approaches are permitted subject to policies~~  
36 ~~and regulations of this program.~~  
37 b. ~~Groins, breakwaters and jetties may be permitted as a conditional use.~~  
38 c. ~~Gabions are prohibited.~~  
39 2. ~~Urban Resort.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 a. ~~Bulkheads, revetments, and bioengineering approaches are permitted subject to policies~~
- 2 ~~and regulations of this program.~~
- 3 b. ~~Groins, breakwaters and jetties may be permitted as a conditional use.~~
- 4 c. ~~Gabions are prohibited.~~
- 5 3. ~~Urban Conservancy.~~
- 6 a. ~~Bulkheads, revetments, and bioengineering approaches are permitted subject to policies~~
- 7 ~~and regulations of this program.~~
- 8 b. ~~Breakwaters and jetties may be permitted as a conditional use if accessory to a water-~~
- 9 ~~dependent use and littoral sediment transport is not significantly disrupted.~~
- 10 c. ~~Groins and gabions are prohibited.~~
- 11 4. ~~Shoreline Residential.~~
- 12 a. ~~Bulkheads, revetments, and bioengineering approaches are permitted subject to policies~~
- 13 ~~and regulations of this program.~~
- 14 b. ~~Groins, breakwaters and jetties may be permitted as a conditional use.~~
- 15 c. ~~Gabions are prohibited.~~
- 16 5. ~~Rural.~~
- 17 a. ~~Bulkheads, revetments, and bioengineering approaches are permitted subject to policies~~
- 18 ~~and regulations of this program.~~
- 19 b. ~~Groins, breakwaters and jetties may be permitted as a conditional use.~~
- 20 c. ~~Gabions are prohibited.~~
- 21 6. ~~Resource.~~
- 22 a. ~~Bulkheads, revetments, and bioengineering approaches are permitted subject to policies~~
- 23 ~~and regulations of this program.~~
- 24 b. ~~Groins, breakwaters and jetties may be permitted as a conditional use.~~
- 25 c. ~~Gabions are prohibited.~~
- 26 7. ~~Conservancy.~~
- 27 a. ~~Bulkheads, revetments, and bioengineering approaches are permitted subject to policies~~
- 28 ~~and regulations of this program.~~
- 29 b. ~~Breakwaters and jetties may be permitted as a conditional use if accessory to a water-~~
- 30 ~~dependent use and littoral sediment transport is not significantly disrupted.~~
- 31 c. ~~Groins and gabions are prohibited.~~
- 32 8. ~~Natural. Shoreline stabilization is prohibited; except that bioengineering approaches may be~~
- 33 ~~permitted as a conditional use when necessary to restore an eroding accretion shoreform or to~~
- 34 ~~retard erosion elsewhere.~~
- 35 9. ~~Aquatic.~~
- 36 a. ~~Bioengineering approaches are permitted on tidelands and shorelands when necessary to~~
- 37 ~~restore an eroding accretion shoreform or to retard erosion elsewhere subject to policies~~
- 38 ~~and regulations of this program.~~
- 39 b. ~~Groins, breakwaters, and jetties may be permitted as a conditional use if such development~~
- 40 ~~is permitted in the abutting upland shoreline area designation.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

c. ~~Bulkheads or revetments are prohibited except for an approved water dependent development subject to policies and regulations of this program.~~

d. ~~Gabions are prohibited~~

### ~~23.4100.190-200~~ Signs.

~~Signs in shoreline areas shall be subject to the policies and regulations of this section and~~

~~Chapter 23.90 WCC.~~

#### ~~A. Policies.~~

~~A. Whatcom County recognizes the constitutional right for property owners to communicate using signs on their property. These policies are intended to ensure that signage within shoreline areas is consistent with the purpose and intent of the Act and this program by addressing impacts to ecological functions, public safety and visual aesthetics.~~

~~B. Signs should be located, designed and maintained to be visually compatible with local shoreline scenery as seen from both land and water, especially on shorelines of statewide significance.~~

~~C. Sign location and design should not significantly impair shoreline views.~~

~~D. As a preferable alternative to continued proliferation of single purpose signs, communities, districts, and/or multiuse or multitenant commercial developments are encouraged to erect single, common use gateway signs to identify and give directions to local premises and public facilities.~~

~~E. Signs of a commercial or industrial nature should be limited to those areas or premises to which the sign messages refer.~~

~~F. Billboards and other off-premises signs are not water dependent, reduce public enjoyment of or access to shorelines, and often lower values of nearby properties. Such signs should not be located on shorelines except for approved community gateway or directional signs.~~

~~G. Signs near scenic vistas and view points should be restricted in number, location, and height so that enjoyment of these limited and scarce areas is not impaired.~~

~~H. Freestanding signs should be located to avoid blocking scenic views and be located on the landward side of public transportation routes which generally parallel the shoreline.~~

~~I. To minimize negative visual impacts and obstructions to shoreline access and use, low profile, on-premises wall signs are strongly preferred over freestanding signs or off-premises wall signs.~~

~~J. Signs should be designed mainly to identify the premises and nature of enterprise without unduly distracting uninterested passersby. Moving or flashing signs should be prohibited on shorelines.~~

#### ~~B. Regulations.~~

##### ~~A. General.~~

1. These provisions do not apply to private informational signs posted on private property by the owner for reasonable purposes such as address, No Trespass, and temporary signs such as For Sale, Rent and campaign signs; provided, that no such sign exceeds four square feet in area.

2. In addition to the regulations in this section, signs are subject to WCC 20.80.400, et seq. (Signs)

1-3. Unless otherwise prohibited by zoning regulations or this program, shoreline developments are permitted to maintain a total of three on-premises signs. Only one may be a freestanding, roof, or projecting sign; provided, that if this sign is double faced, then only one other wall sign is

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 permitted. ~~This provision does not apply to private informational signs posted on private~~  
2 ~~property by the owner for reasonable purposes such as address, home occupation signs, No~~  
3 ~~Trespass, and temporary signs such as For Sale, Rent and campaign signs; provided, no sign~~  
4 ~~exceeds four square feet in area.~~ All signs proposed for a development requiring a substantial  
5 development permit shall be designated on application and approval documents.

6 ~~2. Multiuse or multitenant commercial developments shall erect no more than one sign at each~~  
7 ~~street gateway.~~

8 ~~3. Communities, neighborhoods and districts shall erect no more than one sign at each street~~  
9 ~~gateway identifying the name of the community or neighborhood and give directions to local~~  
10 ~~premises and public facilities.~~

11 ~~4. Exception. Signs required by law and signs posted for legitimate safety purposes shall not be~~  
12 ~~subject to limitations with respect to the number, location, and/or size; provided, that they are~~  
13 ~~the minimum necessary to achieve the intended purpose. Such signs include but are not limited~~  
14 ~~to official or legal notices issued and posted by any public agency or court, or traffic directional~~  
15 ~~or warning signs.~~

16 ~~5. All building signs shall be integrated with building design. Roof signs shall be designed to occupy~~  
17 ~~a design feature of the roof such as a dormer or gable and may not be placed above the peak of~~  
18 ~~a pitched roof or the eave of a flat roof. Projecting signs shall be incorporated in a marquee,~~  
19 ~~canopy, or other architectural feature.~~

20 ~~6. Applications for substantial development permits shall include a conceptual sign package~~  
21 ~~addressing the size and location of all signs and shall include design standards to assure that all~~  
22 ~~signs in a development are consistent in terms of material, color, height, size, and illumination.~~

23 ~~7. Sign permits not associated with a substantial development permit shall demonstrate~~  
24 ~~compliance with all provisions of this code and shall be similar to and compatible with other~~  
25 ~~signs in a development under a single ownership or approved as an integrated development.~~

26 ~~8.4. Sign illumination shall be indirect, incorporating exterior lighting shining on the sign, or shadow~~  
27 ~~illumination behind nontransparent materials. Internally illuminated signs are prohibited.~~

28 ~~9.5. Distracting Devices. Any signs or other devices which flash, blink, flutter, rotate, oscillate, or~~  
29 ~~otherwise purposely fluctuate in lighting or position, in order to attract attention through their~~  
30 ~~distractive character, are prohibited on shorelines; provided, that searchlights, pennants,~~  
31 ~~banners and other devices of seasonal, holiday, or special event character may be ~~utilize~~used for~~  
32 ~~up to 90 days in one year.~~

33 ~~10.6. \_\_\_\_\_~~ Freestanding signs other than those private informational signs described in subsection  
34 ~~(BA)(1) of this section are prohibited between a public right-of-way and the water where the~~  
35 ~~water-body is visible from the public right-of-way.~~

36 ~~11.7. \_\_\_\_\_~~ To protect views from the water or publicly accessible beaches or lands adjacent to the  
37 ~~water, freestanding signs other than those private informational signs described in subsection~~  
38 ~~(BA)(1) of this section are prohibited between buildings and OHWM, and waterward of a line~~  
39 ~~drawn from the nearest point of the building parallel to the shoreline; provided, that where a~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

public road or path separates said building from the OHWM, up to one freestanding sign not to exceed 12 square feet is permitted between the road or path and said building.

~~12.8.~~ Signs may not be located in critical areas or buffers as established by WCC Chapter 16.16 except as otherwise provided for ~~therein~~ Chapter 16.16 WCC; provided, that pursuant to subsections (B)(1) and (4) of this section, signs may be permitted within critical area buffers where the placement of such signs does not require the removal of vegetation.

~~13.9.~~ Unless specifically exempted from setback requirements in WCC 23.40.020, the minimum required setbacks for permanent freestanding signs ~~are~~ is 50 feet ~~from the ordinary high water mark, where not subject to critical areas or buffers: 50 feet.~~

a. ~~From side property lines: 10 feet.~~

b. ~~Maximum height: 15 feet.~~

~~B.~~ Building mounted signs are subject to setbacks applicable to buildings. Height of wall signs may be measured from the floor elevation of the uppermost finished story; provided, the sign does not project above the roof of the building. Roof signs shall not extend higher than the maximum height of the primary building.

~~C.~~ Sign Area Limit.

a. The maximum area of individual sign faces shall be consistent with applicable zoning standards; provided, that the combined area of sign faces per premises shall not exceed 60 square feet with a maximum face area of freestanding signs not to exceed 12 square feet in all shoreline designations where signs are permitted, except on aquatic, urban conservancy, and conservancy shorelines and shorelines of statewide significance where the total sign area shall not exceed 24 square feet per premises and freestanding signs shall not exceed 4 square feet.

b. The size of individual building or tenant signs shall be governed in accordance with the following table:

**Table 3. Sign Area Limits**

Relevant building wall vertical surface area or facade area for a specific tenant <sup>(1)</sup>	Maximum sign surface area for that facade	Maximum sign area <sup>(2)</sup>
Below 100 sq. ft.	4 sq. ft.	4 sq. ft.
100 – 199 sq. ft.	4 sq. ft. + 4% of the facade area over 100 sq. ft.	8 sq. ft.
200 – 499 sq. ft.	10 sq. ft. + 3% of the facade area over 200 sq. ft.	20 sq. ft.
500 sq. ft. or greater	26 sq. ft. + 2% of the facade area over 500 sq. ft. up to a maximum of 40 sq. ft.	40 sq. ft.

1. (1) Includes only vertical building walls, excludes all roof area above the eaves and any dormers or other vertical areas above roof eaves. For building tenants, includes the area of the projection of the interior partitions onto the exterior wall.

2. (2) On aquatic and conservancy shorelines and shorelines of statewide significance, no sign visible from a public right of way, the water, or publicly accessible beaches or lands adjacent to the water, shall exceed 24 square feet, and freestanding signs shall not exceed four square feet.

**Comment [AP246]:** Revised for consistency with WCC 23.40.020 (Bulk Provisions) per Scoping Document, Item #16b.

**Comment [CES247]:** Covered by 20.80.400

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 | ~~3.10.~~ Freestanding signs shall be entirely self-supporting and structurally sound without  
2 | permanent use of guy wires or cables.
- 3 | ~~4.11.~~ Signs shall comply with the standards in this section at any time a change in use or  
4 | modification of structures requiring a substantial development permit is approved. Abandoned  
5 | or derelict signs should either be properly restored or completely removed within a reasonable  
6 | period of time by the sign owner or property owner as necessary.
- 7 | B. Regulations for Specific Shoreline Environment Designations.
- 8 | 1. In the Natural shoreline environment, sign development is prohibited, except for trail marking,  
9 | hazard warnings, or interpretive scientific or educational purposes and personal signs provided  
10 | for in this section. Such permitted signs shall be limited in size and number to those required to  
11 | affect their purpose.
- 12 | 2. In the Aquatic shoreline area environment, only wall signs and low-profile freestanding signs less  
13 | than 30 inches in height for water-dependent uses are permitted, except as provided for in this  
14 | section, and no premise may have more than two signs.
- 15 | ~~C. Shoreline Area Regulations.~~
- 16 | A. ~~Urban. Sign development is permitted subject to policies and regulations of this program.~~
- 17 | B. ~~Urban Resort. Sign development is permitted subject to policies and regulations of this program.~~
- 18 | C. ~~Shoreline Residential. Sign development is permitted subject to policies and regulations of this~~  
19 | ~~program.~~
- 20 | D. ~~Urban Conservancy. Sign development is permitted subject to policies and regulations of this~~  
21 | ~~program.~~
- 22 | E. ~~Rural. Sign development is permitted subject to policies and regulations of this program.~~
- 23 | F. ~~Resource. Sign development is permitted subject to policies and regulations of this program.~~
- 24 | G. ~~Conservancy. Sign development is permitted subject to policies and regulations of this program.~~
- 25 | H. ~~Natural. Sign development is prohibited, except for trail marking, hazard warnings, or~~  
26 | ~~interpretive scientific or educational purposes and personal signs provided for in subsection~~  
27 | ~~(B)(1) of this section. Such permitted signs shall be limited in size and number to those required~~  
28 | ~~to affect their purpose.~~
- 29 | I. ~~Aquatic. Only wall signs and low profile freestanding signs under 30 inches in height for water-~~  
30 | ~~dependent uses are permitted, except as provided for in subsections (B)(1) and (4) of this~~  
31 | ~~section. No one premises may maintain more than two signs in an aquatic shoreline area.~~
- 32 | ~~23.4100.190-210 Transportation.~~
- 33 | These regulations apply to both public and private transportation projects.
- 34 | A. ~~General. Roads, railways, and other transportation developments in shoreline areas shall be subject~~  
35 | ~~to the policies and regulations of this section and Chapter 23.90 WCC. These policies and regulations~~  
36 | ~~apply to both public transportation projects and private transportation projects.~~
- 37 | B. ~~Policies.~~
- 38 | C. ~~New public or private transportation facilities should be located inland from the land/water~~  
39 | ~~interface, preferably out of the shoreline, unless:~~

Comment [AP248]: Carried over from removed 'Shoreline Area Regulations.'

Comment [CES249]: Addressed in use table now.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 ~~D. Perpendicular water crossings are required for access to authorized uses consistent with this~~  
2 ~~program; or~~
- 3 ~~E. Facilities are primarily oriented to pedestrian and non-motorized use and provide an opportunity for~~  
4 ~~a substantial number of people to enjoy shoreline areas, and are consistent with policies and~~  
5 ~~regulations for ecological protection in WCC 23.90.030.~~
- 6 ~~F. Transportation facilities should be located and designed to avoid public recreation and public access~~  
7 ~~areas and significant natural, historic, archaeological or cultural sites.~~
- 8 ~~G. Parking is not a preferred use in shorelines and should only be allowed to support authorized uses~~  
9 ~~where no feasible alternatives exist.~~
- 10 ~~H. New or expanded public transportation facility route selection and development should be~~  
11 ~~coordinated with related local and state government land use and circulation planning.~~
- 12 ~~I. Transportation system route planning, acquisition, and design in the shoreline should provide space~~  
13 ~~wherever possible for compatible multiple uses such as utility lines, pedestrian shore access or view~~  
14 ~~points, or recreational trails.~~
- 15 ~~J. Transportation system plans and transportation projects within shorelines should provide safe trail~~  
16 ~~space for non-motorized traffic such as pedestrians, bicyclists, or equestrians. Space for such uses~~  
17 ~~should be required along roads on shorelines, where appropriate, and should be considered when~~  
18 ~~rights-of-way are being vacated or abandoned.~~
- 19 ~~K. Public access should be provided to shorelines where safe and compatible with the primary and~~  
20 ~~adjacent use, or should be replaced where transportation development substantially impairs lawful~~  
21 ~~public access. Viewpoints, parking, trails and similar improvements should be considered for~~  
22 ~~transportation system projects in shoreline areas, especially where a need has been identified.~~
- 23 ~~L. Public transportation routes, particularly arterial highways and railways, should be located,~~  
24 ~~designed, and maintained to permit safe enjoyment of adjacent shore areas and properties by other~~  
25 ~~appropriate uses such as recreation or residences. Vegetative screening or other buffering should be~~  
26 ~~considered.~~
- 27 ~~M. Regulations.~~
- 28 ~~A. General.~~
- 29 1. RCW 36.87.130 prohibits the County from vacating any county road that abuts a body of  
30 saltwater or freshwater except for port, recreational, educational, or industrial purposes.  
31 Therefore, development, abandonment, or alteration of undeveloped county road ends within  
32 SMP jurisdiction is prohibited unless approved in accordance with this program.
- 33 2. Transportation development shall be carried out in a manner that maintains or improves state  
34 water quality standards for affected waters.
- 35 3. Maintenance activity including vegetation control and erosion control shall be carried out  
36 consistent with this program. Necessary minor resurfacing of existing roadways and  
37 replacement of culverts that improve shoreline ecological functions may be exempt from  
38 substantial development permit requirements as provided by WCC 23.60.020 Title 22 (Land Use  
39 and Development).
- 40 4. Transportation facilities must meet the following criteria:

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 | a. ~~Documentation that~~ The proposed facilities cannot be feasibly located outside of shoreline  
2 | jurisdiction due to the uses served or the need to connect specific end points. An analysis of  
3 | alternatives may be required. ~~New or expanded public or private~~ Transportation facilities  
4 | should be located inland from the land/water interface, preferably out of the shoreline.
- 5 | b. ~~Documentation that~~ The proposed facilities are primarily oriented to pedestrian use and  
6 | provide an opportunity for a substantial number of people to enjoy shoreline areas.
- 7 | c. ~~Documentation that the proposed facilities comply with critical area regulations in WCC~~  
8 | ~~Chapter 16.16.~~
- 9 | d. ~~Documentation of how~~ The location, design, and use achieves no net loss of shoreline  
10 | ecological functions and incorporate appropriate mitigation in accordance with  
11 | ~~WCC 23.30.02~~ WCC 23.30.010 (Ecological Protection).
- 12 | d. ~~Documentation that~~ The proposed facilities avoid public recreation areas and significant  
13 | natural, historic, archaeological or cultural resources, or ~~that~~ no alternative is feasible  
14 | outside of the shoreline and ~~that~~ all feasible measures to minimize adverse impacts have  
15 | been incorporated into the proposal.
- 16 | B. Site Design and Operation.
- 17 | ~~4.1.~~ Transportation facilities on shorelines shall be designed to generally follow natural topography,  
18 | to minimize cuts and/or fills, to avoid cutting off meander bends or point bars, and to avoid  
19 | adverse impacts to shoreline ecological functions and processes. Wherever such roads or  
20 | railway embankments cross depressions remaining from remnant channels and oxbow bends,  
21 | crossings of ample cross-section shall be provided to span the remnant feature.
- 22 | ~~5.2.~~ Raised arterial roads or railways shall be built outside the floodway except for necessary  
23 | crossings. If built in the floodway fringe, such routes should be aligned generally parallel to  
24 | outside stream bends so they will also act as setback dikes. Any parking areas required along  
25 | such roads shall be sited at the base of the embankment and at the downstream corner of large  
26 | accretion beaches, thus requiring no or minimal flood hazard reduction control-works or  
27 | shoreline stabilization. Local access roads in floodplains shall be built at valley floor grade level  
28 | so that floodwaters are not abnormally obstructed nor diverted. Transportation facilities shall  
29 | be designed so that no significant loss of floodway capacity or measurable increase in  
30 | predictable flood levels will result. If transportation facilities are intended to secondarily provide  
31 | flood hazard reduction control, they shall comply with policies of the Comprehensive Plan and  
32 | regulations for flood hazard reduction control-works under WCC ~~23.40.080~~ 23.40.100 (Flood  
33 | Hazard Reduction and Instream Structures).
- 34 | ~~6.3.~~ If a road is demonstrated to be necessary along an accretion shoreform, the waterward road  
35 | shoulder shall be set back far enough from the primary berm so that the berm may absorb the  
36 | high energy of storm tide breakers, as well as prevent road bed erosion and allow optimum  
37 | recreational use of these scarce shore features.
- 38 | ~~7.4.~~ Spans on rivers shall avoid placing structures within the channel migration zone or other  
39 | dynamic, shifting channel elements such as bends.

Comment [PDS250]: Redundent. Already a general regulation.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 | ~~8-5.~~ Earth cut slopes and other exposed soils shall be placed, compacted, and planted or otherwise  
2 | stabilized and protected from surface runoff with native vegetation. Transportation facilities  
3 | sited close to water, wetlands, or other sensitive features shall incorporate the maximum  
4 | feasible buffer of native vegetation in accordance with critical area regulations in WCC  
5 | Chapter 16.16.
- 6 | ~~9-6.~~ Bridges or bottomless culverts or other similar structures shall be used in accordance with  
7 | WDFW guidance to protect shoreline ecological functions and processes. Bridge approaches in  
8 | floodways shall be constructed on open piling, support piers, or other similar measures to  
9 | preserve hydraulic processes.
- 10 | ~~10-7.~~ Bridge supports and abutments shall be designed and spaced so they do not act as walls  
11 | baffling or blocking flood waters, or interrupting stream channel processes or littoral drift.
- 12 | ~~11-8.~~ Transportation facilities shall be constructed of materials that will not adversely affect  
13 | water quality or aquatic plants and animals over the long term. Elements within or over water  
14 | shall be constructed of materials approved by applicable state agencies for use in water for both  
15 | submerged portions and other components to avoid discharge of pollutants from splash, rain or  
16 | runoff. Wood treated with creosote, pentachlorophenol or other similarly toxic materials are  
17 | prohibited. Preferred materials are concrete and steel.
- 18 | ~~12-9.~~ Vehicle and pedestrian circulation systems shall be designed to minimize clearing,  
19 | grading and alteration of topography and natural features. Roadway and driveway alignment  
20 | shall follow the natural contours of the site and minimize width to the maximum extent feasible.  
21 | Elevated walkways should be ~~utilize~~ used to cross wetlands.
- 22 | 10. Nonemergency construction and repair work shall be scheduled for that time of year when  
23 | seasonal conditions (weather, streamflow) permit optimum feasible protection of shoreline  
24 | ecological functions and processes.
- 25 | N.C. Additional Standards for Parking Facilities.
- 26 | 1. Parking facilities are not a water-dependent use and shall only be permitted in the shoreline to  
27 | support an authorized use where it can be demonstrated that there are no feasible alternative  
28 | locations away from the shoreline. Parking facilities shall be buffered from the water's edge and  
29 | less intense adjacent land uses by vegetation screening, undeveloped space, or structures  
30 | developed for the authorized primary use.
- 31 | ~~1-2.~~ Parking areas shall be developed ~~utilizing~~ using low impact development techniques whenever  
32 | possible including, but not limited to, the use of permeable surfacing materials.
- 33 | ~~2-3.~~ Impervious surfacing for parking lot/space areas shall be minimized through the use of  
34 | alternative surfaces where feasible, consistent with the most current Low Impact Development  
35 | Technical Guidance Manual for Puget Sound, or as amended.
- 36 | ~~3.~~ ~~Minimum required setbacks from shorelines are contained in WCC 23.90.130, Shoreline bulk~~  
37 | ~~provisions — Buffers, setbacks, height, open space and impervious surface coverage.~~
- 38 | D. Supplemental Application Requirements.
- 39 | 1. In addition to the application requirements specified in WCC Title 22 (Land Use and  
40 | Development), All applications for new or expanded transportation facilities shall be

Comment [DN251]: Moved from Site Planning section (WCC 23.30.080).

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 accompanied by adequate documentation that the proposal meets the policies and regulations  
2 of this program, including ~~but not limited to~~ subsection (A)(4) of this section.
- 3 ~~2. Documentation that the facility cannot be feasibly located outside of shoreline jurisdiction due~~  
4 ~~to the uses served or the need to connect specific end points. An analysis of alternatives may be~~  
5 ~~required. New or expanded public or private transportation facilities should be located inland~~  
6 ~~from the land/water interface, preferably out of the shoreline.~~
- 7 ~~3. Documentation that the facilities are primarily oriented to pedestrian use and provide an~~  
8 ~~opportunity for a substantial number of people to enjoy shoreline areas.~~

10 ~~Chapter 16.16 WCC.~~
- 11 ~~5. Documentation of how the location, design, and use achieves no net loss of shoreline ecological~~  
12 ~~functions and incorporate appropriate mitigation in accordance with WCC 23.90.030.~~
- 13 ~~6. Documentation that facilities avoid public recreation areas and significant natural, historic,~~  
14 ~~archaeological or cultural resources, or that no alternative is feasible outside of the shoreline~~  
15 ~~and that all feasible measures to minimize adverse impacts have been incorporated into the~~  
16 ~~proposal.~~
- 17 E. Regulations for Specific Shoreline Environment Designations.
- 18 1. In the Urban Conservancy and Conservancy shoreline area environments, transportation  
19 facilities are permitted only for access to approved development.
- 20 2. In the Natural shoreline area environment, transportation facilities are prohibited, except to  
21 access approved recreational development.
- 22 3. In the Aquatic shoreline area environment, access to water-dependent or water-related uses,  
23 such as ferry terminals, is permitted. Bridge crossings for non-water-dependent or non-water-  
24 related uses may be permitted as a shoreline conditional use.
- 25 A. Shoreline Area Regulations:
- 26 ~~1. Urban. Transportation facilities are permitted subject to policies and regulations of this~~  
27 ~~program. Transportation facilities not serving a specific approved use, including roads, railways,~~  
28 ~~and parking areas, may be permitted as a conditional use, provided there is no feasible location~~  
29 ~~outside of the shoreline.~~
- 30 ~~2. Urban Resort. Transportation facilities are permitted subject to policies and regulations of this~~  
31 ~~program. Transportation facilities not serving a specific approved use, including roads, railways,~~  
32 ~~and parking areas, may be permitted as a conditional use, provided there is no feasible location~~  
33 ~~outside of the shoreline.~~
- 34 ~~3. Urban Conservancy. Transportation facilities are permitted only for access to approved~~  
35 ~~development, subject to policies and regulations of this program.~~
- 36 ~~4. Shoreline Residential. Transportation facilities are permitted subject to policies and regulations~~  
37 ~~of this program. Transportation facilities not serving a specific approved use, including roads,~~  
38 ~~railways, and parking areas, may be permitted as a conditional use, provided there is no feasible~~  
39 ~~location outside of the shoreline.~~

Comment [AP252]: Carried over from removed 'Shoreline Area Regulations.'

Comment [CES253]: Addressed in use table now.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 ~~5. Rural. Transportation facilities are permitted subject to policies and regulations of this program.~~  
2 ~~Transportation facilities not serving a specific approved use, including roads, railways, and~~  
3 ~~parking areas, may be permitted as a conditional use, provided there is no feasible location~~  
4 ~~outside of the shoreline.~~
- 5 ~~6. Resource. Transportation facilities are permitted subject to policies and regulations of this~~  
6 ~~program. Transportation facilities not serving a specific approved use, including roads, railways,~~  
7 ~~and parking areas, may be permitted as a conditional use, provided there is no feasible location~~  
8 ~~outside of the shoreline.~~
- 9 ~~7. Conservancy. Transportation facilities are permitted only for access to approved development,~~  
10 ~~subject to policies and regulations of this program.~~
- 11 ~~8. Natural. Transportation facilities are prohibited, except to access approved recreational~~  
12 ~~development.~~
- 13 ~~9. Aquatic. Access to water dependent or water related uses, such as ferry terminals, is permitted~~  
14 ~~subject to policies and regulations of this program. New or expanded bridge crossings for non-~~  
15 ~~water dependent or non water related uses may be permitted as a conditional use.~~
- 16 **23.4100.200-220 Utilities.**  
17 Utility development in shoreline areas shall be subject to the policies and regulations of this section and  
18 Chapter 23.90 WCC. These policies and regulations apply to both ~~local and regional, both public and~~  
19 ~~private utilities.~~ This section applies to regional and local utilities, both public and private, but not to  
20 accessory utilities (see definitions in WCC Chapter 23.60); however, there are regulations regarding  
21 septic systems located in WCC 23.30.020 (Water Quality and Quantity).
- 22 ~~A. Policies.~~
- 23 ~~A. New public or private utilities should be located inland from the land/water interface, preferably out~~  
24 ~~of the shoreline jurisdiction, unless:~~
- 25 ~~a. Perpendicular water crossings are unavoidable; or~~  
26 ~~b. Utilities are required for authorized shoreline uses consistent with this program.~~
- 27 ~~B. Utilities should be located and designed to avoid public recreation and public access areas and~~  
28 ~~significant natural, historic, archaeological or cultural resources.~~
- 29 ~~C. Utilities should be located, designed, constructed, and operated to result in no net loss of shoreline~~  
30 ~~ecological functions and processes with appropriate mitigation as provided in WCC 23.90.030.~~
- 31 ~~D. All utility development should be consistent with and coordinated with all local government and~~  
32 ~~state planning, including comprehensive plans and single purpose plans to meet the needs of future~~  
33 ~~populations in areas planned to accommodate growth. Site planning and rights of way for utility~~  
34 ~~development should provide for compatible multiple uses such as shore access, trails, and~~  
35 ~~recreation or other appropriate use whenever possible; utility right of way acquisition should also~~  
36 ~~be coordinated with transportation and recreation planning.~~
- 37 ~~E. Utilities should be located in existing rights of way and corridors whenever possible.~~
- 38 ~~F. Utilities serving new development should be located underground, wherever possible.~~
- 39 ~~G. Development of pipelines and cables on aquatic lands and tidelands, particularly those running~~  
40 ~~roughly parallel to the shoreline, and development of facilities that may require periodic~~

Comment [AP254]: Added pursuant to scoping document Item 17i.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 maintenance which would disrupt shoreline ecological functions should be discouraged except  
2 where no other feasible alternative exists. When permitted, provisions shall assure that the facilities  
3 do not result in a net loss of shoreline ecological functions or significant impacts to other shoreline  
4 resources and values.

### 5 ~~B. Regulations.~~

#### 6 ~~A. General Design and Operation.~~

7 1. ~~Components of water systems.~~ Utilities which ~~that~~ are not water-dependent shall be located  
8 away from shoreline jurisdiction unless alternative locations, including alternative technology,  
9 are demonstrated to be infeasible and it is demonstrated that the facilities do not result in a net  
10 loss of shoreline ecological functions and processes or significant adverse impacts to other  
11 shoreline resources and values such as parks and recreation facilities, public access, and  
12 archaeological, historic, and cultural resources, and ~~or~~ aesthetic resources.

13 2. ~~Fire Protection Facilities.~~ Storage and handling facilities for water-borne firefighting or rescue  
14 equipment may be permitted on shoreline jurisdiction at locations which are suitable  
15 considering the purpose of the proposal and the policies of the Comprehensive Plan.

16 3. Utilities shall be located within roadway and driveway corridors and rights-of-way wherever  
17 feasible.

18 ~~3.4. New and expanded utilities~~ Utilities must meet the following criteria:

19 a. ~~Documentation that~~ The proposed facilities cannot be feasibly located outside of shoreline  
20 jurisdiction due to the uses served or the need to cross shorelands to connect specific end  
21 points. An analysis of alternatives may be required. ~~New or expanded public or private~~  
22 Utilities should be located inland from the land/water interface, preferably out of shoreline  
23 jurisdiction.

24 b. ~~Documentation that the proposed facilities comply with critical area regulations in WCC~~  
25 ~~Chapter 16.16.~~

26 ~~e.b. Documentation of how~~ The location, design, and use of the proposed facility achieves no  
27 net loss of shoreline ecological functions and incorporates appropriate mitigation in  
28 accordance with WCC ~~23.30.020~~ 23.30.010 (Ecological Protection).

29 ~~d.c. Documentation that~~ The proposed facilities will avoid public recreation areas and significant  
30 natural, ~~historic, archaeological~~ or cultural resources, and that all feasible measures to  
31 minimize adverse impacts to such resources have been incorporated into the proposal.

32 ~~d. Applications must demonstrate~~ The proposal includes adequate provisions for preventing  
33 spills or leaks, as well as procedures for mitigating damages from spills or other  
34 malfunctions and shall demonstrate that periodic maintenance will not disrupt shoreline  
35 ecological functions.

36 e. If the proposal is for oil, gas, and natural gas utilities and pipelines or electrical energy and  
37 communications utilities ~~Application materials, it shall~~ includes an analysis of alternative  
38 routes avoiding aquatic lands, including an analysis of alternative technology.

Comment [CES255]: Moved from Site Planning section; required by WAC 173-26-241(3)(l).

Comment [PDS256]: Redundant. Already a general regulation.

# Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

- 1 B. Additional Standards for Specific Utilities ~~Water Systems.~~
- 2 1. Desalinization facilities shall be located consistent with critical area regulations and buffers,
- 3 except for water-dependent components such as water intakes.
- 4 2. Solid Waste Facilities.
- 5 a. ~~Private and public intake facilities, and wells on shorelines, should be located where there~~
- 6 ~~will be no net loss in ecological functions or adverse impacts upon shoreline resources,~~
- 7 ~~values, natural features, or other users.~~
- 8 b. ~~Desalinization facilities shall be located consistent with critical area regulations and buffers,~~
- 9 ~~except for water dependent components such as water intakes.~~
- 10 c. ~~Sewage Systems.~~
- 11 d. ~~Sewage trunk lines, interceptors, pump stations, treatment plants and other components~~
- 12 ~~that are not water dependent shall be located away from shoreline jurisdiction unless~~
- 13 ~~alternative locations, including alternative technology, are demonstrated to be infeasible~~
- 14 ~~and it is demonstrated that the facilities do not result in a net loss of shoreline ecological~~
- 15 ~~functions and processes or significant impacts to other shoreline resources and values such~~
- 16 ~~as parks and recreation facilities, public access and archaeological, historic, and cultural~~
- 17 ~~resources, and aesthetic resources.~~
- 18 e. ~~Outfall pipelines and diffusers are water dependent, but should be located only where there~~
- 19 ~~will be no net loss in shoreline ecological functions and processes or adverse impacts upon~~
- 20 ~~shoreline resources and values.~~
- 21 f. ~~Septic tanks and drainfields are prohibited where public sewer is reasonably available.~~
- 22 g. a. Solid Waste Facilities. Facilities for processing, storage and disposal of solid waste are not
- 23 normally water-dependent. Components that are not water-dependent shall not be
- 24 permitted ~~on~~ in shoreline jurisdiction.
- 25 h. b. Disposal of solid waste on shorelines or in water-bodies has potential for severe adverse
- 26 effects upon ecological processes and functions, property values, public health, natural
- 27 resources, and local aesthetic values and shall not be permitted.
- 28 i. c. Temporary storage of solid waste in suitable receptacles is permitted as an accessory use to
- 29 a primary permitted use, or for litter control.
- 30 2.3 Oil, Gas and Natural Gas Transmission.
- 31 a. Regional ~~Oil, gas, and natural gas utility pipelines, except local service lines,~~ shall not be
- 32 located in shoreline jurisdiction unless alternatives are demonstrated to be infeasible ~~and~~
- 33 ~~shall include analysis of alternative routes avoiding aquatic lands and including alternative~~
- 34 ~~technology.~~
- 35 b. Local ~~Natural gas local service lines~~ utilities shall not be located in ~~shoreline area~~ shoreline
- 36 environments unless serving approved shoreline uses. Crossings of shorelines shall not be
- 37 approved unless alternatives are demonstrated to be infeasible. ~~Application materials shall~~
- 38 ~~include an analysis of alternative routes avoiding aquatic lands, including an analysis of~~
- 39 ~~alternative technology.~~

Comment [DN257]: Moved to the General Regs – Water Quality section as this would apply universally and relates more to accessory utilities

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 C. ~~Developers and operators of pipelines and related appurtenances for gas and oil shall be required to~~  
2 ~~demonstrate adequate provisions for preventing spills or leaks, as well as established procedures for~~  
3 ~~mitigating damages from spills or other malfunctions and shall demonstrate that periodic~~  
4 ~~maintenance will not disrupt shoreline ecological functions.~~
- 5 1.4. Electrical Energy and Communication Systems.
- 6 2. ~~Energy and communication systems including substations, towers, transmission and distribution~~  
7 ~~lines have critical location requirements, but are not normally water dependent. Systems~~  
8 ~~components that are not water dependent shall not be located on shoreline jurisdiction unless~~  
9 ~~alternatives are infeasible. Application materials for such facilities shall include an analysis of~~  
10 ~~alternative routes avoiding aquatic lands, including an analysis of alternative technology.~~
- 11 a. ~~Underground placement of lines shall be required on shorelines for new or replacement~~  
12 ~~lines that are parallel to the shoreline, and do not cross water or other critical areas defined~~  
13 ~~in WCC Chapter 16.16; provided, that maintenance of existing aerial lines above 35kv may~~  
14 ~~be permitted above ground where alternatives are demonstrated to be impractical and/or~~  
15 ~~infeasible. New or replacement lines that cross water or other critical areas defined in~~  
16 ~~Chapter 16.16 WCC may be required to be placed underground depending on impacts on~~  
17 ~~ecological functions and processes and visual impacts; provided, that maintenance of~~  
18 ~~existing aerial lines above 35 kv may be permitted above ground where alternatives are~~  
19 ~~demonstrated to be impractical and/or infeasible. Poles or supports treated with creosote~~  
20 ~~or other wood preservatives that may be mobile in water shall not be used along shorelines~~  
21 ~~or associated wetlands. Where road rights-of-way or easements are within 150 feet and also~~  
22 ~~are parallel to the shoreline for more than 500 feet, no new overhead wiring shall be~~  
23 ~~installed between the road and OHWM.~~
- 24 b. ~~Utilities for new development within the shoreline shall be installed underground.~~
- 25 a. ~~Other Utility Production and Processing Facilities. Other utility processing facilities, such as~~  
26 ~~power plants, that are non water oriented shall not be allowed in shoreline jurisdiction unless~~  
27 ~~no other feasible alternative is available.~~
- 28 b. ~~Minimum required setbacks from shorelines and side property lines and maximum height limits~~  
29 ~~are contained in WCC 23.90.130, Shoreline bulk provisions – Buffers, setbacks, height, open~~  
30 ~~space and impervious surface coverage.~~
- 31 c. ~~Site Coverage. Maximum site coverage for utility development including parking and storage~~  
32 ~~areas shall not exceed standards in the underlying zoning in WCC Title 20 and shall not exceed~~  
33 ~~50 percent on urban, urban resort and shoreline residential shorelines, 35 percent on rural and~~  
34 ~~resource shorelines and 20 percent on urban conservancy and conservancy shorelines.~~
- 35 5. Hydropower Development. In addition to the general requirements, above, hydropower  
36 facilities shall be located, designed, and operated to:
- 37 a. Minimize impacts to fish and wildlife resources including spawning, nesting, rearing habitat,  
38 migratory routes, and critical areas. Mitigation measures to achieve no net loss of shoreline  
39 ecological functions and processes shall be implemented in accordance with WCC 23.30.010  
40 (Ecological Protection).

Comment [AP258]: Captured above.

Comment [AP259]: Revised for conciseness and clarity.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1            b. Minimize impacts to geohydraulic processes; waterfalls; erosion and accretion shoreforms;  
2            agricultural land; scenic vistas; recreation sites; and sites having significant historical,  
3            cultural, scientific, or educational value.  
4            c. Accommodate public access to, and multiple use of, the shoreline.  
5            d. Comply with the instream structure regulations of 23.40.100 (Flood Hazard Reduction and  
6            Instream Structures).  
7    C. Supplemental Application Requirements.  
8            1. In addition to the minimum application requirements specified in WCC Title 22 (Land Use and  
9            Development), All applications for new or expanded utilities shall be accompanied by adequate  
10            documentation that the proposal meets the policies and regulations of this program, including  
11            but not limited to subsection (1)(b) of this section.;  
12    D. Regulations for Specific Shoreline Environment Designations.  
13            1. In the Urban Conservancy and Conservancy shoreline environments, local utility development is  
14            permitted; provided, that sewage outfalls and treatment plants, over-water communication or  
15            power-lines, fuel pipelines, and other types of hazardous material pipelines may be permitted as  
16            a shoreline conditional use, provided there is no feasible location outside the shoreline.  
17            2. In the Natural shoreline environment, utility development is prohibited. Maintenance of existing  
18            utilities is permitted and shall take extraordinary measures in protecting the natural features  
19            therein.  
20            3. In the Aquatic shoreline environment:  
21            a. Submarine electrical or communications cables, over-water public utility lines consisting of  
22            local distribution facilities if adequately flood-proofed, water intakes, and desalination  
23            facility intakes are permitted.  
24            b. Submarine water and sewer lines, fuel pipelines, sewer, and desalination outfalls may be  
25            permitted as shoreline conditional uses.  
26            c. Crossings of water-bodies by over-water transmission or distribution lines and on-site  
27            electrical communication wiring may be permitted within 100 feet of the OHWM and  
28            wetlands and over bodies of water as a shoreline conditional use. All other utility  
29            development is prohibited.  
30    C. Shoreline Area Regulations.  
31            A. Urban. Utility development consisting of local distribution facilities is permitted subject to  
32            policies and regulations of this program. Regional facilities, including transmission facilities  
33            servicing customers outside of Whatcom County may be permitted as a conditional use, provided  
34            there is no feasible location outside the shoreline. Desalination facilities may be permitted as a  
35            conditional use.  
36            B. Urban Resort. Utility development consisting of local distribution facilities is permitted subject  
37            to policies and regulations of this program. Regional facilities, including transmission facilities  
38            servicing customers outside of Whatcom County, may be permitted as a conditional use, provided  
39            there is no feasible location outside the shoreline. Desalination facilities may be permitted as a  
40            conditional use.

Comment [AP260]: Moved from 'Shoreline Area Regulations,' below.

Comment [CES261]: Addressed by use table now.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 ~~C. Urban Conservancy. Utility development consisting of local distribution facilities is permitted~~  
2 ~~subject to policies and regulations of this program; provided, that sewage outfalls and treatment~~  
3 ~~plants, over water communication or power lines, fuel pipelines, and other types of hazardous~~  
4 ~~material pipelines may be permitted as a conditional use, provided there is no feasible location~~  
5 ~~outside the shoreline. Regional facilities, including transmission facilities serving customers~~  
6 ~~outside of Whatcom County, may be permitted as a conditional use, provided there is no~~  
7 ~~feasible location outside the shoreline. Freestanding communication towers are prohibited.~~  
8 ~~Desalinization facilities may be permitted as a conditional use.~~
- 9 ~~D. Shoreline Residential. Utility development consisting of local distribution facilities is permitted~~  
10 ~~subject to policies and regulations of this program. Regional facilities, including transmission~~  
11 ~~facilities serving customers outside of Whatcom County, may be permitted as a conditional use,~~  
12 ~~provided there is no feasible location outside the shoreline. Desalinization facilities may be~~  
13 ~~permitted as a conditional use.~~
- 14 ~~E. Rural. Utility development consisting of local distribution facilities is permitted subject to~~  
15 ~~policies and regulations of this program. Regional facilities, including transmission facilities~~  
16 ~~servicing customers outside of Whatcom County, may be permitted as a conditional use, provided~~  
17 ~~there is no feasible location outside the shoreline. Desalinization facilities may be permitted as a~~  
18 ~~conditional use.~~
- 19 ~~F. Resource. Utility development consisting of local distribution facilities is permitted subject to~~  
20 ~~policies and regulations of this program. Regional facilities, including transmission facilities~~  
21 ~~servicing customers outside of Whatcom County, may be permitted as a conditional use, provided~~  
22 ~~there is no feasible location outside the shoreline. Desalinization facilities may be permitted as a~~  
23 ~~conditional use.~~
- 24 ~~G. Conservancy. Utility development consisting of local distribution facilities is permitted subject to~~  
25 ~~policies and regulations of this program; provided, that sewage outfalls and treatment plants,~~  
26 ~~over water communication or power lines, fuel pipelines, and other types of hazardous material~~  
27 ~~pipelines may be permitted as a conditional use, provided there is no feasible location outside~~  
28 ~~the shoreline. Regional facilities, including transmission facilities serving customers outside of~~  
29 ~~Whatcom County, may be permitted as a conditional use, provided there is no feasible location~~  
30 ~~outside the shoreline. Freestanding communication towers are prohibited. Desalinization~~  
31 ~~facilities may be permitted as a conditional use.~~
- 32 ~~H. Natural.~~  
33 ~~a. Utility development is prohibited.~~  
34 ~~b. Maintenance of existing utilities is permitted and shall take extraordinary measures in~~  
35 ~~protecting the natural features therein.~~
- 36 ~~I. Aquatic.~~  
37 ~~a. Submarine electrical or communications cables, over water public utility lines consisting of~~  
38 ~~local distribution facilities if adequately flood-proofed, water intakes, and desalinization~~  
39 ~~facility intakes are permitted subject to policies and regulations of this program.~~

- 1 | ~~b. Submarine water and sewer lines, fuel pipelines, sewer, and desalination outfalls may be~~
- 2 | ~~permitted as conditional uses.~~
- 3 | ~~e. Crossings of water bodies by over water transmission or distribution lines and on site~~
- 4 | ~~electrical communication wiring may be permitted within 100 feet of the OHWM and~~
- 5 | ~~wetlands and over bodies of water as a conditional use. All other utility development is~~
- 6 | ~~prohibited.~~

# Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

## Chapter 23.50 Applicability and Nonconforming Uses, Structures, and Lots

Comment [AP262]: Moved Applicability portion to Chapter 23.10, Purpose, Intent, and Applicability

### 23.50.010 Application to persons and development.

Comment [AP263]: Moved to Chapter 23.10

C. This program shall apply to any person as defined in Chapter 23.110 WCC.

D. This program shall apply to any use or development as defined in Chapter 23.110 WCC. All development and use of shorelines of the state shall be carried out in a manner that is consistent with this program and the policy of the Act as required by RCW 90.58.140(1), whether or not a shoreline permit or statement of exemption is required for such development pursuant to Chapter 23.60 WCC.

E. No substantial development as defined in Chapter 23.110 WCC shall be undertaken within shorelines by any person on shorelines without first obtaining a substantial development permit from Whatcom County; provided, that such a permit shall not be required for the exempt activities listed in WCC 23.60.022.

### 23.50.020 Relationship to other local regulations.

Comment [AP264]: Moved to Chapter 23.05.

F. In the case of development subject to the shoreline permit requirement of this program, the county building official shall not issue a building permit for such development until a shoreline permit has been granted; provided, that any permit issued by the building official for such development shall be subject to the same terms and conditions that apply to the shoreline permit.

G. In the case of development subject to regulations of this program but exempt from the shoreline substantial development permit requirement, any required statement of exemption shall be obtained prior to issuance of the building permit; provided, that for single family residences, a building permit reviewed and signed off by the administrator may substitute for a written statement of exemption. A record of review documenting compliance with bulk and dimensional standards as well as policies and regulations of this program shall be included in the permit review. The building official shall attach and enforce conditions to the building permit as required by applicable regulations of this program pursuant to RCW 90.58.140(1).

H. In the case of zoning conditional use permits and/or variances required by WCC Title 20 for development that is also within shorelines, the county decision maker shall document compliance with bulk and dimensional standards as well as policies and regulations of this program in consideration of recommendations from the administrator. The decision maker shall attach conditions to such permits and variances as required to make such development consistent with this program.

I. In the case of land divisions, such as short subdivisions, long plats and planned unit developments that require county approval, the decision maker shall document compliance with bulk and dimensional standards as well as policies and regulations of this program and attach appropriate conditions and/or mitigating measures to such approvals to ensure the design, development activities and future use associated with such land division(s) are consistent with this program.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 J. ~~Other local ordinances that may be applicable to shoreline development or use include, but are not~~  
2 ~~limited to:~~
- 3 1. ~~Building, plumbing, mechanical, and fire codes.~~
  - 4 2. ~~Boating and swimming, WCC Title 11.~~
  - 5 3. ~~On-site sewage system regulations, Chapter 24.05 WCC.~~
  - 6 4. ~~Solid waste rules and regulations, Chapter 24.06 WCC.~~
  - 7 5. ~~Zoning, WCC Title 20.~~
  - 8 6. ~~Land division regulations, WCC Title 21.~~
  - 9 7. ~~Development standards.~~
- 10 **23.50.030 Relationship to other state and federal laws.**
- 11 F. ~~Obtaining a shoreline permit or statement of exemption for a development or use does not excuse~~  
12 ~~the applicant/proponent from complying with any other local, tribal, state, regional or federal~~  
13 ~~statutes or regulations applicable to such development or use.~~
- 14 G. ~~At the time of application or initial inquiry, the administrator shall inform the applicant/proponent~~  
15 ~~of other such statutes and regulations relating to shoreline issues that may be applicable to the~~  
16 ~~project to the extent that the administrator is aware of such statutes. However, the final~~  
17 ~~responsibility for determining applicable statutes and regulations and complying with the same rests~~  
18 ~~with the applicant/proponent or responsible person carrying out the use or development in~~  
19 ~~question.~~
- 20 H. ~~Washington State statutes together with implementing regulations adopted pursuant thereto that~~  
21 ~~may be applicable to shoreline development or use include, but are not limited to:~~
- 22 1. ~~Flood Control Zone Act, Chapter 86.16 RCW.~~
  - 23 2. ~~Forest Practices Act, Chapter 76.09 RCW.~~
  - 24 3. ~~Fish and Wildlife, RCW Title 77.~~
  - 25 4. ~~Water Pollution Control Act, Chapter 90.48 RCW.~~
  - 26 5. ~~Land Subdivision Act, Chapter 58.17 RCW.~~
  - 27 6. ~~Surface Mining Act, Chapter 78.44 RCW.~~
  - 28 7. ~~Washington Clean Air Act, Chapter 70.94 RCW.~~
  - 29 8. ~~State Environmental Policy Act (SEPA), Chapter 43.21C RCW.~~
  - 30 9. ~~Camping Resorts Act, Chapter 19.105 RCW.~~
  - 31 10. ~~Water Resources Act of 1971, Chapter 90.54 RCW.~~
  - 32 11. ~~Growth Management Act, Chapter 36.70A RCW.~~
  - 33 12. ~~State Hydraulic Code, Chapter 77.55 RCW.~~
- 34 I. ~~Regional authority regulations authorized by state law that may be applicable to shoreline~~  
35 ~~development or use include, but are not limited to:~~
- 36 1. ~~Northwest Clean Air Agency regulations.~~
  - 37 2. ~~Puget Sound Water Quality Management Plan.~~
- 38 J. ~~Federal statutes together with implementing regulations adopted pursuant thereto that may be~~  
39 ~~applicable to shoreline development or use include, but are not limited to:~~

Comment [AP265]: Moved to Chapter 23.05

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1. ~~Rivers and Harbors Act of 1899.~~
2. ~~Fish and Wildlife Coordination Act of 1958.~~
3. ~~National Environmental Policy Act of 1969 (NEPA).~~
4. ~~Coastal Zone Management Act of 1972, as amended.~~
5. ~~Federal Water Pollution Control Act, as amended.~~
6. ~~Flood Insurance Act of 1968, as amended.~~
7. ~~Clean Air Act, as amended.~~
8. ~~Endangered Species Act (ESA).~~

### **23.50.040 Application within federal reserves.**

- B. ~~The shoreline permit procedures, policies and regulations established in this program shall apply to development or use of shorelines of the state within national forests, national parks and national recreation areas by persons other than federal agencies.~~
- C. ~~As recognized by RCW 90.58.350, the provisions of this program shall not apply to lands held in trust by the United States for Indian nations, tribes or individuals.~~

Comment [AP266]: Moved to Chapter 23.05

### **23.50.050 Program effects on property values.**

- C. ~~As provided for in RCW 90.58.290, the restrictions imposed upon use of real property through implementation of policies and regulations of the Act and this program shall be duly considered by the county assessor and the county board of equalization in establishing the fair market value of such properties.~~
- D. ~~Designation of private property as a natural or conservancy shoreline area pursuant to Chapter 23.30 WCC shall qualify the property as meeting the definition of “open space land” under the Open Space Taxation Act of 1970, as amended (RCW 84.34.020(1)) and shall qualify such land for application for open space taxation in accordance with RCW 84.34.037 and Chapter 3.28 WCC.~~

Comment [AP267]: Moved to Chapter 23.05

### **23.50.060 Hazardous substance remedial actions.**

- A. ~~The procedural requirements of Chapter 90.58 RCW shall not apply to a project for which a consent decree, order, or agreed order has been issued pursuant to Chapter 70.105D RCW or to the Department of Ecology when it conducts a remedial action under Chapter 70.105D RCW. The Department of Ecology shall, in consultation with the administrator, assure that such projects comply with the substantive requirements of Chapter 90.58 RCW, Chapter 173-26 WAC and this program. (Ord. 2009-13 § 1 (Exh. 1)).~~

Comment [AP268]: Deleted per Periodic Review Checklist, Item 2017.c, and Scoping Document, Item #1c. Exceptions are now established in §22.07.010(G).

### **23.50.070 Nonconforming development.**

- The following provisions shall apply to lawfully established uses, buildings and/or structures that do not meet the specific standards of this program.
- A. ~~The lawfully established use of any building, structure, land or premises existing on the effective date of initial adoption of the program (August 27, 1976), or any subsequent amendment thereto or authorized under a permit or approval issued, or otherwise vested, prior to the effective date of initial adoption of the program or any subsequent amendment thereafter shall be considered~~

Comment [MD269]: Rewritten (below) per the latest DOE guidance that separates out nonconforming uses, development, and lots. See minor revisions to draft replacement text below.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 nonconforming and may be continued, subject to the provisions of this section; provided, that  
2 agricultural activities shall conform to WCC 16.16.290; provided further, that bulkheads shall  
3 conform to WCC 23.100.130.
- 4 ~~B. Nonconforming structures may be maintained, repaired, renovated, or remodeled to the extent that  
5 nonconformance with the standards and regulations of this program is not increased; provided, that  
6 a nonconforming development that is moved any distance must be brought into conformance with  
7 this program and the Act; provided further, that as a conditional use a nonconforming dock may be  
8 modified, reoriented or altered within the same general location to be more consistent with the  
9 provisions of this SMP.~~
- 10 ~~C. Nonconforming structures, other than single family residences and their appurtenances that are  
11 expanded or enlarged must obtain a variance or be brought into conformance with this program and  
12 the Act; provided, that nonconforming structures with conforming uses may be expanded or  
13 enlarged within the existing building footprint as a conditional use pursuant to WCC  
14 23.100.050(B)(1)(c).~~
- 15 ~~D. Nonconforming structures (including accessory structures) that are damaged or destroyed by fire,  
16 explosion, flood, or other casualty may be restored or replaced in kind; provided, that:~~
- 17 ~~1. Structures containing conforming uses, such as a single family residence or accessory structure,  
18 that are located within a hazardous area shall be redeveloped consistent with the requirements  
19 of Chapter 16.16 WCC, Article 3 (Geologically Hazardous Areas) and Article 4 (Frequently  
20 Flooded Areas); provided, that the permit process is commenced within 18 months of the date  
21 of such damage; and the reconstruction does not expand, enlarge, or otherwise increase the  
22 nonconformity, except as provided for in subsections H and I of this section.~~
- 23 ~~2. Structures containing nonconforming uses can be replaced in kind if there is no feasible  
24 alternative that allows for compliance with the provisions of this program, and the permit  
25 process is commenced within 18 months of the date of such damage, and the reconstruction  
26 does not expand, enlarge, or otherwise increase the nonconformity, except as provided for in  
27 subsection E or H of this section.~~
- 28 ~~E. If a nonagricultural nonconforming use is intentionally abandoned for a period of 12 months or  
29 more, then any future use of the nonconforming building, land or premises shall be consistent with  
30 the provisions of this program.~~
- 31 ~~F. Replacement of any nonconforming structures or buildings or portions thereof within the aquatic  
32 shoreline area shall comply with program requirements for materials that come in contact with the  
33 water pursuant to WCC 23.90.040(B)(5); provided, that replacement of existing wood pilings with  
34 chemically treated wood is allowed for maintenance purposes where use of a different material  
35 such as steel or concrete would result in unreasonable or unsafe structural complications; further  
36 provided, that where such replacement exceeds 20 percent of the existing pilings over a 10-year  
37 period, such pilings shall conform to the standard provisions of this section.~~
- 38 ~~G. Enlargement or expansion of single family residences by the addition of space to the main structure  
39 or by the addition of normal appurtenances as defined in Chapter 23.110 WCC that extend  
40 waterward of the existing primary residential foundation walls further into a critical area (excluding~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 the buffers of the critical areas), further into the minimum required side yard setback, or that  
2 increase the structure height above the limits established by this program shall require a variance;  
3 provided, that expansion of nonconforming single family residences other than that specified in this  
4 subsection I may be expanded without a variance where the provisions of subsection J or K of this  
5 section apply.

6 ~~H. The enlargement or expansion of single family residences by the addition of space to the exterior of  
7 the main structure or normal appurtenances is permitted without a conditional use permit or  
8 variance once during the life of the structure (100 years). The structure shall be located landward of  
9 the ordinary high water mark, and any expansion of the footprint is landward of the existing building  
10 footprint (not the side yard), and any vertical expansion is within the existing building footprint;  
11 provided, that the following conditions are met:~~

12 ~~1. Enlargements, expansions, or additions that increase the existing primary structure or normal  
13 appurtenances by up to 250 square feet of gross floor area as defined by Chapter 23.110 WCC  
14 shall be allowed provided the expansion or addition will occur on a previously impacted  
15 impervious surface and the expansion is not waterward of the common line setback as  
16 illustrated in Appendix F.~~

17 ~~2. Enlargements, expansions, or additions that increase the total footprint of the existing primary  
18 structure or normal appurtenances by 250 to 500 square feet of gross floor area as defined by  
19 Chapter 23.110 WCC shall be allowed; provided, that the addition will occur on a previously  
20 impacted impervious surface and the expansion is not waterward of the common line setback  
21 as illustrated in Appendix F; further provided, that the shoreline is enhanced by the equivalent  
22 area of a building footprint that is expanded. If enhanced through planting, the administrator  
23 shall require a vegetation management plan consistent with WCC 23.90.060(B)(2).~~

24 ~~I. The administrator shall require a conditional use permit if the enlargement or expansion of single  
25 family residences by the addition of space to the exterior of the main structure or normal  
26 appurtenances is in excess of those allowances provided in subsection J of this section.~~

27 ~~J. A structure that is being or has been used for a nonconforming use may be used for a different  
28 nonconforming use only upon the approval of a conditional use permit. In addition to the  
29 conditional use criteria of WCC 23.60.040, before approving a conditional use for a change in  
30 nonconforming use, the hearing examiner shall also find that:~~

31 ~~1. No reasonable alternative conforming use is practical because of the configuration of the  
32 structure and/or the property;~~

33 ~~2. The proposed use will be at least as consistent with the policies and provisions of the Act and  
34 this program and as compatible with the uses in the area as the preexisting use;~~

35 ~~3. The use or activity is enlarged, intensified, increased or altered only to the minimum amount  
36 necessary to achieve the intended functional purpose;~~

37 ~~4. The structure(s) associated with the nonconforming use shall not be expanded in a manner that  
38 increases the extent of the nonconformity including encroachment into areas, such as setbacks,  
39 and any critical areas and/or associated buffers established by Chapter 16.16 WCC, where new  
40 structures, development or use would not be allowed;~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1        5. ~~The vegetation conservation standards of WCC 23.90.060(B)(3) are met;~~
- 2        6. ~~The change in use, remodel or expansion will not create adverse impacts to shoreline ecological~~
- 3            ~~functions and/or processes; and~~
- 4        7. ~~Uses which are specifically prohibited or which would thwart the intent of the Act or this~~
- 5            ~~program shall not be authorized.~~
- 6        K. ~~Nonconforming lots are those that have a building area of less than 2,500 square feet available for a~~
- 7            ~~single family residence and normal appurtenances that is unrestricted by setbacks or buffers from~~
- 8            ~~shorelines.~~
- 9        L. ~~Where permitted according to shoreline areas designations (WCC Table 23.100.010), new single-~~
- 10            ~~family development on any legal lot in shoreline jurisdiction that is nonconforming with respect to~~
- 11            ~~the required shoreline buffer standards may be allowed without a shoreline variance when all of the~~
- 12            ~~following criteria are met:~~
- 13            1. ~~The depth of the lot (the distance from the ordinary high water mark to the inside edge of the~~
- 14                ~~frontage setback) is equal to or less than the standard buffer as indicated in Chapter 16.16 WCC;~~
- 15                ~~and~~
- 16            2. ~~The building area lying landward of the shoreline buffer and interior to required side yard~~
- 17                ~~setbacks is 2,500 square feet or less; provided, that consideration shall be given to view impacts~~
- 18                ~~and all single family residences approved under this section shall not extend waterward of the~~
- 19                ~~common line setback as measured in accordance with Appendix F. The building area means the~~
- 20                ~~entire area that will be disturbed to construct the home, normal appurtenances (except~~
- 21                ~~drainfields), and landscaping; and~~
- 22            3. ~~The lot is not subject to landslide hazard areas, alluvial fan hazard areas, or riverine and coastal~~
- 23                ~~erosion hazard areas or associated buffers as provided in WCC 16.16.310; and~~
- 24            4. ~~The nonconforming lot was created prior to August 8, 2008; and~~
- 25            5. ~~Appropriate measures are taken to mitigate all adverse impacts, including but not limited to~~
- 26                ~~locating the residence in the least environmentally damaging location relative to the shoreline~~
- 27                ~~and any critical areas; and provided, that all administrative reductions to side yard and/or~~
- 28                ~~frontage setbacks are pursued, when doing so will not create a hazardous condition or a~~
- 29                ~~condition that is inconsistent with this program and WCC Title 20; and~~
- 30            6. ~~There is no opportunity to consolidate lots under common ownership that will alleviate the~~
- 31                ~~nonconformity; and~~
- 32            7. ~~The area between the structure and the shoreline and/or critical area shall comply with the~~
- 33                ~~vegetation conservation standards of WCC 23.90.060(B)(3); and~~
- 34            8. ~~Development may not take place waterward of the ordinary high water mark; and~~
- 35            9. ~~Facilities such as a conventional drainfield system may be allowed within critical areas or their~~
- 36                ~~buffers, except wetlands and buffers, outside of the building area specified above, subject to~~
- 37                ~~specific criteria in Chapter 16.16 WCC.~~
- 38        M. ~~Redevelopment of nonconforming rights of way and associated transportation structures, such as~~
- 39            ~~railroad trestles, may be permitted for purposes of facilitating the development of public trails~~
- 40            ~~and/or public shoreline access; provided, that such redevelopment shall be otherwise consistent~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 with the provisions of this program, including but not limited to the provisions for public access and  
2 no net loss of shoreline ecological functions and processes, except as provided for in subsections E  
3 and H of this section.

### 4 **23.50.010 Nonconforming Uses.**

5 A. The lawfully established use of any building, structure, land, or premises existing or authorized  
6 under a permit or approval issued prior to the effective date of initial adoption of this program  
7 (August 27, 1976) or any applicable amendment thereafter, but which does not conform to present  
8 use regulations due to subsequent changes to the master program, shall be considered legally  
9 nonconforming and may be continued, subject to the provisions of this section; provided, that  
10 agricultural activities shall conform to WCC Chapter 16.16, Article 8 (Conservation Program on  
11 Agricultural Lands).

12 B. The expansion, alteration, and/or intensification of a nonconforming use is prohibited.

13 C. An existing use designated as a shoreline conditional use under present use regulations that lawfully  
14 existed prior to the effective date of the initial adoption of this program (August 27, 1976) or any  
15 applicable amendment thereafter and that has not obtained a shoreline conditional use permit shall  
16 be considered a legal use and may be continued subject to the provisions of this section without  
17 obtaining a shoreline conditional use permit.

18 D. Other than agricultural uses complying with WCC 16.16.800, if a use is discontinued for a period of  
19 12 consecutive months or more, then any subsequent use, if allowed, shall be consistent with the  
20 provisions of this program and the Act.

21 E. The change of a nonconforming use to another type of nonconforming use is prohibited. ~~may only~~  
22 occur upon the approval of a shoreline conditional use permit. In addition to the shoreline  
23 conditional use criteria of WCC Title 22 (Land Use and Development), before approving a shoreline  
24 conditional use for a change in nonconforming use, the Hearing Examiner shall also find that:

25 ~~— No reasonable alternative conforming use is practical because of the configuration of the~~  
26 ~~structure and/or the property;~~

27 ~~— The proposed use will be consistent with the policies and provisions of the Act and this program~~  
28 ~~and as compatible with the uses in the area as the preexisting use;~~

29 ~~— The vegetation conservation management standards of WCC 23.30.050 are met;~~

30 ~~— The change in use or remodel will not create adverse impacts to shoreline ecological functions~~  
31 ~~and/or processes; and~~

32 ~~— Uses that are specifically prohibited or that would thwart the intent of the Act or this program~~  
33 ~~shall not be authorized.~~

34 ~~— Public Access is provided as required by this program.~~

35 ~~— Vegetation screening and/or view protection is provided as required by this program.~~

Comment [P/C270]: P/C Motion to prohibit.  
Carried 8-1.

Comment [P/C271]: P/C Motion to delete.  
Carried 7-2.

### 36 **23.50.011020 Nonconforming Structures.**

37 A. A lawfully established structure existing or authorized under a permit or approval issued prior to the  
38 effective date of initial adoption of this program (August 27, 1976) or any applicable amendment  
39 thereafter, but is no longer fully consistent with present regulations due to subsequent changes to

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 the master program, shall be considered legally nonconforming and may be continued, subject to  
2 the provisions of this section; provided that:
- 3 1. Shoreline stabilization structures shall conform to WCC 23.40.190 (Shoreline Stabilization).
  - 4 2. When maintenance and repair of a nonconforming structure has lapsed such that the structure  
5 or activity area is not in a usable condition, the structure or activity shall be considered to be  
6 abandoned or derelict and may no longer be continued.
  - 7 3. For structures where the ordinary high water mark establishes landward of the structure, this  
8 structure shall be considered to be abandoned or derelict and may no longer be continued.
  - 9 4. Non-overwater nonconforming structures may be maintained, repaired, renovated, or  
10 remodeled to the extent that nonconformance with the standards and regulations of this  
11 program is not increased, provided that a nonconforming structure that is moved any distance  
12 must be brought into conformance with this program and the Act, except as provided in  
13 subsection (C) and (D) of this section;
  - 14 5. Overwater nonconforming structures may be maintained or repaired to the extent that  
15 nonconformance with the standards and regulations of this program is not increased; provided  
16 that when replacement is the common method of repair, the replaced components shall meet  
17 the construction and materials standards of WCC 23.40.150 (Moorage Structures).
- 18 B. Nonconforming structures (including accessory structures) that are damaged or destroyed by fire,  
19 explosion, flood, or other casualty may be restored or replaced in kind; provided, that:
- 20 1. Intentional demolition or removal is not a casualty.
  - 21 2. Damaged or destroyed nonconforming structures containing conforming uses that are located  
22 within a geologically hazardous area or frequently flooded area shall be reconstructed  
23 consistent with the requirements of WCC Chapter 16.16, Article 3 (Geologically Hazardous  
24 Areas) and Article 4 (Frequently Flooded Areas); provided, that the permit process is  
25 commenced within 18 months of the date of such damage; and the reconstruction does not  
26 expand, enlarge, or otherwise increase the nonconformity, except as provided for in this  
27 section.
  - 28 3. Damaged or destroyed nonconforming structures containing nonconforming uses can be  
29 replaced in kind if:
    - 30 a. There is no feasible alternative that allows for compliance with the provisions of this  
31 program;
    - 32 b. The structure is reconstructed consistent with the requirements of WCC Chapter 16.16,  
33 Article 3 (Geologically Hazardous Areas) and Article 4 (Frequently Flooded Areas);
    - 34 c. The permit process is commenced within 12 months of the date of such damage; and,
    - 35 d. The reconstruction does not expand, enlarge, or otherwise increase the nonconformity.
- 36 C. Nonconforming structures that do not meet the criteria of subsection (A)(2) but are intentionally  
37 demolished or removed with a valid demolition permit may be replaced with the same bulk  
38 dimensions provided that:
- 39 1. The permit process is commenced within 12 months of the date of such demolition or removal;  
40 and

**Comment [CES272]:** Revised to remind folks that a demo permit is required; and clarify that this does not apply to unusable structures addressed in A.2.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1        2. Such structures that are located within a geologically hazardous area or frequently flooded area  
2        shall be reconstructed consistent with the requirements of WCC Chapter 16.16, Article 3  
3        (Geologically Hazardous Areas) and Article 4 (Frequently Flooded Areas).
- 4        D. Replacement of any nonconforming structures or buildings or portions thereof within the aquatic  
5        shoreline environment shall comply with program requirements for construction design and  
6        materials; provided, that replacement of existing wood pilings with chemically treated wood is  
7        allowed for maintenance purposes where use of a different material such as steel or concrete would  
8        result in unreasonable or unsafe structural complications; further provided, that where such  
9        replacement exceeds 20% of the existing pilings over a 10-year period, such pilings shall conform to  
10       the standard provisions of this section.
- 11       E. Other than for single-family residences and their appurtenances, nonconforming structures that  
12       are shall not be altered, expanded or enlarged, or expanded without must be brought into  
13       conformance with this program and the Act or obtain a variance unless such alteration, enlargement  
14       or expansion would bring the structure into conformance with this program and the Act; provided,  
15       that nonconforming structures with conforming uses may be enlarged or expanded within the  
16       existing building footprint as a shoreline conditional use pursuant to WCC Title 22 (Land Use and  
17       Development) 23.100.050(B)(1)(e) when the following criteria are met:-  
18       1. The enlargement or expansion is within the existing building footprint;  
19       2. The enlargement or expansion is in conformance with the bulk dimensional standards; and  
20       3. Public access is provided and/or the shoreline environment is enhanced.
- 21       F. Single-family residences nonconforming to the shoreline buffer.
- 22       1. Enlargement or expansion of a primary single-family structure may be approved when either of  
23       the following are met:
- 24       a. When the vertical expansion or enlargement is within the existing building footprint and is  
25       in conformance with the bulk dimensional standards; or
- 26       b. When the enlargement or expansion meets all of the following.
- 27       i. The enlargement or expansion will not extend waterward of the building footprint of  
28       the existing primary structure or the enlargement or expansion is consistent with the  
29       constrained lot provisions in WCC 23.40.170 (Standards for Single-Family Residential  
30       Use on Constrained Lots).
- 31       ii. The enlargement or expansion is not within a critical area or critical area buffer in a  
32       manner inconsistent with this program.
- 33       iii. The enlargement or expansion is in conformance with the bulk dimensional standards.
- 34       2. The enlargement or expansion of single-family residences or normal appurtenances greater than  
35       the constrained lot provisions of WCC 23.40.170(C) may be approved once during the life of the  
36       structure (100 years); provided, that the following conditions are met:-
- 37       a. The existing structure must be located landward of the ordinary high water mark.
- 38       b. Building footprint enlargement or expansion:
- 39       i. Shall not increase the total building footprint by more than 500 square feet.
- 40       ii. Shall be landward or lateral of the existing footprint.

**Comment [MD273]:** Under WAC 173-27-080 variance only needed if increasing nonconformity.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1           iii. Shall occur on a previously impacted impervious surface.

2           iv. Shall not occur waterward of the common line setback as described in WCC 23.40.020  
3           (Shoreline Bulk Provisions).

4           v. Shall be accompanied by enhancement of an area equivalent to the enlargement or  
5           expansion if the total building footprint increases by more than 250 square feet. If  
6           enhanced through planting, the Director shall require a vegetation management plan  
7           consistent with WCC 23.30.0540 (Vegetation Management).

8           c. The property has not previously received a shoreline exemption under the provisions for a  
9           nonconforming or constrained lot.

10 G. Redevelopment of nonconforming rights-of-way and associated transportation structures, such as  
11 railroad trestles, may be permitted for purposes of facilitating the development of public trails  
12 and/or public shoreline access; provided, that such redevelopment shall be otherwise consistent  
13 with the provisions of this program, including but not limited to the provisions for public access and  
14 no net loss of shoreline ecological functions and processes, except as provided for in this section.

### 15 **23.50.012030 Nonconforming Lots.**

16 A lawfully established lot existing or authorized under a permit or approval issued prior to the effective  
17 date of initial adoption of this program (August 27, 1976) or any applicable amendment thereafter, but  
18 which does not conform to present lot standards, shall be considered a legally nonconforming lot and  
19 may be developed subject to the provisions of this program.

20 ~~Where permitted by the shoreline areas designation (WCC Table 23.100.010), new single family~~  
21 ~~development on any legal lot in shoreline jurisdiction that is nonconforming with respect to the~~  
22 ~~required shoreline setback standards may be allowed without a shoreline variance when the~~  
23 ~~following criteria are met:~~

24 ~~—The depth of the lot (the distance from the ordinary high water mark to the inside edge of the~~  
25 ~~frontage setback) is equal to or less than the standard buffer as indicated in Chapter 16.16 WCC;~~

26 ~~—The building area lying landward of the shoreline buffer and interior to required side yard~~  
27 ~~setbacks is 2,500 square feet or less. The building area means the entire area that will be~~  
28 ~~disturbed to construct the home, normal appurtenances (except drainfields), and landscaping,~~  
29 ~~including any lawn, turf, ornamental vegetation, or gardens located in the outer management~~  
30 ~~zone of the buffer pursuant to WCC 23.30.060(B)(2);~~

31 ~~—Consideration shall be given to view impacts. Any single family residences approved under this~~  
32 ~~section shall not extend waterward of fifteen (15) feet landward of the OHWM, or the common~~  
33 ~~line setback as measured in accordance with WCC 23.30.060(A)(2)(b), whichever is further~~  
34 ~~landward.~~

35 ~~—The lot is not subject to landslide hazard areas or riverine and coastal erosion hazard areas or~~  
36 ~~associated buffers as defined in WCC 16.16.310;~~

37 ~~—The nonconforming lot was created prior to the effective date of this program (August 8, 2008);~~

38 ~~—Appropriate measures are taken to mitigate all adverse impacts, including but not limited to~~  
39 ~~locating the residence in the least environmentally damaging location relative to the shoreline~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 and any critical areas, that all administrative reductions to side yard and/or frontage setbacks  
2 are pursued; and when doing so will not create a hazardous condition or a condition that is  
3 inconsistent with this program and WCC Title 20. The standard front yard setback may be  
4 reduced to 20 feet pursuant to WCC 20.80.230(2). The standard side yard setbacks may be  
5 reduced to 5 feet of the total required side yard setbacks on one side and the balance on the  
6 other side pursuant to WCC 23.90.130.B.4; provided, that if the side yard setback reductions  
7 pursuant WCC 23.90.130.B.4 are insufficient, both side yard setbacks may be reduced to 5 feet.  
8 There is no opportunity to consolidate lots under common ownership that will alleviate the  
9 nonconformity;  
10 The area between the structure and the shoreline and/or critical area shall comply with the  
11 vegetation conservation standards of WCC 23. 30.050(B);  
12 Development may not take place waterward of the ordinary high water mark; and  
13 Facilities such as a conventional drainfield system may be allowed within critical areas or their  
14 buffers, except wetlands and buffers, outside of the building area specified above, subject to  
15 specific criteria in Chapter 16.16 WCC.

Comment [RCE274]: Moved to 23.40.170(C).

### 23.50.080 Property rights.

Comment [AP275]: Moved to Chapter 23.10

- 16 **23.50.080 Property rights.**  
17 A.—Decisions on shoreline permits and/or approvals shall recognize all relevant constitutional and other  
18 legal limitations on the regulation of private property. Findings shall assure that conditions imposed  
19 relate to the governmental authority and responsibility to protect the public health, safety, and  
20 welfare, are consistent with the purposes of the Act, and are roughly proportional to the expected  
21 impact.  
22 B.— This program does not alter existing law on access to or trespass on private property and does not  
23 give the general public any right to enter private property without the owner's permission.  
24 C.— Consistent with Whatcom County's high standard of staff conduct, county staff observe all  
25 applicable federal and state laws regarding entry onto privately owned property.

# Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

## Chapter 23.60 Shoreline Permits and Exemptions

Comment [MD276]: Unless otherwise noted, the contents of this chapter have been moved to T-22.

### 23.60.005 General requirements.

1. To be authorized, all uses and developments shall be planned and carried out in a manner that is consistent with this program and the policy of the Act as required by RCW 90.58.140(1), regardless of whether a shoreline permit, statement of exemption, shoreline variance, or shoreline conditional use permit is required.

Comment [RCE277]: Moved to applicability section.

### 23.60.010 Substantial development permits criteria.

- A. A substantial development permit shall be required for all proposed use and development of shorelines unless the proposal is specifically exempt pursuant to WCC 23.60.022.
- B. In order to be approved, the decision maker must find that the proposal is consistent with the following criteria:
  1. All regulations of this program appropriate to the shoreline designation and the type of use or development proposed shall be met, except those bulk and dimensional standards that have been modified by approval of a shoreline variance under WCC 23.60.030.
  2. All policies of this program appropriate to the shoreline area designation and the type of use or development activity proposed shall be considered and substantial compliance demonstrated.
  3. For projects located on shorelines of statewide significance, the policies of Chapter 23.40 WCC shall also be adhered to.
- C. In the granting of all shoreline substantial development permits, consideration shall be given to the cumulative environmental impact of additional requests for like actions in the area. For example, if shoreline substantial development permits were granted for other developments in the area where similar circumstances exist, the sum of the permitted actions should also remain consistent with the policy of RCW 90.58.020 and should not produce significant adverse effects to the shoreline ecological functions and processes or other users.

Comment [RE278]: Moved to ecological protection and critical areas

### 23.60.020 Exemptions from Shoreline Substantial Development Permits process.

#### A. 23.60.021 Application and interpretation.

1. An exemption from the substantial development permit process is not an exemption from compliance with the Act, or this program, or from any other regulatory requirements. To be authorized, all uses and developments must be consistent with the policies and regulatory provisions of this program and the Act. A statement of exemption shall be obtained for exempt activities consistent with the provisions of WCC 23.60.020.
2. Exemptions shall be construed narrowly. Only those developments that meet the precise terms of one or more of the listed exemptions may be granted exemptions from the substantial development permit process.
3. The burden of proof that a development, or use is exempt is on the applicant/proponent of the exempt development action.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

4. If any part of a proposed development is not eligible for exemption, then a substantial development permit is required for the entire project.
5. A development or use that is listed as a conditional use pursuant to this program or is an unlisted use, must obtain a conditional use permit even if the development or use does not require a substantial development permit.
6. When a development or use is proposed that does not comply with the bulk, dimensional and/or performance standards of the program, such development or use shall only be authorized by approval of a shoreline variance even if the development or use does not require a substantial development permit.
7. All permits or statements of exemption issued for development or use within shoreline jurisdiction shall include written findings prepared by the administrator, including compliance with bulk and dimensional standards and policies and regulations of this program. The administrator may attach conditions to the approval of exempt developments and/or uses as necessary to assure consistency of the project with the Act and the program.

### **B. 23.60.022 Exemptions listed.**

1. The following activities shall be considered exempt from the requirement to obtain a shoreline substantial development permit. A statement of exemption, as provided for in WCC 23.60.023 of this program shall be required for those activities listed in WCC 23.60.023(B) and (C).
  - a. Any development of which the total cost or fair market value, whichever is higher, does not exceed \$5,718, or as amended by the state office of financial management, if such development does not materially interfere with the normal public use of the water or shorelines of the state. For the purposes of determining whether or not a permit is required, the total cost or fair market value shall be based on the value of development that is occurring on shorelines of the state as defined in RCW 90.58.030(2)(c). The total cost or fair market value of the development shall include the fair market value of any donated, contributed or found labor, equipment or materials.
  - b. Normal maintenance or repair of existing structures or developments, including damage by accident, fire or elements. Normal maintenance includes those usual acts to prevent a decline, lapse or cessation from a lawfully established condition. Normal repair means to restore a development to a state comparable to its original condition within a reasonable period after decay or partial destruction except where repair causes substantial adverse effects to the shoreline resource or environment. Replacement of a structure or development may be authorized as repair where such replacement is the common method of repair for the type of structure or development and the replacement structure or development is comparable to the original structure or development including but not limited to its size, shape, configuration, location and external appearance and the replacement does not cause substantial adverse effects to shoreline resources or the environment.
  - c. Construction of the normal protective bulkhead common to single family residences. A normal protective bulkhead includes those structural and nonstructural developments

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

installed at or near, and parallel to, the ordinary high water mark for the sole purpose of protecting an existing single family residence and appurtenant structures from loss or damage by erosion. A normal protective bulkhead is not exempt if constructed for the purpose of creating dry land. When a vertical or near vertical wall is being constructed or reconstructed, not more than one cubic yard of fill per one foot of wall may be used for backfill. When an existing bulkhead is being repaired by construction of a vertical wall fronting the existing wall, it shall be constructed no further waterward of the existing bulkhead than is necessary for construction of new footings. When a bulkhead has deteriorated such that an ordinary high water mark has been established by the presence and action of water landward of the bulkhead then the replacement bulkhead must be located at or near the actual ordinary high water mark. Beach nourishment and bioengineered erosion control projects may be considered a normal protective bulkhead when any structural elements are consistent with the above requirements and when the project has been approved by the Washington Department of Fish and Wildlife.

- d. ~~Emergency construction necessary to protect property from damage by the elements. An emergency is an unanticipated and imminent threat to public health, safety or the environment that requires immediate action within a time too short to allow full compliance with this program. Emergency construction does not include development of new permanent protective structures where none previously existed. Where new protective structures are deemed by the administrator to be the appropriate means to address the emergency situation, upon abatement of the emergency situation the new structure shall be removed or any permit that would have been required, absent an emergency, pursuant to Chapter 90.58 RCW, Chapter 173-27 WAC or this program, shall be obtained. All emergency construction shall be consistent with the policies of Chapter 90.58 RCW and this program. As a general matter, flooding or other seasonal events that can be anticipated and may occur but that are not imminent are not an emergency.~~
- e. ~~Construction and practices normal or necessary for farming, irrigation, and ranching activities, including agricultural service roads and utilities, construction of a barn or similar agricultural structure, and the construction and maintenance of irrigation structures including, but not limited to, head gates, pumping facilities, and irrigation channels; provided, that this exemption shall not apply to agricultural activities proposed on land not in agricultural use on December 17, 2003; and further provided, that a feedlot of any size, all processing plants, other activities of a commercial nature, or alteration of the contour of the shorelands by leveling or filling other than that which results from normal cultivation shall not be considered normal or necessary farming or ranching activities. A feedlot shall be an enclosure or facility used or capable of being used for feeding livestock hay, grain, silage, or other livestock feed, but shall not include land for growing crops or vegetation for livestock feeding and/or grazing, nor shall it include normal livestock wintering operations.~~
- f. ~~Construction or modification, by or under the authority of the Coast Guard or a designated port management authority, of navigational aids such as channel markers and anchor buoys.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- g. ~~Construction on shorelands by an owner, lessee, or contract purchaser of a single family residence for their own use or for the use of their family, which residence does not exceed a height of 35 feet above average grade level and that meets all requirements of the state agency or local government having jurisdiction thereof. Single family residence means a detached dwelling designed for and occupied by one family including those structures and developments within a contiguous ownership which are a normal appurtenance as defined in WCC 23.110.010.~~
- h. ~~Construction of a dock, including a shared moorage, designed for pleasure craft only, for the private noncommercial use of the owners, lessee, or contract purchaser of a single family or multifamily residence. A dock is a landing and moorage facility for watercraft and does not include recreational decks, storage facilities or other appurtenances. The private dock exemption applies if either:
  - i. ~~In saltwater, the fair market value of the dock does not exceed \$2,500;~~
  - ii. ~~In fresh waters the fair market value of the dock does not exceed \$10,000, but if subsequent construction having a fair market value exceeding \$2,500 occurs within five years of the completion of the prior construction, the subsequent construction shall be considered a substantial development for the purpose of this program. For the purpose of this section, saltwater shall include the tidally influenced marine and estuarine water areas of the state including the Strait of Georgia, local marine waters and all associated bays, inlets and estuaries.~~~~
- i. ~~Operation, maintenance, or construction of canals, waterways, drains, reservoirs, or other facilities that now exist or are hereafter created or developed as a part of an irrigation system for the primary purpose of making use of system waters including return flow and artificially stored ground water for the irrigation of lands; provided, that this exemption shall not apply to construction of new irrigation facilities proposed after December 17, 2003.~~
- j. ~~The marking of property lines or corners on state owned lands, when such marking does not significantly interfere with normal public use of the surface of the water.~~
- k. ~~Operation and maintenance of any system of dikes, ditches, drains, or other facilities existing on June 4, 1975, that were created, developed or utilized, primarily as a part of an agricultural drainage or diking system.~~
- l. ~~Any project with a certification from the governor pursuant to Chapter 80.50 RCW.~~
- m. ~~Site exploration and investigation activities that are prerequisite to preparation of a development application for authorization under this program, if:
  - i. ~~The activity does not interfere with the normal public use of surface waters;~~
  - ii. ~~The activity will have no significant adverse impact on the environment including but not limited to fish, wildlife, fish or wildlife habitat, water quality and aesthetic values;~~
  - iii. ~~The activity does not involve the installation of any structure and, upon completion of the activity, the vegetation and land configuration of the site are restored to conditions existing before the activity;~~~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- iv. ~~A private entity seeking development authorization under this section first posts a performance bond or provides other evidence of financial responsibility to the administrator to ensure that the site is restored to preexisting conditions; and~~
- v. ~~The activity is not subject to the permit requirements of RCW 90.58.550.~~
- n. ~~The process of removing or controlling aquatic noxious weeds, as defined in RCW 17.26.020, through the use of an herbicide or other treatment methods applicable to weed control that is recommended by a final environmental impact statement published by the Department of Agriculture or the Department of Ecology jointly with other state agencies under Chapter 43.21C RCW.~~
- o. ~~Watershed restoration projects as defined in Chapter 23.110 WCC and by RCW 89.08.460. The administrator shall review the projects for consistency with the program in an expeditious manner and shall issue its decision along with any conditions within 45 days of receiving a complete application form from the applicant/proponent. No fee may be charged for accepting and processing applications for watershed restoration projects as defined in Chapter 23.110 WCC.~~
- p. ~~A public or private project, the primary purpose of which is to improve fish or wildlife habitat or fish passage, when all of the following apply:~~
  - i. ~~The project has been approved in writing by the Department of Fish and Wildlife as necessary for the improvement of the habitat or passage and appropriately designed and sited to accomplish the intended purpose;~~
  - ii. ~~The project received hydraulic project approval by the Department of Fish and Wildlife pursuant to Chapter 77.55 RCW; and~~
  - iii. ~~The administrator has determined that the project is consistent with this program. The administrator shall make such determination in a timely manner and provide it by letter to the project proponent.~~

### ~~C. 23.60.023 Statements of Exemption.~~

1. ~~The administrator is hereby authorized to grant or deny requests for statements of exemption from the shoreline substantial development permit requirement for uses and developments within shorelines that are specifically listed in WCC 23.60.022. Such statements shall be applied for on forms provided by the administrator. The statement shall be in writing and shall indicate the specific exemption of this program that is being applied to the development, and shall provide a summary of the administrator's analysis of the consistency of the project with this program and the Act. As appropriate, such statements of exemption shall contain conditions and/or mitigating measures of approval to achieve consistency and compliance with the provisions of the program and Act. A denial of an exemption shall be in writing and shall identify the reason(s) for the denial. The administrator's actions on the issuance of a statement of exemption or a denial are subject to appeal pursuant to WCC 23.60.150.~~
2. ~~Exempt activities related to any of the following shall not be conducted until a statement of exemption has been obtained from the administrator: dredging, flood control works and instream structures, development within an archaeological or historic site, clearing and ground~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

~~disturbing activities such as landfill or excavation, dock, shore stabilization, freestanding signs, or any development within an aquatic or natural shoreline designation; provided, that no separate written statement of exemption is required for the construction of a single family residence when a county building permit application has been reviewed and approved by the administrator; provided further, that no statement of exemption is required for emergency development pursuant to WAC 173-27-040(2)(d).~~

- ~~3. No statement of exemption shall be required for other uses or developments exempt pursuant to WCC 23.60.022 unless the administrator has cause to believe a substantial question exists as to qualifications of the specific use or development for the exemption or the administrator determines there is a likelihood of adverse impacts to shoreline ecological functions.~~
- ~~4. Whether or not a written statement of exemption is issued, all permits issued within the area of shorelines shall include a record of review actions prepared by the administrator, including compliance with bulk and dimensional standards and policies and regulations of this program. The administrator may attach conditions to the approval of exempted developments and/or uses as necessary to assure consistency of the project with the Act and this program.~~
- ~~5. A notice of decision for shoreline statements of exemption shall be provided to the applicant/proponent and any party of record. Such notices shall also be filed with the Department of Ecology, pursuant to the requirements of WAC 173-27-050 when the project is subject to one or more of the following federal permitting requirements:
  - ~~a. A U.S. Army Corps of Engineers Section 10 permit under the Rivers and Harbors Act of 1899. (The provisions of Section 10 of the Rivers and Harbors Act generally apply to any project occurring on or over navigable waters. Specific applicability information should be obtained from the Corps of Engineers.); or~~
  - ~~b. A Section 404 permit under the Federal Water Pollution Control Act of 1972. (The provisions of Section 404 of the Federal Water Pollution Control Act generally apply to any project that may involve discharge of dredge or fill material to any water or wetland area. Specific applicability information should be obtained from the Corps of Engineers.)~~~~
- ~~6. Whenever the exempt activity also requires a U.S. Army Corps of Engineers Section 10 permit under the Rivers and Harbors Act of 1899 or a Section 404 permit under the Federal Water Pollution Control Act of 1972, a copy of the written statement of exemption shall be sent to the applicant/proponent and Ecology pursuant to WAC 173-27-050.~~

### **23.60.030 Variance permit criteria.**

- ~~A. The purpose of a variance is to grant relief to specific bulk or dimensional requirements set forth in this program and any associated standards appended to this program such as critical areas buffer requirements where there are extraordinary or unique circumstances relating to the property such that the strict implementation of this program would impose unnecessary hardships on the applicant/proponent or thwart the policy set forth in RCW 90.58.020. Use restrictions may not be varied.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- ~~B. Variances will be granted in any circumstance where denial would result in a thwarting of the policy enumerated in RCW 90.58.020. In all instances extraordinary circumstances shall be shown and the public interest shall suffer no substantial detrimental effect.~~
- ~~C. Proposals that would otherwise qualify as a reasonable use pursuant to WCC 16.16.270(A) shall require a shoreline variance and shall meet the variance criteria in this section.~~
- ~~D. Variances may be authorized, provided the applicant/proponent can demonstrate all of the following:~~
- ~~1. That the strict application of the bulk or dimensional criteria set forth in this program precludes or significantly interferes with reasonable permitted use of the property;~~
  - ~~2. That the hardship described in subsection A of this section is specifically related to the property, and is the result of conditions such as irregular lot shape, size, or natural features and the application of this program, and not, for example, from deed restrictions or the applicant's/proponent's own actions;~~
  - ~~3. That the design of the project will be compatible with other permitted activities in the area and will not cause adverse effects on adjacent properties or the shoreline environment;~~
  - ~~4. That the variance authorized does not constitute a grant of special privilege not enjoyed by the other properties in the area, and will be the minimum necessary to afford relief;~~
  - ~~5. That the public interest will suffer no substantial detrimental effect;~~
  - ~~6. That the public rights of navigation and use of the shorelines will not be materially interfered with by the granting of the variance; and~~
  - ~~7. Mitigation is provided to offset unavoidable adverse impacts caused by the proposed development or use.~~
- ~~E. Variance permits for development and/or uses that will be located waterward of the ordinary high water mark (OHWM), as defined herein, or within any wetland as defined herein, may be authorized, provided the applicant can demonstrate all of the following:~~
- ~~1. That the strict application of the bulk, dimensional or performance standards set forth in this program precludes all reasonable use of the property; and~~
  - ~~2. That the proposal is consistent with the criteria established under subsections (D)(1) through (7) of this section; and~~
  - ~~3. That the public rights of navigation and use of the shorelines will not be adversely affected.~~
- ~~Other factors that may be considered in the review of variance requests include the conservation of valuable natural resources and the protection of views from nearby roads, surrounding properties and public areas; provided, the criteria of subsection D of this section are first met. In addition, variance requests based on the applicant's/proponent's desire to enhance the view from the subject development may be granted;~~
- ~~where there are no likely detrimental effects to existing or future users, other features, or shoreline ecological functions and/or processes, and~~
- ~~where reasonable alternatives of equal or greater consistency with this program are not available.~~
- ~~4. In platted residential areas, variances shall not be granted that allow a greater height or lesser shore setback than what is typical for the immediate block or area.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

~~F. In the granting of all variances, consideration shall be given to the cumulative environmental impact of additional requests for like actions in the area. For example, if variances were granted to other developments in the area where similar circumstances exist, the total of the variances should also remain consistent with the policy of RCW 90.58.020 and should not produce significant adverse effects to the shoreline ecological functions and processes or other users.~~

~~G. Permits and/or variances applied for or approved under other county codes such as WCC Title 20 or 21 shall not be construed as shoreline permits under this program.~~

### **~~23.60.040 Conditional use permits criteria.~~**

~~A. The purpose of a conditional use permit is to allow greater flexibility in administering the use regulations of this program in a manner consistent with the policy of RCW 90.58.020. In authorizing a conditional use, special conditions may be attached to the permit by the county or the Department of Ecology to control any undesirable effects of the proposed use.~~

~~B. Uses specifically classified or set forth in this program as conditional uses and unlisted uses may be authorized, provided the applicant/proponent can demonstrate all of the following:~~

- ~~1. That the proposed use will be consistent with the policy of RCW 90.58.020 and this program.~~
- ~~2. That the proposed use will not interfere with normal public use of public shorelines.~~
- ~~3. That the proposed use of the site and design of the project will be compatible with other permitted uses within the area.~~
- ~~4. That the proposed use will not cause adverse effects to the shoreline environment in which it is to be located.~~
- ~~5. That the public interest suffers no substantial detrimental effect.~~

~~C. Other uses not specifically classified or set forth in this program, including the expansion or resumption of a nonconforming use pursuant to WCC 23.50.070, may be authorized as conditional uses, provided the applicant/proponent can demonstrate that the proposal will satisfy the criteria set forth in subsection B of this section, and that the use clearly requires a specific site location on the shoreline not provided for under the program, and extraordinary circumstances preclude reasonable use of the property in a manner consistent with the use regulations of this program. Uses that are prohibited cannot be authorized by a conditional use permit.~~

~~D. In the granting of all conditional use permits, consideration shall be given to the cumulative environmental impact of additional requests for like actions in the area. For example, if conditional use permits were granted for other developments in the area where similar circumstances exist, the sum of the conditional uses and their impacts should also remain consistent with the policy of RCW 90.58.020 and should not produce a significant adverse effect to the shoreline ecological functions and processes or other users.~~

~~E. Permits and/or variances applied for or approved under county zoning or subdivision code requirements shall not be construed as shoreline variances under this program.~~

### **~~23.60.050 Minimum application requirements.~~**

~~Where other approvals or permits are required for a use or development that does not require an open record hearing, such approvals or permits shall not be granted until a shoreline approval or permit is~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

~~granted. All shoreline approvals and permits shall include written findings prepared by the administrator documenting compliance with bulk and dimensional standards and other policies and regulations of this program.~~

~~A complete application for a substantial development, conditional use, or variance permit shall contain all materials required in the Department's administrative manual; provided, that the administrator may vary or waive these requirements as provided in the manual and may vary or waive these requirements on a case by case basis. The administrator may require additional specific information depending on the nature of the proposal and the presence of sensitive ecological features or issues related to compliance with other county requirements.~~

### ~~23.60.060 Pre-application conference.~~

~~A. Prior to filing a permit application for a shoreline substantial development permit, variance or conditional use permit decision:~~

~~B. The applicant shall contact the County to schedule a pre-application conference, which shall be held prior to filing the application; provided, that such meetings shall not be required for development activities associated with shoreline restoration projects, agriculture, commercial forestry, or the construction of a single family residence.~~

### ~~23.60.070 Fees.~~

~~B. Required fees for all shoreline substantial development permits, shoreline conditional use permits, shoreline variances, statements of exemption, appeals, pre-application conferences and other required reviews and/or approvals shall be paid to the county at the time of application in accordance with the Whatcom County Unified Fee Schedule in effect at that time and Chapter 22.05 WCC.~~

~~C. When any given project requires more than one of the following permits or applications, the total amount of fees shall be reduced pursuant to WCC 22.25.030:~~

- ~~1. Preliminary plat application.~~
- ~~2. Rezone application.~~
- ~~3. Major development permit.~~
- ~~4. Planned unit development.~~
- ~~5. Binding site plan.~~

~~D. When any project requires a shoreline conditional use permit or shoreline variance in addition to a shoreline substantial development permit, the fees for the conditional use or variance shall be reduced by half.~~

~~E. In the event that actions of an applicant result in the repetition of the review, inspections and other steps in the approval process, those items or steps repeated shall be charged to and paid by the applicant prior to any further processing of the application by the county. The cost shall be in accordance with the adopted fee schedule.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

F. If an application is withdrawn within 30 days of submittal, and no work has commenced at the site of the proposal for which the application was made, a refund of not more than 50 percent of the shoreline fees paid may be granted by the administrator. This amount may be reduced where staff time, public notice and other costs exceed 50 percent of the fees paid.

### **23.60.080 Notice of application.**

B. Upon receipt of a completed shoreline substantial development permit, shoreline variance, or shoreline conditional use permit application the County shall issue a notice of application for a proposed land use action in the manner set forth in WCC 22.05.070.

C. The rights of treaty tribes to resources within their usual and accustomed areas shall be accommodated through the notification and comment provisions of the permit review process. Tribal treaty rights may be addressed through specific permit conditions. Direct coordination between tribes and the applicant/proponent is encouraged.

Comment [RCE279]: Moved to 23.05.040

### **23.60.090 Permit application review.**

B. All shoreline permit applications, exemptions, or other approvals shall be subject to the provisions of this program that are in effect at the time of application.

C. To facilitate review of an application the decision maker shall consider any or all of the following:

1. The application and attached information;
2. The SEPA checklist, threshold determination, environmental impact statement, or other environmental studies and/or documentation;
3. Written comments from interested persons;
4. Information and recommendations from any public agency and from the administrator in cases where the administrator is not the decision maker;
5. Information or comment presented at a public hearing, if held, on the application; and
6. The policy and provisions of the Act and this program including the criteria enumerated in WCC 23.60.010, 23.60.030 and 23.60.040, as applicable.

D. The decision maker shall process project permit applications for shoreline substantial development permits, shoreline variance, and shoreline conditional use permits in compliance with the provisions of Chapter 22.05 WCC.

E. The decision maker shall process project permit applications for shoreline statements of exemption in accordance with the provisions of Chapter 22.05 WCC and WCC 23.60.023(A).

F. Any application for a shoreline permit or approval that remains inactive for a period of 180 days shall expire and a new application and repayment of fees shall be required to reactivate the proposal; provided, that the administrator may grant a single 90-day extension for good cause. Delays such as those caused by public notice requirements, State Environmental Policy Act review, litigation directly related to the proposal, or changes in government regulations shall not be considered as part of the inactive period.

— If a shoreline permit is denied, no reapplication for the same or essentially similar development may be made until one year from the date of denial.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

### **23.60.100 Consolidated Permit Review.**

- A. Whenever an application for a project permit under the program requires a project permit or approval under another County permit authority, such as zoning or subdivision, the shoreline project permit application, time requirements, and notice provisions for processing the shoreline permit shall apply, in addition to those of other regulatory programs.
- The provisions of Chapter 22.05 WCC shall apply to the consolidated application, review, and approval of applications that require an open record hearing.
- B. Any shoreline use or development that is subject to other approvals or permits that requires an open record hearing under another permit authority, such as zoning or subdivision, shall be subject to consolidated review and the decision maker designated for the open record hearing shall be the decision maker for the consolidated review.

### **23.60.110 State Environmental Policy Act (SEPA) compliance.**

- A. Whenever an application for shoreline substantial development permit, shoreline variance, shoreline conditional use permit, or statement of exemption is subject to the rules and regulations of SEPA (Chapter 43.21C RCW), the review requirements of SEPA, including time limitations, shall apply, where applicable.
- B. Applications for shoreline permit(s) or approval(s) that are not categorically exempt under SEPA shall be subject to environmental review by the responsible official of Whatcom County pursuant to the State Environmental Policy Act (Chapter 197-11 WAC).
- C. As part of SEPA review, the Responsible Official may require additional information regarding the proposed development in accordance with Chapter 197-11 WAC.
- D. Failure of the applicant/proponent to submit sufficient information for a threshold determination to be made shall be grounds for the Responsible Official to determine the application incomplete.

Comment [RCE280]: Covered by WCC 16.08

### **23.60.120 Burden of proof.**

Permit applicants/proponents have the burden of proving that the proposed development is consistent with the criteria set forth in the Act and this program.

Comment [CES281]: Moved to Permit application review

### **23.60.130 Public Hearings.**

- A. The administrator shall determine whether an application requires a public hearing pursuant to the criteria below no later than 15 days after the minimum public comment period provided by WCC 23.60.080. An open record public hearing shall be required for all of the following:
1. The proposal has a cost or market value in excess of \$100,000 except for single-family residences, agriculture, commercial forestry, and ecological restoration projects; or
  2. The proposal would result in development of an area larger than five acres; or
  3. The proposal is a new or expanded marina, pier, aquaculture structure, any building over 35 feet high, mine, dam, stream diversion, landfill; or
  4. The administrator has reason to believe the proposal would be controversial based on public response to the notice of receipt of application and other information; or

Comment [CES282]: Moved/covered by Title 22 now

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 5. The proposal is determined to have a significant adverse impact on the environment and an environmental impact statement is required in accordance with the State Environmental Policy Act; or
  - 6. The proposal requires a variance and/or conditional use approval pursuant to this program; or
  - 7. The use or development requires an open record public hearing for other Whatcom County approvals or permits.
- ~~B. An open record public hearing on shoreline permit applications shall be held in accordance with the provisions of Chapter 22.05 WCC, unless a continuance is granted pursuant to the rules and procedures of the Hearing Examiner or other hearing body and subject to time requirements for compliance with the State Environmental Policy Act.~~
- ~~C. Repealed by Ord. 2018-032.~~
- ~~D. Repealed by Ord. 2018-032.~~
- ~~E. Public hearing requirements for permit appeals shall be processed according to WCC 23.60.150.~~

### **23.60.140 Permit conditions.**

In granting, revising, or extending a shoreline permit, the decision maker may attach such conditions, modifications, or restrictions thereto regarding the location, character, and other elements of the proposed development deemed necessary to assure that the development will be consistent with the policy and provisions of the Act and this program as well as the supplemental authority provided in Chapter 43.21C RCW as applicable. In cases involving unusual circumstances or uncertain effects, a condition may be imposed to require monitoring with future review or reevaluation to assure conformance with the Act and this program. If the monitoring plan is not implemented, the permittee may be found to be noncompliant and the permit may be rescinded in accordance with WCC 23.60.180.

### **~~23.60.XXX Filing with Department of Ecology~~**

- ~~After all local permit administrative appeals or reconsideration periods are complete and the permit documents are amended to incorporate any resulting changes, the County will hand deliver or mail or hand deliver the permit using return receipt requested mail to the Department of Ecology regional office.~~
- ~~Projectsposals that require both Shoreline Conditional Use Permits and or Variances shall be hand delivered or mailed simultaneously with any shoreline permit for the project.~~
- ~~The permit and documentation of final local decision will be mailed together the following information:~~
  - ~~A copy of the complete application;~~
  - ~~Findings and conclusions that establish the basis for the decision, including but not limited to identification of shoreline environment designation(s), applicable program policies and regulations, and the consistency of the project with appropriate review criteria for the type of permit(s);~~
  - ~~The final decision of the local government;~~
  - ~~A completed permit data sheet (WAC Reference); and~~

Comment [CES283]: Moved to Permit application review.

Comment [CES284]: Moved to Ch. 22.07

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- ~~— Where applicable, local government shall also file the applicable documents required by SEPA, or in lieu thereof, a statement summarizing the actions and dates of such actions taken under Chapter 43.21C RCW.~~
- ~~— When the project has been modified in the course of the local review process, plans or text shall be provided that clearly indicate the final approved plan.~~
- ~~— Upon approval of a revision, the decision maker shall file a copy of the revised site plan and a detailed description of the authorized changes to the original permit with the Department of Ecology together with a final ruling and findings supporting the decision based on the requirements of this section. In addition, the decision maker shall notify parties of record of the action.~~
- 23.60.150 Notice of Decision, Reconsideration and Appeal.**
- ~~— A notice of decision for action on a shoreline substantial development permit, shoreline variance, or shoreline conditional use permit shall be provided to the applicant/proponent and any party of record in accordance with the review procedures of Chapter 22.05 WCC, and at least 10 days prior to filing such decisions with the Department of Ecology pursuant to WAC 173-27-130. Decisions filed with the Department of Ecology shall contain the following information:~~
- ~~— After all local permit administrative appeals or reconsideration periods are complete and the permit documents are amended to incorporate any resulting changes, the County will mail or hand deliver the permit using return receipt requested mail to the Department of Ecology regional office and the Office of the Attorney General.~~
- ~~— Projects that require both Conditional Use Permits and or Variances shall be mailed simultaneously with any Substantial Development Permits/shoreline permit for the project.~~
- ~~— The permit and documentation of final local decision will be mailed together the following information:~~
  - ~~2. A copy of the complete application;~~
  - ~~3. Findings and conclusions that establish the basis for the decision including but not limited to identification of shoreline environment designation(s), applicable program policies and regulations and the consistency of the project with appropriate review criteria for the type of permit(s);~~
  - ~~4. The final decision of the local government;~~
  - ~~5. A completed permit data sheet (see Appendix A of this title); and~~
  - ~~6. Where applicable, local government shall also file the applicable documents required by SEPA, or in lieu thereof, a statement summarizing the actions and dates of such actions taken under Chapter 43.21C RCW.~~
  - ~~7. When the project has been modified in the course of the local review process, plans or text shall be provided that clearly indicate the final approved plan.~~
- ~~A. Notice of decision for shoreline statements of exemption shall comply with WCC 22.05.110(1) and 23.60.023(E).~~
- ~~— Any person with standing may appeal any order, final permit decision, or final administrative determination made by the director or designee in the administration of this program.~~

Comment [CES285]: Moved to T-22

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

### ~~Administrative Appeal Procedures.~~

~~Administrative appeals are processed in accordance with WCC 22.05.160.~~

~~After the issuance of the appeal determination, a party with standing may Appeals to the Shorelines Hearings Board of a decision on a shoreline substantial development permit, shoreline variance, or shoreline conditional use permit may be filed by the applicant/proponent or any aggrieved party pursuant to RCW 90.58.180 within 21 days of the “date of filing,” as defined in this program and RCW 90.58.140(6). The appeal to the Shorelines Hearing Board shall be filed in accordance with the provisions of Chapter 461-08C WAC.~~

~~Appeals of a decision of the Department of Ecology shall be filed in accordance with the provisions of Chapter 461-08C WAC.~~

- B. This program shall only establish standing for parties of record for shoreline substantial development permits, shoreline variances, or shoreline conditional use permits. Standing as a party of record is not established by this program for exempt actions pursuant to WCC 23.60.022; provided, that in such cases standing may be established through an associated permit process that provides for public notice and provisions for parties of record.
- A. The applicant/proponent or any party of record may request reconsideration of any final action by the decision maker within 10 days of notice of the decision. Such requests shall be filed on forms supplied by the county. Grounds for reconsideration must be based upon the content of the written decision. The decision maker is not required to provide a written response or modify his/her original decision. He/she may initiate such action as he/she deems appropriate. The procedure of reconsideration shall not preempt or extend the appeal period for a permit or affect the date of filing with the Department of Ecology, unless the applicant/proponent requests the abeyance of said permit appeal period in writing within 10 days of a final action.
- B. Appeals to the Shorelines Hearings Board of a decision on a shoreline substantial development permit, shoreline variance or shoreline conditional use permit may be filed by the applicant/proponent or any aggrieved party pursuant to RCW 90.58.180 within 21 days of filing the final decision by Whatcom County with the Department of Ecology.
- C. Whatcom County shall consider an appeal of a decision on a shoreline substantial development permit, shoreline variance or shoreline conditional use only when the applicant/proponent waives his/her right to a single appeal to the Shorelines Hearings Board. Such waivers shall be filed with the county in writing concurrent with a notice of appeal within 10 days of a final action. When an applicant/proponent has waived his/her right to a single appeal, such appeals shall be processed in accordance with the appeal procedures of subsection H of this section and shall be an open record hearing before the hearing examiner.
- D. Any order, requirement or administrative permit decision, or determination by the administrator based on a provision of this program, except a shoreline substantial development permit, may be the subject of an appeal to the office of the hearing examiner by any aggrieved person. Such appeals shall be processed in accordance with the appeal procedures of subsection H of this section and shall be an open record hearing before the hearing examiner.
- E. Appeal Procedures:

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- ~~1. Appeals shall be filed on forms supplied by the county within 10 calendar days of the issuance of a substantial development permit, shoreline variance or shoreline conditional use permit and within 20 calendar days of any other action of the administrator being appealed.~~
- ~~2. A public hearing on the appeal shall be held within 45 working days following receipt of the application for appeal.~~
- ~~3. Legal notice of the public hearing shall be made by mailing notice of time, date, and location of the hearing to the appellant, any parties of record, the Washington Department of Ecology, and the administrator at least 15 days prior to the hearing.~~
- ~~4. A decision by the hearing examiner shall be mailed within 10 working days of the public hearing to all parties of record unless otherwise mutually agreed to by all parties to the appeal.~~
- ~~5. Any party of record may request a closed record review of the hearing examiner's decision issued under subsection (H)(4) of this section by the county council. Such an appeal shall be filed with the county council on forms supplied by the county within 10 calendar days of the written decision. If appeal is made to the county council, notice of appeal shall be provided to all parties of record at least 15 days prior to consideration by the county council. The council shall meet to review the hearing examiner's decision within 21 days of transmittal thereof, at which time it may approve or disapprove the application, or remand the matter to the hearing examiner.~~
- ~~6. The time period for appeal to the Shorelines Hearings Board shall begin after the decision maker has filed the final county decision with the Department of Ecology.~~

### **~~23.60.160 Initiation of development.~~**

~~—Development pursuant to a shoreline substantial development permit, shoreline variance, or conditional use permit shall not begin and shall not be authorized until 21 days after the “date of filing” or until all review proceedings before the Shorelines Hearings Board have terminated.~~

### **~~Date of Filing.~~**

- ~~2. “Date of filing” of a substantial development permit is the date of actual receipt of the decision by the Department of Ecology.~~
- ~~3. The “date of filing” for a shoreline variance or shoreline conditional use permit shall mean the date the permit decision rendered by the Department of Ecology is transmitted by the department to the county and the applicant/proponent.~~

### **~~23.60.170 Revisions.~~**

- ~~A. A revision is required whenever the applicant/proponent proposes substantive changes to the design, terms, or conditions of a project from that which is approved in the permit and/or statement of exemption. Changes are substantive if they materially alter the project in a manner that relates to its conformance to the terms and conditions of the permit, this program, or the Act. Changes that are not substantive in effect do not require a revision.~~
- ~~B. An application for a revision to a shoreline permit shall be submitted to the administrator/director. The application shall include detailed plans and text describing the proposed changes. The County decision maker that approved the original permit may approve the request upon a finding that the~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

proposed changes are within the scope and intent of the original approval, and are consistent with this program and the Act.

- C. “Within the scope and intent of the original approval” means all of the following:
1. ~~No additional over-water construction is involved except that a pier, dock, or floating structure may be increased by 500 square feet or 10 percent from the provisions of the original permit, whichever is less over that approved under the original approval;~~
  2. ~~Ground area coverage and/or height may be increased a maximum of 10 percent over that approved under the original approval; provided, that the revised approval does not authorize development to exceed the height, impervious surface, setbacks, or any other requirements of this program except as authorized under a variance granted for the original development;~~  
~~The revised permit does not authorize development to exceed height, lot coverage, setback, or any other requirements of the applicable master program except as authorized under a variance granted as the original permit or a part thereof;~~
  3. ~~Additional or revised mitigation and/or landscaping is consistent with any conditions attached to the original approval and with this program;~~
  4. ~~The use authorized pursuant to the original approval is not changed; and~~
  5. ~~The revision will not cause adverse environmental impacts beyond those originally authorized in the approval.~~
- ~~Revisions to shoreline permits and statements of exemption may be authorized after the original authorization has expired. Revisions made after the expiration of the original approval shall be limited to changes that are consistent with this program and that would not require a permit under this program. If the proposed change is a substantial development as defined by this program, then a new permit is required.~~
- D. ~~The provisions of this subsection shall not be used to extend the time requirements or to authorize substantial development beyond the time limits or scope of the original approval.~~
- E. ~~A new permit shall be required if the proposed revision and any previously approved revisions in combination would constitute development beyond the scope and intent of the original approval as set forth in subsection C of this section.~~
- F. ~~Upon approval of a revision, the decision maker shall file a copy of the revised site plan and a detailed description of the authorized changes to the original permit with the Department of Ecology together with a final ruling and findings supporting the decision based on the requirements of this section. In addition, the decision maker shall notify parties of record of the action.~~
- ~~If the proposed revision is to a development for which a shoreline conditional use or variance was issued, the decision maker shall submit the revision to the Department of Ecology for approval with conditions or denial, and shall indicate that the revision is being submitted under the requirements of this subsection.~~
- ~~Under the requirements of WAC 173-27-110(6), the Department shall render and transmit to the decision maker and the applicant/proponent its final decision within 15 days of the date of the Department’s receipt of the submittal from the decision maker. The decision maker shall notify parties on record of the Department’s final decision.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

~~G. Appeals of a decision of the Department shall be filed in accordance with the provisions of Chapter 461-08C WAC.~~

### **23.60.190 Rescission and modification.**

- A. Any shoreline permit granted pursuant to this program may be rescinded or modified upon a finding by the Hearing Examiner that the permittee or his/her successors in interest have not complied with conditions attached thereto. If the results of a monitoring plan show a development to be out of compliance with specific performance standards, such results may be the basis for findings of noncompliance.
- B. The Administrator shall initiate rescission or modification proceedings by issuing written notice of noncompliance to the permittee or his/her successors and notifying parties of record at the original address provided in application review files.
- C. The Hearing Examiner shall hold a public hearing no sooner than 15 days following such issuance of notice, unless the applicant/proponent files notice of intent to comply and the Administrator grants a specific schedule for compliance. If compliance is not achieved, the Administrator shall schedule a public hearing before the Hearing Examiner. Upon considering written and oral testimony taken at the hearing, the Hearing Examiner shall make a decision in accordance with the above procedure for shoreline permits.
- D. These provisions do not limit the Administrator, the Prosecuting Attorney, the Department of Ecology or the Attorney General from administrative, civil, injunctive, declaratory or other remedies provided by law, or from abatement or other remedies.

### **23.60.190 Expiration.**

- A. The following time requirements shall apply to all substantial development permits and to any development authorized pursuant to a variance, conditional use permit, or statement of exemption:
1. Construction shall be commenced    or, where no construction is involved, the use or activity shall be commenced    within two years of the effective date of a shoreline permit or exemption or the permit shall expire; provided, that the Hearing Examiner or Administrator, as appropriate, may authorize a single extension for a period of not more than one year based on a showing of good cause if a request for extension has been filed with the hearing examiner or administrator as appropriate before the expiration date of the shoreline permit or exemption,    and notice of the proposed extension is given to parties of record and the Department of Ecology.
  2. Authorization to conduct development activities shall terminate five years after the effective date of a shoreline permit or exemption; provided, that the Hearing Examiner or Administrator, as appropriate, may authorize a single extension for a period of not more than one year based on a showing of good cause, if a request for extension has been filed with the hearing examiner or administrator, as appropriate, before the expiration date of the shoreline permit    or exemption and notice of the proposed extension is given to parties of record and the Department of Ecology.
- The effective date of a shoreline permit or exemption shall be the date of filling as provided in RCW 90.58.140(6).

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- ~~— Tolling. The effective date does not include The time periods in (1) and (2) of this section do not include the time during which a use or activity was not actually pursued due to the pendency of administrative appeals or legal actions or due to the need to obtain any other government permits and approvals for the which the issued shoreline permit authorizes, development that authorize the development to proceed, including the pendency of all reasonably related administrative appeals or legal appeal actions on any such permits or approval, last action required on the shoreline permit or exemption and all other government permits and approvals that authorize the development to proceed, including administrative and legal actions on any such permit or approval.~~
- ~~— The applicant/ proponent shall be responsible for informing the County of the of such pendency, of other permit applications filed with agencies other than the County and of any related administrative and legal actions on any permit or approval.~~
3. If no notice of the pendency of other permits or approvals is given to the County prior to the date of the last action by the County to grant County permits and approvals necessary to authorize the development to proceed, including administrative and legal actions of the county, and actions under other County development regulations, the date of the last action by the County shall be the effective date.
- B. ~~Notwithstanding the time limits established in subsections (A)(1) and (2) of this section, upon a finding of good cause based on the requirements and circumstances of the proposed project and consistent with the policies and provisions of this program and the Act, the Hearing Examiner or Administrator, as appropriate, may set different time limits for a particular substantial development permit or exemption as part of the action to approve the permit or exemption. The Hearing Examiner may also set different time limits on specific conditional use permits or variances with the approval of the Department of Ecology. The different time limits may be longer or shorter than those established in subsections (A)(1) and (2) of this section but shall be appropriate to the shoreline development or use under review. “Good cause based on the requirements and circumstances of the proposed project” shall mean that the time limits established for the project are reasonably related to the time actually necessary to perform the development on the ground and complete the project that is being permitted, and/or are necessary for the protection of shoreline resources.~~
- C. ~~When permit approval includes conditions, such conditions shall be satisfied prior to occupancy or use of a structure or prior to the commencement of a nonstructural activity; provided, that different time limits for compliance may be specified in the conditions of approval as appropriate.~~
- ~~— The Hearing Examiner or Administrator, as appropriate, shall notify the Department of Ecology in writing of any change to the effective date of a permit, authorized by subsections A through C of this section, with an explanation of the basis for approval of the change. Any change to the time limits of a permit other than those authorized by the sections of this program previously listed shall require a new permit application.~~
- D. ~~—~~

# Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

## ~~Chapter 23.70 Administration~~

Comment [MD286]: Entire chapter moved to T-22

### ~~23.70.010 Administrator.~~

~~D. The Administrator, as defined in WCC 23.110.010, is hereby vested with the authority to:~~

- ~~1. Overall administrative responsibility for this program.~~
- ~~2. Determine if a public hearing should be held on a shoreline permit application by the Hearing Examiner pursuant to WCC 23.60.130.~~
- ~~3. Grant or deny statements of exemption.~~
- ~~4. Authorize, approve or deny shoreline substantial development permits, except for those for which the Hearing Examiner or County Council is the designated decision maker.~~
- ~~5. Issue a stop work order pursuant to the procedure set forth in WAC 173-27-270 upon a person undertaking an activity on shorelines in violation of Chapter 90.58 RCW or this program; and seek remedies for alleged violations of this program's regulations, or of the provisions of the Act, or of conditions attached to a shoreline permit issued by Whatcom County.~~
- ~~6. Decide whether or not a proposal is subject to the consolidated review process of Chapter 22.05 WCC and determine what other permits are required to be included in the consolidated review.~~
- ~~7. Make field inspections as needed, and prepare or require reports on shoreline permit applications.~~
- ~~8. Make written recommendations to the County Council or Hearing Examiner as appropriate and, insofar as possible, assure that all relevant information, testimony, and questions regarding a specific matter are made available during their respective reviews of such matter.~~
- ~~9. Propose amendments to the Planning Commission deemed necessary to more effectively or equitably achieve the purposes and goals of this program.~~
- ~~10. The Administrator shall perform the following administrative responsibilities:~~
- ~~11. Advise interested persons and prospective applicants/proponents as to the administrative procedures and related components of this program;~~
- ~~12. Collect fees as provided for in WCC 23.60.070; and~~
- ~~13. Assure that proper notice is given to interested persons and the public through news media, posting or mailing of notice.~~
- ~~14. Review administrative and management policies, regulations, plans and ordinances relative to lands under county jurisdiction that are adjacent to shorelines so as to achieve a use policy on such lands that is consistent with the Act and this program.~~
- ~~15. Review and evaluate the records of project review actions in shoreline areas shoreline environments and report on the cumulative effects of authorized development of shoreline conditions. The Administrator Director shall coordinate such review with the Washington Department of Ecology, the Washington Department of Fish and Wildlife, the Lummi Nation and Nooksack Tribe, and other interested parties.~~
- ~~16. Make recommendations to the Planning Commission for open space tax designations pursuant to Chapter 84.34 RCW.~~

12 ~~**23.70.030 Hearing Examiner.**~~  
13 ~~The Whatcom County Hearing Examiner is hereby vested with the authority to conduct open record~~  
14 ~~hearings and prepare a record thereof pursuant to WCC 2.11.210.~~

15 ~~**23.70.040 Planning Commission.**~~  
16 ~~The Whatcom County Planning Commission is hereby vested with the responsibility to review the~~  
17 ~~program from time to time as a major element of the County's planning and regulatory program, and~~  
18 ~~make recommendations for amendments thereof to the County Council.~~

19 ~~**23.70.050 County Council.**~~  
20 ~~The Whatcom County Council is hereby vested with authority to:~~  
21 ~~A. Initiate an amendment to this program according to the procedures prescribed in WAC 173-26-100.~~  
22 ~~B. Adopt all amendments to this program, after consideration of the recommendation of the Planning~~  
23 ~~Commission and pursuant to the procedural requirements of Chapter 2.02 WCC; provided, that~~  
24 ~~substantive amendments shall become effective immediately upon adoption by the Department of~~  
25 ~~Ecology.~~  
26 ~~C. Make final decisions with regard to shoreline permit, shoreline variance or shoreline conditional use~~  
27 ~~applications that require County Council action on a consolidated review as provided by Chapter~~  
28 ~~22.05 WCC.~~  
29 ~~D. Review and decide appeals to Hearing Examiner decisions pursuant to the procedures of WCC~~  
30 ~~23.60.150.~~

# Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

## Chapter 23.80 Legal Provisions

Comment [MD289]: Entire chapter moved to 23.05 or 23.10

### **23.80.010 Amendments.**

- ~~B. The County Council or the Planning Commission may initiate an amendment to this program according to the procedures prescribed in WAC 173-26-100. The Planning Commission shall conduct a public hearing on any amendment proposed by the county council.~~
- ~~C. Any person may petition the County Council or Planning Commission to amend this program. Petitions shall specify the changes requested and any and all reasons therefor. The County Council or Planning Commission may schedule a public hearing on said petition(s) if it deems the proposed amendment would make this program more consistent with the Act and/or any applicable Department of Ecology Guidelines, or more equitable in its application to persons or property due to changed conditions in an area.~~
- ~~D. After approval or disapproval of a program amendment by the Department of Ecology as provided in RCW 90.58.090, the County shall publish a notice that the program amendment has been approved or disapproved by the Department of Ecology. For the purposes of RCW 36.70A.290, the date of publication for the amendment of a program is the date the County publishes notice that the program amendment has been approved or disapproved by the Department of Ecology.~~
- ~~E. The administrator shall submit an annual report to the County Council reviewing the effectiveness of the program in achieving its stated purpose, goals, and objectives. Such report may also include any proposed amendments deemed necessary to increase its effectiveness or equity. If said report contains proposed amendments, the Council may schedule a public hearing to consider such matter in accordance with the procedure described in subsection A of this section. Said report shall also include a determination of whether or not the goal of no net loss of shoreline ecological function is being achieved and provide recommendations for achieving and maintaining the goal.~~
- ~~F. Upon County Council adoption of a detailed community or subarea plan under the Whatcom County Comprehensive Plan, the Planning and Development Services Department shall prepare amendments, as appropriate, for the purpose of incorporating the goals, objectives, and standards of the community or subarea plan into this program. The Planning Commission shall schedule a public hearing upon receipt of such proposals, and shall give due consideration to the community objectives so expressed.~~

### **23.80.020 Violations and Penalties.**

- ~~A. In the event any person violates any of the provisions of this chapter, the County may issue a correction notice to be delivered to the owner or operator, or to be conspicuously posted at the site. In a nonemergency situation, such notice may include notice of the intent to issue a stop work order no less than 10 calendar days following the receipt of the correction notice, and provide for an administrative predeprivation hearing within 10 calendar days of the notice. In an emergency situation where there is a significant threat to public safety or the environment, the County may issue a stop work order. The stop work order shall include, in writing, the right to request an administrative predeprivation hearing within 72 hours following receipt of the stop work order.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 ~~B. In addition to incurring civil liability under WCC 23.80.030 and RCW 90.58.210, pursuant to RCW~~  
2 ~~90.58.220 any person found to have willfully engaged in activities on shorelines of the state in~~  
3 ~~violation of the provisions of the Act or of this program, or other regulations adopted pursuant~~  
4 ~~thereto shall be punished by:~~
- 5 ~~1. A fine of not less than \$25.00 or more than \$1,000;~~
  - 6 ~~2. Imprisonment in the county jail for not more than 90 days; or~~
  - 7 ~~3. Both such fine and imprisonment;~~
- 8 ~~provided, that the fine for the third and all subsequent violations in any five-year period shall not be~~  
9 ~~less than \$500.00 nor more than \$10,000. Provided further, that fines for violations of RCW~~  
10 ~~90.58.550, or any rule adopted thereunder, shall be determined under RCW 90.58.560. Each permit~~  
11 ~~violation or each day of continued development without a required permit shall constitute a~~  
12 ~~separate violation.~~
- 13 ~~C. The penalty provided in subsection B of this section shall be assessed and may be imposed by a~~  
14 ~~notice in writing, either by certified mail with return receipt requested or by personal service, to the~~  
15 ~~person incurring the same. The notice shall include the amount of the penalty imposed and shall~~  
16 ~~describe the violation with reasonable particularity. In appropriate cases, corrective action shall be~~  
17 ~~taken within a specific and reasonable time.~~
- 18 ~~D. Within 30 calendar days after the notice is received, the person incurring the penalty may apply in~~  
19 ~~writing to the county for remission or mitigation of such penalty. Upon receipt of the application,~~  
20 ~~the county may remit or mitigate the penalty upon whatever terms the county in its discretion~~  
21 ~~deems proper. The county's final decision on mitigation or revisions may be reviewed by the hearing~~  
22 ~~examiner if the aggrieved party files a written appeal therewith of said decision within 10 calendar~~  
23 ~~days of its issuance.~~
- 24 ~~E. If work activity has occurred on a site in violation of this program, prompt corrective action,~~  
25 ~~restoration or mitigation of the site will be required when appropriate. If this provision is not~~  
26 ~~complied with, the county may restore or mitigate the site and charge the responsible person for~~  
27 ~~the full cost of such an activity. Additionally, any and all permits or approvals issued by the county~~  
28 ~~may be denied for that site for a period of up to six years.~~
- 29 ~~F. The county may suspend or revoke a permit if the applicant violates the conditions or limitations set~~  
30 ~~forth in the permit or exceeds the scope of the work set forth in the permit.~~
- 31 ~~G. Any person who willfully violates any court order or regulatory order of injunction issued pursuant~~  
32 ~~to this program shall be subject to a fine of not more than \$5,000, imprisonment in the county jail~~  
33 ~~for not more than 90 days, or both.~~
- 34 **23.80.030 Remedies.**
- 35 ~~A. The Whatcom County prosecuting attorney or administrator, where authorized, shall bring such~~  
36 ~~injunctive, declaratory, or other actions as are necessary to ensure that no uses are made of the~~  
37 ~~shorelines of the state located within Whatcom County in conflict with the provisions of this~~  
38 ~~program, the Act, or other regulations adopted pursuant thereto, and to otherwise enforce the~~  
39 ~~provisions of this program.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 ~~B.— Any person subject to the regulatory provisions of this program or the Act who violates any~~  
2 ~~provision thereof, or permit, or permit condition issued pursuant thereto shall be liable for all~~  
3 ~~damage to public or private property arising from such violation, including the cost of restoring the~~  
4 ~~affected area to its condition prior to violation. The Whatcom County prosecuting attorney shall~~  
5 ~~bring suit for damages under this section on their own behalf and on the behalf of all persons~~  
6 ~~similarly situated. If liability has been established for the cost of restoring an area affected by a~~  
7 ~~violation, the court shall make provision to assure that restoration will be accomplished within a~~  
8 ~~reasonable time at the expense of the violator. In addition to such relief, including money damages,~~  
9 ~~the court in its discretion may award attorney’s fees and costs of the suit to the prevailing party.~~  
10 ~~C.— A person who fails to conform to the terms of a substantial development permit, conditional use~~  
11 ~~permit or variance issued under RCW 90.58.140, who undertakes a development or use on~~  
12 ~~shorelines of the state without first obtaining any required permit or authorization, or who fails to~~  
13 ~~comply with a stop work order may be subject to a civil penalty. The penalty shall be imposed~~  
14 ~~pursuant to the procedure set forth in WAC 173-27-280 and become due and recovered as set forth~~  
15 ~~in WAC 173-27-290(3) and (4). Persons incurring a penalty may appeal the same to the shoreline~~  
16 ~~hearings board or the county council pursuant to WAC 173-27-290(1) and (2).~~  
17 ~~D.— Any order, requirement or determination by the administrator pursuant to WCC 23.80.020 may be~~  
18 ~~appealed in accordance with the provisions of WCC 23.60.150(G) and (H).~~  
19 **23.80.040 Abatement.**  
20 Structures or development on shorelines considered by the administrator to present a hazard or other  
21 public nuisance to persons, properties or natural features may be abated by the County under the  
22 provisions of the applicable provisions of the Uniform Code for the Abatement of Dangerous Buildings,  
23 1997 Edition, or successor as adopted by Whatcom County, or by other appropriate means.

# Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

## Chapter 23.11060 Definitions

### 23.1160.005 Generally.

The terms used throughout this program shall be defined and interpreted as indicated below. When consistent with the context, words used in the present tense shall include the future; the singular shall include the plural, and the plural the singular. Any words not defined herein shall be defined pursuant to WWC Chapter 16.16 (Critical Areas) or Titles 20 (Zoning) or 22 (Land Use and Development), or their common meanings when not defined in code.

### 23.1160.010 "A" definitions.

~~1. "Accessory development" means any development incidental to and subordinate to a primary use of a shoreline site and located adjacent thereto.~~

**Comment [CES290]:** This term is not used now; use "accessory use" throughout, which is defined in T-20.

~~2-1. "Accessory structure" means a structure that is incidental and subordinate to a primary use and located on the same lot as the primary use, such as barns, garages, storage sheds, and similar structures. Structures that share a common wall with a primary residential structure shall be considered an extension of the primary structure, rather than an accessory structure.~~

**Comment [AP291]:** Added for consistency with revisions made to Bulk Provisions Table per Scoping Document, Item #17d.

~~"Accessory use" means a use customarily incidental to a permitted use; provided, that such use shall be located on the same lot as the permitted use except where specifically permitted elsewhere in zoning district regulations.~~

**Comment [AP292]:** Captured in Zoning Code (Title 20).

~~3-2. "Accretion shoreform" means a shoreline with a relatively stable berm and backshore that has been built up by long-term deposition of sand and gravel transported by wind and/or water from a feeder bluff or other material source. Such shoreforms are scarce locally and Examples include, but are not limited to, barrier beaches, points, spits, tombolos, pocket beaches, and point and channel bars on streams.~~

~~4-3. "Act" means the Shoreline Management Act of 1971 (Chapter 90.58 RCW) as amended.~~

~~5. "Activity" means human activity associated with the use of land or resources.~~

**Comment [CES293]:** Term already defined in CAO.

~~6. "Administrator" or "Shoreline Administrator" means the director of the department of planning and development services who is to carry out the administrative duties enumerated in this program, or his/her designated representative.~~

**Comment [CES294]:** Term no longer used; has been replaced with "Director," in keeping with general direction of other, recent code overhauls.

~~7-4. "Adverse impact" means an impact that can be measured or is tangible and has a reasonable likelihood of causing moderate or greater harm to ecological functions or processes or other elements of the shoreline environment.~~

~~8-5. "Agricultural activities" means agricultural uses and practices including, but not limited to: producing, breeding, or increasing agricultural products; rotating and changing agricultural crops; allowing land used for agricultural activities to lie fallow in which it is plowed and tilled but left unseeded; allowing land used for agricultural activities to lie dormant as a result of adverse agricultural market conditions; allowing land used for agricultural activities to lie dormant because the land is enrolled in a local, state, or federal conservation program, or the land is subject to a conservation easement; conducting agricultural operations; maintaining, repairing, and replacing agricultural equipment; maintaining, repairing, and replacing agricultural facilities; and maintaining~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 agricultural lands under production or cultivation. The construction of new structures or activities  
2 that bring a new, non-ongoing agricultural area into agricultural use are not considered agricultural  
3 activities.
- 4 ~~9.6.~~ “Agricultural equipment” and “agricultural facilities” include, but are not limited to:  
5 a. The following used in agricultural operations: equipment; machinery; constructed shelters,  
6 buildings, and ponds; fences; water diversion, withdrawal, conveyance, and use equipment and  
7 facilities including, but not limited to, pumps, pipes, tapes, canals, ditches, and drains;  
8 b. Corridors and facilities for transporting personnel, livestock, and equipment to, from, and within  
9 agricultural lands;  
10 c. Farm residences and associated equipment, lands, and facilities; and  
11 d. Roadside stands and on-farm markets for marketing fruit or vegetables.
- 12 ~~10.7.~~ “Agricultural land” means areas on which agricultural activities are conducted as of the date of  
13 adoption of this program pursuant to the State Shoreline Guidelines as evidenced by aerial  
14 photography or other documentation. After the effective date of this program, land converted to  
15 agricultural use is subject to compliance with the requirements herein.
- 16 ~~11.8.~~ “Agricultural products” includes, but is not limited to, horticultural, viticultural, floricultural,  
17 vegetable, fruit, berry, grain, hops, hay, straw, turf, sod, seed, and apiary products; feed or forage  
18 for livestock; Christmas trees; hybrid cottonwood and similar hardwood trees grown as crops and  
19 harvested within 20 years of planting; and livestock including both the animals themselves and  
20 animal products including, but not limited to, meat, poultry and poultry products, and dairy  
21 products.
- 22 ~~12.~~ “Alluvial fan” means a fan-shaped deposit of sediment and organic debris formed where a stream  
23 flows or has flowed out of a mountainous upland onto a level plain or valley floor because of a  
24 sudden change in sediment transport capacity (e.g., significant change in slope or confinement).
- 25 ~~13.9.~~ “Alteration” means any human-induced change in an existing condition of a shoreline, critical  
26 area and/or its buffer. Alterations include, but are not limited to, grading, filling, channelizing,  
27 dredging, clearing (vegetation), draining, construction, compaction, excavation, or any other activity  
28 that changes the character of the area.
- 29 ~~14.~~ “Anadromous fish” means fish species that spend most of their lifecycle in saltwater, but return to  
30 freshwater to reproduce.
- 31 ~~15.10.~~ “Appurtenance” means development that is necessarily connected to the use and enjoyment of  
32 a single-family residence and is located landward of the OHWM and/or the perimeter of a wetland.  
33 For the purposes of single-family residential exemptions, normal Appurtenances include a garage,  
34 deck, driveway, utilities, fences, installation of a septic tank and drainfield, and grading which that  
35 does not exceed 250 cubic yards (except to construct a conventional drainfield) and that does not  
36 involve placement of fill in any wetland or waterward of the ordinary high water mark.
- 37 ~~16.11.~~ “Aquaculture” means the culture or farming or culture of food-fish, shellfish, or other aquatic  
38 plants or animals, in freshwater or saltwater areas, and may require development such as fish  
39 hatcheries, rearing pens and structures, and shellfish rafts, as well as use of natural spawning and  
40 rearing areas. Aquaculture does not include the harvest of wild geoduck associated with the state

Comment [CES295]: From the CAO definition.

Comment [CES296]: Already defined in Ch. 16.16

Comment [CES297]: Term not used in this document.

Comment [CES298]: Definition amended to state definition from WAC 173-26-020(6).

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 managed wildstock geoduck fishery-free swimming fish or the harvest of shellfish not artificially  
2 planted or maintained, including the harvest of wild stock geoducks on DNR-managed lands.
- 3 ~~17.~~ 17. “Aquaculture practices” means any activity directly pertaining to growing, handling, or harvesting of  
4 aquaculture produce including, but not limited to, propagation, stocking, feeding, disease  
5 treatment, waste disposal, water use, development of habitat and structures. Excluded from this  
6 definition are related commercial or industrial uses such as wholesale and retail sales, or final  
7 processing and freezing.
- 8 ~~18,12.~~ 12. “Aquatic shoreline area environment” means an area designated pursuant to WCC  
9 Chapter 23.230 (Shoreline Jurisdiction and Environment Designations).
- 10 ~~19.~~ 19. “Archaeological object” means an object that comprises the physical evidence of an indigenous and  
11 subsequent culture including material remains of past human life including monuments, symbols,  
12 tools, facilities, graves, skeletal remains and technological byproducts.
- 13 ~~20.~~ 20. “Archaeological resource/site” means a geographic locality in Washington, including, but not limited  
14 to, submerged and submersible lands and the bed of the sea within the state’s jurisdiction, that  
15 contains archaeological objects. “Significant” is that quality in American history, architecture,  
16 archaeology, engineering, and culture that is present in districts, sites, buildings, structures, and  
17 objects that possess integrity of location, design, setting, materials, workmanship, feeling, and  
18 association, and:  
19 a. ~~That are associated with events that have made a significant contribution to the broad patterns~~  
20 ~~of our history; or~~  
21 b. ~~That are associated with the lives of significant persons in our past; or~~  
22 c. ~~That embody the distinctive characteristics of a type, period or method of construction, or that~~  
23 ~~represent the work of a master, or that possess high artistic values, or that represent a~~  
24 ~~significant and distinguishable entity whose components may lack individual distinction; or~~  
25 d. ~~That have yielded or may be likely to yield information important in history or prehistory.~~
- 26 ~~21,13.~~ 13. “Archaeologist” means a person who has designed and executed an archaeological study as  
27 evidenced by a thesis or dissertation and has been awarded an advanced degree such as an M.A.,  
28 M.S. or Ph.D. from an accredited institution of higher education in archaeology, anthropology, or  
29 history or other germane discipline with a specialization in archaeology; has a minimum of one year  
30 of field experience with at least 24 weeks of field work under the supervision of a professional  
31 archaeologist, including no less than 12 weeks of survey or reconnaissance work, and at least eight  
32 weeks of supervised laboratory experience. Twenty weeks of field work in a supervisory capacity  
33 must be documentable with a report produced by the individual on the field work.
- 34 ~~22.~~ 22. “Archaeology” means systematic, scientific study of the human past through material remains.
- 35 ~~23,14.~~ 14. “Associated wetlands” means wetlands that are in proximity to tidal waters, lakes, rivers, or  
36 streams that are subject to the Shoreline Management Act and either influence or are influenced by  
37 such waters. Factors used to determine proximity and influence include, but are not limited to:  
38 location contiguous to a shoreline waterbody, formation by tidally influenced geohydraulic  
39 processes, presence of a surface connection including through a culvert or tide gate, location in part  
40 or whole within the floodplain of a shoreline, periodic inundation, and/or hydraulic continuity.

Comment [CES299]: Term not used

Comment [AP300]: Re-located to “Cultural resource” and “Cultural resource site” definitions

Comment [CES301]: Term already found in T-20 definitions.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 ~~24.15.~~ “Average grade level” means the average of the natural or existing topography of the portion of  
2 the lot, parcel, or tract of real property that will be directly under a proposed building or structure.  
3 In the case of structures to be built over water, average grade level shall be the elevation of the  
4 ordinary high water mark. Calculation of the average grade level shall be made by averaging the  
5 ground elevations at the midpoint of all exterior walls of the proposed building or structure. ~~on that~~  
6 part of the lot to be occupied by the building or structure as measured by averaging the elevations  
7 at the center of all exterior walls of the proposed structure.

### 8 ~~23.1160.020~~ “B” definitions.

9 1. “Backshore” means the accretion or erosion zone, located landward of the line of ordinary high  
10 water, which is normally wetted only by storm tides. A backshore may take the form of a more or  
11 less narrow storm berm (ridge of wave-heaped sand and/or gravel) under a bluff, or it may  
12 constitute a broader complex of berms, marshes, meadows, or dunes landward of the line of  
13 ordinary high water. It is part of the littoral drift process along its waterward boundary. ~~a zone of~~  
14 accretion or erosion lying landward of the average high tide mark, wetted by tides during storm  
15 events.

16 2. “Barrier beach” means a linear ridge of sand or gravel extending above high tide, built by wave  
17 action and sediment deposition seaward of the original coastline; includes a variety of depositional  
18 coastal landforms. ~~accretion shoreform of sand and/or gravel berm(s) accreted waterward of bluffs,~~  
19 bays, marshes or estuaries by littoral drift; the berm acts as a natural dike and seawall to its  
20 backshore or marsh hinterland.

21 3. “Beach nourishment” means a restoration or shoreline stabilization activity in which selected beach  
22 material is deposited at one or several locations in the updrift portion of a drift sector. The material  
23 is then naturally transported by waves or currents downdrift to stabilize or restore accretion  
24 shoreforms and other berms, which may be eroding due to artificial obstructions in the shore  
25 process corridor.

26 4. “Bed and Breakfast” means a privately owned dwelling that is the primary residence(s) of the owner  
27 in which, for compensation, one to five rooms are used as sleeping units to house or lodge  
28 individuals or families for periods of less than 30 days as transient visitors with or without limited  
29 food service. The use of the dwelling unit for the bed and breakfast shall be clearly incidental and  
30 subordinate to its use for residential purposes and the purpose of the applicable zoning district. At  
31 least one owner shall be present overnight when a guest room is rented.

32 ~~3.5.~~ “Bedlands” means those submerged lands below the line of extreme low tide in marine waters and  
33 below the line of navigability or navigable lakes and rivers. Where the line of navigability has not  
34 been established, bedlands would be those submerged lands below the OHWM in lakes and rivers.

35 4.6. “Bedrock” means a general term for rock, typically hard, consolidated geologic material that  
36 underlies soil or other unconsolidated, superficial material or is exposed at the surface.

37 ~~5.7.~~ “Berm” or “protective berm” means one or several accreted linear mounds of sand and gravel  
38 generally paralleling the shore at or landward of OHWM; berms are normally stable because of  
39 material size or vegetation, and are naturally formed by littoral drift.

Comment [CES302]: Amended to BAS definition (from Hugh Shippman's A geomorphic classification of Puget Sound)

Comment [CES303]: Incorporated from Resolution 2016-039, Council's action on short-term rentals.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 | ~~6-8.~~ “Best management practices” means conservation practices or systems of practices and  
2 | management measures that:
- 3 | a. Control soil loss and reduce water quality degradation caused by nutrients, animal waste, toxins,  
4 | and sediment;
- 5 | b. Minimize adverse impacts to surface water and ground water flow, circulation patterns, and to  
6 | the chemical, physical, and biological characteristics of waters, wetlands, and other fish and  
7 | wildlife habitats;
- 8 | c. Control site runoff, spillage or leaks, sludge or water disposal, or drainage from raw material.
- 9 | ~~7.~~ “Bioengineered shoreline stabilization” means ~~biostructural and biotechnical alternatives to~~  
10 | ~~hardened structures (bulkheads, walls) for protecting slopes or other erosive features.~~  
11 | ~~Bioengineered stabilization uses vegetation, geotextiles, geosynthetics and similar materials. An~~  
12 | ~~example is vegetated reinforced soil slopes (VRSS), which uses vegetation arranged and embedded~~  
13 | ~~in the ground to prevent shallow mass movement and surficial erosion.~~
- 14 | 9. “Boathouse.” See “Moorage Structure.”
- 15 | ~~10.~~ “Boat lift” or “lift.” See ~~Moorage Structure.~~ means an in-water structure used for the dry berthing  
16 | of vessels above the water level and lowering of vessels into the water. A boat lift as herein defined  
17 | is used to berth and launch a single vessel suspended over the water’s surface. A boat lift is  
18 | generally a manufactured unit without a canopy cover and may be placed in the water adjacent to a  
19 | dock or as stand-alone structure. A boat lift may be designed either for boats or personal watercraft.  
20 | A boat lift is to be differentiated from a hoist or crane used for the launching of vessels. A boat lift  
21 | with a canopy cover shall be considered a covered moorage for the purposes of this program.
- 22 | ~~8-11.~~ “Bog” means a type of wetland dominated by mosses that form peat. Bogs are very acidic,  
23 | nutrient poor systems, fed by precipitation rather than surface inflow, with specially adapted plant  
24 | communities.
- 25 | ~~9-12.~~ “Breakwater” means an offshore structure that is generally built parallel to shore that may or  
26 | may not be connected to land, and may be floating or stationary. Their primary purpose is to protect  
27 | harbors, moorages and navigation activity from wave and wind action by creating stillwater areas  
28 | along shore. A secondary purpose is to protect shorelines from wave-caused erosion.
- 29 | ~~10-13.~~ “Buffer (buffer zone)” means the area adjacent to a shoreline and/or critical area that separates  
30 | and protects the area from adverse impacts associated with adjacent land uses.
- 31 | ~~11-14.~~ “Building” means any structure used or intended for supporting or sheltering any use or  
32 | occupancy as defined in the International Building Code.
- 33 | ~~12-15.~~ “Building area” means the entire area that will be disturbed to construct the home, normal  
34 | appurtenances (except on-site sewage systems), and landscaping.
- 35 | ~~13-16.~~ “Building footprint” means, for the purposes of this program, the ground area contained by the  
36 | exterior walls of a building.
- 37 | ~~14-17.~~ “Bulkhead” means a wall-like structure ~~such as a revetment or seawall~~ that is placed parallel to  
38 | shore primarily for retaining uplands and fills prone to sliding or sheet erosion, and to protect  
39 | uplands and fills from erosion by wave action.

Comment [CES304]: Now found under  
“Shoreline stabilization, soft-treatment”

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 **23.1160.030 “C” definitions.**  
2 **1. “Canopy.” See “Moorage Structure.”**  
3 ~~1. “Channel migration zone (CMZ)” means the area along a river or stream within which the channel~~  
4 ~~can reasonably be expected to migrate over time as a result of normally occurring processes. It~~  
5 ~~encompasses that area of current and historic lateral stream channel movement that is subject to~~  
6 ~~erosion, bank destabilization, rapid stream incision, and/or channel shifting, as well as adjacent~~  
7 ~~areas that are susceptible to channel erosion. There are three components of the channel migration~~  
8 ~~zone: (a) the historical migration zone (HMZ) – the collective area the channel occupied in the~~  
9 ~~historical record; (b) the avulsion hazard zone (AHZ) – the area not included in the HMZ that is at risk~~  
10 ~~of avulsion over the timeline of the CMZ; and (c) the erosion hazard area (EHA) – the area not~~  
11 ~~included in the HMZ or the AHZ that is at risk of bank erosion from stream flow or mass wasting over~~  
12 ~~the timeline of the CMZ. The channel migration zone may not include the area behind a lawfully~~  
13 ~~constructed flood protection device. Channel migration zones shall be identified in accordance with~~  
14 ~~guidelines established by the Washington State Department of Ecology.~~  
15 2. “Channelization” means the straightening, relocation, deepening or lining of stream channels,  
16 including construction of continuous revetments or levees for the purpose of preventing gradual,  
17 natural meander progression.  
18 3. ~~“Cherry Point management area” means a geographic area defined as all the shoreline areas within~~  
19 ~~the jurisdiction of the Whatcom County shoreline management program lying between the eastern~~  
20 ~~property boundary of Tax Lots 2.27 and 2.28 within the SE 1/4 of Section 11, Township 39 North,~~  
21 ~~Range 1 West, as it existed on June 18, 1987, and the southern boundary of Section 32, Township 39~~  
22 ~~North, Range 1 East, extending waterward a distance of 5,000 feet and extending landward for 200~~  
23 ~~feet as measured on a horizontal plane from the OHWM.~~  
24 3. “Clearing” means the removal or destruction of vegetation or plant cover by manual, chemical, or  
25 mechanical means and that may result in exposed soils. Clearing includes, but is not limited to,  
26 actions such as cutting, felling, thinning, flooding, killing, poisoning, girdling, uprooting, or burning.  
27 4. “Coastal high hazard area” means the area subject to high velocity waters, including, but not limited to,  
28 storm surge or tsunamis. The area is designated on the Flood Insurance Rate Map as Zone V1-  
29 V30, VE or V.  
30 5. “Commercial development” means those developments whose primary use is for retail, service or  
31 other commercial business activities. Included in this definition are developments such as hotels,  
32 motels, ~~bed and breakfast establishments~~, shops, restaurants, banks, professional offices, grocery  
33 stores, laundromats, recreational vehicle parks, commercial rental campgrounds and cabins,  
34 whether public or private, and indoor or intensive outdoor commercial recreation facilities. Not  
35 included are private camping clubs, marinas, signs, utilities, ~~bed and breakfasts, short-term rentals,~~  
36 and other development.  
37 6. ~~“Commercial fish” means those species of fish that are classified under the Washington Department~~  
38 ~~of Fish and Wildlife Food Fish Classification as commercial fish (WAC 220-12-010).~~  
39 7. ~~“Compensatory mitigation” means a project for the purpose of mitigating, at an equivalent or~~  
40 ~~greater level, unavoidable impacts that remain after all appropriate and practicable avoidance and~~

Comment [CES305]: Already defined in Ch. 16.16

Comment [CES306]: Moved to “Official Map” section

Comment [CES307]: Incorporated from Resolution 2016-039, Council’s action on short-term rentals.

Comment [CES308]: Already in Ch. 16.16

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 minimization measures have been implemented. Compensatory mitigation includes, but is not  
2 limited to, wetland creation, restoration, enhancement, and preservation; stream restoration and  
3 relocation, rehabilitation; and buffer enhancement.
- 4 ~~8.~~ “Conditional use” for the purposes of this program means a use, development or substantial  
5 development listed in the regulations as being permitted only as a conditional use, or not classified  
6 in this program. Conditional uses are subject to review and approval pursuant to the criteria in  
7 Chapter 23.60 WCC regardless of whether or not the proposal requires a substantial development  
8 permit.
- 9 ~~9-6.~~ “Conservancy shoreline area environment” means an area so designated in WCC  
10 Chapter 23.230 (Shoreline Jurisdiction and Environment Designations).
- 11 ~~10.~~ “Conservation” means the prudent management of rivers, streams, wetlands, wildlife and other  
12 environmental resources in order to preserve and protect them. This includes the careful use of  
13 natural resources to prevent depletion or harm to the environment.
- 14 ~~11.~~ “Conservation easement” means a legal agreement that the property owner enters into to restrict  
15 uses of the land for purposes of natural resources conservation. The easement is recorded on a  
16 property deed, runs with the land, and is legally binding on all present and future owners of the  
17 property.
- 18 ~~12.~~ “Contaminant” means any chemical, physical, biological, or radiological substance that does not  
19 occur naturally in ground water, air, or soil or that occurs at concentrations greater than those in the  
20 natural levels (Chapter 173-200 WAC).
- 21 ~~13-7.~~ “County” means Whatcom County, Washington.
- 22 ~~14-8.~~ “Covered moorage” means a roofed floating or fixed offshore structure without walls, other  
23 than a minimal structural framework needed to support the roof, for moorage of water craft or float  
24 planes.
- 25 ~~15.~~ “Critical aquifer recharge area” means areas designated by WAC 365-190-080(2) that are  
26 determined to have a critical recharging effect on aquifers (i.e., maintain the quality and quantity of  
27 water) used for potable water as defined by WAC 365-190-030(2).
- 28 ~~16-9.~~ “Critical areas” means the following areas as designated in WCC Chapter 16.16:  
29 a. Critical aquifer recharge areas.  
30 b. Wetlands.  
31 c. Geologically hazardous areas.  
32 d. Frequently flooded areas.  
33 e. Fish and wildlife habitat conservation areas.
- 34 ~~10.~~ “Critical habitat” means habitat areas with which endangered, threatened, sensitive or monitored  
35 plant, fish, or wildlife species have a primary association (e.g., feeding, breeding, rearing of young,  
36 migrating). Such areas are identified in WCC Chapter 16.16 with reference to lists, categories, and  
37 definitions promulgated by the Washington Department of Fish and Wildlife as identified in  
38 WAC 232-12-011 or 232-12-014; in the Priority Habitat and Species (PHS) program of the  
39 Department of Fish and Wildlife; or by rules and regulations adopted by the U.S. Fish and Wildlife  
40 Service, National Marine Fisheries Service, or other agency with jurisdiction for such designations.

Comment [CES309]: Already in Ch. 16.16

Comment [AP310]: Moved to “Shoreline  
Conditional Use” definition.

Comment [CES311]: Already in Ch. 16.16

Comment [CES312]: Already in Ch. 16.16

Comment [CES313]: Already in Ch. 16.16

Comment [CES314]: Already in Ch. 16.16

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 ~~17.11.~~ “Critical saltwater habitat” includes all kelp beds, eelgrass beds, spawning and holding areas for  
2 forage fish, such as Pacific herring, surf smelt and Pacific sandlance; subsistence, commercial and  
3 recreational shellfish beds; mudflats, intertidal habitats with vascular plants; and areas with which  
4 priority species have a primary association.
- 5 ~~25.16.~~ “Archaeological object/Cultural resource” refers to any archaeological, historic, cemetery, or  
6 other cultural sites or artifacts; as well as those traditional food, medicine, fibers, and objects that  
7 sustain the religious, ceremonial, and social activities of affected Native American tribes that may be  
8 regulated under state or federal laws administered by the Washington State Department of  
9 Archaeologic and Historic Preservation (DAHP). means an object that comprises the physical  
10 evidence of an indigenous and subsequent culture including material remains of past human life  
11 including monuments, symbols, tools, facilities, graves, skeletal remains and technological  
12 byproducts.
- 13 ~~26.~~ “Archaeological resource/site/Cultural resource site” means a geographic locality in Washington,  
14 including, but not limited to, submerged and submersible lands and the bed of the sea within the  
15 state’s jurisdiction, that contains archaeological objects/cultural resources. “Significant” is that  
16 quality in American history, architecture, archaeology, engineering, and culture that is present in  
17 districts, sites, buildings, structures, and objects that possess integrity of location, design, setting,  
18 materials, workmanship, feeling, and association, and:
- 19 a. That are associated with events that have made a significant contribution to the broad patterns  
20 of our history; or
- 21 b. That are associated with the lives of significant persons in our past; or
- 22 c. That embody the distinctive characteristics of a type, period or method of construction, or that  
23 represent the work of a master, or that possess high artistic values, or that represent a  
24 significant and distinguishable entity whose components may lack individual distinction; or
- 25 d. That have yielded or may be likely to yield information important in history or prehistory.
- 26 ~~18.12.~~ “Current deflector” means an angled “stub-dike,” groin, or sheet-pile structure which projects  
27 into a stream channel to divert flood currents from specific areas, or to control downstream current  
28 alignment.
- 29 ~~23.1160.040~~ **“D” definitions.**
- 30 1. “Dam” means a barrier across a stream or river to confine or regulate flow or raise water levels for  
31 purposes such as flood or irrigation water storage, erosion control, power generation, or collection  
32 of sediment or debris.
- 33 2. “Date of filing” refers to the beginning of the state Shorelines Hearings Board’s 21 day appeal  
34 period. Consistent with RCW 90.58.140(6), “date of filing” is defined as follows:
- 35 a. For projects that only require a substantial development permit: the date that Ecology receives  
36 the County’s decision.
- 37 b. For a shoreline conditional use permit or variance: the date the Ecology’s decision on the  
38 shoreline conditional use permit or variance is transmitted to the applicant and the County.

Comment [AP315]: Added for consistency with CAO.

Comment [CES316]: From DAHP guidance.

Comment [CES317]: Deleted, as LNTPO commented, “The definition that is included for this term on page 227 is taken from the Federal process and it does not apply here. Under state law a different process is followed.” Proposed for removal, as term “significant” is no longer used.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 c. For substantial development permits simultaneously mailed with a shoreline conditional use  
2 permit or variance: the date that Ecology’s decision on the shoreline conditional use permit or  
3 variance is transmitted to the applicant and the County.
- 4 ~~“Debris flow” means a moving mass of rock fragments, soil, and mud; more than half of the~~  
5 ~~particles being larger than sand size; a general term that describes a mass movement of sediment~~  
6 ~~mixed with water and air that flows readily on low slopes.~~
- 7 3. “Department” means the Whatcom County Department of Planning and Development Services.
- 8 ~~2.4. “Department of Ecology” or “Ecology” means the Washington State Department of Ecology.~~
- 9 ~~3.5. “Development” means any land use activity, action, or manmade change to improved or~~  
10 ~~unimproved real estate, including but not limited to buildings or other structures, site work, and~~  
11 ~~installation of utilities; land division, binding site plans, and planned unit developments; dredging,~~  
12 ~~drilling, dumping, filling, grading, clearing, or removal of any sand, gravel, or minerals; shoreline~~  
13 ~~stabilization works, driving of piling, placing of obstructions; or any project of a permanent or~~  
14 ~~temporary nature that interferes with the normal public use of the surface of the waters overlying~~  
15 ~~lands subject to the act at any stage of water level. “Development” does not include dismantling or~~  
16 ~~removing structures if there is no other associated development or redevelopment, a use consisting~~  
17 ~~of the construction or exterior alteration of structures, dredging, drilling, dumping, filling; removal~~  
18 ~~of any sand, gravel or minerals; bulkheading; driving of piling; placing of obstructions; or any project~~  
19 ~~of a permanent or temporary nature that interferes with the normal public use of the surface of the~~  
20 ~~waters overlying lands subject to the Act at any state of water level. This term may include activities~~  
21 ~~related to subdivision and short subdivisions; binding site plans; planned unit developments;~~  
22 ~~clearing activity; fill and grade work; building or construction; and activities that are exempt from~~  
23 ~~the substantial development permit process or that require a shoreline variance or conditional use.~~
- 24 4.6. “Dike” means an artificial embankment placed at a stream mouth or delta area to hold back sea  
25 water for purposes of creating and/or protecting arable land from flooding.
- 26 7. “Dock.” See “Moorage Structure.” means all platform structures or anchored devices in or floating  
27 upon water bodies to provide moorage for pleasure craft or landing for water dependent recreation  
28 including, but not limited to, floats, swim floats, float plane moorages, and water ski jumps.  
29 Excluded are launch ramps.
- 30 5.8. “Director” means the Whatcom County Planning and Development Services director, or his/her  
31 designee. The Director is the Shoreline Administrator and is authorized to carry out the  
32 administrative duties enumerated in his program.
- 33 6.9. “Ditch” or “drainage ditch” means an artificially created watercourse constructed to drain convey  
34 surface or ground water. Ditches are graded (manmade) channels installed to collect and convey  
35 runoff from fields and roadways. Ditches may include irrigation ditches, waste ways, drains, outfalls,  
36 operational spillways, channels, stormwater runoff facilities or other wholly artificial watercourses,  
37 except those that directly result from the modification to a natural watercourse. Ditched channels  
38 that support fish are considered to be streams.
- 39 7.10. “Dredge spoil” means the material removed by dredging.

Comment [AP318]: Added per Periodic Review Checklist, Item 2017.d, and Scoping Document Item #2a.

Comment [CES319]: Already in Ch. 16.16

Comment [AP320]: Added per Scoping Document, Item #7a.

Comment [CES321]: Amended for consistency with WAC 173-27-030.

Comment [CES322]: Amended to reflect DOE definitions.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 ~~8-11.~~ “Dredging” means the removal, displacement, and disposal of unconsolidated earth material  
2 such as silt, sand, gravel, or other submerged material from ~~the bottom~~ waterward of the OHWM of  
3 water-bodies or from wetlands. ~~With the exception of regular maintenance of an approved barge~~  
4 landing site, maintenance dredging and other support activities are included in this definition.
- 5 ~~12.~~ “Drift sector” or “drift cell” means a particular reach of marine shore in which littoral drift may occur  
6 without significant interruption, and which contains any and all natural sources of such drift, and  
7 also any accretion shoreform(s) accreted by such drift. Each normal drift sector contains these shore  
8 process elements: feeder bluff or estuary, driftway, littoral drift, and accretion shoreform.
- 9 ~~9-13.~~ “Drift sill” means a low elevation groin, typically constructed of rock, installed along with beach  
10 nourishment filled up to height of sill, that is sometimes used to hold or slow littoral transport of  
11 placed sediment without blocking longshore drift.
- 12 ~~10-14.~~ “Driftway” means that portion of the marine shore process corridor, primarily the upper  
13 foreshore, through which sand and gravel are transported by littoral drift. The driftway is the  
14 essential component between the feeder bluff(s) and accretion shoreform(s) of an integral drift  
15 sector. Driftways are also characterized by intermittent, narrow berm beaches.
- 16 **23.1160.050 “E” definitions.**
- 17 1. “Ecological functions” or “shoreline functions” means the work performed or role played by the  
18 physical, chemical, and biological processes that contribute to the maintenance of the aquatic and  
19 terrestrial environments that constitute the shoreline’s natural ecosystem. See WAC 173-26-  
20 201(2)(c). Functions include, but are not limited to, habitat diversity and food chain support for fish  
21 and wildlife, ground water recharge and discharge, high primary productivity, low flow stream water  
22 contribution, sediment stabilization and erosion control, storm and flood water attenuation and  
23 flood peak desynchronization, and water quality enhancement through biofiltration and retention of  
24 sediments, nutrients, and toxicants. These beneficial roles are not listed in order of priority.
- 25 2. “Ecology” or “Department of Ecology” means the Washington State Department of Ecology.
- 26 3. “Ecosystem processes” or “ecosystem-wide processes” means the suite of naturally occurring  
27 physical and geologic processes of erosion, transport, and deposition; and specific chemical  
28 processes that shape landforms within a specific shoreline ecosystem and determine both the types  
29 of habitat and the associated ecological functions.
- 30 ~~2-4.~~ “Ells.” See “Moorage Structure.”
- 31 ~~3-5.~~ “Emergency activities” means an unanticipated and imminent threat to public health, safety, or the  
32 environment which requires immediate action within a time too short to allow full compliance with  
33 the master program. Emergency construction is construed narrowly as that which is necessary to  
34 protect property from the elements and does not include development of new permanent  
35 protective structures where none previously existed. Where new protective structures are deemed  
36 by the Director to be the appropriate means to address the emergency situation, upon abatement  
37 of the emergency, pursuant to the master program and RCW 90.58.030(3)(e)(iii), WAC 173-27-  
38 040(2)(d), or their successors. As a general matter, flooding or other seasonal events that can be  
39 anticipated and may occur but that are not imminent are not considered an emergency. ~~those~~

Comment [AP323]: Added per Scoping Document, Item #7a.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 activities that require immediate action within a time too short to allow full compliance with this  
2 program due to an unanticipated and imminent threat to public health, safety or the environment.  
3 Emergency construction does not include development of new permanent protective structures  
4 where none previously existed. All emergency construction shall be consistent with the policies of  
5 Chapter 90.58 RCW and this program. As a general matter, flooding or other seasonal events that  
6 can be anticipated and may occur but that are not imminent are not an emergency.
- 7 ~~4-6.~~ “Enhancement” means actions performed within an existing degraded shoreline, critical area and/or  
8 buffer to intentionally increase or augment one or more functions or values of the existing area.  
9 Enhancement actions include, but are not limited to, increasing plant diversity and cover, increasing  
10 wildlife habitat and structural complexity (snags, woody debris), installing environmentally  
11 compatible erosion controls, or removing nonindigenous plant or animal species.
- 12 ~~5.~~ “Erosion” means the wearing away of land by the action of natural forces, such as wind, rain, water  
13 and other natural agents that mobilize, transport, and deposit soil particles; on a beach, the carrying  
14 away of beach material by wave actions, tidal currents, or littoral currents. a process whereby wind,  
15 rain, water and other natural agents mobilize, and transport, and deposit soil particles.
- 16 ~~6-7.~~ “Erosion hazard areas” means lands or areas underlain by soils identified by the U.S. Department of  
17 Agriculture Natural Resource Conservation Service (NRCS) as having “severe” or “very severe”  
18 erosion hazards and areas subject to impacts from lateral erosion related to moving water such as  
19 river channel migration and shoreline retreat.
- 20 ~~7-8.~~ “Essential public facility” means those facilities that are typically difficult to site, such as airports,  
21 state education facilities, and state or regional transportation facilities as defined in RCW 47.06.140,  
22 state and local correctional facilities, solid waste handling facilities, and inpatient facilities including  
23 substance abuse facilities, mental health facilities, and group homes, and secure community  
24 transition facilities as defined in RCW 71.09.020 (RCW 36.70A.200, Siting of essential public  
25 facilities).
- 26 ~~8-9.~~ “Excavation” means the disturbance, displacement and/or disposal of unconsolidated earth material  
27 such as silt, sand, gravel, soil, rock or other material from all areas landward of OHWM.
- 28 ~~9-10.~~ “Exempt development” means a use or development activity that is not a substantial  
29 development and that is specifically listed as exempt from the substantial development permit  
30 requirement in WAC 173-27-040 and WCC ~~Chapter 23.60~~ Title 22 (Land Use and Development).
- 31 ~~10-11.~~ “Extreme high water level” means the highest tide level reached in a 19-year tidal cycle, or on  
32 lakes, the highest water level reached in the past 10 years.
- 33 ~~11-12.~~ “Extreme low tide” means the lowest line on the land reached by a receding tide.
- 34 ~~23.1160.060~~ **“F” definitions.**
- 35 1. “Fair market value” of a development means the open market bid price for conducting the work,  
36 using the equipment and facilities, and purchase of the goods, services and materials necessary to  
37 accomplish the development. This would normally equate to the cost of hiring a contractor to  
38 undertake the development from start to finish, including the cost of labor, materials, equipment  
39 and facility usage, transportation and contractor overhead and profit. The fair market value of the

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 development shall include the fair market value of any donated, contributed or found labor,  
2 equipment or materials.
- 3 2. “Farm pond” means an open water depression created from a non-wetland site in connection with  
4 agricultural activities.
- 5 3. “Feasible” means an action, such as a development project, mitigation, or preservation  
6 requirement, that meets all of the following conditions:  
7 a. The action can be accomplished with technologies and methods that have been used in the past  
8 in similar circumstances, or studies or tests have demonstrated in similar circumstances that  
9 such approaches are currently available and likely to achieve the intended results;  
10 b. The action provides a reasonable likelihood of achieving its intended purpose; and  
11 c. The action does not physically preclude achieving the project’s primary intended legal use.  
12 In cases where this program requires certain actions, unless they are infeasible, the burden of  
13 proving infeasibility is on the applicant/proponent. In determining an action’s infeasibility, the  
14 County may weigh the action’s relative costs and public benefits, considered in the short- and long-  
15 term time frames.
- 16 4. “Feasible alternative” means an action, such as development, mitigation, or restoration, that meets  
17 all of the following conditions: (a) the action can be accomplished with technologies and methods  
18 that have been used in the past in similar circumstances, or studies or tests have demonstrated in  
19 similar circumstances that such approaches are currently available and likely to achieve the  
20 intended results; (b) the action provides a reasonable likelihood of achieving its intended purpose;  
21 and (c) the action does not physically preclude achieving the project’s primary intended legal use.  
22 Feasibility shall take into account both short- and long-term monetary and nonmonetary costs and  
23 benefits.
- 24 5. “Feasible location” means a location that accommodates a development in a manner that achieves  
25 its intended purpose consistent with the constraints of the applicable land use regulations and  
26 characteristics of the property, including but not limited to lot size, configuration, presence/absence  
27 of critical areas and compatibility with adjacent land use/development. Feasibility shall take into  
28 account both short- and long-term monetary and nonmonetary costs and benefits.
- 29 6. “Feeder bluff” or “erosional bluff” means any bluff (or cliff) experiencing periodic erosion from  
30 waves, sliding or slumping, and/or whose eroded sand or gravel material is naturally transported  
31 (littoral drift) via a driftway to an accretion shoreform; these natural sources of beach material are  
32 limited and vital for the long-term stability of driftways and accretion shoreforms.
- 33 7. “Feeder bluff exceptional” means relatively rapidly eroding bluff segments identified by the  
34 presence of landslide scarps, bluff toe erosion, and a general absence of vegetative cover and/or  
35 portions of bluff face fully exposed. Other indicators included the presence of colluvium (slide  
36 debris), boulder or cobble lag deposits, and fallen trees across the beachface. Feeder bluff  
37 exceptional segments lack a backshore, old or rotten logs, and coniferous bluff vegetation.
- 38 8. “Feedlot” means a concentrated, confined animal or poultry operation for production of meat, milk  
39 or eggs; or stabling in yards, barns, pens or houses wherein animals or poultry are fed at the place of

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 confinement; and crop or forage growth or production is not sustained within the place of  
2 confinement.
- 3 9. “Filling” means the act of transporting or placing by any manual or mechanical means of fill  
4 material from, to, or on an area waterward of the OHWM, in wetlands, or on shorelands in a  
5 manner that raises the elevation or creates dry land any soil surface, including temporary stockpiling  
6 of fill material.
- 7 10. “Fill material” means any solid or semi-solid material, including rock, sand, soil, clay, plastics,  
8 construction debris, wood chips, overburden from mining or other excavation activities, and  
9 materials used to create any structure or infrastructure that, when placed, changes the grade or  
10 elevation of the receiving site.
- 11 11. “Fish and wildlife habitat conservation areas” means those areas as defined in WCC Chapter 16.16  
12 (Critical Areas) important for maintaining species in suitable habitats within their natural geographic  
13 distribution so that isolated populations are not created, as designated in Chapter 16.16 WCC.
- 14 12. “Fish habitat” means a complex of physical, chemical, and biological conditions that provide the life-  
15 supporting and reproductive needs of a species or life stage of fish. Although the habitat  
16 requirements of a species depend on its age and activity, the basic components of fish habitat in  
17 rivers, streams, ponds, lakes, estuaries, marine waters, and nearshore areas include, but are not  
18 limited to, the following:
- 19 a. Clean water and appropriate temperatures for spawning, rearing, and holding.  
20 b. Adequate water depth and velocity for migrating, spawning, rearing, and holding, including off-  
21 channel habitat.  
22 c. Abundance of bank and instream structures to provide hiding and resting areas and stabilize  
23 stream banks and beds.  
24 d. Appropriate substrates for spawning and embryonic development. For stream- and lake-  
25 dwelling fishes, substrates range from sands and gravel to rooted vegetation or submerged  
26 rocks and logs. Generally, substrates must be relatively stable and free of silts or fine sand.  
27 e. Presence of riparian vegetation as defined in this program. Riparian vegetation creates a  
28 transition zone, which provides shade, and food sources of aquatic and terrestrial insects for  
29 fish.  
30 f. Unimpeded passage (i.e., due to suitable gradient and lack of barriers) for upstream and  
31 downstream migrating juveniles and adults.
- 32 13. “Fisheries” means all species of fish and shellfish commonly or regularly originating or harvested  
33 commercially or for sport in Puget Sound and its tributary freshwater bodies, together with the  
34 aquatic plants and animals and habitat needed for continued propagation and growth of such  
35 species.
- 36 14. “Fisheries enhancement” means actions taken to rehabilitate, maintain or create fisheries habitat,  
37 including but not limited to hatcheries, spawning channels, lake rehabilitation, and planting of  
38 fisheries stocks. Fisheries enhancement differs from aquaculture in that the increase in fisheries  
39 stocks eventually becomes available for public harvest.

Comment [CES324]: Updated to be consistent with WAC 173-26-020(16)

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 15. "Float" means an anchored (not directly to the shore) floating platform that is free to rise and fall  
2 with water levels and is used for water-dependent recreational activities such as boat mooring,  
3 swimming or diving. Floats may stand alone with no over-water connection to shore or may be  
4 located at the end of a pier or ramp. ~~a floating platform similar to a dock that is anchored or~~  
5 ~~attached to pilings.~~
- 6 16. "Flood" or "flooding" means a general and temporary condition of partial or complete inundation of  
7 normally dry land areas from the overflow of inland waters and/or the unusual and rapid  
8 accumulation of runoff of surface waters from any source.
- 9 17. "Flood control works" means all development on rivers and streams designed to retard bank  
10 erosion, to reduce flooding of adjacent lands, to control or divert stream flow, or to create a  
11 reservoir, including but not limited to revetments, dikes, levees, channelization, dams, vegetative  
12 stabilization, weirs, flood and tidal gates. Excluded are water pump apparatus.
- 13 18. "Flood management" means a long-term program to reduce flood damages to life and property and  
14 to minimize public expenses due to floods through a comprehensive system of planning,  
15 development regulations, building standards, structural works, and monitoring and warning  
16 systems.
- 17 19. "Flood-proofing" means structural provisions, changes, adjustments or a combination thereof, to  
18 buildings, structures, and works in areas subject to flooding in order to reduce or eliminate damages  
19 from flooding to such development and its contents, as well as related water supplies and utility  
20 facilities.
- 21 ~~20. "Floodplain, 100-year" means all lands along a river or stream that may be inundated by the base~~  
22 ~~flood of such river or stream.~~
- 23 ~~21. "Floodway" means those portions of the area of a river valley lying streamward from the outer~~  
24 ~~limits of a watercourse upon which flood waters are carried during periods of flooding that occur~~  
25 ~~with reasonable regularity, although not necessarily annually; said floodway being identified, under~~  
26 ~~normal conditions, by changes in surface soil conditions or changes in types or quality of vegetation~~  
27 ~~ground cover condition, topography, or other indicators of flooding that occurs with reasonable~~  
28 ~~regularity, although not necessarily annually. The floodway shall not include those lands that can~~  
29 ~~reasonably be expected to be protected from flood waters by flood control devices maintained by or~~  
30 ~~maintained under license from the federal government, the state, or the County. The limit of the~~  
31 ~~floodway is that which has been established in the program and approved by the Department of~~  
32 ~~Ecology.~~
- 33 ~~22.~~ 20. "Floodway fringe" means that fringe of land in the floodplain outside the floodway, which is  
34 subject to inundation by the base flood. Flooding in the fringe is limited to flood surge storage of  
35 water currents moving at a negligible velocity of less than one-half mile per hour.
- 36 ~~23.~~ 21. "Food chain" means the hierarchy of feeding relationships between species in a biotic  
37 community. The food chain represents the transfer of material and energy from one species to  
38 another within an ecosystem.
- 39 ~~24.~~ 22. "Foreshore" means the intertidal area between mean higher high water and mean low water.

Comment [AP325]: Defined in CAO.

Comment [AP326]: Update per Periodic Review Checklist, Item 2007.a, and Scoping Document, Item #2g.

Comment [CES327]: Already defined in Ch. 16.16

# Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 23. "Fossil fuels" include coal, petroleum, crude oil, natural gas, oil shales, bitumens, tar sands, propane,  
2 butane, and heavy oils. All contain carbon and were formed as a result of geologic processes acting  
3 on the remains of organic matter. Renewable fuels are not fossil fuels.
- 4 ~~25-24.~~ "Fossil Fuel Transshipment Facility" is a facility engaging primarily in the process of off-loading of  
5 fossil fuels materials, refined or unrefined, refinery feedstocks, products or by products from one  
6 transportation method (such as a ship, truck, or railcar) facility and loading it onto another  
7 transportation facility method for the purposes of transporting the fossil fuel such products into or  
8 and out of Whatcom County. Examples of transportation facilities include ship, truck, or freight car.  
9 Fossil fuel transshipment facilities may also include pump and compressor stations and associated  
10 facilities. This definition shall include bulk storage or transfer facilities for the shipment of crude oil  
11 without refining or consuming within the Cherry Point Industrial District and shall excludes Small  
12 Fossil or Renewable Fuel Storage and Distribution Facilities.
- 13 ~~26.~~ "Fossil Fuel Refinery" means a facility that converts crude oil and other liquids into petroleum  
14 products including but not limited to gasoline, distillates such as diesel fuel and heating oil, jet fuel,  
15 petrochemical feedstocks, waxes, lubricating oils, and asphalt. Activities that support refineries  
16 include but are not limited to: bulk storage, manufacturing, or processing of fossil fuels or by  
17 products. This definition excludes Small Fossil or Renewable Fuel Storage and Distribution Facilities.  
18 "Forest land" means all land that is capable of supporting a merchantable stand of timber and is not  
19 being actively used, developed, or converted in a manner that is incompatible with timber  
20 production.
- 21 ~~27.~~ "Forest practices" means any activity conducted on or directly pertaining to forest land and relating  
22 to growing, harvesting, or processing of timber; including, but not limited to: (a) road and trail  
23 construction, (b) fertilization, (c) prevention and suppression of diseases and insects; or other  
24 activities that qualify as a use or development subject to the Act.
- 25 ~~28-25.~~ Excluded from this definition is preparatory work such as tree marking, surveying and removal  
26 of incidental vegetation such as berries, greenery, or other natural products whose removal cannot  
27 normally be expected to result in damage to shoreline natural features. Also excluded from this  
28 definition is preparatory work associated with the conversion of land for non-forestry uses and  
29 developments. Log storage away from forest land is considered industrial.
- 30 ~~29.~~ "Freestanding sign" means a self-supporting sign placed off and away from the building to which it is  
31 related.
- 32 ~~30-26.~~ "Frequently flooded areas" means lands in the floodplain subject to a one percent or greater  
33 chance of flooding in any given year and those lands that provide important flood storage,  
34 conveyance and attenuation functions, as determined by the County in accordance with WAC 365-  
35 190-080(3). Classifications of frequently flooded areas include, at a minimum, the 100-year  
36 floodplain "special flood hazard area" designations of the Federal Emergency Management Agency  
37 and the National Flood Insurance Program, as designated in WCC Chapter 16.16 (Critical Areas).

**Comment [P/C328]:** Showing amendments (in different color) from the P/C from their action on concurrent fossil fuel regulations in Title 20.

**Comment [DN329]:** Added per Council's pending draft fossil fuel amendments.

**Comment [AP330]:** Removed. Relying on Title 20 (Zoning).

**Comment [AP331]:** Removed. Already defined in Title 20 (Zoning).

**Comment [AP332]:** Removed. Already defined in Title 20 (Zoning).

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 | ~~23.1160.070~~ **“G” definitions.**
- 2 | 1. “Gabions” means works composed of masses of rock, rubble, or masonry tightly enclosed usually by
- 3 | wire mesh so as to form massive blocks. They are used to form walls on beaches to retard wave
- 4 | erosion or as foundations for breakwaters or jetties.
- 5 | 2. “Gangway.” See “Moorage Structure.”
- 6 | ~~2.3.~~ “Geologically hazardous areas” means areas designated in WCC Chapter 16.16 that, because of their
- 7 | susceptibility to erosion, sliding, earthquake, or other geological events, pose unacceptable risks to
- 8 | public health and safety and may not be suited to commercial, residential, or industrial
- 9 | development.
- 10 | ~~3.4.~~ “Geotechnical report” or “geotechnical analysis/assessment” is an umbrella term used for the
- 11 | evaluation completed by a qualified professional to meet the requirements of WCC 16.16.255
- 12 | (Critical areas assessment reports) and WCC 16.16, Article 3 (Geologically Hazardous Areas). means
- 13 | a scientific study or evaluation conducted by a qualified professional that includes a description of
- 14 | the ground and surface hydrology and geology, the affected land form and its susceptibility to mass
- 15 | wasting, erosion, and other geologic hazards or processes, conclusions and recommendations
- 16 | regarding the effect of the proposed development on geologic conditions, the adequacy of the site
- 17 | to be developed, the impacts of the proposed development, alternative approaches to the proposed
- 18 | development, and measures to mitigate potential site specific and cumulative geological and
- 19 | hydrological impacts of the proposed development, including the potential adverse impacts to
- 20 | adjacent and down-current properties. Geotechnical reports shall conform to accepted technical
- 21 | standards.
- 22 | ~~4.5.~~ “Gradient” means a degree of inclination, or a rate of ascent or descent, of an inclined part of the
- 23 | earth’s surface with respect to the horizontal; the steepness of a slope. It is expressed as a ratio
- 24 | (vertical to horizontal), a fraction (such as meters/kilometers or feet/miles), a percentage (of
- 25 | horizontal distance), or an angle (in degrees).
- 26 | ~~5.6.~~ “Grading” means the movement or redistribution of the soil, sand, rock, gravel, sediment, or other
- 27 | material on a site in a manner that alters the natural contour of the land.
- 28 | ~~6.7.~~ “Groins” means wall-like structures extending on an angle waterward from the shore into the
- 29 | intertidal zone. Their purpose is to build or preserve an accretion shoreform or berm on their updrift
- 30 | side by trapping littoral drift. Groins are relatively narrow in width but vary greatly in length. Groins
- 31 | are sometimes built in series as a system, and may be permeable or impermeable, high or low, and
- 32 | fixed or adjustable.
- 33 | ~~7.~~ “Gross floor area” means, for the purposes of WCC 23.50.070(J), the sum total of the area included
- 34 | within the surrounding exterior walls of a building.
- 35 | 8. “Ground water” means all water that exists beneath the land surface or beneath the bed of any
- 36 | stream, lake or reservoir, or other body of surface water within the boundaries of the state,
- 37 | whatever may be the geological formation or structure in which such water stands or flows,
- 38 | percolates or otherwise moves (Chapter 90.44 RCW).
- 39 | 9. “Growth Management Act” means Chapters 36.70A and 36.70B RCW, as amended.

Comment [MD333]: Deleted as term removed from referenced provision.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 | ~~23.1160.080~~ **"H" definitions.**
- 2 | 1. "Habitat conservation areas." See "Fish and wildlife habitat conservation areas."
- 3 | ~~4-2.~~ "Harbor area" means the navigable waters between inner and outer harbor lines as established by
- 4 | the State Harbor Lines Commission waterward of and within one mile of an incorporated city.
- 5 | Harbor areas have been established offshore of Bellingham and Blaine.
- 6 | ~~2. Repealed by Ord. 2019-013.~~
- 7 | 3. "Hazard tree" See WCC Chapter 16.16 (Critical Areas).
- 8 | ~~3-4.~~ "Hazardous area" means any shoreline ~~area~~ environment which is hazardous for intensive human
- 9 | use or structural development due to inherent and/or predictable physical conditions, such as, but
- 10 | not limited to, geologically hazardous areas, frequently flooded areas, and coastal high hazard areas.
- 11 | ~~4-5.~~ "Hazardous materials" means any substance containing such elements or compounds which, when
- 12 | discharged in any quantity in shorelines, present an imminent and/or substantial danger to public
- 13 | health or welfare, including, but not limited to: fish, shellfish, wildlife, water quality, and other
- 14 | shoreline features and property.
- 15 | ~~5-6.~~ "Hazardous substance" means any liquid, solid, gas, or sludge, including any material, substance,
- 16 | product, commodity, or waste, regardless of quantity, that exhibits any of the physical, chemical or
- 17 | biological properties described in WAC 173-303-090 or 173-303-100.
- 18 | ~~6-7.~~ "Hearings board" means the State Shorelines Hearings Board referenced in RCW 90.58.170.
- 19 | ~~7-8.~~ "Height (building)" means the distance measured from the average grade level to the highest point
- 20 | of a structure. Television antennas, chimneys, and similar structures or appurtenances shall not be
- 21 | used in calculating height except where they obstruct the view of residences adjoining such
- 22 | shorelines. Temporary construction equipment is excluded in this calculation (WAC 173-27-030(9) or
- 23 | its successor). For all moorage structures, height shall be measured from the ordinary high water
- 24 | mark~~the vertical dimension measured from average grade to the highest point of a structure;~~
- 25 | ~~provided, that antennas, chimneys, and similar appurtenances shall not be used in calculating~~
- 26 | ~~height, unless such appurtenance obstructs the view of a substantial number of adjacent residences.~~
- 27 | ~~8-9.~~ "High intensity land use" means land use that includes the following uses or activities: commercial,
- 28 | urban, industrial, institutional, retail sales, residential (more than one unit/acre), high intensity ~~new~~
- 29 | agriculture (dairies, nurseries, greenhouses, raising and harvesting crops requiring annual tilling,
- 30 | raising and maintaining animals), high intensity recreation (golf courses, ball fields), and hobby
- 31 | farms.
- 32 | ~~9-10.~~ "Historic preservation professional" means those individuals who hold a graduate degree in
- 33 | architectural history, art history, historic preservation, or closely related field, with coursework in
- 34 | American architectural history, or a bachelor's degree in architectural history, art history, historic
- 35 | preservation or closely related field plus one of the following:
- 36 | a. At least two years of full-time experience in research, writing, or teaching in American
- 37 | architectural history or restoration architecture with an academic institution, historical
- 38 | organization or agency, museum, or other professional institution; or
- 39 | b. Substantial contribution through research and publication to the body of scholarly knowledge in
- 40 | the field of American architectural history.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 | ~~10.11.~~ “Historic site” means those sites that are eligible or listed on the Washington Heritage Register,  
2 | National Register of Historic Places, or any locally developed historic registry formally adopted by  
3 | the Whatcom County Council.
- 4 | ~~11.12.~~ “Hydraulic project approval (HPA)” means a permit issued by the State Department of Fish and  
5 | Wildlife for modifications to waters of the state in accordance with Chapter 77.55 RCW.
- 6 | ~~12.13.~~ “Hydric soil” means a soil that is saturated, flooded or ponded long enough during the growing  
7 | season to develop anaerobic conditions in the upper part. The presence of hydric soil shall be  
8 | determined following the methods described in the NRCS “Field Indicators of Hydric Soils” Version 7,  
9 | and/or the Corps of Engineers Wetlands Delineation Manual, as amended, Washington State  
10 | Wetland Identification and Delineation Manual (RCW 36.70A.175).
- 11 | ~~13.14.~~ “Hydrophytic vegetation” means macrophytic plant life growing in water or on a substrate that  
12 | is at least periodically deficient in oxygen as a result of excessive water content.
- 13 | ~~14.15.~~ “Hyporheic zone” means the saturated zone located beneath and adjacent to streams that  
14 | contain some proportion of surface water from the surface channel mixed with shallow ground  
15 | water. The hyporheic zone serves as a filter for nutrients, as a site for macroinvertebrate production  
16 | important in fish nutrition, and provides other functions related to maintaining water quality.
- 17 | **23.1160.090 “I” definitions.**
- 18 | ~~1.~~ “Impervious surface” means a hard surface area which either prevents or retards the entry of water  
19 | into the soil mantle as under natural conditions prior to development, and/or a hard surface area  
20 | which causes water to run off the surface in greater quantities or at an increased rate of flow from  
21 | the flow present under natural conditions prior to development. Common impervious surfaces  
22 | include, but are not limited to, roof tops, walkways, patios, driveways, parking lots or storage areas,  
23 | concrete or asphalt paving, gravel roads, and oiled macadam or other surfaces which similarly  
24 | impede the natural infiltration of stormwater. Natural surface water and open, uncovered  
25 | detention/retention facilities shall not be calculated when determining total impervious surfaces.  
26 | Impervious surfaces do not include surfaces created through proven low impact development  
27 | techniques.
- 28 | ~~2.1.~~ “In-kind compensation” means to replace critical areas with substitute areas whose characteristics  
29 | and functions mirror those destroyed or degraded by a regulated activity.
- 30 | ~~3.2.~~ “Instream structure” means a structure placed by humans within a stream or river waterward of the  
31 | ordinary high-water mark that either causes or has the potential to cause water impoundment or  
32 | the diversion, obstruction, or modification of water flow. Instream structures may include those for  
33 | hydroelectric generation, irrigation, water supply, flood control, transportation, utility service  
34 | transmission, fish habitat enhancement, or other purpose.
- 35 | ~~4.3.~~ “Industrial development” means facilities for processing, manufacturing, and storage of finished or  
36 | semi-finished goods, including but not limited to oil, metal or mineral product refining, power  
37 | generating facilities, including hydropower, ship building and major repair, storage and repair of  
38 | large trucks and other large vehicles or heavy equipment, related storage of fuels, commercial  
39 | storage and repair of fishing gear, warehousing, construction contractors’ offices and

Comment [AP334]: Updated for consistency with CAO.

Comment [AP335]: Removed. Relying on definition in Title 20 (Zoning).

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 material/equipment storage yards, wholesale trade or storage, and log storage on land or water,  
2 together with necessary accessory uses such as parking, loading, and waste storage and treatment.  
3 Excluded from this definition are mining, including on-site processing of raw materials, and off-site  
4 utility, solid waste, road or railway development, and methane digesters that are accessory to an  
5 agricultural use. This definition excludes fossil or renewable fuel refineries or transshipment  
6 facilities.

Comment [DN336]: Amended per Council's pending draft fossil fuel amendments.

7 ~~5.4.~~ "Infiltration" means the downward entry of water into the immediate surface of soil.

8 ~~6.5.~~ "Institutional development" means those public and/or private facilities including, but not limited  
9 to, police and fire stations, libraries, activity centers, schools, educational and religious training  
10 centers, water-oriented research facilities, and similar noncommercial uses, excluding essential  
11 public facilities.

12 ~~7.6.~~ "Intertidal zone" means the substratum from extreme low water of spring tides to the upper limit of  
13 spray or influence from ocean-derived salts. It includes areas that are sometimes submerged and  
14 sometimes exposed to air, mud and sand flats, rocky shores, salt marshes, and some terrestrial  
15 areas where salt influences are present.

16 ~~8.7.~~ "Invasive species" means a species that is (a) nonnative (or alien) to Whatcom County and (b) whose  
17 introduction causes or is likely to cause economic or environmental harm, or harm to human health.  
18 Invasive species can be plants, animals, and other organisms (e.g., microbes). Human actions are the  
19 primary means of invasive species introductions.

### 20 ~~23.1160.100~~ "J" definitions.

21 1. "Jetties" means structures that are generally perpendicular to shore extending through or past the  
22 intertidal zone. They are built singly or in pairs at harbor entrances or river mouths mainly to  
23 prevent shoaling or accretion from littoral drift in entrance channels, which may or may not be  
24 dredged. Jetties also serve to protect channels from storm waves or cross currents, and stabilize  
25 inlets through barrier beaches. On the West Coast and in this region, most jetties are of riprap  
26 mound construction.

### 27 ~~23.1160.110~~ "K" definitions.

28 Reserved.

### 29 ~~23.1160.120~~ "L" definitions.

30 1. "Lake." See WCC Chapter 16.16 (Critical Areas). means a body of standing water in a depression of  
31 land or expanded part of a stream, of 20 acres or greater in total area. A lake is bounded by the  
32 OHWM or, where a stream enters the lake, the extension of the lake's OHWM within the stream.  
33 Wetland areas occurring within the standing water of a lake are to be included in the acreage  
34 calculation of a lake.

Comment [AP337]: Updated for consistency with CAO.

35 2. "Landslide" means a general term covering a wide variety of mass movement landforms and  
36 processes involving the downslope transport, under gravitational influence of soil and rock material  
37 *en masse*; included are debris flows, debris avalanches, earthflows, mudflows, slumps, mudslides,  
38 rock slides, and rock falls.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 ~~3.~~ “Landslide hazard areas” means areas that, due to a combination of site conditions, like slope  
2 inclination and relative soil permeability, are susceptible to mass wasting, as designated in WCC  
3 Chapter 16.16 (Critical Areas).
- 4 ~~3-4.~~ “Launch Rail.” See “Moorage Structure.”
- 5 ~~4-5.~~ “Launch Ramp” or “Boat Ramp.” See “Moorage Structure.” means an inclined slab, set of pads, rails,  
6 planks, or graded slope used for launching boats with trailers or by hand.
- 7 ~~5-6.~~ “Levee” means a natural or artificial embankment on the bank of a stream for the purpose of  
8 keeping floodwaters from inundating adjacent land. Some levees have revetments on their sides.
- 9 ~~6-7.~~ “Liberal construction” means an interpretation that applies in writing in light of the situation  
10 presented that tends to effectuate the spirit and purpose of the writing.
- 11 ~~7-8.~~ “Littoral drift” means the natural movement of sediment, particularly sand and gravel, along  
12 shorelines by wave action in response to prevailing winds or by stream currents (see also “drift  
13 sector,” “driftway”).
- 14 ~~8-9.~~ “Live-aboard” means any noncommercial habitation of a vessel, as defined in WCC 23.110.220(3),  
15 when any one of the following applies:
- 16 a. Any person or succession of different persons resides on the vessel in a specific location, and/or  
17 in the same area on more than a total of 30 days in any 40-day period or on more than a total of  
18 90 days in any 365-day period. “In the same area” means within a radius of one mile of any  
19 location where the same vessel previously moored or anchored on state-owned aquatic lands. A  
20 vessel that is occupied and is moored or anchored in the same area, but not for the number of  
21 days described in this subsection, is considered used as a recreational or transient vessel;
- 22 b. The city or county jurisdiction, through local ordinance or policy, defines the use as a residential  
23 use or identifies the occupant of the vessel as a resident of the vessel or of the facility where it is  
24 moored;
- 25 c. The operator of the facility where the vessel is moored, through the moorage agreement, billing  
26 statement, or facility rules, defines the use as a residential use or identifies the occupant of the  
27 vessel as a resident of the vessel or of the facility; or
- 28 d. The occupant or occupants identify the vessel or the facility where it is moored as their  
29 residence for voting, mail, tax, or similar purposes.
- 30 ~~9-10.~~ “Log booming” means assembling and disassembling rafts of logs for water-borne  
31 transportation.
- 32 ~~10-11.~~ “Log storage” means the holding of logs in the water for more than 60 days.
- 33 ~~11.~~ “Lot” means land described by final plat, short plat or metes and bounds description and is  
34 established pursuant to applicable state and local regulations in effect at the date a legal instrument  
35 creating the lot is recorded at the Whatcom County auditor’s office. A lot bisected by a public or  
36 private road, railroad, trail or other feature is considered a single building site unless the portion of  
37 the parcel on each side of the bisecting road or other feature separately meets all dimensional,  
38 buffer and other requirements established by local and state regulations.
- 39 ~~12.~~ “Lot area” or “lot size” means the portion of a total parcel determined to be usable for the purpose  
40 of creating a building lot, pursuant to all applicable regulations. The area below the ordinary high

Comment [AP338]: Removed. Relying on Title 20 (Zoning).

Comment [CES339]: Defined in T-20.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 water mark shall not be considered a part of the lot area. Lot area shall exclude any portion included  
2 within the lot description used as a public road or as an access easement for another parcel;  
3 provided, that the area of parcels of five acres or greater may be regarded as nominal and may be  
4 measured to the center of bounding roads. Easements or restrictions that preclude use to the  
5 present or future surface owner of the parcel shall be excluded from lot area.

### 23.1160.130 "M" definitions.

6 1. "Maintenance or repair" means those usual activities required to prevent a decline, lapse or  
7 cessation from a lawfully established condition or to restore the character, scope, size, and design of  
8 a serviceable area, structure, or land use to a state comparable to its previously authorized and  
9 undamaged condition. This does not include any activities that change the character, scope, or size  
10 of the original structure, facility, utility or improved area beyond the original design.

11 2. ~~"Major development" means any project for which a major project permit is required pursuant to  
12 Chapter 20.88 WCC. For the purposes of this program, "major development" shall also mean any  
13 project associated with an existing development for which a major development permit has been  
14 required or other existing legal nonconforming development for which a major development permit  
15 would otherwise be required if developed under the current land use regulations outlined in WCC  
16 Title 20.~~

17 3-2. "Marina" means a facility that provides wet moorage and/or dry storage facility for pleasure craft  
18 and/or commercial craft where goods, moorage or services related to boating may be sold  
19 commercially or provided for a fee, e.g., yacht club, etc. Launching facilities and covered moorage  
20 may also be provided. Marinas may be open to the general public or restricted on the basis of  
21 property ownership or membership. Manufacturing of watercraft is considered industrial. Shared  
22 moorage of 5 or more residential units is considered a marina.

23 4-3. "Marsh" means a low flat wetland area on which the vegetation consists mainly of herbaceous  
24 plants such as cattails, bulrushes, tules, sedges, skunk cabbage or other hydrophytic plants. Shallow  
25 water usually stands on a marsh at least during part of the year.

26 5-4. "Mass wasting" means downslope movement of soil and rock material by gravity. This includes soil  
27 creep, erosion, and various types of landslides, not including bed load associated with natural  
28 stream sediment transport dynamics.

29 6-5. "May" means the action is allowable, provided it conforms to the provisions of this program.

30 7-6. "Mean annual flow" means the average flow of a river, or stream (measured in cubic feet per  
31 second) from measurements taken throughout the year. If available, flow data for the previous 10  
32 years should be used in determining mean annual flow.

33 8-7. "Mean higher high water" or "MHHW" means the mean elevation of all higher tides, generally  
34 occurring twice each day in Whatcom County at any given location on the marine shoreline.

35 9-8. "Mean lower low water" or "MLLW" means the mean elevation of all lower tides, generally  
36 occurring twice each day in Whatcom County at any given location on the marine shoreline.

37 10-9. "Mining" means the removal of naturally occurring metallic and nonmetallic minerals or other  
38 materials from the earth for ~~economic~~ commercial and other uses.

Comment [AP340]: Removed term as it's no longer used.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 | ~~11-10.~~ “Mitigation” means individual actions that may include a combination of the following  
2 | measures, listed in order of preference:  
3 | a. Avoiding an impact altogether by not taking a certain action or parts of actions;  
4 | b. Minimizing impacts by limiting the degree or magnitude of an action and its implementation;  
5 | c. Rectifying impacts by repairing, rehabilitating, or restoring the affected environment;  
6 | d. Reducing or eliminating an impact over time by preservation and maintenance operations  
7 | during the life of the action;  
8 | e. Compensating for an impact by replacing or providing substitute resources or environments;  
9 | and  
10 | f. Monitoring the mitigation and taking remedial action when necessary.
- 11 | ~~12-11.~~ “Mitigation plan” means a detailed plan indicating actions necessary to mitigate adverse impacts  
12 | to critical areas.
- 13 | ~~13-12.~~ “Mixed use” means a combination of uses within the same building or site as a part of an  
14 | integrated development project with functional interrelationships and coherent physical design.
- 15 | 13. “Monitoring” means evaluating the impacts of development proposals over time on the biological,  
16 | hydrological, pedological, and geological elements of ecosystem functions and processes and/or  
17 | assessing the performance of required mitigation measures through the collection and analysis of  
18 | data by various methods for the purpose of understanding and documenting changes in natural  
19 | ecosystems and features compared to baseline or pre-project conditions and/or reference sites.
- 20 | 14. “Moorage Buoy.” See “Moorage Structure.”
- 21 | 15. “Boat Lift” or lift. See “Moorage Structure.”
- 22 | 16. “Mooring Pile” or piling. See “Moorage Structure.”
- 23 | 17. “Moorage Structure” means any in- or overwater structures, used for mooring, launching, or storing  
24 | vessels and may contain any one or combination of the following:  
25 | a. Piers and docks adjoin the shoreline, extend over the water, and serve as a landing or  
26 | moorage place for commercial, industrial and pleasure watercraft.  
27 | i. Piers are built on fixed platforms and sit above the water.  
28 | ii. Docks are anchored to the land, substrate or the pier with pilings or anchors and float on  
29 | the water.  
30 | b. Gangways are walkways that connect the pier to the dock. Gangways are often used in areas  
31 | where the water level changes due to tides or seasonal variations.  
32 | c. Ells are extensions of piers, often in a U-shape or L shape, that provide additional watercraft  
33 | moorage.  
34 | d. Recreational floats are platforms that float on the water’s surface. They are anchored offshore  
35 | and are used for swimming and fishing. Some floats have components such as slides and  
36 | trampolines.  
37 | e. Boathouses basically serve as garages for boats. They have walls and a roof, and are situated  
38 | on the water or just above the water’s edge.  
39 | f. Mooring buoys typically include an anchoring system with an anchor and anchor line, a float  
40 | marking its location, and a fitting for a vessel’s mooring chain or hawser. Washington laws

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 establish two categories for mooring buoys -- commercial and recreational [RCW 79.105.430].  
2 Commercial buoys are typically used for temporary moorage of a vessel that is awaiting transit  
3 or loading or offloading. Recreational buoys are used as semi-permanent moorage for  
4 recreational vessels.  
5 g. Mooring piles or pilings are fixed poles or groups of poles set in the substrate and extending  
6 above the water line.  
7 h. Lifts or boat lifts raise watercraft out of the water for launching or storing. They may be  
8 attached to the substrate, a pier or dock, bulkhead or float or be located upland.  
9 i. Canopies are covers that protect watercraft from the sun and rain.  
10 j. Boat or launch ramps are solid or relatively solid surfaces that bridge land and water and are  
11 used for moving watercraft into and out of the water.  
12 k. Railways are rails attached to the substrate used for launching and retrieving watercraft,  
13 usually with a cradle and winch system.  
14 a-l. Others such as Jet Ski floats and boat dry docks provide storage of watercraft out of the water.  
15 Some floats serve as helicopter pads, while others are used for docking seaplanes.  
16 14. “Multifamily dwelling” means a single building, or portion thereof, designed for or occupied by three  
17 or more families living independently of each other in separate dwelling units on one lot of record  
18 and, for the purpose of this code, includes triplexes, fourplexes, apartment buildings, and residential  
19 condominiums.  
20 ~~15-18.~~ “Must” means a mandate; the action is required.  
21 **23.1160.140 “N” definitions.**  
22 ~~1.~~ “Native vegetation” means plant species that are indigenous to the Whatcom County and the local  
23 area.  
24 ~~2-1.~~ “Natural shoreline area environment” means an area designated pursuant to WCC  
25 Chapter 23.320 (Shoreline Jurisdiction and Environment Designations).  
26 ~~3-2.~~ “Navigable waters” means a waterbody that in its ordinary condition, or by being united with other  
27 water-bodies, forms a continued route or area over which commerce or recreational activities are or  
28 may be carried on in the customary modes in which such commerce or recreation is conducted on  
29 water.  
30 ~~4-3.~~ “Nearshore habitat” or “nearshore zone” means the area of marine and estuarine shoreline,  
31 generally extending from the top of the shoreline bank or bluff to the depth offshore where light  
32 penetrating the water falls below a level supporting plant growth, and upstream in estuaries to the  
33 head of the tidal influence. It includes bluffs, beaches, mudflats, kelp and eelgrass beds, salt  
34 marshes, gravel spits, and estuaries zone that extends waterward from the marine shoreline  
35 (OHWM) to a water depth of approximately 20 meters (66 feet). Nearshore habitat is biologically  
36 rich, providing important habitat for a diversity of plant and animal species.  
37 4. “No net loss” as a public policy goal means the maintenance of the aggregate total of the county’s  
38 shoreline ecological and/or critical area functions and values at its current level of environmental  
39 resource productivity. As a development and/or mitigation standard, no net loss requires that the

Comment [CES341]: From DOE shoreline manual.

Comment [AP342]: Already defined in Title 20 (Zoning).

Comment [AP343]: Already defined in Title 20 (Zoning).

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 impacts of a particular shoreline development and/or use, whether permitted or exempt, be  
2 identified and prevented or mitigated, such that it has no resulting adverse impacts on shoreline  
3 ecological functions or processes values. Each project shall be evaluated based on its ability to meet  
4 the no net loss standard commensurate with its scale and character.

5 ~~5. “Nonconforming lot” means, for the purposes of WCC 23.50.070(K) and 23.90.060(B)(3), a vacant~~  
6 ~~lot under contiguous ownership and with less than a total of 20,000 square feet, including within~~  
7 ~~shoreline jurisdiction, a lot that met dimensional requirements of the applicable master program at~~  
8 ~~the time of its establishment but now contains less than the required width, depth or area due to~~  
9 ~~subsequent changes to the master program.~~

10 ~~5. that was lawfully established prior to the effective date of this program (August 27, 1976) or~~  
11 ~~amendments hereto, but which does not conform to the setback or buffer standards of this~~  
12 ~~program.~~

13 6. ~~“Nonconforming structure” means an existing structure that was lawfully constructed at the time it~~  
14 ~~was built but is no longer fully consistent with present regulations such as setbacks, buffers or yards;~~  
15 ~~area; bulk; height or density standards due to subsequent changes to the master program.~~

16 7. ~~“Nonconforming use,” “nonconforming development” or “nonconforming structure” means an~~  
17 ~~existing shoreline use, development or structure that was lawfully constructed or established prior~~  
18 ~~to the effective date of initial adoption of this program (August 27, 1976) or any applicable~~  
19 ~~amendments thereafter hereto, but which does not conform to present use regulations due to~~  
20 ~~subsequent changes to or standards of the master program.~~

21 8. “Non-water-oriented use” means uses that are not water-dependent, water-related or water-  
22 enjoyment. Non-water-oriented uses have little or no relationship to the shoreline and are not  
23 considered priority uses under the Shoreline Management Act except single-family residences. Any  
24 use that does not meet the definition of water-dependent, water-related or water-enjoyment is  
25 classified as non-water-oriented.

### 26 ~~23.1160.150~~ “O” definitions.

27 ~~16. “Off premises sign” means a sign situated on premises other than those premises to which the sign’s~~  
28 ~~message is related.~~

29 1. “Oil” means petroleum or any petroleum product in liquid, semi-liquid, or gaseous form including,  
30 but not limited to, crude oil, fuel oil, sludge, oil refuse and oil mixed with wastes other than dredging  
31 spoil. See Fossil Fuels.

32 2. “Ongoing agriculture” means those activities conducted on lands defined in RCW 84.34.020(2), and  
33 those activities involved in the production of crops and livestock, including, but not limited to,  
34 operation and maintenance of existing farm and stock ponds or drainage ditches, irrigation systems,  
35 changes between agricultural activities, and maintenance or repair of existing serviceable structures  
36 and facilities. Activities that bring an area into agricultural use are not part of an ongoing activity. An  
37 operation ceases to be ongoing when the area on which it was conducted has been converted to a  
38 nonagricultural use, or has lain idle for more than five consecutive years unless that idle land is

**Comment [AP344]:** Differentiating nonconforming lots, structures, and uses per Periodic Review Checklist, Item 2017.g, and Scoping Document, Item #2d and 10a.

**Comment [AP345]:** Already defined in Title 20 (Zoning).

**Comment [DN346]:** Added per Council’s pending draft fossil fuel amendments.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 registered in a federal or state soils conservation program. Forest practices are not included in this  
2 definition.

3 ~~3. "On premises sign" means a sign situated on the premises to which the sign's message is related.~~

Comment [AP347]: Already defined in Title 20 (Zoning).

4 ~~4.3. "Open space" means any parcel or area of land or water not covered by structures, hard surfacing,~~  
5 ~~parking areas and other impervious surfaces except for pedestrian or bicycle pathways, or where~~  
6 ~~otherwise provided by this title or other County ordinance and set aside or, dedicated, for active or~~  
7 ~~passive recreation, visual enjoyment, or critical area development buffers as established in WCC~~  
8 ~~Chapter 16.16. Submerged lands and/or tidelands within the boundaries of any waterfront parcel~~  
9 ~~that are located waterward of the ordinary high water mark shall not be used in open space~~  
10 ~~calculations. Required open space percentages, as applicable, are not to be used for purposes of~~  
11 ~~calculating total impervious surface.~~

12 ~~5.4. "Ordinary high water mark (OHWM)" or "OHWM" means the mark or line on all lakes, rivers,~~  
13 ~~streams, and tidal water means that mark that will be found by examining the bed and banks and~~  
14 ~~ascertaining where the presence and action of waters are so common and usual, and so long~~  
15 ~~continued in all ordinary years, as to mark upon the soil a character distinct from that of the~~  
16 ~~abutting upland, in respect to vegetation as that condition existed on June 1, 1971, as it may~~  
17 ~~naturally change thereafter, or as it may change thereafter in accordance with approved~~  
18 ~~development; provided, that in any area where the OHWM cannot be found, the OHWM adjoining~~  
19 ~~saltwater shall be the line of mean higher high tide and the OHWM adjoining fresh water shall be~~  
20 ~~the line of mean high water. For braided streams, the OHWM is found on the banks forming the~~  
21 ~~outer limits of the depression within which the braiding occurs.~~

### 22 ~~23.1160.160 "P" definitions.~~

- 23 1. "Party of record" means all persons, agencies or organizations who have submitted written  
24 comments in response to a notice of application; made oral comments in a formal public hearing  
25 conducted on an application; or notified local government of their desire to receive a copy of the  
26 final decision on a permit and who have provided an address for delivery of such notice by mail.
- 27 2. "Permit or approval" means any form or permission required under this program prior to  
28 undertaking activity on shorelines of the state, including substantial development permits, variance  
29 permits, shoreline conditional use permits, permit revisions, and shoreline exemptions from the  
30 substantial development permit process.
- 31 3. "Person" means any individual, trustee, executor, other fiduciary, corporation, firm, partnership,  
32 association, organization, or other entity, either public or private, acting as a unit ~~an individual,~~  
33 ~~partnership, corporation, association, organization, cooperative, public or municipal corporation,~~  
34 ~~state agency or local governmental unit, however designated, or Indian nation or tribe.~~
- 35 4. "Pier." See "Moorage Structure." ~~means any platform structure, fill, or anchored device in or floating~~  
36 ~~upon waterbodies and extending waterward from ordinary high water to provide moorage for~~  
37 ~~industrial, commercial, and/or pleasure watercraft engaged in commerce, including, but not limited~~  
38 ~~to: wharves, mono buoys, sea islands, quays, ferry terminals, and fish weighing stations.~~

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 ~~5.~~ “Planned unit development (PUD)” means one or a group of specified uses, such as residential,  
2 resort, commercial or industrial, to be planned and constructed as a unit. Zoning or subdivision  
3 regulations with respect to lot size, building bulk, etc., may be varied to allow design innovations  
4 and special features in exchange for additional and/or superior site amenities or community  
5 benefits.
- 6 ~~6-5.~~ “Pocket beach” means an isolated beach existing usually without benefit of littoral drift from  
7 sources elsewhere. Pocket beaches are produced by erosion of immediately adjacent bluffs or banks  
8 and are relatively scarce and therefore valuable shoreforms in Whatcom County; they are most  
9 common between rock headlands and may or may not have a backshore.
- 10 ~~7-6.~~ “Point” means a low profile shore promontory that may be either the wave-cut shelf remaining from  
11 an ancient bluff or the final accretional phase of a hooked spit that closed the leeward side gap.  
12 Points are accretion shoreforms characterized by converging berms accreted by storm waves that  
13 enclose a lagoon, marsh, or meadow, depending on the point’s development stage.
- 14 ~~8-7.~~ “Point bar” means an accretion shoreform created by deposition of sand and gravel on the inside,  
15 convex side of a meander bend. Most material is transported downstream as sediment and bedload  
16 at times of high current velocity, or flood stage, from eroding banks or other bars upstream.
- 17 ~~9-8.~~ “Pond” means an open body of water, generally equal to or greater than 6.6 feet deep, that persists  
18 throughout the year and occurs in a depression of land or expanded part of a stream and has less  
19 than 30 percent aerial coverage by trees, shrubs, or persistent emergent vegetation. Ponds are  
20 generally smaller than lakes. Farm ponds are excluded from this definition. Beaver ponds that are  
21 two years old or less are excluded from this definition. For the purpose of this program, any pond  
22 whose surface water extends into the OHWM of any shoreline of the state shall be considered part  
23 of that shoreline of the state.
- 24 ~~10-9.~~ “Port development” means public or private facilities for transfer of cargo or passengers from  
25 water-borne craft to land and vice versa, including, but not limited to: piers, wharves, sea islands,  
26 commercial float plane moorages, offshore loading or unloading buoys, ferry terminals, and  
27 required dredged waterways, moorage basins, and equipment for transferring cargo or passengers  
28 between land and water modes. Excluded from this definition and addressed elsewhere are airports,  
29 marinas, boat ramps or docks used primarily for recreation, cargo storage and parking areas not  
30 essential for port operations, boat building or repair. The latter group is considered industrial or  
31 accessory to other uses. This definition excludes fossil or renewable fuel transshipment facilities.
- 32 ~~11-10.~~ “Potable” means water that is suitable for drinking by the public (Chapter 246-290 WAC).
- 33 ~~12-11.~~ “Preservation” means actions taken to ensure the permanent protection of existing, ecologically  
34 important areas that the County has deemed worthy of long-term protection.
- 35 ~~13-12.~~ “Primary association” means the use of a habitat area by a listed or priority species for  
36 breeding/spawning, rearing young, resting, roosting, feeding, foraging, and/or migrating on a  
37 frequent and/or regular basis during the appropriate season(s), as well as habitats that are used less  
38 frequently/regularly but which provide for essential life cycle functions such as breeding, nesting, or  
39 spawning.

Comment [AP348]: Already defined in Title 20 (Zoning).

Comment [DN349]: Added per Council’s pending draft fossil fuel amendments.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 | ~~14-13.~~ “Priority habitat” means a habitat type with unique or significant value to one or more species.  
2 | An area classified and mapped as priority habitat must have one or more of the following attributes:  
3 | comparatively high fish or wildlife density; comparatively high fish or wildlife species diversity; fish  
4 | spawning habitat; important wildlife habitat; important fish or wildlife seasonal range; important  
5 | fish or wildlife movement corridor; rearing and foraging habitat; important marine mammal  
6 | haulout; refuge; limited availability; high vulnerability to habitat alteration; unique or dependent  
7 | species; or shellfish bed. A priority habitat may be described by a unique vegetation type or by a  
8 | dominant plant species that is of primary importance to fish and wildlife (such as oak woodlands or  
9 | eelgrass meadows). A priority habitat may also be described by a successional stage (such as old  
10 | growth and mature forests). Alternatively, a priority habitat may consist of a specific habitat  
11 | element (such as a consolidated marine/estuarine shoreline, talus slopes, caves, snags) of key value  
12 | to fish and wildlife. A priority habitat may contain priority and/or nonpriority fish and wildlife  
13 | (WAC 173-26-020(24)).
- 14 | ~~15-14.~~ “Priority species” means wildlife species of concern due to their population status and their  
15 | sensitivity to habitat alteration, as defined by the Washington Department of Fish and Wildlife.
- 16 | ~~16-15.~~ “Private dock” means a dock and/or float for pleasure craft moorage or water recreation for  
17 | exclusive use by one waterfront lot owner.
- 18 | ~~17-16.~~ “Private sign” means a sign used on a private residence to indicate only the owner’s name or  
19 | address, that the premises are for rent or sale, or for other reasonable purposes related to  
20 | residential use including permitted home occupations.
- 21 | ~~18-17.~~ “Project” means any proposed or existing activity regulated by Whatcom County.
- 22 | ~~19.~~ “Project permit” or “project permit application” means any land use or environmental permit or  
23 | approval required by Whatcom County, including, but not limited to, building permits, subdivisions,  
24 | binding site plans, planned unit developments, conditional uses, shoreline substantial development  
25 | permits, variances, lot consolidation relief, site plan review, permits or approvals authorized by a  
26 | comprehensive plan or subarea plan.
- 27 | ~~20.~~ “Projecting sign” means a sign that is attached to and projects at an angle from a building’s exterior  
28 | wall.
- 29 | ~~21-18.~~ “Public access” means the public’s right to get to and use the state’s public waters, both  
30 | saltwater and freshwater, the water/land interface and associated shoreline ~~area~~ environment. It  
31 | includes physical access that is either lateral (areas paralleling the shore) or perpendicular (an  
32 | easement or public corridor to the shore), and/or visual access facilitated by means such as scenic  
33 | roads and overlooks, viewing towers and other public sites or facilities.
- 34 | ~~22-19.~~ “Public interest” means the interest shared by the citizens of the state or community at large in  
35 | the affairs of government, or some interest by which their rights or liabilities are affected including,  
36 | but not limited to, an effect on public property or on health, safety, or general welfare resulting  
37 | from adverse effects of a use or development.
- 38 | ~~23.~~ “Public utility” means a use owned or operated by a public or publicly licensed or franchised agency  
39 | that provides essential public services such as telephone exchanges, electric substations, radio and

Comment [AP350]: Already defined in Title 20 (Zoning).

Comment [CES351]: Already defined in Title 20 (Zoning).

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

~~television stations, wireless communications services, gas and water regulation stations, and other facilities of this nature.~~

Comment [AP352]: Already defined in Title 20 (Zoning).

### **23.1160.170 “Q” definitions.**

~~1. “Qualified professional” or “qualified consultant.” See WCC 16.16 (Critical Areas), means a person with experience and training with expertise appropriate for the relevant critical area subject in accordance with WAC 365-195-905(4). A qualified professional must have obtained a B.S. or B.A. or equivalent degree in biology, soil science, engineering, environmental studies, fisheries, geology, geomorphology or related field, and related work experience and meet the following criteria:~~

~~a. A qualified professional for wetlands must have a degree in biology, ecology, soil science, botany, or a closely related field and a minimum of three years of professional experience in wetland identification and assessment associated with wetland ecology in the Pacific Northwest or comparable systems.~~

~~b. A qualified professional for habitat conservation areas must have a degree in wildlife biology, ecology, fisheries, or closely related field and a minimum of three years’ professional experience related to the subject species/habitat type.~~

~~c. A qualified professional for geologically hazardous areas must be a professional engineering geologist or geotechnical engineer, licensed in the state of Washington.~~

~~2.1. A qualified professional for critical aquifer recharge areas means a Washington State licensed hydrogeologist, geologist, or engineer.~~

### **23.1160.180 “R” definitions.**

1. “Recharge” means the process involved in the absorption and addition of water from the unsaturated zone to ground water.
2. “Recreation” means an experience or activity in which an individual engages for personal enjoyment and satisfaction. Most shore-based recreation includes outdoor recreation such as: fishing, hunting, clamming, beach combing, and rock climbing; various forms of boating, swimming, hiking, bicycling, horseback riding, camping, picnicking, watching or recording activities such as photography, painting, bird watching or viewing of water or shorelines, nature study and related activities.
3. “Recreational development” means the modification of the natural or existing environment to accommodate recreation. This includes clearing land, earth modifications, structures and other facilities such as parks, camps, camping clubs, launch ramps, golf courses, viewpoints, trails, public access facilities, public parks and athletic fields, hunting blinds, wildlife enhancement (wildlife ponds are considered excavation), and other low intensity use outdoor recreation areas. Recreational homes/condominiums and related subdivisions of land are considered residential; resorts, motels, hotels, recreational vehicle parks, intensive commercial outdoor or indoor recreation, and other commercial enterprises are considered commercial.
4. “Recreational Float.” See “Moorage Structure.”
- 4.5. “Reestablishment” means measures taken to intentionally restore an altered or damaged natural feature or process including:

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 a. Active steps taken to restore damaged wetlands, streams, protected habitat, and/or their  
2 buffers to the functioning condition that existed prior to an unauthorized alteration;
- 3 b. Actions performed to reestablish structural and functional characteristics of a critical area that  
4 have been lost by alteration, past management activities, or other events; and
- 5 c. Restoration can include restoration of wetland functions and values on a site where wetlands  
6 previous existed, but are no longer present due to lack of water or hydric soils.
- 7 5. "Rehabilitation" means a type of restoration action intended to repair natural or historic functions  
8 and processes. Activities could involve breaching a dike to reconnect wetlands to a floodplain or  
9 other activities that restore the natural water regime.
- 10 6. "Renewable biomass" includes but is not limited to the following:
- 11 a. Planted crops and crop residue harvested from agricultural land.
- 12 b. Planted trees and tree residue from a tree plantation.
- 13 c. Animal waste material and animal byproducts.
- 14 d. Slash and pre-commercial thinnings.
- 15 e. Organic matter that is available on a renewable or recurring basis.
- 16 f. Algae.
- 17 g. Separated yard waste or food waste, including recycled cooking and trap grease.
- 18 h. Items a through g including any incidental, de minimis contaminants that are impractical to  
19 remove and are related to customary feedstock production and transport.
- 20 7. "Renewable Fuel" means liquid fuels produced from renewable biomass and limited in terms of  
21 blending with fossil fuels. Common renewable fuels include ethanol and biodiesel:
- 22 a. "E85 motor fuel" means an alternative fuel that is a blend of ethanol and hydrocarbon of which  
23 the ethanol portion is nominally seventy-five to eighty-five percent denatured fuel ethanol by  
24 volume that complies with the most recent version of American society of testing and materials  
25 specification D 5798.
- 26 b. "Renewable diesel" means a diesel fuel substitute produced from nonpetroleum renewable  
27 sources, including vegetable oils and animal fats, that meets the registration requirements for  
28 fuels and fuel additives established by the federal environmental protection agency in 40 Code  
29 of Federal Regulations (C.F.R.) Part 79 (2008) and meets the requirements of American society  
30 of testing and materials specification D 975.
- 31 c. Renewable fuels shall include those designed to result in a lifecycle greenhouse gas emission  
32 reduction of at least 50% or more under the Federal Clean Air Act. Renewable fuels shall not  
33 include products produced from palm oil or other feedstocks that cannot be proven to reduce  
34 greenhouse gas emissions utilizing accepted methods of the Washington State Department of  
35 Ecology or US EPA.
- 36 5-8. "Renewable Fuel Refinery" means a facility that processes or produces renewable fuels. This  
37 definition excludes Small Fossil or Renewable Fuel Storage and Distribution Facilities.

**Comment [P/C353]:** Deleted by the P/C during their deliberations on concurrent fossil fuel regulations in Title 20, since federal regulations may be amended over time.

**Comment [DN354]:** Added per Council's pending draft fossil fuel amendments.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 | ~~6-9.~~ “Renovate” means to restore to an earlier condition as by repairing or remodeling. Renovation shall  
2 | include any interior changes to a building and those exterior changes that do not substantially  
3 | change the character of an existing structure.
- 4 | ~~7-10.~~ “Residential development” means ~~buildings, earth modifications, development subdivision~~ and  
5 | use of land primarily for human residence, including, but not limited to: single-family and  
6 | multifamily dwellings, condominiums, mobile homes and mobile home parks, boarding homes,  
7 | family daycare homes, adult family homes, retirement and convalescent homes, ~~bed and~~  
8 | ~~breakfasts, and vacation rental units,~~ together with accessory uses common to normal residential  
9 | use. Camping sites or clubs, recreational vehicle parks, motels, ~~and hotels, and other transient~~  
10 | ~~housing~~ are not included in this definition.
- 11 | ~~11.~~ “Resource shoreline ~~area environment~~” means an area designated pursuant to WCC  
12 | Chapter 23.230 (~~Shoreline Jurisdiction and Environment Designations~~).
- 13 | ~~8-12.~~ “Responsible Party” or “Party Responsible.” The “responsible party” shall be assumed, in  
14 | ~~singular or plural, to be any individual, business, organization, or entity, property owner, or person~~  
15 | ~~having control of a property who has created or allowed to exist a violation of any applicable~~  
16 | ~~regulations, whether or not the violation is known to that person at the time the violation occurred~~  
17 | ~~or is occurring. A responsible party includes any person who aids, assists, or perpetuates a~~  
18 | ~~violation.~~
- 19 | ~~9-13.~~ “Restore,” “restoration” or “ecological restoration” means the reestablishment or upgrading of  
20 | impaired ecological shoreline processes or functions. This may be accomplished through measures  
21 | including, but not limited to, revegetation, removal of intrusive shoreline structures, and removal  
22 | or treatment of toxic materials. Restoration does not imply a requirement for returning the  
23 | shoreline ~~area environment~~ to aboriginal or pre-European settlement conditions.
- 24 | ~~10-14.~~ “Revetment” means a ~~sloped wall~~ ~~sloping structure built to protect a scarp, embankment, or~~  
25 | ~~shore against erosion by waves or currents. Usually built of riprap, with heavy armor layer, one or~~  
26 | ~~more filter layers of smaller rock or filter cloth, and “toe” protection. A revetment slopes~~  
27 | ~~shoreward and has a rough or jagged face. Its sloping face absorbs wave energy and differentiates~~  
28 | ~~it from a bulkhead, which is a near vertical structure constructed of riprap or other suitable~~  
29 | ~~material placed on stream banks or other shorelines to retard bank erosion and minimize lateral~~  
30 | ~~stream movement.~~
- 31 | ~~11-15.~~ “Riprap” means dense, hard, angular rock free from cracks or other defects conducive to  
32 | weathering used for revetments or other flood control works.
- 33 | ~~12-16.~~ “Riparian zone” means the area adjacent to a waterbody (stream, lake or marine water) that  
34 | contains vegetation that influences the aquatic ecosystem, nearshore area and/or fish and wildlife  
35 | habitat by providing shade, fine or large woody material, nutrients, organic debris, sediment  
36 | filtration, and terrestrial insects (prey production). Riparian areas include those portions of  
37 | terrestrial ecosystems that significantly influence exchanges of energy and matter with aquatic  
38 | ecosystems (i.e., zone of influence). Riparian zones provide important wildlife habitat. They provide  
39 | sites for foraging, breeding and nesting; cover to escape predators or weather; and corridors that  
40 | connect different parts of a watershed for dispersal and migration.

Comment [CES355]: Incorporated from Resolution 2016-039, Council’s action on short-term rentals.

Comment [CES356]: Updated to be more accurate.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 | ~~13-17.~~ “Riparian vegetation” means vegetation that tolerates and/or requires moist conditions and  
2 | periodic free-flowing water, thus creating a transitional zone between aquatic and terrestrial  
3 | habitats which provides cover, shade and food sources for aquatic and terrestrial insects for fish  
4 | species. Riparian vegetation and their root systems stabilizes stream banks, attenuates high water  
5 | flows, provides wildlife habitat and travel corridors, and provides a source of limbs and other  
6 | woody debris to terrestrial and aquatic ecosystems, which, in turn, stabilize stream beds.
- 7 | ~~14-18.~~ “River delta” means those lands formed as an aggradational feature by stratified clay, silt, sand  
8 | and gravel deposited at the mouths of streams where they enter a quieter body of water. The  
9 | upstream extent of a river delta is that limit where it no longer forms distributary channels.
- 10 | ~~15-19.~~ “Rock shore” means those shorelines whose bluffs and banks are typically composed of natural  
11 | rock formations.
- 12 | ~~16-20.~~ “Roof sign” means a sign erected upon, against, or directly above a roof, or on top of or above  
13 | the parapet of a building; signs on mansard roofs shall be considered wall signs.
- 14 | ~~17-21.~~ “Rural shoreline ~~area~~ environment” means an area designated pursuant to WCC  
15 | Chapter 23.230 (Shoreline Jurisdiction and Environment Designations).
- 16 | ~~23-1160.190~~ **“S” definitions.**
- 17 | 1. “Seismic hazard areas” means areas that are subject to severe risk of damage as a result of  
18 | earthquake-induced ground shaking, slope failure, settlement, or soil liquefaction.
- 19 | 2. “Shall” means a mandate; the action must be done.
- 20 | 3. “Shared moorage” means moorage for pleasure craft and/or landing for water sports for use in  
21 | common by shoreline residents of a certain subdivision or community within shoreline jurisdiction  
22 | or for use by patrons of a public park or quasi-public recreation area, including rental of non-  
23 | powered craft. If a shared moorage provides commercial services or is of a large scale (~~more than~~  
24 | four or more slips), it shall be considered a marina. Shared moorage proposed to be leased to  
25 | upland property owners shall also be considered as a marina. If a proposal includes covered  
26 | moorage, commercial sale of goods or services, or a means of launching other than a ramp, swinging  
27 | boom, or davit style hoist, it shall be considered a marina.
- 28 | 4. “Shellfish” means invertebrates of the phyla Arthropoda (class Crustacea), Mollusca (class  
29 | Pelecypoda) and Echinodermata.
- 30 | 5. “Shellfish habitat conservation areas” means all public and private tidelands suitable for shellfish, as  
31 | identified by the Washington Department of Health classification of commercial growing areas, and  
32 | those recreational harvest areas as identified by the Washington Department of Ecology are  
33 | designated as shellfish habitat conservation areas pursuant to WAC 365-190-080. Any area that is or  
34 | has been designated as a shellfish protection district created under Chapter 90.72 RCW is also a  
35 | shellfish habitat conservation area.
- 36 | 6. “Shellfish protection district” means the Drayton Harbor shellfish protection district (DHSPD)  
37 | (Ordinance 95-036) and the Portage Bay shellfish protection district (PBSPD) (Ordinance 98-069), or  
38 | other area formed by the County based on RCW Title 90, in response to State Department of Health  
39 | (DOH) closures or downgrades of a commercial shellfish growing area due to a degradation of water

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 quality as a result of pollution. These areas include the watershed draining to the shellfish beds as  
2 part of the shellfish habitat conservation area.
- 3 7. “Shorelands” or “shoreland areas” means those lands extending landward for 200 feet in all  
4 directions as measured on a horizontal plane from the ordinary high water mark; floodways and  
5 contiguous floodplain areas landward 200 feet from such floodways; and all wetlands and river  
6 deltas associated with the streams, lakes and tidal waters which are subject to the provisions of  
7 Chapter 90.58RCW.
- 8 8. “Shorelines” means all of the water areas of the state as defined in RCW 90.58.030, including  
9 reservoirs and their associated shorelands, together with the lands underlying them except:  
10 a. Shorelines of statewide significance;  
11 b. Shorelines on segments of streams upstream of a point where the mean annual flow is 20 cubic  
12 feet per second or less and the wetlands associated with such upstream segments; and  
13 c. Shorelines on lakes less than 20 acres in size and wetlands associated with such small lakes.
- 14 9. “Shoreline Administrator” means the Director of the Department of Planning and Development  
15 Services Department, or his/her designee, who is authorized to carry out the administrative duties  
16 enumerated in this program or staff member designated by the director to perform the review  
17 functions required in this program.
- 18 10. “Shoreline Conditional Use” for the purposes of this program means a use, development or  
19 substantial development listed in the regulations as being permitted only as a shoreline conditional  
20 use, or not classified in this program. Shoreline Conditional uses are subject to review and approval  
21 pursuant to the criteria in WCC Chapter 23.60 Title 22 (Land Use and Development), regardless of  
22 whether or not the proposal requires a substantial development permit.
- 23 11. “Shoreline jurisdiction” means all “shorelines of the state” and “shorelands.”
- 24 12. “Shoreline permit” means a shoreline substantial development permit, a shoreline conditional use,  
25 or a shoreline variance, or any combination thereof issued by Whatcom County pursuant to  
26 Chapter 90.58 RCW.
- 27 13. “Shoreline residential area environment” means an area designated pursuant to WCC  
28 Chapter 23.230 (Shoreline Jurisdiction and Environment Designations).
- 29 14. “Shoreline stabilization” means structural or nonstructural modifications to the existing shoreline  
30 intended to reduce or prevent erosion of uplands or beaches. They are generally located parallel to  
31 the shoreline at or near the OHWM. Other construction classified as shore defense works include  
32 groins, jetties and breakwaters, which are intended to influence wave action, currents and/or the  
33 natural transport of sediments along the shoreline.
- 34 15. “Shoreline stabilization, bioengineered” means biostructural and biotechnical alternatives to  
35 hardened structures (bulkheads, walls) for protecting slopes or other erosive features including soft-  
36 treatment techniques. Bioengineered stabilization uses vegetation reinforced soil slopes (VRSS),  
37 which uses vegetation arranged embedded in the ground to prevent shallow mass-movements and  
38 surficial erosion.
- 39 16. “Shoreline stabilization, nonstructural” means a soft treatment which does not use driftwood, logs,  
40 geotextile fabric, or other organic or nonorganic structural materials. Examples include:

**Comment [AP357]:** Relocated from  
“Conditional Use.”

**Comment [CES358]:** All shoreline stabilization  
definitions from WAC and DOE guidance.

**Planning Commission Approved Draft with Department of Ecology  
Required & Recommended Amendments**

- 1 a. Addressing upland drainage issues;  
2 b. Planting stabilization vegetation without fill, grading, or use of nonbiodegradable geotextile fabric,  
3 gabions or other stabilizing structures to provide temporary erosion control.  
4 17. “Shoreline stabilization, replacement” means the construction of a new structure to perform a  
5 shoreline stabilization function of an existing legally established shoreline stabilization structure  
6 which can no longer adequately serve its purpose. Where ordinary high water has established  
7 behind the structure replacement is considered a new shoreline stabilization.  
8 18. “Shoreline stabilization, soft-treatment” means shore erosion control and restoration practices  
9 using only plantings or organic materials to restore, protect or enhance the natural shoreline  
10 environment. This technique mimics natural conditions for ecological functions and ecosystem-wide  
11 processes. When used, organic/biodegradable structural components are to be placed to avoid  
12 significant disruption of sediment recruitment, transportation, and accretion. Examples include:  
13 a. Bioengineered shoreline stabilization;  
14 b. Beach nourishment/replenishment;  
15 c. Vegetated soil stabilization retention methods;  
16 d. Driftwood;  
17 e. Coir fiber logs or other natural materials;  
18 f. Nonstructural shoreline stabilization;  
19 g. Beach berm.  
20 19. “Shoreline stabilization, hard structure” means shore erosion control practices using hardened  
21 structures that armor and stabilize the shoreline landward of the structure from further erosion.  
22 20. “Shoreline stabilization, hybrid structure” means an approach to erosion control that combines soft-  
23 treatment shoreline treatment placed waterward of more conventional structural shoreline  
24 stabilization elements. The soft treatment preserves natural beach contours and mimics habitat  
25 structure in order to preserve ecological functions. The hard structure provides long-term stability to  
26 the upland site, but is located sufficiently landward of the OHWM as not to impair ecological  
27 processes.  
28 21. Shoreline Stabilization, New. Placement of shoreline stabilization where no such structure previously  
29 existed, including additions to or increases in size of existing shoreline stabilization measures, are  
30 considered new structures.  
31 22. “Shoreline stabilization, structural” means shoreline stabilization which includes a footing,  
32 foundation, or anchors. Materials are typically hardened structures which armor the shoreline. See  
33 also “shoreline stabilization, hard structure” and “shoreline stabilization, hybrid structure.”  
34 ~~15-~~23. “Shoreline view area” means any area looking waterward within the jurisdiction of this program  
35 between the OHWM and a public road, park, pathway, or other public area that is undeveloped or  
36 developed with accessory uses only; and that does not obstruct the view of the shoreline or would  
37 not obstruct the view if natural vegetation, fences, walls, antennas or similar obstructions were  
38 removed.  
39 ~~16-~~24. “Shorelines of statewide significance” means the following shorelines in Whatcom County:  
40 a. Those areas of Puget Sound and adjacent saltwaters between the ordinary high water mark and  
41 the line of extreme low tide as follows: Birch Bay from Point Whitehorn to Birch Point; and

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 b. Those areas of Puget Sound and adjacent saltwaters north to the Canadian line and lying  
2 waterward from the line of extreme low tide; and  
3 c. Those lakes, whether natural, artificial, or a combination thereof, with a surface acreage of  
4 1,000 acres or more measured at the ordinary high water mark including Lakes Whatcom, Baker  
5 and Ross; and  
6 d. Those natural rivers or segments thereof as follows: any west of the crest of the Cascade range  
7 downstream of a point where the mean annual flow is measured at 1,000 cubic feet per second  
8 or more; including the Nooksack River's mainstream, the North Fork upstream to its confluence  
9 with Glacier Creek in Section 6, Township 39 North, Range 7 East, W.M.; and the South Fork  
10 upstream to its confluence with Hutchinson Creek in Section 9, Township 37 North, Range 5  
11 East, W.M.  
12 e. Shoreline jurisdiction associated with subsections ~~(15)~~(a), (c), and (d) of this section.  
13 25. "Shorelines of the state" means the total of all "shorelines" and "shorelines of statewide  
14 significance" within the state.  
15 ~~17-26.~~ 26. "Short-term rental" means a dwelling unit where the owner is not present on site during the  
16 rental period, which, for compensation, is used to lodge individuals or families for a period of less  
17 than 30 days.  
18 ~~18-27.~~ 27. "Should" means that the particular action is required unless there is a demonstrated, compelling  
19 reason, based on policy of the Act and this chapter, against taking the action.  
20 ~~19-28.~~ 28. "Sign" means any placard, billboard, display, message, design, letters, symbol, light, figure,  
21 illustration, set of pennants, or other device intended to identify, inform, advertise, or attract  
22 attention to any private or public premises, and placed mainly outdoors so as to be seen from any  
23 public or quasi-public place. Double-faced signs are counted as two signs. Excluded from this  
24 definition are official traffic, directional or warning devices, other official public notices, signs  
25 required by law, or flag of a government or other noncommercial institution.  
26 ~~20-29.~~ 29. "Significant vegetation removal" means the removal or alteration of trees, shrubs, and/or  
27 ground cover by clearing, grading, cutting, burning, chemical means, or other activity that causes  
28 significant impacts to ecological functions provided by such vegetation. The removal of invasive or  
29 noxious weeds does not constitute significant vegetation removal. Tree pruning, not including tree  
30 topping, where it does not affect ecological functions, does not constitute significant vegetation  
31 removal.  
32 ~~21-30.~~ 30. "Single-family development" means the development of a single-family residence permanently  
33 installed and served with utilities on a lot of record.  
34 ~~22-31.~~ 31. "Site" means any parcel or combination of contiguous parcels, or right-of-way or combination of  
35 contiguous rights-of-way under the applicant's/proponent's ownership or control that is the subject  
36 of a development proposal or change in use.  
37 ~~23-32.~~ 32. "Slope" means:  
38 a. Gradient.  
39 b. The inclined surface of any part of the earth's surface delineated by establishing its toe and top  
40 and measured by averaging the inclination over at least 10 feet of vertical relief.

**Comment [CES359]:** Incorporated from Resolution 2016-039, Council's action on short-term rentals.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 33. “Small Fossil or Renewable Fuel Storage and Distribution Facilities” means:  
2 a. Equipment and buildings used for purposes of direct sale or distribution to consumers of fossil  
3 fuels or renewable fuels, or  
4 b. Accessory equipment that supplies fossil fuels or renewable fuels to an onsite allowed  
5 commercial or industrial operation, and that does not meet the definitions of fossil fuel or  
6 renewable refinery or transshipment facilities
- 7 ~~24-34.~~ “Soil” means all unconsolidated materials above bedrock described in the Soil Conservation  
8 Service Classification System or by the Unified Soils Classification System.
- 9 ~~25-35.~~ “Solid waste” means all putrescible and non-putrescible solid and semi-solid waste including  
10 garbage, rubbish, ashes, industrial wastes, swill, demolition and construction wastes, abandoned  
11 vehicles and parts thereof, and any other discarded commodities.
- 12 36. “Spit” means an accretion shoreform that is narrow in relation to length and extends parallel to or  
13 curves outward from shore; spits are also characterized by a substantial wave-built sand and gravel  
14 berm on the windward side, and a more gently sloping silt or marsh shore on the lagoon or leeward  
15 side; curved spits are called hooks.
- 16 37. “Standing” is the status required for a person, agency, or other entity to bring an action before an  
17 appeal body. A person has standing per RCW 36.70C.060 if they are:  
18 a. The applicant and the owner of property to which the land use decision is directed; or  
19 b. Another person, county department, and/or public agency aggrieved or adversely affected by  
20 the land use decision, or who would be aggrieved or adversely affected by a reversal or  
21 modification of the land use decision. A person is aggrieved or adversely affected within the  
22 meaning of this section only when all of the following conditions are present:  
23 i. The land use decision has prejudiced or is likely to prejudice that person;  
24 ii. That person’s asserted interests are among those that the local jurisdiction was required to  
25 consider when it made the land use decision;  
26 iii. A judgment in favor of that person would substantially eliminate or redress the prejudice to  
27 that person caused or likely to be caused by the land use decision; and  
28 iv. The petitioner has exhausted his or her administrative remedies to the extent required by  
29 law.
- 30 ~~26-38.~~ “Statement of exemption” means a written statement by the administrator/Director that a  
31 particular development proposal is exempt from the substantial development permit requirement  
32 and is generally consistent with this program including the policy of the Act (RCW 90.58.020),  
33 pursuant to WCC ~~23.60.020~~ Title 22 (Land Use and Development).
- 34 ~~27-39.~~ “Streams” means those areas where surface waters produce a defined channel or bed. A  
35 defined channel or bed is an area that demonstrates clear evidence of the annual passage of water  
36 and includes, but is not limited to, bedrock channels, gravel beds, sand and silt beds, and defined  
37 channel swales. The channel or bed need not contain water year-round. This definition includes  
38 drainage ditches or other artificial water courses where natural streams existed prior to human  
39 alteration, and/or the waterway is used by anadromous or resident salmonid or other fish  
40 populations or flows directly into shellfish habitat conservation areas.

**Comment [P/C360]:** Added by the P/C during their deliberations on concurrent fossil fuel regulations in Title 20.

**Comment [DN361]:** Added per Council’s pending draft fossil fuel amendments.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 | ~~28.40.~~ “Strict construction” means an interpretation that considers only the literal words of a writing.
- 2 | ~~29.41.~~ “Structure” means a permanent or temporary building or edifice of any kind, or any piece of
- 3 | work artificially built up or composed of parts joined together in some definite matter whether
- 4 | installed on, above, or below the surface of the ground or water, except for vessels (after
- 5 | International Building Code).
- 6 | ~~30.42.~~ “Substantial development” means any development of which the total cost or fair market value
- 7 | exceeds \$5,718 or as amended by the State Office of Financial Management, or any development
- 8 | which that materially interferes with the normal public use of the water or shorelines of the state;
- 9 | except the classes of development, listed in ~~WCC 23.60.022(A) through (P); WAC 173-27-040.~~
- 10 | ~~31.43.~~ “Substantially degrade” means to cause significant ecological impact.
- 11 | ~~32.~~ “Surface mining” means all or any part of the processes involved in mining by removing the soil or
- 12 | rock overburden and mining directly from deposits thereby exposed, including also open pit mining,
- 13 | gravel bar scalping and mining of deposits naturally exposed at earth’s surface, and including
- 14 | production of surface mining refuse.
- 15 | ~~33.44.~~ “Sustained yield” means the continuing yield of a biological resource, such as timber from a
- 16 | forest, by controlled and periodic harvesting.
- 17 | ~~34.45.~~ “Swamp” means a wetland that is often inundated and composed of woody vegetation.
- 18 | **23.1160.200 “T” definitions.**
- 19 | 1. “Tideland” means the land on the shore of marine water-bodies between OHWM and the line of
- 20 | extreme low tide which is submerged daily by tides.
- 21 | 2. “Timber” means forest trees, standing or down, of a commercial species, including Christmas trees.
- 22 | 3. “Toe” means the lowest part of a slope or cliff; the downslope end of an alluvial fan, landslide, etc.
- 23 | 4. “Tombolo” means an accretion shoreform that began as a spit and accreted into a causeway-like
- 24 | connection to an island or offshore rock; tombolos normally develop from offshore bars (submarine
- 25 | berms) that build up in a low energy “wave-shadow” zone between the offshore, wave barrier
- 26 | element and an active driftway.
- 27 | 5. “Top” means the top of a slope; or in this program it may be used as the highest point of contact
- 28 | above a landslide hazard area.
- 29 | 6. “Transportation” means roads and railways, related bridges and culverts, fills, embankments,
- 30 | causeways, parking areas, truck terminals and rail switchyards, sidings, spurs, and air fields. Not
- 31 | included are recreational trails, highway rest areas, ship terminals, seaplane moorages, nor logging
- 32 | roads; they are included respectively under “recreation,” “pier,” “dock,” “residential,” and “forest
- 33 | practices.”
- 34 | **23.1160.210 “U” definitions.**
- 35 | 1. “Unavoidable” means adverse impacts that remain after all appropriate avoidance and minimization
- 36 | measures have been implemented.
- 37 | 2. “Upland” means dry lands landward of OHWM.
- 38 | 3. “Urban conservancy shoreline area environment” means an area designated pursuant to WCC
- 39 | Chapter ~~23.30~~ 23.20 (Shoreline Jurisdiction and Environment Designations).

Comment [AP362]: Updated per Periodic Review Checklist, Items 2019.a, 2017.a, and 2016.a, and Scoping Document, Item #1a and 1e.

Comment [AP363]: Already defined in Title 20 (Zoning).

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 4. “Urban resort shoreline ~~area~~ environment” means an area designated pursuant to WCC  
2 Chapter ~~23.30~~ 23.20 (Shoreline Jurisdiction and Environment Designations).
- 3 5. “Urban shoreline ~~area~~ environment” means an area designated pursuant to WCC  
4 Chapter ~~23.30~~ 23.20 (Shoreline Jurisdiction and Environment Designations).
- 5 6. “Utilities” means all lines and facilities used to distribute, collect, transmit, or control electrical  
6 power, natural gas, petroleum products, information (telecommunications), water, and sewage.  
7 a. “Accessory utilities” means on-site utility features such as a water, sewer, septic, electrical, or  
8 gas lines serving a primary use. Accessory utilities shall be considered part of the primary use.  
9 b. “Local utilities” means utilities that serve adjacent properties and include, but are not limited to,  
10 powerlines, water, sewer, and stormwater facilities, fiber optic cable, pump stations and  
11 hydrants, switching boxes, and other structures normally found in a street right-of-way.  
12 c. “Regional utilities” means utilities that serve more than one community or major attractions;  
13 examples include, but are not limited to, two hundred thirty (230) kv power transmission lines,  
14 natural gas transmission lines, and regional water storage tanks and reservoirs, regional water  
15 transmission lines or regional sewer collectors and interceptors. Regional utilities may also  
16 include facilities serving an entire community, such as subregional switching stations (one  
17 hundred fifteen (115) kv and smaller), and municipal sewer, water, and storm water facilities.  
18 Regional utilities include regional transmission pipelines for the bulk conveyance of natural gas,  
19 or pipelines termed a distribution pipeline but having characteristics that fit the definition of a  
20 transmission pipeline. Natural gas pipelines which are owned and operated by a gas utility  
21 company regulated by the State Utilities and Transportation Commission and which are  
22 distribution lines owned by the utility that provide natural gas service directly to county citizens  
23 and businesses shall not be considered regional transmission lines.
- 24 6-7. “Utility development” means development including, but not limited to, facilities for distributing,  
25 processing, or storage of water, sewage, solid waste, storm drainage, electrical energy including  
26 electronic communications, and their administrative structures, as well as pipelines for petroleum  
27 products, and fire-fighting facilities. Power plants are considered industrial.
- 28 **23.1160.220 “V” definitions.-**
- 29 1. “Vacation Rental Unit” means a single-family dwelling unit, detached accessory dwelling unit, or  
30 accessory apartment that, for compensation, is rented as a single unit used to lodge individuals or  
31 families for a period of less than 30 days and where the owner is not present in the rented unit  
32 during the rental period. Individual sleeping rooms shall not be rented individually.
- 33 4-2. “Variance” means an adjustment in the application of this program’s bulk and dimensional  
34 regulations to a particular site pursuant to WCC Chapter 23.60 Title 22 (Land Use and Development).
- 35 2-3. “Vegetative stabilization” means planting of vegetation to retain soil and retard erosion, reduce  
36 wave action, and retain bottom materials. It also means utilization-use of temporary structures or  
37 netting to enable plants to establish themselves in unstable areas.
- 38 3-4. “Vessel” means a floating structure that is designed primarily for navigation, is normally capable of  
39 self-propulsion and use as a means of transportation, and meets all applicable laws and regulations

Comment [AP364]: Language from WCC 20.82.030(2).

Comment [CES365]: Definitions added per Scoping Document, Item #7b to distinguish different levels of utility facilities.

Comment [CES366]: Incorporated from Resolution 2016-039, Council’s action on short-term rentals.

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

1 pertaining to navigation and safety equipment on vessels, including, but not limited to, registration  
2 as a vessel by an appropriate government agency. -

### 3 **23.1160.230 “W” definitions.**

4 ~~1.~~ “Wall sign” means a sign placed upon and parallel to the exterior of a building.

Comment [AP367]: Already defined in Title 20 (Zoning).

5 ~~2.1.~~ “Waterbody” means a body of still or flowing water, fresh or marine, bounded by the OHWM.

6 ~~3.2.~~ “Water-dependent use” means a use or portion of a use that requires direct contact with the water  
7 and cannot exist at a non-water location due to the intrinsic nature of its operations.

8 ~~4.3.~~ “Water-enjoyment use” means a recreational use, or other use facilitating public access to the  
9 shoreline as the primary character of the use; or a use that provides for recreational use or aesthetic  
10 enjoyment of the shoreline for a substantial number of people as a general character of the use and  
11 that through the location, design and operation assure the public’s ability to enjoy the physical and  
12 aesthetic qualities of the shoreline. In order to qualify as a water-enjoyment use, the use must be  
13 open to the general public and the water-oriented space within the project must be devoted to the  
14 specific aspects of the use that fosters shoreline enjoyment.

15 ~~5.4.~~ “Water-oriented use” means any one or a combination of water-dependent, water-related or water-  
16 enjoyment uses and serves as an all-encompassing definition, together with single-family  
17 residences, for priority uses under the Act.

18 ~~6.5.~~ “Water quality” means the characteristics of water, including flow or amount, and related physical,  
19 chemical, aesthetic, recreation-related, and biological characteristics.

20 ~~7.6.~~ “Water-related use” means a use or portion of a use that is not intrinsically dependent on a  
21 waterfront location but depends upon a waterfront location for economic viability. These uses have  
22 a functional relationship to the water, or the use provides a necessary support service for a water-  
23 dependent use and physical separation is not feasible.

24 ~~8.7.~~ “Watershed” means a geographic region within which water drains into a particular river, stream or  
25 body of water. There are approximately 122 watersheds (e.g., Bertrand, Ten Mile, Dakota, Canyon  
26 Creek, Lake Whatcom, Lake Samish) identified in WRIA 1 and WRIA 3. These are nested within  
27 approximately 14 sub-basins (e.g., North Fork Nooksack, Drayton Harbor, Sumas River, Friday  
28 Creek), which are nested within four basins (e.g., Nooksack River, Fraser River, Samish River,  
29 Coastal).

30 ~~9.8.~~ “Watershed restoration plan” means a plan developed or sponsored by the Department of Fish and  
31 Wildlife, the Department of Ecology, the Department of Transportation, a federally recognized  
32 Indian tribe acting within and pursuant to its authority, a city, a county or a conservation district that  
33 provides a general program and implementation measures or actions for the preservation,  
34 restoration, recreation, or enhancement of the natural resource character and ecology of a stream,  
35 stream segment, drainage area or watershed for which agency and public review have been  
36 conducted pursuant to Chapter 43.21C RCW, the State Environmental Policy Act.

37 ~~10.9.~~ “Watershed restoration project” means a public or private project authorized by the sponsor of  
38 a watershed restoration plan that implements the plan or part of the plan and consists of one or  
39 more of the following activities:

## Planning Commission Approved Draft with Department of Ecology Required & Recommended Amendments

SMP Update – Title 23 Amendments

October 29, 2021

- 1 a. A project that involves less than 10 miles of stream reach, in which less than 25 cubic yards of  
2 sand, gravel, or soil is removed, imported, disturbed or discharged, and in which no existing  
3 vegetation is removed except as minimally necessary to facilitate additional plantings;
- 4 b. A project for the restoration of an eroded or unstable stream bank that employs the principles  
5 of bioengineering, including limited use of rock as a stabilization only at the toe of the bank, and  
6 with primary emphasis on using native vegetation to control erosive forces of flowing water; or  
7 c. A project primarily designated to improve fish and wildlife habitat, remove or reduce  
8 impediments to migration of fish, or enhance the fishery resource available for use by all of the  
9 citizens of the state; provided, that any structures, other than a bridge or culvert or instream  
10 habitat enhancement structure associated with the project, is less than 200 square feet in floor  
11 area and is located above the ordinary high water mark.
- 12 ~~11.10.~~ “Weir” means a structure in a stream or river for measuring or regulating stream flow.
- 13 ~~12.11.~~ “Wet season” means the period generally between November 1st and March 30th of most years  
14 when soils are wet and prone to instability. The specific beginning and end of the wet season can  
15 vary from year to year depending on weather conditions.
- 16 ~~13.12.~~ “Wetlands” means areas that are inundated or saturated by surface water or ground water at a  
17 frequency and duration sufficient to support, and that under normal circumstances support, a  
18 prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally  
19 include swamps, marshes, bogs and similar areas. Wetlands do not include those artificial wetlands  
20 intentionally created for non-wetland sites, including, but not limited to, irrigation and drainage  
21 ditches, grass-lined swales, canals, detention facilities, wastewater treatment facilities, farm ponds,  
22 and landscape amenities or those wetlands created after July 1, 1990, that were unintentionally  
23 created as a result of the construction of a road, street, or highway. Wetlands may include those  
24 artificial wetlands intentionally created from non-wetland areas to mitigate the conversion of  
25 wetlands.
- 26 ~~14.13.~~ “Wetland edge” means the boundary of a wetland as delineated based on the definitions  
27 contained in WCC this eChapter 16.16 (Critical Areas).
- 28 ~~15.14.~~ “Wood waste” means solid waste consisting of wood pieces or particles generated as a  
29 byproduct or waste from the manufacturing of wood products, handling and storage of raw  
30 materials and trees and stumps. This includes, but is not limited to, sawdust, chips, shavings, bark,  
31 pulp, hog fuel, and log sort yard waste, but does not include wood pieces or particles containing  
32 chemical preservatives such as creosote, pentachlorophenol, or copper-chrome-arsenate.
- 33 ~~23.1160.240~~ **“X” definitions.**  
34 Reserved.
- 35 ~~23.1160.250~~ **“Y” definitions.**  
36 Reserved.
- 37 ~~23.1160.260~~ **“Z” definitions.**  
38 Reserved.

# Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

## Chapter 22.05 Project Permit Procedures

### 22.05.010 Purpose and Applicability.

- (1) The purpose of this chapter is to combine and consolidate the application, review, and approval processes for project permits and appeals as defined in WCC 20.97-~~321~~ (Definitions). It is further intended for this chapter to comply with the provisions of Chapter 36.70B RCW. These procedures provide for a consolidated land use permit process and integrate the environmental review process with the procedures for review of land use decisions.
- (2) This chapter applies to the processing of project permit applications for development and appeals related to the provisions of WCC Title 15, Buildings and Construction; WCC Title 16, Environment; WCC Title 17, Flood Damage Prevention; WCC Title 20, Zoning; WCC Title 21, Land Division Regulations; and WCC Title 23, Shoreline Management Program. The provisions of this chapter shall apply to all project permit applications as defined in RCW 36.70B.020, and other administrative decisions, as listed in ~~the table in~~ WCC 22.05.020 Table 1.
- (3) The meaning of words used in this chapter shall be as defined in WCC Chapters 20.97 (Definitions) or 23.60 (Definitions), as appropriate to the permit being applied for.

### 22.05.020 Project Permit Processing Table.

- (1) ~~Table 1. Project Permit Processing Table~~ Marked boxes in the table below indicates the required general steps for processing all project permit applications or administrative actions. Check marks indicate a step is required; reference letters refer to the notes in subsection (2) of this section. The requirements for each step listed in the top row of the table are provided in WCC 22.05.040 through 22.05.160, as indicated. Specific requirements for each project permit can be found through the references given in the table.

- 1
- 2

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

- 1 (2) **Project Permit Processing Table Notes.** As indicated in Table 1 the table in subsection (1) of this  
2 **section**, project permits are subject to the following additional requirements:
- 3 ~~(a)~~ Pre application conference subject to WCC Title 23, Shoreline Management Program.  
4 ~~(b)~~ Single family residential uses in critical areas or critical area buffers, except all uses in geological  
5 hazardous areas and setbacks.  
6 ~~(c)~~(a) Shoreline permit public hearing decision determined pursuant to  
7 22.07.030(A) (Shoreline Substantial Development Permits) WCC Title 23, Shoreline Management  
8 Program. If a public hearing is required the shoreline permit shall be processed as a Type III  
9 application.  
10 ~~(d)~~(b) Pursuant to ~~Chapters 23.60 and 23.70~~ WCC 22.07.060, final administrative  
11 determinations or decisions as appropriate shall be filed with, or approved by, the Washington  
12 State Department of Ecology.  
13 ~~(e)~~(c) All reasonable use exception applications in geological hazardous areas and setbacks  
14 and all non-single-family residential uses in critical areas or critical area buffers.  
15 ~~(f)~~(d) Building permit pre-application conference, subject to WCC 15.04.020(A)(3)(a).  
16 ~~(g)~~(e) The Hearing Examiner may choose to consult with the development standards technical  
17 advisory committee concerning technical matters relating to land division applications.  
18 ~~(h)~~(f) Whatcom County shall consider an appeal of a decision on a shoreline substantial  
19 development permit, shoreline variance, or shoreline conditional use only when the applicant  
20 waives his/her right to a single appeal to the Shorelines Hearings Board. When an applicant has  
21 waived his/her right to a single appeal, such appeals shall be processed in accordance with the  
22 appeal procedures of section WCC 23.60.1560(H) (Appeals).  
23 ~~(i)~~(g) Except that appeals of WCC Title 15 fire and building code requirements shall be made  
24 to the board of appeals per current building code, as adopted in WCC 15.04.010.

### 25 **22.05.024 Variances.**

- 26 (1) Variances from the terms of Title 20 (Zoning) or Chapter 16.16 (Critical Areas Ordinance) may be  
27 authorized in specific cases that will not be contrary to the public interest, and where, due to special  
28 conditions, literal enforcement of the provisions of those codes would result in unnecessary  
29 hardship. Generally, variances shall only be considered for dimensional standards, unless otherwise  
30 specified in those codes. Under no circumstances shall a variance be granted that allows a use not  
31 permissible or otherwise prohibited in the zoning district in which the subject property is located.
- 32 (2) There are two types of variances: Minor and Major Variances.
- 33 (a) Minor variances include those that are unlikely to have impacts on surrounding properties or  
34 people. These shall be limited to variances for:
- 35 i. A reduction of up to 10% of a front yard setback  
36 ii. A reduction in parking stall dimensions down to 9 feet by 18 feet.  
37 ~~iii.~~ A 25% to 50% reduction of critical area buffers pursuant to 16.16.273 (Variances).  
38 (b) Major variances include all other variances.

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

- 1 (3) The appropriate decision maker, as specified in 22.05.020 (Project permit processing table) shall  
2 have the authority to grant variances when the conditions set forth in subsection (4) have been  
3 found to exist. In such cases, a variance may be granted so that the spirit of the County's land use  
4 codes shall be observed, public safety and welfare secured, and substantial justice done.
- 5 (4) Before any variance may be granted, it shall be shown that the following circumstances are found to  
6 apply:
- 7 (a) That any variance granted shall not constitute a grant of special privilege, be based upon  
8 reasons of hardship caused by previous actions of the property owner, nor be granted for  
9 pecuniary reasons alone;
- 10 (b) Because of special circumstances applicable to the subject property, including size, shape,  
11 topography, location, or surrounding, the strict application of Title 20 (Zoning) or Chapter 16.16  
12 (Critical Areas Ordinance) is found to cause a hardship and deprive the subject property of a use  
13 or improvement otherwise allowed in its zoning district. Aesthetic considerations or design  
14 preferences without reference to restrictions based upon the physical characteristics of the  
15 property do not constitute sufficient hardship under this section;
- 16 (c) The granting of the variance will not be materially detrimental to the public welfare, or injurious  
17 to the property or improvements in the vicinity and zone in which the subject property is  
18 situated.

### 19 **22.05.026 Conditional Use Permits.**

- 20 (1) **Application.** Conditional use permit applications shall be processed per the provisions of this  
21 chapter.
- 22 (2) Conditional use permits shall be nontransferable unless said transfer is approved by the Hearing  
23 Examiner.
- 24 (3) **Approval Criteria.** Before approving an application, the Director or Hearing Examiner shall ensure  
25 that any specific standards of the zoning district defining the use are fulfilled, and shall find  
26 adequate evidence showing that the proposed use at the proposed location:
- 27 (a) Will be harmonious and in accordance with the general and specific objectives of Whatcom  
28 County's Comprehensive Plan, zoning regulations, and any other applicable regulations.
- 29 (b) Will be designed, constructed, operated, and maintained so as to be harmonious and  
30 appropriate in appearance with the existing or intended character of the general vicinity, and  
31 that such use will not change the essential character of the same area.
- 32 (c) If located in a rural area (as designated in the Comprehensive Plan), will be consistent with rural  
33 land use policies as designated in the rural lands element of the Comprehensive Plan.
- 34 (d) Will not be hazardous or disturbing to existing or future neighboring uses.
- 35 (e) Will be serviced adequately by necessary public facilities such as highways, streets, police and  
36 fire protection, drainage structures, refuse disposal, water, sewers, and schools; or that the  
37 persons or agencies responsible for the establishment of the proposed use shall be able to  
38 provide adequately any such services.

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

- 1 (f) Will not create excessive additional requirements at public cost for public facilities and services,  
2 and will not be detrimental to the economic welfare of the community.
- 3 (g) Will not involve uses, activities, processes, materials, equipment, and conditions of operation  
4 that will be detrimental to any persons, property, or the general welfare by reasons of excessive  
5 production of traffic, noise, smoke, fumes, glare or odors.
- 6 (h) Will have vehicular approaches to the property which shall be so designed as not to create an  
7 interference with traffic on surrounding public streets.
- 8 (i) Will not result in the destruction, loss or damage of any natural, scenic, or historic feature of  
9 major importance.
- 10 (4) Approval Criteria for expansion of Fossil Fuel Refineries pursuant to WCC 20.68.153 and expansion  
11 of Fossil Fuel Transshipment Facilities pursuant to WCC 20.68.154. Before approving an application,  
12 the hearing examiner shall ensure that any specific standards of the zoning district defining the use  
13 are fulfilled, and shall find adequate evidence showing that:
- 14 (a) The conditional use permit approval criteria listed under WCC 22.05.026(3) are met;
- 15 (b) Within shorelines, if applicable, County approval shall be contingent upon approval of a  
16 shoreline permit;
- 17 (c) The applicant has documented to the County decision maker (as applicable):
- 18 (i) All of the anticipated types and volumes of substances to be processed, stored, or  
19 transferred in bulk with the proposed expansion,
- 20 (ii) Changes in the Maximum Transshipment Capacity or the Maximum Atmospheric Crude  
21 Distillation Capacity occurring as a result of the proposed expansion, as applicable; and
- 22 (iii) The mode of shipment vessels to be loaded or unloaded with the proposed equipment  
23 and/or as a result of the proposed expansion.
- 24 (iv) The permit shall be limited exclusively to those types and volumes of materials or products  
25 as documented and approved.
- 26 (d) Insurance requirements meet the provisions of WCC 22.05.125.
- 27 (e) Mitigation of transportation impacts consistent with Chapter 20.78 WCC, Transportation  
28 Concurrency Management, and Chapter 16.24 WCC, Commute Trip Reduction.
- 29 (f) Mitigation of impacts to other services including fire and emergency response capabilities,  
30 water supply and fire flow, to address risks created by expansions.
- 31 (g) Plans for stormwater and wastewater releases have been approved.
- 32 (h) Prior to commencement of any site preparation or construction activities, all necessary state  
33 leases shall be acquired for any piers or aquatic lands improvements, and it shall be  
34 demonstrated to the zoning administrator that the project applicant has met any federal or  
35 state permit consultation requirements, including tribal treaty rights or the provisions of the  
36 Magnuson Amendment through state and federal permitting decisions.
- 37 (i) The County decision maker may approve a conditional use permit with a condition to obtain  
38 relevant leases and complete any necessary federal and state permitting requirements, and may  
39 restrict the conditional use permittee from undertaking site preparation or construction  
40 activities until it has fulfilled that condition.

**Comment [CES2]:** This section has been added since the P/C acted on it to incorporate as existing text Council's Cherry Point amendments (Ord. 2021-046, 7/27/2021)

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

- 1 (j) The permittee must inform the county permitting authorities of a change in the aforementioned  
2 disclosures so that the department can document current capacity levels to ensure that the  
3 cumulative thresholds under WCC 20.68.153 or WCC 20.68.154 (as applicable) have not been  
4 exceeded.
- 5 (k) The County decision maker shall include, in any approval of an application for an expansion, as  
6 per 20.68.153 or 20.68.154, a condition that the permitted equipment shall only be used in the  
7 manner described by the project proponent in the application and approved in the permit. The  
8 application shall describe the intended use, including the type of fuel to be stored and, if located  
9 at a Fossil Fuel Refinery or Renewable Fuel Refinery, whether the equipment will or will not be  
10 used for transshipment.
- 11 (5) **Revisions.** The Hearing Examiner may administratively approve revisions to conditional use permits;  
12 provided, that the proposed changes are within the scope and intent of the original permit. "Within  
13 the scope and intent of the original permit" shall mean the following:
- 14 (a) Lot coverage and height may be increased a maximum of 10 percent from the provisions of the  
15 original permit; provided, that:
- 16 (i) revisions involving new structures not shown on the original site plan shall require a new  
17 permit;
- 18 (ii) any revisions shall not exceed height, lot coverage, setback, or any other requirements of  
19 the regulations for the area in which the project is located; and,
- 20 (iii) any revisions shall be reviewed for consistency with the Comprehensive Plan;
- 21 (b) Landscaping may be added to a project without necessitating an application for a new permit;  
22 provided, that the landscaping is consistent with conditions (if any) attached to the original  
23 permit and is consistent with the regulations for the area in which the project is located;
- 24 (c) The use authorized pursuant to the original permit is not changed;
- 25 (d) No additional over-water construction will be involved for shoreline conditional use permits;
- 26 (e) No substantial increase in adverse environmental impact will be caused by the project revision.
- 27 **22.05.028 Administrative Approval Uses.**
- 28 (1) Administrative approval applications shall be processed per the provisions of this Chapter.
- 29 (2) The Director of Planning and Development Services is authorized to approve, approve with  
30 conditions, or deny all administrative approval use applications.
- 31 (3) **Approval Criteria.** Decisions for all administrative approval use permits shall be based upon  
32 compliance with:
- 33 (a) The criteria established for the proposed use in the appropriate zone district;
- 34 (b) The Comprehensive Plan policies governing the associated land use designation;
- 35 (c) In rural areas, consideration will be given to the cumulative impacts of permitted uses in relation  
36 to the governing Comprehensive Plan policies and zoning district; and
- 37 (d) The criteria of WCC 22.05.026 (Conditional Use Permits), subsection (3) (Approval Criteria).
- 38 (e) Additionally, decisions for administrative approval use permits for adult businesses shall be  
39 based on the criteria in subsection (4) of this section.

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

- 1 (4) **Additional Approval Criteria for Adult Businesses.** Prior to granting administrative approval for an  
2 adult business, the Director shall find that the proposed use at the proposed location satisfies or will  
3 satisfy all the following criteria:
- 4 (a) The adult business will be consistent with WCC 20.66.131 (Light Impact Industrial District,  
5 Administrative Approval Uses).
- 6 (b) The adult business shall be closed from 2:00 a.m. to 10:00 a.m. if it contains:  
7 (i) An adult eating or drinking establishment; or  
8 (ii) An adult theater; or  
9 (iii) Another adult commercial establishment; or  
10 (iv) One or more viewing booths.
- 11 (c) If the adult business includes one or more viewing booths, the interior of the adult business will  
12 incorporate all of the following measures:  
13 (a) Each viewing booth shall have at least a three-foot wide opening where a customer enters  
14 and exits the booth that is without doors, physical barriers, or visual barriers; and  
15 (b) Each viewing booth shall have at least one 100-watt light bulb that is properly working and  
16 turned on when business is open. The light bulb shall not be covered or otherwise shielded  
17 except with a commercially available lighting fixture. A minimum of one 12-inch by 12-inch  
18 durable metal sign shall be located at the entrance to each viewing booth area stating that  
19 lights shall remain on; and  
20 (c) Aisles or hallways adjacent to viewing booths shall be a minimum of five feet wide; and  
21 (d) There shall be no holes or openings in common walls between viewing booths.
- 22 (d) Additionally for adult businesses containing one or more viewing booths, a condition of approval  
23 shall allow an unannounced inspection by Whatcom County every six months during business  
24 hours to ensure that measures in subsections (4)(c)(i) through (iv) of this section are being  
25 implemented on an ongoing basis.
- 26 (5) **Revisions.** The Director may approve revisions to administrative approval use permits; provided,  
27 that the proposed changes are within the scope and intent of the original permit. "Within the scope  
28 and intent of the original permit" shall mean the following:
- 29 (a) Lot coverage and height may be increased a maximum of 10 percent from the provisions of the  
30 original permit; provided, that:  
31 (i) revisions involving new structures not shown on the original site plan shall require a  
32 new permit; and  
33 (ii) any revisions shall not exceed height, lot coverage, setback, or any other requirements  
34 of the regulations for the area in which the project is located; and  
35 (iii) any revisions shall be reviewed for consistency with the Comprehensive Plan;
- 36 (b) Landscaping may be added to a project without necessitating an application for a new permit;  
37 provided, that the landscaping is consistent with conditions (if any) attached to the original  
38 permit and is consistent with the regulations for the area in which the project is located;
- 39 (c) The use authorized pursuant to the original permit is not changed;
- 40 (d) No additional over-water construction will be involved for shoreline conditional use permits;

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

1 (e) No substantial increase in adverse environmental impact will be caused by the project revision.

### 2 **22.05.030 Consolidated Permit Review.**

3 The County shall integrate and consolidate the review and decision on two or more project permits  
4 ~~subject to this chapter~~ that relate to the proposed project action unless the applicant requests  
5 otherwise. Consolidated Type I, II, III and IV permits shall be reviewed under the process required for the  
6 permit with the highest process type number per WCC [22.05.020](#). Level IV is considered the highest and  
7 Level I is considered the lowest process type.

### 8 **22.05.040 Pre-Application Conference.**

9 The purpose of a pre-application conference is to assist applicants in preparing development  
10 applications for submittal to the County by identifying applicable regulations and procedures. It is not  
11 intended to provide a staff recommendation on future permit decisions. Pre-application review does not  
12 constitute acceptance of an application by the County nor does it vest an application, unless otherwise  
13 indicated in Whatcom County Code.

- 14 (1) A pre-application conference is required as indicated in WCC [22.05.020](#), unless the Director or  
15 designee grants a written waiver. For other permits, the applicant may request a pre-application  
16 conference.
- 17 (2) The County shall charge the applicant a fee for a pre-application conference per the unified fee  
18 schedule. If the County makes a determination of completeness on a project permit submitted  
19 within one year of the notice of site-specific submittal requirements per subsection (6) of this  
20 section, the pre-application fee shall be applied to the application cost.
- 21 (3) It is the responsibility of the applicant to initiate a pre-application conference through a written  
22 application. The application shall, at a minimum, include all items identified on the pre-application  
23 form and the department's administrative manual. The applicant may provide additional  
24 information to facilitate more detailed review.
- 25 (4) A pre-application conference shall be scheduled as soon as possible and held no later than 30  
26 calendar days from the date of the applicant's request, unless agreed upon by the applicant and the  
27 County.
- 28 (5) The County shall invite the appropriate city to the pre-application meeting if the project is located  
29 within that city's urban growth area or which contemplates the use of any city utilities. Notice shall  
30 also be given to appropriate public agencies and public utilities, if within 500 feet of the area  
31 submitted in the application.
- 32 (6) The County should provide the applicant with notice of site-specific submittal requirements for  
33 application no later than 14 calendar days from the date of the conference.
- 34 (7) A new pre-application conference shall be required if an associated project permit application is not  
35 filed with the County within one year of the notice of site-specific submittal requirements per  
36 subsection (6) of this section or the application is substantially altered, unless waived per  
37 WCC [22.05.040](#)(1).

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

### 22.05.050 Application and Determination of Completeness.

(1) Project permit applications shall be submitted using current forms provided by the review authority.

The submittal shall include: all applicable fees per Chapter [22.25](#) WCC, all materials required by the department's administrative manual (unless waived pursuant to subsection (2)), and all items identified in the pre-application notice of site-specific submittal requirements. If a permit is denied, no reapplication for the same or essentially similar development may be made until one year from the date of denial.

(2) The Director may vary or waive the requirements provided in the department's administrative manual on a case-by-case basis, though may also require additional specific information depending on the nature of the proposal and the presence of sensitive ecological features or issues related to compliance with other county requirements.

~~(2)(3)~~ Upon submittal by the applicant, the County will accept the application and note the date of receipt. Receipt of an application does not constitute approval of the project proposal.

~~(3)(4)~~ Within 14 calendar days of receiving the application, the County shall provide to the applicant a written determination which states either that the application is complete or the application is incomplete. To the extent known by the County, other agencies of local, state, or federal government that may have jurisdiction shall be identified on the determination.

~~(4)(5)~~ A project permit application is complete when it meets the submittal requirements of the department's administrative manual, includes items identified through the pre-application conference process and contains sufficient information to process the application even if additional information will be required. A determination of completeness shall not preclude the County from requiring additional information or studies at any time prior to permit approval. A project permit application shall be deemed complete under this section if the County does not issue a written determination to the applicant that the application is incomplete by the end of the fourteenth calendar day from the date of receipt.

~~(5)(6)~~ If the application is determined to be incomplete, the following shall take place:

(a) The County will notify the applicant that the application is incomplete and indicate what is necessary to make the application complete.

(b) The applicant shall have 90 calendar days from the date that the notification was issued to submit the necessary information to the County. If the applicant does not submit the necessary information to the County in writing within the 90-day period, the application shall be rejected. The Director or designee may extend this period for an additional 90 calendar days upon written request by the applicant.

(c) Upon receipt of the necessary information, the County shall have 14 calendar days to make a determination and notify the applicant whether the application is complete or what additional information is necessary.

(7) A determination of an incomplete application is an appealable final administrative determination, subject to WCC [22.05.160](#)(1).

Comment [CES3]: Moved from 23.60.090  
(Permit Application Review)

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

- 1 **22.05.060 Vesting.**  
2 (1) **Complete Applications.** For a project permit application the department has determined to be  
3 complete per WCC [22.05.050](#)(4), the application shall be considered under the zoning or other land  
4 use control ordinances in effect on the date the application was submitted to the department.  
5 (2) **Incomplete Applications.** For a project permit application the department has determined to be  
6 incomplete per WCC [22.05.050](#)(5), the application shall be considered under the zoning or other  
7 land use control ordinances in effect on the date the department determines the application to be  
8 complete based on the necessary information required by the department.  
9 (3) **Applications Subject to Pre-Application Conference.** Notwithstanding the provisions of subsections  
10 (1) and (2) of this section, for a project permit application that is (a) subject to a pre-application  
11 conference per WCC [22.05.020](#) and [22.05.040](#), (b) submitted no more than 28 calendar days from  
12 the date the department issued its notice of site-specific submittal requirements, and (c)  
13 determined complete by the department, the application shall be considered under the zoning or  
14 other land use control ordinances in effect on the date the pre-application conference request was  
15 submitted to the department.  
16 (4) **Continuation of Vesting.** Building or land disturbance permit applications that are required to  
17 complete a valid (i.e., not expired) project permit approval for project permits identified in the  
18 following list (subsections (4)(a) through (m) of this section) shall vest to the zoning and land use  
19 control ordinances in effect at the time the project permit application identified below was  
20 determined complete:  
21 (a) Administrative use;  
22 (b) Commercial site plan review;  
23 (c) Conditional use;  
24 (d) Critical areas variance;  
25 (e) Major project permit;  
26 (f) Natural resource review;  
27 (g) Planned unit development;  
28 (h) Reasonable use exceptions (Type II and III);  
29 (i) Shoreline conditional use permit;  
30 (j) Shoreline exemption;  
31 (k) Shoreline substantial;  
32 (l) Shoreline variance;  
33 (m) Zoning variance.  
34 (5) **Building Permit Applications within Recorded Long and Short Subdivisions and Binding Site Plans.**  
35 Building permit applications, including associated land disturbance permits, shall be governed by  
36 conditions of approval, statutes, and ordinances in effect at the time of final approval pursuant to  
37 RCW [58.17.170](#). Vesting duration for those building permit applications shall be governed by the  
38 time limits established for long subdivisions in RCW [58.17.170](#), unless the County finds that a change  
39 in conditions creates a serious threat to the public health or safety.

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

- 1 (6) **Building and Fire Code Requirements.** Building and fire code provisions adopted per WCC  
2 Title [15](#) vest at the time a building permit application is determined complete.
- 3 (7) **Duration.** Vesting status established through subsections (1) through (5) of this section runs with  
4 the application and expires upon denial of the application by the County, withdrawal of the  
5 application by the applicant, rejection of the application per WCC [22.05.050](#)(5), expiration of the  
6 application per WCC [22.05.130](#)(1)(a)(i), or expiration of the approved permit per WCC [22.05.140](#).
- 7 **22.05.070 Notice of Application.**
- 8 (1) For Type II, III, and IV applications per WCC [22.05.020](#), the County shall issue a notice of application  
9 within 14 calendar days of a determination of completeness. The date of notice shall be the date of  
10 mailing.
- 11 (2) If the County has made a State Environmental Policy Act (SEPA) threshold determination of  
12 significance concurrently with the notice of application, the County shall combine the determination  
13 of significance and scoping notice with the notice of application.
- 14 (3) Notice shall include:
- 15 (a) The date of application, the date of determination of completeness for the application, and the  
16 date of the notice of application;
- 17 (b) A description of the proposed project action and a list of the project permits included in the  
18 application, and, if applicable, a list of any studies requested by the County;
- 19 (c) The identification of other permits not included in the application to the extent known by the  
20 County;
- 21 (d) The identification of environmental reviews conducted, including notice of existing  
22 environmental documents that evaluate the proposed project (including but not limited to  
23 reports, delineations, assessments and/or mitigation plans associated with critical area reviews)  
24 and, if not otherwise stated on the document providing notice of application, the location where  
25 the application and any studies can be reviewed;
- 26 (e) Any other information determined appropriate by the County;
- 27 (f) A statement indicating those development regulations that will be used for project mitigation or  
28 a determination of consistency if they have been identified at the time of notice;
- 29 (g) A statement of the minimum public comment period which shall be 14 calendar days for all  
30 project permits except for shoreline substantial development, shoreline conditional use,  
31 shoreline variance and major project permits for mitigation banks which shall have a minimum  
32 comment period of no more than 30 calendar days;
- 33 (h) A statement of the right of any person to comment on the application and receive notice of and  
34 participate in any hearings, request a copy of the decision once made and to appeal a decision  
35 when allowed by law. The department may accept public comments at any time prior to the  
36 close of the open record public hearing, or if there is no public hearing, prior to the decision on  
37 the project permit. In addition, the statement shall indicate that any person wishing to receive  
38 personal notice of any decisions or hearings must notify the department.
- 39 (4) The department shall issue a notice of application in the following manner:

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

- 1 (a) The notice shall be published once in the official County newspaper and on the Whatcom  
2 County website. The applicant shall bear the responsibility of paying for such notice.  
3 (b) Additional notice shall be given using the following method:  
4 i. For sites within urban growth areas: Application notice shall be sent to all property owners  
5 within 300 feet of the external boundaries of the subject property as shown by the records  
6 of the County assessor;  
7 ii. For sites outside urban growth areas: Application notice shall be sent to all property owners  
8 within 1,000 feet of the external boundaries of the subject property as shown by the records  
9 of the County assessor.
- 10 (5) The County shall send notices of application to neighboring cities and other agencies or tribes that  
11 will potentially be affected, either directly or indirectly, by the proposed development. Notice shall  
12 also be given to public utilities, if within 500 feet of the area submitted in the application.
- 13 (6) All public comments received on the notice of application must be received by the department of  
14 planning and development services by 4:30 p.m. on or before the last day of the comment period.
- 15 (7) Except for a determination of significance, the County shall not issue its SEPA threshold  
16 determination or issue a decision or recommendation on a permit application until the end of the  
17 public comment period on the notice of application. If an optional Determination of Nonsignificance  
18 (DNS) process is used, the notice of application and DNS comment period shall be combined.
- 19 (8) Public notice given for project permit applications, SEPA documents, project hearings, and appeals  
20 hearings as required by this chapter and other provisions of the County code may be combined  
21 when practical, where such combined notice will expedite the permit review process, and where  
22 provisions applicable to each individual notice are met through the combined notice.

### 22.05.080 Posting of Application.

23 Where posting of public notice is required per WCC [22.05.020](#), the department shall post public notices  
24 of the proposal on all road frontages of the subject property and adjacent shorelines on or before the  
25 notice of application date and shall be visible to adjacent property owners and to passing motorists. Said  
26 notices shall remain in place until three days after the comment period closes.  
27

### 22.05.090 Open Record Public Hearings.

- 28 ~~(1) As shown in~~ Pursuant to WCC [22.05.020](#) (Project Permit Processing Table), Type III and Type IV  
29 applications and appeals of Type I and Type II applications require an open record public hearing.  
30 ~~(2) These Open Record Hearing Notice. Public hearings are subject to the~~ shall be noticed as follows:  
31 ~~(a)~~ a. \_\_\_\_\_ The Hearing Examiner shall publish a notice of open record hearing once in the official  
32 County newspaper and on the Whatcom County website at least 14 calendar days prior to the  
33 hearing. The notice shall consist of the date, time, place, and type of the hearing. In addition,  
34 personal notice shall be provided to any person who has requested such notice in a timely  
35 manner, consistent with WCC [22.05.070](#) ~~(3)(a)~~ (Notice of Application).  
36 ~~(b)~~ b. \_\_\_\_\_ Within two days of the published notice the applicant shall be responsible for posting  
37 three copies of the notice in a conspicuous manner on the property upon which the use is  
38 proposed. Notices shall be provided by the Hearing Examiner.  
39

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

- 1 | ~~(c)~~c. \_\_\_\_\_ An affidavit verifying distribution of the notice must be submitted to the Hearing  
2 | Examiner two working days prior to the open record hearing.
- 3 | ~~(d)~~d. \_\_\_\_\_ The Hearing Examiner shall send notice of an open record hearing to neighboring cities  
4 | and other agencies or tribes that will potentially be affected, either directly or indirectly by the  
5 | proposed development. The Hearing Examiner shall be responsible for such notification.
- 6 | ~~(e)~~e. \_\_\_\_\_ The applicant shall pay all costs associated with providing notice.
- 7 | ~~(2)~~(3) **One Open Record Hearing.** A project proposal subject to this chapter shall be provided with no  
8 | more than one open record hearing and one closed record hearing pursuant to RCW Chapter [36.70B](#)  
9 | ~~RCW~~. This restriction does not apply to an appeal of a determination of significance as provided in  
10 | RCW [43.21C.075](#).
- 11 | ~~(3)~~(4) **Combined County and Agency Hearing.** Unless otherwise requested by an applicant, the County  
12 | shall allow an open record hearing to be combined with a hearing that may be necessary by another  
13 | local, state, regional, federal or other agency for the same project if the joint hearing can be held  
14 | within the time periods specified in Chapter [22.05](#) WCC, or if the applicant agrees to waive such  
15 | time periods in the event additional time is needed in order to combine the hearings. The combined  
16 | hearing shall be conducted in Whatcom County pursuant to Chapter [36.70B](#) RCW.
- 17 | ~~(4)~~(5) Quasi-judicial actions, including applications listed as Type III and IV applications in  
18 | WCC [22.05.020](#), are subject to the appearance of fairness doctrine, Chapter [42.36](#) RCW. The Hearing  
19 | Examiner shall administer the open record hearing and issue decisions or recommendations in  
20 | accordance with Chapter [42.36](#) RCW.
- 21 | **22.05.100 Application Consistency Review and Recommendations.**
- 22 | (1) During project permit review, the review authority shall determine if the project proposal is  
23 | consistent with the County's comprehensive plan, other adopted plans, and existing regulations and  
24 | development standards.
- 25 | ~~(1)~~(i) \_\_\_\_\_ For Type I and II applications, the conclusions of a consistency determination made  
26 | under this section shall be documented in the project permit decision.
- 27 | ~~(2)~~(ii) \_\_\_\_\_ For Type III and IV applications the department shall prepare a staff report on the  
28 | proposed development or action. Staff shall file one consolidated report with the Hearing  
29 | Examiner at least 10 calendar days prior to the scheduled open record hearing. The staff report  
30 | shall:
- 31 | ~~(i)~~i. \_\_\_\_\_ Summarize the comments and recommendations of County departments, affected agencies,  
32 | special districts and public comments received within the 14-day or 30-day comment period  
33 | as established in WCC [22.05.070](#)(6).
- 34 | ~~(ii)~~ii. \_\_\_\_\_ Provide an evaluation of the project proposal for consistency as indicated in this section.
- 35 | ~~(iii)~~iii. \_\_\_\_\_ Include recommended findings, conclusions, and actions regarding the proposal.
- 36 | (2) **Additional Requirements.** For all project permit applications, if more information is required to  
37 | determine consistency at any time in review of the application, the department may issue a notice  
38 | of additional requirements. The applicant notice of additional requirements shall have allow the

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

- 1 applicant 180 calendar days from the date of issuance of said notice to submit all required  
2 information.
- 3 (3) **Permit Inactivity.** Any application that remains inactive for a period of 180 days shall expire and a  
4 new application and repayment of fees shall be required to reactivate the proposal; provided, that  
5 the Director or designee may grant a 1-year extension for good cause extend this period for no  
6 more than cumulative 24 months upon written request by the applicant, provided the request is  
7 submitted before the end of the first 180-day period. A notice of additional requirements is not a  
8 final administrative determination.
- 9 (4) **Burden of Proof.** Permit applicants/proponents have the burden of proving that the proposed  
10 development is consistent with all applicable policies and regulations
- 11 ~~(3)~~(5) **Permit conditions.** In granting, revising, or extending a permit, the decision maker may attach  
12 such conditions, modifications, or restrictions thereto regarding the location, character, and other  
13 elements of the proposed development deemed necessary to assure that the development will be  
14 consistent with the applicable policies and regulations (including the policies and provisions of the  
15 Shoreline Management Act for shoreline permits). In cases involving unusual circumstances or  
16 uncertain effects, a condition may be imposed to require monitoring with future review or  
17 reevaluation to assure conformance. If the monitoring plan is not implemented, the permittee may  
18 be found to be noncompliant and the permit may be revoked in accordance with WCC 22.05.150  
19 (Permit Revocation).
- 20 **22.05.110 Final Decisions – Type I, II, and III applications.**
- 21 (1) The Director or designee's final decision on all Type I or II applications shall be in the form of a  
22 written determination or permit. The determination or permit may be granted subject to conditions,  
23 modifications, or restrictions that are necessary to comply with all applicable codes.
- 24 (2) The Hearing Examiner's final decision on all Type III applications per WCC 22.05.020 or appeals per  
25 WCC 22.05.160(1) shall either grant or deny the application or appeal.
- 26 (a) The Hearing Examiner may grant Type III applications subject to conditions, modifications or  
27 restrictions that the Hearing Examiner finds are necessary to make the application compatible  
28 with its environment, carry out the objectives and goals of the comprehensive plan, statutes,  
29 ordinances and regulations as well as other official policies and objectives of Whatcom County.
- 30 (b) Requirements:
- 31 (i) Performance bonds or other security, acceptable to the prosecuting attorney, may be  
32 required to ensure compliance with the conditions, modifications and restrictions.
- 33 (ii) Fossil or Renewable Fuel Refinery or Fossil or Renewable Fuel Transshipment Facilities: The  
34 applicant shall provide insurance or other financial assurance acceptable to the prosecuting  
35 attorney consistent with Section 22.05.125.
- 36 (c) The Hearing Examiner shall render a final decision within 14 calendar days following the  
37 conclusion of all testimony and hearings. Each final decision of the Hearing Examiner shall be in  
38 writing and shall include findings and conclusions based on the record to support the decision.

**Comment [CES4]:** Combined 23.60.090 (Permit application review) with this section and normalized the extension date to 1-year.

**Comment [CES5]:** Moved from 23.60.120

**Comment [CES6]:** Moved from 23.60.140 (Permit Conditions).

**Comment [CES7]:** This section has been revised since the P/C acted on it to incorporate as existing text Council's Cherry Point amendments (Ord. 2021-046, 7/27/2021).

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

- 1 (d) No final decision of the Hearing Examiner shall be subject to administrative or quasi-judicial  
2 review, except as provided herein.
- 3 (e) The applicant, any person with standing, or any County department may appeal any final  
4 decision of the Hearing Examiner to superior court, except as otherwise specified in  
5 WCC 22.05.020.
- 6 **22.05.120 Recommendations and Final Decisions to County Council – Type IV Applications.**
- 7 (1) For Type IV applications per WCC [22.05.020](#) the Hearing Examiner's recommendations to the County  
8 Council may be to grant, grant with conditions or deny an application. The Hearing Examiner's  
9 recommendation may include conditions, modifications or restrictions as may be necessary to make  
10 the application compatible with its environment, carry out the objectives and goals of the  
11 comprehensive plan, statutes, ordinances and regulations as well as other official policies and  
12 objectives of Whatcom County.
- 13 (2) Each recommended decision of the Hearing Examiner for an application identified as a Type IV  
14 application per WCC [22.05.020](#) shall be in writing to the clerk of the County Council and shall include  
15 findings and conclusions based upon the record to support the decision. Such findings and  
16 conclusions shall also set forth the manner in which the decision carries out and conforms to the  
17 County's comprehensive plan and complies with the applicable statutes, ordinances or regulations.
- 18 (3) The deliberation of the County Council on quasi-judicial actions shall be in accordance with  
19 WCC [22.05.090](#)(4) and Chapter [42.36](#) RCW.
- 20 (4) For planned unit developments and major project permits the following shall apply:
- 21 (a) The recommendation of the Hearing Examiner regarding planned unit developments and major  
22 project permits shall be based upon the criteria set forth in WCC [20.85.335](#) and [20.88.130](#),  
23 respectively.
- 24 (b) The Hearing Examiner shall file the recommendation with the clerk of the County Council within  
25 21 calendar days following the conclusion of the open record hearing.
- 26 (c) The County Council shall conduct the following within the specified time frames, except as  
27 provided in subsection (4)(c)(iii) of this section:
- 28 i. Hold a public meeting, not an open record public hearing, to deliberate on the project  
29 application within 28 calendar days after receiving the Hearing Examiner's recommendation.
- 30 ii. Issue a final written decision within 21 calendar days of the public meeting.
- 31 iii. The County Council may exceed the time limits in subsection (4)(c)(i) or (ii) of this section if  
32 the County Council meeting schedule does not accommodate a meeting within the above  
33 time frames, or if the County Council makes written findings that a specified amount of  
34 additional time is needed to process a specific application or project type, per  
35 RCW [36.70B.080](#)(1).
- 36 (5) The County Council's final written decision may include conditions when the project is approved and  
37 shall state the findings of fact upon which the decision is based.
- 38 (a) Performance bonds or other security, acceptable to the prosecuting attorney, may be required  
39 to ensure compliance with the conditions, modifications and restrictions.

**Comment [CES8]:** This section has been revised since the P/C acted on it to incorporate as existing text Council's Cherry Point amendments (Ord. 2021-046, 7/27/2021)

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

- 1 (b) Fossil or Renewable Fuel Refinery or Fossil or Renewable Fuel Transshipment Facilities: The  
2 applicant shall provide insurance or other financial assurance acceptable to the prosecuting  
3 attorney consistent with Section 22.05.125.
- 4 (6) Any deliberation or decision of the County Council shall be based solely upon consideration of the  
5 record established by the Hearing Examiner, the recommendations of the Hearing Examiner and the  
6 criteria set forth in applicable County code, the County Comprehensive Plan if applicable, and the  
7 County Shoreline Management Program, including compliance with SEPA, WAC 197-11 (SEPA Rules)  
8 as adopted and modified in the County Code, and the County's adopted SEPA policies.

### 22.05.125 Proof of Insurance for Hazards Created in the County

9 For expansion projects requiring approval under a Conditional Use Permit or Major Project Permit at  
10 new or existing facilities per WCC 20.68.153 or WCC 20.68.154, financial assurance for the benefit of  
11 Whatcom County shall be required. For such expansion projects, a permittee must demonstrate proof of  
12 financial assurance (such as trust funds, letters of credit, insurance, self-insurance, financial tests,  
13 corporate guarantees, payment bonds, or performance bonds) sufficient to comply with the financial  
14 responsibility requirements set forth in State and Federal law, as applicable, prior to permit approval by  
15 a Whatcom County Decision Maker. If the financial assurance is in the form of insurance policies, the  
16 policies must name Whatcom County as an additional insured and provide Whatcom County with a  
17 certificate of insurance to that effect.  
18

19 The permittee must maintain the approved level of financial assurance coverage for new or expanded  
20 uses while operating the permitted facility. At the request of the permittee, the Whatcom County  
21 Decision Maker may approve new or altered forms of financial assurance to meet the requirements of  
22 this section, provided that the new or altered form is consistent with the scope and intent of the original  
23 permit condition.

### 22.05.126 Supplemental Procedures for Fossil Fuel Refinery and Fossil Fuel Transshipment Facility Permitting

- 24 (1) Upon request of the County, Fossil Fuel Refineries or Fossil Fuel Transshipment Facilities shall fill out  
25 a supplemental checklist for the purpose of determining whether a project qualifies as a permitted  
26 use or requires a conditional use permit as specified in WCC 20.68.153 or WCC 20.68.154. The  
27 checklist shall contain supplemental information to include:  
28  
29 (a) Impact on Maximum Atmospheric Crude Distillation Capacity (MACDC), Maximum  
30 Transshipment Capacity, and fossil fuel unit train shipment frequency from the proposed  
31 activity;  
32 (b) Confirmation of the acceptance of potential permit conditions as outlined in 20.68.068  
33 subsection (23);  
34 (c) Applicant name, property owner information, and parcel information as appropriate; and  
35 (d) An attestation by the applicant regarding the accuracy of the information contained therein,  
36 signed by the applicant and certified by a Notary Public.  
37  
38 (2) Confidential Business Information

**Comment [CES9]:** This section has been inserted since the P/C acted on it to incorporate as existing text Council's Cherry Point amendments (Ord. 2021-046, 7/27/2021).

**Comment [CES10]:** This section has been inserted since the P/C acted on it to incorporate as existing text Council's Cherry Point amendments (Ord. 2021-046, 7/27/2021).

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

- 1 (a) For the purpose of checklists, permit applications and all other materials submitted by Fossil  
2 Fuel Refineries or Fossil Fuel Transshipment Facilities for activities in the Cherry Point Heavy  
3 Impact Industrial District, the following shall apply:  
4 (i) The applicant shall clearly identify information the applicant considers to be Confidential  
5 Business Information, not subject to disclosure under chapter 42.56 RCW (Public Records  
6 Act) and/or WCC 1.32.090. If such information is contained in submittal documents, the  
7 applicant shall submit two copies of materials for County use as follows:  
8 1. A copy with Confidential Business Information clearly identified, with a watermark  
9 indicating the document contains such information; and  
10 2. A copy with Confidential Business Information redacted, and a watermark added  
11 indicating that the document does not contain such information and is suitable for  
12 public disclosure.  
13 (ii) Confidential Business Information may include:  
14 1. Processing equipment technical specifications on internals, sidestream/pumparounds,  
15 design specifications, and process controls;  
16 2. Process unit design, instrumentation and controls;  
17 3. Feedstock, product, or process unit pump capacity and configuration; and  
18 4. Contractual agreements and all terms contained therein.  
19 (iii) The information listed above is not meant to be all-inclusive. Other information related to  
20 the applicant's processing activities, feedstock and product purchase, and/or sale and  
21 transportation methods and costs may be Confidential Business Information and, if so, shall  
22 be marked as such when submitted.  
23 (iv) Calculation and permit material submittals may contain, but are not required to contain any  
24 of the above information.  
25 (v) Where no increase to MACDC, Maximum Transshipment Capacity, or unit train frequency is  
26 proposed, submittal of Confidential Business Information specifically related to the criteria  
27 of WCC 20.68.153 and WCC 20.68.154 shall not be required to be submitted with the permit  
28 application materials.  
29 (3) Where calculations are to be submitted for Maximum Transshipment Capacity of Maximum  
30 Atmospheric Crude Distillation Capacity, the applicant shall provide calculations performed and  
31 certified by a professional engineer licensed in the state of Washington, clearly indicating the impact  
32 on MACDC and Transshipment Capacity. Confidential Business Information shall be clearly identified  
33 as required by WCC 22.05.126(2)(a)(i) above.  
34 (4) If the County receives a public records request for records containing information the applicant has  
35 clearly indicated to be Confidential Business Information pursuant to WCC 22.05.126(2)(a)(i), the  
36 County will notify the applicant of the request and provide the applicant with at least 30 days to file  
37 for an injunction under RCW 42.56.540 to prevent the disclosure of such information. If the  
38 applicant does not file for an injunction within the period of time set by the County, the County will  
39 disclose the records containing the information that the applicant has designated as Confidential  
40 Business Information pursuant to WCC 22.05.126(2)(a)(i).

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

### 22.05.130 Permit Review Time Frames.

(1) The County shall issue a notice of final decision for all permit types, including procedures for administrative appeal and notice that affected property owners may request a change in valuation for property tax purposes, to the applicant, the Whatcom County assessor, and any person who requested notice or submitted substantive comments on the application within 120 calendar days of the date the department determined the application complete, except as provided below:

- (a) The following time periods shall be excluded from the calculation of the number of days elapsed:
- i. Any period during which the applicant has been required by the County to correct plans, perform required studies, or provide additional, required information through a notice of additional requirements, per WCC [22.05.100\(3\)](#). The period shall be calculated from the date the County issues a notice of additional requirements until the date the County receives all of the requested additional information;
  - ii. Any period during which an environmental impact statement is being prepared following a determination of significance pursuant to Chapter [43.21C](#) RCW and WCC Title [16](#);
  - iii. The period specified for administrative appeals of project permits as provided in Chapter [2.11](#) WCC;
  - iv. The period specified for administrative appeals of development standards as provided in WCC [12.08.035\(l\)](#);
  - v. Any period in which the applicant has not met public notification requirements;
  - vi. Any period of time mutually agreed upon in writing by the applicant and the County.
- (b) The time limits established by this section shall not apply to a project permit application that:
- i. Requires an amendment to the Whatcom County comprehensive plan or a development regulation in order to obtain approval.
  - ii. Requires approval of a new fully contained community as provided in RCW [36.70A.350](#), a master planned resort as provided in RCW [36.70A.360](#), or the siting of an essential public facility as provided in RCW [36.70A.200](#).
  - iii. Is substantially revised by the applicant, including all redesigns of proposed land divisions, in which case a new time period shall start from the date at which the revised project application is determined to be complete.

- (c) Additionally, for shoreline permits and exemptions, and pursuant to WAC 173-27-125, the following special procedures apply to Washington State Department of Transportation (WSDOT) projects:
- i. Pursuant to RCW 47.01.485, the Legislature established a target of 90 days review time for local governments.
  - ii. Pursuant to RCW 90.58.140, WSDOT projects that address significant public safety risks may begin twenty-one days after the date of filing if all components of the project will achieve no net loss of shoreline ecological functions.

(d) The County may extend notice of final decision on the project if the County can document legitimate reasons for such a delay. In such a case the County shall provide written

**Comment [CES11]:** Added per Periodic Review Checklist, Item 2015.a, and Scoping Document, Item #2e.

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

- 1 notice to the applicant at least 14 calendar days prior to the deadline for the original notice of  
2 final decision. The notice shall include a statement of reasons why the time limits have not been  
3 met and a date of issuance of a notice of final decision.
- 4 (2) If an applicant believes a project permit application has not been acted upon by the County in a  
5 timely manner or otherwise consistent with this chapter, the applicant or authorized representative  
6 may request a meeting with the Director to resolve the issue. Within 14 calendar days ~~of~~ after the  
7 meeting, the Director shall:
- 8 (a) Approve the permit if it is within the Director's authority to do so, provided the approval would  
9 not violate state or County regulations; or  
10 (b) Deny the permit if it is within the Director's authority to do so; or  
11 (c) Respond in writing with the department's position, or a mutually acceptable resolution of the  
12 issue, which may include a partial refund of application fees at the Director's discretion.
- 13 (3) Any final order, permit decision or determination issued by Whatcom County shall include a notice  
14 to the applicant of his or her appeal rights per WCC [22.05.160](#) (Appeals).
- 15 **22.05.140 Expiration of Project Permits.**
- 16 (1) This section shall apply to non-shoreline project permits and shoreline statements of exemption.  
17 Expiration of shoreline permits shall be subject to the rules of WCC 22.07.080 (Expiration of  
18 Shoreline Permits).
- 19 ~~(1)(2)~~ Project permit approval status shall expire two years from the date of approval except where a  
20 different duration of approval is authorized by Whatcom County Code, or is established by a court  
21 decision or state law, or executed by a development agreement. The decision maker may extend  
22 this period up to one year from the date of original expiration upon written request by the  
23 applicant.
- 24 ~~(2)(3)~~ Any complete project permit application for which no information has been submitted in  
25 response to the department's notice of additional requirements per WCC [22.05.100](#)(3) shall expire  
26 at the end of the time limit established in 22.05.100(3).
- 27 ~~(3)(4)~~ For projects that have received a SEPA determination of significance per Chapter [16.08](#) WCC, all  
28 underlying project permit applications shall expire when one of the following occurs:
- 29 (a) The applicant has not in good faith maintained a contract with a person or firm to complete the  
30 environmental impact statement (EIS) as specified in the scoping document. The applicant is  
31 responsible for informing the County of the status of such contract. If there is no notice given to  
32 the County, all underlying project permit applications shall expire upon the end date of the  
33 contract; or  
34 (b) The mutually agreed time frame to complete the draft EIS or final EIS has lapsed.
- 35 (4) Project permits which received preliminary approval or a final decision prior to February 22, 2009,  
36 that did not include an expiration time frame in the conditions of approval shall expire on June 16,  
37 2020.

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

1 | **22.05.150 Permit Revocation Procedure.**

- 2 (1) Upon notification by the Director that a substantial violation of the terms and conditions of any  
3 | previously granted zoning conditional use, shoreline substantial development, or shoreline  
4 conditional use permit exists, the Hearing Examiner shall issue a summons as per WCC [2.11.220](#) to  
5 the permit holder requiring said permit holder to appear and show cause why revocation of the  
6 permit should not be ordered. Failure of the permit holder to respond may be deemed good cause  
7 for revocation.
- 8 (2) Upon issuance of a summons as set forth in subsection (1) of this section, the Hearing Examiner shall  
9 schedule an open record hearing to review the alleged violations. The summons shall include notice  
10 of the hearing and shall be sent to the permit holder and the Director of planning and development  
11 services no less than 12 calendar days prior to the date of the hearing. At the hearing the Hearing  
12 Examiner shall receive evidence of the alleged violations and the responses of the permit holder, as  
13 per the business rules of the Hearing Examiner's office. Testimony shall be limited to that of the  
14 division and the permit holder except where additional evidence would be of substantial value in  
15 determining if revocation should be ordered. The land use division's evidence may include the  
16 testimony of witnesses.
- 17 (3) Upon a showing of violation by a preponderance of the evidence as alleged, the Hearing Examiner  
18 may revoke the permit or allow the permit holder a reasonable period of time to cure the violation.  
19 If the violation is not cured within the time set by the Hearing Examiner, the permit shall be  
20 revoked. Where a time to cure the violation has been set out, no further hearing shall be necessary  
21 prior to the revocation. The permit holder shall have the burden of proving that the violation has  
22 been cured within the time limit previously set. Such evidence as is necessary to demonstrate that  
23 the violation has been cured may be submitted to the Hearing Examiner by either the permit holder  
24 or the Director of planning and development services. Any revocation shall be accompanied by  
25 written findings of fact and conclusions of law. The permit holder shall be notified of any revocation  
26 within 14 calendar days of the revocation.

27 | **22.05.160 Appeals.**

- 28 (1) Any person with standing may appeal any order, final permit decision, or final administrative  
29 determination made by the Director or designee in the administration or enforcement of any  
30 chapter to the Hearing Examiner, who has the authority to hear and decide such appeals per  
31 WCC [2.11.210](#).
- 32 (a) To be valid, an appeal shall be filed, on a form provided by the department, with the  
33 department within 14 calendar days of the issuance of a final permit decision and shall be  
34 accompanied by a fee as specified in the Unified Fee Schedule. The written appeal shall include:
- 35 i. The action or decision being appealed and the date it was issued;  
36 ii. Facts demonstrating that the person is adversely affected by the decision;  
37 iii. A statement identifying each alleged error and the manner in which the decision fails to  
38 satisfy the applicable decision criteria;  
39 iv. The specific relief requested; and

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

- 1 v. Any other information reasonably necessary to make a decision on the appeal.  
2 (b) The Hearing Examiner shall schedule an open record public hearing on the appeal to be held  
3 within 60 calendar days following the department's receipt of the application for appeal unless  
4 otherwise agreed upon by the County and the appellant.  
5 (c) A party who fails to appeal within 14 calendar days is barred from appeal, per  
6 Chapter [2.11](#) WCC.  
7 (d) The business rules of the Hearing Examiner shall govern appeal procedures. The Hearing  
8 Examiner shall have the authority granted in the business rules, and that authority is  
9 incorporated herein by reference. See also WCC [2.11.220](#).

10 ~~(2)~~ For non-shoreline permits, ~~The applicant,~~ any person with standing, or any County department may  
11 appeal any final decision of the Hearing Examiner to superior court or other body as specified by  
12 WCC [22.05.020](#). The appellant shall file a written notice of appeal within 21 calendar days of the  
13 final decision of the Hearing Examiner, as provided in RCW [36.70C.040](#).

14 ~~(2)~~(3) For shoreline permits, after the issuance of the appeal determination, a party with standing  
15 may appeal to the Shorelines Hearings Board a decision on a shoreline substantial development  
16 permit, shoreline variance, or shoreline conditional use pursuant to RCW 90.58.180 within 21 days  
17 of the "date of filing" as defined in this program and RCW 90.58.140(6). The appeal to the Shorelines  
18 Hearing Board shall be filed in accordance with the provisions of Chapter 461-08C WAC. [Appeals of a](#)  
19 [decision of the Department of Ecology shall be filed in accordance with the provisions of Chapter](#)  
20 [461-08C WAC.](#)

Comment [AP12]: Updated per Periodic Review Checklist, Item 2017.d, and Scoping Document Item #2a.

Comment [CES13]: Moved from 23.60.150 (Notice of Decision, Reconsideration, and Appeal)

### 21 **22.05.170 Annual Report.**

22 Staff shall prepare an annual report on the implementation of this chapter and submit it to the Council.

### 23 **22.05.180 Interpretation, Conflict and Severability.**

- 24 (1) **Interpret to Protect Public Welfare.** In the event of any discrepancies between the requirements  
25 established herein and those contained in any other applicable regulation, code or program, the  
26 regulations which are more protective of the public health, safety, environment and welfare shall  
27 apply.  
28 (2) **Severability.** The provisions of this chapter are severable. If a section, sentence, clause, or phrase of  
29 this title is adjudged by a court of competent jurisdiction to be invalid, the decision shall not affect  
30 the remaining portions of this chapter.

# Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

## Chapter ~~23.60~~ 22.07 Additional Requirements for Shoreline Permits and Exemptions

Comment [CES14]: Though this is a new chapter, the existing language from Title 20 is not shown as new; only changes to that existing language is shown in strikeout/underline.

### ~~23.60.005~~ 22.07.010 General Requirements.

- A. In addition to the requirements of WCC Chapter 22.05 (Project Permits), shoreline permits shall be subject to the provisions of this chapter.
- B. To be authorized, all shoreline activities, uses, and developments shall be ~~planned and carried out~~ done in a manner ~~that is~~ consistent with this program and ~~the policy of the Shoreline Management Act~~ as required by RCW 90.58.140(1), regardless of whether a shoreline permit, statement of exemption, shoreline variance, or shoreline conditional use permit is required.
- C. All final shoreline substantial development, variance, and conditional use permit decisions or recommendations shall be filed with the Department of Ecology pursuant to WCC 22.07.060.
- D. A development or use that is listed as a shoreline conditional use pursuant to this program or is an unlisted use must obtain a shoreline conditional use permit even if the development or use does not require a substantial development permit.
- E. When a development, use, or activity is proposed that does not comply with the bulk, dimensional and/or performance standards of the program, such development or use shall only be authorized by approval of a shoreline variance even if the development or use does not require a substantial development permit.
- F. All permits or statements of exemption issued for development, use, or activity within shoreline jurisdiction shall include written findings prepared by the Director, including compliance with bulk and dimensional standards and policies and regulations of this program. The Director may attach conditions to the approval to project permits as necessary to assure consistency of the project with the Act and the program.
- G. Pursuant to WAC 173-27-044, requirements to obtain a substantial development permit, shoreline conditional use permit, shoreline variance, letter of exemption, or other review conducted by a local government to implement the Shoreline Management Program do not apply to:
- 1. Remedial Action.** Any person conducting a remedial action at a facility pursuant to a consent decree, order, or agreed order issued pursuant to chapter 70.105D RCW, or to the Department of Ecology (Ecology) when it conducts a remedial action under chapter 70.105D RCW. Ecology must ensure compliance with the substantive requirements of this chapter through the consent decree, order, or agreed order issued pursuant to chapter 70.105D RCW, or during the Ecology-conducted remedial action, through the procedures developed by Ecology pursuant to RCW 70.105D.090;
  - 2. Boatyard Facilities.** Any person installing site improvements for stormwater treatment in an existing boatyard facility to meet requirements of a national pollutant discharge elimination system stormwater general permit. Ecology must ensure compliance with the substantive requirements of this chapter through the review of engineering reports, site plans, and other documents related to the installation of boatyard stormwater treatment facilities; or

Comment [CES15]: Moved from 22.07.020

# Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

- 1 **3. Washington State Department of Transportation (WSDOT) facility maintenance and safety**  
2 **improvements. Any Washington State Department of Transportation (WSDOT) projects or**  
3 **activities that meet the conditions of RCW 90.58.356.**
- 4 **A.H. All applications for shoreline substantial development permits or permit revisions shall be**  
5 **submitted to the Department of Ecology upon a final decision by local government pursuant to WAC**  
6 **173-27-130. "Final decision by local government" shall mean the order of ruling, whether it be an**  
7 **approval or denial, that is established after all local administrative appeals related to the permit**  
8 **have concluded or the opportunity to initiate such appeals has lapsed.**
- 9 ~~**23.60.22.07.020 Exemptions from Shoreline Substantial Development Permits process.**~~
- 10 **A. ~~23.60.021~~ Application and interpretation.**
- 11 1. An exemption from the substantial development permit process is not an exemption from  
12 compliance with the Act, ~~or~~ this program, or from any other regulatory requirements. To be  
13 authorized, all uses, ~~and~~ developments, and activities must be consistent with the policies and  
14 regulatory provisions of this program and the Act. A statement of exemption shall be obtained  
15 for exempt activities consistent with the below provisions of WCC 23.60.020.
- 16 2. Exemptions shall be construed narrowly. Only those developments that meet the precise terms  
17 of one or more of the listed exemptions may be granted exemptions from the substantial  
18 development permit process.
- 19 3. The burden of proof that a development, ~~or~~ use, or activity is exempt is on the  
20 applicant/proponent of the exempt development action.
- 21 4. If any part of a proposed development is not eligible for exemption, then a substantial  
22 development permit is required for the entire project.
- 23 ~~5. A development or use that is listed as a conditional use pursuant to this program or is an~~  
24 ~~unlisted use, must obtain a conditional use permit even if the development or use does not~~  
25 ~~require a substantial development permit.~~
- 26 ~~6. When a development or use is proposed that does not comply with the bulk, dimensional~~  
27 ~~and/or performance standards of the program, such development or use shall only be~~  
28 ~~authorized by approval of a shoreline variance even if the development or use does not require~~  
29 ~~a substantial development permit.~~
- 30 ~~7. All permits or statements of exemption issued for development or use within shoreline~~  
31 ~~jurisdiction shall include written findings prepared by the administrator, including compliance~~  
32 ~~with bulk and dimensional standards and policies and regulations of this program. The~~  
33 ~~administrator may attach conditions to the approval of exempt developments and/or uses as~~  
34 ~~necessary to assure consistency of the project with the Act and the program.~~
- 35 ~~**B. 23.60.022 Exemptions listed.**~~
- 36 ~~1.B. The following activities shall be considered exempt from the requirement to obtain a shoreline~~  
37 ~~substantial development permit. A statement of exemption, as provided for in WCC 23.60.023 of~~  
38 ~~this program shall be required for those activities listed in WCC 23.60.023(B) and (C). Certain~~  
39 ~~developments, uses, or activities are exempt from the substantial development permit~~

Comment [CES16]: Language from RCW 90.58.355.

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

1 requirements of the Act and this program. These developments, uses, or activities are those set  
2 forth in WAC 173-27-040 (or as amended), and do not meet the definition of substantial  
3 development under RCW 90.58.030(3)(e). A summary of exempt developments is listed below, the  
4 application of which shall be guided by WAC 173-27-040 (or as amended).

5 ~~2-1.~~ Any development of which the total cost or fair market value, whichever is higher, does not  
6 exceed ~~\$5,7187,047~~, or as amended by the state Office of Financial Management, if such  
7 development does not materially interfere with the normal public use of the water or shorelines  
8 of the state. For the purposes of determining whether or not a permit is required, the total cost  
9 or fair market value shall be based on the value of development that is occurring on shorelines  
10 of the state as defined in RCW 90.58.030(2)(c). The total cost or fair market value of the  
11 development shall include the fair market value of any donated, contributed or found labor,  
12 equipment or materials.

13 ~~3-2.~~ Normal maintenance or repair of existing structures or developments, including damage by  
14 accident, fire or elements. Normal maintenance includes those usual acts to prevent a decline,  
15 lapse or cessation from a lawfully established condition. Normal repair means to restore a  
16 development to a state comparable to its original condition within a reasonable period after  
17 decay or partial destruction except where repair causes substantial adverse effects to the  
18 shoreline resource or environment. Replacement of a structure or development may be  
19 authorized as repair where such replacement is the common method of repair for the type of  
20 structure or development and the replacement structure or development is comparable to the  
21 original structure or development including but not limited to its size, shape, configuration,  
22 location and external appearance and the replacement does not cause substantial adverse  
23 effects to shoreline resources or the environment.

24 ~~4-3.~~ Construction of the normal protective bulkhead common to single-family residences. A normal  
25 protective bulkhead includes those structural and nonstructural developments installed at or  
26 near, and parallel to, the ordinary high water mark for the sole purpose of protecting an existing  
27 single-family residence and appurtenant structures from loss or damage by erosion. A normal  
28 protective bulkhead is not exempt if constructed for the purpose of creating dry land. When a  
29 vertical or near vertical wall is being constructed or reconstructed, not more than one cubic yard  
30 of fill per one foot of wall may be used for backfill. When an existing bulkhead is being repaired  
31 by construction of a vertical wall fronting the existing wall, it shall be constructed no further  
32 waterward of the existing bulkhead than is necessary for construction of new footings. When a  
33 bulkhead has deteriorated such that an ordinary high water mark has been established by the  
34 presence and action of water landward of the bulkhead then the replacement bulkhead must be  
35 located at or near the actual ordinary high water mark. Beach nourishment and bioengineered  
36 erosion control projects may be considered a normal protective bulkhead when any structural  
37 elements are consistent with the above requirements and when the project has been approved  
38 by the Washington Department of Fish and Wildlife.

39 ~~5-4.~~ Emergency construction necessary to protect property from damage by the elements. An  
40 emergency is an unanticipated and imminent threat to public health, safety or the environment

**Comment [CES18]:** This number gets updated every 5 years by OFM. As of 2017 it was \$7,047. (Though set in code here, PDS updates our permit application, website, and handouts to reflect OFM's newest threshold amount whenever it's published.

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

1 that requires immediate action within a time too short to allow full compliance with this  
2 program. Emergency construction does not include development of new permanent protective  
3 structures where none previously existed. Where new protective structures are deemed by the  
4 ~~administrator~~ Director to be the appropriate means to address the emergency situation, upon  
5 abatement of the emergency situation the new structure shall be removed or any permit that  
6 would have been required, absent an emergency, pursuant to Chapter 90.58 RCW, Chapter 173-  
7 27 WAC or this program, shall be obtained. All emergency construction shall be consistent with  
8 the policies of Chapter 90.58 RCW and this program. As a general matter, flooding or other  
9 seasonal events that can be anticipated and may occur but that are not imminent are not an  
10 emergency.

11 ~~6-5.~~ Construction and practices normal or necessary for farming, irrigation, and ranching activities,  
12 including agricultural service roads and utilities, construction of a barn or similar agricultural  
13 structure, and the construction and maintenance of irrigation structures including, but not  
14 limited to, head gates, pumping facilities, and irrigation channels; provided, that this exemption  
15 shall not apply to agricultural activities proposed on land not in agricultural use on December  
16 17, 2003; and further provided, that a feedlot of any size, all processing plants, other activities of  
17 a commercial nature, or alteration of the contour of the shorelands by leveling or filling other  
18 than that which results from normal cultivation shall not be considered normal or necessary  
19 farming or ranching activities. A feedlot shall be an enclosure or facility used or capable of being  
20 used for feeding livestock hay, grain, silage, or other livestock feed, but shall not include land for  
21 growing crops or vegetation for livestock feeding and/or grazing, nor shall it include normal  
22 livestock wintering operations.

23 ~~7-6.~~ Construction or modification, by or under the authority of the Coast Guard or a designated port  
24 management authority, of navigational aids such as channel markers and anchor buoys.

25 ~~8-7.~~ Construction on shorelands by an owner, lessee, or contract purchaser of a single-family  
26 residence for their own use or for the use of their family, which residence does not exceed a  
27 height of 35 feet above average grade level and that meets all requirements of the state agency  
28 or local government having jurisdiction thereof. Single-family residence means a detached  
29 dwelling designed for and occupied by one family including those structures and developments  
30 within a contiguous ownership which are a normal appurtenance as defined in Chapter 23.60  
31 WCC ~~23.110.010~~.

32 ~~9-8.~~ Construction of a dock, including a shared moorage, designed for pleasure craft only, for the  
33 private noncommercial use of the owners, lessee, or contract purchaser of a single-family or  
34 multifamily residence. A dock is a landing and moorage facility for watercraft and does not  
35 include recreational decks, storage facilities or other appurtenances. The private dock  
36 exemption applies if either:

37 a. In salt waters, the fair market value of the dock does not exceed \$2,500; or

38 b. In fresh waters the fair market value of the dock does not exceed:

39 i. \$20,000 for docks that are constructed to replace existing docks, are of equal or lesser  
40 square footage than the existing dock being replaced

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

- 1           ii. \$10,000 for all other docks constructed in fresh waters,  
2 ~~but However, if subsequent construction having a fair market value exceeding \$2,500 occurs~~  
3 ~~within five years of the completion of the prior construction, and the combined fair market~~  
4 ~~value of the subsequent and prior construction exceeds the amount specified above, the~~  
5 ~~subsequent construction shall be considered a substantial development for the purpose of this~~  
6 ~~program. For the purpose of this section, saltwater shall include the tidally influenced marine~~  
7 ~~and estuarine water areas of the state including the Pacific Ocean, Strait of Juan de Fuca, Strait~~  
8 ~~of Georgia, and Puget Sound local marine waters and all associated bays, inlets, and estuaries.~~
- 9 ~~10.9.~~ Operation, maintenance, or construction of canals, waterways, drains, reservoirs, or  
10 other facilities that now exist or are hereafter created or developed as a part of an irrigation  
11 system for the primary purpose of making use of system waters including return flow and  
12 artificially stored ground water for the irrigation of lands; provided, that this exemption shall not  
13 apply to construction of new irrigation facilities proposed after December 17, 2003.
- 14 ~~11.10.~~ The marking of property lines or corners on state-owned lands, when such marking does  
15 not significantly interfere with normal public use of the surface of the water.
- 16 ~~12.11.~~ Operation and maintenance of any system of dikes, ditches, drains, or other facilities  
17 existing on June 4, 1975, that were created, developed or utilized, primarily as a part of an  
18 agricultural drainage or diking system.
- 19 ~~13.12.~~ Any project with a certification from the governor pursuant to Chapter 80.50 RCW.
- 20 ~~14.13.~~ Site exploration and investigation activities that are prerequisite to preparation of a  
21 development application for authorization under this program, if:
- 22       i.a. The activity does not interfere with the normal public use of surface waters;  
23       ii.b. The activity will have no significant adverse impact on the environment including but not  
24       limited to fish, wildlife, fish or wildlife habitat, water quality and aesthetic values;  
25       iii.c. The activity does not involve the installation of any structure and, upon completion of the  
26       activity, the vegetation and land configuration of the site are restored to conditions existing  
27       before the activity;
- 28       iv.d. A private entity seeking development authorization under this section first posts a  
29       performance bond or provides other evidence of financial responsibility to the  
30       ~~administrator~~Director to ensure that the site is restored to preexisting conditions; and  
31       v.e. The activity is not subject to the permit requirements of RCW 90.58.550.
- 32 ~~15.14.~~ The process of removing or controlling aquatic noxious weeds, as defined in RCW  
33 17.26.020, through the use of an herbicide or other treatment methods applicable to weed  
34 control that is recommended by a final environmental impact statement published by the  
35 Department of Agriculture or the Department of Ecology jointly with other state agencies under  
36 Chapter 43.21C RCW.
- 37 ~~16.15.~~ Watershed restoration projects as defined in Chapter ~~23.60-23.110~~WCC and WAC 193-  
38 27-040(2)(o) ~~by RCW 89.08.460.~~ The ~~administrator~~Director shall review the projects for  
39 consistency with the program in an expeditious manner and shall issue its decision along with

Comment [CES19]: Amended to more precisely reflect WAC 173-27-040

Formatted: Indent: Left: 0.5", Numbered + Level: 2 + Numbering Style: a, b, c, ... + Start at: 1 + Alignment: Left + Aligned at: 1.88" + Indent at: 2.13"

# Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

1 any conditions within 45 days of receiving a complete application form from the  
2 applicant/proponent. No fee may be charged for accepting and processing applications for  
3 watershed restoration projects as defined in Chapter ~~23.60~~ ~~23.110~~ WCC (Definitions).

4 ~~17.16.~~ A public or private project, the primary purpose of which is to improve fish or wildlife  
5 habitat or fish passage, including restoring native kelp, eelgrass beds and native oysters, when  
6 all of the following apply:

7 ~~i.a.~~ The project has been approved in writing by the Department of Fish and Wildlife as  
8 necessary for the improvement of the habitat or passage and appropriately designed and  
9 sited to accomplish the intended purpose;

10 ~~i.b.~~ The project received hydraulic project approval by the Department of Fish and Wildlife  
11 pursuant to Chapter 77.55 RCW; and

12 ~~c.~~ The ~~administrator~~ Director has determined that the project is consistent with this program.  
13 The ~~administrator~~ Director shall make such determination in a timely manner and provide it  
14 by letter to the project proponent.

15 ~~18.17.~~ The external or internal retrofitting of an existing structure with the exclusive purpose  
16 of compliance with the Americans with Disabilities Act of 1990 or to otherwise provide physical  
17 access to the structure by individuals with disabilities.

## 18 C. ~~23.60.023~~ Statements of Exemption.

19 1. Statements of Exemption are considered Type I applications pursuant to WCC 22.05.020 (Project  
20 Permit Processing Table).

21 ~~1-2.~~ The ~~administrator~~ Director is hereby authorized to grant or deny requests for statements of  
22 exemption from the shoreline substantial development permit ~~requirement process for~~  
23 ~~developments, uses, or activities and developments within shorelines that are specifically listed~~  
24 ~~in WCC 23.60.022 in subsection (B). Such statements shall be applied for on forms provided by~~  
25 ~~the administrator. The statement shall be in writing and shall indicate the specific exemption of~~  
26 ~~this program that is being applied to the development, and shall provide a summary of the~~  
27 ~~administrator's analysis of the consistency of the project with this program and the Act. As~~  
28 ~~appropriate, such statements of exemption shall contain conditions and/or mitigating measures~~  
29 ~~of approval to achieve consistency and compliance with the provisions of the program and Act.~~  
30 ~~A denial of an exemption shall be in writing and shall identify the reason(s) for the denial. The~~  
31 ~~administrator's actions on the issuance of a statement of exemption or a denial are subject to~~  
32 ~~appeal pursuant to WCC 23.60.150.~~

33 ~~2-3.~~ Exempt activities ~~related to any of the following~~ shall not be conducted until a statement of  
34 exemption has been obtained from the ~~administrator~~ Director: ~~dredging, flood control works and~~  
35 ~~instream structures, development within an archaeological or historic site, clearing and ground~~  
36 ~~disturbing activities such as landfill or excavation, dock, shore stabilization, freestanding signs,~~  
37 ~~or any development within an aquatic or natural shoreline designation; provided, that no~~  
38 ~~separate written statement of exemption is required for the construction of a single family~~  
39 ~~residence when a county building permit application has been reviewed and approved by the~~  
40 ~~administrator; provided further, that no statement of exemption is required for emergency~~

Comment [CES20]: Added pursuant to DOE checklist.

Formatted: Indent: Left: 0.5", Numbered + Level: 2 + Numbering Style: a, b, c, ... + Start at: 1 + Alignment: Left + Aligned at: 1.88" + Indent at: 2.13"

Comment [CES21]: Covered by other sections of code

# Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

development pursuant to WAC 173-27-040(2)(d) and that other project permits (e.g., building permits), may serve as a statement of exemption when they contain a statement of review and compliance with the Shoreline Management Program.

~~3.4. No statement of exemption shall be required for other uses or developments exempt pursuant to WCC 23.60.022 unless the administrator has cause to believe a substantial question exists as to qualifications of the specific use or development for the exemption or the administrator determines there is a likelihood of adverse impacts to shoreline ecological functions. Whether or not a written statement of exemption is issued, all permits issued within the area of shorelines shall include a record of review actions prepared by the administrator/Director, including compliance with bulk and dimensional standards and policies and regulations of this program. The administrator may attach conditions to the approval of exempted developments and/or uses as necessary to assure consistency of the project with the Act and this program.~~

Comment [CES22]: Covered by the new language in (2)

4.5. A notice of decision for shoreline statements of exemption shall be provided to the applicant/proponent and any party of record. Such notices shall also be filed with the Department of Ecology, pursuant to the requirements of WAC 173-27-050 when the project is subject to one or more of the following federal permitting requirements:

- a. A U.S. Army Corps of Engineers Section 10 permit under the Rivers and Harbors Act of 1899. (The provisions of Section 10 of the Rivers and Harbors Act generally apply to any project occurring on or over navigable waters. Specific applicability information should be obtained from the Corps of Engineers.); or
- b. A Section 404 permit under the Federal Water Pollution Control Act of 1972. (The provisions of Section 404 of the Federal Water Pollution Control Act generally apply to any project that may involve discharge of dredge or fill material to any water or wetland area. Specific applicability information should be obtained from the Corps of Engineers.)

Comment [CES23]: Covered by 22.05.100(5)

~~5. Whenever the exempt activity also requires a U.S. Army Corps of Engineers Section 10 permit under the Rivers and Harbors Act of 1899 or a Section 404 permit under the Federal Water Pollution Control Act of 1972, a copy of the written statement of exemption shall be sent to the applicant/proponent and Ecology pursuant to WAC 173-27-050.~~

Comment [CES24]: Covered by (5)

## ~~22.07.030 23.60.010~~ Shoreline Substantial Development Permits criteria.

A. A shoreline substantial development permit shall be required for all proposed uses, development, and activities within the shoreline jurisdiction unless the proposal is specifically exempt pursuant to WCC 22.07.020 (Exemptions).

Comment [CES25]: Moved from below.

B. All shoreline substantial development permits are considered Type II permits (see WCC 22.05.020, Project Permit Processing Table), except those the Director has determined meets the following criteria, in which case it shall be considered a Type III permit:

A. The administrator shall determine whether an application requires a public hearing pursuant to the criteria below no later than 15 days after the minimum public comment period provided by WCC 23.60.080. An open record public hearing shall be required for all of the following:

# Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

- 1 1. The proposal has a cost or market value in excess of ~~\$1500,000~~, except for single-family  
2 residences, agriculture, and commercial forestry, and ecological restoration projects; or  
3 ~~2. The proposal would result in development of an area larger than five acres; or~~  
4 ~~3. The proposal is a new or expanded marina, pier, aquaculture structure, any building over 35 feet~~  
5 ~~high, mine, dam, stream diversion, landfill; or~~  
6 ~~4. The administrator has reason to believe the proposal would be controversial based on public~~  
7 ~~response to the notice of receipt of application and other information; or~~  
8 ~~5.2. The proposal is determined to have a significant adverse impact on the environment and an~~  
9 environmental impact statement is required in accordance with the State Environmental Policy  
10 Act; ~~or.~~  
11 ~~6.3. The proposal requires a major variance and/or conditional use approval pursuant to this~~  
12 program; or  
13 ~~7. The use or development requires an open record public hearing for other Whatcom County~~  
14 ~~approvals or permits.~~  
15 ~~B. A substantial development permit shall be required for all proposed uses, and development, and~~  
16 ~~activities within the of shorelines jurisdiction unless the proposal is specifically exempt pursuant to~~  
17 ~~WCC 23.60.0220.~~  
18 C. In order to be approved, the decision maker must find that the proposal is consistent with the  
19 Shoreline Management Act and the Shoreline Management Program following criteria:  
20 1. ~~All regulations of this program appropriate to the shoreline designation and the type of use or~~  
21 ~~development proposed shall be met, except those bulk and dimensional standards that have~~  
22 ~~been modified by approval of a shoreline variance under WCC 23.60.030.~~  
23 2. ~~All policies of this program appropriate to the shoreline area designation and the type of use or~~  
24 ~~development activity proposed shall be considered and substantial compliance demonstrated.~~  
25 3. ~~For pProjects located on shorelines of statewide significance, the policies of Chapter 23.40 WCC~~  
26 ~~shall also be adhered to.~~  
27 D. In the granting of all shoreline substantial development permits, consideration shall be given to the  
28 cumulative environmental impact of additional requests for like actions in the area. For example, if  
29 shoreline substantial development permits were granted for other developments in the area where  
30 similar circumstances exist, the sum of the permitted actions should also remain consistent with the  
31 policy of RCW 90.58.020 and should not produce significant adverse effects to the shoreline  
32 ecological functions and processes or other users.  
33 **22.07.040 23.60.040 Shoreline Conditional Use Permits criteria.**  
34 A. The purpose of a shoreline conditional use permit is to allow greater flexibility in administering the  
35 use regulations of this program in a manner consistent with the policy of RCW 90.58.020. In  
36 authorizing a shoreline conditional use, special conditions may be attached to the permit by the  
37 county or the Department of Ecology to control any undesirable effects of the proposed use.  
38 B. Uses specifically classified or set forth in this program as shoreline conditional uses and unlisted uses  
39 may be authorized, provided the applicant/proponent can demonstrate all of the following:

**Comment [CES26]:** Increased due to inflation. This amount has not been changed since 1986.

**Comment [CES27]:** Proposed for deletion since developments of 5 acres or more would undoubtedly be valued at more than \$500,000.

**Comment [CES28]:** Covered by the shoreline use table in conjunction with subsection (c).

**Comment [CES29]:** Not necessary; already covered by the modified use table in T-23.

**Comment [CES30]:** Proposed for deletion as there is no criteria for staff to objectively determine when a project might be controversial.

**Comment [CES31]:** Covered by 22.05.030

**Comment [CES32]:** Moved to (A)

**Comment [CES33]:** P/C motion to amend as shown. Carries 7-2

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

- 1 1. That the proposed use will be consistent with the policy of RCW 90.58.020 and this program.
- 2 2. That the proposed use will not interfere with normal public use of public shorelines.
- 3 3. That the proposed use of the site and design of the project will be compatible with other
- 4 permitted uses within the area.
- 5 4. That the proposed use will not cause adverse effects to the shoreline environment in which it is
- 6 to be located.
- 7 5. That the public interest suffers no substantial detrimental effect.
- 8 C. All shoreline conditional use permits are considered Type III permits (see WCC 22.05.020, Project
- 9 Permit Processing Table), except those for single-family residential development, uses, or activities,
- 10 which shall be processed as a Type II permit.
- 11 ~~E.D.~~ Other uses not specifically classified or set forth in this program, including the ~~expansion or~~
- 12 resumption of a nonconforming use pursuant to WCC 23.50.0170 (Nonconforming Uses), may be
- 13 authorized as shoreline conditional uses, provided the applicant/proponent can demonstrate that
- 14 the proposal will satisfy the criteria set forth in subsection (B) of this section, and that the use clearly
- 15 requires a specific site location on the shoreline not provided for under the program, and
- 16 extraordinary circumstances preclude reasonable use of the property in a manner consistent with
- 17 the use regulations of this program. Uses that are prohibited cannot be authorized by a shoreline
- 18 conditional use permit.
- 19 ~~D.E.~~ In the granting of all shoreline conditional use permits, consideration shall be given to the
- 20 cumulative environmental impact of additional requests for like actions in the area. For example, if
- 21 shoreline conditional use permits were granted for other developments in the area where similar
- 22 circumstances exist, the sum of the shoreline conditional uses and their impacts should also remain
- 23 consistent with the policy of RCW 90.58.020 and should not produce a significant adverse effect to
- 24 the shoreline ecological functions and processes or other users.
- 25 ~~E.~~ ~~Permits and/or variances applied for or approved under county zoning or subdivision code~~
- 26 ~~requirements shall not be construed as shoreline variances under this program.~~
- 27 ~~23.60.03022.07.050 Shoreline Variances permit criteria.~~
- 28 A. The purpose of a shoreline variance is to grant relief to specific bulk or dimensional requirements
- 29 set forth in ~~this the Shoreline Management~~ Program and any associated standards appended to this
- 30 program such as critical areas buffer requirements where there are extraordinary or unique
- 31 circumstances relating to the property such that the strict implementation of this program would
- 32 impose unnecessary hardships on the applicant/proponent or thwart the policy set forth in RCW
- 33 90.58.020. Use restrictions may not be varied.
- 34 B. Shoreline variances are considered Type III applications pursuant to WCC 22.05.020 (Project Permit
- 35 Processing Table).
- 36 ~~B.C.~~ Shoreline variances will be granted in any circumstance where denial would result in a thwarting of
- 37 the policy enumerated in RCW 90.58.020. In all instances extraordinary circumstances shall be
- 38 shown and the public interest shall suffer no substantial detrimental effect.

Comment [CES34]: Moved to General Requirements section.

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

- 1 C. ~~Proposals that would otherwise qualify as a reasonable use pursuant to WCC 16.16.270(A) shall~~  
2 ~~require a shoreline variance and shall meet the variance criteria in this section.~~
- 3 D. ~~Shoreline variances for development and/or uses that will be located landward of the ordinary high~~  
4 ~~water mark (OHWM) and/or landward of any wetland may be authorized provided the applicant can~~  
5 ~~demonstrate all of the following: Variances may be authorized, provided the applicant/proponent can~~  
6 ~~demonstrate all of the following:~~
- 7 1. ~~That the strict application of the bulk or dimensional criteria set forth in this program the~~  
8 ~~Shoreline Management Program precludes or significantly interferes with reasonable permitted~~  
9 ~~use of the property;~~
  - 10 2. ~~That the hardship described in subsection (A1) of this section is specifically related to the~~  
11 ~~property, and is the result of unique conditions such as irregular lot shape, size, or natural~~  
12 ~~features and the application of this program, and not, for example, from deed restrictions or the~~  
13 ~~applicant's/proponent's own actions;~~
  - 14 3. ~~That the design of the project will be~~ compatible with other ~~permitted~~ authorized uses  
15 activities within the area and with uses planned for the area under the comprehensive plan and  
16 shoreline master program and will not cause adverse effects on adjacent properties or impacts  
17 to the shoreline environment;
  - 18 4. ~~That the variance authorized does not constitute a grant of special privilege not enjoyed by the~~  
19 ~~other properties in the area, and will be the minimum necessary to afford relief;~~
  - 20 5. ~~That the public interest will suffer no substantial detrimental effect;~~
  - 21 6. ~~That the public rights of navigation and use of the shorelines will not be materially interfered~~  
22 ~~with by the granting of the variance; and~~
  - 23 7. ~~Mitigation is provided to offset unavoidable adverse impacts caused by the proposed~~  
24 ~~development or use.~~
- 25 E. ~~Shoreline variances permits~~ for development and/or uses that will be located waterward of the  
26 ordinary high water mark (OHWM), ~~as defined herein, or within any wetland as defined herein,~~ may  
27 be authorized, provided the applicant can demonstrate all of the following:
- 28 1. ~~That the strict application of the bulk, dimensional or performance standards set forth in this~~  
29 ~~program precludes all reasonable use of the property; and~~
  - 30 2. ~~1.~~ That the proposal is consistent with the criteria established under subsections (D) ~~(1) through~~  
31 ~~(7)~~ of this section; and
  - 32 3. ~~2.~~ That the public rights of navigation and use of the shorelines will not be adversely affected.
- 33 ~~Other factors that may be considered in the review of variance requests include the conservation of~~  
34 ~~valuable natural resources and the protection of views from nearby roads, surrounding properties~~  
35 ~~and public areas; provided, the criteria of subsection D of this section are first met. In addition,~~  
36 ~~variance requests based on the applicant's/proponent's desire to enhance the view from the subject~~  
37 ~~development may be granted;~~  
38 ~~where there are no likely detrimental effects to existing or future users, other features, or shoreline~~  
39 ~~ecological functions and/or processes; and~~  
40 ~~where reasonable alternatives of equal or greater consistency with this program are not available.~~

Comment [CES35]: This section's text amended to mimic WAC 173-27-170(3)

Comment [CES36]: Already addressed in subsection (D).

# Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

1 ~~4. In platted residential areas, variances shall not be granted that allow a greater height or lesser~~  
2 ~~shore setback than what is typical for the immediate block or area.~~

Comment [AP37]: Revised per Scoping Document, Item #3a and staff comment #28

3 F. In the granting of all ~~shoreline~~ variances, consideration shall be given to the cumulative  
4 environmental impact of additional requests for like actions in the area. For example, if ~~shoreline~~  
5 variances were granted to other developments in the area where similar circumstances exist, the  
6 total of the variances should also remain consistent with the policy of RCW 90.58.020 and should  
7 not produce significant adverse effects to the shoreline ecological functions and processes or other  
8 users.

Comment [CES38]: This is covered by the Variance Criteria for protection of public interest.

Comment [CES39]: Moved to General Requirements section.

9 ~~G. Permits and/or variances applied for or approved under other county codes such as WCC Title 20 or~~  
10 ~~21 shall not be construed as shoreline permits under this program.~~

Comment [CES40]: General provision moved to appropriate section.

## 23.60.050 Minimum application requirements.

11 ~~Where other approvals or permits are required for a use or development that does not require an open~~  
12 ~~record hearing, such approvals or permits shall not be granted until a shoreline approval or permit is~~  
13 ~~granted. All shoreline approvals and permits shall include written findings prepared by the administrator~~  
14 ~~documenting compliance with bulk and dimensional standards and other policies and regulations of this~~  
15 ~~program.~~

Comment [RCE41]: Don't need, as permit review consolidation is required

17 ~~A complete application for a substantial development, conditional use, or variance permit shall contain~~  
18 ~~all materials required in the Department's administrative manual; provided, that the administrator may~~  
19 ~~vary or waive these requirements as provided in the manual and may vary or waive these requirements~~  
20 ~~on a case by case basis. The administrator may require additional specific information depending on the~~  
21 ~~nature of the proposal and the presence of sensitive ecological features or issues related to compliance~~  
22 ~~with other county requirements.~~

Comment [CES42]: Moved to 22.05.050

## 23.60.060 Pre-application conference.

23 ~~Prior to filing a permit application for a shoreline substantial development permit, variance or~~  
24 ~~conditional use permit decision.~~

Comment [CES43]: Covered by 22.05.040

26 ~~The applicant shall contact the County to schedule a pre-application conference, which shall be held~~  
27 ~~prior to filing the application; provided, that such meetings shall not be required for development~~  
28 ~~activities associated with shoreline restoration projects, agriculture, commercial forestry, or the~~  
29 ~~construction of a single family residence.~~

## 23.60.070 Fees.

Comment [CES44]: Covered by 22.05.050(1)

31 ~~A. Required fees for all shoreline substantial development permits, shoreline conditional use permits,~~  
32 ~~shoreline variances, statements of exemption, appeals, pre-application conferences and other~~  
33 ~~required reviews and/or approvals shall be paid to the county at the time of application in~~  
34 ~~accordance with the Whatcom County Unified Fee Schedule in effect at that time and Chapter 22.05~~  
35 ~~WCC.~~

36 ~~B. When any given project requires more than one of the following permits or applications, the total~~  
37 ~~amount of fees shall be reduced pursuant to WCC 22.25.030:~~

38 ~~1. Preliminary plat application.~~

# Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

- 1        2. ~~Rezone application.~~
- 2        3. ~~Major development permit.~~
- 3        4. ~~Planned unit development.~~
- 4        5. ~~Binding site plan.~~
- 5        C. ~~When any project requires a shoreline conditional use permit or shoreline variance in addition to a~~
- 6        ~~shoreline substantial development permit, the fees for the conditional use or variance shall be~~
- 7        ~~reduced by half.~~
- 8        D. ~~In the event that actions of an applicant result in the repetition of the review, inspections and other~~
- 9        ~~steps in the approval process, those items or steps repeated shall be charged to and paid by the~~
- 10       ~~applicant prior to any further processing of the application by the county. The cost shall be in~~
- 11       ~~accordance with the adopted fee schedule.~~
- 12       E. ~~If an application is withdrawn within 30 days of submittal, and no work has commenced at the site~~
- 13       ~~of the proposal for which the application was made, a refund of not more than 50 percent of the~~
- 14       ~~shoreline fees paid may be granted by the administrator. This amount may be reduced where staff~~
- 15       ~~time, public notice and other costs exceed 50 percent of the fees paid.~~

## ~~23.60.080 Notice of application.~~

- 16       A. ~~Upon receipt of a completed shoreline substantial development permit, shoreline variance, or~~
- 17       ~~shoreline conditional use permit application the County shall issue a notice of application for a~~
- 18       ~~proposed land use action in the manner set forth in WCC 22.05.070.~~
- 19       (9) ~~The rights of treaty tribes to resources within their usual and accustomed areas shall be~~
- 20       ~~accommodated through the notification and comment provisions of the permit review process.~~
- 21       ~~Tribal treaty rights may be addressed through specific permit conditions. Direct coordination~~
- 22       ~~between tribes and the applicant/proponent is encouraged.~~
- 23

Comment [MD45]: Covered by 22.05.070. Draft revision per Scoping Document, Item #4a (staff comment #31).

Comment [RCE46]: Moved to 23.05.040(F)(3)

## ~~23.60.090 Permit application review.~~

- 24       A. ~~All shoreline permit applications, exemptions, or other approvals shall be subject to the provisions~~
- 25       ~~of this program that are in effect at the time of application.~~
- 26       B. ~~To facilitate review of an application the decision maker shall consider any or all of the following:~~
- 27       1. ~~The application and attached information;~~
- 28       2. ~~The SEPA checklist, threshold determination, environmental impact statement, or other~~
- 29       ~~environmental studies and/or documentation;~~
- 30       3. ~~Written comments from interested persons;~~
- 31       4. ~~Information and recommendations from any public agency and from the administrator/rector in~~
- 32       ~~cases where the administrator/rector is not the decision maker;~~
- 33       5. ~~Information or comment presented at a public hearing, if held, on the application; and~~
- 34       6. ~~The policy and provisions of the Act and this program including the criteria enumerated in WCC~~
- 35       ~~23.60.010, 23.60.030 and 23.60.040, as applicable.~~
- 36       C. ~~The decision maker shall process project permit applications for shoreline substantial development~~
- 37       ~~permits, shoreline variance, and shoreline conditional use permits in compliance with the provisions~~
- 38       ~~of Chapter 22.05-WCC.~~
- 39

Comment [CES47]: Covered by 22.05.060 (Vesting)

Comment [CES48]: Moved to 22.05.100 Consistency Review and Recommendations

# Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

- 1 ~~D. The decision maker shall process project permit applications for shoreline statements of exemption~~  
2 ~~in accordance with the provisions of Chapter 22.05 WCC and WCC 23.60.023(A).~~
- 3 ~~E. Any application for a shoreline permit or approval that remains inactive for a period of 180 days~~  
4 ~~shall expire and a new application and repayment of fees shall be required to reactivate the~~  
5 ~~proposal; provided, that the administrator may grant a single 90-day extension for good cause.~~  
6 ~~Delays such as those caused by public notice requirements, State Environmental Policy Act review,~~  
7 ~~litigation directly related to the proposal, or changes in government regulations shall not be~~  
8 ~~considered as part of the inactive period.~~
- 9 ~~— If a shoreline permit is denied, no reapplication for the same or essentially similar development may~~  
10 ~~be made until one year from the date of denial.~~

Comment [CES49]: No longer needed as permit procedures have been combined.

## 23.60.100 Consolidated Permit Review.

- 11 ~~A. Whenever an application for a project permit under the program requires a project permit or~~  
12 ~~approval under another County authority, such as zoning or subdivision, the shoreline~~  
13 ~~project permit application, time requirements, and notice provisions for processing the shoreline~~  
14 ~~permit shall apply, in addition to those of other regulatory programs.~~  
15 ~~— provisions of Chapter 22.05 WCC shall apply to the consolidated application, review, and approval of~~  
16 ~~applications that require an open record hearing.~~
- 17 ~~B. Any shoreline use or development that is subject to other approvals or permits that requires an~~  
18 ~~open record hearing under another permit authority, such as zoning or subdivision, shall be subject~~  
19 ~~to consolidated review and the decision maker designated for the open record hearing shall be the~~  
20 ~~decision maker for the consolidated review.~~

Comment [CES50]: Moved to 22.05.050 Application and Determination of Completeness

Comment [CES51]: Don't need this; covered by 22.05.030

## 23.60.110 State Environmental Policy Act (SEPA) compliance.

- 22 ~~A. Whenever an application for shoreline substantial development permit, shoreline variance,~~  
23 ~~shoreline conditional use permit, or statement of exemption is subject to the rules and regulations~~  
24 ~~of SEPA (Chapter 43.21C RCW), the review requirements of SEPA, including time limitations, shall~~  
25 ~~apply, where applicable.~~
- 26 ~~B. Applications for shoreline permit(s) or approval(s) that are not categorically exempt under SEPA~~  
27 ~~shall be subject to environmental review by the responsible official of Whatcom County pursuant to~~  
28 ~~the State Environmental Policy Act (Chapter 197-11 WAC).~~
- 29 ~~C. As part of SEPA review, the Responsible Official may require additional information regarding the~~  
30 ~~proposed development in accordance with Chapter 197-11 WAC.~~
- 31 ~~D. Failure of the applicant/proponent to submit sufficient information for a threshold determination to~~  
32 ~~be made shall be grounds for the Responsible Official to determine the application incomplete.~~

Comment [RCE52]: Deleted, as this is covered in permit application and permit types.

## 23.60.120 Burden of proof.

- 34 ~~Permit applicants/proponents have the burden of proving that the proposed development is consistent~~  
35 ~~with the criteria set forth in the Act and this program.~~

Comment [CES53]: Moved to 22.05.100 Permit Consistency Review and Recommendations

# Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

## **22.60.130 Public Hearings.**

A. ~~An open record public hearing on shoreline permit applications shall be held in accordance with the provisions of Chapter 22.05 WCC, unless a continuance is granted pursuant to the rules and procedures of the Hearing Examiner or other hearing body and subject to time requirements for compliance with the State Environmental Policy Act.~~

B. ~~Repealed by Ord. 2018-032.~~

C. ~~Repealed by Ord. 2018-032.~~

D. ~~Public hearing requirements for permit appeals shall be processed according to WCC 23.60.150.~~

**Comment [CES54]:** Pertinent sections moved to 22.05.090 Open Record Public Hearings

## **22.60.140 Permit conditions.**

~~In granting, revising, or extending a shoreline permit, the decision maker may attach such conditions, modifications, or restrictions thereto regarding the location, character, and other elements of the proposed development deemed necessary to assure that the development will be consistent with the policy and provisions of the Act and this program as well as the supplemental authority provided in Chapter 43.21C RCW as applicable. In cases involving unusual circumstances or uncertain effects, a condition may be imposed to require monitoring with future review or reevaluation to assure conformance with the Act and this program. If the monitoring plan is not implemented, the permittee may be found to be noncompliant and the permit may be rescinded in accordance with WCC 23.60.180.~~

**Comment [CES55]:** Moved to 22.05.100 Permit Consistency Review and Recommendations

## **22.07.060 Filing Shoreline Permits with the Department of Ecology**

A. After all local permit administrative appeals or reconsideration periods are complete, the County will deliver the final permit using return receipt requested mail or email to the Department of Ecology regional office and the attorney general.

B. Proposals that require both shoreline conditional use permits and/or shoreline variances shall be delivered simultaneously with any shoreline permit for the project.

C. The permit and documentation of final local decision will be delivered together the following information:

1. A copy of the complete application;

2. Findings and conclusions that establish the basis for the decision, including but not limited to identification of shoreline environment designation(s), applicable program policies and regulations, and the consistency of the project with appropriate review criteria for the type of permit(s);

3. The final decision of the local government;

4. A completed permit data sheet (WAC 173-27-990, Appendix A); and

5. Where applicable, local government shall also file the applicable documents required by SEPA, or in lieu thereof, a statement summarizing the actions and dates of such actions taken under Chapter 43.21C RCW.

6. When the project has been modified in the course of the local review process, plans or text shall be provided that clearly indicate the final approved plan.

F. Development pursuant to a shoreline substantial development permit, shoreline variance, or shoreline conditional use permit shall not begin and shall not be authorized until 21 days after the

**Comment [AP56]:** Updated per Periodic Review Checklist, Item 2017.d, and Scoping Document Items #2a and 5c.

# Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

- 1 "date of filing," as defined in this program Title 23 (Shoreline Management Program) and RCW  
2 90.58.140(6), or until all review proceedings before the Shorelines Hearings Board have terminated.  
3 G. Upon approval of a permit revision, the decision maker shall file a copy of the revised site plan and a  
4 detailed description of the authorized changes to the original permit with the Department of  
5 Ecology together with a final ruling and findings supporting the decision based on the requirements  
6 of this section. In addition, the decision maker shall notify parties of record of the action.
- 7 **~~23.60.150 Notice of Decision, Reconsideration and Appeal.~~**  
8 ~~A notice of decision for action on a shoreline substantial development permit, shoreline variance, or~~  
9 ~~shoreline conditional use permit shall be provided to the applicant/proponent and any party of~~  
10 ~~record in accordance with the review procedures of Chapter 22.05 WCC, and at least 10 days prior to~~  
11 ~~filing such decisions with the Department of Ecology pursuant to WAC 173-27-130. Decisions filed~~  
12 ~~with the Department of Ecology shall contain the following information:~~  
13 ~~After all local permit administrative appeals or reconsideration periods are complete and the permit~~  
14 ~~documents are amended to incorporate any resulting changes, the County will mail or hand deliver~~  
15 ~~the permit using return receipt requested mail to the Department of Ecology regional office and the~~  
16 ~~Office of the Attorney General.~~  
17 ~~Projects that require both Conditional Use Permits and or Variances shall be mailed simultaneously~~  
18 ~~with any Substantial Development Permits shoreline permit for the project.~~  
19 ~~The permit and documentation of final local decision will be mailed together the following~~  
20 ~~information:~~  
21 a. ~~A copy of the complete application;~~  
22 b. ~~Findings and conclusions that establish the basis for the decision including but not limited to~~  
23 ~~identification of shoreline environment designation(s), applicable program policies and~~  
24 ~~regulations and the consistency of the project with appropriate review criteria for the type of~~  
25 ~~permit(s);~~  
26 c. ~~The final decision of the local government;~~  
27 d. ~~A completed permit data sheet (see Appendix A of this title); and~~  
28 e. ~~Where applicable, local government shall also file the applicable documents required by SEPA,~~  
29 ~~or in lieu thereof, a statement summarizing the actions and dates of such actions taken under~~  
30 ~~Chapter 43.21C RCW.~~  
31 f. ~~When the project has been modified in the course of the local review process, plans or text shall~~  
32 ~~be provided that clearly indicate the final approved plan.~~  
33 A. Notice of decision for shoreline statements of exemption shall comply with WCC 22.05.110(1) and  
34 23.60.023(E).  
35 ~~Any person with standing may appeal any order, final permit decision, or final administrative~~  
36 ~~determination made by the irector or designee in the administration of this program.~~  
37 ~~Administrative Appeal Procedures.~~  
38 ~~Administrative appeals are processed in accordance with WCC 22.05.160.~~

**Comment [CES61]:** Covered by 22.05.110(1)

# Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

- 1 — ~~After the issuance of the appeal determination, a party with standing may appeals to the~~  
2 ~~Shorelines Hearings Board of a decision on a shoreline substantial development permit,~~  
3 ~~shoreline variance, or shoreline conditional use pursuant to RCW 90.58.180 within 21 days of~~  
4 ~~the “date of filing,” as defined in this program and RCW 90.58.140(6). The appeal to the~~  
5 ~~Shorelines Hearing Board shall be filed in accordance with the provisions of Chapter 461-08C~~  
6 ~~WAC.~~
- 7 B. This program shall only establish standing for parties of record for shoreline substantial  
8 development permits, shoreline variances, or shoreline conditional use permits. Standing as a party  
9 of record is not established by this program for exempt actions pursuant to WCC 23.60.022;  
10 provided, that in such cases standing may be established through an associated permit process that  
11 provides for public notice and provisions for parties of record.
- 12 ———
- 13 F. The applicant/proponent or any party of record may request reconsideration of any final  
14 action by the decision maker within 10 days of notice of the decision. Such requests shall be  
15 filed on forms supplied by the county. Grounds for reconsideration must be based upon the  
16 content of the written decision. The decision maker is not required to provide a written  
17 response or modify his/her original decision. He/she may initiate such action as he/she deems  
18 appropriate. The procedure of reconsideration shall not preempt or extend the appeal period  
19 for a permit or affect the date of filing with the Department of Ecology, unless the  
20 applicant/proponent requests the abeyance of said permit appeal period in writing within 10  
21 days of a final action.
- 22 G. Appeals to the Shorelines Hearings Board of a decision on a shoreline substantial  
23 development permit, shoreline variance or shoreline conditional use permit may be filed by the  
24 applicant/proponent or any aggrieved party pursuant to RCW 90.58.180 within 21 days of filing  
25 the final decision by Whatcom County with the Department of Ecology.
- 26 C. Whatcom County shall consider an appeal of a decision on a shoreline substantial development  
27 permit, shoreline variance or shoreline conditional use only when the applicant/proponent waives  
28 his/her right to a single appeal to the Shorelines Hearings Board. Such waivers shall be filed with the  
29 county in writing concurrent with a notice of appeal within 10 days of a final action. When an  
30 applicant/proponent has waived his/her right to a single appeal, such appeals shall be processed in  
31 accordance with the appeal procedures of subsection H of this section and shall be an open record  
32 hearing before the hearing examiner.
- 33 H. ~~With the exception of a shoreline substantial development permit, a~~Any order, requirement or  
34 ~~administrative permit decision, or determination by the administrator based on a provision of this~~  
35 ~~program, including the issuance of a statement of exemption or denial, except a shoreline~~  
36 ~~substantial development permit, may be the subject of an appeal to the office of the hearing~~  
37 ~~examiner by any aggrieved person. Such appeals shall be processed in accordance with the appeal~~  
38 ~~procedures of subsection H of this section and shall be an open record hearing before the hearing~~  
39 ~~examiner.~~
- 40 I. Appeal Procedures.

Comment [MD64]: Draft revision per Scoping Document, Items #4a and 5c (staff comment #34).

# Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

- 1. Appeals shall be filed on forms supplied by the county within 10 calendar days of the issuance of a substantial development permit, shoreline variance or shoreline conditional use permit and within 20 calendar days of any other action of the administrator being appealed.
- 2. A public hearing on the appeal shall be held within 45 working days following receipt of the application for appeal.
- 3. Legal notice of the public hearing shall be made by mailing notice of time, date, and location of the hearing to the appellant, any parties of record, the Washington Department of Ecology, and the administrator at least 15 days prior to the hearing.
- 4. A decision by the hearing examiner shall be mailed within 10 working days of the public hearing to all parties of record unless otherwise mutually agreed to by all parties to the appeal.
- 5. Any party of record may request a closed record review of the hearing examiner's decision issued under subsection (H)(4) of this section by the county council. Such an appeal shall be filed with the county council on forms supplied by the county within 10 calendar days of the written decision. If appeal is made to the county council, notice of appeal shall be provided to all parties of record at least 15 days prior to consideration by the county council. The council shall meet to review the hearing examiner's decision within 21 days of transmittal thereof, at which time it may approve or disapprove the application, or remand the matter to the hearing examiner.
- 6. The time period for appeal to the Shorelines Hearings Board shall begin after the decision maker has filed the final county decision with the Department of Ecology.

## ~~22.60.160~~ **Initiation of development.**

~~Development pursuant to a shoreline substantial development permit, shoreline variance, or conditional use permit shall not begin and shall not be authorized until 21 days after the "date of filing" or until all review proceedings before the Shorelines Hearings Board have terminated.~~

### A. ~~Date of Filing.~~

- 1. "Date of filing" of a substantial development permit is the date of actual receipt of the decision by the Department of Ecology.
- 2. The "date of filing" for a shoreline variance or shoreline conditional use permit shall mean the date the permit decision rendered by the Department of Ecology is transmitted by the department to the county and the applicant/proponent.

## ~~22.60.170~~ **Revisions to Shoreline Permits.**

- A. A revision is required whenever the applicant/proponent proposes substantive changes to the design, terms, or conditions of a project from that which is approved in the permit and/or statement of exemption. Changes are substantive if they materially alter the project in a manner that relates to its conformance to the terms and conditions of the permit, this program, or the Act. ~~Changes that are not substantive in effect do not require a revision.~~
- B. An application for a revision to a shoreline permit shall be submitted to the ~~administrator~~ Director. The application shall include detailed plans and text describing the proposed changes. The County decision maker that approved the original permit may approve the request upon a finding that the

**Comment [AP66]:** Updated per Periodic Review Checklist, Item 2017.d, and Scoping Document Item #2a.

**Comment [CES67]:** Moved to permit application review section.

**Comment [AP68]:** Definition for "date of filing" added to definitions section.

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

- 1 proposed changes are within the scope and intent of the original approval, and are consistent with  
2 this program and the Act.
- 3 C. “Within the scope and intent of the original approval” means all of the following:
- 4 1. No additional over-water construction is involved except that a pier, dock, or floating structure  
5 may be increased by 500 square feet or 10 percent from the provisions of the original permit,  
6 whichever is less over that approved under the original approval;
  - 7 2. Ground area coverage and/or height may be increased a maximum of 10 percent over that  
8 approved under the original approval; ~~provided, that the revised approval does not authorize~~  
9 ~~development to exceed the height, impervious surface, setbacks, or any other requirements of~~  
10 ~~this program except as authorized under a variance granted for the original development;~~
  - 11 3. The revised permit does not authorize development to exceed height, lot coverage, setback, or  
12 any other requirements of the applicable master program except as authorized under a variance  
13 granted as the original permit or a part thereof;
  - 14 ~~3-4. Additional or revised mitigation and/or landscaping is consistent with any conditions attached to~~  
15 ~~the original approval and with this program;~~
  - 16 ~~4-5. The use authorized pursuant to the original approval is not changed; and~~
  - 17 ~~5-6. The revision will not cause adverse environmental impacts beyond those originally authorized in~~  
18 ~~the approval.~~
- 19 ~~D. Revisions to shoreline permits and statements of exemption may be authorized after the original~~  
20 ~~authorization has expired pursuant to WCC 22.07.080 (Expiration of Shoreline Permits). Revisions~~  
21 ~~made after the expiration of the original approval shall be limited to changes that are meet the~~  
22 ~~definition of a shoreline exemption and are consistent with this program, and that would not~~  
23 ~~require a permit under this program. If the proposed change is a substantial development as defined~~  
24 ~~by this program, then a new permit is required.~~
- 25 ~~D-E. The provisions of this subsection shall not be used to extend the time requirements or to authorize~~  
26 ~~substantial development beyond the time limits or scope of the original approval; provided the~~  
27 ~~revision approval shall expire within 1 year from the date of approval, tolling of expiration does not~~  
28 ~~apply to revision approvals.~~
- 29 ~~E-F. A new permit shall be required if the proposed revision and any previously approved revisions in~~  
30 ~~combination would constitute development beyond the scope and intent of the original approval as~~  
31 ~~set forth in subsection (C) of this section.~~
- 32 G. The revision approval, including the revised site plans and text consistent with the provisions of  
33 WAC 173-27-180 as necessary to clearly indicate the authorized changes, and the final ruling on  
34 consistency with this section shall be filed with the Department of Ecology pursuant to WCC  
35 22.07.060 (Filing Shoreline Permits with the Department of Ecology). In addition, the County shall  
36 notify parties of record of their action.
- 37 ~~F. Upon approval of a revision, the decision maker shall file a copy of the revised site plan and a~~  
38 ~~detailed description of the authorized changes to the original permit with the Department of~~  
39 ~~Ecology together with a final ruling and findings supporting the decision based on the requirements~~  
40 ~~of this section. In addition, the decision maker shall notify parties of record of the action.~~

Comment [RCE69]: Changes made to match WAC 173-27-100

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

1 | H. If the proposed revision is to a development for which a shoreline conditional use or shoreline  
2 | variance was issued, the decision maker shall submit the revision to the Department of Ecology for  
3 | approval with conditions or denial, and shall indicate that the revision is being submitted under the  
4 | requirements of this subsection.

5 | I. Under the requirements of WAC 173-27-110(6), the Department shall render and transmit to the  
6 | decision maker and the applicant/proponent its final decision within 15 days of the date of the  
7 | Department's receipt of the submittal from the decision maker. The decision maker shall notify  
8 | parties on record of the Department's final decision.

9 | ~~G.A. Appeals of a decision of the Department shall be filed in accordance with the provisions of~~  
10 | ~~Chapter 461-08C WAC.~~

### 11 | **23.60.180 Rescission and modification.**

12 | A. Any shoreline permit granted pursuant to this program may be rescinded or modified upon a finding  
13 | by the Hearing Examiner that the permittee or his/her successors in interest have not complied with  
14 | conditions attached thereto. If the results of a monitoring plan show a development to be out of  
15 | compliance with specific performance standards, such results may be the basis for findings of  
16 | noncompliance.

17 | ~~B. The Administrator shall initiate rescission or modification proceedings by issuing written notice of~~  
18 | ~~noncompliance to the permittee or his/her successors and notifying parties of record at the original~~  
19 | ~~address provided in application review files.~~

20 | ~~C. The Hearing Examiner shall hold a public hearing no sooner than 15 days following such issuance of~~  
21 | ~~notice, unless the applicant/proponent files notice of intent to comply and the Administrator grants~~  
22 | ~~a specific schedule for compliance. If compliance is not achieved, the Administrator shall schedule a~~  
23 | ~~public hearing before the Hearing Examiner. Upon considering written and oral testimony taken at~~  
24 | ~~the hearing, the Hearing Examiner shall make a decision in accordance with the above procedure for~~  
25 | ~~shoreline permits.~~

26 | ~~D. These provisions do not limit the Administrator, the Prosecuting Attorney, the Department of~~  
27 | ~~Ecology or the Attorney General from administrative, civil, injunctive, declaratory or other remedies~~  
28 | ~~provided by law, or from abatement or other remedies.~~

### 29 | **22.07.08023.60.190 Expiration of Shoreline Permits.**

30 | ~~A. Expiration of shoreline statements of exemptions shall be in accordance with WCC 22.05.140~~  
31 | ~~(Expiration of Project Permits).~~

32 | ~~A.B. The following time requirements shall apply to all substantial development permits and to any~~  
33 | ~~development authorized pursuant to a shoreline variance, or shoreline conditional use permit, or~~  
34 | ~~statement of exemption:~~

- 35 | 1. Construction shall be commenced or, where no construction is involved, the use or activity shall  
36 | be commenced, within two years of the effective date of a shoreline permit or exemption or the  
37 | permit shall expire; provided, that the Hearing Examiner or ~~Administrator~~Director, as  
38 | appropriate, may authorize a single extension for a period of not more than one year based on a  
39 | showing of good cause if a request for extension has been filed with Planning and Development

Comment [CES70]: Covered under 22.05.150  
Permit Revocation

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

- 1 Services with the hearing examiner or administrator as appropriate before the expiration date of  
2 the shoreline permit or exemption, and The Director shall provide notice of the proposed  
3 extension is given to parties of record and the Department of Ecology.
- 4 2. Authorization to conduct development activities shall terminate five years after the effective  
5 date of a shoreline permit or exemption; provided, that the Hearing Examiner or  
6 Administrator/Director, as appropriate, may authorize a single extension for a period of not more  
7 than one year based on a showing of good cause, if a request for extension has been filed with  
8 Planning and Development Services with the hearing examiner or administrator, as appropriate,  
9 before the expiration date of the shoreline permit or exemption and The Director shall provide  
10 notice of the proposed extension is given to parties of record and the Department of Ecology.
- 11 3. The effective date of a shoreline permit or exemption shall be the date of filing as provided in  
12 RCW 90.58.140(6).
- 13 ~~—~~ Tolling. The effective date does not include the time during which a development, use, or  
14 activity was not actually pursued due to the need to obtain other government permits and  
15 approvals for which the issued shoreline permit authorizes, including the pendency of all  
16 reasonably related administrative appeals or legal actions on any such permits or approval. Last  
17 action required on the shoreline permit or exemption and all other government permits and  
18 approvals that authorize the development to proceed, including administrative and legal actions  
19 on any such permit or approval.
- 20 4. The applicant/ proponent shall be responsible for informing the County of the of such pendency,  
21 of other permit applications filed with agencies other than the County and of any related  
22 administrative and legal actions on any permit or approval.
- 23 3. ~~If no notice of the pendency of other permits or approvals is given to the County prior to the~~  
24 ~~date of the last action by the County to grant County permits and approvals necessary to~~  
25 ~~authorize the development to proceed, including administrative and legal actions of the county,~~  
26 ~~and actions under other County development regulations, the date of the last action by the~~  
27 ~~County shall be the effective date.~~
- 28 ~~B.C.~~ Notwithstanding the time limits established in subsections (A) ~~(1) and (2)~~ of this section, upon a  
29 finding of good cause based on the requirements and circumstances of the proposed project and  
30 consistent with the policies and provisions of this program and the Act, the Hearing Examiner or  
31 Administrator/Director, as appropriate, may set different time limits for a particular substantial  
32 development permit or exemption as part of the action to approve the permit or exemption. The  
33 Hearing Examiner may also set different time limits on specific shoreline conditional use permits or  
34 shoreline variances with the approval of the Department of Ecology. The different time limits may  
35 be longer or shorter than those established in subsections (A) ~~(1) and (2)~~ of this section but shall be  
36 appropriate to the shoreline development or use under review. "Good cause based on the  
37 requirements and circumstances of the proposed project" shall mean that the time limits  
38 established for the project are reasonably related to the time actually necessary to perform the  
39 development on the ground and complete the project that is being permitted, and/or are necessary  
40 for the protection of shoreline resources.

## Planning Commission Approved Draft (Updated w/ Council's Cherry Point Amendments)

SMP Update – Title 22 Amendments

October 29, 2021

- 1 | ~~C.D.~~ When permit approval includes conditions, such conditions shall be satisfied prior to occupancy  
2 | or use of a structure or prior to the commencement of a nonstructural activity; provided, that  
3 | different time limits for compliance may be specified in the conditions of approval as appropriate.
- 4 | ~~E.~~ The Hearing Examiner or ~~Administrator~~ Director, as appropriate, shall notify the Department of  
5 | Ecology in writing of any change to the effective date of a permit, ~~authorized by subsections A~~  
6 | ~~through C of this section~~, with an explanation of the basis for approval of the change. Any change to  
7 | the time limits of a permit other than those authorized by the sections of this program previously  
8 | listed shall require a new permit application.
- 9 | ~~D.F.~~ All shoreline permits shall expire 8 years from the date of filing unless a different time period is  
10 | granted by the outcome of an administrative appeal or legal action.

**Comment [CES71]:** Proposed to deal with permits that span multiple versions of the SMP.

## Planning Commission Hearing Draft

### Article 1. Purpose and Intent

#### 16.16.100 Purpose and Intent.

- A. The purposes of this chapter ~~is~~ are to help achieve ~~carry out~~ the goals of the Whatcom County comprehensive plan and the State of Washington Growth Management Act (Chapter [36.70A](#) RCW) and its implementing rules by designating and classifying critical areas, and by protecting the functions and values of critical areas and the ecological processes that sustain them, while allowing for appropriate economically beneficial or productive use of land and property. Critical areas regulated under this chapter include geologically hazardous areas, frequently flooded areas, critical aquifer recharge areas, wetlands, and habitat conservation areas. This chapter seeks to maintain harmonious relationships between human activity and the natural environment.
- B. The Growth Management Act requires the designation of critical areas and the adoption of regulations for the protection of such areas by all counties and cities. The Washington Department of Commerce has adopted minimum guidelines in Chapter [365-190](#) WAC detailing the process involved in establishing a program to protect critical areas. "Protection" in this context means preservation of the functions and values of the natural environment, or to safeguard the public from hazards to health and safety. Critical areas that must be protected include the following areas and ecosystems:
1. Wetlands;
  2. Areas of critical recharging effect on aquifers used for potable water;
  3. Fish and wildlife habitat conservation areas;
  4. Frequently flooded areas; and
  5. Geologically hazardous areas.
- C. By regulating development and minimizing critical area alterations, this chapter seeks to:
1. Reduce harm due to landslides, earthquakes, erosion, volcanic events, flooding, and other natural hazards.
  2. Minimize unnecessary maintenance of public facilities, and costs associated with property damage, emergency rescue relief operations, and environmental degradation.
  3. Protect against adverse impacts to water quality and quantity resources.
  4. Alert appraisers, assessors, real estate agents, owners, potential buyers or lessees, and other members of the public to natural conditions that pose a hazard or otherwise limit development.
  5. Protect wetlands, floodplains, critical aquifer recharge areas, and habitat conservation areas by applying the best available science to ensure no net loss of ecological functions and values.
  6. Protect species listed as threatened or endangered and their habitats.
  7. Protect unique, fragile, and/or valuable elements of the environment, including ground and surface waters, wetlands, anadromous fish species, shellfish, and other fish and wildlife and their habitats.
  8. Provide County officials with information to approve, condition, or deny project proposals.
  9. Protect property rights, while allowing for economic development, including agriculture, and allowing for the development and maintenance of adequate and appropriate public services and essential public facilities.

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

10. Prevent adverse and cumulative environmental impacts to critical areas and mitigate unavoidable impacts.
  11. Coordinate Whatcom County's critical areas protection activities and programs with those of other jurisdictions.
  12. Coordinate environmental reviews and permitting of proposals with other departments and agencies to avoid duplication and delay.
  13. Allow for reasonable use of property in accordance with the provisions of WCC [16.16.270](#).
  14. Establish critical areas protection standards and procedures that are consistent with state and federal regulations pertaining to critical areas.
- D. The goals, policies, and purposes set forth in this chapter serve as a basis for exercise of the County's substantive authority under the State Environmental Policy Act (SEPA) and the County's SEPA rules.
- E. The County's enactment or enforcement of this chapter shall not be construed for the benefit of any individual person or group of persons other than the general public.
- F. Nothing in this chapter is intended to preclude or discourage beneficial actions that protect, restore, and/or maintain critical areas or minimize risks associated with critical areas.
- G. Consistent with Whatcom County's high standard of staff conduct, County staff shall observe all applicable County, state, and federal and Washington laws regarding entry onto privately owned property.

## Article 2. Administrative Provisions

### 16.16.200 Authority.

- A. This chapter is adopted under the authority of Chapter [36.70](#) RCW, which empowers a county to enact a critical area ordinance and provide for its administration, enforcement and amendment, and Chapter [36.70A](#) RCW and Article 11 of the Washington State Constitution.
- B. The Director shall administer and enforce the provisions of this chapter and have the responsibility for reviewing development proposals for compliance with this chapter. Additionally, s/he shall also have the:
1. Authority to approve, deny, or condition permits in accordance with the standards set forth herein.
  2. Authority to convene an interdisciplinary team to assist in reviewing development proposals or to solicit review from outside experts in accordance with WCC 16.16.220(C) (Interdisciplinary Team).
  3. Authority to post a stop work order pursuant to WCC 16.16.285 upon a person undertaking activity within a critical area or buffer in violation of this chapter.
  4. Any additional responsibility and/or authority specifically provided for in this chapter.
  5. For project permits subject to consolidated review the Director's authority shall transfer to another County decision maker when another decision maker is specified for a separate project permit. In such cases, the Director shall ensure that all procedural requirements of this chapter are met and shall make a recommendation to the designated decision maker as to how the provisions of this chapter apply to the permit action, including project permits.
- C. The Whatcom County Hearing Examiner authority is provided in is hereby vested with responsibility and authority to perform the following duties:
1. Those duties as assigned in WCC Chapter 2.11 (Hearing Examiner).
  2. Those duties as assigned in WCC Title 22 (Land Use and Development)
  3. To grant or deny variances to the standards of this Chapter pursuant to WCC 16.16.275 (Variances).
  4. To grant, condition, or deny reasonable use exception permits for all developments affecting critical areas pursuant to WCC 16.16.270 (Reasonable Use Exceptions).
  5. To decide on appeals of administrative decisions issued by the Director.
- D. In granting, revising, or extending a permit, the Director, or Hearing Examiner as applicable, may attach such conditions, modifications, or restrictions thereto regarding the location, character, and other features of the proposed development deemed necessary to assure that the development is consistent with criteria set forth in this chapter. In cases involving unusual circumstances or uncertain effects, a condition may be imposed to allow for future review or reevaluation to assure conformance with this chapter. The Director and/or Hearing Examiner shall render a final decision in accordance with the timelines established in WCC Chapter 22.05, as applicable. All decisions of the Director and Hearing Examiner may be appealed pursuant to WCC 22.05.160.

Formatted: List Paragraph, Indent: Left: 0", Numbered + Level: 1 + Numbering Style: A, B, C, ... + Start at: 1 + Alignment: Left + Aligned at: 0.25" + Indent at: 0.5"

Comment [CES1]: Moved from 16.16.240, which has been deleted.

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

### 16.16.205 Authorizations Required.

- A. No action shall be taken by any person, ~~company, agency, governmental body (including Whatcom County), applicant, owner, or owner's agent, which that~~ results in any alteration of a critical area or its setback or buffer without prior authorization by submitting an application ~~to the technical administrator on a form provided by Whatcom County~~ and obtaining either the required permit or an approval of a notice of activity, as specified herein.
- B. No land use ~~development project~~ permit, construction permit, or land division approval required by County ordinance shall be granted until the County decision maker has determined that the applicant has complied with the applicable purposes, requirements, objectives, and goals of this chapter including the mitigation standards set forth in WCC [16.16.260](#).
- C. Project permits shall comply with all provisions of this chapter, WCC Title [22](#) and the department's administrative manual.
- D. The requirements of this chapter shall apply concurrently with review conducted under the State Environmental Policy Act (SEPA) (RCW Chapter [43.21C](#)), as locally adopted (WCC Chapter [16.08](#)). Any conditions required pursuant to this chapter shall be coordinated with the SEPA review and threshold determination.
- E. Areas characterized by a particular critical area may also be subject to other regulations established by this chapter due to the overlap or multiple functions of some critical areas. When one critical area adjoins or overlaps another, the more restrictive standards shall apply.

Comment [CES2]: Definition of person now covers these.

### 16.16.210 Applicability and Severability.

This chapter shall be consistently applied to any alteration or development within geographical areas of unincorporated Whatcom County that meets the definition and criteria for critical areas and critical area buffers ~~or setbacks~~ as set forth in this chapter. No development shall be constructed, located, extended, modified, converted or altered, or land subdivided without full compliance with this chapter. Should any section or provision of this chapter be declared invalid, such decision shall not affect the validity of this chapter as a whole.

### 16.16.215 Relationship to Other Jurisdictions.

- A. Permit applicants are responsible for complying with all federal, state, tribal, and local regulations that may pertain to a proposed development. Compliance with the provisions of this chapter does not necessarily constitute compliance with other regulations and permit requirements.
- B. In cases where other agencies have jurisdiction over critical areas and the ~~technical administrator~~ **Director** determines that the permit conditions imposed by such agencies are no less protective and satisfy the requirements of this chapter, those permit conditions may be substituted as the conditions of approval for the requirements of this chapter. Such agencies may include, but are not limited to, the Lummi Nation; the Nooksack Tribe; the United States Army Corps of Engineers; the United States Environmental Protection Agency; the United States Fish and Wildlife Service; the National Marine Fisheries Service or NOAA Fisheries; and the Washington State Departments of Ecology, Natural Resources, and Fish and Wildlife.
- C. The County shall make detailed written findings required by WCC Chapter [22.05](#) and WCC [16.16.250](#) when adopting conditions of another jurisdiction's permit. Such requirements shall

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

be a condition of critical area approval and enforceable by the County. In the event that there is a conflict between permit requirements and the standards of this chapter, the more restrictive standards shall apply.

- D. The County shall notify the applicant in writing when adopting other agencies’ conditions pursuant to this section.

**16.16.220 Identification and mapping of Critical Areas.**

A. **Critical Area Maps.** The County has identified critical areas and areas where the conditions under which critical areas typically occur and/or have the potential to occur. The approximate location and extent of critical areas within the County’s jurisdiction are shown on maps; however, this information is for increasing public awareness of critical areas. These “static” maps maybe too inexact for regulatory purposes. These maps which shall be available at the Department of Planning and Development Services department and online for public inspection.

- 1. Property owners, the ~~technical administrator~~ Director, and/or members of the public may use these maps as a general guide, but the maps do not provide a comprehensive accounting of areas subject to this chapter nor do they provide a definitive critical areas designation. Maps showing known critical areas are only for information or illustrative purposes. Critical area locations and boundaries shown on the County’s maps are approximate and do not include buffers that may be associated with critical areas, and some critical areas may not be shown on the maps at all. It is also possible that some maps showing critical areas in certain areas may not be accurate.

2. Planning and Development Services has the authority to update critical areas maps and shall do so as new critical areas are identified and as new information becomes available.

- 3. The approximate location and extent of frequently flooded areas are shown on the County’s critical area maps. These maps are to be used as a guide and do not provide a definitive critical area designation. The County shall update the maps as new hazard areas are identified and as new information becomes available. This article does not imply that land outside mapped frequently flooded areas or uses permitted within such areas will be free from flooding or flood damages. This chapter shall not create liability on the part of Whatcom County, any officer or employee thereof, or the Federal Insurance and Mitigation Administration (FIMA), for any flood damages that result from reliance on this chapter or any administrative decision lawfully made hereunder.

B. **Identification.** Field investigation, analysis by a qualified professional, and/or consideration of other sources of credible scientific information may be required to confirm the presence or absence of a critical area and its boundaries and buffers. When County critical area maps, indicators, or other sources of credible information indicate that a site may be located in, contain, or abut critical areas or their buffers or setbacks, the Director shall require technical studies in accordance with the requirements for that critical area specified herein to determine the extent of critical areas on the property.

Comment [CES3]: Moved from 16.16.410

Comment [CES4]: Moved to 16.16.250 (Review Process)

Comment [CES5]: Moved from 16.16.250

- C. **Interdisciplinary Team.** The Director may call upon outside expertise including an interdisciplinary team if s/he determines that additional technical assistance is required to assess a critical areas development proposal or ensure the application of best available science.
1. The Director will coordinate this effort and seek advice from the team.
  2. The interdisciplinary team shall include the applicant and/or their technical representative, local, state, or federal agency or tribal representatives with expertise in the field, and/or independent qualified professionals with expertise relating to the critical area issue.
  3. The functions of the interdisciplinary team are to field check and verify critical area determinations/boundaries and assess species/habitat presence by providing written peer review of the information included with an application, identify areas of concern in the application of best available science, provide professional opinions and recommendations relevant to the provisions of this chapter, and help focus the preparation of subsequent reports and environmental documentation on the most relevant issues.
  4. In lieu of convening an interdisciplinary team, the County may require third-party review by a qualified professional for any development proposal, mitigation plan, mitigation bank proposal, or other project for which additional technical expertise is needed. The cost of the third-party review shall be the permit applicant’s responsibility.

~~C.A. Planning and Development Services has the authority to update critical areas maps and shall do so as new critical areas are identified and as new information becomes available.~~

**16.16.225 Regulated activities General Regulations.**

- A. The following activities shall be subject to the provisions of this chapter when they occur within critical areas or their buffers or will impair the functions and values of a critical area:
1. Clearing, grading, dumping, excavating, discharging, or filling with any material. This includes creating impervious surfaces.
  2. Constructing, reconstructing, demolishing or altering the size of any structure or infrastructure, subject to the provisions for a nonconforming structure pursuant to WCC 16.16.275, Chapter 20.83 WCC, and WCC 23.50.070.
  3. Any other activity for which a county permit is required, excluding permits for interior remodeling.

A. General regulations apply to all critical areas and critical area buffers. Specific critical area articles describe standards applied to authorized alterations.

B. Alteration of critical areas and/or buffers is prohibited except when any impacts are mitigated pursuant to this Chapter, and:

1. Alteration is approved pursuant to the reasonable use or variance provisions of WCC 16.16.270 and 16.16.273, respectively; or
2. Alteration is necessary to accommodate an essential public facility or public utility where no feasible alternative location will accommodate the facility and the facility is located, designed, and constructed to minimize and, where possible, avoid critical areas disturbance to the maximum extent feasible; or

Comment [RE6]: Deleted, as it is redundant with 16.16.235(A)

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

- 3. Alteration is necessary to accommodate an approved water-dependent use and any associated development, use, or activity and/or the development activities listed in WCC Title 23.90.130(B)(7)(a) when permitted in accordance with the Whatcom County Shoreline Management Program (SMP); provided, that such development is operated, located, designed and constructed to minimize and, where possible, avoid critical areas disturbance to the maximum extent feasible; or
  - 4. Alteration is part of an essential element of an activity allowed by this chapter and all feasible measures to avoid and minimize impacts have been employed. Such feasible measures shall include, but not be limited to, clustering where permitted by zoning and as appropriate to protect critical areas. The purposes of clustering shall be to minimize adverse effects of development on critical area functions and values, minimize land clearing, maintain soil stability, preserve native vegetation, provide for wildlife corridors, maintain hydrology, and mitigate risk to life and property; or
  - 5. Alteration is associated with an exempt activity under WCC 16.16.230, or is allowed pursuant to the notification provisions of WCC 16.16.235, or is allowed pursuant to the specific regulatory standards for each designated critical area, as enumerated in the subsequent articles of this chapter; or
  - 6. Alteration is associated with an alternative mitigation plan or watershed-based management plan approved pursuant to WCC 16.16.261 or 16.16.262, respectively; or
  - 6. Alteration is associated with a conservation farm plan pursuant to Article 8 of this chapter; or
  - 7. Alteration of Type III or IV wetlands not subject to WCC Title 23 that have a habitat area score of less than 6 when associated with an approved commercial development within an Urban Growth Area; or
  - 8. Alteration of a shoreline habitat conservation area buffers as allowed by Title 23 (Shoreline Management Program).
- C. Development proposals shall seek to maintain ecological connectivity and habitat corridors whenever possible. Restoration of ecological connectivity and habitat corridors shall be considered a priority restoration and mitigation action.
- D. In order to preserve native plant communities within shoreline jurisdiction and/or critical areas and their buffers, associated with marine, river, or lake shorelines and wetlands, mitigation sequencing shall be applied during site planning for uses and activities so that the design and location of the structure or development minimizes native vegetation removal. Development, uses, or activities that require vegetation clearing shall be designed to avoid the following, in order of preference:
- 1. Native trees;
  - 2. Other native vegetation;
  - 3. Nonnative trees; and
  - 4. Other nonnative vegetation.

**16.16.230 Exempt Activities Allowed without Notification.**

The following activities do not require authorization from Whatcom County. However, Exemptions from permit requirements of this chapter shall not be construed deemed to grant authorization for any work

**Comment [CES7]:** Already addressed by (4)

**Comment [DOE-Req8]:** Required Change – This change is based on conversations with Whatcom County clarifying that this exception does not apply within shoreline jurisdiction.

**Comment [CES9]:** Policy change: This would allow “alteration of Type III or IV wetlands that have a habitat area score of less than 6 when associated with an approved commercial development within an Urban Growth Area” when impacts are mitigated. This would allow the alteration of certain wetlands in Urban Growth Areas (UGAs) (in particular, Birch Bay) so as to encourage development of commercially zoned property. Commercial development in Birch Bay has been stifled because so much of the remaining commercially zoned property contains small, isolated wetlands. Yet under the Growth Management Act we’re supposed to encourage development within UGAs so that development doesn’t sprawl to less developed areas of the County.

**Comment [CES10]:** Policy change: This would allow modification of shoreline buffers pursuant to the new system being proposed in the SMP update.

**Comment [AP11]:** Added per SMP Scoping Document, Item #8b.

**Comment [P/C12]:** P/C moved to amend. Passed 7-0

**Comment [CES13]:** To provide clear guidance on order of preference in what vegetation should be avoided when clearing in shorelines.

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

to be done in any manner in violation of the provisions of this chapter or any other laws or ordinances of this jurisdiction. ~~The following activities as specified are exempt from the requirements of this chapter~~ Activities within the shoreline jurisdiction (WCC 23.20.10) may require a shoreline permit or statement of exemption.

- A. Class I, II, III, and IV special (not Class IV general) forest practices conducted in accordance with the applicable standards of the Washington State Forest Practices rules, WAC Title [222](#), except where the lands have been or are proposed to be converted to a use other than commercial forest product production.
- B. Maintenance of lawfully established vegetation, landscaping, and gardens within a regulated critical area or its buffer, ~~including, but not limited to, cutting, mowing lawns, weeding, removal of noxious and invasive species, harvesting and replanting of garden crops, pruning and planting of noninvasive ornamental vegetation or indigenous native species (excluding trees)~~ to maintain the general condition and extent of such areas; provided, that native growth protection areas, or other areas protected via conservation easements or similar restrictive covenants are not covered by this exception.
- C. Maintenance activities necessary to implement approved mitigation plans.
- D. Low impact activities, when the activity does not cause adverse impacts, such as hiking, canoeing, viewing, nature study, photography, hunting, fishing, education, or scientific research.
- E. Activities undertaken to comply with a United States Environmental Protection Agency Superfund-related order, or a Washington Department of Ecology order pursuant to the Model Toxics Control Act ~~(such as the Swift Creek Sediment Management Action Plan)~~, or a Department of Homeland Security order that specifically preempts local regulations in the findings of the order.
- F. Maintenance and/or repair of lawfully established single-family residences and appurtenant features; provided, that the activity does not further alter, impact, or encroach upon critical areas or buffers or further affect their functions. The maintenance activity shall not result in increased risk to life or property.
- G. Fish, wildlife, and/or wetland restoration or enhancement activities not required as project mitigation; provided, that the project is approved by the U.S. Fish and Wildlife Service, the Washington State Department of Ecology, Washington State Department of Fish and Wildlife, or other appropriate local, state, federal, or tribal jurisdiction and/or that meet the criteria of RCW [77.55.181](#)(1) and that are reviewed and approved according to the provisions of RCW [77.55.181](#).

**16.16.235 Activities Allowed with Notification.**

- A. The activities specified in subsection B of this section are authorized within critical areas and buffers; provided, that:
  - 1. The applicant provides a written notification to the ~~technical administrator~~ Director on a form provided by the Department. Activities within the shoreline jurisdiction (WCC 23.20.010) may ~~shall~~ require a shoreline permit or statement of exception.
  - 2. The notification will provide a site plan (in a common scale), photos, and specific information describing the activity and the mitigation to be implemented, if required ~~by the technical~~

**Comment [DOE-Req14]:** Required Change – This change is required for consistency with minimum procedural requirements for permit review in WAC 173-27. There may be instances where a shoreline permit or statement of exemption are required for developments that may otherwise be exempt outside of shoreline jurisdiction. The required language mimics that included in WCC 16.16.235.1 – Activities Allowed with Notification

**Comment [P/C15]:** P/C moved to delete. Carries 7-0-0-2

**Comment [DOE-Req16]:** Required Change – This change clarifies the fact that some actions allowed through this process may not meet the definition of “Development” as defined by the SMP. In such cases, a shoreline permit or statement of exemption would technically not be required. In such instances, any applicable standards of the SMP would still apply but the process outlined within this section could still be utilized. For example, removal of a single hazard tree would not require a development permit or exemption per the SMP, however mitigation would still be required consistent with the SMP, including applicable sections of the CAO.

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

~~administrator~~, to document that the activity will not result in increased risk to public health, safety, and welfare; that adverse impacts to critical areas are minimized; and that disturbed areas are restored as soon as possible following the activity.

3. Notification shall be submitted ~~to the technical administrator~~ at least 10 full business days prior to initiating work.
4. Upon receipt of the notification, the ~~technical administrator~~ Director shall issue a decision within 10 days unless additional information is required from the applicant or other review processes necessitate additional time. Additionally, the ~~technical administrator~~ Director may provide guidance on best management practices for tree and vegetation protection, construction management, erosion and sedimentation control, water quality protection, and use of chemical applications to be used in the execution of the activities listed in subsection B of this section.
5. Unless otherwise specified, notification shall be valid for one year per activity; provided, that there is no change in the scope of the project including, but not limited to, the location and/or extent of the activity allowed under the notification process.

### B. Activities Allowed with Notification.

1. **Emergency construction or activity** necessary for the immediate preservation of the public health, safety, and welfare as determined by the ~~technical administrator~~ Director; provided, that:
  - a. An emergency is an unanticipated and imminent threat to public health, safety, or the environment that requires immediate action within a time period too short to allow full compliance with this chapter.
  - b. Emergency construction does not include development of new permanent protective structures where none previously existed. Where the ~~technical administrator~~ Director determines that new protective structures are the appropriate means to address an emergency situation, the project proponent shall either obtain any permits that would have been required absent an emergency, pursuant to Chapter [90.58](#) RCW, Chapter [173-27](#) WAC, or this chapter, or remove the structure upon abatement of the emergency situation.
  - c. Within the jurisdiction of the Whatcom County Shoreline Management Program (WCC Title [23](#)), all emergency construction shall be consistent with the policies and procedural requirements of WCC Title [23](#) and this chapter.
  - d. The applicant shall make a reasonable attempt to contact the ~~technical administrator~~ Director prior to activity; provided, that when prior notice is not feasible, notification of the action shall be submitted to the ~~technical administrator~~ Director as soon as the emergency is addressed and no later than 14 days following such action.
2. **Maintenance, operation, and/or repair of existing infrastructure improvements**, including dikes and drainage ditches, rights-of-way, trails, roads, fences, and utilities or utility corridors; provided, that the activity does not further alter, impact, or encroach upon critical areas or buffers or further affect their functions. The maintenance or repair activity shall not result in increased risk to life or property. Maintenance or repair shall be allowed pursuant to the provisions set forth in this chapter; provided, that:

- a. The applicant shall submit to the ~~technical administrator~~ Director a written description of the maintenance activity with all of the following general information:
    - i. Type, timing, frequency, and sequence of maintenance activity to be conducted;
    - ii. Type of equipment to be used (hand or mechanical);
    - iii. Manner in which the equipment will be used; and
    - iv. Best management practices to be used.
  - b. The applicant’s written description shall be valid for up to five years; provided, that there is no significant change in the type or extent of maintenance activity.
3. **Utility Installation.** Construction of electrical, telecommunications, cable, water, sewer, and other utility lines and equipment within existing structures, facilities, infrastructure systems, development areas and uses, utility easements, and public and private rights-of-way, provided:
- a. There is no further intrusion into geologically hazardous areas, frequently flooded areas, wetlands, or fish and wildlife habitat conservation areas or their buffers;
  - b. Soil erosion is controlled;
  - c. Disturbed areas are promptly stabilized; and
  - d. Any adverse impacts to critical areas are mitigated in accordance with this chapter.
- 3.4. **Select Removal or Pruning of Vegetation Management.** No vegetation shall be removed from a wetland, habitat conservation area, coastal or riverine erosion hazard area, or landslide hazard area, or their buffers, unless specifically listed in subsection (a) and meeting the conditions of subsection (b), below subject to the following:
- a. Exceptions. ~~Vegetation removal or pruning will be done in a manner that minimizes disturbance and prevents adverse effects on soil stability, fish or wildlife habitat, water quality, or water quantity.~~
    - i. Except for ~~Lawn~~, pasture, ornamental vegetation, and similar introduced vegetation, provided all areas of vegetation removal are revegetated, no vegetation shall be removed from a wetland, habitat conservation area, coastal or riverine erosion hazard area, or landslide hazard area or their buffers unless otherwise authorized by the technical administrator for safety reasons.
    - ii. Restoration projects.
    - iii. Maintenance of legally established views so long as the criteria subsection (B)(6) of this section are met.
    - iv. The felling of hazard trees within critical areas and buffers, with an approved tree risk assessment completed by a qualified professional.
    - v. To improve overall slope or bank stability selective vegetation limbing, clearing, and/or thinning may be allowed in landslide hazard areas and/or riverine and coastal erosion hazard areas and/or their buffers pursuant to an approved habitat management plan designed. The plan shall be prepared by a qualified professional and reviewed by a licensed geologist or geotechnical engineer.

Comment [CES17]: Added to address Scoping Document item #12a.

b. Conditions.

i. Vegetation removal or pruning will be done in a manner that minimizes disturbance and prevents adverse effects on soil stability, fish or wildlife habitat, water quality, or water quantity. Shrubs shall not be pruned to a height of less than 6 feet.

ii. Cut vegetation shall be left within the critical area or buffer where practicable unless removal is warranted due to the presence of an established disease infestation, noxious weeds, environmental or other hazards, or because of access or maintenance needs if the area is a utility or access right-of-way.

iii. All limb removal, crown thinning, or pruning shall meet the American National Standard Institute (ANSI) tree pruning standards. Pruning shall retain branches that overhang the water. No tree topping shall occur. In no circumstance shall removal of more than one-fourth (1/4) of the original crown be permitted within a three year period.

iv. Hazard Tree Mitigation.

(A) The landowner shall replace any trees that are removed at a three to one ratio (3:1). When approved by the Director, a landowner may choose to convert a hazard tree proposed for removal to a wildlife snag as an alternative if recommended by a certified arborist.

(B) In addition to the requirements of WCC 20.80.300 through 20.80.380 (Landscaping), replacement trees shall meet the following criteria:

(1) Replacement trees shall be exclusively species native to the coastal region of the Pacific Northwest.

(2) At a minimum, 50% of replacement trees shall be evergreen species. If only one replacement tree is required, it shall be an evergreen species, unless otherwise approved by the Director.

4. ~~The felling of hazard trees within critical areas and buffers, with an approved tree risk assessment completed by a qualified professional.~~

5. **View Corridors.** Clearing and/or thinning for limited view corridors shall be allowed. Except in landslide hazard areas and buffers and riverine and coastal erosion hazard areas and buffers, the clearing, pruning, and revegetation of buffer areas for view purposes where it does not adversely impact ecological and/or aesthetic values, and/or slope stability, provided:

a. The proposed view corridor is not located in a landslide, riverine, or coastal erosion hazard areas hazard areas or their buffers.

b. Clearing shall only be allowed when the applicant can demonstrate that a limited view corridor cannot be achieved through limb removal, crown thinning, or pruning. With clearing, a combination such strategies may be required to establish a view shall be required.

a-c. A window or view opening is limited to the minimum necessary for view purposes and shall not exceed a cumulative total of 15% percent of buffer length, unless the applicant can demonstrate to the technical administrator's satisfaction that a larger dimension is warranted because of slope or other site considerations. Trees greater than 12 inches in diameter at breast height shall be preserved, but may be shaped, windowed/thinned or

Comment [AP18]: This language is modeled after Tree Replacement Requirements for Lake Whatcom.

Comment [CES19]: New text added per Scoping Document, Item #18a.

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

- ~~pruned.~~ Whenever possible, view corridors shall be located in areas dominated with non-native vegetation and invasive species.
- ~~b.d.~~ Significant trees greater than 12 inches in diameter at breast height shall be preserved, but may be shaped, windowed/thinned or pruned.
- ~~e.e.~~ Low-growing native vegetation shall be retained and/or planted in the view corridor to provide habitat, stabilize the area, and achieve dense growth.
- ~~d.~~ This activity shall not be conducted more than once every 10 years for any individual residential property.
- ~~e.f.~~ Clearing shall not take place where increased risks or adverse impacts, including cumulative impacts, to critical area functions and values are likely to occur.
- ~~f.g.~~ This provision does not apply to open space set aside in a subdivision or other approval to which specific conditions are attached that prohibit clearing of vegetation without a written approval or permit.
- ~~g.h.~~ View areas established under this section shall be considered lawfully established and may be maintained as provided for in subsection (B)(~~34~~) of this section.
6. **Navigation Aids.** The installation of navigation aids and boundary markers in accordance with applicable state and federal laws or the installation of mooring buoys in accordance with the Department of Fish and Wildlife design guidelines and the Whatcom County Shoreline Management Program (WCC Title [23](#)).
7. **Site Investigation.** Routine site investigation work in wetlands, landslide hazard areas, and riverine and coastal erosion hazard areas. This includes geotechnical soil borings, groundwater monitoring wells, percolation tests, sediment sampling, and similar or related activities required for land use application submittals or permit compliance. Land survey and shallow soil test pits dug in conjunction with wetland delineation studies do not require notification.
8. **Household Garden Products.** ~~Fertilizers or household~~ herbicides to address noxious weed infestation may be used in critical area buffers, but not in critical areas. Either must be applied at times and rates specified on the label in accordance with Washington State Department of Agriculture and other applicable regulations.
9. **Ditch Maintenance.** ~~Routine maintenance of ditches o~~On agricultural lands maintenance of ditches is allowed; provided, that all of the following are met:
- a. The maintenance is necessary to support ongoing agricultural operations;
  - b. The maintenance activity does not expand the dimensions of the drainage channel beyond the original, lawfully established dimensions;
  - c. The agricultural activities are conducted pursuant to an approved conservation farm plan prepared pursuant to Article 8 of this chapter;
  - d. The farm operator obtains a hydraulic project approval (HPA), if required, from the Washington State Department of Fish and Wildlife (WDFW) prior to the maintenance activity; and
  - e. The farm operator provides a copy of the HPA to the ~~technical administrator~~ Director as part of the written notification.
10. Alteration or removal of beaver-built structures two years old or less; provided, that:

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

- a. There is no adverse impact to wetland or river or stream functions.
- b. The property owner obtains an HPA from WDFW (if required) prior to the maintenance activity.
- c. The property owner provides a copy of the HPA to the ~~technical administrator~~ Director as part of the written notification.

### **16.16.240 Technical administrator and hearing examiner authority.**

The technical administrator is the Whatcom County director of planning and development services or his/her designee. The hearing examiner is appointed by the county council. The technical administrator and the county hearing examiner shall administer and enforce the provisions of this chapter pursuant to the following:

- A. The technical administrator shall have the primary responsibility for reviewing development proposals for compliance with this chapter and is authorized to approve, deny, or condition permits in accordance with the standards set forth herein. The technical administrator shall also have the following authority:
  1. ~~Authority to convene an interdisciplinary team to assist in reviewing development proposals or to solicit review from outside experts in accordance with WCC 16.16.245.~~
  2. ~~Authority to grant, condition, or deny reasonable use permits for single-family residential building permits within critical areas and/or their buffers.~~
  3. ~~Authority to grant, condition, or deny reasonable use permits for other development proposals that would affect critical area buffers, but not the critical areas themselves.~~
  4. ~~Authority to serve a cease and desist order pursuant to WCC 16.16.285 upon a person undertaking activity within a critical area or buffer in violation of this chapter.~~
  5. ~~Any additional responsibility and/or authority specifically provided for in the subsequent articles of this chapter.~~
- B. ~~The technical administrator's authority shall transfer to another county decision maker when another decision maker is specified for a separate project permit. In such cases, the technical administrator shall ensure that all procedural requirements of this chapter are met and shall make a recommendation to the designated decision maker as to how the provisions of this chapter apply to the permit action, including project permits.~~
- C. ~~The Whatcom County hearing examiner is hereby vested with responsibility and authority to hear appeals and perform the following duties:~~
  1. ~~Authority to grant or deny variances.~~
  2. ~~Authority to grant, condition, or deny reasonable use permits for all developments, except single-family building permits, affecting critical areas.~~
  3. ~~Authority to decide on appeals of administrative decisions including, but not limited to, reasonable use permits issued by the technical administrator.~~
  4. ~~Authority to hold public hearings pursuant to Chapter 22.05 WCC.~~
- D.A. ~~In granting, revising, or extending a permit, the technical administrator, or hearing examiner as applicable, may attach such conditions, modifications, or restrictions thereto regarding the location, character, and other features of the proposed development deemed necessary to assure that the~~

Comment [RE20]: Moved to 16.16.200 (Authority)

development is consistent with criteria set forth in this chapter. In cases involving unusual circumstances or uncertain effects, a condition may be imposed to allow for future review or reevaluation to assure conformance with this chapter. The technical administrator and/or hearing examiner shall render a final decision in accordance with the timelines established in Chapter 22.05 WCC, as applicable. All decisions of the technical administrator and hearing examiner may be appealed pursuant to WCC 22.05.160.

**16.16.245 Interdisciplinary team.**

The technical administrator may call upon outside expertise including an interdisciplinary team if the technical administrator determines that additional technical assistance is required to assess a critical areas development proposal or ensure the application of best available science.

- A. The interdisciplinary team shall include the applicant and/or their technical representative, local, state, or federal agency or tribal representatives with expertise in the field, and/or independent qualified professionals with expertise relating to the critical area issue.
- B. The functions of the interdisciplinary team are to field check and verify critical area determinations/boundaries and assess species/habitat presence by providing written peer review of the information included with an application, identify areas of concern in the application of best available science, provide professional opinions and recommendations relevant to the provisions of this chapter, and help focus the preparation of subsequent reports and environmental documentation on the most relevant issues.
- C. The technical administrator will coordinate this effort and seek advice from the team.
- D. In lieu of convening an interdisciplinary team, the county may require third party review by a qualified professional for any development proposal, mitigation plan, mitigation bank proposal, or other project for which additional technical expertise is needed. The cost of the third party review shall be the permit applicant's responsibility.

Comment [RE21]: Moved to 16.16.220(C) (Interdisciplinary Team)

**16.16.250 Submittal requirements and Critical Areas Review Process.**

- A. All applicants shall complete a prescreening meeting with the technical administrator/Director prior to submitting an application subject to this chapter. The purpose of this meeting shall be to discuss the requirements for a complete application; the critical area standards and procedures; to review conceptual site plans prepared by the applicant; to discuss appropriate investigative techniques and methods; and to determine reporting requirements.
- B. Review and approval of a proposed development within a critical area or its buffer may be initiated through the application for any project permit in Whatcom County on department-approved forms and containing the materials listed in the department's Administrative Manual.

~~When County critical area maps, indicators, or other sources of credible information indicate that a site may be located in, contain, or abut critical areas or their buffers or setbacks, the shall require technical studies in accordance with the requirements for that critical area specified herein.~~

Comment [CES22]: Moved to 16.16.220

- C. The technical administrator/Director shall be responsible, in a timely manner, to make one of the following determinations regarding critical areas review:
  - 1. Initial Determination. ~~When county critical area maps or other sources of credible information indicate that a site may be located, contain or abut critical areas, critical area buffers or setbacks~~

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

~~the technical administrator shall require technical studies in accordance with that critical area's specific article.~~

~~2.1. Determination of Impacts.~~ The ~~technical administrator~~ Director shall use best available science, including but not limited to the County's critical areas maps, his/her field investigation results, his/her own knowledge of the site, information from appropriate resource agencies, or documentation from a scientific or other credible source to determine if the project will more probably than not adversely impact a critical area or its buffer. Identified adverse impacts shall be fully mitigated in accordance with WCC 16.16.260.

~~3.2. Determination of Compliance.~~ If the applicant demonstrates to the satisfaction of the ~~technical administrator~~ Director that the project meets the provisions of this chapter and is not likely to adversely affect the functions and values of critical areas or buffers or provides mitigation to reduce the adverse impact to meet no net loss of the function and values of critical areas or buffers, the ~~technical administrator~~ Director shall make the determination that the proposal complies with this chapter.

~~4.3. Decision to Approve, Condition, or Deny.~~ The ~~technical administrator~~ Director shall review all pertinent information pertaining to the proposed development and shall approve, approve with conditions, or deny the permit based on their review, and shall provide a detailed written decision. This determination shall be included in the project review record for the project permit in accordance with WCC Chapter 22.05.

D. The ~~technical administrator~~ Director may waive the requirement for critical areas review under this chapter when s/he determines that all of the following conditions are met:

1. The proposed development activity is located on a parcel that received approval of a previous critical areas review within the prior five years, site conditions have not changed, and the applicable regulations have not substantively changed;
2. All critical areas within 300 feet of the new proposed development, use, or activity on the parcel have been identified and delineated and the effects of the pro-posed development activity have been thoroughly considered in accordance with the most current regulations and best available science;
3. The activity is in compliance with all permit conditions including mitigating measures, as applicable, that were imposed as part of the prior review and there are no outstanding violations of conditions that were imposed as part of the previous review;
4. The development activity involves a use that is equally or less intensive than the development activity that was subject to the prior permit. Land use intensity shall be based on factors including development density, critical areas impacts, impervious surface, noise, glare, dust, hours of operation, and traffic.

~~E. Submittal Materials.~~

- ~~1. Complete application.~~
- ~~2. A detailed site map drawn to a common scale, or survey, showing at least the following:~~
  - ~~a. Vicinity map.~~
  - ~~b. Topographic, hydrologic, and vegetative features.~~

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

- e. ~~The location and description of known wildlife and habitat features and all known critical areas.~~
- d. ~~Proposed development activity with dimensions.~~
- 3. ~~Existing physical features of the site including buildings, fences, and other structures, roads, parking lots, utilities, water bodies, etc. Structures shall be dimensioned.~~
- F. ~~Elements of a critical area assessment are encouraged to be submitted together for timely review. However, the technical administrator may allow the various components to be submitted independently at different phases of a project if s/he determines piecemeal review will benefit the review process or at the request of the applicant.~~

**Comment [CES23]:** Deleted because we're moving away from the code listing everything needed in an application and just referring PDS's admin manual, which is referenced in subsection (B) now.

**Comment [CES24]:** Moved to 16.16.255

**16.16.255 Critical Areas Assessment Reports.**

A. When the ~~technical administrator~~ Director determines a need for a critical area assessment pursuant to WCC 16.16.250, s/he shall have the authority to require a critical areas assessment report, to be prepared by a qualified professional and be consistent with best available science. The analysis shall be commensurate with the value or sensitivity of a particular critical area and relative to the scale and potential impacts of the proposed activity. A critical area assessment shall have all of the following elements, unless determined by the ~~technical administrator~~ Director not to be needed:

- 1. The requirements found in subsections ~~B-(C)~~ and ~~H-(I)~~ of this section;
- 2. Geological hazard assessment;
- 3. Critical aquifer recharge assessment;
- 4. Frequently flooded area assessment;
- 5. Wetland assessment;
- 6. Fish and wildlife habitat conservation area assessment;
- 7. A mitigation plan addressing all mitigation requirements of this title.
- 8. Habitat Management Plan, when required by this chapter or Title 23.

B. Elements of a critical area assessment are encouraged to be submitted together for timely review. However, at the request of the applicant the Director may allow the various components to be submitted independently at different phases of a project if s/he determines piecemeal review is reasonable and will benefit the review process.

**Comment [CES25]:** Moved from 16.16.250

~~B-C.~~ The critical areas assessment report shall:

- 1. Demonstrate that the submitted proposal is consistent with the purposes and specific standards of this chapter;
- 2. Describe all relevant aspects of the development proposal and critical areas adversely affected by the proposal including any geological hazards and risks associated with the proposal, and assess impacts on the critical area from activities and uses proposed; and
- 3. Identify impacts of the proposed use/development on habitat corridors, ecological connectivity, and habitat for salmon and forage fish as identified in WCC 16.16.710.

**Comment [CES26]:** Added per SMP Scoping Document, Items #8b and 8c.

~~3-4.~~ Where impacts are unavoidable, demonstrate through an alternatives analysis that no other feasible alternative exists. Such an analysis shall explore alternatives that might pose fewer impacts or better protect ecological functions, and address such issues as project design,

**Comment [P/C27]:** P/C moved to approve. Passed 7-0

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

location on the property, and type and location of mitigation, as applicable to the proposed development.

~~4.5. Identify and evaluate the cumulative impacts of individual development proposals to assure that no net loss standards are achieved. Consider the cumulative impacts of the proposed action that includes past, present, and reasonably foreseeable future actions to facilitate the goal of no net loss of critical areas.~~ Such impacts shall include those to wildlife, habitat, and migration corridors; water quality and quantity; and other watershed processes that relate to critical area condition, process, and/or service.

**Comment [CES28]:** Moved from 23.90.030  
30.010 Ecological Protection

~~5.6. Identify proposed mitigation and protective measures as required by this chapter.~~

~~C.D.~~ The ~~technical administrator~~ Director shall review the critical areas assessment report for completeness and accuracy and shall consider the recommendations and conclusions of the critical areas assessment report to assist in making administrative decisions concerning approval, conditional approval, or denial of the subject project and to resolve issues concerning critical areas jurisdiction and appropriate mitigation and protective measures.

~~E.~~ The Director shall reject or request revision of the field and literature findings and conclusions reached in a critical areas assessment report when s/he can demonstrate that the assessment is inaccurate, incomplete, or does not fully address the critical areas impacts involved.

~~D.F.~~ Critical areas assessment reports shall generally be valid for a period of five years from the date the assessment is approved by the ~~technical administrator~~ Director. Future land use applications may require preparation of new or supplemental critical area assessment reports unless it can be demonstrated to the satisfaction of the ~~technical administrator~~ Director that the previously prepared report is adequate for current analysis. The ~~technical administrator~~ Director may also require the preparation of a new critical area assessment report or a supplemental report when new information is found demonstrating that the initial assessment is in error. If the ~~technical administrator~~ Director requires more information in the report, s/he shall make the request in writing to the applicant stating what additional information is needed and why.

~~F.A.~~ The ~~technical administrator~~ shall reject or request revision of the field and literature findings and conclusions reached in a critical areas assessment report when s/he can demonstrate that the assessment is inaccurate, incomplete, or does not fully address the critical areas impacts involved.

~~F.G.~~ To avoid duplication, the reporting requirements of this chapter shall be coordinated if more than one critical area assessment report is required for a site or development proposal. Similarly, where other agencies' assessments or reports are required pursuant to other state or federal laws, the applicant is encouraged to submit one report that satisfies all such agencies' requirements.

~~G.H.~~ In addition to a hard copy, applicants shall provide reports and maps to the County in an electronic format that allows site data to be incorporated into the County critical areas database; however, the County may waive the electronic format requirement for single-family building permits. Applicants shall follow Whatcom County electronic submittal guidelines. This requirement shall not be construed as a requirement to use specific computer software, though it must be in a format usable by the County.

~~H.I.~~ The intent of these provisions is to require a reasonable level of technical study and alternatives analysis pursuant to WCC [16.16.250](#) sufficient to assess potential project impacts and to protect

critical areas. At a minimum, a critical areas assessment report shall include the following information:

1. A site plan showing the proposed development footprint and clearing limits, all relevant critical areas and buffers within and abutting the site, a written description of the project, an examination of project on-site design alternatives, and an explanation of why the proposed activity requires a location on, or access across, a critical area and why alternatives are not feasible;
2. A written description of the critical areas and buffers on or in the vicinity of the site, including their size, type, classification or rating, condition, disturbance history, and functions and values. Projects in frequently flooded areas must comply with the reporting requirements of WCC Title 17. Projects on or adjacent to geologically hazardous areas shall identify the type of hazard and assess the associated risks posed by the development or that the development may be subject to;
3. An analysis of potential adverse critical area impacts associated with the proposed activity including, but not limited to, effects related to clearing, grading, noise, light/glare, drilling, damming, draining, creating impervious surface, managing stormwater, releasing hazardous materials, and other alterations, and including an explanation of critical area processes and functions that may be affected;
4. An analysis of how critical area impacts or risks will be avoided and/or minimized, and/or an analysis of the proposed measures to prevent or minimize hazards. When impacts cannot be avoided, the report shall include a plan describing mitigation that will be provided to replace critical area functions and values altered as a result of the proposal. The mitigation plan shall be consistent with the provisions of WCC 16.16.260 and provide written documentation showing what the applicant considered for each step in the mitigation sequencing and the other applicable articles of this chapter;
5. The dates, names, signatures, and qualifications of the persons preparing the report and documentation of analysis methods including any fieldwork performed on the site; and
6. Additional reasonable information requested by the ~~technical administrator~~ Director for the assessment of critical areas impacts or otherwise required by the subsequent articles of this chapter.

**16.16.260 General Mitigation Requirements.**

- A. ~~Developments permitted pursuant to this chapter~~ that adversely impacts or alters a critical area or buffer shall include mitigation sufficient to minimize risks associated with geologic hazards and/or ~~maintain~~ or replace or improve critical areas functions and values. Any proposed development that cannot adequately mitigate critical area impacts as determined by the ~~technical administrator~~ Director shall be denied.
- B. In determining the extent and type of mitigation required, the Director may consider all of the following:
  1. The ecological processes that affect and influence critical area structure and function within the watershed or sub-basin;

Formatted: List Paragraph, Indent: Left: 0", Numbered + Level: 1 + Numbering Style: A, B, C, ... + Start at: 1 + Alignment: Left + Aligned at: 0.25" + Indent at: 0.5"

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

2. The individual and cumulative effects of the action upon the functions of the critical area and associated watershed;
3. Observed or predicted trends regarding the gains or losses of specific habitats or species in the watershed, in light of natural and human processes;
4. The likely success of the proposed mitigation measures;
5. Effects of the mitigation actions on neighboring properties; and
6. Opportunities to implement restoration actions formally identified by an adopted shoreline restoration plan, watershed planning document prepared and adopted pursuant to Chapter 90.82 RCW, a salmonid recovery plan or project that has been identified on the watershed management board habitat project list or by the Washington State Department of Fish and Wildlife as essential for fish and wildlife habitat enhancement.

**Comment [CES29]:** Was repeated in several articles; moved to general mitigation regs.

C. Though in general on-site mitigation is preferred, the County shall not risk mitigation success or bypass opportunities for improving ecological processes in a watershed by precluding other mitigation options when it is more effective and sustainable. In order to provide the greatest ecological benefit, a combination of mitigation options may be used to achieve no net loss of ecological functions. In some cases it may be necessary to mitigate at multiple sites or on-site and out-of-kind. In determining the extent and type of mitigation required for impacts to critical areas, the Director may consider all of the following when applicable:

**Comment [CES30]:** Policy change. This would allow off-site mitigation when it's better for the environment and assists w/ developing an offsite buffer mitigation program.

1. On-site and in-kind. Unless otherwise approved by the Director, all critical areas impacts shall be compensated by creation or restoration of replacement areas that are in-kind, on-site, and of similar critical area category.
2. Off-site and in-kind. The Director may consider and approve off-site mitigation when the applicant demonstrates that greater biological and/or hydrological functions and values will be achieved. The mitigation may include restoration, creation, or enhancement of critical areas and/or their buffers. The process to determine the ratios of on-site mitigation shall apply to off-site ratios as well.
3. On-site and out-of-kind. The Director may consider and approve out-of-kind mitigation when the applicant demonstrates an ecological uplift of biological and/or hydrological functions and values will be achieved. The mitigation may include restoration, creation, or enhancement of other types of critical areas and/or their buffers. The process to determine the ratios of out-of-kind mitigation shall be based on a habitat management plan with a functional replacement assessment.
4. Alternative Mitigation Plans pursuant to 16.16.261 (Alternative Mitigation Plans)
5. Use of Mitigation Bank Credits, pursuant to 16.16.263 (Mitigation Banking)

D. Where feasible, mitigation projects shall be completed prior to activities that will disturb habitat conservation areas critical areas or their buffers. In all other cases, mitigation shall be completed concurrently with developments as quickly as possible following disturbance and prior to use or occupancy of the activity or development.

E. Construction of mitigation projects shall be timed to reduce impacts; provided, that the Director may adjust the timing requirements to allow grading, planting, and other activities to occur during the appropriate season(s).

**Comment [CES31]:** Moved from 16.16.760

**A-F. Mitigation Sequence.**

1. When an alteration or impact to a critical area or buffer is proposed, the applicant shall conduct an alternatives/mitigation sequencing analysis and demonstrate that all reasonable efforts have been taken to mitigate adverse impacts in the following prioritized order:
  - a. Avoiding the adverse impact altogether by not taking a certain action or parts of an action, or moving the action.
  - b. Minimizing adverse impacts by limiting the degree or magnitude of the action and its implementation by using appropriate technology and engineering, or by taking affirmative steps to avoid or reduce adverse impacts.
  - c. Rectifying the adverse impact by repairing, rehabilitating, or restoring the affected environment.
  - d. Reducing or eliminating the adverse impact over time by preservation and maintenance operations during the life of the action.
  - e. Compensating for the adverse impact by replacing, enhancing, or providing similar substitute resources or environments and monitoring the adverse impact and the mitigation project and taking appropriate corrective measures.
2. Mitigation shall be provided for all unavoidable adverse alterations of a critical area or buffer. Mitigation for individual projects may include a sequenced combination of the above measures as needed to achieve the most effective protection, compensation for buffer functions and values, or mitigation for critical area functions and values.

**B-G. Mitigation Plan.**

1. A mitigation plan shall be developed in accordance with an approved critical areas assessment report and be consistent with best available science. Where appropriate, the mitigation plan should be compatible with watershed and recovery planning goals for Whatcom County. The intent of these provisions is to require a level of technical study and analysis sufficient to protect critical areas and/or protect developments and occupants from critical areas involving hazards. The analysis shall be commensurate with the value or sensitivity of a particular critical area and relative to the scale and potential impacts of the proposed activity.
2. The mitigation plan shall provide for construction, maintenance, monitoring, and contingencies as required by conditions of approval and consistent with the requirements of this chapter.
3. The mitigation plan shall demonstrate that all reasonable efforts have been taken to provide sufficient mitigation such that the activity does not have significant adverse impacts and results in no net loss of shoreline and critical area ecological functions.
- ~~3-4.~~ The mitigation plan shall be prepared by a qualified professional; provided, that the ~~technical administrator~~ Director may waive the requirement to hire a qualified professional to prepare a mitigation plan when the required mitigation involves standard planting or enhancement practices. The waiver shall not be granted for mitigation practices involving wetland creation, rehabilitation, and/or restoration.
- 4-5. The mitigation plan shall contain the following information:
  - i. A description and scaled drawings of the activities proposed to reduce risks associated with geologic hazards and/or flooding, and/or to mitigate for impacts to critical area

Comment [CES32]: Moved from 23.90.030/30.010 Ecological Protection

functions and values. This shall include all clearing, grading/ excavation, drainage alterations, planting, invasive weed management, installation of habitat structures, construction sequencing, best management practices, site protection, irrigation, and other site treatments associated with the development activities.

- ii. Specific information on construction or the proposed mitigation activity including timing, sequence, equipment needs, best management practices, and responsible parties.
- iii. A description of the functions and values that the proposed mitigation area(s) shall provide, and/or a description of the level of hazard mitigation provided.
- iv. The goals, objectives, and performance standards that the proposed mitigation action(s) shall achieve or demonstrate consistency with.
- v. A description of how the mitigation area(s) will be evaluated and monitored to determine if the performance standards are being met.
- vi. A program and schedule for construction and post-construction performance monitoring of the mitigation project.
- vii. An evaluation of potential adverse impacts on adjacent property owners resulting from the proposed mitigation and measures to address such impacts. Mitigation projects shall not result in adverse impacts to adjacent property owners.
- viii. Identification of potential courses of action or contingencies, and any corrective measures to be taken if monitoring or evaluation indicates that project performance standards are not being met.
- ix. Plan sheets with scale identified, showing the edge of the critical area and buffer area. The affected critical area and buffer shall be clearly staked, flagged, and/or fenced prior to and during any site clearing and construction to ensure protection for the critical area and buffer during construction.
- x. A description of other permits and approvals being sought, including the need for permits from state and/or federal agencies.
- xi. Additional information as required by the subsequent articles of this chapter.

**C.H. Mitigation Monitoring and Maintenance.**

- 1. All mitigation areas shall be maintained and managed to prevent degradation and ensure protection of critical area functions and values subject to field verification by the Director.
- 2. The technical administrator/Director shall have the authority to require that compensatory mitigation projects be monitored annually for at least five years to establish that performance standards have been met. Required monitoring reports shall be submitted to the County annually during the monitoring period to document milestones, successes, problems, and contingency actions of the compensatory mitigation.
  - i. At year three, if the mitigation is meeting year 5 performance standards, the technical administrator/Director may reduce the monitoring timeframe to three years for minor mitigation projects involving critical area or buffer revegetation or vegetation enhancement, but not for projects involving wetland creation, wetland restoration, stream restoration or other activities that require manipulation of soils or water. All mitigation areas shall be

Comment [CES33]: Moved from below.

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

~~maintained and managed to prevent degradation and ensure protection of critical area functions and values subject to field verification by the technical administrator.~~

Comment [CES34]: Moved to (1)

- ii. The ~~technical administrator~~ Director shall have the authority to extend the monitoring period, require corrective measures, and/or require additional monitoring reports beyond the initial monitoring period for any project that does not meet the performance standards identified in the mitigation plan, or does not provide adequate replacement for the functions and values of the impacted critical area.

~~2.3.~~ Permanent protection shall be achieved through deed restriction or other protective covenant in accordance with WCC [16.16.265](#).

**D.1. Mitigation Assurance.**

1. The applicant and his/her representatives shall demonstrate sufficient scientific expertise and capability to implement the mitigation, monitor the site, and make corrections if the project fails to meet projected goals. The ~~technical administrator~~ Director may require the following to ensure that the mitigation is fully functional:
  - i. The applicant shall post a mitigation surety in the amount of ~~125% percent~~ of the estimated cost of the uncompleted actions or the estimated cost of restoring the functions and values of the critical area that are at risk, whichever is greater. The surety shall be based on an itemized cost estimate of the mitigation activity including clearing and grading, plant materials, plant installation, irrigation, weed management, monitoring, and other costs.
  - ii. The surety shall be in the form of an assignment of funds or other means approved by the ~~technical administrator~~ Director.
  - iii. Surety authorized by this section shall remain in effect until the ~~technical administrator~~ Director determines, in writing, that the standards bonded for have been met. Surety shall generally be held by the County for a period of five years to ensure that the required mitigation has been fully implemented and demonstrated to function, and may be held for longer periods when necessary. Surety for construction may be reduced after initial completion in an amount not to exceed the cost of monitoring plus not less than ~~25% percent~~ of the construction cost.
  - iv. Depletion, failure, or collection of surety funds shall not discharge the obligation of an applicant or violator to complete required mitigation, maintenance, or monitoring.
  - v. Public development proposals shall be relieved from having to comply with the bonding requirements of this section if public funds have previously been committed for mitigation, maintenance, or monitoring.
  - vi. Any failure to satisfy critical area requirements established by law or condition including, but not limited to, the failure to provide a monitoring report within 30 days after it is due or comply with other provisions of an approved mitigation plan shall constitute a default subject to the provisions of WCC [16.16.285](#), and the County may demand payment of any financial guarantees or require other action authorized by the County code or any other law.

- vii. Any funds recovered pursuant to this section shall be used to complete the required mitigation or equivalent.

**E.J. Permanent Protection.** All mitigation areas shall be protected and managed to prevent degradation and ensure protection of critical area functions and values in perpetuity. Permanent protection shall be achieved through deed restriction or other protective covenant in accordance with WCC [16.16.265](#). If additional development is proposed that impacts a mitigation area and those impacts are accounted for under a new, approved mitigation plan, such protection may be removed so long as the final plan meets the requirements of this chapter for all cumulative impacts.

**16.16.261 Alternative ~~or innovative~~ Mitigation Plans.**

- A. The County shall consider and may approve alternative ~~or innovative~~ mitigation plans for major developments (as defined in Article 9 of this chapter), planned unit developments (pursuant to WCC Chapter [20.85](#) ), and/or development agreements (pursuant to RCW [36.70B.170](#) through [36.70B.210](#)).
- B. If approved, said plan shall be used to satisfy the requirements of this chapter and provide relief and/or deviation as appropriate from the specific standards and requirements thereof; provided, that the standards of impact avoidance and minimization shall remain as guiding principles in the application of these provisions and when it is demonstrated that all of the following circumstances exist:
  - 1. The proponent(s) demonstrate the organizational and fiscal capability to carry out the purpose and intent of the plan;
  - 2. The proponent(s) demonstrate that long-term management, maintenance, and monitoring will be adequately funded and effectively implemented;
  - 3. There is a clear likelihood for success of the proposed plan based on supporting scientific information or demonstrated experience in implementing similar plans;
  - 4. In terms of functional value, the proposed mitigation plan results in equal or greater protection and conservation of critical areas functions, services, and values than would be achieved using parcel-by-parcel regulations and/or traditional mitigation approaches;
  - 5. The plan is consistent with the general purpose and intent of this chapter, the Shoreline Management Program (WCC Title [23](#)), and the comprehensive plan;
  - 6. The plan shall contain relevant management strategies considered effective and within the scope of this chapter and shall document when, where, and how such strategies substitute for compliance with the specific standards herein; and
  - 7. The plan shall contain clear and measurable standards for achieving compliance with the purposes of this chapter, a description of how such standards will be monitored and measured over the life of the plan, and a fully funded contingency plan if any element of the plan does not meet standards for compliance.
- C. Alternative mitigation plans shall be reviewed concurrently with the underlying land use permit(s) and decisions to approve or deny such plans shall be made in accordance with the underlying permit process. The plan shall be reviewed by the ~~technical administrator~~ Director to ensure compliance with the general purpose and intent of this chapter and to ensure accuracy

of the data and effectiveness of proposed management strategies. In making this determination the ~~technical administrator~~ Director shall consult with the State Departments of Fish and Wildlife, Ecology, Natural Resources, and/or other local, state, federal, and/or tribal agencies or experts. If the ~~technical administrator~~ Director finds the plan to be complete, accurate, and consistent with the purposes and intent of this chapter, the designated decision maker shall solicit comment pursuant to the public notice provisions of WCC Chapter [22.05](#) prior to final approval/denial of permission of the plan to substitute for the requirements and standards of this chapter.

**16.16.262 Watershed-Based Management Plans.**

- A. The County may consider watershed-based management plans sponsored by watershed improvement districts, other special purpose districts, or other government agencies.
- B. If approved, said plan shall be used to satisfy the requirements of this chapter and provide relief and/or deviation as appropriate from the specific standards and requirements thereof; provided, that the standards of impact avoidance and minimization shall remain as guiding principles in the application of these provisions and when it is demonstrated that all of the following circumstances exist:
  - 1. The proponent(s) demonstrate the organizational and fiscal capability to carry out the purpose and intent of the plan;
  - 2. The proponent(s) demonstrate that long-term management, maintenance, and monitoring of the watershed will be adequately funded and effectively implemented;
  - 3. There is a clear likelihood for success of the proposed plan based on supporting scientific information or demonstrated experience in implementing similar plans;
  - 4. In terms of functional value, the proposed mitigation plan results in equal or greater restoration, protection, and conservation of the impacted critical areas than would be achieved using parcel-by-parcel regulations and/or traditional mitigation approaches;
  - 5. The plan is consistent with the general purpose and intent of this chapter, the comprehensive plan, and an approved watershed plan prepared pursuant to Chapter [90.82](#) RCW (the State Watershed Management Act) or the plan is prepared under other local or state authority that is consistent with the goals and policies of an applicable and approved watershed plan prepared pursuant to Chapter [90.82](#) RCW;
  - 6. The plan shall contain relevant management strategies considered effective and within the scope of this chapter and shall document when, where, and how such strategies substitute for compliance with the specific standards herein; and
  - 7. The plan shall contain clear and measurable standards for achieving compliance with the purposes of this chapter, a description of how such standards will be monitored and measured over the life of the plan, and a fully funded contingency plan if any element of the plan does not meet standards for compliance.
- C. Watershed-based management plans shall be approved by the County Council by ordinance and appended to this chapter. The process for approval shall be as follows:
  - 1. The plan shall be reviewed by the ~~technical administrator~~ Director to ensure compliance with the purposes of this chapter, the Whatcom County Shoreline Management Program (WCC

Title 23), and with the comprehensive plan, and to ensure accuracy of the data and effectiveness of proposed management strategies. In making this determination the ~~technical administrator~~ Director shall consult with the State Departments of Fish and Wildlife, Ecology, Natural Resources, and/or other local, state, federal, and/or tribal agencies or experts.

2. If the ~~technical administrator~~ Director finds the plan to be complete, accurate, and consistent with the purposes and intent of this chapter, the designated decision maker shall solicit comments pursuant to the public notice provisions of WCC Chapter 22.05 prior to final approval/denial of permission of the plan to substitute for the requirements and standards of this chapter.
3. The designated decision maker shall not approve watershed-based management plans that conflict with Chapter 90.82 RCW.

**16.16.263 Mitigation Bankings.**

A. **Mitigation Bank Credits.** The County may approve the use of mitigation banking credits as a form of compensatory mitigation for wetland and habitat conservation area impacts when the provisions of this chapter require mitigation and when it is clearly demonstrated that the use of a bank will provide equivalent or greater replacement of critical area functions and values when compared to on-site mitigation; provided, that all of the following criteria are met:

1. Banks shall only be used when they provide significant ecological benefits including long-term conservation of critical areas, important species, habitats and/or habitat linkages, and when they are consistent with the County comprehensive plan and create a viable alternative to the piecemeal mitigation for individual project impacts to achieve ecosystem-based conservation goals.
2. The bank shall be established in accordance with the Washington State Draft Mitigation Banking Rule, Chapter 173-700 WAC or as revised, and Chapter 90.84 RCW and the federal mitigation banking guidelines as outlined in the Federal Register, Volume 60, No. 228, November 28, 1995. These guidelines establish the procedural and technical criteria that banks must meet to obtain state and federal certification.
3. Preference shall be given to mitigation banks that implement restoration actions that have been identified formally by an adopted shoreline restoration plan, watershed planning document prepared and adopted pursuant to Chapter 90.82 RCW, a salmonid recovery plan or project that has been identified on the watershed management board habitat project list or by the Washington State Department of Fish and Wildlife as essential for fish and wildlife habitat enhancement.

B. **Establishing a Mitigation Banks.** Establishing a mitigation bank shall require a major project permit in accordance with WCC Chapter 20.88 and shall be subject to a formal review process including public review as follows:

1. The bank sponsor shall submit a bank prospectus for County review. The prospectus shall identify the conceptual plan for the mitigation bank, including:
  - i. The ecological goals and objectives of the bank;
  - ii. The rationale for site selection, including a site map and legal description of the prospective bank site;

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

- iii. A narrative demonstrating compliance with the Whatcom County comprehensive plan, associated development standards and this chapter, shoreline restoration plan, watershed planning documents prepared and adopted pursuant to Chapter [90.82](#) RCW, and/or the salmonid recovery plan;
  - iv. A description of the existing site conditions and expected changes in site conditions as a result of the banking activity, including changes on neighboring lands;
  - v. A conceptual site design;
  - vi. A description of the proposed protective mechanism such as a conservation easement; and
  - vii. Demonstration of adequate financial resources to plan, implement, maintain, and administer the project.
2. The ~~technical administrator~~ Director shall review the bank prospectus either by participating in the state’s Mitigation Bank Review Team (MBRT) process and/or by hiring independent, third-party expertise to assist in the review.
  3. If the ~~technical administrator~~ Director determines that the bank prospectus is complete, technically accurate, and consistent with the purpose and intent of this chapter, s/he shall forward the prospectus to the County Council for initial review. If the proposed bank involves conversion of agricultural land to nonagricultural uses, the County Council shall seek a recommendation from the agricultural advisory committee as to whether the conversion should be allowed. The committee’s recommendation shall be nonbinding. The County Council may require mitigation for the loss of agricultural lands.
  4. If the County Council determines, based on the initial review, that the prospectus is valid, it shall issue a notice to proceed to the bank sponsor. Following receipt of the notice to proceed, the bank sponsor may submit application for a major project permit in accordance with WCC Chapter [20.88](#) . The notice to proceed shall not be construed as final approval of the bank proposal, but shall indicate approval to proceed with the development of the mitigation bank instrument, which details all of the legal requirements for the bank.
  5. Upon receipt of a draft mitigation banking instrument from the bank sponsor and major project permit application, the ~~technical administrator~~ Director shall review the banking instrument and major project permit in consultation with the MBRT and/or other third-party expert. Following review of the mitigation banking instrument and major project permit, the ~~technical administrator~~ Director shall make a recommendation to certify and approve, conditionally certify and approve, or deny the bank proposal and major project permit in accordance with the provisions of WCC Chapters [20.88](#) and [22.05](#) .
  6. Following receipt of the recommendation, the County Council shall proceed with review in accordance with the provisions outlined in WCC Chapters [20.88](#) and [22.05](#) .
  7. The bank sponsor shall be responsible for the cost of any third-party review.
- C. **Award of Bank Credits.** The award of bank credits for an approved bank may be negotiated based on habitat acreage, habitat quality, and contribution to a regional conservation strategy that has been approved by the County and other appropriate regulatory agency(ies). Credit availability may vary in accordance with agreed-upon performance criteria for the development of the resource

value in question. Awarded bank credits, subject to the approval of the County and regulatory agency(ies), may be made transferable. Whether out-of-kind mitigation credit will be allowed at a particular bank will require a fact-specific inquiry on a case-by-case basis for the project creating the impacts.

**D. Use of Bank Credits.**

1. Credits from a wetland mitigation bank may be approved for use as compensation for unavoidable impacts to wetlands when:
  - a. The bank is certified under state rules;
  - b. The administrator determines that the wetland mitigation bank provides appropriate compensation for the authorized impacts; and
  - c. The proposed use of credits is consistent with the terms and conditions of the certified bank instrument.
2. Replacement ratios for projects using bank credits shall be consistent with replacement ratios specified in the certified bank instrument.
3. Credits from a certified wetland mitigation bank may be used to compensate for impacts located within the service area specified in the certified bank instrument. In some cases, the service area of the bank may include portions of more than one adjacent drainage basin for specific wetland functions.

**16.16.264 In-Lieu Fees.**

To aid in the implementation of off-site mitigation, the County may develop an in-lieu-fee program. This program shall be developed and approved through a public process and be consistent with federal rules, state policy on in-lieu-fee mitigation, and state water quality regulations. An approved in-lieu-fee program sells compensatory mitigation credits to permittees whose obligation to provide compensatory mitigation is then transferred to the in-lieu-fee program sponsor, a governmental or nonprofit natural resource management entity. Credits from an approved in-lieu-fee program may be used when subsections A through F of this section apply:

- A. The approval authority determines that it would provide environmentally appropriate compensation for the proposed impacts.
- B. The mitigation will occur on a site identified using the site selection and prioritization process in the approved in-lieu-fee program instrument.
- C. The proposed use of credits is consistent with the terms and conditions of the approved in-lieu-fee program instrument.
- D. Land acquisition and initial physical and biological improvements of the mitigation site must be completed within five years of the credit sale.
- E. Projects using in-lieu-fee credits shall have debits associated with the proposed impacts calculated by the applicant's qualified wetland scientist using the method consistent with the credit assessment method specified in the approved instrument for the in-lieu-fee program.
- F. Credits from an approved in-lieu-fee program may be used to compensate for impacts located within the service area specified in the approved in-lieu-fee instrument.

**16.16.265 Critical Areas Protective Measures.**

When an impact to critical area or a buffer will occur due to a proposed development, a standard buffer width has been altered, or mitigation is required, one or more of the following protective measures shall be applied:

**A. General measures** (applicable to all projects)

1. **Building Setbacks.** ~~The County shall require b~~Buildings and other structures shall ~~to be set back~~ a minimum distance of 10 feet from the edge of geological hazard setback, a critical area buffer, or from the critical area where no buffer is required~~–~~, unless otherwise determined by the Director that a shorter distance will suffice. This setback is to avoid conflicts with tree branches and/or critical root zones of trees that are in the buffer or will be planted in the buffer. The following uses may be ~~are~~ allowed in the building set-back from the buffer if they do not cause damage to the critical root zone of trees in the buffer:
  - a. Landscaping;
  - b. Uncovered decks less than 30 inches in height;
  - c. Building overhangs 18 inches or less;
  - d. Impervious surfaces, including ~~such as~~ driveways, parking lots, roads, and patios; provided, that such surfaces conform to the applicable water quality standards and that construction equipment does not enter or damage the buffer or critical area;
  - e. Clearing and grading;
  - f. Utilities, including ~~W~~wells, septic systems, and propane tanks with fuel capacities up to 500 gallons.
2. Temporary protection measures to identify location of critical areas and buffers such as construction fencing, erosion and sediment control, or similar shall be required during construction of the proposed project.

**Comment [CES35]:** Moved from below. Then amended on recommendation of our consultants. Mirrors COB regs.

**B. Project Specific Measures.** Based on the specifics of the project, the Director will determine which of the following apply:

1. **Tree Protection.** If significant trees are identified, such that their drip line extends beyond the reduced buffer edge, the following tree protection requirements must be followed:
  - a. A tree protection area shall be designed to protect each tree or tree stand during site development and construction. Tree protection areas may vary widely in shape, but must extend a minimum of five feet beyond the existing tree canopy area along the outer edge of the dripline of the tree(s), unless otherwise approved by the department.
  - b. Tree protection areas shall be added and clearly labeled on all applicable site development and construction drawings submitted to the department.
  - c. Temporary construction fencing at least thirty inches tall shall be erected around the perimeter of the tree protection areas prior to the initiation of any clearing or grading. The fencing shall be posted with signage clearly identifying the tree protection area. The fencing shall remain in place through site development and construction.
  - d. No clearing, grading, filling or other development activities shall occur within the tree protection area, except where approved in advance by the department and shown on the approved plans for the proposal.

**Comment [CES36]:** Added in keeping with similar tree protection measures adopted by Co/C in other parts of the WCC.

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

- e. No vehicles, construction materials, fuel, or other materials shall be placed in tree protection areas. Movement of any vehicles within tree protection areas shall be prohibited.
- f. No nails, rope, cable, signs, or fencing shall be attached to any tree proposed for retention in the tree protection area.
- g. The department may approve the use of alternate tree protection techniques if an equal or greater level of protection will be provided.

**A-2. Deterrent Devices.** ~~The technical administrator~~ Director, as a condition of permit approval, may require that the outer boundary of a wetland or habitat conservation area and its buffer, a mitigation site, a designated open space, or a conservation easement be identified with signs, markers, and/or fencing to minimize potentially harmful intrusions from adjacent land uses, to alert citizens to a potential public health or safety risk associated with a critical area, or to accomplish other objectives specifically provided for elsewhere in this chapter. ~~The technical administrator~~ Director shall provide specifications on the type, content, and size of the signs prior to permit approval. The signs shall be posted near primary access points and approximately every 200 feet along the critical area boundary.

Formatted: Indent: Left: 0.25"

**3. Notice on Title.** ~~The owner of any property containing any critical area or buffer that are not altered by a proposed development for which a development permit is about to be issued shall record a notice document with the County Auditor Real Estate Records, in a format approved provided by the technical administrator~~ Director, and provide a copy of the filed notice to the Department of Planning and Development Services ~~department at the time prior to the project permit is being issued.~~ This requirement may be waived by the Director for certain geologically hazardous areas if s/he finds that the risk is so low as to not warrant notification (e.g., old alluvial deposits). ~~The notice on title shall provide notice of:~~

- a. ~~advise of~~ The presence of a critical area(s) or buffer(s) on the property, and that limitations on actions in or affecting the critical area or buffer exist.
- b. ~~The notice shall provide that~~ That ~~restrictions on uses within the critical area apply exist until such time as the Technical Administrator~~ Director ~~approves a change in to the restriction(s) and such approval is filed.~~

~~This~~ Such ~~notice on title shall not be required for a development proposal by a public agency or public or private utility within a right-of-way or easement for which they do not have fee-simple title. This requirement shall be waived by the technical administrator for certain geologically hazardous areas if s/he finds that the risk is so low as to not warrant notification (e.g., old alluvial deposits).~~

**1-4. Tracts and Easements.** ~~Prior to final approval of any development project permit, the part of the critical areas and required buffers that is located on the site within the review area (as specified in the Review & Reporting Requirements of each Article of this Chapter) shall be protected using one of the following mechanisms:~~

- a. ~~For land divisions other than short plats, p~~ Placed in a separate tract or tracts owned in common by all lots within a subdivision, short subdivision, or binding site plan or dedicated to a public or private land trust for conservation.

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

- b. ~~For all other project permit types, Covered by~~ Placed in a protective conservation easement; on a form provided or approved by Whatcom County; ~~or~~
- c. Mitigation areas shall be placed in a native growth protection area (NGPA) easement, on a form provided or approved by Whatcom County.
- ~~b. public or private land trust dedication; or~~
- ~~c. Preserved through an appropriate permanent protective mechanism that provides the same level of permanent protection as designation of a separate tract or tracts as determined by the county technical administrator or hearing examiner.~~

**Comment [CES37]:** Added to meet permanent protection requirements of existing text.

~~**B. A. Building Setback.** The county shall require buildings and other structures to be set back a minimum distance of 10 feet from the edge of geological hazard setback, a critical area buffer, or from the critical area where no buffer is required. The following uses are allowed in the building set back:~~

- ~~1. Landscaping;~~
- ~~2.1. Uncovered decks;~~
- ~~3.1. Building overhangs 18 inches or less;~~
- ~~4.1. Impervious surfaces such as driveways, parking lots, roads, and patios; provided, that such surfaces conform to the applicable water quality standards and that construction equipment does not enter or damage the buffer or critical area;~~
- ~~5.1. Clearing and grading;~~
- ~~6.1. Wells.~~

**C. Indemnification.** At the ~~technical administrator~~ Director’s discretion, when a permit is granted for development or use within a geologic, flood, or other hazard area, the property owner shall sign an indemnification agreement acknowledging hazards posed to the development and absolving the County of all responsibility, to be recorded against the property prior to permit issuance.

~~**D. A. Temporary protection measures to identify location of critical areas and buffers such as construction fencing, erosion and sediment control, or similar shall be required during construction of the proposed project.**~~

**16.16.270 Reasonable Use Exceptions.**

- A.** If the application of this Chapter would result in denial of all reasonable and economically viable use of a property, and if such reasonable and economically viable use of the property cannot be obtained by consideration of a variance pursuant to WCC 16.16.273 (Variances), then a landowner may seek a reasonable use exception from the standards of this Chapter. Reasonable use exceptions are intended as a last resort when no plan for mitigation and/or variance can meet the requirements of this Chapter and allow the applicant a reasonable and economically viable use of his or her property. The reasonable use exception shall follow the variance and public notification procedures of WCC Title 22 (Land Use and Development).
- B.** Requests for reasonable use exceptions shall be a Type III project permit application (See WCC Title 22, Land Use & Development).
- C.** The Hearing Examiner shall only grant a reasonable use exception under all of the following conditions:
  - 1. The proposed development is otherwise allowed under Whatcom County code.

**Comment [CES38]:** Policy change: Staff is proposing that reasonable use exceptions be the last method of altering standards to allow reasonable economic use of constrained property, and that they be decided upon by the Hearing Examiner. However, to counter the additional time and cost of this process, staff is also proposing to use the new category of minor variances that Council recently created. (16.16.273 Variances.) They would be limited to variances for a 25% to 50% reduction of critical area buffers (when mitigated and they meet certain criteria) but would address most of the instances that reasonable use exceptions are currently applied for. We believe that overall, these changes would significantly reduce the number cases having to go to the Hearing Examiner.

**Comment [CES39]:** Moved from below

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

2. There is no portion of the site where the provisions of this chapter allow reasonable economic use, including agricultural use or continuation of legal nonconforming uses.
3. The application of this Chapter would deny all reasonable and economically viable use of the property so that there is no reasonable and economically viable use with a lesser impact on the critical area than that proposed.
4. There is no feasible alternative to the proposed activities that will provide reasonable economic use with less adverse impact on critical areas and/or buffers. Feasible alternatives may include, but are not limited to, locating the activity on a contiguous parcel that is under the ownership or control of the applicant, change in use, reduction in size, change in timing of activity, and/or revision of project design.
5. Activities will be located as far as possible from critical areas and the project employs all reasonable methods to avoid adverse effects on critical area functions and values, including maintaining existing vegetation, topography, and hydrology. Where both critical areas and buffer areas are located on a parcel, buffer areas shall be disturbed in preference to the critical area.
6. The proposed development does not pose a threat to the public health and safety.
7. The proposed activities comply with all state, local and federal laws, such as special flood hazard areas restrictions and on-site wastewater disposal.
8. Measures shall be taken to ensure the proposed activities will not cause degradation of groundwater or surface water quality, or adversely affect drinking water supply.
9. Any proposed modification to a critical area will be evaluated by the Hearing Examiner through consideration of an approved critical area assessment report and habitat management plan and will be the minimum modification necessary to allow reasonable use of the property.
10. The inability of the applicant to derive reasonable use of the property is not the result of actions by the current or previous owners in segregating or dividing the property and/or creating the condition of lack of use after September 30, 2005.
11. The applicant has requested and been denied a variance under the provisions of WCC 16.16.273 (Variances).
12. For single-family residences, the maximum impact area shall not exceed 10% of the lot area or 2,500 square feet, whichever is greater; provided that in no instance shall it exceed ~~may be no larger than~~ 4,000 square feet. This impact area shall include the residential structure as well as appurtenant development that ~~are~~ is necessarily connected to the use and enjoyment of a single-family residence. ~~These~~ Such appurtenant developments includes garages, decks, driveways, parking, on-site septic systems, and all lawn and nonnative landscaping, with the following exceptions:
  - a. On lots outside of the shoreline jurisdiction, ~~w~~When an extended driveway is necessary to access a portion of a development site with the least impact on critical area and/or buffers, those portions of the driveway shall be excluded from the 4,000-square-foot maximum impact area; provided, that the access road or driveway meets the standards of WCC 16.16.620(~~E~~D) or 16.16.720(~~E~~D), as applicable.

**Comment [DOE-Req40]:** Required Change – This and the subsequent change removes any reference to the SMP as 16.16.270 is not incorporated by reference as part of the SMP at 23.05.065.A.

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

On lots within the shoreline jurisdiction, when an extended driveway is necessary to access a portion of a development site with the least impact on critical areas and/or buffers, approval of those driveway portions shall be sought through a shoreline variance (WCC 23.60.030) and the applicant shall demonstrate that the size and location of the driveway is the minimum relief necessary to access the development site.

A.D. The Hearing Examiner may issue conditions of approval including modifications to the size and placement of structures and facilities to minimize impacts to critical areas and associated buffers. The Hearing Examiner may also specify mitigation requirements that ensure that all impacts are mitigated to the maximum extent feasible using best available science.

A. Permit applicants for a property so encumbered by critical areas and/or buffers that application of this chapter, including buffer averaging, buffer reduction, or other mechanism, would deny all reasonable use may seek approval pursuant to the reasonable use standards and procedures provided in this section.

B. Reasonable Use Standards.

1. Nothing in this chapter is intended to preclude all reasonable economic use of property. If the application of this chapter would deny all reasonable economic use of the subject property, including agricultural use, use or development shall be allowed if it is consistent with the zoning code and the purposes of this chapter.
2. To qualify as a reasonable use, the technical administrator or hearing examiner, as appropriate, must find that the proposal is consistent with all of the following criteria:
  - a. There is no portion of the site where the provisions of this chapter allow reasonable economic use, including agricultural use or continuation of legal nonconforming uses;
  - b. There is no feasible alternative to the proposed activities that will provide reasonable economic use with less adverse impact on critical areas and/or buffers. Feasible alternatives may include, but are not limited to, locating the activity on a contiguous parcel that has been under the ownership or control of the applicant since September 30, 2005, change in use, reduction in size, change in timing of activity, and/or revision of project design;
  - c. Activities will be located as far as possible from critical areas and the project employs all reasonable methods to avoid adverse effects on critical area functions and values, including maintaining existing vegetation, topography, and hydrology. Where both critical areas and buffer areas are located on a parcel, buffer areas shall be disturbed in preference to the critical area;
  - d. The proposed activities will not result in adverse effects on endangered or threatened species as listed by the federal government or the state of Washington, or be inconsistent with an adopted recovery plan;
  - e. Measures shall be taken to ensure the proposed activities will not cause degradation of groundwater or surface water quality, or adversely affect drinking water supply;
  - f. The proposed activities comply with all state, local and federal laws, including those related to erosion and sediment control, pollution control, floodplain restrictions, and on-site wastewater disposal;
  - g. The proposed activities will not cause damage to other properties;

**Comment [P/C41]:** P/C moved to keep but slightly modify the original language as shown. Passes 9-0.

**Comment [DOE-Req42]:** To do: Ryan says to keep a but move b to T-23

**Comment [DOE-Req43]:** Required Change – This and the previous change removes any reference to the SMP as 16.16.270 is not incorporated by reference as part of the SMP at 23.05.065.A.

- h. The proposed activities will not increase risk to the health or safety of people on or off the site;
- i. The inability to derive reasonable economic use of the property is not the result of segregating or dividing the property and/or creating the condition of lack of use after September 30, 2005;
- j. The project includes mitigation for unavoidable critical area and buffer impacts in accordance with the mitigation requirements of this chapter;
- ~~k. a. For single family residences, the maximum impact area may be no larger than 4,000 square feet. This impact area shall include the residential structure as well as appurtenant development that are necessarily connected to the use and enjoyment of a single family residence. These appurtenant developments include garages, decks, driveways, parking, on-site septic systems, and all lawn and nonnative landscaping, with the following exceptions:~~
  - ~~i. On lots outside of the shoreline jurisdiction, when an extended driveway is necessary to access a portion of a development site with the least impact on critical area and/or buffers, those portions of the driveway shall be excluded from the 4,000 square foot maximum impact area, provided, that the access road meets the standards of WCC 16.16.620(E) or 16.16.720(C), as applicable.~~
  - ~~ii. i. On lots within the shoreline jurisdiction, when an extended driveway is necessary to access a portion of a development site with the least impact on critical areas and/or buffers, approval of those driveway portions shall be sought through a shoreline variance (WCC 22.60.030) and demonstrate that the size and location of the driveway is the minimum relief necessary to access the development site.~~

C. Reasonable Use Procedures.

- 1. Procedural requirements for reasonable use exception applications shall be as follows:
  - a. Reasonable use exception applications shall be subject to an open record public hearing; except, that reasonable use exception applications for single family residential building permits, or for other development proposals that would affect critical area buffers, but not the critical areas themselves, shall be processed administratively by the technical administrator.
  - b. Reasonable use exception applications that require an open record hearing shall be processed in accordance with Chapter 22.05 WCC.
  - c. Reasonable use exception applications that are subject to administrative approval by the technical administrator shall be processed in accordance with Chapter 22.05 WCC.
  - d. The hearing examiner or technical administrator shall have the authority to set an expiration date for any or all reasonable use approvals. The development proposal must be completed before the approval expires.
  - e. Any person aggrieved by the granting, denying, or rescinding of a reasonable use exception by the technical administrator or any party of record may appeal the technical administrator's decision pursuant to WCC 16.16.280 or the hearing examiner decision pursuant to Chapter 22.05 WCC.

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

- f. ~~Any application for a reasonable use exception or approval which remains inactive for a period of 180 days shall expire and a new application and repayment of fees shall be required to reactivate the proposal; provided, that the technical administrator may grant a single 90-day extension for good cause. Delays such as those caused by public notice requirements, environmental (SEPA) review, litigation directly related to the proposal, or changes in government regulations shall not be considered as part of the inactive period.~~
2. ~~All reasonable use exception applications or other approvals shall be subject to the provisions of this chapter, which are in effect at the time of application.~~
3. ~~Each application for a reasonable use exception shall be accompanied by a fee as stated in the unified fee schedule.~~
4. ~~In making reasonable use decisions, the technical administrator shall have the authority to require submittal of technical reports in accordance with WCC 16.16.255 and/or 16.16.260(B).~~

### 16.16.273 Variances.

- A. ~~Where strict application of and compliance with the dimensional requirements of this chapter renders compliance with these provisions an undue hardship and when no other feasible alternative exists, permit applicants may seek a variance for relief.~~
- B. ~~As described in WCC 22.05.024 (Variances) there are two types of variances pertaining to this Chapter: Minor and Major variances.~~
1. ~~Minor variances shall be limited to variances for a 25% to 50% reduction of critical area buffers.~~
2. ~~Major variances include all other variances.~~
- A-C. ~~pursuant to WCC 20.84.100. A v~~ Variance applications shall be processed pursuant to WCC 22.05.024 (Variances), or if in the shoreline jurisdiction WCC 22.07.050 (Shoreline Variances), ~~Chapter 22.05 WCC~~ and meet the criteria therein.

### 16.16.275 Nonconforming Uses, Structures, and Lots ~~uses/buildings.~~

The following provisions shall apply to legally existing uses, ~~and/or buildings and/or~~ structures, or lots that do not meet the specific standards of this chapter:

- A. ~~The lawful use of any legal nonconforming building, structure, land, or premises existing on September 30, 2005, or authorized under a permit or approval issued, or otherwise vested, prior to that date may be continued, subject to this section and the provisions for a nonconforming structure in WCC Chapter 20.83; provided, that agricultural activities shall conform to Article 8 of this chapter (Conservation Program on Agriculture Lands).~~
- A-B. ~~If a nonagricultural nonconforming use or structure is intentionally abandoned for a period of five years~~ 12 months or more, then any future use of the nonconforming building, land, or premises shall be consistent with the provisions of this chapter.
- B-C. ~~Expansion, alteration, and/or intensification of a nonconforming use is prohibited.~~
- C-D. ~~Expansion, alteration, and/or intensification of a legal nonconforming building, or structure (including normal maintenance and repair), is allowed unless such use will produce impacts that degrade the critical area, including but not limited to vegetation clearing; additional impervious surfaces; generation of surface water runoff; discharge, or risk of discharge of pollutants; increased noise, light or glare; or increased risk associated with geologically hazardous areas.~~

Comment [CES44]: To make consistent with T-20

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

~~D.E.~~ Nonconforming structures that are completely destroyed by fire, explosion, flood, or other casualty may be restored or replaced in kind if there is no alternative that allows for compliance with the standards of this chapter; provided, that:

~~1.~~ Intentional demolition or removal is not a casualty.

Comment [CES45]: To be consistent with SMP

~~1-2.~~ The reconstruction process is commenced within ~~five years~~, 18 months of the date of such damage; and

Comment [CES46]: To be consistent with SMP

~~2-3.~~ The reconstruction does not expand, enlarge, or otherwise increase the nonconformity, except as provided for in subsection C of this section.

~~E.F.~~ Nonconforming uses, structures, and lots in the shoreline areas ~~area jurisdiction~~ shall be governed by the shoreline management provisions of WCC Title 23.

~~F.G.~~ When a ~~development project~~ permit is sought for a parcel containing a nonconforming building or structure that has been intentionally abandoned for a period of five years or more, the ~~technical administrator~~ Director may require removal of the nonconforming building and restoration of the critical area or buffer in accordance with this chapter as a condition of permit approval.

**16.16.280 Appeals.**

Final permit decisions shall be subject to appeal in accordance with the procedures of WCC Chapter 22.05.

**16.16.285 Penalties and Enforcement.**

- A. Any person who violates any of the provisions of this chapter shall be liable for a civil offense and may be fined a sum not to exceed \$1,000 for each offense. After a notice of violation has been given, each day of site work in conjunction with the notice of violation shall constitute a separate offense.
  - 1. The penalty provided in subsection A of this section shall be assessed and may be imposed by a notice in writing either by certified mail with return receipt requested or by personal service to the person incurring the same. The notice shall include the amount of the penalty imposed and shall describe the violation with reasonable particularity. In appropriate cases, corrective action shall be taken within a specific and reasonable time.
  - 2. Within 30 business days after the notice is received, the person incurring the penalty may apply in writing to the County for remission or mitigation of such penalty. Upon receipt of the application, the County may remit or mitigate the penalty upon whatever terms the County in its discretion deems proper. The County’s final decision on mitigation or revision shall be reviewed by the Hearing Examiner if the aggrieved party files a written appeal therewith of said decision within 10 business days of its issuance.
- B. If work activity has occurred on a site in violation of this chapter, prompt corrective action, restoration, or mitigation of the site will be required when appropriate. If this provision is not complied with, the County may restore or mitigate the site and charge the property owner for the full cost of such an activity. Additionally, any and all permits or approvals issued by the County may be denied for that site for a period of up to six years.
- C. In the event any person violates any of the provisions of this chapter, the County may issue a correction notice to be delivered to the owner or operator, or to be conspicuously posted at the

site. In a nonemergency situation, such notice may include notice of the intent to issue a stop work order no less than 10 business days following the receipt of the correction notice, and provide for an administrative pre-deprivation hearing within 10 business days of the notice. In an emergency situation where there is a significant threat to public safety or the environment, the County may issue a stop work order. The stop work order shall include, in writing, the right to request an administrative pre-deprivation hearing within 72 hours following receipt of the stop work order. Failure to comply with the order to stop work shall be a gross misdemeanor punishable upon conviction by a minimum fine of \$500.00 up to a maximum fine of \$1,000 or one year in jail, or both. Under no circumstance may the court defer or suspend any portion of the minimum \$500.00 fine for any conviction under this section. Each day or part thereof of noncompliance with said order to stop work shall constitute a separate offense.

- D. The County may suspend or revoke a permit if the applicant violates the conditions or limitations set forth in the permit or exceeds the scope of the work set forth in the permit.
- E. The prosecuting attorney may enforce compliance with this chapter by such injunctive, declaratory, or other actions as deemed necessary to ensure that violations are prevented, ceased, or abated.
- F. Any person who, through an act of commission or omission, procures, aids, or abets in the violation shall be considered to have committed a violation for the purposes of the civil penalty.
- G. After the Fact Permit Fee. After the fact permit application fees shall be double the amount established by the unified fee schedule.

**16.16.295 Open Space and Conservation.**

The following programs may be employed to ~~achieve the purposes of this chapter and~~ minimize the burden to individual property owners from application of the provisions of this chapter:

- A. Open Space. Any property owner whose property contains a critical area or buffer and who meets the applicable qualifying criteria may apply for open space taxation assessment pursuant to Chapter [84.34](#) RCW.
- B. ~~Native Growth Protection Area (NGPA) Conservation~~-Easement. Any person who owns an identified critical area or its associated buffer may place a ~~conservation-NGPA~~ easement over that portion of the property by naming the County or its qualified designee under RCW [64.04.130](#) as beneficiary of the conservation. This ~~conservation-NGPA~~ easement may be in lieu of separate critical areas tracts that qualify for open space tax assessment described in subsection A of this section. The purpose of the easement shall be to preserve, protect, maintain, and limit use of the affected property. The terms of the ~~conservation-NGPA~~ easement may include prohibitions or restrictions on access and shall be approved by the property owner and the County.
- C. Conservation Futures Fund. The County may consider using the conservation futures property tax fund as authorized by RCW [84.34.230](#) for the acquisition of properties containing significant critical areas and their associated buffers.

### **Article 3. Geologically Hazardous Areas**

#### **16.16.300 Purpose.**

The purpose of this article is to reduce risks to human life and safety and reduce the risk of damage to structures and property from geologic hazards, to allow for natural geologic processes supportive of forming and maintaining fish and wildlife habitat, and to regulate and inform land use and planning decisions. It is recognized that the elimination of all risk from geologic hazards is not feasible to achieve but the purpose of this article is to reduce the risk to acceptable levels.

#### **16.16.310 Geologically Hazardous Areas – Designation, Mapping, and Classification.**

- A. Designation. Lands determined to be landslide, seismic, alluvial fan, volcanic, erosion (including channel migration zones), tsunami, seiche and landslide generated waves or mine hazard areas are hereby designated as geologically hazardous areas. Development in these geologic hazard areas can put human life, safety, health, and development at risk, alter geologic processes, adversely affect natural resources, and put the development and surrounding developments and uses at risk.
- B. Mapping. The approximate location and extent of known potential geologically hazardous areas are shown on maps maintained by the County. These maps are useful as a guide for project applicants and/or property owners, and County review of development proposals. However, they do not provide a conclusive or definitive indication of geologically hazardous area presence or extent. Potential geologically hazardous areas may exist that do not appear on the maps, and some potential geologically hazardous areas that appear on the maps may not meet the geologically hazardous areas designation criteria. The County shall update the maps periodically as new information becomes available and may require additional studies during the development review process to supplement and/or confirm the mapping. This chapter does not imply that land outside mapped geologically hazardous areas or uses permitted within such areas will be without risk. This chapter shall not create liability on the part of Whatcom County or any officer or employee thereof for any damages that result from reliance on this chapter or any administrative decision lawfully made hereunder.
- C. Classification. For purposes of this chapter, geologically hazardous areas shall include all of the following:
  1. Landslide Hazard Areas. Landslide hazard areas shall include areas potentially susceptible to landslides based on a combination of geologic, topographic, and hydrologic factors, as specified below. They include any areas susceptible to mass movement due to any combination of bedrock, soil, slope (gradient), slope aspect, slope form (concave, convex, planar), geological structure, surface and subsurface hydrology, or other factors. Landslide hazard areas shall also include areas along which landslide material may be routed or which may be subject to deposition of landslide-delivered material. Potential landslide hazard areas include but are not limited to the following areas:
    - a. Potential Landslide Hazard Areas. Potential landslide hazard areas exhibit one or more of the following characteristics:

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

- i. Areas designated as quaternary slumps, earthflows, mudflows, or landslides on maps published by the U.S. Geological Survey, Washington State Department of Natural Resources, or other reputable sources;
- ii. Areas with all three of the following characteristics:
  - (A) Slopes steeper than ~~15% percent~~;
  - (B) Hillsides intersecting geologic contacts with a relatively permeable sediment overlying a relatively impermeable sediment or bedrock; and
  - (C) Springs or groundwater seepage;
- iii. Areas that have shown movement and/or are underlain or covered by mass wastage debris;
- iv. Potentially unstable slopes resulting from river or stream erosion or undercutting by wave erosion;
- v. Slopes having gradients steeper than ~~80% percent~~ subject to rockfall during seismic shaking;
- vi. Areas that show past sloughing or calving of sediment or rocks resulting in a steep slope that is poorly vegetated;
- vii. Slopes that are parallel or sub-parallel to planes of weakness (which may include but not be limited to bedding planes, soft clay layers, joint systems, and fault planes) in subsurface materials;
- viii. Areas that show evidence of, or are at risk from, snow avalanches;
- ix. Deep-seated landslide areas characterized by one or more of the following features: scalloped ridge crests at the top of the slope, crescent-shaped depressions, head scarps, side scarps, ponds or sag areas on midslopes, benches and scarps on midslope areas, hummocky ground, or linear fractures in the ground. These features may be evident in aerial images, topographic maps, LiDAR imagery or on the ground;
- x. Areas below unstable slopes that could be impacted by landslide run-out;
- xi. Areas above or adjacent to unstable slopes that could be impacted if the landslide area expands;
- xii. Any area with a slope of ~~40% percent~~ or steeper and with a vertical relief of 10 or more feet except areas composed of competent bedrock or properly engineered slopes designed and approved by a geotechnical engineer licensed in the state of Washington and experienced with the site;
- xiii. Areas within which land use activities could affect the slope stability, including but not limited to areas with subsurface hydrologic flow, groundwater recharge areas and surface water flow;
- xiv. Areas of historical landslide movement including coastal shoreline areas mapped by the Department of Ecology Coastal Zone Atlas or the Department of Natural Resources slope stability mapping as unstable (“U” or Class 3), unstable old slides (“UOS” or Class 4), or unstable recent slides (“URS” or Class 5).

- b. Active Landslide Hazard Areas. Active landslide hazard areas are areas that exhibit indicators noted in subsection (C)(1)(a) of this section that have been determined through geological assessment to be presently failing or very likely to fail in the near future.
- 2. Seismic Hazard Areas. Whatcom County is located in a seismically active area that will be subject to ground motion during local and regional earthquakes. Seismic hazards and risk are partially addressed in the International Building Code (IBC) or International Residential Code (IRC). Additional seismic hazard areas for the purpose of this chapter include:
  - a. Areas designated as having a “high” and “moderate to high” risk of liquefaction susceptibility as mapped on the Liquefaction Susceptibility Map by the Washington State Department of Natural Resources.
  - b. Areas that are identified as underlain by liquefiable soils and due to local topography are also subject to or interpreted as being potentially impacted by lateral spreading.
  - c. Areas located within 500 feet of quaternary fault zones with surface offsets.
- 3. Alluvial Fan Hazard Areas. Any area located at the base of a confined mountain channel and determined to be susceptible to clear water flooding, debris-laden flows and floods, and erosional impacts shall be designated as an alluvial fan hazard area. Watershed hydrology, geology, slope conditions, topography, current and historic land uses, roads and road drainage, valley bottom conditions, and channel conditions upstream of an alluvial fan area are all fundamental to potential hazards and risks on alluvial fans. Alluvial fan hazard areas shall include those areas on alluvial fans potentially impacted by:
  - a. Sediment-laden flows (e.g., debris flows and debris floods);
  - b. Clear water floods;
  - c. Stream channel changes (including channel avulsion, incision, aggradation or lateral erosion and migration);
  - d. Erosion.
- 4. Volcanic Hazard Areas. Volcanic hazard areas are those areas that have been affected, or have the potential to be affected, by pyroclastic flows, pyroclastic surges, lava flows, or ballistic projectiles, ash and tephra fall, volcanic gases, and volcanic landslides. Also included are areas that have been or have the potential to be affected by Case M, Case I, or Case II lahars, or by debris flows or sediment-laden events originating from the volcano or its associated deposits. In addition, volcanic hazards include secondary effects such as sedimentation and flooding due to the loss of flood conveyance as a result of river channel and flood plain aggradation. The implications of secondary effects may be observed at some distance from the initiating event, and may continue to impact affected drainages over many decades following the initiating event. Secondary effects may significantly alter existing stream and river channels, associated channel migration zones and floodplains due to stream and river bed aggradation and channel avulsion. Volcanic hazards include areas that have not been affected recently, but could be affected by future events. Volcanic hazard areas are classified into the following categories:
  - a. Pyroclastic Flow Hazard Areas. Areas that could be affected by pyroclastic flows, pyroclastic surges, lava flows, and ballistic projectiles in future eruptions. During any single eruption,

some drainages may be unaffected by any of these phenomena, while other drainages are affected by some or all phenomena. Recurrence interval is not known.

- b. Ash/Tephra Fall Hazard Areas. The location of ash/tephra fall hazards at Mount Baker is predominantly controlled by the prevailing westerly winds observed on the west coast of North America. However, easterly winds do occur in the region and direct ash/tephra fall impacts to Whatcom County population centers are certainly a possibility. Health hazards, power outages, negative impacts to machinery and aircraft, structural damage (e.g., roof collapse) and extensive disruption of daily activities are all potential hazards.
- c. Lateral Blast Hazard Areas. Lateral blast hazards result from low-angle, explosive volcanic eruptions that emanate from the flank of a volcano. The occurrence of a lateral blast is largely unpredictable, both with respect to timing and direction, and does not appear to be a common feature of eruptive activity at Mount Baker or at other volcanoes globally. Extensive destruction is likely within the lateral blast zone, and mitigation is generally considered unachievable.
- d. Volcanic Landslide Hazard Areas. Landslides are common on volcanoes due to their relative height, steepness, and weakness in both the underlying bedrock and the volcanic deposits due to magma movement and chemical weathering. Landslide size is highly variable depending on site conditions and type, but may achieve high velocity and momentum which can carry a landslide across valleys and ridgelines. Given the range of possible landslide types and sizes, specific hazards, risk zones and recurrence interval have not been delineated at Mount Baker. Volcanic landslide hazards are associated with lahar hazards as they pose the potential to generate small- to large-scale cohesive lahars.
- e. Lahar Hazard Areas.
  - a. Case M Lahar Hazard Areas. Areas that could be affected by cohesive lahars that originate as enormous avalanches of weak, chemically-altered rock from the volcano. Case M lahars can occur with or without eruptive activity. A single, post-glacial Case M lahar deposit is known to have traveled down the Middle Fork Nooksack River, and is postulated to have continued down the main stem of the Nooksack River, eventually reaching Bellingham Bay, and to have also flowed north to Canada along the prehistoric path of the Nooksack River. Case M lahars are thus interpreted to pose a threat to the Sumas River drainage due to the potential for bed aggradation and channel avulsion to overtop the low-lying drainage divide that exists between the Nooksack and Sumas River drainages. Case M lahars are considered high-consequence, low-probability events.
  - b. Case I Lahar Hazard Areas. Areas that could be affected by relatively large non-cohesive lahars, which most commonly are caused by the melting of snow and glacier ice by magmatic activity and associated processes, but which can also have a non-eruptive origin. The average recurrence interval for Case I lahars, based on deposits identified along the flanks of Mount Baker, is postulated to be 500 years or greater. However, renewed magmatic activity at Mount Baker would be indicative of greatly increased

- potential for Case I lahar generation; this may reduce the recurrence interval to approximate that of Case II lahars.
- c. Case II Lahar Hazard Areas. Areas that could be affected by moderately large debris avalanches or small cohesive lahars, or other types of debris flow generated on the east flank of Mount Baker at Sherman Crater or the upper Avalanche Gorge. Case II lahars impact the Baker Lake basin and drainage, and are considered correlative to Case I lahars that may impact the primary drainages on the west and north of Mount Baker, but with increased frequency and comparable volume. The postulated recurrence interval for Case II lahars at Mount Baker is less than 100 years.
5. Erosion Hazard Areas. Erosion hazard areas shall include:
    - a. Channel migration zones, also known as riverine erosion areas, are defined as the areas along a river or stream within which the channel(s) can be reasonably predicted to migrate over time. This is a result of natural and normally occurring geomorphic, hydrological, and related processes when considered with the characteristics of the river or stream and its surroundings, and in consideration of river and stream management plans. Channel migration hazard areas shall include potential channel migration, channel avulsion, bank erosion, and stability of slopes along the river or stream;
    - b. Coastal erosion areas that are subject to shoreline retreat from wind, wave, and tidal erosion.
  6. Tsunami Hazard Areas. Tsunami hazard areas include coastal areas susceptible to flooding, inundation, debris impact, and/or mass wasting as the result of a tsunami generated by seismic events.
  7. Seiche and Landslide Generated Wave Hazard Areas. Seiche and landslide generated wave hazard areas include lake and marine shoreline areas susceptible to flooding, inundation, debris impact, and/or mass wasting as the result of a seiche or landslide generated waves. No known best available science is currently available to characterize potential seiche hazards in Whatcom County.
  8. Mine Hazard Areas. Mine hazard areas shall include those lands in proximity to abandoned mines and associated underground mine workings where mine workings are less than 200 feet below ground level. Mine workings include adits (mine entrances), gangways (haulage tunnels), rooms and chutes (large voids), drifts, pillars (rock left for support) and air shafts. Mine hazards include subsidence, which is the uneven downward movement of the ground surface caused by underground workings caving in; sink holes; contamination of ground and surface water from tailings and underground workings; concentrations of lethal or noxious gases; and underground mine fires.

**16.16.320 Geologically Hazardous Areas – Protective Measures ~~General standards.~~**

In addition to the applicable general protective measures found in WCC [16.16.265](#), the following requirements shall apply to all activities in geologically hazardous areas:

- A. **Generally.** New developments shall be located and/or engineered and constructed to reduce risks to life, health, safety, and buildings, and not increase potential for landslides or erosion that could

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

impact either other properties, public resources, or other critical areas. The County may impose conditions on development activity in a geologically hazardous area as needed to:

1. Protect human life and safety;
2. Minimize the potential for property damage related to seismic events, erosion and/or landslides;
3. Minimize the need for stream or riverbank or coastal bluff stabilization in the future;
4. Reduce public liabilities for damages associated with geologic hazards;
5. Protect slope stability and minimize erosion, seismic, and/or landslide hazard risks;
6. Maintain natural sediment and erosion processes that are integral to the health and sustainability of freshwater and marine ecosystems as well as minimizing impacts to stream, river, and coastal processes such as channel infill, channel migration, sediment transport, or flooding;

**B. Impact Avoidance.** Impact avoidance measures shall include, but not be limited to, locating the use/development outside of the hazard area, reducing the number, size or scale of buildings and appurtenant features; altering the configuration or layout of the proposed development; implementing special engineering methods for construction, drainage, runoff management, etc.; preserving native vegetation; and other feasible protective measures as determined by an alternatives analysis. For some geologic hazards (except for lahar hazards), impact avoidance may mean no development will be permitted on a property. So long as an applicant complies with WCC [16.16.350\(B\)](#), the County shall not require lahar hazard impact avoidance measures that reduce the number, size, or scale of buildings or appurtenant features; or prevent uses otherwise allowed per the property’s zoning district based solely on the property’s location within a lahar hazard zone.

**C. Stormwater Management.** Development shall manage on-site stormwater by developing a properly sized stormwater management system using appropriate stormwater techniques to protect geologically hazards areas. Low Impact Development and Low Impact Development Best Management Practices are preferred, unless demonstrated to be infeasible.

~~C.D.~~ **Location of Alterations.** New development shall be directed toward portions of a parcel or parcels under contiguous ownership that are not subject to, or at risk from, geological hazards (except for lahar hazards) and/or are outside any setback or buffer established by this chapter.

~~D.~~ **Critical Facilities Prohibited.** Critical facilities as defined in WCC [16.16.900](#) shall not be constructed or located in geologically hazardous areas if there is a feasible alternative location outside geologically hazardous areas that would serve the intended service population. If allowed, the critical facility shall be designed and operated to minimize the risk and danger to public health and safety to the maximum extent practicable.

**E. Review by Qualified Professional.** A geologist or other qualified professional, licensed in the state of Washington, shall review development proposals that occur in potentially geologically hazardous areas to determine the potential risk. If development takes place within an identified geologically hazardous area requiring design or structural elements to minimize the hazard, the mitigation shall be designed by a qualified professional licensed in the state of Washington with expertise in mitigation of geological hazards.

Comment [CES47]: Moved to 16.16.322

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

F. **Life of Structure.** Proposed development shall be sited far enough from erosion and landslide hazard areas to ensure at least 100 years of useful life for the proposed structure(s) or infrastructure. The location ~~should~~ shall be determined by a geologist or other qualified professional licensed in the state of Washington and ~~should~~ be based on site-specific evaluation of the landslide and/or erosion hazard.

### 16.16.322 Geologically Hazardous Areas – General Use or Modification.

A. **Remodels and Additions.** Any proposed remodel or addition to an existing permitted or nonconforming structure that exceeds a valuation of greater than 50% ~~percent~~ of the fair market value shall be required to ensure that the entire structure is improved in accordance with all Article 3 requirements.

B. **Critical Facilities Prohibited.** Critical facilities as defined in WCC 16.16.900 shall not be constructed or located in geologically hazardous areas if there is a feasible alternative location outside geologically hazardous areas that would serve the intended service population. If allowed, the critical facility shall be designed and operated to minimize the risk and danger to public health and safety to the maximum extent practicable.

~~B-C.~~ **Agricultural Activities.** Agricultural activities (uses and structures) may be allowed within geologically hazardous areas without a conservation farm plan as long as the activity does not increase the potential for landslides, channel migration, or alluvial fan hazards on or off the site; except, that a conservation farm plan shall be required for agricultural activities within landslide hazard areas and associated landslide hazard area setbacks (WCC [16.16.325\(C\)](#)).

~~C-D.~~ **Land Subdivision.** Land that is located wholly within a landslide hazard area, riverine or coastal erosion hazard area, alluvial fan hazard area, lahar hazard area, or mine hazard area or its buffer may not be subdivided to create buildable parcels entirely within the hazardous area. Land that is located partially within a hazard area or its setback may be divided; provided, that each resulting lot has sufficient buildable area outside of the hazardous area with provision for drainage, erosion control and related features that will not adversely affect the hazard area or its setback.

### 16.16.325 Landslide Hazard Areas – Use and Modification Standards.

A. ~~General Standards- Allowed Uses and Modifications.~~ The following ~~uses and modifications activities~~ may be allowed in active landslide hazard areas when all reasonable measures have been taken to minimize risks and other adverse effects associated with landslide hazards, and when the amount and degree of the alteration are limited to the minimum needed to accomplish the project purpose:

1. **Reasonable Use.** Developments that will not increase the threat to the health or safety of people and will not increase potential for landslides on or off the site and meet the reasonable use standards as set forth in WCC [16.16.270](#).
2. **Utilities.** Utility lines and pipes that are above ground, properly anchored and/or designed so that they will continue to function in the event of a slope failure or movement of the underlying materials and will not increase the risk or consequences of static or seismic slope instability or result in a risk of mass wasting. Such utility lines may be permitted only when the applicant demonstrates that no other feasible alternative is available to serve the affected population.

Comment [CES48]: Moved from 16.16.320

3. **Trails.** Trails shall be meet all of the following:

- a. The applicant demonstrates that no other feasible alternative exists.
- b. The trail engineering design and construction methods minimize the need for major repair or reconstruction.
- c. Specific construction standards to minimize impacts, including drainage and drainage maintenance plans, may be required.
- d. Exceptions or deviations from technical standards for width or other dimensional measurements may require a variance.

4. **Development Access.** Access driveways and roads shall meet all of the following:

- a. The applicant demonstrates that no other feasible alternative exists, including through the provisions of Chapter 8.24 RCW.
- b. A qualified professional designs the driveway or access road to minimize the need for major repair or reconstruction. The design shall provide a greater level of protection than road or driveway standards outside of geological hazardous areas.
- c. Specific construction standards to minimize impacts, including drainage and drainage maintenance plans, may be required.
- d. Exceptions or deviations from technical standards for width or other dimensional measurements may require a variance.

Formatted: Indent: Left: 0.5", Hanging: 0.25", Numbered + Level: 2 + Numbering Style: a, b, c, ... + Start at: 1 + Alignment: Left + Aligned at: 0.75" + Indent at: 1.25"

~~3. Access roads and trails that are engineered and built to standards that minimize the need for major repair or reconstruction beyond that which would be required in nonhazard areas. Access roads and trails may be permitted only if the applicant demonstrates that no other feasible alternative exists, including through the provisions of Chapter 8.24 RCW. If such access through critical areas is granted, exceptions or deviations from technical standards for width or other dimensions and specific construction standards to minimize impacts, including drainage and drainage maintenance plans, may be required.~~

4-5. **Stormwater.** Stormwater conveyance through a properly designed stormwater pipe when no other storm-water conveyance alternative is available feasible. The pipe shall be located above ground and be properly anchored and/or designed so that it will continue to function in the event of a slope failure or movement of the underlying materials and will not increase the risk or consequences of static or seismic slope instability or result in increased risk of mass wasting activity.

B. **Landslide Hazard Management Zone Standards.** Alteration may be allowed within 300 feet of an active landslide hazard area when the technical administrator Director determines that the following standards are met:

- 1. The proposed alteration includes all appropriate measures to avoid, eliminate, reduce, or otherwise mitigate risks to health and safety.
- 2. The proposed alteration is located outside of a landslide hazard area and any required setback, as set forth in WCC [16.16.325\(C\)](#).
- 3. The development will not decrease slope stability on adjacent properties. The development shall not increase the risk or frequency of landslide occurrences.

4. The removal and disturbance of vegetation, clearing, or grading shall be limited to the area of the approved development.
5. The development is outside of the area of potential upslope or downslope surface movement or potential deposition in the event of a slope failure.
6. The development will not increase or concentrate surface water discharge or sedimentation to adjacent properties beyond predevelopment conditions.
7. The proposed alterations will not adversely impact other critical areas.
8. Structures and improvements shall minimize alterations to the slope contour, and shall be designed to minimize impervious lot coverage unless such alterations or impervious surfaces are needed to maintain slope stability.

C. **Landslide Hazard Area Setbacks.** ~~In addition to the applicable general protective measures found in WCC 16.16.265, the technical administrator shall have the authority to require~~ Setbacks shall be required from the edges of any identified landslide hazard area in accordance with the following:

1. The size of the setback shall be based on the findings of a qualified professional and shall minimize the risk of property damage, death, or injury resulting from landslides both on and off the property; provided, that the Director may require a minimum setback in accordance with International Building Codes adopted by Whatcom County.
2. The setback shall include consideration of the hydrologic contribution area to the potential landslide area and/or the area subject to the potential for mass movement, and the downhill area subject to potential deposition.
3. The setback shall include consideration of vegetation on the potential landslide area and in areas above and below the potential landslide area. ~~The technical administrator~~ Director shall have the authority to require vegetation or other measures to protect or improve slope stability and shall have the authority to require a mitigation plan developed in accordance with WCC 16.16.260, and a conservation easement in accordance with WCC 16.16.265(C) to ensure appropriate vegetation improvements are installed, maintained, and preserved.
4. Developments on sites that are directly adjacent to a wetland, marine shoreline, or other habitat conservation area as defined in Article 7 of this chapter may be subject to additional buffer requirements and standards as set forth in the subsequent articles of this chapter.

**16.16.340 Seismic Hazard Areas – Use and Modification Standards.**

Development may be allowed in seismic hazard areas when all of the following apply:

- A. Structures in seismic hazard areas shall conform to applicable analysis and design criteria of the International Building Code.
- B. Public roads, bridges, utilities, and trails shall be allowed when there are no feasible alternative locations, and geotechnical analysis and design are provided that minimize potential damage to roadway, bridge, and utility structures, and facilities will not be susceptible to damage from seismically induced ground deformation. Mitigation measures shall be designed in accordance with the most recent version of the American Association of State Highway and Transportation Officials (AASHTO) Manual or other appropriate document.

**16.16.345 Alluvial Fan Hazard Areas – Use and Modification Standards.**

The following ~~uses and modification activities~~ may be allowed in alluvial fan hazard areas when all reasonable measures have been taken to minimize risks and other adverse effects associated with alluvial fan hazards, when the amount and degree of alteration are limited to the minimum needed to accomplish the project purpose, and when the applicable general protective measures found in WCC [16.16.265](#) have been applied:

- A. **Reasonable Use.** Developments that will minimize the threat to the health or safety of people and will not increase the risks of alluvial fan hazards on or off the site and meet the reasonable use standards as set forth in WCC [16.16.270](#).
- B. **Infrastructure.** Roads, utilities, bridges, and other infrastructure that are located and designed to minimize adverse impacts on critical areas and avoid the need for channel dredging or diking or other maintenance activities that have the potential to substantially degrade river and stream functions.
- C. Permanent residential structures and commercial developments shall be allowed in alluvial fan hazard areas only if the fan has undergone a County-approved study to assess potential hazards, determine risks, and identify mitigation measures and is deemed suitable for development. The ~~technical administrator~~ Director shall make this determination based on a detailed assessment by a qualified professional that identifies the risks associated with a 500-year return period debris flow or the maximum credible event that could impact the alluvial fan.
- D. Accessory structures not involving human occupancy shall be allowed as long as the structure will not increase the alluvial fan hazards on or off the site.

**16.16.350 Volcanic Hazard Areas – Use and Modification Standards.**

- A. Ash/Tephra Fall and Lateral Blast Hazard Areas. Development may be allowed in these areas; provided, that all reasonable measures have been taken to minimize risks and adverse effects, and when the amount and degree of the alteration is limited to the minimum needed to accomplish the project purpose, and when the applicable general protective measures found in WCC [16.16.265](#) and the standards of WCC [16.16.320](#) have been applied.
- B. Lahar Hazard Zones.
  - 1. Subject to WCC [16.16.320](#)(A) through (C) and WCC [16.16.265](#), the following uses are allowed in any volcanic hazard areas:
    - a. Single-family residences and duplexes.
    - b. Accessory structures not involving human occupancy.
    - c. Sewer collection facilities, communication facilities, and other utilities that are not likely to cause harm to people or the environment if inundated by a lahar. Underground utilities such as pipelines shall be allowed if demonstrated through a geotechnical analysis to be sufficiently buried as to not likely be damaged by scour caused by a lahar.
    - d. Agricultural and forestry uses not including human habitation.
  - 2. Subject to WCC [16.16.320](#)(A) through (C) and WCC [16.16.265](#) (except subsection D when located wholly within a lahar hazard zone), the following uses are allowed in volcanic hazard areas subject to the submittal and approval of a volcanic hazard emergency management plan meeting the requirements of subsection (B)(3) of this section; however, this requirement may

be waived for properties located in an area with an estimated lahar arrival time of more than 60 minutes. The County will maintain travel time projection maps to estimate lahar approach times.

- a. Expansion of legal nonconforming uses meeting criteria of WCC [16.16.275](#) and WCC Chapter [20.83](#).
- b. All other uses allowed per the property's zoning district.
3. Where required by subsection (B)(2) of this section, a volcanic hazard emergency management plan shall be submitted for approval and meet the following requirements:
  - a. Is consistent with and integrated into a community emergency plan maintained by the sheriff's office of emergency management.
  - b. Includes an emergency evacuation plan.
  - c. Is required to be updated every five years.
  - d. Evacuation route maps must be posted on the premises.

**16.16.355 Erosion Hazard Areas – ~~Use and Modification~~Standards.**

- A. General Standards. For coastal, riverine, and stream erosion hazard areas, the following activities shall be allowed when the applicable general protective measures found in WCC [16.16.265](#) have been applied and as follows:
  1. Developments that minimize the threat to the health or safety of people and will not increase the risks of erosion hazards on or off the site and meet the reasonable use or variance standards as set forth in WCC [16.16.270](#) or [16.16.273](#), respectively.
  2. Discharge of surface water drainage into a coastal or riverine erosion hazard area, provided there are no other alternatives for discharge, and the drainage is collected upland of the top of the active erosion hazard area and directed downhill in an appropriately designed stormwater pipe that includes an energy dissipating device at the base of the hazard area. The pipe shall be located on the surface of the ground and be properly anchored so that it will continue to function under erosion conditions and not create or contribute to adverse effects on downslope critical areas. The number of pipes ~~should~~ shall be minimized along the slope frontage.
  3. Stormwater retention and detention systems, such as dry wells and infiltration systems using buried pipe or French drains, provided they are located outside the identified channel migration zone, designed by a qualified professional and shall not affect the stability of the site.
  4. Utility lines when no feasible conveyance alternative is available. The line shall be located above ground and properly anchored and/or designed so that it will not preclude or interfere with channel migration and will continue to function under erosion conditions; provided, that utility lines may be located within channel migration zones if they are buried below the scour depth for the entire width of the Channel Migration Zone (CMZ).
  5. Public roads, bridges, and trails when no feasible alternative alignment is available. Facilities shall be designed such that the roadway prism and/or bridge structure will not be susceptible to damage from active erosion.
  6. Access to private development sites may be allowed to provide access to portions of the site that are not critical areas if there are no feasible alternative alignments. Alternative access shall

be pursued to the maximum extent feasible, including through the provisions of Chapter [8.24](#) RCW. Exceptions or deviations from technical standards for width or other dimensions and specific construction standards to minimize impacts may be specified.

7. Shoreline stabilization may be permitted when consistent with the shoreline stabilization regulations found in 23.40.190 (Shoreline Stabilization), regardless of whether the proposed project is within shoreline jurisdiction or not. ~~Stream bank stabilization and shoreline protection may be permitted subject to all of the following standards:~~
  - a. ~~Shoreline protection measures located within coastal or riverine erosion areas shall use soft armoring techniques (bioengineering erosion control measures as identified by the State Department of Ecology and the Department of Fish and Wildlife guidance) unless the applicant provides a geotechnical analysis demonstrating that bioengineering approaches will not adequately protect the property.~~
  - b. ~~The armoring shall not increase erosion on adjacent properties and shall not eliminate or reduce sediment supply from feeder bluffs.~~
  - c. ~~The armoring will not adversely affect critical areas including habitat conservation areas or mitigation will be provided to compensate for adverse effects where avoidance is not feasible.~~
  - d. ~~The proposal shall comply with WCC Title [23](#).~~
  - e. ~~Hard bank armoring is discouraged and may occur only when the property contains an existing permanent structure(s) that is in danger from shoreline erosion caused by wave action or riverine processes and not erosion caused by upland conditions, such as the alteration of natural vegetation or drainage, and the armoring shall not increase erosion on adjacent properties and shall not eliminate or reduce sediment supply.~~
  - f. ~~The erosion is not being caused by upland conditions, such as the removal of vegetation or human alteration of existing drainage.~~
  - g. ~~Nonstructural measures, such as placing or relocating the development further from the shoreline, planting vegetation, or installing on-site drainage improvements, are not feasible or not sufficient.~~
8. New residences shall be located outside of channel migration hazard areas or marine shoreline retreat areas. Accessory structures not involving human occupancy with a footprint equal to or less than 2,500 square feet shall be allowed; provided, that they are located at the outer edge of the migration zone as defined by this chapter; and provided, that the ~~technical administrator~~ Director may allow larger accessory structures where mitigating measures are feasible and provided for by the applicant.
9. New public flood protection measures and expansion of existing ones may be permitted, subject to WCC Title [17](#), Article 4 of this chapter, and a state hydraulic project approval; provided, that bioengineering or soft armoring techniques shall be used where feasible. Hard bank armoring may occur only in situations where soft approaches do not provide adequate protection.
- B. Erosion Hazard Area Setbacks. In addition to the applicable general protective measures found in WCC [16.16.265](#), the ~~technical administrator~~ Director shall have the authority to require setbacks

from the edges of any coastal, stream, or riverine hazard erosion area in accordance with the following:

1. The size of the setback shall be based on the findings of a qualified professional and shall protect critical areas and processes and minimize the risk of property damage, death or injury resulting from erosion over the life of the development, typically identified as 100 years; provided, that the Director may require a minimum setback in accordance with International Building Codes adopted by Whatcom County.
2. The setback shall include the uphill area subject to potential erosion, the downhill area subject to potential deposition, and any area subject to landslide as a result of erosion.
3. The setback shall include woody vegetation adequate to stabilize the soil and prevent soil movement. If the designated setback area lacks adequate woody vegetation, the ~~technical administrator~~ Director shall have the authority to require vegetation enhancement or other measures to improve slope stability.
4. Developments on sites that are directly adjacent to a wetland or marine shoreline or other habitat conservation area as defined in Article 7 of this chapter may be subject to additional setback requirements and standards as set forth in the subsequent articles of this chapter.

**16.16.365 Tsunami Hazard Areas – ~~Use and Modification Standards.~~**

The standards of WCC [16.16.320](#) shall apply. For development within tsunami hazard areas the proposed development shall be designed to provide protection from the tsunami hazard that meets the projected hazard on the Department of Natural Resources Tsunami Inundation Maps. For other low-lying coastal areas not included on the inundation maps, development shall be designed to provide protection for debris impact and an inundation as determined by current Department of Natural Resource modeling, unless other measures can be shown to provide equal or greater protection.

**16.16.367 Seiche and Landslide Generated Wave Hazard Areas – ~~Use and Modification Standards.~~**

Standards for seiche and landslide generated wave hazards will only apply if the hazard area is mapped by the United States Geologic Survey or the Department of Natural Resources, Division of Geology and Earth Resources or other credible source approved by Whatcom County. If a mapped hazard is present, the standards of WCC [16.16.320](#) and [16.16.350](#) shall apply. For residential development within mapped seiche and landslide generated wave hazard areas, the proposed development ~~should~~ shall be designed to withstand the mapped hazard. If the risk of the event is less than 0.1% ~~percent~~ on a yearly basis, development standards may not be required, but notice on property title will be required.

**16.16.370 Mine Hazard Areas – ~~Use and Modification Standards.~~**

The standards of WCC [16.16.320](#) and [16.16.350](#) shall apply.

**16.16.375 Geologically Hazardous Areas – ~~Review and Reporting Requirements.~~**

- A. When County critical area maps or other sources of credible information indicate that a site proposed for development or alteration is, or may be, located within an active or potential geologically hazardous area, the ~~technical administrator~~ Director shall have the authority to require the submittal of a geological assessment report.

- B. A geologic hazards assessment report for a geologically hazardous area shall include a field investigation and contain an assessment of whether or not the type of potential geologic hazard identified is present or not present and if development of the site will increase the potential for landslides or erosion on or off the site. Geology hazard assessment reports shall be prepared, stamped, and signed by a qualified professional. The report should:
1. Be appropriate for the scale and scope of the project;
  2. Include a discussion of all geologically hazardous areas on the site and any geologically hazardous areas off site potentially impacted by or which could impact the proposed project. If the affected area extends beyond the subject property, the geology hazard assessment may utilize existing data sources pertaining to that area;
  3. Clearly state that the proposed project will not decrease slope stability or pose an unreasonable threat to persons or property either on or off site and provide a rationale as to those conclusions based on geologic conditions and interpretations specific to the project;
  4. Provide a description of the ground and surface hydrology and geology, the affected land form and its susceptibility to mass wasting, erosion, and other geologic hazards or processes, and other adequate information to determine compliance with the requirements of this article;
  5. Provide conclusions and recommendations regarding the effect of the proposed development on geologic conditions, the adequacy of the site to be developed, the impacts of the proposed development, alternative approaches to the proposed development, and measures to mitigate potential site-specific and cumulative geological and hydrological impacts of the proposed development, including the potential adverse impacts to adjacent and down-current properties.
  - ~~5-6.~~ Geotechnical reports shall conform to accepted technical standards and generally follow the guidelines set forth in the Washington State Department of Licensing Guidelines for Preparing Engineering Geology Reports in Washington (2006). In some cases, such as when it is determined that no landslide or erosion risk is present, a full report may not be necessary to determine compliance with this article, and in those cases a stamped letter or abbreviated report may be provided;
  - ~~6-7.~~ If a landslide or erosion hazard is identified, provide minimum setback recommendations for avoiding the landslide or erosion hazard, recommendations on stormwater management and vegetation management and plantings, other recommendations for site development so that the frequency or magnitude of landsliding or erosion on or off the site is not altered, and recommendations are consistent with this article;
  - ~~7-8.~~ For projects in seismic hazard areas, the report shall also include a detailed engineering evaluation of expected ground displacements, amplified seismic shaking, or other liquefaction and/or dynamic settlement effects and proposed mitigation measures to ensure an acceptable level of risk for the proposed structure type or other development facilities such as access roads and utilities;
  - ~~8-9.~~ For projects in mine hazard areas, the report shall also include a description of historical data and remnant mine conditions, if available, dates of operation, years of abandonment, strength of overlying rock strata, and other information needed to assess stability of the site together with analysis of surface displacement or foundation stress from collapse of workings.

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

- C. A geological assessment for a specific site may be valid for a period of up to five years when the proposed land use activity and site conditions affecting the site are unchanged. However, if any surface and subsurface conditions associated with the site change during that five-year period, the applicant may be required to submit an amendment to the geological assessment.

### Article 4. Frequently Flooded Areas

#### 16.16.400 Purpose.

The purposes of this article are to:

- A. Reduce the risk to life and safety, public facilities, and public and private property that results from floods.
- B. Avoid or minimize impacts to fish and wildlife habitats that occur within frequently flooded areas.
- C. Protect and maintain the beneficial ecological functions and values of frequently flooded areas, including providing the necessary flow regime to form and maintain a full range of functional and accessible salmonid habitats both within and outside of frequently flooded areas.
- D. To ensure compliance with FEMA National Flood Insurance Program (NFIP) protection standards for critical habitats of species listed under the Endangered Species Act.
- E. In conjunction with the provisions of WCC Title 17, establish review procedures that provide an integrated approach to managing floodplain development and maintaining the capacity of the floodplain or floodway to convey and store flood waters.

#### 16.16.410 Frequently Flooded Areas – Designation and Mapping—Frequently Flooded Areas.

A. Frequently flooded areas are areas located along major rivers, streams, and coastal areas where the depth, velocity, intensity and frequency of flood water during major events present a risk to human life and property. Areas susceptible to these types of hazards are hereby designated as frequently flooded areas and subject to the provisions of this article.

~~B. The approximate location and extent of frequently flooded areas are shown on the County’s critical area maps. These maps are to be used as a guide and do not provide a definitive critical area designation. The County shall update the maps as new hazard areas are identified and as new information becomes available. This article does not imply that land outside mapped frequently flooded areas or uses permitted within such areas will be free from flooding or flood damages. This chapter shall not create liability on the part of Whatcom County, any officer or employee thereof, or the Federal Insurance and Mitigation Administration (FIMA), for any flood damages that result from reliance on this chapter or any administrative decision lawfully made hereunder.~~

Comment [CES49]: Moved to 16.16.220

~~C.~~ B. Frequently flooded areas shall include, but not be limited to:

1. Areas subject to a one percent recurrence interval of flood water inundation or a 100 year base flood Special flood hazard areas as mapped on the current effective Federal Emergency Management Agency’s Flood Insurance Rate Maps (FIRM). This includes coastal high hazard areas as defined by this chapter and as identified and designated on the FIRM maps as Zone VE or V; provided, that tsunami hazard areas are designated as geologically hazardous areas and subject to the provisions of Article 3 of this chapter.
2. Other flood hazard areas identified by the County public works department based on review of historical data, high water marks, photographs of past flooding, or similar information from federal, state, county, or other valid sources when base flood elevation data from the Federal Insurance and Mitigation Administration has not been provided or is not accurate.

Comment [CES50]: FEMA definition added to definitions

**16.16.420 Frequently Flooded Areas – General Standards.**

- A. All development shall conform to the provisions of WCC Title [17](#), Flood Damage Prevention, and the applicable provisions of this chapter.
- B. Development within frequently flooded areas shall be allowed only when it is consistent with all of the following:
  - 1. FEMA’s National Flood Insurance Program (NFIP), including the protection standards for critical habitats for listed species;
  - 2. The mitigation sequence in WCC [16.16.260](#);
  - 3. Article 7, Habitat Conservation Areas, of this chapter;
  - 4. The applicable general protective measures found in WCC [16.16.265](#).
- C. The ~~technical administrator~~ Director shall have the authority to require a habitat assessment and, if necessary, a mitigation plan prepared by a qualified professional, in accordance with the FEMA Regional Guidance for the Puget Sound Basin, and mitigate for adverse impacts to the ecological functions of frequently flooded areas; provided, that such mitigation shall be consistent and compatible with the goal of protecting health and safety and minimizing risks to property.

**16.16.430 Frequently Flooded Areas – Review and Report Requirements.**

- A. When County critical area maps or other sources of credible information indicate that a site proposed for development is or may be located within a frequently flooded area, the County public works department’s river and flood division and/or the ~~technical administrator~~ Director shall have the authority to require a critical area assessment report.
- B. The public works department shall have primary responsibility for reviewing and approving proposed developments for consistency with WCC Title [17](#). The ~~technical administrator~~ Director shall review development proposals for consistency with the standards provided in this chapter. Either may place conditions for approval and/or require mitigation in accordance with this chapter.
- C. In addition to the requirements of WCC [16.16.255](#), critical areas assessment reports for frequently flooded areas shall:
  - 1. Identify any federally listed species and associated habitats, and demonstrate that no harm will occur to such species or habitats as a result of development (inclusive of mitigation) within frequently flooded areas.
  - 2. Address adverse impacts to ecological functions and processes, including riparian vegetation. Positive impacts may also be discussed.
  - 3. Include mitigation for adverse effects on frequently flooded areas’ ecological functions, where applicable.
- D. The ~~technical administrator~~ Director shall have the authority to modify the requirements of subsection C of this section when s/he determines that any portion of these requirements is unnecessary given the scope and/or scale of the proposed development.
- E. The ~~technical administrator~~ Director shall have the authority to require additional information to that required in subsection C of this section that discloses and describes the effects of proposed development on frequently flooded area functions, including, but not limited to, impacts on: storage and conveyance of flood water; channel migration; peak flows and flow velocities; redd scour and displacement of rearing juvenile fish; sediment quality in streams; shear stress and bank erosion;

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

water quality; wildlife habitat; fish access; and nutrients cycling or other hyporheic functions that link surface and groundwater systems.

- F. Critical areas assessment report requirements may be waived for single-family developments and structures accessory to agricultural uses when the ~~technical administrator~~ Director and the Public Works department determine that the development does not meet the FEMA requirements for a habitat assessment in FEMA Regional Guidance for the Puget Sound Basin ~~no adverse impacts or risks to life, property, or ecological functions will occur.~~

## Article 5. Critical Aquifer Recharge Areas

### 16.16.500 Purpose.

The purposes of this article are to:

- A. Preserve, protect, and conserve Whatcom County's groundwater resources and their functions and values for current and future generations by protecting critical aquifer recharge areas from contamination.
- B. Prevent adverse impacts on groundwater quantity by regulating development activities that could deplete aquifer storage, reduce groundwater levels, and/or diminish infiltration and replenishment of groundwater.
- C. Prioritize the management, protection, and conservation of groundwater recharge areas as sources of potable water supply.
- D. Establish review procedures for development activities that have the potential to adversely affect critical aquifer recharge areas.

### 16.16.510 ~~Critical Aquifer Recharge Areas – Designation, Classification and Mapping~~ ~~Critical Aquifer Recharge Areas.~~

- A. Critical aquifer recharge areas play a crucial role in supplying potable water (as defined by WAC [365-190-030\(2\)](#)). These recharge areas have geologic conditions that allow high infiltration rates, which contribute significantly to the replenishment of groundwater. These conditions also create a high potential for groundwater contamination. These areas are hereby designated as critical areas and subject to the provisions of this chapter.
- B. The approximate location and extent of critical aquifer recharge areas are shown on the County's critical area maps. These maps are to be used as a guide and do not provide a definitive critical area designation. The County shall update the maps as recharge areas are identified and as new information becomes available.
- C. Critical aquifer recharge areas shall be designated and classified as follows:
  - 1. Low, Moderate, and High Susceptibility Aquifer Recharge Areas. Aquifer recharge areas susceptible to degradation or depletion because of hydrogeologic characteristics are those areas meeting the criteria established by the State Department of Ecology (Guidance Document for the Establishment of Critical Aquifer Recharge Area Ordinances, July 2000, Publication No. 97-30, Version 4.0).
  - 2. Wellhead Protection Areas. The area defined by the boundaries of the 10-year time of groundwater travel, in accordance with WAC [246-290-135](#). For purposes of this chapter, all wellhead protection areas shall be designated as highly susceptible critical aquifer recharge areas.
- D. If special groundwater management areas or susceptible groundwater management areas are established in Whatcom County in accordance with WAC [173-200-090](#) or [173-100-010](#), respectively, then these areas shall be incorporated into the highly susceptible aquifer designation.

**16.16.520 Critical Aquifer Recharge Areas – General Standards.**

In addition to the applicable general protective measures found in WCC [16.16.265](#), all development in a critical aquifer recharge area shall meet the following standards:

- A. The proposed development will not cause contaminants to enter the aquifer and will not significantly affect the recharging of the aquifer in an adverse manner.
- B. The proposed development must comply with the water source protection requirements and recommendations of the Federal Environmental Protection Agency, State Department of Health, and the Whatcom County health department.
- C. The proposed development must be designed and constructed in accordance with the County stormwater management requirements or other applicable stormwater management standards (Whatcom County Development Standards Chapter 2, WCC Title [20](#)).

**16.16.525 Critical Aquifer Recharge Areas – Use and Modification Activity Subject to Critical Areas Review.**

The following development activities, when proposed in moderate and high susceptibility critical aquifer recharge areas, have the potential to adversely affect groundwater quality and/or quantity and shall require submittal of a critical areas assessment report as defined in WCC [16.16.255](#) and [16.16.535](#):

- A. Any development with an on-site domestic septic system at a gross density greater than one system per residence per acre.
- B. All storage tanks and storage facilities for hazardous substances and/or hazardous wastes; provided, that:
  - 1. The tanks must comply with Department of Ecology regulations contained in Chapters [173-360](#) and [173-303](#) WAC as well as International Building Code requirements;
  - 2. All new underground tanks and facilities shall be designed and constructed so as to prevent releases due to corrosion or structural failure for the operational life of the tank, or have a secondary containment system to prevent the release of any stored substances;
  - 3. All new aboveground storage tanks and facilities shall be designed and constructed so as to prevent the release of a hazardous substance to the ground, groundwaters, or surface waters by having primary and secondary containment.
- C. Vehicle repair, servicing and salvaging facilities; provided, that the facility must be conducted over impermeable pads and within a covered structure capable of withstanding normally expected weather conditions. Chemicals used in the process of vehicle repair and servicing must be stored in a manner that protects them from weather and provides containment should leaks occur. Dry wells shall not be allowed on sites used for vehicle repair and servicing. Dry wells existing on the site prior to facility establishment must be abandoned using techniques approved by the State Department of Ecology prior to commencement of the proposed activity.
- D. Use of reclaimed wastewater must be in accordance with adopted water or sewer comprehensive plans that have been approved by the State Departments of Ecology and Health and the Whatcom County council per Chapter [57.16](#) RCW; provided, that:
  - 1. Surface spreading must meet the groundwater recharge criteria given in RCW [90.46.010](#)(10) and [90.46.080](#).

2. Direct injection must be in accordance with the standards developed by authority of RCW [90.46.042](#).

- E. Any other development activity that the ~~technical administrator~~ Director determines is likely to have a significant adverse impact on groundwater quality or quantity, or on the recharge of the aquifer. The determination must be made based on credible scientific information.
- F. Metals and hard rock mining and new sand and gravel mining subject to the provisions of the County's current mineral resource lands (MRL) review procedures in WCC Chapter [20.73](#); provided, that for new MRLs such activities shall be prohibited within the 10-year travel time zone of wellhead protection areas.

**16.16.530 Critical Aquifer Recharge Areas – Prohibited Uses.**

The following developments and uses are prohibited in critical aquifer recharge areas:

- A. New landfills, including hazardous or dangerous waste, municipal solid waste, special waste, wood waste of more than 2,000 cubic yards, and inert and demolition waste landfills.
- B. Underground Injection Wells. Class I, III, and IV wells and subclasses 5F01, 5D03, 5F04, 5W09, 5W10, 5W11, 5W31, 5X13, 5X14, 5X15, 5W20, 5X28, and 5N24 of Class V wells.
- C. Wood treatment facilities that allow any portion of the treatment process to occur over permeable surfaces (both natural and manmade).
- D. Facilities that store, process, or dispose of chemicals containing perchloroethylene (PCE) or methyl tertiary butyl ether (MTBE).
- E. Facilities that store, process, or dispose of radioactive substances.
- F. Other activities that the ~~technical administrator~~ Director determines would significantly degrade groundwater quality and/or reduce the recharge to aquifers currently, or potentially used as a potable water source, or that may serve as a significant source of base flow to a regulated stream. The determination must be made based on credible scientific information.

**16.16.535 Critical Aquifer Recharge Areas – Review and Report Requirements.**

- A. When County critical area maps or other sources of credible information indicate that the proposed development activities listed in WCC [16.16.525](#) occur within a critical aquifer recharge area, the ~~technical administrator~~ Director shall have the authority to require a critical area assessment report and to regulate developments accordingly. Critical areas assessment reports for aquifer recharge areas shall meet the requirements of WCC [16.16.255](#) and this section. Assessment reports shall include the following site- and proposal-related information unless the ~~technical administrator~~ Director determines that any portion of these requirements is unnecessary given the scope and/or scale of the proposed development:
  - 1. Available information regarding geologic and hydrogeologic characteristics of the site, including the surface location of all critical aquifer recharge areas located on site or immediately adjacent to the site, and permeability of the unsaturated zone;
  - 2. Groundwater depth, flow direction and gradient based on available information;
  - 3. Currently available data on wells and springs within 1,300 feet of the project area;
  - 4. The presence and approximate location of other critical areas, including surface waters, within 1,300 feet of the project area based on available data and maps;

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

5. Existing and available historic water quality data for the area to be affected by the proposed activity;
  6. Proposed best management practices;
  7. The effects of the proposed project on the groundwater quality and quantity, including:
    - a. Potential effects on stream flow, wetlands and/or other resources, and on ecosystem processes;
    - b. Predictive evaluation of groundwater withdrawal effects on nearby wells and surface water features; and
    - c. Predictive evaluation of contaminant transport based on potential releases to groundwater; and
  8. A spill plan that identifies equipment and/or structures that could fail, resulting in an impact. Spill plans shall include provisions for emergency response provisions as well as regular inspection, repair, and replacement of structures and equipment that could fail.
- B. If the applicant can demonstrate through a valid hydrogeological assessment that geologic and soil conditions underlying their property do not meet the criteria for low, moderate, or high susceptibility, the property shall not be considered a critical aquifer recharge area.

## Article 5.5. Areas within the Rural Residential District of Lummi Island

### 16.16.540 Areas within the Rural Residential District of Lummi Island.

#### 16.16.541 Exempt Wells.

Wells drilled as a replacement of an existing well are exempt from this article as long as the withdrawal rate is not increased by more than ~~20% percent~~ of the existing well. If baseline withdrawal rate information is not available, this must be established by a licensed well driller prior to well replacement.

#### 16.16.542 Minimum Well Spacing for all New Wells.

Wells shall have a minimum of 200 feet distance between a new well and an existing operating well.

#### 16.16.543 Requirements for Public Water System Wells, Non-Group B Two Party Wells, and Non-Domestic Wells.

In addition to the minimum well spacing, the following measures are required for public water system wells, non-Group B two party wells, and nondomestic wells. (Includes “public water system” wells and non-Group B two party wells as defined under Whatcom County drinking water regulations and nondomestic use wells pumping greater than 250 gpd. “Public water system” is defined under WCC Chapter [24.11](#) as any water system providing piped water for consumption, excluding a system serving only one single-family residence and any system with four or fewer connections serving only residences on the same farm. A “non-Group B two party well” is defined in WCC Chapter [24.11](#) as a water system using one well to serve two single-family residences for which the director of health has waived all public water system requirements.)

##### A. Chloride Monitoring and Testing.

1. Monitoring. Well owners shall collect and have water samples analyzed for chloride concentration twice annually, in April and August, and submitted to the Whatcom County health department.
2. Chloride Determinations for New Wells or Increased Pumping of Existing Wells. Applications for new wells, applications to convert an existing private well into a two party well, any application to expand the number of connections of a public water system, and nondomestic use wells proposing a greater than ~~20% percent~~ increase in groundwater withdrawals in an existing well require a minimum 24-hour-duration pumping test at ~~100% percent~~ of the proposed average daily demand, at the end of which a water sample will be collected for analysis of chloride concentration. Subdivisions using individual wells are required to test wells simultaneously or, alternatively, have a licensed hydrogeologist evaluate well interference and water quality changes. Subdivision wells shall remain accessible for future testing in the event of subdivision expansion.
3. Restrictions on New Wells or Increased Pumping of Existing Wells. New wells cannot be permitted, existing private wells cannot be converted to two party wells, existing public water systems cannot expand beyond their existing number of approved connections, and nondomestic wells cannot increase pumping rates greater than ~~20% percent~~ if chloride concentrations measured at the end of the test specified in subsection (A)(2) of this section are

greater than 100 mg/L. For systems expanding ~~20% percent~~ or less within one year, the highest chloride determination within the past year in subsection (A)(1) of this section cannot be greater than 100 mg/L.

4. Limit on Water Use by Existing Wells. Any increase (0 to ~~20% percent~~) in water use will not be permitted if either semiannual analysis in the previous 12-month period indicates greater than 100 mg/L chloride concentration. If the semi-annual chloride determinations have not been submitted as required, then the pump testing requirement of subsection (A)(2) of this section shall apply.
5. Prior to 10 days before the pumping test, all property owners within 1,000 feet of the well location shall be notified by first class mail informing them of the test and providing contact information of the person responsible for the testing.

**B. Arsenic Monitoring and Testing in the Unconsolidated Aquifer.**

1. The following monitoring and testing is required unless the well is determined not to be located in the unconsolidated sandstone aquifer. A Washington State licensed hydrogeologist must make the determination in a submitted report.
2. Arsenic Determinations for New Wells or Increased Pumping of Existing Wells. Applications for new wells, applications to convert an existing private well into a two party well, any application to expand the number of connections of a public water system, and nondomestic use wells proposing a greater than ~~20% percent~~ increase in groundwater withdrawals in an existing well require a minimum 24-hour-duration pumping test at ~~100% percent~~ of the proposed average daily demand, at the end of which a water sample will be collected for analysis of arsenic concentration.
3. Restrictions on New Wells or Increased Pumping of Existing Wells. New wells cannot be permitted, existing private wells cannot be converted to two party wells, existing public water systems cannot expand beyond their existing number of approved connections, and nondomestic wells cannot increase pumping rates greater than ~~20% percent~~ if arsenic concentrations measured at the end of the test specified in subsection (B)(2) of this section are greater than 10 µg/L.
4. Limit on Water Use by Existing Wells. Any increase (0 to ~~20% percent~~) in water use will not be permitted if the most recent arsenic determination indicated greater than 10 µg/L arsenic concentration. If no arsenic concentration has been determined in the past three years, the pumping test requirement in subsection (B)(2) of this section shall apply.
5. Prior to 10 days before the pumping test, all property owners within 1,000 feet of the well location shall be notified by first class mail informing them of the test and providing contact information of the person responsible for the testing.

**16.16.544 Administrative Waiver.**

Administrative waivers may be granted to any section of these requirements by petition to the administering agency. Waiver request must demonstrate that the project is consistent with the intent of these requirements; no health hazard would result from this action; and must be stamped by a licensed Washington State hydrogeologist.

Article 6. Wetlands

16.16.600 Purpose.

The purposes of this article are to:

- A. Recognize and protect the beneficial functions, values, and services performed by wetlands, which include, but are not limited to, providing food, breeding, nesting and/or rearing habitat for fish and wildlife; recharging and discharging groundwater; contributing to stream flow during low flow periods; stabilizing stream banks and shorelines; storing storm and flood waters to reduce flooding and erosion; and improving water quality through biofiltration, adsorption, retention and transformation of sediments, nutrients, and toxicants.
B. Regulate land use to avoid adverse effects on wetlands and maintain the functions, services, and values of freshwater and estuarine wetlands throughout Whatcom County.
C. Establish review procedures for development proposals in and adjacent to wetlands.
D. Establish minimum standards for identifying and delineating wetlands.

16.16.610 Wetlands – Designation, Rating, and Mapping.

A. Wetlands shall be delineated in accordance with the requirements of RCW 36.70A.175. Unless otherwise provided for in this chapter, all areas within the county determined to be wetlands in accordance with the U.S. Army Corps of Engineers Wetlands Delineation Manual, 1987 Edition, and the Western Mountains, Valleys, and Coast Region Supplement (Version 2.0), 2010 or as revised, are hereby designated critical areas and are subject to the provisions of this article.

B. The approximate location and extent of wetlands are shown on the County’s critical area maps. However, this information has come from multiple sources over many years’ time and is not precise, only general. Thus, these maps are to be used as a guide and do not provide a definitive critical area designation; a property-specific assessment is necessary for that to determine the wetland boundary. The County shall update the maps as new wetlands are identified and as new information becomes available.

C. Wetlands shall be rated based on categories that reflect the functions and values of each wetland. Wetland categories shall be based on the criteria provided in the Washington State Wetland Rating System for Western Washington, revised 2014, and as amended thereafter, as determined using the appropriate rating forms and associated figures contained in that publication. These categories are generally defined as follows:

- 1. Category I. Category I wetlands are: (a) relatively undisturbed estuarine wetlands larger than one acre; (b) wetlands of high conservation value that are identified by scientists of the Washington Natural Heritage Program/DNR; (c) bogs; (d) mature and old-growth forested wetlands larger than one acre; (e) wetlands in coastal lagoons; (f) interdunal wetlands that score eight or nine habitat points and are larger than one acre; and (g) wetlands that perform many functions well (scoring 23 points or more). These wetlands: (a) represent unique or rare wetland types; (b) are more sensitive to disturbance than most wetlands; (c) are relatively undisturbed and contain ecological attributes that are impossible to replace within a human lifetime; or (d) provide a high level of functions.

Comment [CES51]: Deleted sections moved to 16.16.220 Identification of critical areas

2. Category II. Category II wetlands are: (a) estuarine wetlands smaller than one acre, or disturbed estuarine wetlands larger than one acre; (b) interdunal wetlands larger than one acre or those found in a mosaic of wetlands; or (c) wetlands with a moderately high level of functions (scoring between 20 and 22 points).
3. Category III. Category III wetlands are: (a) wetlands with a moderate level of functions (scoring between 16 and 19 points); (b) can often be adequately replaced with a well-planned mitigation project; and (c) interdunal wetlands between 0.1 and one acre. Wetlands scoring between 16 and 19 points generally have been disturbed in some ways and are often less diverse or more isolated from other natural resources in the landscape than Category II wetlands.
4. Category IV. Category IV wetlands have the lowest levels of functions (scoring fewer than 16 points) and are often heavily disturbed. These are wetlands that we should be able to replace, or in some cases to improve. However, experience has shown that replacement cannot be guaranteed in any specific case. These wetlands may provide some important functions, and should be protected to some degree.

**16.16.612 Exceptions to Regulation.**

- A. All wetlands shall be regulated regardless of size; provided, that the following wetlands may be exempt from the requirement to avoid impacts (WCC 16.16.225 General Regulations), and they may be filled if the impacts are fully mitigated based on the remaining actions in WCC 16.16.260 (General Mitigation Requirements). In order to verify the following conditions, a critical area report for wetlands meeting the requirements in WCC 16.16.255 (Critical Areas Assessment Reports) must be submitted. hydrologically isolated Category IV wetlands less than 1,000 square feet in size may be adversely impacted when all of the following criteria are met:
1. All isolated Category IV wetlands less than 4,000 square feet that:
    - a. Are not associated with riparian areas or their buffers;
    - b. Are not associated with shorelines of the state or their associated buffers;
    - c. Are not part of a wetland mosaic;
    - d. Do not score 5 or more points for habitat function based on the 2014 update to the Washington State Wetland Rating System for Western Washington: 2014 Update (Ecology Publication #14-06-029, or as revised and approved by Ecology);
    - e. Do not contain a Priority Habitat or a Priority Area for a Priority Species identified by the Washington Department of Fish and Wildlife, do not contain federally listed species or their critical habitat, or species of local importance identified in WCC 16.16.710 (Habitat Conservation Areas – Designation, Mapping, and Classification).
  2. Wetlands less than 1,000 square feet that meet the above criteria and do not contain federally listed species or their critical habitat are exempt from the buffer provisions contained in this Chapter.
  1. The wetland does not provide significant suitable breeding habitat for native amphibian species. Suitable breeding habitat may be indicated by adequate and stable seasonal inundation, presence of thin-stemmed emergent vegetation, and clean water;

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

2. ~~The wetland does not have unique characteristics that would be difficult to replace through standard compensatory mitigation practices;~~
3. ~~The wetland is not located within a habitat conservation area, as defined in WCC 16.16.710, or buffer;~~
4. ~~The wetland is not located within a floodplain and/or not associated with a shoreline of the state as defined by the County's shoreline master program (WCC Title 23);~~
5. ~~The wetland is not part of a mosaic of wetlands and uplands. This criterion shall be determined using the guidance provided in Ecology's Wetland Rating System for Western Washington (Publication No. 14-06-029); and~~
6. ~~The wetland is not identified as locally significant by a local watershed plan prepared pursuant to Chapter 400-12 WAC.~~

**Comment [CES52]:** Updated, using language from DOE *Wetland Guidance for CAO Updates, Western Washington Version, 2016*

### 16.16.620 Wetlands – Use and Modification ~~general standards.~~

The following uses and modifications ~~activities~~ may be permitted in wetlands and/or wetland buffers as specified when, pursuant to WCC 16.16.255, 16.16.260, and 16.16.630, all reasonable measures have been taken to avoid adverse effects on wetland functions and values as documented through an alternatives analysis, the amount and degree of alteration are limited to the minimum needed to accomplish the project purpose, and ~~compensatory~~ mitigation is provided for all adverse impacts to wetlands and their buffers that cannot be avoided:

A. **Reasonable Use.** Developments that meet the reasonable use ~~exception or variance~~ standards as set forth in WCC 16.16.270 and 16.16.273, respectively.

#### B. **Utilities.**

1. **Utility lines** in Category II, III, and IV wetlands and their buffers and/or Category I wetland buffers when no feasible conveyance alternative is available shall be designed and constructed to minimize physical, hydrologic, and ecological impacts to the wetland, and meet all of the following:
  - a. The utility line is located as far from the wetland edge and/or buffer as possible and in a manner that minimizes disturbance of soils and vegetation.
  - b. Clearing, grading, and excavation activities are limited to the minimum necessary to install the utility line and the area is restored following utility installation.
  - c. Buried utility lines shall be constructed in a manner that prevents adverse impacts to surface and subsurface drainage. This may include regrading to the approximate original contour or the use of trench plugs or other devices as needed to maintain hydrology.
  - d. Best management practices are used in maintaining said utility corridors such that maintenance activities do not expand the corridor further into the critical area.
  - ~~d.e.~~ The least impactful construction or installation method is used as demonstrated through an alternatives analysis.
2. **On-site sewage disposal systems (OSS)** may be permitted in wetland buffers when accessory to an approved single-family residence residential structure ~~when~~:
  - a. ~~When it~~ is not feasible to connect to a public sanitary sewer system; and
  - b. It is located as far as possible from the wetland; and

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

- c. ~~When it~~ is operated and maintained in accordance with WCC 24.05.160; provided, that adverse effects on water quality are avoided.

**B.C. Public Roads or Bridges.** New or expanded public roads or bridges in Category II, III, and IV wetlands and their buffers and/or Category I wetland buffers when no feasible alternative alignment is available and the road or bridge is designed and constructed to minimize physical, hydrologic, and ecological impacts to the wetland, including placement on elevated structures as an alternative to fill, where feasible.

**D. Private Access.** Access to private development sites may be permitted to cross Category II, III, or IV wetlands or their buffers, provided the access meets the following:

1. ~~For direct wetland fill, there are no feasible alternative alignments.~~ Alternative access shall be pursued to the maximum extent feasible, including through the provisions of Chapter 8.24 RCW.
2. ~~Design and construction methods there are no feasible alternative alignments and measures are taken to maintain preconstruction hydrologic connectivity across the access road or driveway.~~ Alternative access shall be pursued to the maximum extent feasible, including through the provisions of Chapter 8.24 RCW.
3. ~~The access is designed to cause the least impact to the wetland and/or its buffer (which may require the applicant to apply for an Eexceptions or deviations from the technical Development Standards) for width or other dimensions, and specific construction standards to minimize impacts may be specified, including placement on elevated structures as an alternative to fill, if feasible.~~ The access is designed to cause the least impact to the wetland and/or its buffer (which may require the applicant to apply for an Eexceptions or deviations from the technical Development Standards) for width or other dimensions, and specific construction standards to minimize impacts may be specified, including placement on elevated structures as an alternative to fill, if feasible.
4. ~~Access is not achievable through the administrative provisions of WCC 16.16.640 (Wetland Buffer Modification).~~ Access is not achievable through the administrative provisions of WCC 16.16.640 (Wetland Buffer Modification).

Formatted: Indent: Left: 0.25"

**D.E. Agricultural Uses** as follows:

1. Construction of an appurtenant structure that is associated with a primary agricultural use; or the reconstruction, remodeling, or maintenance of such structures in wetland buffers, subject to all of the following specific criteria:
  1. The structure is located within an existing lot of record and is an ongoing agricultural use.
  2. There is no other feasible location with less impact to critical areas.
  3. Clearing and grading activity and impervious surfaces are limited to the minimum necessary to accommodate the proposed structure and, where possible, surfaces shall be made of pervious materials.
2. Ongoing agricultural activities, subject to the following:
  - a. The activities are conducted in accordance with all applicable provisions of this chapter and WCC Title 17; or
  - b. The agricultural activity is in compliance with the Conservation Program on Agricultural Lands (CPAL) as described in Article 8 of this chapter.

**E.F. Domestic wells** serving single-family developments (including plats, short plats, and individual single-family residences) and necessary appurtenances, including a pump and appropriately sized pump house, but not including a storage tank, in wetland buffers when all of the following conditions are met:

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

1. There is no viable alternative to the well site outside of the buffer and the well is located as far back from the wetland edge as is feasible;
2. The well is more than 75 feet deep; and
3. Any impacts to the wetland and buffer from staging equipment and the well-drilling process are mitigated.

### **F.G. Stormwater Management Facilities.**

1. Stormwater management facilities, limited to detention/retention/treatment ponds, media filtration facilities, and lagoons or infiltration basins, or bioretention cells (engineered or rain gardens) may be permitted within the outer ~~50% percent~~ of a Category II, III or IV wetland buffer; provided, that:
  - a. Construction of the stormwater facility does not displace or impact a forested buffer;
  - b. The width of the buffer between the stormwater facility and the wetland edge is not less than the low intensity land use buffer standards in WCC [16.16.630](#);
  - c. There is no other feasible location for the stormwater facility and the facility is located, constructed, and maintained in a manner that minimizes adverse effects on the buffer and adjacent critical areas;
  - d. The stormwater facility is designed to mimic and resemble natural wetlands and meets applicable county or state stormwater management standards and the discharge water meets state water quality standards; and
  - e. Low impact development approaches have been implemented to the maximum extent feasible per the Department of Ecology stormwater manual.
2. Surface water or stormwater conveyance or discharge facilities such as dispersion trenches, level spreaders, and outfalls may be permitted within a Category III or IV wetland buffer on a case-by-case basis when the ~~technical administrator~~ Director determines that all of the following are met:
  - a. Due to topographic or other physical constraints, there are no feasible alternative locations for these facilities in the outer buffer area or outside the buffer.
  - b. The discharge is located as far from the wetland edge and/or buffer as possible and in a manner that minimizes disturbance of soils and vegetation.
  - c. The discharge outlet is designed to prevent erosion and promote infiltration.
  - d. The dispersion outfall is within the outer ~~25% percent~~ of the buffer, unless a closer location is demonstrated to be the only feasible location. Alternative locations shall be the maximum distance from the wetland to alleviate the site constraint.
3. Phosphorus-reducing BMP structures approved and installed through the homeowners' improvement program (or as may be renamed) within the Lake Whatcom watershed to treat runoff from existing development may be permitted within the outer ~~50% percent~~ of a Category II, III or IV wetland buffer.

**G.H. Recreation.** Passive recreation facilities that are part of a non-motorized trail system or environmental education program, including walkways, wildlife viewing structures, or public education trails; provided, that all of the following criteria are met:

1. There is no other feasible alternative route with less impact on the critical area.

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

2. The trail minimizes erosion and sedimentation, hydrologic alteration, and disruption of natural processes such as wood recruitment and natural wildlife movement patterns.

~~3.~~ Private trails shall not exceed ~~six~~ four feet in width, and public trails shall not exceed 10 feet in width, though some portions may be wider to meet the requirements of the Americans with Disabilities Act.

~~4.~~ They shall be made of pervious material or elevated where feasible.

~~5.~~ They shall be designed to avoid removal of significant trees.

6. Trails may include limited viewing platforms that shall not exceed eight feet in width and shall be made of pervious materials where feasible.

~~7.~~ When located in the buffer, they should be located in the outer 25% ~~percent~~ of the buffer, except, that public trails may be permitted closer to the wetland when necessary to provide wetland educational opportunities or for public health and safety; provided, that when closer than the outer 25%, the trail width is the minimum necessary for the trail class.

~~8.~~ They shall be constructed and maintained in a manner that minimizes disturbance of the buffer and associated critical areas.

~~9.~~ If they must cross a wetland, they shall be elevated, constructed to minimize supports, and be the minimum size necessary to accommodate the level of service.

~~H. Single-family developments may be permitted to encroach into wetland buffers subject to the technical administrator's approval; provided, that all of the criteria in WCC 16.16.270(B) (Reasonable Use) are met.~~

**Comment [CES53]:** Added per Scoping Document item #13c to give County Parks flexibility to increase public awareness and stewardship of critical areas.

**Comment [CES54]:** Not needed. 16.16.270 would apply to any type of development and is covered by (A)

**16.16.630 Wetland Buffers ~~widths~~.**

To protect the integrity, functions, and values of wetlands, the ~~technical administrator~~ Director shall have the authority to require buffers from the edges of all wetlands, including reestablished or created wetlands, (in addition to the building setback required by WCC 16.16.265(DA)(1)) in accordance with the following:

A. ~~Wetland buffers shall be established to protect the integrity, functions and values of the wetland.~~

Wetland buffers shall be measured horizontally from a perpendicular line established by the wetland boundary based on the base buffer width identified in Table 1.

~~A-B. Wetland B~~ buffers shall not include areas that are functionally and effectively disconnected from the wetland by an existing, legally established road or other that are functionally and effectively disconnected from the wetland by an of existing, legally established road or other substantially developed surface.

**Comment [P/C55]:** P/C moved to retain existing text. Passed 4-3

~~B-C.~~ The wetland buffer standards required by this Article presume the existence of a dense, multi-storied native vegetation community in the buffer adequate to protect the wetland functions and values. When a buffer lacks adequate vegetation, the ~~technical administrator~~ Director may increase the standard buffer, require buffer planting or enhancement, and/or deny a proposal for buffer reduction or buffer averaging.

~~C-D.~~ The standard wetland buffer shall be based on a combination wetland category, habitat function score (from the wetland rating form), and land use intensity. The intensity of the land use shall be determined in accordance with the definitions found in Article 9 of this chapter unless the ~~technical~~

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

~~administrator~~ Director determines that a lesser level of impact is appropriate based on information provided by the applicant demonstrating that the proposed land use will have a lesser impact on the wetland than that contemplated under the buffer standard otherwise appropriate for the land use, as specified in WCC 16.16.640.

~~D.E.~~ Standard buffer widths are shown in Table 1. However, for Category I or II wetlands with “special characteristics” as determined and defined through the Washington State Department of Ecology (2014) Wetland Rating System (including estuarine, coastal lagoons, wetlands of high conservation value, bogs, forested, and interdunal wetlands), only buffers in the highest habitat score (8 to 9) group are applied.

Table 1. Standard Wetland Buffer Widths

Wetland Category	Habitat Function Score	Land Use Intensity*		
		High Buffer Width (feet)	Moderate Buffer Width (feet)	Low Buffer Width (feet)
<b>Category I</b>				
	8 – 9	300	225	150
	<del>5</del> 6 – 7	150	110	75
	<del>3</del> – 5	100	75	50
<b>Category II</b>				
	8 – 9	<del>275</del> <u>300</u>	<del>150</del> <u>225</u>	<del>100</del> <u>150</u>
	<del>5</del> 6 – 7	150	110	75
	<del>3</del> – <5	<del>80</del> <u>100</u>	<del>60</del> <u>75</u>	50
<b>Category III</b>				
	8 – 9	<del>150</del> <u>300</u>	<del>110</del> <u>225</u>	<del>75</del> <u>150</u>
	<del>5</del> 6 – 7	150	<del>100</del> <u>110</u>	<del>60</del> <u>75</u>
	<del>3</del> – <5	80	60	<del>50</del> <u>40</u>
<b>Category IV</b>				
	<del>8</del> 3 – <59	50	40	25

\* Definitions for high, moderate, and low intensity land use are provided in Article 9 of this chapter.

**16.16.640 Wetland Buffer Modification.**

Buffer widths may be increased, decreased, or averaged in accordance with the following provisions, which provide flexible approaches to maximize both ecological functions and allowed uses. All mitigation proposed shall be consistent with State and this Chapter.

A. **Buffer Width Increasing.** The Director may require the standard buffer width to be increased by the distance necessary to protect wetland functions and provide connectivity to other wetland and habitat areas for one of the following:

1. To protect the function and value of that wetland including, but not limited to, compensating for a poorly vegetated buffer or a buffer that has a steep slope (greater than 30% percent); or
2. To prevent windthrow damage; or

**Comment [CES56]:** Amending wetland buffer widths and habitat function score thresholds to make them consistent with the Department of Ecology’s most recent 2018 guidance. We have been notified by the DOE that though the Critical Areas Ordinance was only updated a few years ago, our wetland buffer widths and habitat function score thresholds do not meet their current guidance, and that they would be reviewing our SMP update to ensure we updated these during this process (linked because our CAO is a part of our SMP, see above). While many of the buffer widths would increase, the change in the habitat function score thresholds would place fewer wetlands in the higher buffer categories. Staff has worked with the local wetland consultants over the past year to analyze what differences this would make for most property owners, and based on data received from them it appears to be wash for the most common types of wetlands.

**Comment [CES57]:** Combined 16.16.640, 650, & 660 into better language from Skagit County

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

3. To protect wetlands or other critical areas from landslides, erosion or other hazards.

Comment [CES58]: Moved from 16.16.660

4. To maintain viable populations of existing species listed by the Federal or State government as endangered, threatened or sensitive; or

5. When a Category I or II wetland is located within 300 feet of:

a. Another Category I, II or III wetland; or

b. A fish and wildlife HCA; or

c. A Type S or F stream; or

d. A high impact land use that is likely to have additional impacts.

The increased buffer distance may be limited to those areas that provide connectivity or are necessary to protect wetland and habitat functions. If the wetland contains variations in sensitivity, increasing the buffer widths will only be done where necessary to preserve the structure, function and value of the wetland.

**B. Buffer Width Averaging.** Buffer width averaging allows limited reductions of buffer width in specified locations while requiring increases in others. The widths of buffers may be averaged if this will improve the protection of wetland functions.

1. Averaging of required buffer widths will be allowed only if the applicant demonstrates that all of the following criteria are met:

a. The area of the buffer proposed for averaging has not been reduced pursuant to subsection (C). Buffer averaging is not allowed if the buffer has been reduced.

b. Averaging is necessary to accomplish the purpose of the proposal and no reasonable alternative is available; and

c. Averaging width will not adversely impact the wetland functions and values; and

d. The wetland has significant differences in characteristics that affect its habitat functions; and

e. The total area contained within the wetland buffer after averaging is no less than that contained within the standard buffer prior to averaging; and

f. The buffer is increased adjacent to the higher-functioning area of habitat or more sensitive portion of the wetland and decreased adjacent to the lower functioning or less sensitive portion; and

g. The buffer width of a Category I, II, or III wetland shall not be reduced below 75% of the standard buffer width.

2. Averaging of required buffer widths will be allowed for the following when the dimensional standards of subsection (B)(1) are met:

a. To protect a natural feature (e.g., a stand of trees or snags) that otherwise would fall outside of the standard buffer.

b. To provide connections with adjacent habitats or to address those situations where pre-existing development has reduced a buffer area to a width less than the required standard.

In the specified locations where a buffer has been reduced to achieve averaging, the Director may require enhancement to the remaining buffer to ensure no net loss of ecologic function, services, or value.

Comment [CES59]: Based on public comments, staff has amended this section to better meet DOE Guidance.

C. **Buffer Width Reduction.** The Director shall have the authority to reduce the standard buffer widths identified in WCC 16.16.630 (Wetland Buffers) as follows:

1. The buffers of moderate and low impact land use projects may be reduced when all of the following apply:
  - a. The area of the buffer proposed for reduction has not been averaged pursuant to subsection (B). Buffer reduction is not allowed if the buffer has been averaged.
  - b. The applicant demonstrates buffer averaging is not feasible.
  - c. The buffer shall not be reduced to less than 75% of the required buffer.
  - d. Prior to considering buffer reductions, the applicant shall demonstrate application of mitigation sequencing as required in WCC 16.16.260 (General Mitigation Requirements).
  - e. To minimize impacts and provide equivalent functions and values as required by this section, the Director may require any or all of the following:
    - i. The use of alternative on-site wastewater systems in order to minimize site clearing, where appropriate;
    - ii. Using low impact development (LID) and LID best management practices where appropriate;
      - ~~In order to offset habitat loss from buffer reduction, retaining existing native vegetation on other portions of the site equal to no more than the area impacted.~~
  - f. The buffer reduction shall not adversely affect the functions and values of the adjacent wetlands;
  - g. All buffer reduction impacts are mitigated and result in equal or greater protection of the wetland functions and values. This includes enhancement of existing degraded buffer area and provide mitigation for the disturbed buffer area.
2. High impact land use projects may apply moderate land use intensity buffers when:
  - a. For wetlands that score 3-5 habitat points, all applicable impact reduction measures from the following list are implemented (from Department of Ecology Publication No. 05-06-008, Wetlands in Washington State, Volume 2, Appendix 8C (as updated in 2018):
    - i. Directing lights away from the wetland and buffer.
    - ii. Locating activities that generate noise away from the wetland and buffer.
    - iii. Routing all new, untreated runoff away from wetland while ensuring wetland is not dewatered.
    - iv. Establishing covenants limiting use of pesticides within 150 feet of wetland.
    - v. Applying integrated pest management.
    - vi. Retrofitting stormwater detention and treatment for roads and existing adjacent development.
    - vii. Preventing channelized flow from lawns that directly enters the buffer.
    - viii. Infiltrating or treating, detaining, and dispersing into the buffer new runoff from impervious surfaces and new lawns.
    - ix. Posting signs at the outer edge of the critical area or buffer to clearly indicate the location of the critical area according to the direction of the County.
    - x. Using privacy fencing.

**Comment [CES60]:** Section amended to be consistent with DOE guidance (Wetlands in Washington State, Volume 2, Appendix 8C, updated 2018 and Guide for Developing CAOs, 2016)

**Comment [CES61]:** Based on public comments, staff has amended this section to better meet DOE Guidance.

**Comment [P/C62]:** P/C motion to strike. Carries 7-1-1

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

- xi. Planting with dense native vegetation appropriate for the County to delineate buffer edge and to discourage disturbance.
- xii. Using low impact development (LID) and LID best management practices where appropriate.
- xiii. Establishing a permanent conservation easement or tract to protect the wetland and the associated buffer.
- xiv. Using best management practices to control dust.

Comment [CES63]: Moved from the old 16.16.640

- b. For wetlands that score 6 points or more for habitat function:
  - i. All applicable impact reduction measures of subsection (C)(2)(a) are implemented, and;
  - ii. A relatively undisturbed, vegetated corridor at least 100 feet wide between the wetland and any other Priority Habitats is protected pursuant to WCC 16.16.260(I) (General Mitigation Requirements – Permanent Protection). If no option for providing such a corridor is available, then only subsection (i) applies.

3. In all circumstances when the buffer between the area of reduction and the wetland is degraded, this degraded portion of the buffer shall include replanting with native vegetation in order to achieve a dense vegetative community.

4. Any person who alters or proposes to alter regulated wetlands shall reestablish, create, rehabilitate, or enhance (or a combination thereof) areas of wetland in order to compensate for wetland losses at the ratios described in mitigation ratios for projects in Western Washington in Table 8C-11 (as updated in 2014) in Department of Ecology Publication No. 05-06-008, Wetlands in Washington State, Volume 2, Section 8C.2.3.

Comment [P/C64]: P/C Motion to approve. Carries 9-0

D. **Buffer Width Variance.** Standard buffer widths may be reduced by more than 25% through a variance pursuant to WCC 16.16.273 (Variances); provided, that buffer averaging beyond that allowed in subsection (B) is prohibited.

~~**16.16.640 Wetland buffer reduction.**~~

~~The technical administrator shall have the authority to reduce the standard buffer widths identified in WCC 16.16.630; provided, that the general standards for avoidance and minimization per WCC 16.16.260(A)(1)(a) and (b) shall apply; and provided further, that all of the following apply:~~

- ~~A. The buffer reduction shall not adversely affect the functions and values of the adjacent wetlands;~~
- ~~B. The buffer of a Category I, II, or III wetland shall not be reduced to less than 75 percent of the required buffer or 50 feet, whichever is greater;~~
- ~~C. The buffer of a Category IV wetland shall not be reduced to less than 50 percent of the required buffer, or 25 feet, whichever is greater;~~
- ~~D. The applicant implements all reasonable measures to minimize the adverse effects of adjacent land uses and ensure no net loss of buffer functions and values. Such measures may include, but are not limited to, the following:
  - ~~1. Direct lights away from the wetland and buffer.~~
  - ~~2.1. Locate activities that generate noise away from the wetland and buffer.~~
  - ~~3.1. Route all new, untreated runoff away from wetland while ensuring wetland is not dewatered.~~
  - ~~4.1. Establish covenants limiting use of pesticides within 150 feet of wetland.~~~~

- ~~5.1. Apply integrated pest management.~~
- ~~6.1. Retrofit stormwater detention and treatment for roads and existing adjacent development.~~
- ~~7.1. Prevent channelized flow from lawns that directly enters the buffer.~~
- ~~8.1. Infiltrate or treat, detain, and disperse into buffer new runoff from impervious surfaces and new lawns.~~
- ~~9.1. Post signs at the outer edge of the critical area or buffer to clearly indicate the location of the critical area according to the direction of the County.~~
- ~~10.1. Use privacy fencing.~~
- ~~11.1. Plant with dense native vegetation appropriate for the County to delineate buffer edge and to discourage disturbance.~~
- ~~12.1. Use low impact development (LID) and LID best management practices where appropriate.~~
- ~~13.1. Establish a permanent conservation easement or tract to protect the wetland and the associated buffer.~~
- ~~14.1. Use best management practices to control dust.~~

**16.16.650 Wetland buffer averaging.**

The technical administrator shall have the authority to average wetland buffer widths on a case-by-case basis; provided, that the general standards for avoidance and minimization per WCC ~~16.16.260~~(A)(1)(a) and (b) shall apply, and when all of the following criteria are met:

- A. The buffer averaging does not reduce the functions or values of the wetland;
- B. The total area contained in the buffer area after averaging is no less than that which would be contained within the standard buffer, and all increases in buffer dimension for averaging must be generally parallel to the wetland boundary to avoid creating buffer “panhandles” unless it constitutes a wildlife corridor;
- C. The wetland contains variations in sensitivity due to existing physical characteristics or the character of the buffer varies in slope, soils, or vegetation;
- D. The minimum buffer width of a Category I, II, or III wetland shall not be less than 75 percent of the widths established under WCC ~~16.16.630~~, or 50 feet, whichever is greater;
- E. The minimum buffer width of a Category IV wetland shall not be less than 50 percent of the widths established under WCC ~~16.16.630~~, or 25 feet, whichever is greater; and
- F. The buffer has not been reduced in accordance with WCC ~~16.16.640~~. Buffer averaging is not allowed if the buffer has been reduced.

**16.16.660 Wetland buffer increases.**

The technical administrator shall have the authority to increase the width of the standard buffer width on a case-by-case basis when there is sound evidence that a larger buffer is required by an approved habitat management plan as outlined in WCC ~~16.16.750~~, or such increase is necessary to:

- ~~A. Protect the function and value of that wetland including, but not limited to, compensating for a poorly vegetated buffer or a buffer that has a steep slope (greater than 30 percent); or~~
- ~~B. Prevent windthrow damage; or~~
- ~~C. Maintain viable populations of species such as herons and other priority fish and wildlife; or~~

~~D.A. — Protect wetlands or other critical areas from landslides, erosion or other hazards.~~

**16.16.670 Wetlands – Review and Reporting Requirements.**

- A. When County critical area maps or other sources of credible information indicate that a site proposed for development or alteration may contain wetland indicators, contain or abut wetlands or wetland buffers, the ~~technical administrator~~ Director may require a site evaluation (reconnaissance) or critical area assessment report by a qualified professional to determine whether or not a regulated wetland is present and, if so, its relative location in relation to the proposed project area or site. If no regulated wetlands are present, then wetland review will be considered complete.
- B. If the ~~technical administrator~~ Director determines that a wetland indicator is more likely than not present, ~~ts/he technical administrator~~ shall require a wetland assessment report pursuant to WCC [16.16.255](#) and sub-sections C and D of this section.
- C. A wetland assessment is an element of a critical area assessment report that describes the characteristics of the subject property and adjacent areas. The wetland assessment shall include the occurrence, distribution, delineation, and determination of the wetland category and standard wetland buffers as set forth in WCC [16.16.630](#), and may include analysis of historical aerial photos, and review of public records.
- D. A wetland assessment shall include the following site- and proposal-related information unless the ~~technical administrator~~ Director determines that any portion of these requirements is already required by Article 2, or unnecessary given the scope and/or scale of the proposed development:
1. Location information (legal description, parcel number, and address);
  2. A vicinity map;
  3. A site plan that includes scale and wetlands and associated buffers and proposed development if appropriate;
  4. A qualitative written assessment and accompanying maps of wetlands and buffers within 300 feet of the site and an estimate of the existing acreage for each. For on-site wetlands, the assessment shall include the dominant and subdominant plant species; soil type, color and texture; sources of hydrology (patterns of surface and subsurface water movement, precipitation, etc.); topography; and other pertinent information. The assessment of off-site wetlands shall be based on available information and shall not require accessing off-site properties;
  5. Wetland Analysis. An analysis of all wetlands and buffers (to the extent they can be legally accessed) including, at a minimum, the following information:
    - a. Wetland delineation conducted by a qualified professional and completed in accordance with WCC [16.16.610](#)(A).
    - b. The wetland boundary shall be marked in the field (with flagging left in the field for Whatcom County verification and placed high enough to allow line of sight with vegetation growth) and surveyed using a methodology appropriate to scale of development. The surveyed wetlands areas shall be mapped showing location and size of all wetlands.

Methodology used shall be in the report with description of equipment (specs), accuracy, and pertinent description of how the coordinates were gathered.

- c. Determination of each wetland size.
  - d. Description of each wetland class and category.
  - e. Description of overall water sources and drainage patterns on site. Include all streams and drainages (Type S, F, Np, or Ns streams), shorelines, floodplains, flood-prone areas.
  - f. Description of vegetation, hydrologic conditions, and soil and substrate conditions.
  - g. Description of wildlife and habitat. Include all critical habitat for threatened and endangered species within 300 feet of the development footprint.
  - h. Topographic elevation, at two-foot contours provided by Whatcom County PDS for single-family proposals.
  - i. Functional assessment of the wetland and adjacent buffer using a local or state agency-recognized method and including the reference of the method and all data sheets.
  - j. Standard buffer requirements for each wetland. Copies of the wetland rating forms and associated figures from the Ecology Wetland Rating System for Western Washington, as amended.
- E. For single-family building permits, the applicant may hire a qualified professional to prepare the assessment report or may request that the County assess the regulated wetland(s) and buffers and determine the impacts associated with the project, subject to the following:
- 1. ~~Availability of Field investigation by~~ County staff shall be at the discretion of the ~~technical administrator~~ Director and subject to workload and scheduling constraints.
  - 2. Fees for County staff services shall be in accordance with the unified fee schedule.
- F. If a regulated wetland buffer from a neighboring property extends onto a proposed development site for which review under this chapter is required, the ~~technical administrator~~ Director shall have the authority to require that deterrent devices be placed at the edge of the buffer in accordance with WCC [16.16.265](#). The applicant shall provide ~~written~~ documentation that no buffer encroachment will occur. The documentation shall be ~~on a form provided by the Department in the form of a letter or similar affidavit.~~

**16.16.680 Wetlands – Mitigation Standards.**

In addition to the applicable general protective measures found in WCC [16.16.265](#), activities that adversely affect wetlands and/or wetland buffers shall include mitigation sufficient to achieve no net loss of wetland function and values in accordance with WCC [16.16.260](#) and this section.

- A. In determining the extent and type of mitigation required, the ~~technical administrator~~ Director may consider all of the following when applicable:
- 1. The ecological processes that affect and influence critical area structure and function within the watershed or sub-basin;
  - 2. The individual and cumulative effects of the action upon the functions of the critical area and associated watershed;
  - 3. Observed or predicted trends regarding the gains or losses of specific wetland types in the watershed, in light of natural and human processes;

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

- 4. The likely success of the proposed mitigation measures;
- 5. Effects of the mitigation actions on neighboring properties; and
- 6. Opportunities to implement restoration actions formally identified by an adopted shoreline restoration plan, watershed planning document prepared and adopted pursuant to Chapter 90.82 RCW, a watershed plan prepared pursuant to Chapter 400-12 WAC, a salmonid recovery plan or project that has been identified on the watershed management board habitat project list or by the Washington State Department of Fish and Wildlife as essential for fish and wildlife habitat enhancement, a fully authorized mitigation bank (WCC 16.16.263), or an in-lieu-fee program.

~~Compensatory mitigation shall be provided on site or off site in the location that will provide the greatest ecological benefit and have the greatest likelihood of success; provided, that mitigation occurs as close as possible to the impact area and within the same watershed as the permitted alteration. This provision may be waived upon demonstration through a watershed- or landscape-based analysis that mitigation within an alternative sub-basin of the same basin would have the greatest ecological benefit and the greatest likelihood of success; provided, that limiting functions shall not be removed from sensitive watersheds identified in WCC Title 20. Mitigation shall occur within WRIA 1 or 3.~~

~~All mitigation areas shall be protected and managed to prevent degradation and ensure permanent protection of critical area functions and values. Permanent protection shall be achieved through deed restriction or other protective covenant in accordance with WCC 16.16.265.~~

~~Where feasible, mitigation projects shall be completed prior to activities that will disturb wetlands. In all other cases, mitigation shall be completed as quickly as possible following disturbance and prior to use or occupancy of the activity or development. Construction of mitigation projects shall be timed to reduce impacts to existing fish, wildlife and flora; provided, that the technical administrator may adjust the timing requirements to allow grading, planting, and other activities to occur during the appropriate season(s).~~

Comment [CES65]: Now covered in 16.16.260

**B. Type of Mitigation.**

- 1. **Wetland Alterations.** Compensatory mitigation projects shall restore, create, rehabilitate, enhance, and/or preserve equivalent wetland functions and values pursuant to no net loss of function and area. Compensation for wetland alterations shall occur in the following order of preference:
  - a. Reestablishing (also referred to as restoring) wetlands on upland sites that were formerly wetlands.
  - b. Creating wetlands on disturbed upland sites such as those consisting primarily of nonnative, invasive plant species.
  - c. Rehabilitation of existing wetlands for the purposes of repairing or restoring natural and/or historic hydrologic functions.
  - d. Enhancing existing significantly degraded wetlands.
  - e. Preserving Category I or II wetlands that are under imminent threat; provided, that preservation shall only be allowed in combination with other forms of mitigation and when

the ~~technical administrator~~ Director determines that the overall mitigation package fully replaces the functions and values lost due to development.

2. **Buffer Alterations.** Compensatory mitigation for buffer impacts:
  - a. Shall be consistent with WCC [16.16.630](#) through [16.16.660](#); and
  - b. May include enhancement of degraded buffers by planting native species, removing structures and impervious surfaces within buffers, and other measures to achieve equivalent or greater buffer functions.

**C. Mitigation Ratios.**

1. ~~Compensation for wetland buffer impacts shall occur at a minimum 1:1 ratio on an area basis.~~ Compensatory mitigation for wetland alterations shall be based on the wetland category and the type of mitigation activity proposed. The replacement ratio shall be determined according to the ratios provided in Table 2; provided, that the replacement ratio for preservation shall be 10 times the ratio for reestablishment or creation. The created, reestablished, rehabilitated, or enhanced wetland area shall, at a minimum, provide a level of function equivalent to the wetland being altered and shall be located in an appropriate landscape setting.
2. The mitigation ratios noted in Table 2 shall not apply to mitigation banks as defined by this chapter. Credit and debit procedures for mitigation banks shall be determined in accordance with the mitigation banking provisions outlined in WCC [16.16.263](#).
3. The ~~technical administrator~~ Director shall have the authority to adjust the ~~replacement~~ mitigation ratios in Table 2 when one or more of the following apply:
  - a. When a combination of mitigation approaches is proposed. In such cases, the area of altered wetland shall be replaced at a 1:1 ratio through reestablishment or creation, and the remainder of the area needed to meet the ratio can be replaced by enhancement or rehabilitation using Table 2.
  - b. When the project proponent has a demonstrated ability, based on past performance, to successfully design, construct, monitor and maintain wetland mitigation projects/sites.
  - c. ~~When use of the guidance for Calculating Credits and Debits for Compensatory Mitigation in Wetlands of Western Washington (Department of Ecology Publication No. 10-06-011, as amended) results in a lower mitigation ratio than the standard ratios.~~
4. For permanent impacts to wetland buffers, unless the Director approves a habitat management plan with different ratios, mitigation shall be provided at the following ratios:
  - a. Where the mitigation is in place and functional before the impact occurs (i.e., advanced mitigation), at a ratio determined by the functions, values, and goals of an advanced mitigation plan.
  - b. Where the mitigation is in place and functional before within 1 year of the impacts occur occurring (i.e., advanced mitigation), at a 1:1 ratio (area or function); and
  - c. Where the mitigation is placed after 1 year of the impact occurs occurring, at a 1.25:1 ratio (area or function); and
  - d. For retroactive permits the Director may require the ratio to be up to shall be double the ratio in subsection (c) above.

Comment [P/C66]: P/C motion to amend as shown. Passes 7-0

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

All other Category II	3:1	6:1	1:1 R/C and 4:1 RH	1:1 R/C and 8:1 E	12:1
Category I	No alteration allowed unless an essential public facility				

(Ratios indicate mitigation area to area disturbed.)

~~D. Reestablished or created wetlands established pursuant to these mitigation provisions shall have adequate buffers to ensure their protection. The buffer shall be based on the category of the reestablished, created, rehabilitated, enhanced, or preserved wetland.~~

~~E.A. Compensatory mitigation shall be provided on site or off site in the location that will provide the greatest ecological benefit and have the greatest likelihood of success; provided, that mitigation occurs as close as possible to the impact area and within the same watershed as the permitted alteration. This provision may be waived upon demonstration through a watershed- or landscape-based analysis that mitigation within an alternative sub-basin of the same basin would have the greatest ecological benefit and the greatest likelihood of success; provided, that limiting functions shall not be removed from sensitive watersheds identified in WCC Title 20. Mitigation shall occur within WRIA 1 or 3.~~

~~F.A. All mitigation areas shall be protected and managed to prevent degradation and ensure permanent protection of critical area functions and values. Permanent protection shall be achieved through deed restriction or other protective covenant in accordance with WCC 16.16.265.~~

~~G.A. Where feasible, mitigation projects shall be completed prior to activities that will disturb wetlands. In all other cases, mitigation shall be completed as quickly as possible following disturbance and prior to use or occupancy of the activity or development. Construction of mitigation projects shall be timed to reduce impacts to existing fish, wildlife and flora; provided, that the technical administrator may adjust the timing requirements to allow grading, planting, and other activities to occur during the appropriate season(s).~~

**16.16.690 Wetland Compensatory Wetland Mitigation Plan.**

A. In addition to meeting the requirements of WCC 16.16.260(B), a compensatory mitigation plan for wetland and wetland buffer impacts shall meet the following:

<sup>1</sup> From Wetlands in Washington, Volume 2, Appendix 8C, Guidance on Widths of Buffers and Ratios for Compensatory Mitigation for Use with the Western Washington Wetland Rating System, Table 8C-11.

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

1. Provide an analysis of existing wetland functions and values and a detailed description of the effects of the proposed development on wetland and buffer function and value, including the area of direct wetland disturbance, area of buffer disturbance, area of buffer reduction, and area of buffer averaging, including documentation that the functions and values will be increased through reduction or average; effects of stormwater management; proposed hydrologic alteration including changes to natural drainage or infiltration patterns; effects on fish and wildlife species and their habitats; clearing and grading impacts; temporary construction impacts; and effects of increased noise, light, and human intrusion.
2. The plan shall be based on applicable portions of the Washington State Department of Ecology's Guidelines for Developing Freshwater Wetland Mitigation Plans and Proposals, 2004, or other appropriate guidance document that is consistent with best available science.
3. The plan shall contain sufficient information to demonstrate that the proposed activities are logistically feasible, constructible, ecologically sustainable, and likely to succeed. Specific information to be provided in the plan shall include:
  - a. The rationale for site selection;
  - b. General goals of the plan, including wetland function, value, and acreage;
  - c. Description of baseline (existing) site conditions including topography, vegetation, soils, hydrology, habitat features (e.g., snags), surrounding land use, and other pertinent information;
  - d. Field data confirming the presence of adequate hydrology (surface and/or groundwater) to support existing and ~~compensatory-mitigated~~ wetland area(s);
  - e. Nature of mitigation activities, including area of restored, created, enhanced, rehabilitated and preserved wetland, by wetland type;
  - f. Detailed grading and planting plans showing proposed post-construction topography; general hydrologic patterns; spacing and distribution of plant species; size and type of proposed planting stock; watering or irrigation plans; and other pertinent information;
  - g. To facilitate establishment of a stable community of native plants, ~~A~~ description of site treatment measures including removal of noxious weeds and/or invasive species removal, use of mulch and fertilizer, placement of erosion and sediment control devices, and best management practices that will be used to protect existing wetlands and desirable vegetation;
  - g-h. A demonstration that the site will have adequate buffers sufficient to permanently protect the wetland functions.
- B. All ~~compensatory~~ mitigation projects shall be monitored in accordance with WCC [16.16.260\(C\)](#) for a period necessary to establish that performance standards have been met. The ~~technical administrator~~ Director shall have the authority to extend the monitoring period for up to 10 years and require additional monitoring reports when any of the following conditions apply:
  1. The project does not meet the performance standards identified in the mitigation plan.
  2. The project does not provide adequate replacement for the functions and values of the impacted critical area.

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

- 3. The project involves establishment of forested plant communities, which require longer time for establishment.
- C. Reports shall be submitted annually for the first three years following construction and at the completion of years five, seven and 10 if applicable to document milestones, successes, problems, and contingency actions of the ~~compensatory~~ mitigation.

**Article 7. Fish & Wildlife Habitat Conservation Areas (HCA)**

**16.16.700 Purpose.**

The purposes of this article are to:

- A. Protect, restore, and maintain native fish and wildlife populations by protecting and conserving fish and wildlife habitat and protecting the ecological processes, functions and values, and biodiversity that sustain these resources.
- B. Protect marine shorelines, valuable terrestrial habitats, lakes, ponds, rivers, and streams and their associated riparian areas, and the ecosystem processes on which these areas depend.
- C. Regulate development so that isolated populations of species are not created and habitat degradation and fragmentation are minimized.
- D. Maintain the natural geographic distribution, connectivity, and quality of fish and wildlife habitat and ensure no net loss of such important habitats, including cumulative impacts.

**16.16.710 Habitat Conservation Areas – Designation, Mapping, and Classification.**

A. Habitat conservation areas, as defined in Article 9 of this chapter, are those areas identified as being of critical importance to the maintenance of certain fish, wildlife, and/or plant species. These areas are typically identified either by known point locations of specific species (such as a nest or den) or by habitat areas or both. All areas within the county meeting these criteria are hereby designated critical areas and are subject to the provisions of this article.

B. The approximate location and extent of identified fish, wildlife, and sensitive plant habitat areas are shown on the County’s critical area maps as well as state and federal maps. ~~However, these maps are to be used as a guide and do not provide a definitive critical area determination; each applicant is responsible for having a property-specific determination assessment is necessary to determine the extent of the HCA made pursuant to Article 2 of this chapter. The County shall update the maps as new habitat conservation areas are identified and/or more comprehensive information on function, condition, cover type, and resolution is developed.~~

Comment [CES67]: Covered by 16.16.220

C. Habitat conservation areas shall include all of the following:

1. ~~Surface Waters of the State~~Streams.

- a. All ~~waterbodies streams which that~~ meet the criteria for Type S, F, Np, or Ns waters as set forth in WAC [222-16-030](#) of the Washington Department of Natural Resources’ (DNR) Water Typing System, as now or hereafter amended.
  - i. Type S ~~streams waters~~ are those surface waters which meet the criteria of the Washington Department of Natural Resources, WAC [222-16-030](#)(1) as now or hereafter amended, as a Type S water and are inventoried as “shorelines of the state” under the Shoreline Management Master Program for Whatcom County, pursuant to Chapter [90.58](#) RCW. Type S waters contain salmonid fish habitat.
  - ii. Type F ~~waters streams~~ are those surface waters which meet the criteria of the Washington Department of Natural Resources, WAC [222-16-030](#)(2) as now or hereafter amended, as Type F water. Type F streams contain habitat for salmonid fish, game fish and other anadromous fish.

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

- iii. Type Np ~~waters streams~~ are those surface waters which meet the criteria of the Washington Department of Natural Resources, WAC [222-16-030](#)(3) as now or hereafter amended, as Type Np water. Type Np waters do not contain fish habitat.
  - iv. Type Ns ~~waters streams~~ are those surface waters which meet the criteria of the Washington Department of Natural Resources, WAC [222-16-030](#)(4) as now or hereafter amended, as a Type Ns water. These streams are areas of perennial or intermittent seepage, ponds, and drainage ways having short periods of spring or storm runoff. Type Ns waters do not contain fish.
2. Ditches or other artificial watercourses are considered streams for the purposes of this chapter when:
- a. Used to convey natural streams existing prior to human alteration; and/or
  - b. The waterway is used by anadromous or resident salmonid or other resident fish populations; or
  - c. Flows directly into shellfish habitat conservation areas.
3. Areas in which federally listed species are found, have a primary association with, or contain suitable or federally defined critical habitat for said listed species, as listed in the U.S. Fish and Wildlife’s Threatened and Endangered Species List or Critical Habitat List (<http://ecos.fws.gov/ecp/>) or the National Marine Fisheries Service (NMFS) (<https://www.fisheries.noaa.gov/species-directory/threatened-endangered>), as amended.
4. Areas in which state-listed priority species are found, have a primary association with, or contain suitable habitat for said listed species, as listed in the Washington Department of Fish and Wildlife’s Priority Habitats and Species List (<http://wdfw.wa.gov/mapping/phs/> or <http://wdfw.wa.gov/conservation/phs/list/>), as amended.
5. State priority habitats and areas associated with state priority species as listed in Washington Department of Fish and Wildlife’s Priority Habitats and Species List (<http://wdfw.wa.gov/mapping/phs/> or <http://wdfw.wa.gov/conservation/phs/list/>), as amended.
6. Areas in which state-listed rare plant species are found, or contain suitable habitat for said listed species, as listed in the Department of Natural Resources’ Natural Heritage Program (<http://www1.dnr.wa.gov/nhp/refdesk/plants.html>), as amended.
7. Areas in which state-listed saltwater critical areas are found, as listed in WAC [173-26-221](#)(2)(c)(iii).
8. Areas in which state-listed freshwater critical areas are found, as listed in WAC 173-26-221(2)(c)(iv).
- ~~9.~~9. Naturally occurring ponds or manmade ponds and lakes under 20 acres in size and created prior to September 30, 2005, excluding agricultural, fire protection, and stormwater facilities.
- ~~9.~~10. ~~All other waters defined as w~~Waters of the state, including marine waters.
- ~~10.~~11. Natural area preserves, aquatic reserves, and natural resource conservation areas as defined by the Washington Department of Natural Resources.

Comment [P/C68]: Reinserted by the P/C 7-0-2-0.

Comment [RE69]: This is covered by Type S or Type F, Np, Ns water types

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

- ~~11-12.~~ \_\_\_\_\_ Portions of the San Juan Islands National Monument within Whatcom County (including Chuckanut Rock, tip of Eliza Island, Eliza Island Rocks, Lummi Rocks, Baker's Reef, Carter Point, Carter Point Rock, and Seal Rock at the north end of Lummi Island, and subsequently designated areas).
- ~~12-13.~~ \_\_\_\_\_ Frequently flooded areas that are subject to the Federal Emergency Management Agency's National Flood Insurance Program Biological Opinion (FEMA BiOp).
- ~~13-14.~~ \_\_\_\_\_ Species and Habitats of Local Importance. Locally important species and habitats that have recreational, cultural, and/or economic value to citizens of Whatcom County, including the following:
- a. Species. The Department of Planning and Development Services shall maintain a current list of species of local importance as designated by the County Council.
  - b. Habitats.
    - i. The marine nearshore habitat, including coastal lagoons, and the associated vegetated marine riparian zone. These areas support productive eelgrass beds, marine algal turf, and kelp beds that provide habitat for numerous priority fish and wildlife species including, but not limited to, forage fish, seabird and shorebird foraging and nesting sites, and harbor seal pupping and haulout sites. This designation applies to the area from the extreme low tide limit to the upper limits of the shoreline jurisdiction; provided, that reaches of the marine shoreline that were lawfully developed for commercial and industrial uses prior to the original adoption of this chapter may be excluded from this designation, but not otherwise exempt from this chapter.
    - ii. The Chuckanut wildlife corridor, which extends east from Chuckanut Bay and adjacent marine waters, including Chuckanut Mountain, Lookout Mountain, the northern portions of Anderson Mountain, and Stewart Mountain continuing along the southern Whatcom County border to Mount Baker/Snoqualmie National Forest boundary. This area represents the last remaining place in the Puget Trough where the natural land cover of the Cascades continues to the shore of Puget Sound.
    - iii. The Department of Planning and Development Services shall maintain a current list and map of habitats of local importance, as designated by the County Council.
- D. In addition to the species, habitats, and wildlife corridors identified in subsection (C)(12) of this section, the Council may designate additional species, habitats of local importance, and/or wildlife corridors as follows:
1. In order to nominate an area, species, or corridor to the category of "locally important," an individual or organization must:
    - a. Demonstrate a need for special consideration based on:
      - i. Identified species of declining population;
      - ii. Documented species sensitive to habitat manipulation and cumulative loss;
      - iii. Commercial, recreational, cultural, biological, or other special value; or
      - iv. Maintenance of connectivity between habitat areas;
    - b. Propose relevant management strategies considered effective and within the scope of this chapter;

- c. Identify effects on property ownership and use; and
- d. Provide a map showing the species or habitat location(s).
- 2. Submitted proposals shall be reviewed by the County and may be forwarded to the State Departments of Fish and Wildlife, Natural Resources, and/or other local, state, federal, and/or tribal agencies or experts for comments and recommendations regarding accuracy of data and effectiveness of proposed management strategies.
- 3. If the proposal is found to be complete, accurate, and consistent with the purposes and intent of this chapter and the various goals and objectives of the Whatcom County comprehensive plan and the Growth Management Act, the County Council will hold a public hearing to solicit comment. Approved nominations will become designated locally important habitats, species, or corridors and will be subject to the provisions of this chapter.
- 4. The Council may remove species, habitats, or corridors from this list if it can be shown that there is no longer a need to provide protection beyond that afforded by WDFW management strategies. Species and habitats of local importance that are not regulated elsewhere in this chapter may be removed if sufficient evidence has been provided by qualified professionals that demonstrates that the species no longer meets any provisions of subsection (D)(1)(a) of this section.

**16.16.720 Habitat Conservation Areas – ~~General standards~~ Use and Modification.**

The following activities may be permitted in habitat conservation areas and/or their buffers when, pursuant to WCC Chapter 16.16 (Critical Areas), ~~255 and 16.16.260,~~ all reasonable measures have been taken to avoid adverse effects on species and habitats, any applicable Washington Department of Fish and Wildlife management recommendations have been applied, mitigation is provided for all adverse impacts that cannot be avoided, and the amount and degree of the alteration are limited to the minimum needed to accomplish the project purpose; provided, that locally important species and habitats shall be subject to WCC 16.16.730-710(C)(12):

A. **Reasonable Use.** Developments that meet the reasonable use ~~and~~ or variance standards set forth in WCC 16.16.270 and 16.16.273, respectively.

**B. Utilities.**

- 1. ~~New~~ **Utility lines** and facilities may be permitted when all of the following criteria are met:
  - a. The least impactful construction or installation methodology is used as demonstrated through an alternatives analysis.
  - ~~a-b.~~ Impacts to fish and wildlife habitat and/or corridors shall be avoided to the maximum extent possible.
  - ~~b-c.~~ Where feasible, installation shall be accomplished by boring beneath the scour depth of the stream or waterbody and the width of the channel migration zone where present.
  - ~~c-d.~~ Trenching of utilities across a stream channel shall be conducted as perpendicular to the channel centerline as possible whenever boring under the channel is not feasible. Utilities shall be installed below potential scour depth regardless of method.
  - ~~d-e.~~ Crossings shall be contained within the footprint of an existing road or utility crossing where possible.

**Comment [CES70]:** Note: The order of the existing text has been changed to match that in 16.16.620, though not shown in track changes as it would become too confusing.

e-f. The utility installation shall not increase or decrease the natural rate, extent, or opportunity of channel migration.

2. On-site sewage disposal systems (OSS) may be permitted in FWHCA buffers when accessory to an approved single-family residence when:

a. It is not feasible to connect to a public sanitary sewer system; and

b. It is located as far as possible from the FWHCA buffer; and

~~a-c. It is operated and maintained in accordance with WCC 24.05.160; provided, that adverse effects on water quality are avoided.~~ may be permitted in nonaquatic HCA buffers and in the outer 50 percent of streams or other aquatic HCA buffers when accessory to an approved residential structure for which there are no alternatives and when it is not feasible to connect to a public sanitary sewer system and when operated and maintained in accordance with WCC Chapter 24.05; provided, that adverse effects on water quality and slope stability are avoided.

2-3. Domestic wells serving single-family developments (including plats, short plats, and individual single-family residences) and necessary appurtenances, including a pump and appropriately sized pump house, but not including a storage tank, in HCA buffers when all of the following conditions are met:

- a. There is no viable alternative to the well site outside of the buffer and the well is located as far back from the wetland edge as is feasible;
- b. Any impacts to the HCA buffer from staging equipment and the well-drilling process are mitigated.

B-C. Stream crossings, provided they meet all the following criteria:

1. The stream crossing is for an allowed use.

~~1-2.~~ There is no other feasible alternative route with less impact on critical areas.

2-3. The crossing minimizes interruption of natural processes such as channel migration, the downstream movement of wood and gravel, and the movement of all fish and wildlife. Bridges are preferred for all stream crossings and should be designed to maintain the existing stream substrate and gradient, span the bankfull width, or be proven to not have an appreciable increase in backwater elevation at a minimum of a 100-year event and provide adequate vertical clearance for debris likely to be encountered at high water.

~~3-4.~~ Culverts shall be designed according to applicable state and federal guidance criteria for fish passage as identified in Water Crossing Design Guidelines, WDFW 2013, as amended, and/or the National Marine Fisheries Service Guidelines for Salmonid Passage at Stream Crossings, 2000 (and subsequent revisions), and in accordance with a state hydraulic project approval. The applicant or property owner shall maintain fish passage through the bridge or culvert.

4-5. The County may require that existing culverts be removed, replaced, or fish passage barrier status corrected as a condition of approval if the culvert is detrimental to fish passage or water quality.

5-6. Roadway widths at culvert crossings shall be limited to the minimum width necessary to accommodate the roadway's classification. Culvert length shall be the minimum that is compatible with the roadway width.

**Comment [JPS71]:** Guidelines also indicate relocation is an acceptable solution and may provide ecological lift if relocation is back to original stream bed location.

~~6-7.~~ Shared common crossings are the preferred approach where multiple properties can be accessed by one crossing.

**D. Private Access.** Access to private development sites may be permitted to cross ~~habitat conservation areas~~FWHCAs and their buffers if: there are no feasible alternative alignments. Alternative access shall be pursued to the maximum extent feasible, including through the provisions of Chapter ~~8.24~~RCW. Exceptions or deviations from technical standards may be considered by the technical administrator on a case-by-case basis where the resulting outcome reduces overall impacts to any identified critical area.

1. ~~If~~there are no feasible alternative alignments. Alternative access shall be pursued to the maximum extent feasible, including through the provisions of Chapter ~~8.24~~ RCW.
2. The access is designed to cause the least impact to the habitat conservation area and/or its buffer (which may require the applicant to apply for an exception or deviation from the Development Standards)

~~7-3.~~ Access is not achievable through the administrative provisions of WCC 16.16.740 (Buffer Modification).

**C.E. Agricultural Uses.** Construction or improvements, other than ~~a~~buildings, that are associated with an agricultural use in the outer ~~25% percent~~ of the CPAL designated buffer; or the reconstruction, remodeling, or maintenance of such structures in a habitat conservation area buffer, subject to all of the following criteria:

1. The structure is located within an existing lot of record and is an ongoing agricultural use.
2. There is no other feasible location with less impact to critical areas. However, this provision does not apply to the reconstruction, maintenance and/or remodeling of preexisting structures.
3. Clearing and grading activity and impervious surfaces are limited to the minimum necessary to accommodate the proposed structure and, where possible, surfaces shall be made of pervious materials.
4. Unavoidable adverse effects on critical areas are mitigated in accordance with this chapter.

**F. Stormwater Management Facilities.**

~~D-1.~~ Stormwater management facilities limited to detention/retention/treatment ponds, media filtration, lagoons and infiltration basins may be permitted in a stream buffer, subject to all of the following standards:

- ~~1-a.~~ The facility is located in the outer ~~50% percent~~ of the standard stream buffer and does not displace or impact a forested riparian community;
- ~~2-b.~~ There is no other feasible location for the stormwater facility and the facility is located, constructed, and maintained in a manner that minimizes adverse effects on the buffer and adjacent critical areas;
- ~~3-c.~~ The stormwater facility meets applicable county or state stormwater management standards and the discharge water meets state water quality standards; and
- ~~4-d.~~ Low impact development approaches have been considered and implemented to the maximum extent feasible.

Comment [CES72]: Reworded for clarity

Formatted: Indent: Left: 0.25"

Formatted: Indent: Left: 0.5"

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

~~E-2.~~ Stormwater conveyance or discharge facilities such as dispersion trenches, level spreaders, and outfalls may be permitted in a habitat conservation area buffer on a case-by-case basis when the ~~technical administrator~~ Director determines that all of the following are met:

Formatted: Indent: Left: 0.25"

~~1-a.~~ Due to topographic or other physical constraints, there are no feasible locations for these facilities outside the buffer;

Formatted: Indent: Left: 0.5"

~~2-b.~~ The discharge is located as far from the ordinary high water mark as possible and in a manner that minimizes disturbance of soils and vegetation, except on shoreline slopes where location shall be determined by site characteristics to minimize adverse impacts;

~~3-c.~~ The discharge outlet is designed to prevent erosion and promote infiltration;

~~4-d.~~ The discharge meets freshwater and marine state water quality standards, including the need to evaluate cumulative impacts to 303(d) impaired water bodies and total maximum daily load (TMDL) standards as appropriate at the point of discharge. Standards should include filtration through mechanical or biological means, vegetation retention, timely reseeding of disturbed areas, use of grass-lined bioswales for drainage, and other mechanisms as appropriate within approved stormwater "special districts"; and

~~5-e.~~ The discharge outlet is designed to exclude fish from entering or migrating into stormwater conveyance systems.

~~6-3.~~ Phosphorus-reducing BMP structures approved and installed through the homeowners' improvement program (or as may be renamed) within the Lake Whatcom watershed to treat runoff from existing development may be permitted within fish and wildlife habitat conservation area buffers, provided that they are located the maximum feasible distance from the ordinary high water mark ~~25 feet of the lake shoreline.~~

**G. Recreation.**

~~F-1.~~ Trails. Construction of trails and roadways may be permitted in a habitat conservation area buffer when not directly related to a crossing and are subject to all of the following standards:

Comment [CES73]: Amended per Scoping Document item #13c

~~1-a.~~ There is no other feasible alternative route with less impact on the critical area.

Formatted: Indent: Left: 0.25"

~~2-b.~~ The ~~road or~~ trail minimizes erosion and sedimentation, hydrologic alteration, and disruption of natural processes such as channel migration, wood recruitment and natural wildlife movement patterns.

Formatted: Indent: Left: 0.5"

~~3-c.~~ Private trails shall not exceed four feet in width, and public trails shall not exceed 10 feet in width, though some portions may be wider to meet the requirements of the Americans with Disabilities Act.

~~d.~~ and They shall be made of pervious material or ~~on an elevated structure~~ where feasible.

~~e.~~ They shall be designed to avoid removal of significant trees.

~~a-f.~~ Trails may include limited viewing platforms that shall not exceed eight feet in width and shall be made of pervious materials where feasible.

~~4-g.~~ The ~~road or~~ trail through riparian (stream) buffer shall be located in the outer ~~25% percent~~ of the standard buffer, unless necessary to provide educational opportunities.

Formatted: Indent: Left: 0.5"

~~5-h.~~ The ~~road or~~ trail is constructed and maintained in a manner that minimizes disturbance of the buffer and associated critical areas.

~~G.2.~~ **Marinas and Launch Ramps.** Construction, reconstruction, repair, and maintenance of marinas and launch ramps may be permitted when consistent with the regulations found in WCC 23.40.060 (Marinas and Launch Ramps ), regardless of whether the proposed project is within shoreline jurisdiction or not.

~~H.3.~~ **Docks.** Construction, ~~of docks and public launching ramps,~~ and reconstruction, repair, and maintenance of docks ~~and public or private launching ramps~~ may be permitted when consistent with the Army Corps of Engineers’ Regional General Permit 6 (Structures in Inland Marine Waters of Washington State) and the regulations found in WCC 23.40.150 (Mooring Structures), regardless of whether or not the proposed project is within shoreline jurisdiction. subject to the following:

- ~~1.~~ The dock or ramp is located and oriented and constructed in a manner that minimizes adverse effects on navigation, wave action, water quality, movement of aquatic and terrestrial life, ecological processes, critical saltwater habitats, wetlands, or other critical areas.
- ~~2.~~ Docks or ramps on shorelines of the state shall comply with WCC Title 23 and state hydraulic project approval requirements.
- ~~3.~~ Natural shoreline processes will be maintained to the maximum extent practicable. The activity will not result in increased erosion and will not alter the size or distribution of shoreline or stream substrate, or eliminate or reduce sediment supply from feeder bluffs.
- ~~4.~~ No net loss to habitat conservation areas or associated wetlands will occur.
- ~~5.~~ No net loss of juvenile fish migration corridors will occur.
- ~~6.~~ No net loss of intertidal or riparian habitat function will occur.

~~4.~~ **Accessory Uses Structures.** When located in the shoreline jurisdiction, residential water-oriented recreational accessory structures—such as a boat equipment storage shed, an small uncovered boat storage rack, a fire pit, and a pathway leading to the shoreline—may be permitted in an HCA buffer; provided,

- a. Such structures are located as far from the shoreline as feasible and on previously-impacted buffer areas;
- b. The maximum area, inclusive of existing lawfully-established accessory structures, They shall be limited to 10% of the buffer’s area or 500 square feet, whichever is less;
- c. No more than 20% of the linear length of shoreline is occupied by a building or structure;
- d. Individual structures shall be limited to a total footprint area of 100-square feet and 10-feet in height; and
- e. The shoreline is 75% or at ratios outlined in WCC 16.16.760, whichever is greater, planted (or replanted) with native vegetation to a minimum depth of 15 feet landward from the ordinary high water mark.
- f. This provision shall not apply to residential developments authorized using the constrained lot provisions of WCC 23.40.150(B).

~~H.~~ **Relocation of streams,** or portions of streams, when there is no other feasible alternative and when the relocation will result in equal or better habitat and water quality and quantity, and will not diminish the flow capacity of the stream or other natural stream processes; provided, that the

Formatted: Indent: Left: 0.25"

**Comment [CES74]:** Policy Change. This section allows for some recreational uses at the water’s edge while meeting no net loss.

**Comment [DOE-Req75]:** Required Changes – These changes are required for consistency with the SMP Guidelines governing principle that SMP regulations must be designed to achieve no net loss of ecological functions (WAC 173-26-186(8)). The changes add appropriate sideboards to allow a limited and predictable list of common residential developments that may be located within regulated buffers. The changes include more emphasis on the required mitigation sequence including avoidance, minimization and mitigation of impacts to buffers [WAC 173-26-201(2)(e)]

relocation meets state Hydraulic Project Approval requirements and that relocation of shoreline streams shall be prohibited unless the relocation has been identified formally by the Washington State Department of Fish and Wildlife as essential for fish and wildlife habitat enhancement or identified in watershed planning documents prepared and adopted pursuant to Chapter [90.82](#) RCW, the WRIA 1 Salmonid Recovery Plan, or the WRIA 1 Watershed Management Board Habitat Project List, or the County's Shoreline Restoration Plan.

**J.I. Clearing and grading**, when allowed as part of an authorized activity or as otherwise allowed in these standards, may be permitted; provided, that the following shall apply:

1. Grading is allowed only during the designated dry season, which is typically regarded as May to October of each year; provided, that the County may extend or shorten the designated dry season on a case-by-case basis, based on actual weather conditions. Special scrutiny shall be given to Lakes Samish, Padden, and Whatcom watersheds, and water resource special management areas as described in WCC [20.80.735](#).
2. Appropriate erosion and sediment control measures shall be used at all times, consistent with best management practices in the Department of Ecology's Stormwater Management Manual for Western Washington. The soil duff layer shall remain undisturbed to the maximum extent possible. Where feasible, disturbed topsoil shall be salvaged and/or redistributed to other areas of the site. Areas shall be revegetated as needed to stabilize the site.
3. The moisture-holding and infiltration capacity of the topsoil layer shall be maintained by minimizing soil compaction or reestablishing natural soil structure and infiltrative capacity on all are-as of the project area not covered by impervious surfaces.

**K.J. Shoreline Streambank Stabilization and shoreline protection** may be permitted when consistent with the shoreline stabilization regulations found in 23.40.190 (Shoreline Stabilization), regardless of whether the proposed project is within shoreline jurisdiction or not. ~~subject to all of the following standards:~~

- ~~1. The stabilization or protection measures shall be designed in accordance with the techniques contained within the Washington Department of Fish and Wildlife's most recent Integrated Streambank Protection Guidelines. Deviation from these techniques requires written justification from a qualified professional/engineer.~~
- ~~2. Natural shoreline processes will be maintained to the maximum extent practicable.~~
- ~~3. The activity will not result in increased erosion and will not alter the size or distribution of shoreline or stream substrate, or eliminate or reduce sediment supply from feeder bluffs.~~
- ~~4. Stream and shoreline protection and launching ramps on shorelines of the state shall comply with WCC Title [22](#) and with state hydraulic project approval requirements.~~
- ~~5. No net loss to habitat conservation areas or associated wetlands will occur.~~
- ~~6. No net loss of juvenile fish migration corridors will occur.~~
- ~~7. No net loss of intertidal or riparian habitat function will occur.~~
- ~~8. Nonstructural measures, such as placing or relocating the development further from the shoreline, planting vegetation, or installing on-site drainage improvements, are not practicable or not sufficient.~~

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

9. Stabilization is achieved through bioengineering or soft armoring techniques in accordance with an applicable hydraulic permit approval issued by the Washington State Department of Fish and Wildlife.

10. Hard bank armoring is discouraged and may occur only when the property contains an existing permanent structure(s) that is in danger from shoreline erosion caused by wave action or riverine processes and not erosion caused by upland conditions, such as the alteration of natural vegetation or drainage, and the armoring shall not increase erosion on adjacent properties and shall not eliminate or reduce sediment supply. An objective alternatives analysis, addressing upstream and downstream impacts, shall be conducted to demonstrate that there is no other less environmentally damaging alternative to the more impacting proposed action.

11. Normal sloughing, erosion of steep bluffs, or shoreline erosion itself, without a scientific or geotechnical analysis, is not a demonstration of need.

12. The bank stabilization or shore protection will not adversely affect habitat conservation areas or mitigation will be provided to compensate for adverse effects where avoidance is not feasible.

~~L.K.~~ **New Public Flood Protection Measures** and expansion of existing ones may be permitted, subject to WCC Title 17, Article 4 of this chapter and a state hydraulic project approval; provided, that bioengineering or soft armoring techniques shall be used where feasible. Hard bank armoring may occur only in situations where soft approaches do not provide adequate protection.

~~L.~~ **In-stream structures** such as, but not limited to, high-flow bypasses, dams, and weirs, shall be allowed only as part of a watershed restoration project as defined pursuant to WCC ~~Title 23.410.230(10)~~ or identified in watershed planning documents prepared and adopted under Chapter 90.82 RCW, the salmonid recovery plan or watershed management board habitat project list, and the County's shoreline restoration plan and upon acquisition of any required state or federal permits. The structure shall be designed to avoid adverse effects on stream flow, water quality, or other habitat functions and values.

~~M.~~ ~~Single family developments may be permitted to encroach into stream buffers subject to the technical administrator's approval; provided, that all of the criteria in WCC 16.16.270(B) are met.~~

~~N.M.~~ All other development may be allowed in shellfish protection districts outside of actual shellfish habitats with a valid ~~development project~~ permit and when the requirements of subsection O of this section are met.

~~O.N.~~ Alteration or removal of **beaver-built structures** more than two years old; provided, that:

1. The property owner can show that the beaver dam is harming or likely to harm his or her property.
2. It has been demonstrated that beaver deceivers or auto leveler devices cannot appropriately resolve ponding/backwatering that is negatively affecting adjacent land or property.
3. Impacts to wetland, river, or stream functions are minimized and mitigation is provided to compensate for lost ecological value.
4. The property owner obtains an HPA from WDFW prior to initiating alteration or removal of the beaver-built structure.
5. The property owner provides a copy of the HPA to the ~~technical administrator~~ Director.

**Comment [CES76]:** Not needed. 16.16.270 would apply to any type of development and is covered by (A)

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

P-O. On Eliza Island, applicants shall complete the U.S. Fish and Wildlife Service (USFWS) self-assessment (<https://www.fws.gov/pacific/eagle/>) to determine whether a USFWS bald eagle permit is needed and, if so, apply for one. Development activities near bald eagle habitat shall be carried out consistent with the National Bald Eagle Guidelines.

**P. Timber Removal.**

1. To allow for greater flexibility in a development proposal when an application has been submitted for a Conversion Option Harvest Plan (COHP) or a Class IV General FPA, an applicant has the opportunity to remove timber within the standard buffers if the applicant’s mitigation measures incorporate all of the performance standards based upon water type listed in Table 3. In conformance with professional standards used by the Washington Department of Natural Resources for forest practices in sensitive areas, all removal of timber within HCA buffers shall be subject to conditions specified by the Director in conjunction with an on-site technical team review in which participation by representatives of the proponent, Ecology, WDFW, WDNR and natural resource representatives of affected Indian tribes is solicited.
2. The intent of this section is to provide an additional opportunity for an applicant to propose some level of timber removal within the riparian habitat zone, as long as it can be demonstrated that the function of the buffer can be maintained at the levels described below. If the buffer, in its current state, cannot meet these standards, then the Director will not be able to give its approval for any activity which would inhibit recovery of or degrade the current buffer.
3. The current performance of a given buffer area is compared to its potential performance as rated by the Soil Conservation Service’s most recent Soil Survey of Whatcom County. In consultation with a representative from the Natural Resource Conservation Service, Soil Conservation District, or professional forester, the applicant will determine the capability of the site for woodland management, using the most suitable tree species according to the soil survey, and establish the stand characteristics that would be expected from a mature stand of those species established on site:
4. If the current stand can exceed the riparian protection that could be expected based on site potential, then additional activity may be allowed provided the following performance standards can be met. For Type S streams, an alternative method may be utilized to allow limited timber harvest within the outer 100 feet of a buffer:

**Comment [CES77]:** Borrowed from Skagit County, this section would allow timber harvesting to occur w/in buffers while still retaining the HCA’s functions. This is aimed at closing a loophole wherein applicants remove timber before applying for a development permit, which is when the CAO becomes applicable (the CAO is not applicable to forest practices except for Class IV Conversions).

**Table 3. Performance-Based Riparian Standards\***

<b>Watertype</b>	<b>Performance Standards</b>
Type S	<p>Maintain 95% of total LWD recruitment expected to enter freshwater stream(s) from a mature stand; and</p> <p>Maintain 85% of the trees which are greater than 24 inches DBH within 100 feet of the water(s); and</p> <p>Maintain an average of 75% canopy cover (based on canopy densitometer readings at the water(s) edge).</p> <p>The applicant may further request some limited timber harvest of up to 30% of the merchantable timber within the outer 100 feet of any 200-foot required buffer provided</p>

<u>Watertype</u>	<u>Performance Standards</u>
	<p>the harvest:</p> <p>(a) Does not reduce the LWD and canopy requirements; and</p> <p>(b) The applicant will increase the total buffer size by 50 feet to mitigate for the limited timber harvest in the required buffer to provide additional wildlife habitat. The additional 50-foot buffer shall retain a minimum of 50% of the total number of trees with 25% of the total trees left having a diameter at breast height (DBH—4-1/2 feet) greater than 12 inches; and</p> <p>(c) No more than 50% of the dominant trees in the outer 100 feet may be harvested.</p>
Type F	<p>Maintain 85% of total LWD recruitment expected to enter freshwater stream(s) from a mature stand; and</p> <p>Maintain 85% of the trees which are greater than 18 inches DBH within 100 feet of the water(s); and</p> <p>Maintain an average of 75% canopy cover (based on canopy densitometer readings at the water(s) edge).</p>
Types Np and Ns	<p>Maintain 50% of total LWD recruitment expected to enter freshwater stream(s) from a mature stand; and</p> <p>Maintain 85% of the trees which are greater than 24 inches DBH within 50 feet of the water(s); and</p> <p>Maintain an average of 75% canopy cover (based on canopy densitometer readings at the water(s) edge).</p>

\* Note: These standards must be exceeded before additional activity can be permitted within the riparian zone. Applicants electing to employ performance-based mitigation in accordance with the above matrix shall include appropriate analysis and justification in their site assessment/habitat management plan.

**16.16.730 Locally Important Habitats and Species—Standards.**

Alterations that occur within a locally important habitat area or that may affect a locally important species as defined herein shall be subject to review on a case-by-case basis. The technical administrator shall have the authority to require an assessment of the effects of the alteration on species or habitats and may require mitigation to ensure that unmitigated adverse effects do not occur. This standard is intended to allow for flexibility and responsiveness with regard to locally important species and habitats.

**16.16.740-730 Habitat Conservation Area Buffers—Standards.**

In addition to the applicable general protective measures found in WCC 16.16.265 and 16.16.720, the technical administrator/Director shall have the authority to require buffers from the edges of all habitat conservation areas (in addition to the building setback required by 16.16.265(D)) in accordance with the following:

**A. General.**

A.1. Buffers shall be established for activities adjacent to habitat conservation areas as necessary to protect the integrity, functions, and values of the resource. Buffer widths shall reflect the sensitivity of the species or habitat present and the type and intensity of the proposed adjacent

Formatted: Indent: Left: 0.25"

human use or activity. Buffers shall not include areas that are functionally and effectively disconnected from the habitat conservation area by an existing, legally established road or other that are functionally and effectively disconnected from the habitat area by of an existing, legally established road or other substantially developed surface.

Comment [P/C78]: P/C moved to retain existing language. Passed 4-3

B. Stream Buffers.

2. The standard buffer widths required by this Article are considered to be the minimum required and presume the existence of a dense vegetation community in the buffer zone adequate to protect the stream ecological functions and values at the time of the proposed activity. When a buffer lacks adequate vegetation to protect critical area functions, the technical administrator Director may increase the standard buffer, require buffer planting or enhancement, and/or deny a proposal for buffer reduction or buffer averaging.

Formatted: Indent: Left: 0.25"

3. The standard buffer shall be measured landward horizontally from the edge of the ordinary high water mark as identified in the field. The required buffer shall be extended to include any abutting regulated wetland(s), landslide hazard areas, and/or erosion hazard areas and required buffers.

1-4. For streams, the standard buffer is measured on both sides of the stream from the ordinary high water on both sides of the stream mark as identified in the field; provided, that for streams with identified channel migration zones, the buffer shall extend outward horizontally from the outer edge of the channel migration zone on both sides. The required buffer shall be extended to include any abutting regulated wetland(s), landslide hazard areas and/or erosion hazard areas and required buffers, but shall not be extended across roads or other lawfully established structures or hardened surfaces.

2. The following standard buffer width requirements are established:

Formatted: Numbered + Level: 1 + Numbering Style: A, B, C, ... + Start at: 1 + Alignment: Left + Aligned at: 0.25" + Indent at: 0.5"

- a. Shoreline streams: 150 feet;
- b. Fish bearing streams: 100 feet;
- c. Non fish bearing streams: 50 feet.

Comment [CES79]: Moved to Table 4

3-5. Portions of streams that flow underground may be exempt from these buffer standards at the technical administrator Director's discretion when it can be demonstrated that no adverse effects on aquatic species will occur.

Formatted: Indent: Left: 0.25", Numbered + Level: 2 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 0.75" + Indent at: 1"

B. Buffers for Other Habitat Conservation Areas Buffer Widths.

1. Standard buffer widths for habitat conservation areas shall be as identified in Table 4.

Formatted: Indent: Left: 0.25"

2. For habitat conservation areas not listed in Table 4, including those of locally important habitats and species and State priority habitats and areas with which federally listed or state priority species have a primary association, minimum buffers shall be based on habitat a management plan prepared pursuant to WCC 16.16.750. The technical administrator shall determine appropriate buffer widths for other habitat conservation areas. The Director shall have the authority to require a critical area assessment report and/or habitat management plan (HMP) pursuant to WCC 16.16.750, and may require mitigation to ensure that unmitigated adverse effects do not occur. based on the best available information. Buffer widths for non-stream habitat conservation areas shall be as identified in Table 3:

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

Table 4. Buffer Requirements for HCAs

Habitat Conservation Area	Buffer Requirement
Type S – Freshwater	<u>200 feet</u>
Type S – Marine	<u>150 feet</u>
Type F – Lake	<u>100 feet</u>
Type F – Stream	<u>150 feet</u>
Type Np	<u>50 feet</u>
Type Ns	<u>50 feet</u>
manmade ponds identified in 16.16.710(D)(10)	25 feet, unless otherwise approved through an Habitat Management Plan pursuant to subsection (B)(2), above, or a Conservation Farm Plan pursuant to Article 8
Areas with which federally listed species have a primary association, State priority habitats and areas with which priority species have a primary association	Minimum buffers shall be based on recommendations provided by the Washington State Department of Fish and Wildlife PHS Program; provided, that local and site-specific factors shall be taken into consideration and the buffer width based on the best available information concerning the species/habitat(s) in question and/or the opinions and recommendations of a qualified professional with appropriate expertise. When there are no state recommendations or species management guidelines then only the building setback (WCC 16.16.265) shall be applied.
Critical saltwater habitats	Buffers shall extend 150 feet landward from ordinary high water mark of the marine shore. Buffers shall not be required adjacent to shellfish protection districts, but only in nearshore areas where shellfish reside.
Natural ponds and lakes	Ponds under 20 acres – Buffers shall extend 50 feet from the ordinary high water mark. Lakes 20 acres and larger (which are subject to WCC Title 23) – Buffers shall extend 100 feet from the ordinary high water mark; provided, that where vegetated wetlands are associated with the shoreline, the buffer shall be based on the wetland buffer requirements in WCC 16.16.630.
Natural area preserves and natural resource conservation areas	Buffers shall not be required adjacent to these areas. These areas are assumed to encompass the land required for species preservation.

**Comment [CES80]:** Policy change: 200' is the Court recommended based on National Wildlife Federation v. FEMA (Federal District Court Case No. 2:11cv-02044-rsm; NMFS Doc. #2006-00472)

**Comment [CES81]:** Now covered by subsection (B)(2)

**Comment [CES82]:** Now covered by the water types, above.

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

Habitat Conservation Area	Buffer Requirement
Locally important habitat areas	<p>The buffer for marine nearshore habitats shall extend landward 150 feet from the ordinary high water mark.</p> <p>The need for and dimensions of buffers for other locally important species or habitats shall be determined on a case-by-case basis, according to the needs of the specific species or habitat area of concern. Buffers shall not be required adjacent to the Chuckanut wildlife corridor. The technical administrator shall coordinate with the Washington State Department of Fish and Wildlife and other state, federal or tribal experts in these instances, and may use WDFW PHS management recommendations when available.</p>

Comment [CES83]: Now covered by the water types, above.

Comment [CES84]: Now covered in subsection (B)(2)

**16.16.740 Habitat Conservation Area Buffer Modification.**

Buffer widths may be increased, decreased, or averaged in accordance with the following provisions, which provide flexible approaches to maximize both ecological functions and allowed uses. All mitigation proposed shall be consistent this Chapter.

**A. Buffer Width Increasing.** The Director may require the standard buffer width to be increased or to establish a non-riparian buffer, when such buffers are necessary for one of the following:

1. To protect priority fish or wildlife using the HCA.
2. To provide connectivity when a Type S or F waterbody is located within 300 feet of:
  - a. Another Type S or F water body; or
  - b. A fish and wildlife HCA; or
  - c. A Category I, II or III wetland;
3. To comply with the requirements of a habitat management plan prepared pursuant to WCC 16.16.750.
4. To protect fish and wildlife habitat, maintain water quality, ensure adequate flow conveyance, provide adequate recruitment for large woody debris, maintain adequate streamwater temperatures, or maintain in-streamwater conditions.
5. To compensate for degraded vegetation communities, Clean Water Act 303(d) impaired water bodies, or steep slopes adjacent to the habitat conservation area.
6. To maintain areas for channel migration and/or frequently flooded areas.
7. To protect adjacent or downstream gradient areas from erosion, landslides, or other hazards.
8. To protect streamswaters from high intensity adjacent land uses.

The increased buffer distance may be limited to those areas that provide connectivity or are necessary to protect habitat functions. Increasing the buffer widths will only be done where necessary to preserve the structure, function and value of the habitat.

**B. Buffer Width Averaging.**

1. Buffer width averaging allows limited reductions of buffer width in specified locations while requiring increases in others. Averaging of required buffer widths shall be allowed only where the applicant demonstrates that all of the following criteria are met:
  - a. The buffer has not been reduced pursuant to subsection (C). Buffer averaging is not allowed if the buffer has been reduced.

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

- b. Averaging is necessary to accomplish the purpose of the proposal and no reasonable alternative is available due to site constraints caused by existing physical characteristics such as slope, soils, or vegetation; and
  - c. The habitat contains variations in sensitivity due to existing physical characteristics; and
  - d. Averaging will not adversely impact the functions and values of fish and wildlife conservation areas; and
  - e. Averaging meets performance standards for protecting fish species; and
  - f. The total area contained within the buffer after averaging is no less than that contained within the standard buffer prior to averaging; and
  - g. The slopes adjacent to the habitat conservation area within the buffer area are stable and the gradient does not exceed 30% percent; and,
  - h. The buffer width shall not be reduced below 75% of the standard buffer width.
2. In the specified locations where a buffer has been reduced to achieve averaging, the Director may require enhancement to the remaining buffer to ensure no net loss of ecologic function, services, or value.

**C. Buffer Width Reduction.**

1. The Director shall have the authority to reduce buffer widths on a case-by-case basis; provided, that the general standards for alternatives analysis and mitigation sequencing per WCC 16.16.260 have been applied, and when the applicant demonstrates to the satisfaction of the Director that all of the following criteria are met:
- a. The buffer has not been averaged pursuant to subsection (B). Buffer reduction is not allowed if the buffer has been averaged.
  - b. The applicant demonstrates buffer averaging is not feasible.
  - c. The buffer shall not be reduced to less than 75% percent of the standard buffer specified in Table 4Table 3.
  - d. The slopes adjacent to the habitat conservation area within the buffer area are stable and the gradient does not exceed 30% percent (see Article 3 of this chapter).
  - e. The applicant has demonstrated application of mitigation sequencing as required in WCC 16.16.260 (General Mitigation Requirements).
  - f. To minimize impacts and provide equivalent functions and values as required by this section, the Director may require any or all of the following:
    - i. The use of alternative on-site wastewater systems in order to minimize site clearing, where appropriate;
    - ii. Using low impact development (LID) and LID best management practices where appropriate;  
~~In order to offset habitat loss from buffer reduction, retaining existing native vegetation on other portions of the site equal to no more than the area impacted.~~
  - g. All buffer reduction impacts are mitigated and result in equal or greater protection of the HCA functions and values. This includes enhancement of existing degraded buffer area and provide mitigation for the disturbed buffer area.

Comment [P/C85]: P/C motion to strike. Carries 7-1-1

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

- 2. In all circumstances when the buffer between the area of reduction and the habitat conservation area is degraded, this degraded portion of the buffer shall include replanting with native vegetation in order to achieve a dense vegetative community.

Comment [P/C86]: P/C motion to approve. Carries 9-0

- D. **Buffer Width Variance.** Standard buffer widths may be reduced by more than 25% through a variance pursuant to WCC 16.16.273 (Variances); provided, that buffer averaging beyond that allowed in subsection (B) is prohibited.
- E. The technical administrator shall have the authority to reduce buffer widths on a case-by-case basis; provided, that the general standards for alternatives analysis and mitigation sequencing per WCC 16.16.260 have been applied, and when the applicant demonstrates to the satisfaction of the technical administrator that all of the following criteria are met:
  - 1. The buffer reduction shall not adversely affect the habitat functions and values of the adjacent habitat conservation area or other critical area.
  - ~~2.1. The buffer shall not be reduced to less than 75 percent of the standard buffer specified in Table 3.~~
  - ~~3.1. The slopes adjacent to the habitat conservation area within the buffer area are stable and the gradient does not exceed 30 percent (see Article 3 of this chapter).~~
  - 4. The area that has been reduced shall be mitigated at least at a ratio of 1:1, on an area basis.
- F. The technical administrator shall have the authority to average buffer widths on a case-by-case basis; provided, that the general standards for avoidance and minimization per WCC 16.16.260(A)(1)(a) and (b) shall apply, and when the applicant demonstrates to the satisfaction of the technical administrator that all of the following criteria are met:
  - 1. The total area contained in the buffer area after averaging is no less than that which would be contained within the standard buffer and all increases in buffer dimension are parallel to the habitat conservation area.
  - 2. The buffer averaging does not reduce the functions or values of the habitat conservation area or riparian habitat, or the buffer averaging, in conjunction with vegetation enhancement, increases the habitat function.
  - 3. The buffer averaging is necessary due to site constraints caused by existing physical characteristics such as slope, soils, or vegetation.
  - 4. The buffer width is not reduced to less than 75 percent of the standard width specified in Table 3.
  - ~~5.1. The slopes adjacent to the habitat conservation area within the buffer area are stable and the gradient does not exceed 30 percent.~~
  - 6. Where a buffer has been reduced, the technical administrator may require enhancement to the remaining buffer to ensure no net loss of ecologic function, services, or value.
- G. **Buffer Increases.** The technical administrator shall have the authority to increase the width of a habitat conservation area buffer on a case-by-case basis when there is clear evidence that such increase is necessary to achieve any of the following:
  - ~~1. Comply with the requirements of a habitat management plan prepared pursuant to WCC 16.16.750.~~

- ~~2.1. Protect fish and wildlife habitat, maintain water quality, ensure adequate flow conveyance, provide adequate recruitment for large woody debris, maintain adequate stream temperatures, or maintain in-stream conditions.~~
- ~~3.1. Compensate for degraded vegetation communities, Clean Water Act 303(d) impaired water bodies, or steep slopes adjacent to the habitat conservation area.~~
- ~~4.1. Maintain areas for channel migration and/or frequently flooded areas.~~
- ~~5.1. Protect adjacent or downstream areas from erosion, landslides, or other hazards.~~
- ~~6.1. Protect streams from high intensity adjacent land uses.~~

**16.16.750 Habitat Conservation Areas – Review and Reporting Requirements.**

- A. When County critical area maps or other sources of credible information indicate that a site proposed for development or alteration is more likely than not to contain habitat conservation areas or buffers, or could adversely affect a habitat area or buffer, the ~~technical administrator~~ Director shall require a site evaluation (field investigation) by a qualified professional or other measures to determine whether or not the species or habitat is present. If no habitat conservation areas are present, then review will be considered complete. If the site evaluation determines that the species or habitat is present, the ~~technical administrator~~ Director shall require a critical areas assessment report or habitat management plan (HMP), except; provided, that
1. No report or evaluation shall be required for developments outside of buffers within the upland portions of shellfish conservation areas.
  2. The ~~technical administrator~~ Director shall have the authority to waive the report requirement when he/she determines that the project is a single-family building permit development that involves less than one-half acre of clearing and/or vegetation removal and will not directly disturb the species, or specific areas or habitat features that comprise the habitat conservation area (nest trees, breeding sites, etc.) as indicated by a site plan or scaled drawing of the proposed development.
- B. In addition to the reporting requirements of WCC [16.16.255](#), the habitat conservation area assessment report/HMP shall describe the characteristics of the subject property and adjacent areas, including condition, quality, function, and values of the habitat conservation area at a scale appropriate to the function being evaluated (see WAC [365-196-830\(6\)](#)). The assessment shall include determination of appropriate buffers as set forth in WCC [16.16.740](#). The assessment shall also include field identification and/or delineation of habitat areas, analysis of historical aerial photos, and review of public records as necessary to determine potential effects of the development action on critical areas. Assessment reports shall include the following site- and proposal-related information unless the ~~technical administrator~~ Director determines that any portion of these requirements is unnecessary given the scope and/or scale of the proposed development:
1. A map drawn to a common scale or survey showing the following information:
    - a. Topographic, hydrologic, and vegetative features.
    - b. The location and description of wildlife and habitat features, and all critical areas on or within 200 feet of the site, or farther, given the scale appropriate to the function being evaluated.

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

- c. Proposed development activity.
- d. Existing physical features of the site including buildings, fences, and other structures, roads, parking lots, utilities, water bodies, etc.
- e. Surrounding land uses and zoning (to ensure appropriate buffer).
2. An analysis, including an analysis of cumulative impacts, of how the proposed development activities will affect the fish and wildlife habitat conservation area and/or buffer, including the area of direct disturbance; effects of stormwater management; effects on any 303(d) impaired water bodies; proposed alteration to surface or subsurface hydrology; natural drainage or infiltration patterns; clearing and grading impact; temporary construction impacts; effects of increased intensity of use (including noise, light, human intrusion, etc.).
3. Provisions to reduce or eliminate adverse impacts of the proposed development activities on the functions and values of the habitat conservation area including, but not limited to:
  - b. Buffering;
  - c. Clustering of development;
  - d. Retention of native vegetation;
  - e. Access limitations;
  - f. Seasonal restrictions on construction activities in accordance with the guidelines developed by the Washington State Department of Fish and Wildlife, the U.S. Army Corps of Engineers, the salmonid recovery plan and/or other agency or tribe with expertise and jurisdiction over the subject species/habitat; and
  - g. Other appropriate and proven low impact development techniques.
4. Management recommendations developed by WDFW through its Priority Habitat and Species program.
5. Additional information including, but not limited to, direct observations of species use or detailed physical and biological characteristics both on and off site at an appropriate scale (see WAC [365-196-830](#)(6)). The assessment of off-site conditions shall be based on available information and shall not require accessing off-site properties.
6. Applicants near a bald eagle nest shall complete the U.S. Fish and Wildlife Service (USFWS) self-assessment (<https://www.fws.gov/pacific/eagle>) to determine whether a USFWS bald eagle permit is needed, and if so, apply for one. Development activities near bald eagle habitat shall be carried out consistent with the National Bald Eagle Guidelines.
- C. All habitat management plans ~~shall~~ should be prepared in consultation with the State Department of Fish and Wildlife and/or other federal, state, local or tribal resource agencies with jurisdiction and expertise in the subject species/habitat, and shall contain a review of the most current best available science applicable to the subject species/habitat.
- D. For single-family building permits, the applicant may hire a qualified professional to prepare the assessment report or may request that the County assess the regulated wetland(s) and buffers and determine the impacts associated with the project, subject to the following: ~~At the request of the applicant, the County may gather the required information in this section for applicants seeking to develop a single-family home; provided, that:~~

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

1. Availability of County staff shall be at the discretion of the ~~technical administrator~~ Director and subject to workload and scheduling constraints.
2. Fees for County staff services shall be in accordance with the unified fee schedule.

### 16.16.760 Habitat Conservation Areas – Mitigation Standards.

Activities that adversely affect habitat conservation areas and/or their buffers as determined by the ~~technical administrator~~ Director shall include mitigation sufficient to achieve no net loss of habitat functions and values or an ecological lift in accordance with WCC 16.16.260 and this section.

~~A. In determining the extent and type of mitigation required, the technical administrator may consider all of the following:~~

- ~~1. The ecological processes that affect and influence critical area structure and function within the watershed or sub-basin;~~
- ~~2. The individual and cumulative effects of the action upon the functions of the critical area and associated watershed;~~
- ~~3. Observed or predicted trends regarding the gains or losses of specific habitats or species in the watershed, in light of natural and human processes;~~
- ~~4. The likely success of the proposed mitigation measures;~~
- ~~5. Effects of the mitigation actions on neighboring properties; and~~
- ~~6. Opportunities to implement restoration actions formally identified by an adopted shoreline restoration plan, watershed planning document prepared and adopted pursuant to Chapter 90.82 RCW, a salmonid recovery plan or project that has been identified on the watershed management board habitat project list or by the Washington State Department of Fish and Wildlife as essential for fish and wildlife habitat enhancement.~~

~~B. The following additional mitigation standards shall apply:~~

~~B. Mitigation for alterations to habitat areas shall achieve equivalent or greater biologic functions, and shall provide similar functions to those that are lost or altered.~~

~~C. A. Mitigation in the form of habitat restoration or enhancement is required when a habitat is altered permanently as a result of an approved project. Alterations shall not result in net loss of habitat.~~

~~1. Where feasible, mitigation projects shall be completed prior to activities that will disturb habitat conservation areas. In all other cases, mitigation shall be completed as quickly as possible following disturbance and prior to use or occupancy of the activity or development. Construction of mitigation projects shall be timed to reduce impacts to existing fish, wildlife and flora; provided, that the technical administrator may adjust the timing requirements to allow grading, planting, and other activities to occur during the appropriate season(s).~~

~~2. Mitigation shall be provided on-site whenever feasible. Off-site mitigation in a location that will provide a greater ecological benefit to the species and/or habitats affected and have a greater likelihood of success may be accepted at the discretion of the technical administrator. Mitigation shall occur as close to the impact site as possible. As mitigation is moved further away from the impacted habitat, the technical administrator may increase the amount of mitigation required. If off-site mitigation is proposed, the applicant must demonstrate through an alternatives/mitigation sequencing analysis (WCC 16.16.260) that the mitigation will have greater ecological benefit.~~

Comment [PDS87]: An approved habitat management plan may require a lift to comply.

Comment [CES88]: Moved to 16.16.260 General Mitigation Requirements

Comment [CES89]: Moved to 16.16.260 General Mitigation Requirements

Comment [CES90]: Now covered by 16.16.260(D)

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

~~D.B.~~ All mitigation sites shall have buffers consistent with the buffer requirements established in WCC 16.16.740; provided, that the ~~technical administrator~~ Director shall have the authority to approve a smaller buffer when existing site constraints (such as a road) prohibit attainment of the standard buffer. Mitigation actions shall not create buffer encumbrances on adjoining properties.

~~3.~~ ~~The technical administrator shall require annual monitoring of mitigation activities and submittal of annual monitoring reports in accordance with WCC 16.16.260(C) to ensure and document that the goals and objectives of the mitigation are met. Monitoring shall be for a period of up to five years.~~

Comment [CES91]: Covered by 16.16.260(l)(2).

~~E.C.~~ Mitigation projects involving in-stream water work including, but not limited to, installation of large woody debris shall be designed to ensure there are no adverse hydraulic effects on ~~upstream-up-~~ or ~~downstream-downgradient~~ properties. The County Public Works River and Flood Division shall review any such mitigation projects for compliance with this provision.

D. As applicable, apply mitigation standards of the Army Corps of Engineer Regional General Permit 6 for inland marine waters as amended February 12, 2020.

Comment [CES92]: Added for consistency with RGP-6

~~F.E.~~ On a case-by-case basis, the technical administrator shall have the authority to require mitigation ~~For permanent impacts to a habitat conservation areas or their buffers, mitigation shall be provided at the following ratios, unless the Director approves a habitat management plan with greater ratios:~~

1. Where the mitigation is in place and functional before the impacts occur (i.e., advanced mitigation), at a ratio determined by the functions, values, and goals of an advanced mitigation plan, at a 1:1 ratio (area or function).
2. Where the mitigation is in place within 1 year of the impact occurring, at a 1:1 ratio (area or function). Where the mitigation is placed after the impact occurs, at a 1.25:1 ratio (area or function); and
- 2-3. Where the mitigation is placed after 1 year of the impact occurring, at a 1.25:1 ratio (area or function).
4. For retroactive permits the Director may require the ratio shall be up to double the ratio in subsection (3) above.

Comment [P/C93]: P/C motion to amend as shown. Passes 7-0

## **Article 8. Conservation Program on Agriculture Lands (CPAL)**

### **16.16.800 Purpose.**

- A. The well-being of farms and ranches in Whatcom County depends in part on good quality soil, water, air, and other natural resources. Agricultural operations that incorporate protection of the environment, including critical areas and their buffers as defined by this chapter, are essential to achieving this goal.
- B. The purpose of the CPAL program is to allow farmers practicing ongoing agricultural activities that may affect critical areas, their functions and values, and/or their buffers to do so either (1) in accordance with the standard requirements of this chapter or (2) pursuant to a conservation farm plan voluntarily prepared and approved pursuant to this article. If farmers and ranchers are willing to enter into the CPAL program, then flexibility in these provisions may be extended to them. If not, then they must observe the standard provisions of this chapter.
- C. This program shall be subject to continued monitoring and adaptive management to ensure that it meets the purpose and intent of this chapter.

### **16.16.810 Resource Concerns.**

Agricultural operations, including the keeping of horses and other large animals, have the potential to create adverse impacts to critical areas. It is the County's policy to minimize such impacts.

- A. **Nutrient Pollution of Water.** Animal waste contains nutrients (nitrogen and phosphorous). With each rain, these wastes can wash off the land and into the nearest stream, lake, or wetland. In surface water, phosphorous and nitrogen fertilize aquatic plants and weeds. As the plants and weeds proliferate and decay, the dissolved oxygen that fish need to survive is depleted. Nitrogen in the form of nitrate is easily dissolved in and carried with rainfall through our permeable soils to groundwater. Nitrate concentrations exceeding the maximum contaminate level for safe drinking water are found in many wells of Whatcom County. These can present a significant human health risk, particularly to the very old and young.
- B. **Pathogen Pollution of Water.** Manure contains bacteria and other pathogens. These can make the water unfit for drinking without treatment or shellfish unfit for human consumption. They can also make water unsafe for human contact and recreational sports such as fishing, swimming or water skiing. Both surface and groundwater are vulnerable to this type of pollution.
- C. **Sediment Pollution to Surface Water.** Regardless of the amount of supplemental feed provided, large animals will continue grazing until all palatable vegetation is gone. On especially small lots (one or two acres), the animals that are allowed free and continuous access to vegetation quickly graze-out and trample pasture grasses and forbs. These areas are then susceptible to invasion by weeds, including noxious weeds, and brush. The resulting bare ground is subject to erosion from wind and water. Lands that lack adequate vegetation are subject to erosion, and contaminated runoff from these areas can enter water bodies and wetlands and interfere with fish and wildlife habitat.
- D. **Degradation of Riparian Areas.** The term "riparian" is defined in Article 9 of this chapter and includes the areas adjacent to streams, lakes, marine shorelines and other waters. A healthy riparian area is essential to protecting fish and wildlife, including salmon and shellfish. Dense riparian vegetation

along the water's edge will slow and protect against flood flows; provide infiltration and filtering of pollutants; secure food and cover for fish, birds and wildlife; and keep water cooler in summer. If it occurs, uncontrolled grazing has the potential to remove important riparian vegetation.

**16.16.820 Classification and Applicability.**

- A. A conservation farm plan identifies the farming or ranching activities and the practice(s) necessary to avoid their potential negative impacts (resource concerns). Practice selection depends upon the types of livestock raised and crops grown. Based upon the type and intensity of the operation, some generalizations can be made as to the resource concerns and remedies that apply.
- B. Some operations present relatively low risks to critical areas because of their benign nature, timing, frequency, or location. For these operations, the resource concerns and remedies are relatively easy to identify and implement. These are described in more detail as Type 1 agricultural operations subject to standardized conservation farm plans in WCC [16.16.830](#) and [16.16.840\(A\)](#).
- C. Where the potential negative impacts to critical areas are moderate or high, solutions are more difficult to formulate and implement. In those circumstances, a more rigorous planning process is required. In such cases, a formal written plan shall provide the desired environmental protection. These types of operations are described as agricultural operations requiring custom conservation farm plans in WCC [16.16.830](#) and [16.16.840\(B\)](#) or (C).
- D. Agricultural activities that qualify for coverage include:
  - 1. Type 1 Operations.
    - a. To qualify as a Type 1 operation, a farm shall not exceed one animal unit per one acre of grazable pasture. These operations present a low potential risk to critical area degradation including ground/surface water contamination because the animals kept generate fewer nutrients than can be used by the crops grown there.
    - b. Critical areas on Type 1 operations are protected against the potential negative impacts of agricultural activities through the implementation of an approved standard conservation farm plan prepared in accordance with WCC [16.16.830](#) and [16.16.840\(A\)](#).
    - c. Those operators qualifying for a Type 1 (standard) conservation farm plan may elect to do a Type 2 (custom) conservation farm plan if they want to use "Prescribed Grazing" (NRCS Practice 528A) to manage vegetative filter strips installed alongside critical areas.
  - 2. Type 2 Operations.
    - a. Type 2 operations are farms that include, but are not limited to, those that exceed one animal unit per one acre of grazable pasture; farms that have orchards, vineyards, small-fruit field or row crops; and drainage improvement districts. These operations present a potential moderate risk to critical area degradation, including ground or surface water contamination, because the nutrients applied from manure or commercial fertilizers may exceed that which can be easily used by the crops grown there without careful planning and management. The agricultural activities are also likely to be much more intense than Type 1 operations, posing greater potential risks to other critical areas.

- b. Critical areas on Type 2 operations are protected against the potential negative impacts of agricultural activities through the implementation of an approved custom conservation farm plan prepared in accordance with WCC [16.16.830](#) and [16.16.840\(B\)](#).
- 3. Type 3 Operations.
  - a. Type 3 operations include dairies and animal feeding operations/concentrated animal feeding operations (AFO/CAFOs). These operations are already regulated by state and federal governments (see Chapter [90.64](#) RCW et seq.; [40](#) CFR [122.23](#) and [40](#) CFR Part 412).
  - b. Critical areas are protected against the potential negative impacts of Type 3 agricultural activities through the implementation of an approved custom conservation farm plan prepared in accordance with WCC [16.16.830](#) and [16.16.840\(C\)](#).

**16.16.830 Conservation Farm Plans – General Standards.**

- A. All conservation farm plans shall include all practicable measures, including best management practices, to maintain existing critical area functions and values.
- B. A conservation farm plan shall not recommend nor authorize:
  - 1. Filling, draining, grading, or clearing activities within critical areas or buffers:
    - a. Except on ongoing agricultural land where such activities are a demonstrated essential part of the ongoing agricultural use or part of routine maintenance; and
    - b. When it does not expand the boundaries of the ongoing agricultural use; and
    - c. The appropriate permits for doing so have been obtained.
  - 2. The construction of new structures. New structures shall be constructed in compliance with the applicable standard requirements of this chapter and the Whatcom County Code.
  - 3. New or expanded drainage systems. Routine maintenance of existing drainage systems may be allowed, but only in compliance with the Washington State Hydraulic Code (Chapter [220-660](#) WAC) and the best management practices found in the “Drainage Management Guide for Whatcom County Drainage Improvement Districts.”
  - 4. The conversion of land to agricultural use.
- C. Other plans prepared for compliance with state or federal regulations (e.g., nutrient management plans), or to obtain an accredited private third-party certification (e.g., GLOBALG.A.P.), or similar plans may be used as part of or in lieu of a conservation farm plan if the ~~technical administrator~~ Director determines they adequately address the requirements of this title.

**16.16.840 Conservation Farm Plan Requirements.**

- A. **Type 1 (Standard) Conservation Farm Plans.** Owners of Type 1 operations have limited options to control animal waste because their operations are small. The required conservation farm plan can be prepared by the landowner and include a simple map of the property, a standard checklist designed to protect water quality, and the following additional components:
  - 1. System Siting and Design. Barns, corrals, paddocks, or lots are to be sited to avoid runoff directly into critical areas.
    - a. Where structures exist in critical areas or buffers and cannot be relocated, corrective measures must be taken if necessary to avoid runoff of pollutants and bacteria to critical areas.

- b. Along regulated streams<sup>2</sup>, lakes, ponds, or wetlands:
  - i. Where trees and shrubs already exist, they shall be retained and managed to preserve the existing functions of the buffer pursuant to the USDA Natural Resource Conservation Service’s (NRCS) Conservation Practice 391, “Riparian Forest Buffer.”
  - ii. Where trees and shrubs are absent, a strip or area of herbaceous vegetation shall be established and maintained between barns, corrals, paddocks, and grazing areas pursuant to the NRCS Conservation Practice 393, “Vegetative Filter Strip,” and USDA’s buffer width design tool for surface runoff found in the publication “Conservation Buffers Design Guidelines for Buffers, Corridors, and Greenways.” Livestock shall be excluded from the vegetative filter strips established to protect critical areas pursuant to NRCS Practice 472, “Access Control.”
- 2. Manure Collection, Storage, and Use. Manure and soiled bedding from stalls and paddocks are to be removed and are to be placed in a storage facility protected from rainfall so that runoff does not carry pollutants and bacteria to critical areas. Manure is to be used as cropland fertilizer. The rate and timing of manure application shall not exceed crop requirements or cause surface or groundwater water quality degradation. It is to be applied in a manner to avoid runoff of nutrients and bacteria to critical areas.
- 3. Pasture Management. Pastures are to be established and managed pursuant to “Prescribed Grazing” (NRCS Practice 528A).
- 4. Exercise or Barn Lots. These normally bare areas must be stabilized and managed to prevent erosion and sediment movement to critical areas. A diversion terrace shall be installed, where necessary, to hinder flow to and across the lot or paddock. Runoff from the lot must be treated via the vegetative filter strip or riparian buffer as described in subsection (A)(1) of this section to avoid contaminants reaching critical areas.
- 5. Existing native vegetation within critical areas and their buffers shall be retained.
- 6. Chemical additions, including fungicides, herbicides, and pesticides, shall not be applied within 50 feet of standing or flowing water except by a licensed applicator.
- 7. Fertilizers Other Than Manure. The rate and timing of fertilizer application shall not exceed crop requirements, or cause surface or groundwater quality degradation.
- B. **Type 2 (Custom) Conservation Farm Plans.** In addition to the elements of a Type 1 conservation farm plan, Type 2 plans must address the following:
  - 1. In developing the elements that an approved conservation farm plan must contain, the ~~technical administrator~~ Director may authorize the use of the methods, technologies, and best management practices of the Natural Resources Conservation Service. Other standards may be used when such alternatives have been developed by a land grant college or a professional engineer with expertise in the area of farm conservation planning.
  - 2. Implementation of the conservation farm plan must protect existing values and functions of critical areas. Benchmark conditions are to be captured and described in the plan. This may consist of photo documentation, written reports or both.

<sup>2</sup> Note that ditched channels may or may not meet the definition of a stream. See Article 9, Definitions.

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

3. Wetlands shall be conserved pursuant to the provisions of Title 180 – National Food Security Act Manual (see <http://www.nrcs.usda.gov/programs/wetlands/index.html>).
4. Custom conservation farm plans need not address the application, mixing, and/or loading of insecticides, fungicides, rodenticides, and pesticides; provided, that such activities are carried out in accordance with the Washington State Department of Agriculture and all other applicable regulations including, but not limited to: the provisions of Chapter [90.48](#) RCW, the Clean Water Act, United States Code (USC) Section 136 et seq. (Federal Insecticide, Fungicide, and Rodenticide Act), Chapter [15.58](#)RCW (Pesticide Control Act), and Chapter [17.21](#) RCW (Pesticide Application Act).
5. Where potential significant impacts to critical areas are identified through a risk assessment, then plans shall be prepared to prevent and/or mitigate same by:
  - a. A planning advisor; or
  - b. Through the USDA Natural Resources Conservation Service; or
  - c. The Whatcom conservation district; or
  - d. An eligible farmer or rancher, who participates in this program by:
    - i. Attending a County-sponsored or approved workshop, and
    - ii. Conducting a risk assessment of their farm or ranch, alone or with a planning advisor's assistance, and
    - iii. Developing a plan to prevent and/or mitigate any identified risks, and
    - iv. Having the plan approved pursuant to WCC [16.16.290](#).

One resource for guidance is "Tips on Land and Water Management for Small Farm and Livestock Owners in Whatcom County, Washington." It can be obtained from the Whatcom conservation district's website: <http://www.whatcomcd.org/small-farm>. Other guidance may also be used, provided it is consistent with the best available science criteria in WAC [365-195-900](#) through [365-195-925](#).

- C. **Type 3 (Custom) Conservation Farm Plans.** Conservation farm plans meeting the criteria of state and federal laws pertaining to AFO/CAFOs (see Chapter [90.64](#) RCW et seq., [40](#) CFR [122.23](#) and [40](#) CFR Part 412) fulfill the requirements of this chapter. (See U.S. EPA "Final Guidance – Managing Manure Guidance for Concentrated Animal Feeding Operations (CAFOs)" at: <http://epa.gov/guide/cafo/>).

### 16.16.850 Preparation and Approval of Conservation Farm Plans.

Conservation farm plans shall be subject to County review, approval, monitoring, adaptive management, and enforcement in accordance with the following:

- A. The ~~technical administrator~~ Director shall review and approve all conservation farm plans.
- B. Table ~~5~~ 4 shows which entities may prepare and/or provide technical assistance and recommendations in preparing which type of conservation farm plan:

Table 5. Who May Prepare Conservation Farm Plans

Who May Prepare	Type 1 Operations	Type 2 and 3 Operations
The farm operator	X	
Whatcom County planning and development services	X	X
A qualified consultant	X	
A watershed improvement district (for a farm or ranch that is within its boundaries)	X	
The Whatcom conservation district	X	X
A planning advisor	X	X

C. The farm operator can seek conservation farm plan approval directly through the department of planning and development services, or grant permission to any of the entities listed in Table 5 to prepare and submit it. If the conservation farm plan is prepared by any entity listed in Table 5 other than the Whatcom conservation district, the Department will conduct a site visit prior to plan approval in order to assess critical areas and sufficiency of the plan to protect water quality and critical areas.

**16.16.860 Monitoring and Compliance.**

- A. The ~~technical administrator~~ Director and/or the farm operator shall periodically monitor plan implementation and compliance beginning one year after plan approval and every two years thereafter, through the life of the plan, or more frequently at the ~~technical administrator~~ Director's discretion. The monitoring may include periodic site inspections, self-assessment by the farm operator, or other appropriate actions. For a time period of up to every five years, self-certification is allowed for Type 1 conservation farm plans, or if the plan is prepared by the Whatcom conservation district or planning advisor and approved by the department. If a sufficient self-certification monitoring report (must include photos and implemented best management practices) is not submitted within 30 days of request, County staff may make a site visit. Site visits will be coordinated with the landowner/farm operator. Prior to carrying out a site inspection, the ~~technical administrator~~ Director shall provide reasonable notice to the owner or manager of the property as to the purpose or need for the entry, receive confirmation, and afford at least two weeks in selecting a date and time for the visit. At the landowner's/farm operator's discretion, staff may be accompanied by the planning advisor or Whatcom conservation district planner.
- B. Where the planning advisor has reason to believe that there is an imminent threat to public health or significant pollution with major consequences occurring as a result of the agricultural operations, the planning advisor will advise the agricultural operator of his or her concerns in writing. While the planning advisor may provide suggestions for resolving the issue, the responsibility for compliance and resolution of issues rests solely with the farm operator. If compliance issues are not promptly resolved, the planning advisor shall promptly withdraw from representing the farm operator, notify

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

- the ~~technical administrator~~ Director of such, and may report such situations to the ~~technical administrator~~ Director for subsequent action and enforcement in accordance with WCC [16.16.285](#).
- C. The farm practices described in an approved conservation farm plan will be deemed to be in compliance with this chapter so long as the landowner/farm operator is properly and fully implementing the practices and responding to possible adaptive management requirements according to the timeline in the plan. This will be verified through conservation farm plan implementation monitoring.
- D. Agricultural operations shall cease to be in compliance with this article, and a new or revised conservation farm plan will be required, when the ~~technical administrator~~ Director determines that any of the following has occurred:
1. When a farm or ranch operator fails to properly and fully implement and maintain their conservation farm plan.
  2. When implementation of the conservation farm plan fails to protect critical areas. If so, a new or revised conservation farm plan shall be required to protect the values and functions of critical areas at the benchmark condition.
  3. When substantial changes in the agricultural activities of the farm or livestock operation have occurred that render the current conservation farm plan ineffective. Substantial changes that render a conservation farm plan ineffective are those that:
    - a. Degrade baseline critical area conditions for riparian and wetland areas that existed when the plan was approved; or
    - b. Result either in a direct discharge or substantial potential discharge of pollution to surface or ground water; or
    - c. The type of agricultural practices change from Type 1 to Type 2, Type 2 to Type 3, or Type 1 to Type 3 operations.
  4. When the increase in livestock or decrease in land base or nutrient export results in the farm being out of balance between the nutrients generated and to be used by growing crops.
  5. When a new or revised conservation farm plan is required, and the farm operator has been so advised in writing and a reasonable amount of time has passed without significant progress being made to develop said plan. Refusal or inability to provide a new plan within a reasonable period of time shall be sufficient grounds to revoke the approved conservation farm plan and require compliance with the standard provisions of this chapter.
  6. When an owner or manager denies the ~~technical administrator~~ Director reasonable access to the property for technical assistance, monitoring, or compliance purposes, then the ~~technical administrator~~ Director shall document such refusal of access and notify the owner of his/her findings. The owner shall be given an opportunity to respond in writing to the findings of the ~~technical administrator~~ Director, propose a prompt alternative access schedule, and to state any other issues that need to be addressed. Refusal or inability to comply with an approved conservation farm plan within a reasonable period of time shall be sufficient grounds to revoke said plan and require compliance with the standard provisions of this chapter.
- E. With one exception, Whatcom County will not use conservation farm plans (standard or custom) as an admission by the landowner that s/he has violated this chapter. Disclosure of current farm

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

practices, structures on conservation farm plan documents, or observations made through monitoring inspections or conservation farm plan approval, will not be used to bring other enforcement actions against a farm operator. The exception is that when matters of major life, health, environment, or safety issues, as determined by the ~~technical administrator~~ Director, are observed and the landowner fails to immediately and permanently remediate, then the observations may be used in an enforcement action.

### **16.16.870 Limited Public Disclosure.**

- A. Conservation farm plans will not be subject to public disclosure unless required by law or a court of competent jurisdiction;
- B. Provided, that the County will collect summary information related to the general location of a farming enterprise, the nature of the farming activity, and the specific best management practices to be implemented during the conservation farm plan review process. The summary information shall be provided by the farm operator or his/her designee and shall be used to document the basis for the County's approval of the plan.
- C. The County will provide to the public via its website information regarding which farms have approved conservation farm plans and the date of their approval.
- D. Upon request, the County may provide a sample conservation farm plan, exclusive of site- or property-specific information, to give general guidance on the development of a conservation farm plan.

## Article 9. Definitions

### 16.16.900 Definitions.

The terms used throughout this program shall be defined and interpreted as indicated below. When consistent with the context, words used in the present tense shall include the future; the singular shall include the plural, and the plural the singular. Any words not defined herein shall be defined pursuant to Titles 20 (Zoning), 22 (Land Use and Development), 23 (Shoreline Management Program), or their common meanings when not defined in code.

“Accessory structure” means a structure that is incidental and subordinate in intensity to a primary use and located on the same lot as the primary use. Barns, garages, storage sheds, and similar appurtenances are examples. Structures that share a common wall with a primary residential structure shall be considered an extension of the primary structure, rather than an accessory structure.

Comment [AP94]: Added for consistency with revisions made to the SMP Bulk Provisions Table per Scoping Document, Item #17d.

“Active alluvial fan” means a portion or all of a fan that has experienced channel changes, erosion, or deposition. Active fans can be identified based on determination by field geomorphic and topographic evidence, and by historical accounts.

“Activity” means human activity associated with the use of land or resources.

“Adaptive management” means using scientific methods to evaluate how well regulatory and non-regulatory actions protect the critical area. An adaptive management program is a formal and deliberate scientific approach to taking action and obtaining information in the face of uncertainty. Management policy may be adapted based on a periodic review of new information.

“Adequate water supply” means a water supply that meets requirements specified in the Whatcom County drinking water ordinance (WCC Chapter [24.11](#) ~~WCC~~).

“AFO” is an acronym for animal feeding operation.

“Agricultural activities” means those activities directly pertaining to the production of crops or livestock including, but not limited to: cultivation; harvest; grazing; animal waste storage and disposal; fertilization; the operation and maintenance of farm and stock ponds or drainage ditches, irrigation systems, and canals; and normal maintenance, repair, or operation of existing serviceable structures, facilities, or improved areas. The construction of new structures or activities that bring a new, non-ongoing agricultural area into agricultural use are not considered agricultural activities.

“Agricultural land” is land primarily devoted to the commercial production of horticultural, viticultural, floricultural, dairy, apiary, or animal products, or of berries, grain, hay, straw, turf, seed, Christmas trees not subject to the excise tax imposed by RCW [84.33.100](#) through [84.33.140](#), or livestock, and/or lands that have been designated as capable of producing food and fiber, which have not been developed for urban density housing, business, or other uses incompatible with agricultural activity.

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

“Alluvial fan” means a fan-shaped deposit of sediment and organic debris formed where a stream flows or has flowed out of a mountainous upland onto a level plain or valley floor because of a sudden change in sediment transport capacity (i.e., significant change in slope or confinement).

“Alluvium” is a general term for clay, silt, sand, gravel, or similar other unconsolidated detrital materials, deposited during comparatively recent geologic time by a stream or other body of running water, as a sorted or semi-sorted sediment in the bed of the stream or on its floodplain or delta.

“Alteration” means any human-induced change in an existing condition of a critical area or its buffer. Alterations include, but are not limited to, grading, filling, channelizing, dredging, clearing (vegetation), draining, construction, compaction, excavation, or any other activity that changes the character of the critical area.

“Anadromous fish” means fish species that spend most of their lifecycle in salt water, but return to freshwater to reproduce.

“Animal unit” means 1,000 pounds of livestock live weight.

“Aquifer” means a geologic formation, group of formations, or part of a formation capable of yielding a significant amount of groundwater to wells or springs (Chapter [173-160](#) WAC).

“Aquifer susceptibility” means the ease with which contaminants can move from the land surface to the aquifer based solely on the types of surface and subsurface materials in the area. Susceptibility usually defines the rate at which a contaminant will reach an aquifer unimpeded by chemical interactions with the vadose zone media.

“Aquifer vulnerability” is the combined effect of susceptibility to contamination and the presence of potential contaminants.

“Bankfull width” means:

1. For streams – The measurement of the lateral extent of the water surface elevation perpendicular to the channel at bankfull depth. In cases where multiple channels exist, bankfull width is the sum of the individual channel widths along the cross section (see Forest Practices Board Manual, Section 2).
2. For lakes, ponds, and impoundments – Line of mean high water.
3. For tidal water – Line of mean high tide.
4. For periodically inundated areas of associated wetlands – Line of periodic inundation, which will be found by examining the edge of inundation to ascertain where the presence and action of waters are so common and usual, and so long continued in all ordinary years, as to mark upon the soil a character distinct from that of the abutting upland.

“Base flood” is a flood event having a ~~one percent~~ 1% chance of being equaled or exceeded in any given year, also referred to as the 100-year flood. Designations of base flood areas on flood insurance map(s) always include the letters A (zone subject to flooding during a 100-year flood, but less so than V zones) or V (zone subject to the highest flows, wave action, and erosion during a 100-year flood).

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

“Bedrock” is a general term for rock, typically hard, consolidated geologic material that underlies soil or other unconsolidated, superficial material or is exposed at the surface.

“Best available science” means information from research, inventory, monitoring, surveys, modeling, synthesis, expert opinion, and assessment that is used to designate, protect, or restore critical areas. As defined by WAC [365-195-900](#) through [365-195-925](#), best available science is derived from a process that includes peer-reviewed literature, standard methods, logical conclusions and reasonable inferences, quantitative analysis, and documented references to produce reliable information.

“Best management practices” means conservation practices or systems of practices and management measures that:

1. Control soil loss and reduce water quality degradation caused by nutrients, animal waste, toxins, and sediment;
2. Minimize adverse impacts to surface water and groundwater flow, circulation patterns, and to the chemical, physical, and biological characteristics of waters, wetlands, and other fish and wildlife habitat;
3. Control plant site runoff, spillage or leaks, sludge or water disposal, or drainage from raw material.

“Buffer (the buffer zone)” means the area adjacent to the outer boundaries of critical areas including wetlands; habitat conservation areas such as streams, lakes, and marine shorelines; and/or landslide hazard areas that separates and protects critical areas from adverse impacts associated with adjacent land uses.

“CAFO” is an acronym for concentrated animal feeding operation.

“CFR” is an acronym for Code of Federal Regulations.

“Channel migration zone (CMZ)” means the area along a river or stream within which the channel can reasonably be expected to migrate over time as a result of normally occurring processes. It encompasses that area of current and historic lateral stream channel movement that is subject to erosion, bank destabilization, rapid stream incision, and/or channel shifting, as well as adjacent areas that are susceptible to channel erosion. There are three components of the channel migration zone: (1) the historical migration zone (HMZ) – the collective area the channel occupied in the historical record; (2) the avulsion hazard zone (AHZ) – the area not included in the HMZ that is at risk of avulsion over the timeline of the CMZ; and (3) the erosion hazard area (EHA) – the area not included in the HMZ or the AHZ that is at risk of bank erosion from stream flow or mass wasting over the timeline of the CMZ. The channel migration zone may not include the area behind a lawfully constructed flood protection device. Channel migration zones shall be identified in accordance with guidelines established by the Washington State Department of Ecology.

“Clearing” means destruction of vegetation by manual, mechanical, or chemical methods and that may result in exposed soils. Clearing includes, but is not limited to, actions such as cutting, felling, thinning, flooding, killing, poisoning, girdling, uprooting, or burning.

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

“Commercial fish” means those species of fish that are classified under the Washington State Department of Fish and Wildlife Food Fish Classification as commercial fish (WAC [220-12-010](#)).

“Compensatory mitigation” means a project for the purpose of mitigating, at an equivalent or greater level, unavoidable critical area and buffer impacts that remain after all appropriate and practicable avoidance and minimization measures have been implemented. Compensatory mitigation includes, but is not limited to: wetland creation, restoration, enhancement, and preservation; stream restoration and relocation; rehabilitation; and buffer enhancement.

“Conservation” means the prudent management of rivers, streams, wetlands, wildlife and other environmental resources in order to preserve and protect them. This includes the careful use of natural resources in order to prevent depletion or harm to the environment.

“Conservation easement” means a legal agreement that the property owner enters into to restrict uses of the land for purposes of natural resources conservation. The easement is recorded on a property deed, runs with the land, and is legally binding on all present and future owners of the property.

“Contaminant” means any chemical, physical, biological, or radiological substance that does not occur naturally in groundwater, air, or soil or that occurs at concentrations greater than those in the natural levels (Chapter [172-200](#) WAC).

“County” means Whatcom County, Washington.

“CPAL” is an acronym for Conservation Program on Agriculture Lands.

“Critical aquifer recharge areas” means areas designated by WAC [365-190-080\(2\)](#) that are determined to have a critical recharging effect on aquifers (i.e., maintain the quality and quantity of water) used for potable water as defined by WAC [365-190-030\(2\)](#).

“Critical area tract” means land held in private ownership and retained in an open undeveloped condition (native vegetation is preserved) in perpetuity for the protection of critical areas.

Critical Areas. The following areas shall be regarded as critical areas:

1. Critical aquifer recharge areas;
2. Wetlands;
3. Geologically hazardous areas;
4. Frequently flooded areas;
5. Fish and wildlife habitat conservation areas.

“Critical areas report” means a report prepared by a qualified professional or qualified consultant based on best available science, and the specific methods and standards for technical study required for each applicable critical area. Geotechnical reports and hydrogeological reports are critical area reports specific to geologically hazardous areas and critical aquifer recharge areas, respectively.

“Critical facilities (essential facilities)” means buildings and other structures that are intended to remain operational in the event of extreme environmental loading from flood, wind, snow or earthquakes pursuant to the most recently adopted International Building Code (IBC).

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

“Critical habitat” means habitat areas with which endangered, threatened, sensitive or monitored plant, fish, or wildlife species have a primary association (e.g., feeding, breeding, rearing of young, migrating). Such areas are identified herein with reference to lists, categories, and definitions promulgated by the Washington State Department of Fish and Wildlife as identified in WAC [232-12-011](#) or [232-12-014](#); in the Priority Habitat and Species (PHS) Program of the Department of Fish and Wildlife; or by rules and regulations adopted by the U.S. Fish and Wildlife Service, National Marine Fisheries Service, or other agency with jurisdiction for such designations.

“Critical saltwater habitat” includes all kelp beds, eelgrass beds, spawning and holding areas for forage fish, such as Pacific herring, surf smelt and Pacific sandlance; subsistence, commercial and recreational shellfish beds; mudflats, intertidal habitats with vascular plants; and areas with which priority species have a primary association.

“Cumulative impact” means effects on the environment that are caused by the combined results of past, current and reasonably foreseeable future activities. Evaluation of such cumulative impacts should consider: (1) current circumstances affecting the critical area and relevant natural processes; (2) reasonably foreseeable future development that may affect the critical area; and (3) beneficial effects of any established regulatory programs under other local, state, and federal laws.

“Debris flow” means a moving mass of rock fragments, soil, and mud, more than half of the particles being larger than sand size; a general term that describes a mass movement of sediment mixed with water and air that flows readily on low slopes.

“Debris torrent” means a violent and rushing mass of water, logs, boulders and other debris.

“Deepwater habitats” means permanently flooded lands lying below the deepwater boundary of wetlands. Deepwater habitats include environments where surface water is permanent and often deep, so that water, rather than air, is the principal medium in which the dominant organisms live. The boundary between wetland and deepwater habitat in the marine and estuarine systems coincides with the elevation of the extreme low water of spring tide; permanently flooded areas are considered deepwater habitats in these systems. The boundary between wetland and deepwater habitat in the riverine and lacustrine systems lies at a depth of two meters (6.6 feet) below low water; however, if emergent vegetation, shrubs, or trees grow beyond this depth at any time, their deepwater edge is the boundary.

“Delineation” means the precise determination of wetland/non-wetland boundaries in the field according to the application of the specific method described in the Corps of Engineers Wetlands Delineation Manual, 1987 Edition, as amended, and the Western Mountains, Valleys, and Coast Region Supplement (Version 2.0) 2010, or as revised.

Designated Species, Federal. Federally designated endangered and threatened species are those fish and wildlife species identified by the U.S. Fish and Wildlife Service and the National Marine Fisheries Service that are in danger of extinction or threatened to become endangered. The U.S. Fish and Wildlife Service and the National Marine Fisheries Service should be consulted for current listing status.

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

Designated Species, State. State designated endangered, threatened, and sensitive species are those fish and wildlife species native to the state of Washington identified by the Washington Department of Fish and Wildlife, that are in danger of extinction, threatened to become endangered, vulnerable or declining and are likely to become endangered or threatened in a significant portion of their range within the state without cooperative management or removal of threats. State designated endangered, threatened, and sensitive species are periodically recorded in WAC [232-12-014](#) (state endangered species) and WAC [232-12-011](#) (state threatened and sensitive species). The State Department of Fish and Wildlife maintains the most current listing and should be consulted for current listing status.

“Development” means any land use activity, action, or manmade change to improved or unimproved real estate, including but not limited to buildings or other structures, site work, and installation of utilities; land division, binding site plans, and planned unit developments; dredging, drilling, dumping, filling, grading, clearing, or removal of any sand, gravel, or minerals; shoreline stabilization works, driving of piling, placing of obstructions; or any project of a permanent or temporary nature that interferes with the normal public use of the surface of the waters overlying lands subject to the act at any stage of water level. “Development” does not include dismantling or removing structures if there is no other associated development or redevelopment. any activity that requires federal, state, or local approval for the use or modification of land or its resources. These activities include, but are not limited to: subdivisions and short subdivisions; binding site plans; planned unit developments; variances; shoreline substantial development permits and exemptions; clearing activity; fill and grade work; activity conditionally allowed; building or construction; revocable encroachment permits; and septic approval.

**Comment [CES95]:** Amended to be consistent with that in T-23.

“Director” means the director of the Whatcom County Department of Planning and Development Services, or his/her designee.

“Ditch” or “drainage ditch” means an artificially created watercourse constructed to convey surface or groundwater. Ditches are graded (manmade) channels installed to collect and convey water to or from fields and roadways. Ditches may include:

1. Irrigation ditches;
2. Waste ways;
3. Drains;
4. Outfalls;
5. Operational spillways;
6. Channels;
7. Stormwater runoff facilities; or
8. Other wholly artificial watercourses.

This definition is not meant to include artificial water courses that conveys or historically conveyed (prior to human alteration) waters of the state, is used by anadromous or other fish populations, or flows directly into shellfish habitat conservation areas.

“Emergency activities” means those activities which require immediate action within a time too short to allow full compliance with this chapter due to an unanticipated and imminent threat to public health, safety or the environment. Emergency construction does not include development of new permanent protective structures where none previously existed. All emergency construction shall be consistent with the policies of Chapter [90.58](#) RCW and this chapter. As a general matter, flooding or other seasonal events that can be anticipated and may occur but that are not imminent are not an emergency.

“Emergent wetland” means a wetland with at least ~~30% percent~~ of the surface area covered by erect, rooted, herbaceous vegetation as the uppermost vegetative strata.

“Enhancement” means actions performed within an existing degraded critical area and/or buffer to intentionally increase or augment one or more functions or values of the existing critical area or buffer. Enhancement actions include, but are not limited to, increasing plant diversity and cover, increasing wildlife habitat and structural complexity (snags, woody debris), installing environmentally compatible erosion controls, or removing nonindigenous plant or animal species.

“Erosion” means a process whereby wind, rain, water and other natural agents mobilize, transport, and deposit soil particles.

“Erosion hazard areas” means lands or areas underlain by soils identified by the U.S. Department of Agriculture Natural Resource Conservation Service (NRCS) as having “severe” or “very severe” erosion hazards and areas subject to impacts from lateral erosion related to moving water such as river channel migration and shoreline retreat.

“Estuarine wetland” means the zero-gradient sector of a stream where it flows into a standing body of water together with associated natural wetlands; tidal flows reverse flow in the wetland twice daily, determining its upstream limit. It is characterized by low bank channels (distributaries) branching off the main stream to form a broad, near-level delta; bank; bed and delta materials are silt and clay; banks are stable; vegetation ranges from marsh to forest; and water is usually brackish due to daily mixing and layering of fresh and salt water.

“Exotic” means any species of plants or animals that is not indigenous to the area.

“Farm pond” means an open water depression created from a non-wetland site in connection with agricultural activities.

“Feasible” means an action, such as a development project, mitigation, or preservation requirement that meets all of the following conditions:

1. The action can be accomplished with technologies and methods that have been used in the past in similar circumstances, or studies or tests have demonstrated in similar circumstances that such approaches are currently available and likely to achieve the intended results;
2. The action provides a reasonable likelihood of achieving its intended purpose; and
3. The action does not physically preclude achieving the project’s primary intended legal use.

In cases where this chapter requires certain actions “unless they are infeasible,” the burden of proving infeasibility is on the applicant/ proponent. In determining an action’s infeasibility, the County may weigh the action’s relative costs and public benefits, considered in the short- and long-term time frames.

“Feasible alternative” means an action, such as development, mitigation, or restoration, that meets all of the following conditions: (1) the action can be accomplished with technologies and methods that have been used in the past in similar circumstances, or studies or tests have demonstrated in similar circumstances that such approaches are currently available and likely to achieve the intended results; (2) the action provides a reasonable likelihood of achieving its intended purpose; and (3) the action does not physically preclude achieving the project’s primary intended legal use. Feasibility shall take into account both short- and long-term monetary and nonmonetary costs and benefits.

“Fen” means a mineral-rich wetland formed in peat that has a neutral to alkaline pH. Fens are wholly or partly covered with water and dominated by grass-like plants, grasses, and sedges.

“Fill material” means any solid or semisolid material, including rock, sand, soil, clay, plastics, construction debris, wood chips, overburden from mining or other excavation activities, and materials used to create any structure or infrastructure that, when placed, changes the grade or elevation of the receiving site.

“Filling” means the act of transporting or placing by any manual or mechanical means fill material from, to or on any soil surface, including temporary stockpiling of fill material.

“Fish and wildlife habitat conservation areas” are areas that serve a critical role in sustaining needed habitats and species for the functional integrity of the ecosystem, and which, if altered, may reduce the likelihood that the species will persist over the long term. These areas may include, but are not limited to: rare or vulnerable ecological systems, communities, and habitat or habitat elements including seasonal ranges, breeding habitat, winter range, and movement corridors; and areas with high relative population density or species richness. Counties and cities may also designate locally important habitats and species. “Fish and wildlife habitat conservation areas” does not include such artificial features or constructs as irrigation delivery systems, irrigation infrastructure, irrigation canals, or drainage ditches that lie within the boundaries of, and are maintained by, a port district or an irrigation district or company unless they meet the qualifications of WCC 16.16.710(B).

“Fish habitat” means a complex of physical, chemical, and biological conditions that provide the life-supporting and reproductive needs of a species or life stage of fish. Although the habitat requirements of a species depend on its age and activity, the basic components of fish habitat in rivers, streams, ponds, lakes, estuaries, marine waters, and nearshore areas include, but are not limited to, the following:

1. Clean water and appropriate temperatures for spawning, rearing, and holding;
2. Adequate water depth and velocity for migrating, spawning, rearing, and holding, including off-channel habitat;
3. Abundance of bank and in-stream structures to provide hiding and resting areas and stabilize stream banks and beds;

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

4. Appropriate substrates for spawning and embryonic development. For stream- and lake-dwelling fishes, substrates range from sands and gravel to rooted vegetation or submerged rocks and logs. Generally, substrates must be relatively stable and free of silts or fine sand;
5. Presence of riparian vegetation as defined in this article. Riparian vegetation creates a transition zone, which provides shade and food sources of aquatic and terrestrial insects for fish;
6. Unimpeded passage (i.e., due to suitable gradient and lack of barriers) for upstream and downstream migrating juveniles and adults.

“Flood” or “flooding” means a general and temporary condition of partial or complete inundation of normally dry land areas from the overflow of inland waters and/or the unusual and rapid accumulation of runoff of surface waters from any source.

“Floodplain” is synonymous with one hundred-year floodplain and means that land area susceptible to inundation with a one percent chance of being equaled or exceeded in any given year. The limit of this area shall be based upon flood ordinance regulation maps or a reasonable method which meets the objectives of the act. “Floodplain” means the total land area adjoining a river, stream, watercourse, or lake subject to inundation by the base flood.

“Floodway” means the area, as identified in a master program, that either: (a) Has been established in federal emergency management agency flood insurance rate maps or floodway maps; or (b) Consists of those portions of a river valley lying streamward from the outer limits of a watercourse upon which flood waters are carried during periods of flooding that occur with reasonable regularity, although not necessarily annually, said floodway being identified, under normal condition, by changes in surface soil conditions or changes in types or quality of vegetative ground cover condition, topography, or other indicators of flooding that occurs with reasonable regularity, although not necessarily annually. Regardless of the method used to identify the floodway, the floodway shall not include those lands that can reasonably be expected to be protected from flood waters by flood control devices maintained by or maintained under license from the federal government, the state, or a political subdivision of the state. “Floodway” means the channel of a river or other watercourse and the adjacent land area that must be reserved in order to discharge the base flood without cumulatively increasing the surface water elevation more than one foot. Also known as the “zero rise floodway.”

“Forested wetland” means a wetland with at least ~~30% percent~~ 1% of the surface area covered by woody vegetation greater than 20 feet in height, excluding monotypic stands of red alder or cottonwood that average eight inches in diameter at breast height or less.

“Frequently flooded areas” means lands in the floodplain subject to a ~~one percent~~ 1% or greater chance of flooding in any given year and those lands that provide important flood storage, conveyance and attenuation functions, as determined by the County in accordance with WAC [365-190-080](#)(3). Classifications of frequently flooded areas include, at a minimum, the “special flood hazard area” designations of the Federal Emergency Management Agency and the National Flood Insurance Program.

**Comment [CES96]:** Revised per language of WAC 173-26-020(20).

**Comment [P/C97]:** P/C moved to approve. Carries 9-0

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

“Function assessment” or “functions and values assessment” means a set of procedures, applied by a qualified consultant, to identify the ecological functions being performed in a wetland or other critical area, usually by determining the presence of certain characteristics, and determining how well the critical area is performing those functions. Function assessments can be qualitative or quantitative and may consider social values potentially provided by the wetland or other critical area. Function assessment methods must be consistent with best available science.

“Functions” means the processes or attributes provided by areas of the landscape (e.g., wetlands, rivers, streams, and riparian areas) including, but not limited to, habitat diversity and food chain support for fish and wildlife, groundwater recharge and discharge, high primary productivity, low flow stream water contribution, sediment stabilization and erosion control, storm and flood water attenuation and flood peak desynchronization, and water quality enhancement through biofiltration and retention of sediments, nutrients, and toxicants. These beneficial roles are not listed in order of priority.

“Functions, services, and value” means the beneficial functions that critical areas perform, the services they provide humans, and the values people derive from these roles including, but not limited to, water quality protection and enhancement, fish and wildlife habitat, food chain support, flood storage, conveyance and attenuation, groundwater recharge and discharge, erosion control, wave attenuation, protection from hazards, providing historical and archaeological resources, noise and visual screening, open space, and recreation. These beneficial roles are not listed in order of priority.

“Game fish” means those species of fish that are classified by the Washington State Department of Wildlife as game fish (WAC [232-12-019](#)).

“Geologically hazardous areas” means areas that, because of their susceptibility to erosion, sliding, earthquake, or other geological events, are not suited to the siting of commercial, residential, or industrial development consistent with public health or safety concerns.

“Gradient” means a degree of inclination, or a rate of ascent or descent, of an inclined part of the earth’s surface with respect to the horizontal; the steepness of a slope. It is expressed as a ratio (vertical to horizontal), a fraction (such as meters/kilometers or feet/miles), a percentage (of horizontal distance), or an angle (in degrees).

“Grading” means any excavating or filling of the earth’s surface or combination thereof.

“Grazable acres” means both pasture and hay land as described in the Whatcom County Standard Farm Conservation Planning Workbook.

“Groundwater” means all water that exists beneath the land surface or beneath the bed of any stream, lake or reservoir, or other body of surface water within the boundaries of the state, whatever may be the geological formation or structure in which such water stands or flows, percolates or otherwise moves (Chapter [90.44](#) RCW).

“Groundwater management area” means a specific geographic area or subarea designated pursuant to Chapter [173-100](#) WAC for which a groundwater management program is required.

**Planning Commission Approved Draft with DOE Required & Recommended Edits**

“Groundwater management program” means a comprehensive program designed to protect groundwater quality, to assure groundwater quantity, and to provide for efficient management of water resources while recognizing existing groundwater rights and meeting future needs consistent with local and state objectives, policies and authorities within a designated groundwater management area or subarea and developed pursuant to Chapter [173-100](#) WAC.

“Growing season” means the portion of the year when soil temperatures are above biologic zero (41 degrees Fahrenheit).

“Growth Management Act” means Chapters [36.70A](#) and [36.70B](#) RCW, as amended.

“Habitats of local importance” designated as fish and wildlife habitat conservation areas include those areas found to be locally important by Whatcom County pursuant to WCC [16.16.710\(C\)\(12\)](#).

“Hazard tree” (outside the shoreline jurisdiction) means a tree whose risk evaluation, as determined through a Whatcom County approved tree risk assessment method, is high. Risk evaluation is the combined measurement of: tree failure identification, probability of failure, potential damage to permanent physical improvements to property causing personal injury, and consequences. A tree that constitutes an airport hazard is considered a hazard tree. A hazard tree whose failure is imminent and consequences of damage to permanent physical improvements to property causing personal injury are significant is considered an emergency. “Imminent” in this instance means failure has started or is most likely to occur in the near future, even if there is no significant wind or increased load. Imminent may be determined by a qualified consultant (defined in this section) or when mutually agreed upon by a landowner and Whatcom County.

“Hazard tree” (within the shoreline jurisdiction) means any tree that is susceptible to immediate fall due to its condition (damaged, diseased, or dead) or other factors, and which because of its location is at risk of damaging permanent physical improvements to property or causing personal injury.

“Hazardous substance” means any liquid, solid, gas, or sludge, including any material, substance, product, commodity, or waste, regardless of quantity, that exhibits any of the physical, chemical or biological properties described in WAC [173-303-090](#) or [173-303-100](#).

“High intensity land use” means land use that includes the following uses or activities: commercial, urban, industrial, institutional, retail sales, residential (more than one unit/acre), high-intensity new agriculture (dairies, nurseries, greenhouses, raising and harvesting crops requiring annual tilling, raising and maintaining animals), high-intensity recreation (golf courses, ball fields), hobby farms, and Class IV special forest practices, including the building of logging roads (note that pursuant to WCC [16.16.230\(A\)](#), all other forest practices are exempt from this chapter).

**Comment [P/C98]:** P/C Motion to move these uses to moderate intensity land use definition. Motion carries 4-3-1-0

**Comment [CES99]:** They are not exempt; however, they do not require review under this chapter.

“Hydraulic project approval (HPA)” means a permit issued by the State Department of Fish and Wildlife for modifications to waters of the state in accordance with Chapter [75.20](#) RCW.

“Hydric soil” means a soil that is or has been saturated, flooded or ponded long enough during the growing season to develop anaerobic conditions in the upper part. The presence of hydric soil shall

be determined following the methods described in the NRCS “Field Indicators of Hydric Soils” Version 7, and/or the Corps of Engineers Wetlands Delineation Manual, as amended.

“Hydrologic soil groups” means soils grouped according to their runoff-producing characteristics under similar storm and cover conditions. Properties that influence runoff potential are depth to seasonally high water table, intake rate and permeability after prolonged wetting, and depth to a low permeable layer. Hydrologic soil groups are normally used in equations that estimate runoff from rainfall, but can be used to estimate a rate of water transmission in soil. There are four hydrologic soil groups:

1. Low runoff potential and a high rate of infiltration potential;
2. Moderate infiltration potential and a moderate rate of runoff potential;
3. Slow infiltration potential and a moderate to high rate of runoff potential; and
4. High runoff potential and very slow infiltration and water transmission rates.

“Hydrophytic vegetation” means macrophytic plant life growing in water or on a substrate that is at least periodically deficient in oxygen as a result of excessive water content.

“Hyporheic zone” means the saturated zone located beneath and adjacent to streams that contain some proportion of surface water from the surface channel. The hyporheic zone serves as a filter for nutrients, as a site for macroinvertebrate production important in fish nutrition and provides other functions related to maintaining water quality.

“Impervious surface” means a hard surface area that either prevents or retards the entry of water into the soil mantle as under natural conditions prior to development or that causes water to run off the surface in greater quantities or at an increased rate of flow compared to natural conditions prior to development. Common impervious surfaces may include, but are not limited to, roof tops, walkways, patios, driveways, parking lots or storage areas, concrete or asphalt paving, gravel roads, packed earthen materials, and oiled macadam or other surfaces which similarly impede the natural infiltration of stormwater. Impervious surfaces do not include surface created through proven low impact development techniques.

“In-kind compensation” means to replace critical areas with substitute areas whose characteristics and functions mirror those destroyed or degraded by a regulated activity.

“Infiltration” means the downward entry of water into the immediate surface of soil.

“Intertidal zone” means the substratum from extreme low water of spring tides to the upper limit of spray or influence from ocean-derived salts. It includes areas that are sometimes submerged and sometimes exposed to air, mud and sand flats, rocky shores, salt marshes, and some terrestrial areas where salt influences are present.

“Invasive species” means a species that is: (1) nonnative (or alien) to Whatcom County, and (2) whose introduction causes or is likely to cause economic or environmental harm or harm to human health. Invasive species can be plants, animals, and other organisms (e.g., microbes). Human actions are the primary means of invasive species introductions.

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

“Lahar” means a mudflow and debris flow originating from the slopes of a volcano.

“Lahar hazard area” means areas that have been or potentially could be inundated by lahars or other types of debris flows, according to a map showing volcano hazards from Mount Baker, Washington.

“Lake” means a naturally or artificially created body of deep (generally greater than 6.6 feet) open water that persists throughout the year. A lake is larger than a pond, greater than one acre in size, equal to or greater than 6.6 feet in depth, and has less than ~~30% percent~~ aerial coverage by trees, shrubs, or persistent emergent vegetation. A lake is bounded by the ordinary high water mark or the extension of the elevation of the lake’s ordinary high water mark with the stream where the stream enters the lake.

“Landfill” means a disposal facility or part of a facility at which solid waste is permanently placed in or on land including facilities that use solid waste as a component of fill.

“Landslide” means a general term covering a wide variety of mass movement landforms and processes involving the downslope transport, under gravitational influence of soil and rock material en masse; included are debris flows, debris avalanches, earthflows, mudflows, slumps, mudslides, rock slides, and rock falls.

“Landslide hazard areas” means areas that, due to a combination of site conditions like slope inclination and relative soil permeability, are susceptible to mass wasting.

“Low intensity land use” means land use that includes the following uses or activities: forestry (cutting of trees only), low intensity open space (such as passive recreation and natural resources preservation), and unpaved trails, utility corridors without maintenance roads and little or no vegetation management, or similar uses that do not require land disturbance.

**Comment [CES100]:** Added to make consistent with DOE’s guidance.

“LWD” is an acronym for large woody debris.

“Maintenance or repair” means those usual activities required to prevent a decline, lapse or cessation from a lawfully established condition or to restore the character, scope, size, and design of a serviceable area, structure, or land use to a state comparable to its previously authorized and undamaged condition. This does not include any activities that change the character, scope, or size of the original structure, facility, utility or improved area beyond the original design.

“Major development” means any project for which a major project permit is required pursuant to WCC Chapter 20.88 ~~WCC~~. For the purposes of this chapter, “major development” shall also mean any project associated with an existing development for which a major development permit has been required or other existing legally nonconforming development for which a major development permit would otherwise be required if developed under the current land use regulations outlined in WCC Title 20.

“Mass wasting” means downslope movement of soil and rock material by gravity. This includes soil creep, erosion, and various types of landslides, not including bed load associated with natural stream sediment transport dynamics.

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

“Mature forested wetland” means a wetland with an overstory dominated by mature trees having a wetland indicator status of facultative (FAC), facultative-wet (FACW), or obligate (OBL). Mature trees are considered to be at least 21 inches in diameter at breast height.

“Maximum credible event” means the largest debris flow event that can be hypothesized from geologic processes within a watershed above an alluvial fan with consideration of the volume of sediment and debris that would be available within the drainage combined with material from landslides that would enter the drainage, and the volume of water that could become trapped behind and within the debris flow or dammed within the drainage.

“May” means the action is allowable, provided it conforms to the provisions of this title.

“Mean annual flow” means the average flow of a river or stream (measured in cubic feet per second) from measurements taken throughout the year. If available, flow data for the previous 10 years should be used in determining mean annual flow.

“Mitigation” means individual actions that may include a combination of the following measures, listed in order of preference:

1. Avoiding an impact altogether by not taking a certain action or parts of actions;
2. Minimizing impacts by limiting the degree or magnitude of an action and its implementation;
3. Rectifying impacts by repairing, rehabilitating, or restoring the affected environment;
4. Reducing or eliminating an impact over time by preservation and maintenance operations during the life of the action;
5. Compensating for an impact by replacing or providing substitute resources or environments;  
and
6. Monitoring the mitigation and taking remedial action when necessary.

“Mitigation bank” means a site where wetlands or similar habitats are restored, created, enhanced, or in exceptional circumstances, preserved, expressly for the purpose of providing compensatory mitigation in advance of authorized impacts to aquatic resources.

“Mitigation bank instrument” means the documentation of agency and bank sponsor concurrence on the objectives and administration of the bank. The “bank instrument” describes in detail the physical and legal characteristics of the bank, including the service area, and how the bank will be established and operated.

“Mitigation bank review team” or “MBRT” means an interagency group of federal, state, tribal and local regulatory and resource agency representatives that are invited to participate in negotiations with the bank sponsor on the terms and conditions of the bank instrument.

“Mitigation bank review team process” or “MBRT process” means a process in which the County and other agencies strive to reach consensus with the MBRT members on the terms, conditions, and procedural elements of the bank instrument.

“Mitigation bank sponsor” means any public or private entity responsible for establishing and, in most circumstances, operating a bank.

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

“Mitigation plan” means a detailed plan indicating actions necessary to mitigate adverse impacts to critical areas.

“Moderate intensity land use” means land use that includes the following uses or activities: residential (one unit/gross acre or less), moderate-intensity open space (parks with biking, jogging, etc.), moderate-intensity new agriculture (orchards, and hay fields, nurseries, raising and harvesting crops requiring annual tilling), ~~and~~ paved trails, building of logging roads, and utility corridors or rights-of-way shared by several utilities and including access/maintenance roads.

**Comment [P/C101]:** Motion to move these uses to moderate intensity land use definition. Motion carries 4-3-1-0

“Monitoring” means evaluating the impacts of development proposals over time on the biological, hydrological, pedological, and geological elements of ecosystem functions and processes, and/or assessing the performance of required mitigation measures through the collection and analysis of data by various methods for the purpose of understanding and documenting changes in natural ecosystems and features compared to baseline or pre-project conditions and/or reference sites.

**Comment [CES102]:** Making consistent w/ DOE guidance.

“Native vegetation” means plant species that are indigenous to Whatcom County and the local area.

“Nearshore habitat” means the zone that extends seaward from the marine shoreline to a water depth of approximately 20 meters (66 feet). Nearshore habitat is rich biologically, providing important habitat for a diversity of plant and animal species.

“No net loss” means the maintenance of the aggregate total of the County’s critical area functions and values as achieved through a case-by-case review of development proposals. Each project shall be evaluated based on its ability to meet the no net loss goal.

“Off-site mitigation” means to replace critical areas away from the site on which a critical area has been adversely impacted by a regulated activity.

“Ongoing agriculture” means those activities conducted on lands defined in RCW [84.34.020](#)(2), and those activities involved in the production of crops and livestock, including, but not limited to, operation and maintenance of existing farm and stock ponds or drainage ditches, irrigation systems, changes between agricultural activities, and maintenance or repair of existing serviceable structures and facilities. Activities that bring an area into agricultural use are not part of an ongoing activity. An operation ceases to be ongoing when the area on which it was conducted has been converted to a nonagricultural use, or has lain idle for more than five consecutive years unless that idle land is registered in a federal or state soils conservation program. Forest practices are not included in this definition.

“Ordinary high water mark” means the mark or line on all lakes, rivers, streams, and tidal water that will be found by examining the beds and banks and ascertaining where the presence and action of waters are so common and usual and so long continued in all ordinary years, as to mark upon the soil a character distinct from that of the abutting upland in respect to vegetation (RCW [90.58.030](#)(2)(b)).

“Person” means any individual, trustee, executor, other fiduciary, corporation, firm, partnership, association, organization, or other entity, either public or private, acting as a unit ~~cooperative, public~~

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

or municipal corporation, state agency or local governmental unit, however designated, or Indian nation or tribe.

Comment [CES103]: Making consistent w/ other Titles.

“Planned unit development (PUD)” means one or a group of specified uses, such as residential, resort, commercial or industrial, to be planned and constructed as a unit. Zoning or subdivision regulations with respect to lot size, building bulk, etc., may be varied to allow design innovations and special features in exchange for additional and/or superior site amenities or community benefits.

“Planning advisor” means those qualified individuals who have technical experience and training necessary to prepare conservation farm plans for agricultural lands and who have been certified a technical service provider by the USDA Natural Resources Conservation Service (see <http://techreg.usda.gov>) and signed the practice and confidentiality agreement.

“Pond” means an open body of water, generally equal to or greater than 6.6 feet deep, that persists throughout the year and occurs in a depression of land or expanded part of a stream and has less than 30% percent aerial coverage by trees, shrubs, or persistent emergent vegetation. Ponds are generally smaller than lakes. Farm ponds, ponds built for the primary purpose of combating fires, stormwater facilities, and beaver ponds less than two years old are excluded from this definition.

“Potable” means water that is suitable for drinking by the public (Chapter [246-290](#) WAC).

“Preservation” means actions taken to ensure the permanent protection of existing, ecologically important critical areas and/or buffers that the County has deemed worthy of long-term protection.

“Primary association” means the use or potential use of a habitat area by a listed or priority species for breeding/spawning, rearing young, resting, roosting, feeding, foraging, and/or migrating on a frequent and/or regular basis during the appropriate season(s) as well as habitats that are used less frequently/regularly but which provide for essential life cycle functions such as breeding/nesting/spawning.

“Priority habitat” means a habitat type with unique or significant value to one or more species. An area classified and mapped as priority habitat must have one or more of the following attributes: comparatively high fish or wildlife density; comparatively high fish or wildlife species diversity; fish spawning habitat; important wildlife habitat; important fish or wildlife seasonal range; important fish or wildlife movement corridor; rearing and foraging habitat; important marine mammal haulout; refuge; limited availability; high vulnerability to habitat alteration; unique or dependent species; or shellfish bed. A priority habitat may be described by a unique vegetation type or by a dominant plant species that is of primary importance to fish and wildlife (such as oak woodlands or eelgrass meadows). A priority habitat may also be described by a successional stage (such as old growth and mature forests). Alternatively, a priority habitat may consist of a specific habitat element (such as a consolidated marine/estuarine shoreline, talus slopes, caves, snags) of key value to fish and wildlife. A priority habitat may contain priority and/or nonpriority fish and wildlife (WAC [173-26-020](#)(24)).

“Priority species” means wildlife species of concern due to their population status and their sensitivity to habitat alteration, as defined by the Washington State Department of Fish and Wildlife.

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

“Project” means any proposed or existing activity regulated by Whatcom County.

“Project permit” or “project permit application” means any land use or environmental permit or approval required by Whatcom County, including, but not limited to, building permits, subdivisions, binding site plans, planned unit developments, conditional uses, shoreline substantial development permits, variances, lot consolidation relief, site plan review, permits or approvals authorized by a comprehensive plan or subarea plan.

“Qualified professional” or “qualified consultant” means a person with experience and training with expertise appropriate for the relevant critical area subject in accordance with WAC [365-195-905\(4\)](#). A qualified professional must have obtained a B.S. or B.A. or equivalent degree in biology, soil science, engineering, environmental studies, fisheries, geology, geomorphology or a related field, and related work experience, and meet the following criteria:

1. Is listed on a roster of qualified professionals or qualified consultants prepared by the ~~PDS Natural Resource Supervisor~~ Director.
2. A qualified professional for wetlands must have a degree in wildlife biology, ecology, soil science, botany, or a closely related field and a minimum of five years of professional experience in wetland delineation and assessment associated with wetland ecology in the Pacific Northwest or comparable systems. The following is required to be submitted to be placed on the roster:
  - a. Curriculum vitae or resume;
  - b. Three complete and approved wetland delineations (as primary author on at least one), conducted in accordance with the U.S. Army Corps of Engineers Wetlands Delineation Manual, 1987, or as amended; and
  - c. One complete and approved wetland delineation using the U.S. Army Corps of Engineers Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Western Mountains, Valleys, and Coast Region, 2010, or as amended. Successful completion of a wetland class using this manual may be substituted for this requirement.
3. A qualified professional for habitat conservation areas must have a degree in wildlife biology, ecology, fisheries, or a closely related field and a minimum of three years of professional experience related to the subject species/habitat type or approved equivalent work experience.
4. A qualified professional for geologically hazardous areas must be a professional engineering geologist or geotechnical engineer, licensed in the state of Washington.
5. A qualified professional for critical aquifer recharge areas means a Washington State licensed hydrogeologist, geologist, or engineer.
6. A qualified professional for tree risk assessment means a certified arborist or certified tree professional with a current ISA Tree Risk Assessment Qualification.
7. Anyone who has had their professional licensure, ~~or certification~~, professional membership revoked for violations of the provisions of their professional licensure, certification, or professional membership does not meet the definition of a qualified professional or qualified consultant.

“RCW” is an acronym for Revised Code of Washington.

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

“Reasonable use” means a property that is deprived of all reasonable use when the owner can realize no reasonable return on the property or make any productive use of the property. “Reasonable return” does not mean a reduction in value of the land, or a lack of a profit on the purchase and sale of the property, but rather, where there can be no beneficial use of the property; and which is attributable to the implementation of the critical areas ordinance.

“Reasonable use exception” means an exception to the standards of this title that allows for any one of the uses allowed within a given zoning designation which cannot otherwise conform to the requirements set forth in this title, including the variance criteria; that have the least impact on the critical areas found on the subject property.

“Recharge” means the process involved in the absorption and addition of water from the unsaturated zone to groundwater.

“Reestablishment” means the manipulation of the physical, chemical, or biological characteristics of a site with the goal of returning natural or historic functions to a former critical area. Reestablishment results in rebuilding a former critical area and results in a gain in acres and functions. Activities could include removing fill, plugging ditches, or breaking drain tiles.

“Rehabilitation” means the manipulation of the physical, chemical, or biological characteristics of a site with the goal of repairing natural or historic functions and processes of a degraded critical area. Rehabilitation results in a gain in function but does not result in a gain in area. Activities could involve breaching a dike to reconnect wetlands to a floodplain or returning tidal influence to a wetland.

“Resident fish” means a fish species that completes all stages of its life cycle within freshwater and frequently within a local area.

“Restoration” means measures taken to restore an altered or damaged natural feature, including:

1. Active steps taken to restore damaged wetlands, streams, protected habitat, or their buffers to the functioning condition that existed prior to an unauthorized alteration; and
2. Actions performed to reestablish structural and functional characteristics of a critical area that have been lost by alteration, past management activities, or catastrophic events.

“Retroactive Permit” means a permit applied for after the development, use, or activity has occurred, generally to bring such development, use, or activity into compliance through code enforcement.

“Rills” means steep-sided channels resulting from accelerated erosion. A rill is generally a few inches deep and not wide enough to be an obstacle to farm machinery. Rill erosion tends to occur on slopes, particularly steep slopes with poor vegetative cover.

“Riparian corridor” or “riparian zone” means the area adjacent to a water body (stream, lake or marine water) that contains vegetation that influences the aquatic ecosystem, nearshore area and/or fish and wildlife habitat by providing shade, fine or large woody material, nutrients, organic debris, sediment filtration, and terrestrial insects (prey production). Riparian areas include those portions of terrestrial ecosystems that significantly influence exchanges of energy and matter with aquatic

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

ecosystems (i.e., zone of influence). Riparian zones provide important wildlife habitat. They provide sites for foraging, breeding and nesting; cover to escape predators or weather; and corridors that connect different parts of a watershed for dispersal and migration.

“Riparian vegetation” means vegetation that tolerates and/or requires moist conditions and periodic free-flowing water, thus creating a transitional zone between aquatic and terrestrial habitats which provides cover, shade and food sources for aquatic and terrestrial insects for fish species. Riparian vegetation and their root systems stabilize stream banks, attenuate high water flows, provide wildlife habitat and travel corridors, and provide a source of limbs and other woody debris to terrestrial and aquatic ecosystems, which, in turn, stabilize stream beds.

“Scrub-shrub wetland” means a wetland with at least 30% ~~percent~~ of its surface area covered by woody vegetation less than 20 feet in height as the uppermost strata.

“Seiche” is a standing wave in an enclosed or partially enclosed body of water. Seiches are typically caused when strong winds and rapid changes in atmospheric pressure push water from one end of a body of water to the other. When the wind stops, the water rebounds to the other side of the enclosed area. The water then continues to oscillate back and forth for hours or even days. In a similar fashion, earthquakes, tsunamis, or severe storm fronts may also cause seiches along ocean shelves and ocean harbors. Seiches and seiche-related phenomena have been observed on lakes, reservoirs, swimming pools, bays, harbors and seas. The key requirement for formation of a seiche is that the body of water be at least partially bounded, allowing the formation of the standing wave.

“Seismic hazard areas” means areas that are subject to severe risk of damage as a result of earth-quake-induced ground shaking, slope failure, settlement, or soil liquefaction.

“SEPA” is a commonly used acronym for the State Environmental Policy Act.

“Shellfish” means invertebrates of the phyla Arthropoda (class Crustacea), Mollusca (class Pelecypoda) and Echinodermata.

“Shellfish habitat conservation areas” means all public and private tidelands suitable for shellfish, as identified by the Washington State Department of Health classification of commercial growing areas, and those recreational harvest areas as identified by the Washington State Department of Ecology are designated as shellfish habitat conservation areas pursuant to WAC [365-190-80](#). Any area that is or has been designated as a shellfish protection district created under Chapter [90.72](#) RCW is also a shellfish habitat conservation area.

“Shellfish protection district” means the Drayton Harbor shellfish protection district (DHSPD) and the Portage Bay shellfish protection district (PBSPD) (~~WCC Chapter 16.20-WCC~~), or other area formed by the County based on RCW Title [90](#), in response to State Department of Health (DOH) closures or downgrades of a commercial shellfish growing area due to a degradation of water quality as a result of pollution. These areas include the watershed draining to the shellfish beds as part of the shellfish habitat conservation area.

“Shorelands” or “shoreland areas” means those lands extending landward for 200 feet in all directions as measured on a horizontal plane from the ordinary high water mark; floodways and contiguous floodplain areas landward 200 feet from such floodways; and all wetlands and river deltas associated with the streams, lakes and tidal waters which are subject to the provisions of Chapter [90.58RCW](#).

“Shoreline” (Shoreline Management Act) means all of the water areas of the state, including reservoirs and their associated wetlands, together with lands underlying them, except:

1. Shorelines on segments of streams upstream from a point where the mean annual flow is 20 cubic feet per second or less and the wetlands associated with such upstream segments; and
2. Shorelines on lakes less than 20 acres in size and wetlands associated with such small lakes.

“Shorelines” means all of the water areas of the state as defined in RCW [90.58.030](#), including reservoirs and their associated shorelands, together with the lands underlying them, except:

1. Shorelines of statewide significance;
2. Shorelines on segments of streams upstream of a point where the mean annual flow is 20 cubic feet per second (cfs) or less and the wetlands associated with such upstream segments; and
3. Shorelines on lakes less than 20 acres in size and wetlands associated with such small lakes.

“Shoreline Jurisdiction.” See WCC [23.20.010](#).

“Shorelines of statewide significance” means those areas defined in RCW [90.58.030\(2\)\(e\)](#).

“Shorelines of the state” means the total of all “shorelines,” as defined in RCW [90.58.030\(2\)\(d\)](#), and “shorelines of statewide significance” within the state, as defined in RCW [90.58.030\(2\)\(e\)](#).

“Single-family development” means the development of a single-family residence permanently installed and served with utilities on a lot of record.

“Site” means any parcel or combination of contiguous parcels, or right-of-way or combination of contiguous rights-of-way, under the applicant’s/proponent’s ownership or control that is the subject of a development proposal or change in use.

“Slope” means:

1. Gradient.
2. The inclined surface of any part of the earth’s surface, delineated by establishing its toe and top and measured by averaging the inclination over at least 10 feet of vertical relief.

“Soil” means all unconsolidated materials above bedrock described in the Soil Conservation Service Classification System or by the Unified Soils Classification System.

“Special Flood Hazard Area (SFHA)” means the area that will be inundated by the flood event having a 1% chance of being equaled or exceeded in any given year. The 1% annual chance flood is also referred to as the base flood or 100-year flood. On the FIRM maps, SFHAs are labeled as Zone A, Zone AO, Zone AH, Zones A1-A30, Zone AE, Zone A99, Zone AR, Zone AR/AE, Zone AR/AO, Zone AR/A1-A30, Zone AR/A, Zone V, Zone VE, and Zones V1-V30.

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

“Species of local importance” are those species that are of local concern due to their population status or their sensitivity to habitat alteration or that are game species.

“Sphagnum bog” means a type of wetland dominated by mosses that form peat. Sphagnum bogs are very acidic, nutrient-poor systems, fed by precipitation rather than surface inflow, with specially adapted plant communities.

“Stormwater Manual” or “Stormwater Management Manual for Western Washington” means the version of the Department of Ecology’s Stormwater Management Manual for Western Washington most recently adopted by council.

“Streams” means those areas where surface water flows are sufficient to produce a defined channel or bed. A defined channel or bed is an area that demonstrates clear evidence of the passage of water and includes, but is not limited to, bedrock channels, gravel beds, sand and silt beds, and defined-channel swales. The channel or bed need not contain water year-round. This definition is not meant to include ditches or other artificial water courses unless they are used to convey streams naturally occurring prior to human alteration, and/or the waterway is used by anadromous or other fish populations, or flows directly into shellfish habitat conservation areas.

“Structure” means a permanent or temporary building or edifice of any kind, or any piece of work artificially built up or composed of parts joined together in some definite manner whether installed on, above, or below the surface of the ground or water, except for vessels.

“Substantially Developed Surface” is a legally established area of non-vegetated impervious surface.

“Surface waters of state.” See definition for “waters of the state”

“Survey” means one of the following:

1. Mapping using a compass and tape; or
2. Mapping using a smart phone or hand held GPS; or
3. A survey completed by a licensed surveyor.

“Swale” means a shallow drainage conveyance with relatively gentle side slopes, generally with flow depths less than one foot.

~~“Technical administrator” means the director of the planning and development services department or staff member designated by the director to perform the review functions required in this chapter.~~

**Comment [CES104]:** Term no longer used; replaced by “director.”

“Toe” means the lowest part of a slope or cliff; the downslope end of an alluvial fan, landslide, etc.

“Top” means the top of a slope; or in this chapter it may be used as the highest point of contact above a landslide hazard area.

“Unavoidable” means adverse impacts that remain after all appropriate avoidance and minimization measures have been implemented.

“USDA” is an acronym for the United States Department of Agriculture

“Utilities” means all lines and facilities used to distribute, collect, transmit, or control electrical power, natural gas, petroleum products, information (telecommunications), water, and sewage.

## Planning Commission Approved Draft with DOE Required & Recommended Edits

SMP Update – WCC Ch. 16.16 Amendments

October 29, 2021

“Volcanic hazard areas” means geologically hazardous areas that are subject to pyroclastic flows, lava flows, debris avalanche, or inundation by debris flows, mudflows, or related flooding resulting from volcanic activity.

“WAC” is an acronym for Revised Code of Washington.

“Waters of the state” or “state waters” means all lakes, rivers, ponds, streams, inland waters, underground waters, salt waters, and other surface waters and watercourses within the jurisdiction of Washington State (RCW 90.48.020). ~~salt and freshwaters waterward of the ordinary high water line and within the territorial boundary of the state.~~

“Watershed” means a geographic region within which water drains into a particular river, stream or body of water. There are approximately 122 watersheds (e.g., Bertrand, Ten Mile, Dakota, Canyon Creek, Lake Whatcom, Lake Samish) identified in WRIA 1 and 3. These are nested within approximately 14 sub-basins (e.g., North Fork Nooksack, Drayton Harbor, Sumas River, Friday Creek), which are nested within four basins (e.g., Nooksack River, Fraser River, Samish River, coastal).

“Watershed improvement district” means a special district established pursuant to Chapter [85.38](#) RCW citation.

“WDFW” is an acronym for the Washington State Department of Fish and Wildlife.

“Wellhead protection area” means the area (surface and subsurface) managed to protect ground-water-based public water supplies.

“Wet meadow” means palustrine emergent wetlands, typically having disturbed soils, vegetation, or hydrology.

“Wet season” means the period generally between November 1st and March 30th of most years when soils are wet and prone to instability. The specific beginning and end of the wet season can vary from year to year depending on weather conditions.

“Wetland” means areas that are inundated or saturated by surface water or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas. Wetlands do not include those artificial wetlands intentionally created from non-wetland sites, including, but not limited to, irrigation and drainage ditches, grass-lined swales, canals, detention facilities, retention facilities, wastewater treatment facilities, farm ponds, and landscape amenities, or those wetlands created after July 1, 1990, that were unintentionally created as a result of the construction of a road, street, or highway. However, wetlands include those artificial wetlands intentionally created to mitigate wetland impacts.

“Wetland buffer” means a designated area contiguous or adjacent to a wetland that is required for the continued maintenance, function, and ecological stability of the wetland.

“Wetland class” means the general appearance of the wetland based on the dominant vegetative life form or the physiography and composition of the substrate. The uppermost layer of vegetation that

possesses an aerial coverage of ~~30% percent~~ or greater of the wetland constitutes a wetland class. Multiple classes can exist in a single wetland. Types of wetland classes include forest, scrub/shrub, emergent, and open water.

“Wetland delineation” means the precise determination of wetland boundaries in the field according to the application of specific methodology as described in the Corps of Engineers Wetlands Delineation Manual, 1987 Edition, and the Western Mountains, Valleys, and Coast Region Supplement (Version 2.0) 2010, or as revised, and the mapping thereof.

“Wetland edge” means the boundary of a wetland as delineated based on the definitions contained in this chapter.

Wetland Enhancement. See “mitigation.”

“Wetland mitigation bank” means a site where wetlands and buffers are restored, created, enhanced or, in exceptional circumstances, preserved expressly for the purpose of providing compensatory mitigation in advance of authorized impacts to similar resources.

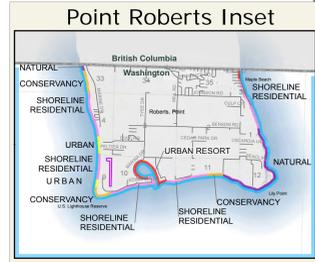

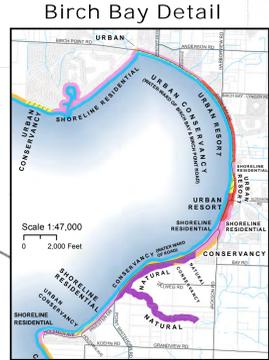

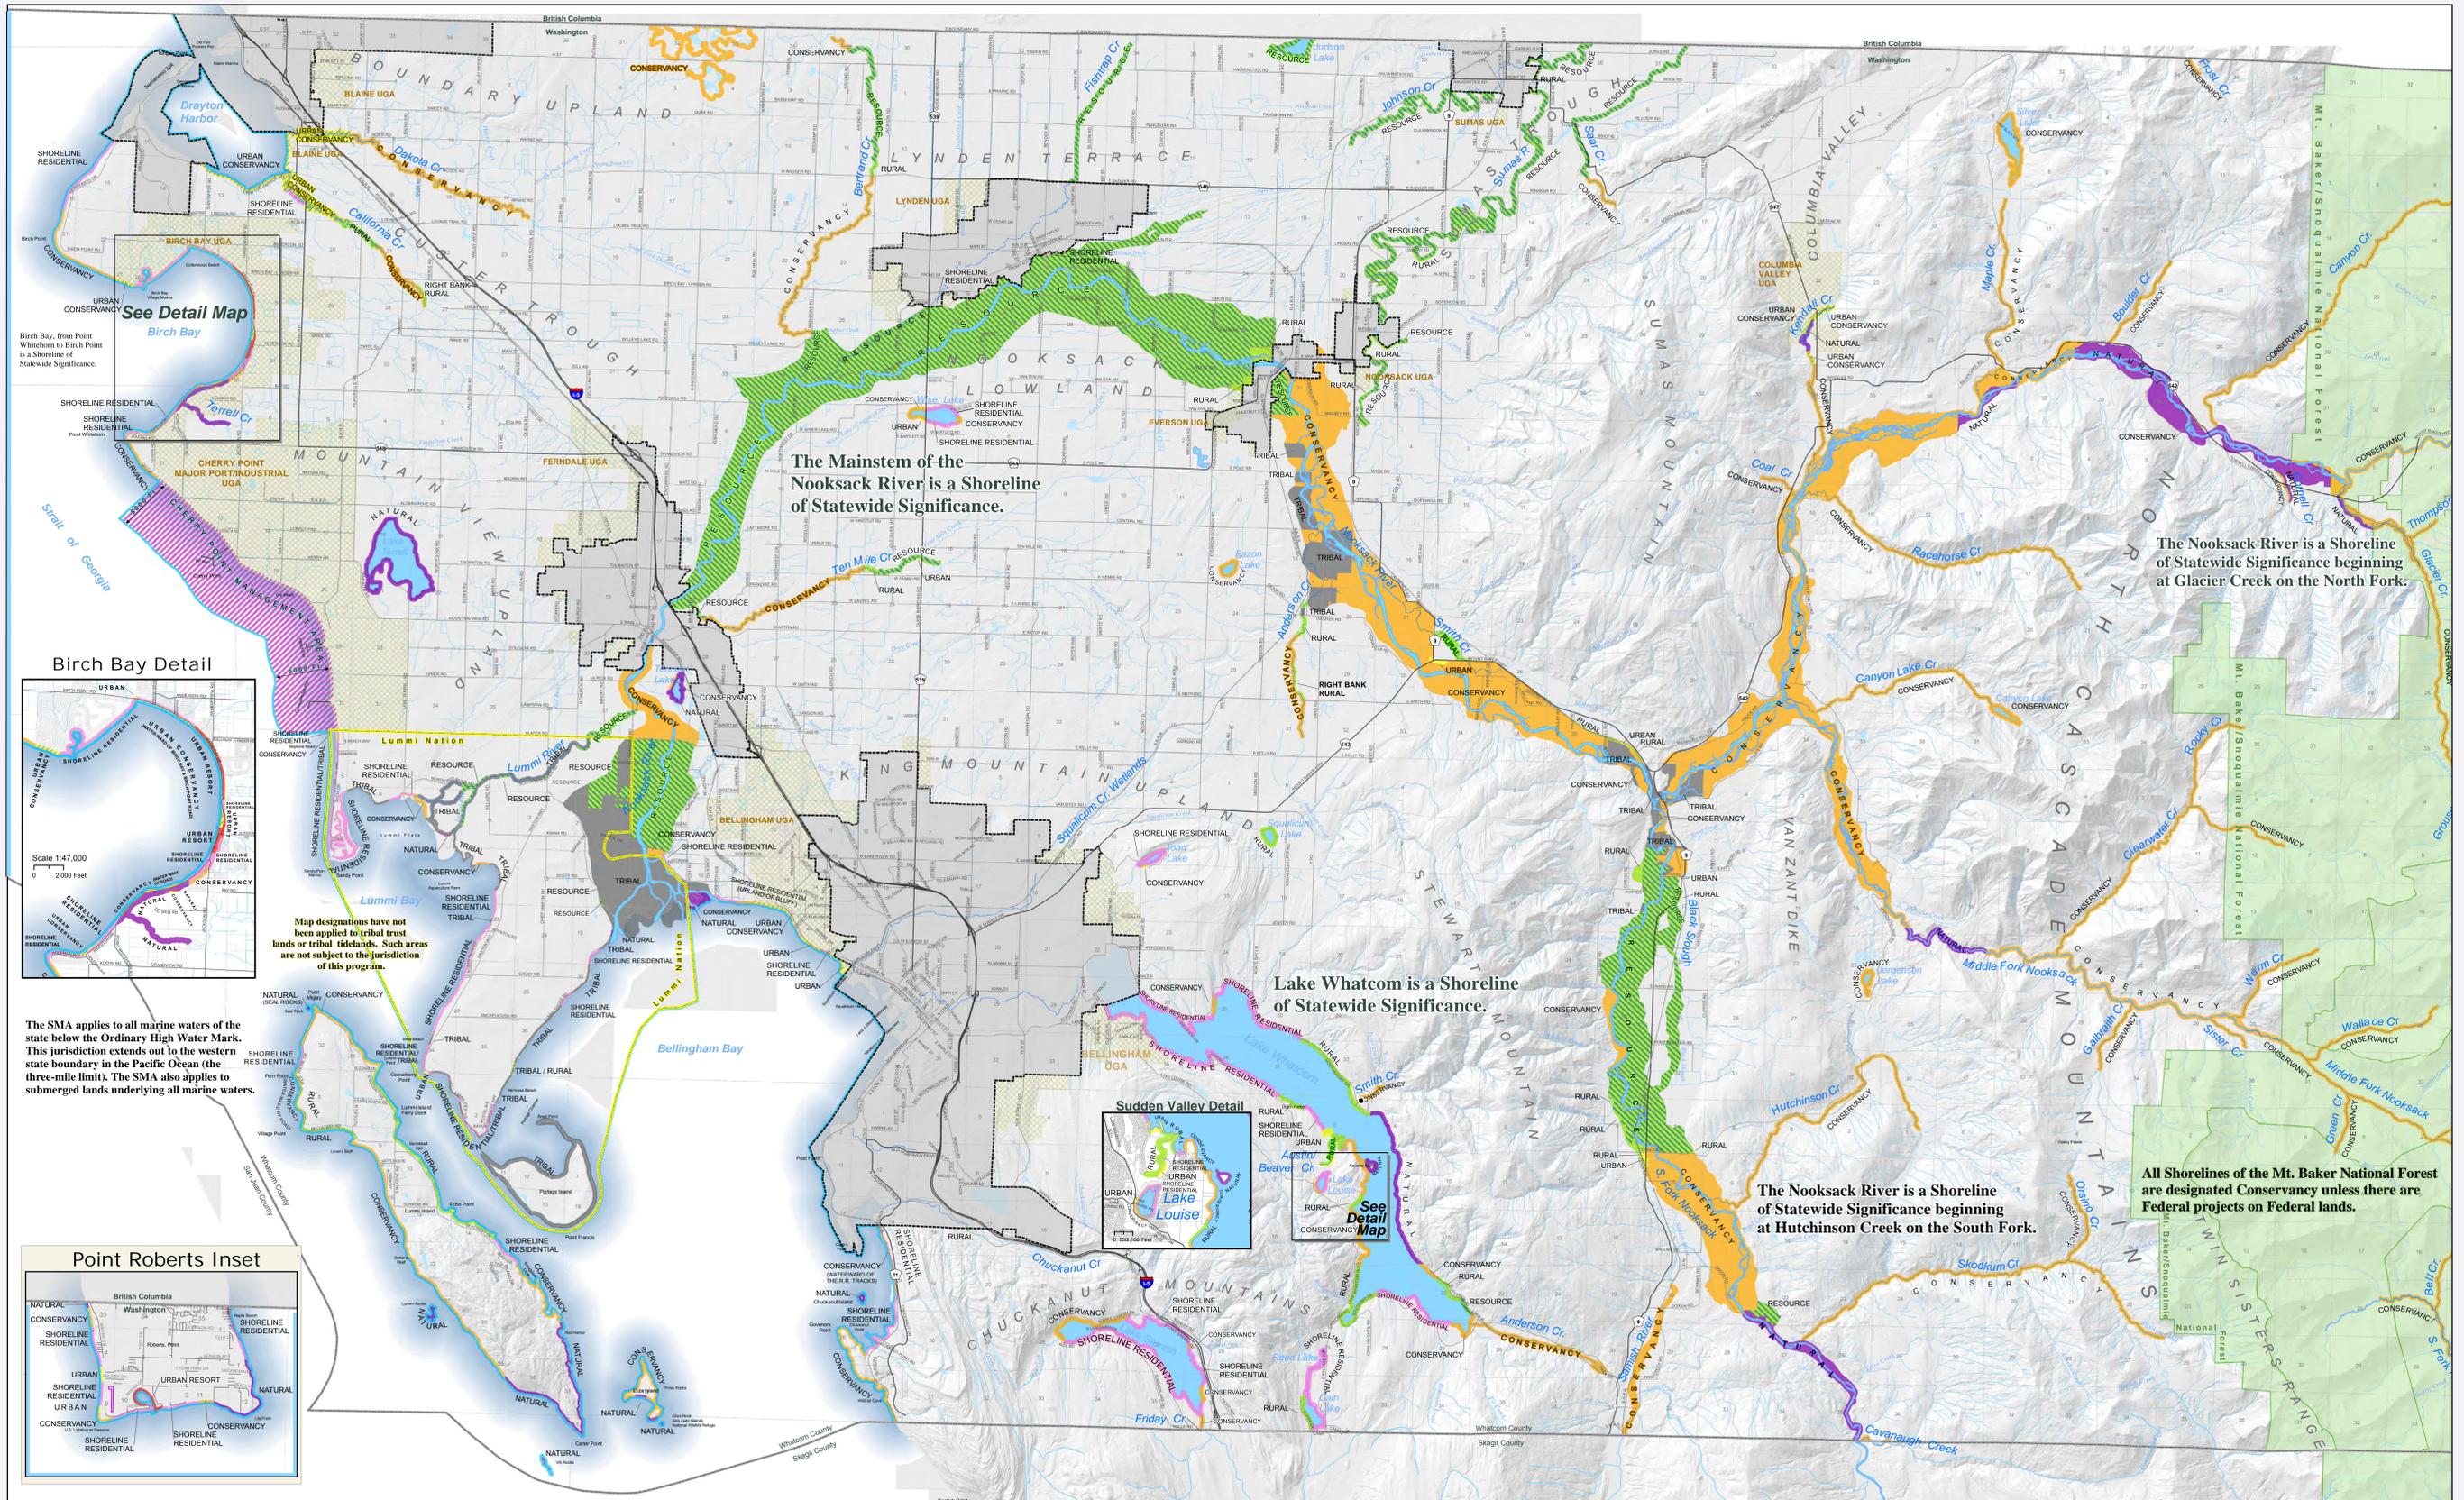

Wetland Restoration. See “mitigation” and “reestablishment.”

“Windthrow” means a natural process by which trees are uprooted or sustain severe trunk damage by the wind.

“Wood waste” means solid waste consisting of wood pieces or particles generated as a byproduct or waste from the manufacturing of wood products, handling and storage of raw materials and trees and stumps. This includes, but is not limited to, sawdust, chips, shavings, bark, pulp, hog fuel, and log sort yard waste, but does not include wood pieces or particles containing chemical preservatives such as creosote, pentachlorophenol, or copper-chrome-arsenate.

“WRIA” is an acronym for Water Resource Inventory Area

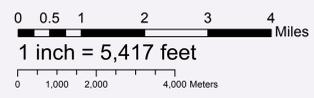

# DRAFT Shoreline Environment Designations 2/24/2021

## Official Shoreline Map

Shoreline Area Designations		Shoreline Residential	Natural	Lummi Nation Boundaries
Urban	Rural	Tribal	Cherry Point Mgmt. Area	City Boundaries
Urban Resort	Resource	Aquatic	Conservancy	Urban Growth Area
Urban Conservancy				

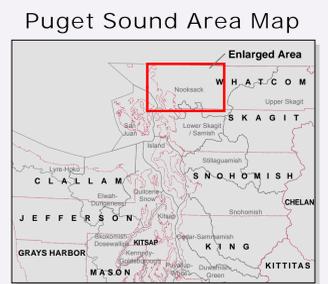

*Applies to all areas waterward of OHWM on Shorelines of the State*

**About this Map:**  
The information depicted on this map is intended to be used with Whatcom County's Shoreline Management Plan, adopted May 27, 1976. Revised to comply with Washington Administrative Code 173-26. Approved by Department of Ecology.

**Shoreline Jurisdiction:**  
The purpose of the official shoreline environment designations map is to depict graphically those areas of Whatcom County falling under the jurisdiction of this program, and the shoreline environment designations of those areas. The map does not necessarily identify or depict the lateral extent of shoreline jurisdiction nor does it identify all associated wetlands. The lateral extent of the shoreline jurisdiction shall be determined on a case-by-case basis based on the location of the ordinary high water mark (OHWM), floodway, floodplain, and presence of associated wetlands.

**USE OF WHATCOM COUNTY'S MAP IMPLIES THE USER'S AGREEMENT WITH THE FOLLOWING STATEMENT:**  
Whatcom County disclaims any warranty of merchantability or warranty of fitness of this map for any particular purpose, either express or implied. No representation or warranty is made concerning the accuracy, currency, completeness or quality of data depicted on this map. Any user of this map assumes all responsibility for use thereof, and further agrees to hold Whatcom County harmless from and against any damage, loss, or liability arising from any use of this map.

# SMP Periodic Update 2020

*Exhibit H: Written Public Comments on the Draft Amendments received by staff (updated 9/20/2021 to include P/C Hearing testimony)*

*(Note: Some section numbers in the draft documents have been revised after some of the earlier comments were received and may no longer be accurate.)*

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
BP01	Jeff Chalfant, BP	9/18/20	B	C/P Ch. 11	Removal of "policies" from code and moving it to the Comprehensive Plan – County staff confirmed that all language was transferred to Comp Plan without edits (except for grammatical corrections).	Correct.
BP02	Jeff Chalfant, BP	9/18/20	D	23.20.050(B)(10)	Adding Cherry Point Management Area as a new "Shoreline Environment" – County staff confirmed that this is a simplification step and that no changes to permitted uses or development were made.	Correct. While the CPMA was treated like an environment designation, it just wasn't called out as such.
BP03	Jeff Chalfant, BP	9/18/20	D	23.30.030(D), 23.40.125(E)(1)(e), 23.40.150(C)(2), 23.40.210(B)(8)	The use of galvanized steel appears to be a newly prohibited material for use in or above shoreline. While we understand the limitation for the use of such materials in water there are no feasible alternatives for use above the water on our pier for equipment and structural components. It is our understanding based on our discussion that our comment is consistent with feedback received from the Parks Department and was not the intent and that an adjustment to the language will be made to allow for use above the water.	We have removed the (newly added) prohibition on galvanized steel, as we could find no mention of it in state law or guidance.
BP04	Jeff Chalfant, BP	9/18/20	D	23.30.040(l) & 23.40.020(F)(4)	Fences and signs have specific limitations in terms of size, height, and setback that cannot be accommodated due to requirements of the Coast Guard and other Federal agencies associate with industrial security requirements. We recommend the addition of a provision that will allow for the construction of security fencing and signage required by such regulations including Chemical Facility Anti-Terrorism Standards (CFATS) codified a 6 CFR, Part 27.	Based on this comment we have added to 23.40.020(F)(9) (Shoreline Bulk Provisions) "provided, that the Director may exempt security fencing from this requirement as required by federal or state regulations" to acknowledge that in certain circumstances higher fences may be allowed. Additionally, we have added "Signage required by state or federal security requirements" as an exemption to 20.40.020(F)(10)(b)).

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
BP05	Jeff Chalfant, BP	9/18/20	D	23.40.010(B)	<i>Table 1 – Shoreline uses for Cherry Point Environment Area</i> Fill and Excavation activities are shown as a prohibited use. However, there are development activities that are permitted within the Cherry Point Environment that require the use of fill and excavation. County staff acknowledged this discrepancy as unintentional and will amend the language to ensure that fill and grading activities are allowed as a part of approved use and development.	The existing regulation in 23.40.125(E)(3) has always said that fill is prohibited in the CPMA, though provides an exception of “the minimum necessary to access piers or other structures that provide access to the water.” We believe this covers your concern. We have, however, clarified that “fill or excavation waterward of the OHWM requires a shoreline conditional use permit,” which is a requirement of the SMA. In the Use Table 1 we have also changed it to be “X/C*,” meaning that fill and excavation is prohibited except as otherwise permitted by the specific regulations (i.e., 23.40.125(E)(3))
BP06	Jeff Chalfant, BP	9/18/20	D	23.40.010	<i>Table 1 – Shoreline uses for Cherry Point Environment Area, Shoreline Stabilization</i> Revetments are shown as a prohibited use; however, bulkheads are allowed as a conditional use. The definition of bulkheads indicates that revetments are sometimes bulkheads. We understand that this is an unintended circular reference and that the County will amend the definition of bulkhead to remove the reference to revetments and replace with a more appropriate reference to the use of rip rap.	We have struck “such as a revetment or seawall” from the definition of bulkhead (20.60.020(16)) to address this circular inconsistency.
BP07	Jeff Chalfant, BP	9/18/20	D	23.40.010	<i>Table 1 – Shoreline uses for Cherry Point Environment Area, Industrial Moorage</i> The heading of the table indicates industrial moorage includes piers, docks and buoys. The definition of pier indicates that it includes other structures not normally considered to fit Ecology’s definition of a pier such as mooring buoys. County staff clarified that the intent was not to prohibit the installation of buoys and that the definition for piers will be amended to be consistent with the Ecology definition and that it will be clarified that buoys are permitted in the Cherry Point Management Area.	We have deleted the term “recreational” in reference to mooring buoys in Table 1 and added a P (permitted) in the Cherry Point Environment. Additionally, we have modified Table 1 to indicate that mooring buoys are not included as general public, commercial, or industrial moorage for the purposes of the table; the mooring buoys row does.
DOEWG01	Nate Brown, DOE	9/21/20	F	16.16.630	We acknowledge and support the County’s proposed adoption	Comment noted.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
	Wetlands Group				of buffer tables from Ecology's Wetland Guidance. This approach provides the most flexibility by basing the widths of buffers on three factors: the wetland category, the intensity of the impacts, and the functions or special characteristics of the wetland.	
DOEWG02	Nate Brown, DOE Wetlands Group	9/21/20	F	16.16.225(8)	<p>We are particularly concerned about the provision allowing alteration of "functionally disconnected" ...wetlands. This term appears to be undefined in the CAO. In addition, there are no acreage thresholds for this provision. Nor is there apparent consideration that wetlands that are unconnected to larger undisturbed landscapes can still provide important functions, specifically water quality and hydrologic storage. Additionally, some Category III wetlands may provide high habitat functions, which warrant larger buffers, not weaker protections.</p> <p>We also note that this change does not appear to be supported by any findings in the Whatcom County Best Available Review: Addendum to the 2005 BAS Report. Nor does this approach align with the strategies detailed in the Birch Bay Watershed Characterization and Watershed Planning Pilot Study: <a href="https://fortress.wa.gov/ecy/publications/documents/0706030.pdf">https://fortress.wa.gov/ecy/publications/documents/0706030.pdf</a>.</p> <p>We offer the following questions in an attempt to better understand the County's rationale for this approach:</p> <ul style="list-style-type: none"> <li>• What scientific basis is there for reducing protections on these wetlands?</li> <li>• Has any analysis been conducted to indicate these wetlands are not important resources in the UGA?</li> <li>• Has any analysis been conducted of how many wetlands would be affected and what the functions and values of those wetlands are?</li> <li>• Would mitigation be required to occur within the UGAs? If not, what are the cumulative effects of large-scale loss of wetlands in the UGAs in the County?</li> </ul> <p>In the absence of this information it is unclear how implementation of this provision could achieve No Net Loss of ecological function. In addition, the concept of functional isolation cannot</p>	Deleted "functionally disconnected" and amended as per conversation with DOE staff.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>be applied in SMA jurisdiction since all wetlands within that area are considered associated wetlands, by definition.</p> <p>We recommend the County either conduct a more refined analysis and resulting policy, informed by existing special studies, to develop a scientifically-based approach, or delete subsection (8) from the draft.</p>	
DOEWG03	Nate Brown, DOE Wetlands Group	9/21/20	F	16.16.640(C)(1)	<p><i>Buffer width reduction</i></p> <p>We are concerned about the apparently redundant and potentially additive buffer reduction that is allowed by this section. We cannot determine whether subsection (C)(1) can be applied in addition to the Ecology-recommended buffer reduction strategy listed in subsection (C)(2).</p> <p>If they can both be applied to a single project then they would result in buffers that are well below what science says is necessary to protect wetland functions. For example, in the current draft, a 150-foot buffer for a Category 3 wetland that has moderate habitat function adjacent to high intensity land use. Allowing this buffer to be reduced to 75 feet through additive reductions in (1) and (2) will not provide a buffer adequate to protect the wetlands' habitat functions.</p> <p>We recommend that the language, with respect to these two reduction strategies, be clarified such that they cannot be applied to the same proposal.</p>	Amended as per conversation with DOE staff to clarify that buffer reductions are not additive.
DOEWG04	Nate Brown, DOE Wetlands Group	9/21/20	F	16.16.640(C)(2)	<p>May allow High Impact uses to be reduced to Moderate buffer width if Ecology's minimizing measures are implemented. Per Ecology's CAO guidance, in addition to the minimizing measures, there must be a relatively intact corridor between the wetland and other wetland/priority habitat. Additionally, as worded in the draft regs, this provision does not imply how the applicant chooses which measures to incorporate into the proposal or how many. The wording should be modified to encourage all reasonable/applicable measures. As currently worded, an applicant may argue for the reduction based on minimal measures.</p>	Amended as per conversation with DOE staff to meet DOE guidance.
DOEWG05	Nate Brown, DOE	9/21/20	F	16.16.640(C)(3)	<p>If a buffer width is reduced, then any remaining "substantial"</p>	Deleted "substantial" and amended as

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
	Wetlands Group				(needs a definition) portion of the buffer that is degraded shall be replanted with native vegetation. It is unclear how this relates to buffer mitigation ratios described in 16.16.680(H). The addition of a statement clarifying the applicability of buffer mitigation ratios is needed.	per conversation with DOE staff.
FSJ01	Level Pratt, Friends of the San Juans	9/16/20	F	16.16.710(C)(2)	<p>In the Fish and Wildlife section of the CAO of the SMP (Ch. 16.16), the County mentions ESA-listed species managed by U.S. Fish and Wildlife, but makes no mention of NOAA Fisheries ESA involvement or authority. Further, the County fails to explicitly acknowledge that the marine nearshore is NOAA Fisheries designated critical habitat for Puget Sound Chinook salmon (Figure attached). Research has clearly demonstrated the importance of the marine and estuarine nearshore to the sustainability and recovery of Puget Sound Chinook.</p> <p>To more fully support Chinook and Southern Resident orca recovery, as well as meeting Goals 10A and 10K of the Shoreline Master Program (see also WAC 173-26-221(2)(C)(iii)), Friends of the San Juans recommends the following revision (new text underlined) in WCC §23.05.065(A):</p> <p>16.16.710(C)(2) Areas in which federally listed species are found, have a primary association with, or contain suitable habitat for said listed species, as listed in the U.S. Fish and Wildlife's Threatened and Endangered Species List or Critical Habitat List (<a href="http://ecos.fws.gov/ecp/">http://ecos.fws.gov/ecp/</a>) <u>or the National Marine Fisheries Service (NMFS) (<a href="https://www.fisheries.noaa.gov/species-directory/threatened-endangered">https://www.fisheries.noaa.gov/species-directory/threatened-endangered</a>), as amended. Note: As of September 2005, NMFS designated the estuarine and marine nearshore environment (extreme high water to a depth of approximately 30 meters mean lower low water, as Puget Sound Chinook Critical Habitat (see Federal Register / Vol. 70, No. 170, 9/2/05) that includes most of the Whatcom County estuarine and marine coastline.</u></p>	We have amended the section (though in practice we've always looked at both lists).
FSJ02	Level Pratt, Friends of the San Juans	9/16/20	F	16.16.225(B)(8)	We also have concerns about a provision in the CAO that is proposed to be incorporated into the SMP that allows for "Alteration of functionally disconnected Type III or IV wetlands when	Based on this and discussions with DOE staff, we have deleted "functionally disconnected" from this provision. Addition-

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					associated with an approved commercial development within an Urban Growth Area;" (WCC §16.16.225.B.8). There is no explanation or definition of a "functionally disconnected" wetland. It is our understanding that they do not exist in the shoreline jurisdiction. The fact they're in the shoreline assumes a functional relationship. We respectfully recommend that the County cite this CAO section as excepted (not included) in the SMP (WCC §23.05.065.A).	ally, based on communication with DOE staff, we have added that the wetlands have to have a habitat score of less than 6 to qualify.
FW/WEC01	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20	B	C/P Ch. 11	<p>We strongly support the Climate Change/Sea Level Rise policies with necessary improvements.[They go on to explain why addressing this is important, their interpretation of state requirements, and supporting material.]</p> <p>But more is needed. It is important that wetland and aquatic vegetation be allowed to occur to maintain shoreline functions and values. So we recommend the addition of the following policy on page 11-31 of the PDF version to read as follows.</p> <p><u>Policy 11AA-8: New lots and new and expanded development should be located so they will not interfere with the landward expansion and movement of wetlands and aquatic vegetation as sea level rises.</u></p>	This is a policy decision and all comments will be forwarded to the P/C and Council.
FW/WEC02	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20	B	C/P Ch. 11	<p>We recommend that proposed Policy 11AA-5 be modified to read as follows:</p> <p>Policy 11AA-5: <u>Whatcom County shall monitor the impacts of climate change on Whatcom County's shorelands, the shoreline master program's ability to adapt to sea level rise, and other aspects of climate change at least every periodic update, and revise the shoreline master program as needed.</u> Whatcom County <del>shall</del> <del>should</del> periodically assess the best available sea level rise projections <u>and other sciences related to climate change within shoreline jurisdiction,</u> and incorporate them into future program updates, as relevant.</p>	This is a policy decision and all comment will be forwarded to the P/C and Council.
FW/WEC03	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20	D	23.05.130(A)	<p>Modify the property rights section so that it is consistent with state and federal law.</p> <p>Proposed 23.05.130(A) would provide that the regulation of private property must be consistent with all relevant constitu-</p>	Our attorney believes that this language does not allow the County to override the SMP. It simply states a legal truth—that regulation of property must be consistent

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					tional and other legal limitations including local laws. This provision would allow W/C to adopt policies or regulations that override the Ecology's approved SMP. This violates the SMA and cannot be adopted.	with other laws. This does not somehow give the County permission to amend the SMP without Ecology's approval.
FW/WEC04	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20	D	23.05.130(E)	Proposed 23.05.130(E) provides that this "program shall not be applied retroactively in a way that requires lawfully existing uses and developments (as of the original effective date of this program) to be removed." This provision will prevent the amortization of existing uses in hazardous areas, such as channel migration zones, frequently flooded areas, and areas subject to sea level rise. This would allow frequently flooded homes to always be rebuilt, no matter the hazard. This is poor policy and should not be adopted.	Our attorney agrees with the commenter on this matter; we have removed (E).
FW/WEC05	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20	D	23.10.030(C)(2)	Proposed 23.10.030(C)(2) provides "that substantive amendments shall become effective immediately upon adoption by the Department of Ecology." But all SMP amendments must be approved by Ecology and become effective 14 days after Ecology adopts them. Proposed 23.10.030(C)(2) should be modified to reflect these requirements.	The commenter is correct. Though we'd amended similar language in 23.05.090 to meet this requirement, we missed it in this section. The section has now been revised.
FW/WEC06	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20	D	23.10.030(C)(3)	Proposed 23.10.030(C)(3) provides that the County Council makes final decisions on shoreline conditional use permits and variances. Ecology must approve both conditional use permits and variances. So this section should provide that these are final County decisions, not final decisions on the permits.	The commenter is correct. Though proposed Ch. 22.07 correctly spells it out, we missed it in this section. The section has now been revised.
FW/WEC07	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20	D	23.30.010(B)	Modify so that it is consistent with the SMA and SMP Guidelines. The WA Court of Appeals has held that "reasonable and appropriate uses should be allowed on the shorelines <i>only if they will result in no net loss of shoreline ecological functions and systems</i> . See RCW 90.58.020; WAC 173-27-241(3)(j)."  However proposed 23.30.010(B) exempts development, use, and activities within the shoreline jurisdiction and within "legally existing substantially developed areas" from the no net loss requirement. This violates the SMA and SMP Guidelines cited by the court of appeals. Proposed 23.30.010(B) also ignores avoidance and minimization and can be read to exempt development in critical areas from the no net loss standard. We rec-	We have amended the text as the commenter has suggested.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>commend that proposed 23.30.010(B) be modified to read as follows:</p> <p>B. Development, use, and activities within the shoreline jurisdiction <del>and outside of critical areas and legally existing substantially developed areas</del> shall avoid and minimize adverse impacts, and any unavoidable impacts shall be mitigated to meet no net loss of ecological function and ecosystem-wide processes pursuant to WAC 173-26-186.</p>	
FW/WEC08	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20	D	23.30.010(B)	The mitigation sequencing requirement in <i>existing</i> WCC 23.30.010(B) must be retained or included elsewhere in the SMP regulations. Mitigation sequencing applies to all development in shorelines jurisdiction, not just development that adversely impacts critical areas. Deleting existing WCC 23.30.010(B) and relying only on the critical areas regulations violates WAC 173-26-201(2)(e)(ii)(A) and other provisions of the SMP Guidelines.	WAC 173-26-201(2)(e)(ii)(A) seems to be addressing how one applies mitigation sequencing to mitigation applied through SEPA review for those types of impacts not regulated by the SMP (e.g., traffic impacts). The County has already adopted WAC 197-11-768 by reference in our SEPA regulations (WCC 16.08.175).
FW/WEC09	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20	D	23.30.050 Ch. 16.16	We recommend that shoreline jurisdiction be expanded to include the 100-year floodplain and that the buffers for river and stream shoreline be increased to use the newly recommended 200-year SPTH of 204 feet and that this width should be measured from the edge of the channel, channel migration zone, or active floodplain whichever is wider. This will help maintain shoreline functions and Chinook habitat.	<p>Proposed WCC 23.20.010(B)(4 lists the shoreline jurisdiction as including "floodways and contiguous floodplain areas landward <i>two hundred feet from such floodways,</i>" straight from RCW 90.58.030.</p> <p>The 204 ft. referenced is not a hard SPTH; this is the weighted 3<sup>rd</sup> Quantile. WDFW Vol 2 provides a step by step process to determine the Riparian Management Area for a parcel based on the ability of a given soil type to support tree growth. The 200 yr. index curve is variable, and as shown in Figure A2-33 the SPTH in Whatcom Co. ranges from 101' to 250'. The buffer on Type S Freshwater is proposed to be 200 feet (16.16.740(B), Table 4), measured, presumably, from the edge of the floodway.</p>
FW/WEC10	Tim Trohimovich, Fu-	9/16/20	D	23.30.060	We strongly support the amendments to 23.30.060 to require	This section was developed in consulta-

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
	turewise, and Rein Attemann, Washington Environmental Council				review of sites that may have cultural or archaeological resources but are concerned that the SMP update deletes the inadvertent discovery requirements in the existing SMP. Even with predevelopment review, cultural resources can still be inadvertently discovered. Proposed WCC 23.30.606 provides that certain state and federal inadvertent discovery provisions apply, but they delete the County's provisions. This will prevent Whatcom County from requiring compliance with the inadvertent discovery requirements. So we recommend that the existing inadvertent discovery requirements in "B" be retained so the County can effectively address the inadvertent discovery of cultural resources.	tion with the Lummi Nation Tribal Historic Preservation Office and the WA State Dept. of Archaeology & Historic Preservation, so we assume it meets all requirements. 23.30.060(B)(3)(a) still requires an inadvertent discovery plan conform to DAHP's most current management standards when warranted.
FW/WEC11	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20	D	23.30.070(A)(3)	Proposed WCC 23.30.070(A)(3) must be deleted. WAC 173-26-221(4)(d)(iii) does not allow developments to not provide public access because "[o]ther reasonable and safe opportunities for public access to the shoreline are located within ¼-mile of the proposed development site" as the proposed amendments do.	WAC 173-26-221 applies to the establishment of environment designation boundaries and provisions, and there is no subsection (4)(d), so we're not clear as to what the commenter is referring.
FW/WEC12	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20	D	23.30.080	We recommend that the SMP require new lots and new buildings be located outside the area of likely sea level rise and if that is not possible, buildings should be elevated above the likely sea level rise. These requirements will provide better protection for buildings, property, and people and will also allow wetlands and marine vegetation to migrate as the sea level rises. We recommend the following new section be added to the SMP periodic update:  <u><b>23.30.080 Sea Level Rise.</b></u> A. <u>New lots shall be designed and located so that the buildable area is outside the area likely to be inundated by sea level rise in 2100 and outside of the area in which wetlands and aquatic vegetation will likely migrate during that time.</u> B. <u>Where lots are large enough, new structures and buildings shall be located so that they are outside the area likely to be inundated by sea level rise in 2100 and outside of the area in which wetlands and aquatic vegetation will likely migrate during that time.</u> C. <u>New and substantially improved structures shall be elevat-</u>	Before adopting specific regulations, we'd need to know the details of likely sea level rise (location, elevation, magnitude, etc.). The COB and WCPW are currently developing the CoSMoS model, which should provide the best data for Whatcom County. The policies being introduced would set us up for developing such regulations once this model is completed.  It should also be noted that in reviewing development proposals, PDS already requires structures to be built above the anticipated flood stage through the County's critical area (i.e., geohazard/tsunami) and flood regulations.  Nonetheless, this is a policy decision and all comments will be forwarded to the P/C and Council.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<u>ed above the likely sea level rise elevation in 2100 or for the life of the building, whichever is less.</u>	
FW/WEC13	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20	D	23.40.010	<i>Table 2, Shoreline Use.</i> We recommend that bulkheads and other forms of hard armoring should be shoreline conditional uses. This ensures that these damaging uses will get an appropriate level or review. The SMP should also provide that all property owners seeking to construct a bulkhead on the shoreline of their property must receive Hydraulic Project Approval (HPA) from the Washington Department of Fish & Wildlife per 2SHB 1579 starting on July 1, 2019.	Our code already allows requires staff to do the same level of review as a substantial or CUP and to condition administrative permits. It also requires a geotechnical analysis for all shoreline stabilization types to ensure the least impactful method is selected.  Obtaining an HPA is already a state requirement for any work in waters of the state. WCC 23.05.040(C) reminds applicants that it's their duty to seek any other required permits from other agencies. Additionally, a standard condition on all of our permits is that one may need additional permits from other agencies. We do not believe that we should be listing every state and federal permit one may need in every section of code where such might apply.
FW/WEC14	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20	D	23.90.130(C) (existing)	We oppose the elimination of environment specific impervious surface and open space requirements in current 23.90.130(C) Table 2, Buffer, Setbacks, Height, Open Space, and Impervious Surface Coverage Standards for Shoreline Development.  WAC 173-26-211(5)(b)(ii)(D) requires rural conservancy shoreline environments to limit impervious surfaces to ten percent of the lot which Table 2 currently does. Research by the University of Washington in the Puget Sound lowlands has shown that when total impervious surfaces exceed 5 - to 10% and forest cover declines below 65% of the basin, then salmon habitat in streams and rivers is adversely affected. This science documents the need to retain the existing impervious surface limits and open space standards to achieve no net loss.	New Table 3. Bulk Regulations for Shoreline Development still contains impervious surface limits meeting this requirement.  However, we did miss the open space requirements, and have added them back in as 23.40.020(E) and Table 3
FW/WEC15	Tim Trohimovich, Fu-	9/16/20	D	23.40.125(B)(2)	We strongly support the fossil fuel use regulations in proposed	Comment noted.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
	turewise, and Rein Attemann, Washington Environmental Council				23.40.125(B)(2). The changing climate shows the need for a just transition away from fossil fuels. The proposed fossil fuel use regulations are an important step in this important transition. We support them.	
FW/WEC16	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20	D	23.40.010	In the Cherry Point Aquatic Reserve we recommend that conditional use permits be required for changes of use, that existing uses be defined specifically, and that new piers, docks, wharfs, and wings be prohibited at Cherry Point. These measures are necessary to protect the valuable resources of the Cherry Point Aquatic Reserve.	The County Council is considering such regulations for Title 20 (Zoning), which would also apply. Staff doesn't believe they need to be repeated here. Nonetheless, we have incorporated their proposed use requirements into 23.40.010 Table 2 (Use Table).
FW/WEC17	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20	D	23.40.140	<p>We oppose the amendments to 23.40.140 Mining policies and regulations and urge the County to retain the existing policies and regulations as they are needed to achieve no net loss.</p> <p>If mining is going to be allowed in floodplains, floodways, and channel migration zones, which the County is proposing to allow, then additional standards are needed. First, mines should be located outside the channel migration zone so that they do not increase the rate of channel migration. Second, mines should be no deeper than the bottom of the nearby streams and rivers so when the river moves into the mine, which is a certainty, the impacts will be reduced. Third, the mine reclamation plan should have a design so that when the river or stream moves into the mine, the mine workings are not so wide that the captured sediments destabilize the river or stream or increase erosion risks on upstream properties.</p> <p>We recommend that the following new regulation be added.</p> <p><u>D. Mining in the 100-year floodplain, floodway, or channel migration zones shall meet the following standards:</u></p> <ul style="list-style-type: none"> <li><u>i. Mines should be located outside the channel migration zone unless there is no feasible alternative site.</u></li> <li><u>ii. Mines shall be no deeper than the bottom of the nearby streams and rivers.</u></li> <li><u>iii. The mine reclamation plan shall have a design so that when the river or stream moves into the mine it is not</u></li> </ul>	Such mining has always been allowed; we're not changing that. Nonetheless, all comments will be forwarded to the P/C and Council.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<u>so wide or deep that the captured sediments destabilize the river or stream or increase erosion risks on upstream properties.</u>	
FW/WEC18	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20	D	23.40.140	<p>In 2020, the legislature adopted RCW 90.48.615(2) which prohibits “[m]otorized or gravity siphon aquatic mining or discharge of effluent from such activity to any waters of the state that has been designated under the endangered species act as critical habitat, or would impact critical habitat for salmon, steelhead, or bull trout. This includes all fresh waters with designated uses of: Salmonid spawning, rearing, and migration.”</p> <p>We recommend that the SMP Update prohibit motorized or gravity siphon aquatic mining and discharging effluent from this type of mining in shorelines that are the critical habitat for salmon, steelhead, or bull trout and that salmonids use for spawning, rearing, and migration.</p>	We have added a section regarding this.
FW/WEC19	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20	D	(existing) 23.100.150	<p>We oppose the amendments to remove policies and regulations encouraging or requiring low-impact development.</p> <p>The update removes some policies and regulations that encouraged, allowed the County to require, or required low-impact development techniques. For example, former (C)(2) on page 156 provided that “[c]lustering and low impact development techniques may be required where appropriate to minimize physical and visual impacts on shorelines in accordance with policies and regulations of WCC 23.90.090.” This regulation has been deleted. While the subdivision regulations are now proposed to allow the County to require clustering, the requirement for low-impact development has been deleted. Low impact development is an important technique for reducing development’s water quality impacts on rivers, lakes, streams, wetlands, and Puget Sound. We urge the County to retain these policies and regulations; they needed to maintain no net loss of shoreline resources.</p>	Former 23.100.150 (C)(2) was moved to 23.40.130(A)(10), though without the reference to LID. At the time, we had been thinking about stormwater LID techniques, which is covered by a general regulation of meeting our Title 20 stormwater regulations; we had not been thinking about LID in terms of plat design. The term has now been reinstated. 23.40.130(A)(10).
FW/WEC20	Tim Trohimovich, Futurewise, and Rein Attemann, Washington	9/16/20	D	(existing) 23.40.200(A)(10), (11), and (12)	Do not delete existing 23.40.200(A)(10), (11), or (12) prohibiting freestanding signs between the right-of-way and buildings, the waterbodies, or placing them in critical areas buffers, or the sign	The SMA, WAC, or DOE guidelines do not address signs. For simplicity’s sake we were proposing to just have our Title

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
	Environmental Council				<p>limits in Table 2, Sign Area Limits.</p> <p>Existing WCC 23.40.200(A)(10), (11), and (12) currently prohibit many freestanding signs between the right-of-way and buildings the waterbodies or placing them in critical area buffer. Signs are not a priority shoreline use, but the policy of the SMA calls on the County and Ecology to protect shoreline views. These existing regulations are necessary to implement the policy of the SMA and cannot be deleted. Existing Table 3 is also needed to limit the sizes of signs in shoreline jurisdiction to implement the policy of the SMA. Again, it cannot be legally deleted.</p>	<p>20 sign regulations address signs. However, T-20 does not address these circumstances, so we have reinserted existing 23.40.200(A)(10), (11), &amp; (12) as 23.40.200(A)(6), (7), &amp; (8).</p> <p>Existing Table 3 does not address sign size.</p>
FW/WEC21	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20	F	16.16.265(A)(1)	<p>Require wider setbacks between development and shoreline and critical areas buffers to protect homes and property from wildfire danger.</p> <p>Whatcom County is susceptible to wildfires. Climate change has the potential to increase wildlife risk through changes in fire behavior, wildfire ignitions, fire management, and the vegetation that fuels wildfire.</p> <p>Setbacks from critical areas buffers provide an area in which buildings can be repaired and maintained without having to intrude into the buffer. It also allows for the creation of a Home Ignition Zone that can protect buildings from wildfires and allow firefighters to attempt to save the buildings during a wildfire. Since a 30-foot-wide Home Ignition Zone is important to protect buildings, we recommend that 16.16.265(A)(1) require a setback at least 30 feet wide adjacent to shoreline and critical area buffers. Combustible structures, such as decks, should not be allowed within this setback to protect the building from wildfires. This will increase protection for people and property.</p>	<p>This distance was established by Council and staff is not proposing to change it. However, all comments will be provided to them.</p> <p>(Note that this comment contradicts comments GCD12 and MES09.)</p>
FW/WEC22	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20	F	Article 3	<p>We strongly support updating the Geohazard Area standards in Article 3.</p> <p>Whatcom County is susceptible to landslides. The SMP Guidelines, in WAC 173-26-221(2)(c)(ii)(B), provide: "Do not allow new development or the creation of new lots that would cause foreseeable risk from geological conditions to people or improvements during the life of the development." Landslides are a</p>	<p>16.16.322(D) already precludes land divisions, and requires risk-reducing measures be taken for non-division development in geohazard areas. 16.16.310 also covers landslide deposits, scarps and flanks.</p>

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>type of geological hazard that can result in major impacts to people and property.</p> <p>We strongly support designating the landslide deposits, scarps and flanks, and areas with susceptibility to deep and shallow landslides as geologically hazardous areas. This will better protect people and property.</p>	
FW/WEC23	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20	F	Article 3	Landslides are capable of damaging commercial, residential, or industrial development at both the tops and toes of slopes due to the earth sliding and other geological events. So the areas at the top, toe, and sides of the slope are geological hazards. We recommend these areas be designated as landslide hazards.	CAO Article 3 already covers this.
FW/WEC24	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20	F	Article 3	<p>Require the review of geologically hazardous areas capable of harming buildings or occupants on a development site.</p> <p>We recommend that the regulations require review of any landslide capable of damaging the proposed development. Geological hazards, such as landslides are capable of damaging property outside the hazard itself. The 2014 Oso slide ran out for over a mile (5,500 feet) even though the slope height was 600 feet. A 2006 landslide at Oso traveled over 300 feet. Recent research shows that long runout landslides are more common than had been realized. This research documents that over the past 2000 years, the average landslide frequency of long runout landslides in the area near the Oso landslide is one landslide every 140 years. The landslides ran out from 787 feet to the 2,000 feet of the 2014 landslide. So we recommend that Whatcom County require review of all geological hazards capable of harming a proposed lot or building site.</p>	CAO Article 3 already covers this.
FW/WEC25	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20	F	16.16.325(C)	We support WCC 16.16.325(C) which requires individualized setbacks from landslide hazard areas based on the actual hazard. WCC 16.16.325(C) will help protect people and property. Construction should not be allowed in these setbacks.	Comment noted.
FW/WEC26	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20	F	Article 5.5	<p>To protect the coastal aquifers, we recommend that Article 5.5 apply to all areas subject to saltwater intrusion.</p> <p>All of the islands in the County and its marine shorelines have</p>	To staff's knowledge, only Lummi Island has been designated as a vulnerable seawater intrusion areas by the County Council (which is why it has the rules in

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>the potential for wells to be contaminated by salt water. WAC 173-26-221(2)(a) requires that shoreline master programs must provide for management of critical areas designated as such pursuant to RCW 36.70A.170(1)(d) located within the shorelines of the state with policies and regulations that ... [p]rovide a level of protection to critical areas within the shoreline area that assures no net loss of shoreline ecological functions necessary to sustain shoreline natural resources." Critical areas include areas with a critical recharging effect on aquifers used for potable waters.</p> <p>Saltwater intrusion can worsen until wells "must be abandoned due to contaminated, unusable water." Saltwater intrusion is often worsened by over-pumping an aquifer. The Western Washington Growth Management Hearings Board has held that Growth Management Act requires counties to designate vulnerable seawater intrusion areas as critical aquifer recharge areas. The Board also held that counties must adopt development regulations "to protect aquifers used for potable water from further seawater degradation."</p>	Art. 5.5).
FW/WEC27	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20	F	Table 1, Standard Wetland Buffer Widths	We support updating the buffer widths to conform to Ecology's most recent recommendations, as they are based on best available science	Comment noted.
FW/WEC28	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20	F	16.16.640(B)	Buffer averaging should not allow widths less than 75% of the required buffer for all wetlands. Type IV wetlands have important functions and values. Allowing 50% buffer reductions for type IV wetlands is inconsistent with best available science and should not be allowed.	Based on this comment we have removed the allowance for Type IV wetlands in 16.16.640(B) and inserted the language from 2016 DOE Guidance (XX.040 Exemptions and Allowed Uses in Wetlands) providing exceptions to regulation of certain wetlands/buffers from regulation in a new section 16.16.612.
FW/WEC29	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20	F	16.16.740(B)	<p>Retain using the PHS recommendations as the default for buffers and management recommendation priority habitats and species.</p> <p>Currently, Table 4, Buffer Requirements for Habitat Conservation Areas (HCAs), provides that for areas with which federally</p>	While the text in the table is proposed for deletion, amended (B)(2) requires that minimum buffers be based on habitat a management plan prepared pursuant to WCC 16.16.750, subsection (B)(4) of

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					listed species have a primary association, state priority habitats, and areas with which priority species have a primary association the "[m]inimum buffers shall be based on recommendations provided by the Washington State Department of Fish and Wildlife PHS Program; provided, that local and site-specific factors shall be taken into consideration and the buffer width based on the best available information concerning the species/habitat(s) in question and/or the opinions and recommendations of a qualified professional with appropriate expertise." This requirement is being deleted and instead the buffers are based on a habitat a management plan. While we recognize the habitat management plan will include information on the PHS program recommendation and a survey of best available science related to the species or habitat, the current requirement is clearer that the default buffer should be the PHS recommendations. We think this is clearer and provides better protection for priority species and habitats and recommend it be retained.	which requires that assessment reports include Management recommendations developed by WDFW through its PHS program. Thus, the requirement is still there (and always was, as this section isn't proposed for modification).
FW/WEC30	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20	F	16.16.740(B)	We also recommend that the required consultation with Indian Tribes and Nations in Table 4 be retained. They have significant expertise on fish and wildlife and their habitat needs.	16.16.750(C) still allows for agency and tribal consultation.
FW/WEC31	Tim Trohimovich, Futurewise, and Rein Attemann, Washington Environmental Council	9/16/20			We support preparing a No Net Loss technical memo. While WAC 173-26-090(2)(d)(ii) provides that "[t]he review process provides the method for bringing shoreline master programs into compliance with the requirements of the act that have been added or changed since the last review and for responding to changes in guidelines adopted by the department, together with a review for consistency with amended comprehensive plans and regulations," this provision does not excuse compliance with WAC 173-26-090(2)(d)(i) and cannot override RCW 90.58.080(4)(a) of the Shoreline Management Act. So, while SMPs must be brought into compliance with new laws and new SMP Guidelines, they must also comply with all current provisions of the SMA and the SMP Guidelines including the no net loss requirement. We urge Whatcom County to update the SMP to achieve no net loss.	A NNL technical memo will be prepared prior to the P/C making their recommendations to Council. We thought it more appropriate to do this task after the public comment period in case the proposals needed to be amended.
GCD01	Glyn & Carol Davies	9/23/20	D	23.10.160(C)	A penalty of double standard post development is excessive.	This section doesn't say that penalties in

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					Please consider reducing the penalty to the cost of mitigation plus a percentage penalty in the range of 15% - 25%.	the way of fines are doubled; it says that "corrective action, restoration, or mitigation" will be required at a double ratio "when appropriate" as a way to discourage violations.
GCD02	Glyn & Carol Davies	9/23/20	D	23.30.040(C)	Please consider clarifying the planting of vegetation to minimize impacts to views from the water requirement in this provision. For example, views from the water are optimized by plants and shrubs that do not exceed 3' – 4' in height. Dense, forested vegetation on the shoreline is highly obstructive to views, so this provision should be clear regarding the type of vegetation that protects views.	This provision is aimed at protecting views from the water. The SMA requires protecting views to <i>and from</i> the water. (RCW 90.58.020)
GCD03	Glyn & Carol Davies	9/23/20	D	23.40.020(F)	Suggest adding a 15 <sup>th</sup> provision to this clause to conform to 16.16.720(G)(4) Accessory Uses. "When located in the shoreline jurisdiction, residential water-oriented accessory structures may be permitted in an HCA buffer; provided that the size shall be limited to 10% of the buffer's area or 500 square feet, whichever is less."	We have added a cross reference to that section.
GCD04	Glyn & Carol Davies	9/23/20	D	23.40.150(A)(2)	<i>"No pier or dock shall be used for a residence."</i> This provision should be deleted since it contradicts 23.40.150(A)(A) that allows moorage for single family residences.	23.40.150(A)(A) to which the commenter refers is proposed for deletion. Furthermore, it refers to "moorage associated with a SFR," which means a private dock at a private SFR (i.e., a personal dock), which is still allowed. The prohibition in 23.40.150(A)(2) refers to someone living on their boat or dock.
GCD05	Glyn & Carol Davies	9/23/20	D	23.40.150(A, B, & C)	<i>Dimensional Standards – Freshwater and Marine – tables</i> Please consider allowing ramps to be 6' wide rather than 4' wide as a safety measure when transporting kayaks, canoes, or boating provisions, equipment and supplies to the dock for launching (kayaks or canoes) or loading into a boat (ice chests, water skis, wakeboards, etc.). 4' is narrow when carrying bulky items to the float, and can be dangerous, particularly if the ramp or pier is high off the water due to the shoreline configuration relative to the float. This would also mean increasing the square footage for the individual use dock or pier to 520 sq. ft. to accommodate	WDFW regulations in WAC 220-660-140 and 380 limit the width of residential dock ramps to 4' wide.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					a 6' wide ramp, and increasing the added square footage if the dock has to be extended due to water depth to 6 sq. ft. rather than 4 sq. ft.	
GCD06	Glyn & Carol Davies	9/23/20	D	23.40.150(A, B, & C)	We also suggest changing the minimum water depth to either 10' measured below ordinary high water, or 6' measured over mean low low water. This is to allow adequate clearance for propellers to protect the sea floor or lake bed from turbulence when a boat is operating in shallow water	Changing to a 10' standard would essentially allow a doubling of the length of docks on our lakes, when we're required to minimize overwater structures. It would also interfere with public navigation.
GCD07	Glyn & Carol Davies	9/23/20	D	23.40.150(C)(8)	Please consider adding a qualifier to this provision stating "...unless shoreline constraints, and/or positioning of pilings make it infeasible to create sufficient buoyancy for the float without positioning flotation components under a portion of the grating."	This standard is from WDFW regulations in WAC 220-660-140 and 380.
GCD08	Glyn & Carol Davies	9/23/20	D	23.40.150(D)(6)	Please consider increasing the size of a covered moorage accessory for a single-family pier or dock to 500 sq. feet (25 x 20) and 20 ft. in height above OHWM to accommodate larger boats that are increasingly common on the lakes in Whatcom County. Also please consider deleting the requirement in this provision that the cover (the "roof materials") be "...translucent or at least 50% clear skylights." The purpose of a covered moorage is to protect the boat, principally from sunlight, which is not served by a translucent cover. Additionally, even if the cover is translucent, the boat under it is not, which defeats the purpose of a translucent cover in any case.	These standards are from DOE guidance.
GCD09	Glyn & Carol Davies	9/23/20	D	23.40.170(C)(3)	Please consider increasing the total allowed footprint of home, sidewalks and similar structures, parking areas and normal appurtenances to "the greater of 40% of the total area of the lot or 4,000 sq. ft." 2,500 sq. ft. is small for just the residence by today's standards, and is prohibitively small when it includes the garage, driveway, sidewalks, decks, patios, etc. in addition to the home.	This provision is existing and is for construction on constrained lots, which by definition cannot accommodate larger development; if one wants a larger home, one can buy an unconstrained lot.
GCD10	Glyn & Carol Davies	9/23/20	F	16.16.235(4)(b)(iii)	Why is tree replacement at a 3:1 ratio? Please consider a tree replacement ratio of 1:1.	A 3:1 ratio is based on DOE guidance, which recommends a ratio of 4:1 for mature trees and 2:1 for young trees. For simplicities sake, we averaged it. Additionally, this is the same replacement

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
						ratio in on Council's adopted tree protection regulations for Lake Whatcom and our other special watershed districts.
GCD11	Glyn & Carol Davies	9/23/20	F	16.16.235(B)(5)(e)	Please consider a pruning height for shrubs on the order of 2' – 3' in order to minimize view obstruction.	We have now moved that provision from the view corridor section to the vegetation management section.
GCD12	Glyn & Carol Davies	9/23/20	F	16.16.265(A)(1)	Please consider eliminating the building setback. The purpose of the critical area buffer is to provide protection; with generous buffer requirements (100' for shoreline, 50' – 100' for critical areas, etc.) there is no need for an additional 10' building setback (or consider reducing the building setback to 5' from the buffer).	This setback was established by Council and staff is not proposing to change it. We have, however, amended the section to allow for a reduction where the setback isn't warranted, modeled on the COB's similar regulation.  (Note that this comment contradicts comment FW/WEC21.)
GCD13	Glyn & Carol Davies	9/23/20	F	16.16.265(A)(1)(b)	Please consider allowing for a grade-level deck that is covered by a corresponding deck on the 2 <sup>nd</sup> floor, as well as the bottom of the stairs/staircase for access to a second level deck, if any.	Comment noted.
GCD14	Glyn & Carol Davies	9/23/20	F	16.16.270(C)(12)	Same comment as GCD08 above: Please consider increasing the total allowed footprint of home, garages/shops, decks, parking, and all lawn and nonnative landscaping to "the greater of 40% of the total area of the lot or 4,000 sq. ft." 2,500 sq. ft. is small for just the residence by today's standards, and is prohibitively small when it includes the garage, driveway, sidewalks, decks and patios and lawn in addition to the home. Also, 23.40.170.C.3 allows an additional 500 sq. ft. for landscaping, lawn, turf, ornamental vegetation, or garden. This provision should match and allow the same additional 500 sq. ft.	Reasonable use as proposed would now be the last effort to avoid a constitutional taking and allow development on very constrained lots and these cases should be rare. The new paradigm is to administratively allow up to 50% buffer reduction (with mitigation) through a minor variance (administrative) and a greater reduction with a public hearing (Hearing Examiner). This new approach should provide greater flexibility while cutting down on costs to applicants and cases going to the H/E. The shoreline code cited is what is allowed without a shoreline variance; an applicant always has the option to seek a larger footprint through a variance.
GCD15	Glyn & Carol Davies	9/23/20	F	16.16.620(F)	Please allow for a storage tank when a storage tank is mandated by County requirements for the well.	A storage tank is not required to be adjacent to a well, as is a pump(house); it could be placed elsewhere on a property,

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
						outside of critical areas/buffers.
GCD16	Glyn & Carol Davies	9/23/20	F	16.16.620(G)(2)(d)	Please consider allowing the dispersion outfall within the outer 50% of the buffer.	The 25% is existing language; however, we have proposed adding, "unless a closer location is demonstrated to be the only feasible location" to account for odd circumstances.
GCD17	Glyn & Carol Davies	9/23/20	F	16.16.265(A)(1)	Please consider eliminating the building setback. The purpose of the critical area buffer is to provide protection; with generous buffer requirements (100' for shoreline, 50' – 100' for critical areas, etc.) there is no need for an additional 10' building setback (or consider reducing the building setback to 5' from the buffer).	We have added text to the section describing its purpose.  However, this setback was established by Council and staff is not proposing to change it.
GCD18	Glyn & Carol Davies	9/23/20	F	16.16.680(F)	Please consider limiting the replacement ratio for preservation to 3 times the ratio for reestablishment or creation (in most cases, 1:1 ratio should be applicable, so a 3 times ratio is generous and should suffice).	Mitigation ratios for wetland impacts are taken verbatim from DOE guidance.
GCD19	Glyn & Carol Davies	9/23/20	F	16.16.720(A)	Since you are proposing eliminating provision "O" under this section that calls out residential, perhaps reference residential use in this provision: "...including, without limitation, residential uses."	We're not sure to what the commenter is referring.
GCD20	Glyn & Carol Davies	9/23/20	F	16.16.720(B)(3)	Please allow for a storage tank when a storage tank is mandated by County requirements for the well.	Tanks do not necessarily need to be next to a well, as a pump house does. Tanks could be located elsewhere on a property, outside of critical areas/buffers.
GCD21	Glyn & Carol Davies	9/23/20	F	16.16.720(G)(1)(d)	Please consider 6 foot width for private trails.	Comment noted.
GCD22	Glyn & Carol Davies	9/23/20	F	16.16.745(C)(1)(c)	Please consider allowing buffer reduction to 65% of the standard buffer specified in the table.	The amendments proposed are intended to meet DOE guidance. As such, we cannot vary without developing our own Best Available Science.
GCD23	Glyn & Carol Davies	9/23/20	F	16.16.760(8)	Please consider mitigation at 1:1 ratio regardless of whether placed before or after impact occurs. Sometimes mitigation must occur after the impact occurs for logistical reasons. This should not result in a 25% penalty.	This ratio is not proposed for amendment; Council approved it in 2017 to account for temporal loss.
LNTHPO01	Tamela Smart, Lummi Nation Tribal Historic Preservation Office	9/15/20	D	23.60.030(18)	One of our primary concerns is the use of the term "significant" in regards to cultural resources. This term has a specific meaning under Federal law. The definition that is included for this	The term significant has been deleted from the definition of "cultural resource site" as it is no longer used in the regula-

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					term on page 227 is taken from the Federal process and it does not apply here. Under state law a different process is followed.	tions.
MES01	Ed Miller, Miller Environmental Services	9/18/20	F	16.16.255(B)	Subsection (5) was stricken, and a side bar note says this is addressed by (4). This does not appear to be the case as 4 is an allowance for water dependent use.	We think the commenter erred in his reference. Allowance for water dependent uses is subsection (3); (4) refers to uses allowed by Ch. 16.16, which includes activities allowed with or without notification.
MES02	Ed Miller, Miller Environmental Services	9/18/20	F	6.16.255(B)(8)	<i>Alteration of functionally disconnected Type III or IV wetlands with associated with an approved commercial development within an Urban Growth Area.</i> Please define "functionally disconnected". If this was intended to mean "isolated wetlands", this provision would exclude many wetlands that have seasonally flowing outlets within the Birch Bay area. Also, why doesn't this exemption apply to residential development in other UGAs?	The term "functionally disconnected" has been deleted.
MES03	Ed Miller, Miller Environmental Services	9/18/20	F	16.16.225(C)	Please define "ecological connectivity" and "habitat corridors." It appears this section will grant the County the authority to protect/prohibit development over areas outside of defined critical areas and their buffers. The language is vague, which will create unpredictable review and requirements. A corridor could be 10 feet wide or >300 feet wide, depending on which species we are seeking to maintain a corridor for. Additionally, corridors are already covered in the CAO, as a WDFW priority habitat covered under the HCA section.	The commenter is correct. However, this verbiage was added in response to the Council's direction in the adopted scoping document.
MES04	Ed Miller, Miller Environmental Services	9/18/20	F	16.16.225(D)	Was this section intended to apply to native plant communities within critical areas and buffers or within any native plant community "associated" with critical areas? What does "associated" mean? This could potentially imply that any native vegetation beyond the regulated buffer should be prioritized for protection. This new section seeks to extend authority over all vegetation (native and non-native) on a property.	The CAO only applies to critical areas and their buffers, and as adopted by reference in the SMP, only applies to the shoreline jurisdiction. This proposed language does not extend authority over all vegetation on a property.
MES05	Ed Miller, Miller Environmental Services	9/18/20	F	16.16.230(B)	We noted the verbiage change from the prior "exempt activities" title. With this modification, no activities would be exempt from the critical areas ordinance. Additionally, under subsection B of this section, the language was modified to remove the allowance to prune or plant ornamental or native trees within critical	Per state law, <i>all</i> activities are subject to the CAO, including those listed here. They are not exempt; they just don't need a permit or review. We changed the title

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					areas or buffers. This would take away any rights to prune or plant native or non-native trees in lawfully established gardens or landscaped areas, including fruit trees? Why? This seems to be taking away some existing established rights. This section is inconsistent with 16.16.235.B.4.a.i.	to make it clearer.  Pruning (and all vegetation management) still listed as an activity allowed in buffers with notification (16.16.230((B)(4)). We removed <i>planting</i> so people don't think they can plant new non-native trees in the buffer. However, one can still maintain existing vegetation.
MES06	Ed Miller, Miller Environmental Services	9/18/20	F	16.16.235(B)(4)(b)(iv)(B)(2)	Evergreen trees may not be appropriate for all environments, particularly wetlands with high levels of seasonal ponding. We recommend removing the evergreen tree requirement.	This language is the same that is used in our tree protection regulations for our watersheds. Nonetheless, we agree that in certain circumstances evergreens may not be the best choice. Therefore we have added, "unless otherwise approved by the Director."
MES07	Ed Miller, Miller Environmental Services	9/18/20	F	16.16.235(B)(5)	What is the time scale when referring to "one-time"? The life of the tree? The duration of property ownership? Please clarify.	This was unclear. We have removed "a one-time," but added "a cumulative total of." We were trying to limit the total amount of buffer that could be cleared.
MES08	Ed Miller, Miller Environmental Services	9/18/20	F	16.16.255(C)(3)	"Habitat corridor" and "ecological connectivity" are general ecology terms, not defined in this code and not regulated as a critical area – unless they are a specific, identified HCA (such as old growth/mature forest, Oregon White Oak, etc.). Biodiversity areas and corridors are identified as a state "priority habitat" by Washington Department of Fish and Wildlife (WDFW)– with corridors defined as "relatively undisturbed and unbroken tracts of vegetation that connect fish and wildlife habitat conservation areas, priority habitat, areas identified as biologically diverse, or valuable habitat within a city or UGA." Critical areas reports are already required to cover biodiversity areas and corridors as an HCA. If the intent of this added section is to include other areas in addition to those currently regulated as critical areas, it seems to be an extension of and addition of a new regulated area.	The commenter is correct. However, this verbiage was added in response to the Council's direction in the adopted scoping document.
MES09	Ed Miller, Miller Environmental Services	9/18/20	F	16.16.265(A)(1)	What is the intent of the building setback? If it is to protect tree root zones and allow for building access and maintenance, a building setback is not always needed. For example, a new	This setback was established by Council and staff is not proposing to change it. We recognize, however, that there may

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					building within a grass field would not disturb root zones within a buffer or result in significant disturbance by a homeowner walking around the house. Assuming this 10-foot building setback area would or could be tabulated as impact, the setback will effectively reduce the allowed "reasonable use" footprint (which is proposed to be reduced back down to 2,500 square feet under this code). Forcing applicants to build smaller homes on reasonable use lots in order to accommodate a 10-foot building setback will significantly reduce the buildable area on a property. For example, a 50 x 50-foot building (2,500 SF) would have to shrink to 40 by 30-foot building (1,200 SF) if it is against a road setback in order to leave a 10-foot building setback around three sides of the structure.	be instances where the setback isn't warranted and have amended the section to allow for a reduction in such cases, modeled on the COB's similar regulation.
MES10	Ed Miller, Miller Environmental Services	9/18/20	F	16.16.265(B)(1)	Significant Trees" needs to be defined in the CAO.	The WCC has too many disparate definition sections, many of which define the same words differently. Staff is working toward ultimately having one definition chapter. But until that happens, we're trying not to add new definitions where words are already defined elsewhere, which is why we've added "Any words not defined herein shall be defined pursuant to Titles 20 (Zoning), 22 (Land Use and Development), 23 (Shoreline Management Program), or their common meanings when not defined in code" at the beginning of the definition section.
MES11	Ed Miller, Miller Environmental Services	9/18/20	F	16.16.270(C)(12)	<p><i>Reasonable Use Exceptions. For single-family residences, the maximum impact area may be no larger than 2,500 square feet. This impact area shall include the residential structure as well as appurtenant development that are necessarily connected to the use and enjoyment of a single-family residence. These appurtenant developments include garages/shops, decks, parking, and all lawn and nonnative landscaping.</i></p> <p>Why is reasonable use reduced from 4,000 SF to 2,500 SF? The County Council previously approved the larger area so that</p>	Reasonable use as proposed would now be the last effort to avoid a constitutional taking and allow development on very constrained lots and these cases should be rare. The new paradigm is to administratively allow up to 50% buffer reduction (with mitigation) through a minor variance (administrative) and a greater reduction with a public hearing (Hearing Examiner). This new approach should provide great-

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>property owners could use a reasonable portion of their 5, 10, 20-acre properties with a house, shop, garden, etc. If the intent is to make it the same as the SMP reasonable use allowance (2,500 square feet), please explain why they need to be the same. Shoreline lots fall within 200 feet of the shoreline, a more highly protected area designated by the Shoreline Management Act. Additionally, shoreline lots are often smaller-sized lots. A majority of non-shoreline lots in the County are at least five acres in size. No specific reasoning is given on why the reasonable use allowance is being lowered, despite the recent critical areas code update in 2017 which brought it to 4,000 square feet.</p> <p>This is particularly concerning if a 10-foot building setback is required to be included within the reasonable use allocation area, severely reducing building size. Potentially, a property owner with five acres or more could be limited to a 1,000 SF house with a required 10-foot building setback and max out the reasonable use allowance with a small house footprint.</p>	<p>er flexibility while cutting down on costs to applicants and cases going to the H/E. The shoreline code cited is what is allowed without a shoreline variance; an applicant always has the option to seek a larger footprint through a variance.</p>
MES12	Ed Miller, Miller Environmental Services	9/18/20	F	16.16.630(C) & 16.16.740(A)(1)	<p>This section of code was revised to remove the provision that buffers do not extend across substantially developed areas and/or across legally established roads. The language was changed to only include "existing, legally established substantially developed surface". This change would allow larger buffers to include disconnected area on the opposite side of roads or developed surfaces (such as buildings). Please explain the reason for this change. We are not aware of any Department of Ecology guidance that proposes including disconnected portions of buffer across roads or developed areas.</p> <p>While some wildlife species may cross roads (e.g. birds, mammals), it seems unlikely that water-dependent species (e.g., amphibians) would regularly access buffers across roads and buildings. Since the intent of the buffer is to protect the functions of the wetland, perhaps the analysis should focus on what functions a disconnected buffer would provide to a wetland across a road or building. The disconnected buffer would not provide</p>	<p>Hydrologic or water quality functions are not the only reason for buffers. While small water-dependent species (e.g., amphibians) may not cross roads, many others do, or they nest, roost, or any number of other activities. DOE guidance does not provide provisions for reducing buffers because of minor (e.g., dirt driveways) intrusions.</p>

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					hydrologic or water quality functions for the wetland across the road.  This change would substantially increase the amount of regulated buffer areas in Whatcom County, particularly in conjunction with the larger buffers proposed under this code change. As such, it seems there should be some reasoning provided as to why this change is needed or even valid.	
MES13	Ed Miller, Miller Environmental Services	9/18/20	F	16.16.640(A)	How will the Director determine what distance is necessary to increase the buffer if it's "poorly vegetated"? This appears subjective as there is no definitive science that provides clear buffer widths in these cases – they could vary depending on what function or which species you are seeking to protect. What would qualify as "poorly vegetated"? Bare dirt? Grass? Significant coverage of invasive species? This section of code could be interpreted and applied very differently among staff, decreasing predictability and consistency for landowners. The section has also been altered from the existing code to allow for buffer increases to "provide connectivity to other wetland and habitat areas". This seems to be an especially broad provision to increase buffers almost anywhere.	Staff is proposing amendments to this section to provide better rationale (based on DOE guidance) for an already existing section.
MES14	Ed Miller, Miller Environmental Services	9/18/20	F	16.16.640(B)(2)	<i>Buffer Width Averaging. In the specified locations where a buffer has been reduced to achieve averaging, the Director may require enhancement to the remaining buffer to ensure no net loss of ecologic function, services, or value.</i>  This section effectively eliminates the intent of buffer averaging and converts it to buffer reduction by requiring mitigation. Buffer averaging is an important and simple way to allow more flexibility for property owners that need to make minor buffer adjustments. This section will also reduce consistency and predictability (each staff member could apply this differently), and will increase the cost for simple projects by requiring plantings, monitoring, bonding, etc. by thousands of dollars.	The intent that if the remaining reduced buffer area is degraded, it is now narrower and lacks the vegetation to properly function. If it is well vegetated, enhancement would not be necessary (nor required).
MES15	Ed Miller, Miller Environmental Services	9/18/20	F	16.16.640(C)(1)(c)	<i>Buffer Width Reduction. The buffer shall not be reduced to less than 75 percent of the standard buffer.</i>  The existing code section allows for up to a 50 percent (or min-	We are responding to comments from DOE regarding having to meet their latest guidance.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					imum of 25 feet) reduction of a Category IV wetland buffer, while higher category wetland are restricted to a 25 percent reduction. Why is this being changed? Is there guidance from the Department of Ecology supporting the change or data from Whatcom County showing that the current allowed reduction up to 50 percent for Category IV wetlands is not working? Category IV wetlands are generally low functioning wetlands – why are we further restricting buffer flexibility here?	
MES16	Ed Miller, Miller Environmental Services	9/18/20	F	16.16.640(C)(1)(e)(iii)	Does this mean the Director could require property owners to protect non-critical area and non-buffer areas with a conservation easement? This essentially gives the Director unlimited authority to restrict uses over non-protected uplands on properties, further limiting uses on properties without clear rationale, size limitations/restrictions, or predictability. Again, this section of code will create highly unpredictable review, requirements, and result in additional cost and critical areas assessment report revisions, depending on staff interpretations and personal beliefs. Additionally – allowed buffer reductions already require buffer mitigation to offset the impact. Please provide rationale for requiring additional mitigation that may include non-designated critical areas.	This is not intended to be in addition to mitigation, but one of the ways to achieve no net loss through the mitigation sequence while applying landscape ecology principals.
MES17	Ed Miller, Miller Environmental Services	9/18/20	F	16.16.640(C)(1)(g) & 16.16.640(C)(3)	<p><i>Buffer Width Reduction. All buffer reduction impacts are mitigated and result in equal or greater protection of the wetland functions and values. This includes enhancement of existing degraded buffer area and provide mitigation for the disturbed buffer area.</i></p> <p>Define “degraded”. This could result in the Director arbitrarily requiring acres of additional planting, above and beyond the 1:1 or 1.25:1 buffer mitigation. How is the amount of area determined? What if the area is an active hayfield or established pasture that is in use? The Director could remove the ability to use a legally established, non-conforming uses and require planting over such area. This again will add uncertainty, lack of predictability, and significantly increase costs without any clear limitations on how much planting could be required. Additionally, this sounds like two things are now required – enhancement of</p>	The planting of degraded buffers has been a part of our CAO since 2005 and is based on DOE guidance. Based on case history, we are only clarifying that the area that might be enhanced is limited to the specific portions of the buffer being reduced, not anywhere on the lot, and certainly not outside critical area buffers (and thus does not “grant unlimited potential for mitigation requirements”). Per DOE guidance, “degraded” is any portion of a buffer that is not in a densely vegetated community.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>existing degraded buffer and conducting additional mitigation. Why are property owners penalized for the current condition of the property – that may have been in place for generations? Also, it should be noted that buffers are not static, and have been increasing with every update and version of the CAO. As a result, areas which now may be considered “degraded buffer,” potentially requiring additional enhancement (per the draft change), may not have even been regulated as buffer a few years ago.</p>	
MES18	Ed Miller, Miller Environmental Services	9/18/20	F	16.16.680(C)(4)	<p><i>Mitigation Ratios. For impacts to wetland buffers, mitigation shall be provided at the follow ratios... (1) Where the mitigation is placed after the impact occurs, at a 1.25:1 ratio (area or function); and (2) where the mitigation is in place and functional before the impact occurs (i.e. advanced mitigation), at a 1:1 ratio (area or function).</i></p> <p>Planting mitigation prior to project construction is complicated because of access for equipment, permit issuance, and seasonal constraints (plants generally must be planted in winter or spring) – which doesn’t always coincide with project construction. At the stage when the mitigation is designed and the critical areas assessment report is submitted to the County for review with the site plan, we don’t know when or if planting could occur prior to project construction. This makes it impossible to assume applicants could achieve a 1:1 mitigation ratio unless they are using an established mitigation bank to offset their impacts. Why is this being changed? Is there a directive from the Department of Ecology or data in Whatcom County supporting this, and the higher ratio?</p>	<p>The amendments to this section are proposed to meet Best Available Science and DOE guidance to account for temporal loss, i.e., the time between impact and when mitigation is providing the same functions and values as to prior to the impact.</p>
MES19	Ed Miller, Miller Environmental Services	9/18/20	F	16.16.720(D)	<p><i>Private Access. Access to existing legal lots may be permitted to cross habitat conservation areas if there are no feasible alternative alignments.</i></p> <p>This section as modified implies that no new lots could be created (subdivided) if a road would be needed to cross through a habitat conservation area. This could include trumpeter swan loafing areas (which are roughly mapped on WDFW priority habitats and species maps), biodiversity corridors, bat habitat</p>	<p>We believe Mr. Miller was reviewing an older draft. We have since amended this subsection (and subsection (C) to clarify how subdivisions could still occur.</p>

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					(which includes entire townships where bats are mapped), streams, Pileated woodpecker habitat (which is not mapped by WDFW and must be determined by the project biologist or County staff), and many other priority habitats.	
MES20	Ed Miller, Miller Environmental Services	9/18/20	F	16.16.630(F)	<i>Table 1 Standard Wetland Buffer Widths.</i> Based on a sampling of numerous projects in Whatcom County, the most common wetland category is a Category III with a moderate habitat score (110 or 150-foot buffers for moderate or high intensity land uses respectively). However, we also find that Category III wetlands with a high habitat score occur. This could easily occur in a wetland of small to moderate size (5,000 to 10,000 square feet), and partially in a pasture. The updated buffer for this type of wetland would be 225 feet or 300 feet (for moderate or high intensity development respectively). A 225-foot buffer would result in over 3.6 acres of land that would be protected as buffer. On a five-acre property, with multiple wetlands, this could easily create many more reasonable use properties, resulting in many more variances.	Based on conversations with DOE staff, Table 1 is proposed to be updated to be consistent with their latest guidance. Mr. Miller provides a good example as to why staff is proposing an (up to 50%) administratively approved minor variance.
MES21	Ed Miller, Miller Environmental Services	9/18/20	F	16.16.740(A)	<i>Buffer Widths</i> This is the same concern as comment MES12, and would allow for buffers to extend to areas across roads.	Hydrologic or water quality functions are not the only reason for buffers. While small water-dependent species (e.g., amphibians) may not cross roads, many others do, or they nest, roost, or any number of other activities. DOE guidance does not provide provisions for reducing buffers because of minor (e.g., dirt driveways) intrusions.
MES22	Ed Miller, Miller Environmental Services	9/18/20	F	16.16.740(B)	<i>Table 4. Buffer Widths.</i> What is a Type O water? No definition is given and there is no other correlation with any other part of the HCA section or Washington State water typing. The buffer provision for natural ponds and lakes under 20 acres was previously 50 feet, but was removed. What are the buffers for small lakes and natural ponds? The added water typing buffers in the table include a 100-foot buffer for lakes. Assumedly	A definition of Type O waters is provided in §16.16.710(C)(1)(a)(v). Natural ponds and lakes under 20 acres fall into one of the five listed types, which are generally based on size, permanence, and presence of fish.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					natural ponds and small lakes would not be required to have the same buffer as large lakes in the County. Currently artificially created ponds (created prior to 2005) do not require a buffer, is this still the case?	
MES23	Ed Miller, Miller Environmental Services	9/18/20	F	16.16.745(A)	<i>Buffer Width Increasing.</i>  There is a new provision to this section that allows the Director to extend Type S or F buffers to resources within 300 feet – including Category III wetlands, other HCA's or other waters. Again, this is an exceptionally broad provision to add in additional regulated areas that are not currently designated as critical areas or buffers in the existing or even the proposed amended code. There is also no clear guidance on how this would be done. The amount of additional area in Whatcom County this could include is hard to imagine. The extension of every fish stream or lake buffer to another resource within 300 feet is essentially extending most of the buffer areas to 300 feet.	This provision has been borrowed from Skagit County as a way to provide inter-jurisdictional consistency, making it easier for our consultants working in multiple jurisdictions.
MES24	Ed Miller, Miller Environmental Services	9/18/20	F	16.16.745(B)	<i>Buffer Averaging.</i>  Same concern as comment MES14.	The intent is that if the remaining reduced buffer area is degraded, it is now narrower and lacks the vegetation to properly function. If it is well vegetated, enhancement would not be necessary (nor required).
MES25	Ed Miller, Miller Environmental Services	9/18/20	F	16.16.745(C)	<i>Buffer Reduction.</i>  Same concern as comment MES17 and MES18.	Planting of degraded buffer has been a part of our CAO since 2005 and based on DOE guidance. We have only tried to clarify based on case history; we are clarifying that the area that might be enhanced is limited to the specific location being reduced.  Per DOE guidance, degraded is any portion of a buffer that is not in a densely vegetated community.
MES26	Ed Miller, Miller Environmental Services	9/18/20	F	16.16.760(B)	<i>Buffer Mitigation.</i>  Same concern as comment MES18.	It is being amended to meet DOE guidance.
NES01	Molly Porter, North-	9/14/20	F	16.16.270(C)(12)	Please provide additional clarification on what is included in the	Whatever fits in 2,500 sq. ft. We could set

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
	west Ecological Services				maximum allowed 2,500 sq. ft. impact area to provide consistency in application. The text states driveways shall be the minimum necessary but does not specify if any of this square footage shall be included in the allowed 2,500 sq. ft. impact area. Is there a minimum square footage of parking area that is required to be included? Is the 10-foot building setback counted towards this allowance?	specific numbers, but that would provide less flexibility to a homeowner.
NES02	Molly Porter, Northwest Ecological Services	9/14/20	F	16.16.270(C)(12)	<p>For projects that require a critical area buffer impact, it appears these will be reviewed in the following order: reduction of up to 25% administered by the Director; a minor variance (buffer reduction of 25-50%) administered by the Director; a major variance (buffer reduction beyond 50%) administered by the Director; and last, if major variance is denied or if all other code requirements including mitigation cannot be met, a reasonable use application is administered by the Hearing Examiner. A flow chart similar to Table 1. Project Permit Processing Table in 22.05, may be helpful to describe this process and requirements associated with each.</p> <p>Please clarify if there are any specific criteria for minor and minor variances in regards to total allowed impact area. It appears variances have no maximum allowable footprint and can be permitted as long as mitigation sequencing is applied and impacts can be mitigated.</p>	The commenter is correct; and a flow chart might be helpful; we'll try to develop one. As to variance criteria, see WCC 22.07.050. There are no criteria in regards to total allowed impact area (though one would have to mitigate).
NES04	Molly Porter, Northwest Ecological Services	9/14/20	F	16.16.640(C)(1)(g) & 16.16.640(C)(3)	Both sections appear to require mitigation, as well as additional enhancement of 'existing degraded buffer area' to provide mitigation for the 'disturbed buffer area.' Please define 'degraded buffer area' and 'disturbed buffer area,' and provide additional clarity on how much additional enhancement may be required beyond the standard 1:1 and 1.25:1 mitigation ratios. Further defining these terms and the amount of enhancement that is expected will help clarify the application of this code section to specific projects.	Per DOE guidance "degraded" is the difference between existing conditions and a densely vegetated community. As each site is different, it would be difficult to have a code that accounts for every variation. We are trying to balance having a code that is a "cookbook" verses providing flexibility to homeowners and their consultants.
NES05	Molly Porter, Northwest Ecological Services	9/14/20	F	16.16.640(B)(1)(a) & (C)(1)(a)	Buffer averaging is preferred to buffer reduction [16.16.640(C)(1)(b)]. Sections 16.16.640(B)(1)(a) and (C)(1)(a) imply a development proposal cannot use a combination of buffer averaging in one area and buffer reduction in another.	Clarification has been added.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					Clarification could be added to state buffer averaging is not allowed if the portion of impacted buffer has already been reduced. This would allow mitigation plans to use buffer averaging where feasible (preferred) and buffer enhancement to compensate for the remainder of buffer reduction.	
NES06	Molly Porter, Northwest Ecological Services	9/14/20	F	16.16.740, Table 4	Provide definition of a Type O stream. This stream type does not appear to be defined in the Washington Administrative Code (WAC 222.16.030), Washington Department of Natural Resources (WDNR) water typing system, or anywhere in the Code update.	A definition of the water types has been added.
NES07	Molly Porter, Northwest Ecological Services	9/14/20	F	16.16.710(C)(1)(b)(i)	Throughout 16.16.710(C)(1) the term "natural streams" has been revised to "natural waters." The term "waters" leaves ambiguity which could be interpreted to mean wetlands or water flowing out of wetlands. Under this definition, 16.16.710(C)(1)(b) would regulate any artificial man-made ditch that receives water from a wetland and categorize the ditch as a stream that would require a stream buffer. Many ditches, including roadside ditches, receive water from wetlands and could be regulated as streams. Is this the intent of this change? If not, for clarity, the term "natural waters" could be replaced "waters of the state" which is defined in (16.16.900).	Based on this comment we have amended the section to say "waters of the state" rather than "natural waters."
NWC01	Katrina Jackson, Northwest Wetlands Consulting	9/9/20	F	16.16.680	As written, it isn't clear that the area of substantial surface and the area beyond the substantial surface are no longer functioning as a part of the buffer protection. As I read it, the provision only seems to address the substantial surface itself.	Correct.
NWC02	Katrina Jackson, Northwest Wetlands Consulting	9/9/20	F	16.16.273	Can we presume that the minor variance is in addition to the standard buffer reduction? Otherwise the minor variance would force many more projects to the Hearing Examiner than under the current reasonable use.  For example a 100' buffer would go to 75' minimum; then with minor variance the buffer could then be modified to 25% to 50% of that number or 56.25 or 37.5. When the 10' building setback is added, the relief is no way near what reasonable use is allowing currently especially on smaller lots where the separation is many times only 10' to 20' between the wetland and the foundation. As I describe the minor variance would still require a 66.25	The proposed new approach would allow the applicant to request, and the County to vary, any numerical or dimensional standard to provide reasonable development. It would be the duty of the Hearing Examiner to determine if a legally permissible project has been recommended.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>foot to 47.5 foot separation between the foundation and the wetland. It is our belief that even a variance on the standard buffer reduction would overburden the Hearing Examiner if reasonable use would under the revisions be required to go to the hearing examiner. You state "They would be limited to variances for a 25% to 50% reduction of critical area buffers (when mitigated and they meet certain criteria) but would address most of the instances that reasonable use exceptions are currently applied for. We believe that overall, these changes would significantly reduce the number cases having to go to the Hearing Examiner." Perhaps you have better statistic than I do about the narrow buffers we have needed under reasonable use. I do a lot of work in Sudden Valley and for the most part many of the projects can stay about 35 feet from a critical area, but those would under the revisions be moved to the hearing examiner.</p>	
NWC03	Katrina Jackson, Northwest Wetlands Consulting	9/9/20	F	16.16.265(B)(4)	<p>Is the intent that the conservation easement shall only apply to the specific altered buffer on properties containing critical areas and/or associated buffers? If so then it should so state. It seems since Notice on title is expected for properties that have critical areas and/or assoc. buffers that are not altered. My thoughts go to the properties that have an established house, want to put a shop in one corner and may need to alter a buffer to do so, but the permittee should not be asked to then identify all of the non-altered wetlands or buffers on the rest of the acreage. So then the applicant would do a conservation easement for the altered buffers and or wetlands, and then also a notice on title to cover any of the other critical areas that are unaltered. If all wetlands and buffer on the property are required to be placed in a CE when only one wetland and/or wetland buffer is altered, this would result in excessive wetland delineation, surveying of wetland boundaries, and reporting costs.</p> <p>Also alteration to buffers on a property should be allowed in the future modified to the full extent of the code provisions and not forced locked into a conservation easement when the first project might only be a minor modification.</p>	<p>The commenter raises a good point. We have revised the section to refer to the "review area."</p> <p>As to the 2<sup>nd</sup> point, our conservation easements do allow for future development as permitted by code.</p>
NWC04	Katrina Jackson,	9/9/20	F	16.16.680	It seems that some effort has been made in part of the code to	Comment noted.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
	Northwest Wetlands Consulting				use the label of compensatory mitigation. Thank you. When a violation occurs clearing or overlayment, once repaired the reparation area should not be then placed in a conservation easement. Because the word mitigation is still somewhat interchangeable in the code or in the minds of those enforcing the code, it needs to be clear than only compensatory mitigation areas are to be placed in conservation easements.	
NWC05	Katrina Jackson, Northwest Wetlands Consulting	9/9/20	F	16.16	<p>Administratively, through reasonable use, wetlands are being filled. This action does not show up as an administrative option under minor variance. As written it looks like wetland fill would need to go to hearing examiners as well. This again would send several more of the single family small residential lots to the hearing examiner. Basically I like the idea of administrative variance or minor variance, but with changes it looks significantly more restrictive than the current practices for what can be handled without going to the hearing examiner.</p> <p>You might also talk with the City of Bellingham. I was working on a stream buffer reduction below minimum standards, very soon after the hearing examiner had told the City to start handling these as an administrative variance and to quit sending them to the hearing examiner. I found this interesting.</p>	Staff's recollection is that staff has only been approving wetland fill for a SFR through administratively processed reasonable use exceptions (RUE) for the last 2 years, and that has only happened once. However, we do not believe that wetland fill (or other uses approve through an RUE ought to be approved by staff; thus the reason for the proposed change.
PA01	Paul Anderson	9/18/20	F	16.16.225(B)(8)	I recommend that this provision be listed "as excepted in WCC § 23.05.065," since it is not applicable for shoreline associated wetlands. Interpretation and enforcement of this section within shoreline jurisdiction is problematic as shoreline associated wetlands by definition (WAC 173-22-030(1)) have proximity and influence with the shoreline water and therefore, are not "functionally disconnected".	Based on this and discussions with DOE staff, we have deleted "functionally disconnected" from this provision. Additionally, based on communication with DOE staff, we have added that the wetlands have to have a habitat score of less than 6 to qualify.
PA02	Paul Anderson	9/18/20	F	16.16.260(G)(1)	Three years is not adequate to establish whether a mitigation site will successfully compensate for lost critical area functions, especially where that mitigation includes the planting of shrubs and trees. In terms of wetland mitigation, state and federal agencies have required a minimum of five years monitoring for several years and I recommend that five years be the minimum monitoring required in the SMP.	Though staff had not proposed to amend this section, based on this comment we realized that the existing code does not reflect current practices. We have updated this section to do so, and to address Mr. Anderson's comment.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
PA03	Paul Anderson	9/18/20	F	16.16.640(C) & 16.16.720(D)	<p><i>[Wetland] Buffer Width Reduction</i></p> <p>Allowing an outright reduction in buffer width will not protect critical area (wetland or fish and wildlife habitat) functions or shoreline ecological functions. The only time a reduction in adopted buffer widths should be allowed (no &gt; than a 25% reduction) is when it is used with buffer averaging (see Bunten et al. 2016). To ensure that there is no net loss of shoreline ecological functions, I recommend that this provision be stricken within shoreline jurisdiction. This same concern and recommendation applies to 16.16.720.D. (Buffer Width Variance).</p>	We have added language to this section from DOE guidance, clarifying that buffer reductions are not allowed outright, but only under certain (DOE approved) circumstances.
PA04	Paul Anderson	9/18/20	F	16.16.710(C)(2)	<p><i>Habitat Conservation Areas – Designation, Mapping, and Classification: "Areas in which federally listed species are found, have a primary association with, or contain suitable habitat for said listed species, as listed in the U.S. Fish and Wildlife's Threatened and Endangered Species List or Critical Habitat List..."</i></p> <p>Within shoreline jurisdiction, this section needs to be edited to also include the National Marine Fisheries Service (NMFS), the federal agency responsible for managing marine species listed under the Endangered Species Act that includes Puget Sound Chinook salmon (<i>Oncorhynchus tshawytscha</i>) and Southern Resident killer whales (<i>Orcinus orca</i>). These two iconic species are of significant cultural, commercial and recreational importance for the Pacific Northwest and not acknowledging their importance and presence within the SMP is a substantial oversight. Due to its critical importance for Chinook salmon rearing and migration, NMFS designated the marine and estuarine nearshore (extreme high water to approx. 30 meters depth), including most of the Whatcom County coast, as critical habitat for the recovery of Puget Sound Chinook in September 2005 (see Federal Register, Vol. 70, No. 170, 9/2/05). NMFS is acknowledged as a regulatory agency in WCC §16.16.900 (Definitions; "Critical habitat").</p> <p>The marine and estuarine nearshore within the County meets the definition of a Fish and Wildlife Habitat Conservation Area in</p>	We have amended 16.16.710(C)(2) to include NMFS listings and critical habitat.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					WAC 365-190-130 and, more importantly for the SMP, the definition of Critical Saltwater Habitat in WAC 173-26-221(2)(C). I respectfully recommend that the County include reference to NMFS-managed listed species in the SMP and that the marine and estuarine nearshore is designated critical habitat for Puget Sound Chinook. To simplify the permitting process and assist staff and applicants in understanding this update, I would also recommend that the salmonid habitat maps be updated to show the marine and estuarine nearshore as a regulated critical area.	
PA05	Paul Anderson	9/18/20	F	16.16.720 & 16.16.740	<p><i>Habitat Conservation Areas – Use and Modification and Habitat Conservation Area Buffers</i></p> <p>Since shorelines and shorelands (associated wetlands) include more than just streams and the SMP protective standards apply to those other waters, I recommend changing “stream(s)” to “water(s)” in Table 3 (§16.16.720) and in §16.16.740. Also, since tidal waters include a number of species and habitats of cultural, commercial and recreational importance (e.g., shellfish areas; Chinook salmon), what is the rationale and science to support requiring a wider buffer on marine versus freshwater habitats; 150 and 200 feet, respectively? To ensure no net loss of ecological function, I recommend that the upland buffer on marine habitats be increased to 200 feet, which is well within the buffer range reported in the scientific literature (see Protecting Nearshore Habitat and Functions in Puget Sound; Protection of Marine Riparian Functions In Puget Sound, Washington; available from WDFW: <a href="https://wdfw.wa.gov/">https://wdfw.wa.gov/</a>).</p>	<p>Amended per this suggestion (though in Table 3 only for the performance standards that apply to all waters.)</p> <p>And while the buffer is proposed to be 150’ in the marine areas, we are still managing for NNL in the entire shoreline jurisdiction.</p>
WCPW01	Atina Casas, W/C Public Works	9/18/20	E	22.05.020	Shoreline Substantial is included in both the Type II and Type III sections of the table. The footnote (c) in the Type II section explains the circumstances when a Shoreline Substantial will be processed as a Type III. This footnote should also be in the Type III section for further clarity.	Comment noted.
WCPW02	Atina Casas, W/C Public Works	9/18/20	E	22.07.020(B)(1)	How will the applicant know what the dollar amount is when OFM changes it every 5 years? Will updated values be shown on the permit application form so applicants know if their project qualifies based on the current value at the time of application	Correct, the application is changed when OFM updates the amount.

					submittal?	
WCPW03	Atina Casas, W/C Public Works	9/18/20	E	22.07.030(A)	<i>A. Shoreline substantial development permits are considered Type II applications pursuant to WCC 24 22.05.020 (Project Permit Processing Table).</i>  For clarity, add a sentence that this permit could be considered a Type III application pursuant to 22.05.090(2) (Open Record Public Hearing).	We have modified the sections to clarify.
WCPW04	Atina Casas, W/C Public Works	9/18/20	F	16.16.680(H)(1)	Consider keeping the wetland buffer impact mitigation ratio 1:1 for public road and bridge projects. Mitigation is not possible before impacts. And between clear zone requirements for vehicle safety and limited right-of-way, there often isn't onsite area available to accommodate a 1.25:1 mitigation ratio.	The mitigation ratios are proposed to be amended to meet DOE guidance. Nonetheless, Public Works could choose to enhance publicly owned property now and apply the mitigation to future projects (i.e., advance mitigation).
WCPW05	Atina Casas, W/C Public Works	9/18/20	F	16.16.760(B)(8)	Consider an HCA buffer impact mitigation ratio of 1:1 for public road and bridge projects. Mitigation is not possible before impacts. And between clear zone requirements for vehicle safety and limited right-of-way, there often isn't onsite area available to accommodate a 1.25:1 mitigation ratio.	The mitigation ratios are proposed to be amended to meet DOE guidance. Nonetheless, Public Works could choose to enhance publicly owned property now and apply the mitigation to future projects (i.e., advance mitigation).
WCPW06	Atina Casas, W/C Public Works	9/18/20	F	16.16.900	Add a definition for Critical Facilities, which is referenced in 16.16.322.	A definition has been added.
WCPW07	Chris Elder, W/C Public Works	9/18/20	B	C/P Ch. 11	Under the Council approved scope of possible amendments, topic #6 highlights Climate Change/Sea Level Rise with the recommended action of "Develop and/or strengthen policies regarding climate change/sea level rise, including the incorporation and use of new data (as it becomes available), to review and revise, if warranted, shoreline use regulations". The proposed amendments to the Shoreline Master Program have not sufficiently addressed this topic based on available data including projected impacts of climate change and have not incorporated best management practices developed to address the projected impacts of climate change.	Policies regarding climate change/ sea level rise have been developed and/or strengthened and are proposed to be included in Chapter 11 of the CompPlan (pg. 11-30).
WCPW08	Chris Elder, W/C Public Works	9/18/20			Related to climate change, the most significant projected climate impacts related to the SMP update include sea level rise and increases in coastal and riverine flooding, both in magnitude and	Before adopting specific regulations, it seems like we'd need to know the details of likely sea level rise (location, elevation,

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>frequency. I have included the several regional and state scientific climate data reports and data informed recommendations on how to incorporate projected climate change impacts such as sea level rise and increased coastal and riverine flooding into planning processes. The list of resources supplied is located at the end of this memo.</p> <p>It should be noted that Whatcom County is currently participating in development of a local Coastal Storm Modeling System (CoSMoS) which will further inform the extent of potential impacts of sea level rise combined with storm surge, wind currents, barometric pressure, and other environmental factors. Data from this effort will inform the magnitude and area of impact and will support selection of an actual sea level rise elevation and/or shoreline impact zone, but existing data already highlights that sea level rise has occurred and will continue to occur at an increasing rate.</p>	<p>magnitude, etc.) and anticipate the development of the CoSMoS model (on which the COB and WCPW are working), which should provide the best data for Whatcom County. The policies being introduced would set us up for developing such regulations once this model is completed.</p> <p>It should also be noted that in reviewing development proposals, PDS already requires structures to be built above the anticipated flood stage through the County's critical area (i.e., geohazard/tsunami) and flood regulations.</p> <p>Nonetheless, this is a policy decision and all comments will be forwarded to the P/C and Council.</p>
WCPW09	Chris Elder, W/C Public Works	9/18/20			<p>While this periodic update to the Shoreline Master Program may not spur development or adoption of an actual sea level rise projection for Whatcom County shorelines, staff recommends developing new code language that clearly identifies the projected impacts of sea level rise and increased impacts of riverine and coastal flooding within Title 23. Furthermore code improvement must require applicants pursuing development within the shoreline jurisdiction to perform a climate vulnerability assessment for the proposed action and highlight mitigation measures proposed to address projected climate impacts. This language will support applicants in mitigating climate risk to their private investment and will support local government in protecting public safety, private property, and environmental health.</p>	<p>Your comments will be forwarded to the P/C &amp; Co/C for their consideration.</p>
WCPW10	Chris Elder, W/C Public Works	9/18/20			<p>The resources described below have been attached to this comment letter to support the above comments and recommendations:</p> <ul style="list-style-type: none"> <li>The University of Washington's Climate Impacts Group Shifting Snowlines and Shorelines (2020) highlights this significant climate changes occurring within our region and does provide summary projections of potential changes in</li> </ul>	<p>Thank you.</p>

RES01	Ander Russell, Resources	9/17/20	D	23.30.020	<p><i>SMP Scoping Document Item 5 : Consistency with Shoreline Management Act (RCW 90.58) and 2003 SMP Update Guidelines (WAC 173- 26)</i> – Thank you for adding language referencing WCC Title 23 Shoreline Regulations 23.30.020 as it pertains to mitigation. We feel that in order to adequately address item 5b from the Scoping Document further clarification is needed on exactly what mitigation actions are needed for development. Please add clarification and reference WCC 16.16.</p>	<p>5b from the scoping document is “Clarify development mitigation requirements.” We feel we have done this in many sections of both Title 23 &amp; WCC 16.16. While most of the “clarifying” has been done to the text of WCC 16.16, it pertains to shoreline permits since the CAO is adopted as part of the SMP.</p>

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
RES02	Ander Russell, Re-Sources	9/17/20	D	23.40.020(G)	<i>Shoreline Bulk Provisions – Buffers, Setbacks, Height, Open Space and Impervious Surface Coverage</i> – Thank you for adding in language about the need for mitigation under G (Development activities allowed in buffers and setbacks). Please clarify and strengthen that language. Any impacts from activities happening within the critical area buffer must be mitigated please show how this will be done.	The text of that section clearly states, “provided...that they comply with all the applicable regulations in WCC Chapter 16.16, including mitigation.” Please note that mitigation requirements are in WCC 16.16, a part of the SMP, and that both need to be read together.
RES03	Ander Russell, Re-Sources	9/17/20	B & D	C/P Ch. 11 & Title 23	<p><i>Climate Change/Sea Level Rise</i> – Thank you for the updated language concerning climate change and sea level rise that was added to the Chapter 11 of the CompPlan (Exhibit B). We strongly support the recommended changes outlined by Futurewise and WEC for this scoping item. A comprehensive approach to addressing the impacts of climate change by protecting natural shorelines and other natural systems will help our community withstand and recover from the increase in those impacts over time.</p> <p>Please add language to reflect a focus on climate change and sea level rise impacts to Exhibit D. The SMP and CompPlan must do a better job at addressing sea level rise and other climate change impacts. We understand that the bulk of the revisions in this area have been added to Exhibit B. However, the words climate change and sea level rise do not appear at all in Exhibit D.</p> <p>Climate change impacts on sea levels, storm surges and riverine and marine flooding are extensively documented and must be planned for and addressed in all County regulations and planning documents. The County need not look any further than its own report on climate change impacts to have the data needed to develop and strengthen policies around climate change, flooding and sea level rise. Just this past winter Whatcom County was inundated with unprecedented flooding from heavy rains that breached dikes and submerged houses. The cost of the damage from the flooding between late January through early February was over \$4 million, \$2.5 million of which was related to road and infrastructure damage.</p>	<p>Before adopting specific regulations, it seems like we'd need to know the details of likely sea level rise (location, elevation, magnitude, etc.) and anticipate the development of the CoSMoS model (on which the COB and WCPW are working), which should provide the best data for Whatcom County. The policies being introduced would set us up for developing such regulations once this model is completed.</p> <p>It should also be noted that in reviewing development proposals, PDS already requires structures to be built above the anticipated flood stage through the County's critical area (i.e., geohazard/tsunami) and flood regulations.</p> <p>Nonetheless, this is a policy decision and all comments will be forwarded to the P/C and Council.</p>

					tal assets (wetlands, streams, lakes, and marine shorelines) in anticipation of climate change impacts, including sea level rise."	
RES04	Ander Russell, Resources	9/17/20	B	C/P Ch. 11	<i>Scoping Document Item 8: Habitat</i> – Please address Scoping Document item 8a. We understand it is not necessary to have references to the WDFW and DNR Shore Friendly Program in the code in order for the County to mirror the program but referring to it adds weight and legitimacy for the use of practices outlined in the WDFW and DNR Shore Friendly Program.	8a is, "Reference WDFW and DNR's Shore Friendly Program." And you're right; the code need not reference all the helpful programs the state (or feds or County) manages. However, we have added reference to that program in C/P policy 111-2, and we do provide such references to applicants here at PDS.
RES05	Ander Russell, Resources	9/17/20	F	16.16.225(C)	Please make the following changes to strengthen weak language:  <u>Development proposals shall seek to maintain ecological connectivity and habitat corridors whenever possible.</u> <u>Restoration of ecological connectivity and habitat corridors shall be considered a priority restoration and mitigation action.</u>	See response to RES07. Further, until actual wildlife corridors are identified, mapped, and adopted, trying to maintain a variable corridor width dependent on the species one's trying to manage would not be possible through piecemeal development review.
RES06	Ander Russell, Resources	9/17/20	F	16.16.255(B)(3) & (5)	We support the addition of 16.16.255 B #'s 3 and 5	Comment noted.
RES07	Ander Russell, Resources	9/17/20	D		Please add a wildlife corridor overlay to shoreline maps in Exhibit D or wherever else is relevant.	The only wildlife corridor that the Council has adopted is the Chuckanut Wildlife Corridor, which is shown on our critical areas maps. Our understanding is that the Council's Wildlife Advisory Committee is looking into recommending others (based on a scientific review), but until the Council acts to adopt any new ones we have nothing to map.
RES08	Ander Russell, Resources	9/17/20	D		We are generally opposed to expansions of nonconforming overwater structures, and will make recommendations to P/C & Co/C on revisions to Chapter 23.50.	Comment noted (however, the code does not allow this).
RES09	Ander Russell, Resources	9/17/20	D	23.40.160	<i>Recreation</i> – Item 13d: The language around trails within critical area buffers must be strengthened. Any impacts to any portion of the critical area buffer from recreational trails must comply with all applicable regulations in WCC 16.16 and be mitigated.	In general we have tried not to repeat every requirement of one code in another (i.e., those of 16.16 in T-23, and vice versa), as there is a general rule that

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
						shoreline permits are subject to 16.16. Nonetheless, we have added subsection 23.40.160(A)(6) to remind folks.
RES10	Ander Russell, Re-Sources	9/17/20			<i>Cherry Point Management Area and heavy impact industrial zone</i> – We support the Aug 17 <sup>th</sup> draft revisions to the Cherry Point Management Area section of Chapter 11. Going further, to fully implement the Comprehensive Plan policy amendments for the Cherry Point industrial zone adopted by the County in May 2017, and to maintain consistency with the proposed Cherry Point Amendments—if adopted—additional amendments to other sections of the SMP are warranted. We intend to propose additional revisions, and will seek feedback from PDS and stakeholders before submitting specific language for consideration by the P/C this Fall. Particularly, specifications for where shoreline conditional use permits are required and conditional criteria should be updated further.	Comment noted.
RES11	Ander Russell, Re-Sources	9/17/20	F	16.16.745	<i>Scoping Document Item 18: Shoreline Setbacks/Riparian Management</i> – We were unable to see where language around Scoping Document item 18b had been added. Please provide specific language to show what incentives will be provided to enhance Fish and Wildlife Habitat Conservation Areas.	18(b) reads, “Provide incentives to enhance Fish and Wildlife Habitat Conservation Areas (FWHCA).  Staff had added this to the scope as we had originally considered developing a site-specific shoreline buffer program wherein incentives to enhance would allow buildings be built closer to the shoreline. However, while exploring this option we determined that additional analyses of shoreline characterization would be required, and doing so was not part of the overall scope of a periodic update.
RES12	Ander Russell, Re-Sources	9/17/20	A & B		<i>Scoping Document Item 19: Water Quality</i> – Lake Whatcom is the drinking water source for 100,000 Whatcom County residents. Scoping Document item number 19 addresses Lake Whatcom water quality. However, no recommendations about Lake Whatcom have been added to this or any section in Exhibits A or B. Please add policy language about the importance of	Ch. 10 of the CompPlan already contains an entire narrative regarding this (pg. 10-22), as well as multiple policies (Goal 10-J and its policies, pg. 10-36, as well as multiple other policies throughout). We didn't think this all needed to be repeated.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					Lake Whatcom as the source of drinking water for most County residents and about the current water quality improvement plan (TMDL). We understand that this language is referenced in Exhibit A, however that language is only in the narrative. Please add policy language (in Exhibit A and Exhibit B) about how the County will improve water quality specific to the TMDL for Lake Whatcom.	
RES13	Ander Russell, Re-Sources	9/17/20			<p><i>Scoping Document Item 22: No Net Loss</i> – Thank you for providing clarification in the Guide to Reviewing Draft SMP Amendments document, about the creation of a Not Net Loss Technical (NNL) memo. We support the creation of the memo and understand that it will be completed at an unspecified date after, “public review of draft amendments,” is completed.</p> <p>We agree with the statements made by Futurewise and WEC in their letter. It is very likely that until the County can show that it achieves NNL of shoreline ecological functions it may not be in compliance with the Shoreline Management Act and the Shoreline Master Guidelines.<sup>4</sup></p> <p>Throughout the update clarification is needed on how no net loss (NNL) will be met and monitored. Please provide clarification in the memo of how the County will monitor activities such as forest practices, mining, construction of structures and trails, shoreline stabilization and all others in a way that will result in NNL of shoreline ecological functions.</p> <p>In order to restore salmon, orca and the shoreline ecological functions we all depend on we must think beyond bare minimum requirements. We know the NNL standard is not fully protecting shorelines and wetlands from degradation and we cannot afford to wait another 8 or 9 years for the next update.</p> <p>Please provide clarity on when the technical memo will be completed, allow for public input on the memo and if the memo or resulting actions, show that the SMP is not achieving NNL outline how NNL or net ecological gains, will be achieved and how those new standards will be incorporated in to the SMP, Comp-Plan and Critical Areas Ordinance.</p>	Comment noted. A draft will be provided to the P/C prior to their final action. The draft will need to be finalized once the Co/C has completed their review.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
RES14	Ander Russell, Re-Sources	9/17/20	C	C/P Ch. 8	Thank you for including the new Whatcom County Comprehensive Plan Chapter 8: Mineral Resource Lands in this recommended update draft.	Comment noted (though we believe you're referring to the <i>Marine</i> Resource Lands section).
RES15	Ander Russell, Re-Sources	9/17/20	D	23.30.050	<i>Vegetation Management</i> – Add language requiring the restoration of native vegetation and vegetation conservation standards (lawns and turf are prohibited) for any new building permits, expansions or change of use in the following areas: within 50' of the OHWM for Lake Whatcom or impaired water bodies on the 303(d) list.	Thank you. We had inadvertently left out some of the existing language of the vegetation management section, but have now reinserted it.
RES16	Ander Russell, Re-Sources	9/17/20	D	23.30.060	<i>Cultural Resources</i> – We support the suggestions added by Lummi Nation. Accept and approve all changes added by Lummi Nation in this section.	Comment noted.
RES17	Ander Russell, Re-Sources	9/17/20	D	23.40.040	<i>Agriculture</i> – We support staff's recommendation during scoping around manure holding facilities. We plan to make comments to the P/C & Co/C during this update process to, again, request that requirements be added that any manure holding facility permitted within the shoreline jurisdiction be in the form of above ground tanks or towers instead of earthen lagoons. In order to be protective of our waterways and groundwater, please make manure holding facilities a shoreline conditional use.	Comment noted (though we believe you brought this issue up during scoping, staff did not).
RES18	Ander Russell, Re-Sources	9/17/20	D	23.40.040	<i>Agriculture</i> – Along the same lines, to reduce the risk of contaminant run-off from flooding and seepage, consider making it mandatory for any new or replaced manure lagoons to be above ground in tanks or towers.	Comment noted.
RES19	Ander Russell, Re-Sources	9/17/20	D	23.40.140	<i>Mining</i> – We oppose the amendments to WCC 23.40.140, Mining. We support the language proposed by Futurewise and WEC in their letter. Please update this section with their language for 23.40.140(D).	Comment noted.
RES20	Ander Russell, Re-Sources	9/17/20	D	23.40.140	<i>Mining</i> – We recommend that the SMP Update prohibit motorized or gravity siphon aquatic mining and discharging effluent from this type of mining in shorelines that are the critical habitat for salmon, steelhead, or bull trout and that salmonids use for spawning, rearing, and migration. This is necessary in order to follow RCW 90.48.615(2).	We have added such language.
RES21	Ander Russell, Re-Sources	9/17/20	D	23.40.150	<i>Docks, Piers and Mooring Buoys</i> – Overwater structures, including docks, cause direct and indirect impacts to shoreline functions and habitat for salmon and forage fish like Cherry Point	Please review 23.40.150 again, as we believe we have accomplished these.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>herring during the construction process and over the useful life of the dock. The cumulative impacts of overwater structures are:</p> <ul style="list-style-type: none"> <li>• "Increase in pollutants and habitat disturbance associated with boat operations and dock and piling maintenance",</li> <li>• "Increased travel distance and time for juvenile salmon and extended time in deeper water, increasing predation risk",</li> <li>• "Decrease in eelgrass and plant habitat and overall photosynthesis in intertidal zone",</li> <li>• "Alteration in juvenile salmon prey base and predation pressure", and</li> <li>• "Change in wave energy and longshore drift patterns, and resulting changes in upper intertidal sediment distribution"</li> </ul> <p>Please make these changes concerning Overwater Structures:</p> <ul style="list-style-type: none"> <li>• Add a clear preference for the use of mooring buoys.</li> <li>• Applicants must demonstrate conclusively that use of a moorage buoy, nearby marina, public boat ramp, or other existing shared facility is not possible. This includes providing evidence of contact with abutting property owners and evidence that they are not willing to share an existing dock or develop a shared moorage. For commercial/industrial facilities, this would include evidence that existing commercial facilities can't be shared or are inadequate for the proposed use.</li> <li>• Minimum grating requirements to allow for light.</li> <li>• Any dock, pier, and moorage pile must include an evaluation of the nearshore environment and the potential impact of the facility on the environment.</li> </ul>	
RES22	Ander Russell, Re-Sources	9/17/20	F	16.16.235(B)(4)	<p><i>Mitigation requirements for hazard trees</i> – Currently there's no requirement to mitigate, or replant, a hazard tree. We suggest adding a requirement to replant a native tree in an appropriate location on site for every hazard tree removed in the shoreline.</p>	Please refer to 16.16.235(B)(4)
RES23	Ander Russell, Re-Sources	9/17/20	D	23.40.150	<p><i>Lake Whatcom</i> – The City of Bellingham's SMP (Title 22, BMC) makes many mentions of Lake Whatcom and discourages certain new uses and activities like docks (a whole section in BMC 22.09.060 "Piers, floats, pilings – Lake Whatcom and Lake Pad-</p>	We have reviewed Bellingham's sections of code that you reference and do not see any discouragement as you say; in fact, there's has the same components as

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					den) and the spraying of herbicides (BMC 22.05.020(B)(1)(n)). Please consider mirroring the City's SMP regulations for Lake Whatcom.	ours.
RES24	Ander Russell, Re-Sources	9/17/20	D	23.40.190	<i>Bulkheads and Shoreline Armoring</i> – Bulkheads and other forms of hard armoring should be conditional uses because of their adverse impacts on the shoreline environment.	Comment noted. Please note that in the use table most of the hard armoring measures are either prohibited or require a CUP. For bulkheads specifically we did not change existing text. Furthermore, we did add text that prioritizes soft-stabilization measures, and that hard measures are of last resort.
PB01	Pam Borso	11/8/20	C	C/P Ch. 8	I would like to urge you to include the amendment to Whatcom County's comprehensive plan to include Marine Resource Lands as a way to recognize marine and tidal lands in Chapter 8 of the Comprehensive plan. Marine and tidal lands are as important as forestry, mining and agricultural lands. These lands are significant resources and along with the upland areas adjacent to them need to be protected for their cultural, social and economic values.	Your comments will be forwarded to the P/C for their consideration.
MS01	Mike Sennett	11/8/20	C	C/P Ch. 8	Whatcom County's geography stretches from the coasts of the Salish Sea to the Cascades, and all the watersheds of the three forks of the Nooksack River are gathered and delivered to the Salish Sea. It seems to me that the unique areas where land and ocean meet have been undervalued by the settler culture. The original functioning ecosystems that supported the indigenous peoples have been severely degraded. Estuaries and wetlands have been filled in, and development has sprawled along the shores in Sandy Point, resulting in shoreline armoring. Birch Bay, Drayton Harbor and The Lummi Nation's tide flats have been contaminated by dairy industry pollution. The lack of protection for our coast has resulted from a lack of recognition of its singular importance by the various governments that have oversight over those areas.  It is time to correct that myopia, and to recognize the important status of our marine lands. By adding the Marine Resources Lands Amendment to Chapter Eight of the Comprehensive Plan,	Your comments will be forwarded to the P/C for their consideration.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
KC01	Kim Clarkin	11/12/20	C	C/P Ch. 8	<p>joining Forestry, Agriculture, and Mining as codified land uses.</p> <p>I support calling out, recognizing and protecting Marine Resource Lands specifically in Ch. 8 of the Comprehensive Plan. I do not understand parts of the new section:</p> <ul style="list-style-type: none"> <li>a. p8-36, para 1 makes it sound like MRLs are only marine shorelines. According to the map they actually extend to the county line. It would be helpful to describe the extent and exclusions in this section. The map shows that part of Bellingham Bay, Drayton Harbor and the shoreline around Blaine are excluded for unexplained reasons. Some of these areas are in special designations but there is no explanation of what these designations mean. Perhaps this could be clarified.</li> <li>b. On p8-39, Policy 8U-3 seems unnecessary. If it is meant to convey a specific meaning, could that be stated clearly?</li> <li>c. Policy 8U-4 refers to State marine resource lands within Whatcom County. I think we may mean State aquatic lands within the county.</li> <li>d. On p 8-41, goal 8W includes no policies. Is this because specifics are listed in other areas of the CompPlan? It would seem useful to incorporate policies related to e.g., reducing shading of near-shore habitat by piers and docks; reducing hard shoreline stabilization methods and incentivizing soft ones; preventing oil spills; removing creosote; protecting kelp and eelgrass beds, etc. If this is done elsewhere in the Comp Plan perhaps reference to those sections here would help integrate the Plan.</li> <li>e. I suggest including the boundaries of the Cherry Point Aquatic Reserve on the map.</li> </ul>	<ul style="list-style-type: none"> <li>a. Portions of other jurisdictions' shoreline jurisdiction are excluded; the County has no jurisdiction there.</li> <li>b. You would have to ask the MRC.</li> <li>c. We believe the MRC chose the word "marine" instead of aquatic because they were focused on the <i>Marine</i> Resource Lands, not all aquatic lands.</li> <li>d. Goal 8W has no policies because the MRC did not propose any.</li> <li>e. Not a bad idea.</li> </ul>
CPAPCSC 01	Cherry Point Aquatic Reserve Citizen Stewardship Committee	11/11/20	C	C/P Ch. 8	<p>The CPAR CSC supports policies and regulations that further protect and enhance marine shoreline areas, such as the Cherry Point Aquatic Reserve. Therefore, the CPAR CSC writes this letter to express support for the Chapter 8 Marine Resource Lands addition to the Whatcom County Comprehensive Plan. This addition to Chapter 8 recognizes marine resource lands and designates long overdue protection of these marine resource lands that are vital economically, culturally, recreationally</p>	<p>Your comments will be forwarded to the P/C for their consideration.</p>

					and environmentally.	
BIAWC01	Jacquelyn Stryna, BAIWC	11/5/20	D, F		Terminology – There is initial concern about terminology that requires clarification, including terms such as “Type O water,” “functionally disconnected,” “habitat corridors,” and “ecological connectivity,” among others. Please clarify and specify where these terms are codified.	All terms are defined in Ch. 23. 60 (Definitions) of Title 23 or Article 9 (Definitions) of Ch. 16.16.
BIAWC02	Jacquelyn Stryna, BAIWC	11/5/20	F	16.16.265(A)(1)	Building setbacks – It is unclear why there is a need for building setbacks to be a minimum of 10 feet from the edge of a CA buffer (WCC 16.16). As currently written, the building setbacks further reduce the “reasonable use” footprints from a mere 4,000 square feet to 2, 500 square feet.	The 10’ building setback from critical area buffers is an existing rule (only moved in the amended version). It was adopted by Council to minimize impacts when maintaining structures (e.g., when putting a ladder up against a 2-story structure the bottom would need to stick out 5-10 feet) and to provide a “fire safe” area where combustible materials can be removed.
BIAWC03	Jacquelyn Stryna, BAIWC	11/5/20	D, F		SMP and CAO changes lend increased authority to the County over development, which restricts the freedom and business autonomy of home builders and homeowners alike. Private property rights are infringed upon with less autonomy for land owners and more authority for County government to determine garden and landscape decisions. Restated, the SMP and CAO updates specifically narrow the choices of home builders and homeowners for no reasonable benefit. These proposed updates extend County authority.	Your comments will be forwarded to the P/C for their consideration.
BIAWC04	Jacquelyn Stryna, BAIWC	11/5/20	F	16.16.270(C)(12)	Reasonable Use Exceptions/Reduction: Why is the County proposing a reasonable use reduction to such a small footprint of 2,500 square feet?	Staff has proposed to go back to the 2,500 sq. ft. maximum impact area we had prior to the 2017 Critical Areas update , as under a reasonable use exception granted by the Hearing Examiner no mitigation would be required.
BIAWC05	Jacquelyn Stryna, BAIWC	11/5/20	F	16.16.630(E)	Increased Buffers only further restrict land availability and choke the potential for a home to be built.	Your comments will be forwarded to the P/C for their consideration.
BIAWC06	Jacquelyn Stryna, BAIWC	11/5/20	D, F		Mitigation requirements cost burden projects and mitigation ratio changes impede autonomy in the construction schedule.	Your comments will be forwarded to the P/C for their consideration.
BIAWC07	Jacquelyn Stryna, BAIWC	11/5/20	D, F		All of the proposed land use modifications add to the overall project cost of building a house. This type of over-regulation directly contributes to the high cost of housing Whatcom County	Your comments will be forwarded to the P/C for their consideration.

LSK01	Lesla Starkenburg-Kroontje, on behalf of John and Leanne Olson, Larry and Barbara Nims, and John and Gladys Van Boven	11/19/20	G	Shoreline Environment Designation Map	<p>is experiencing, plus constricts the availability of land supply.</p> <p>This letter is written on behalf of John and Leanne Olson and Larry and Barbara Nims, the owners of APN 390302 428076 0000 and 390302 485039 0000, and on behalf of John and Gladys Van Boven, the owners of APN 390302 440200 0000. Their property is located at the corner of East Pole Road and Everson Goshen Road and is depicted on the attached Assessor section map.</p> <p>My clients' property was designated as a shoreline of the state under the Shoreline Management Program during the 2008 Comprehensive Plan update. However, this entire property is part of the mineral resource overlay under the Whatcom County Code with permits to mine and the ability to change the configuration of the water body.</p> <p>In 2008 after the completion of the Shoreline Management Program update, the property owners were made aware of the designation. Whatcom County staff at the time believed that the owners had requested the designation. This was not the case. In fact, it was the Department of Ecology who mistakenly noted this area as requiring designation in their correspondence with Whatcom County in January of 2007. Had the property owner's been notified they would have explained the temporary configuration of the water body that is still actively mined.</p> <p>The property owners were told to correct the erroneous shoreline designation, they needed to wait until the next Shoreline Management Program Periodic Update. Since the periodic update time is upon us, it is now time to correct the designation. However, I see the error is continuing forward as the maps still note the area is designated as "shoreline".</p> <p>The Washington State Department of Ecology and Whatcom County have not made it a practice to designate mineral extraction sites as shorelines because the size and configuration of the shoreline is not certain until mineral extraction is complete and the mineral resource land zoning overlay removed from the</p>	Before a determination can be made, staff has requested of their attorney an approved reclamation plan.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>property.</p> <p>In fact, as mineral extraction, and its accessory uses, are considered the highest and best use for the property within the mineral resource land overlay it is presumed that expansion and contraction of the water body will continue over the course of many decades. To create a nonconformity for the preferred zoning use and the existing permits for a waterbody that may to temporary in nature is not good planning.</p> <p>This situation has been discussed many times in different permit settings with the County with the understanding that at this time of this periodic update the error would be corrected.</p>	
RFW01	Ander Russell & Eddy Ury (ReSources), Rein Attemann (Washington Environmental Council), and Tim Trohimovich (Futurewise)	11/12/20	A, B, C, E, G	C/P Ch. 10, Ch. 11, Ch. 8 & Title 22, & Shoreline Environment Designation Map	<p>We recommend that the P/C tentatively approve all Comprehensive Plan amendments proposed in Exhibits A, B, and C, as well as all proposed amendments to WCC Title 22 shown in Exhibit E, as well as the Shoreline Environmental Designations map.</p> <p>However, as our previous comments stated, we are recommending additional policies be added into the Comprehensive Plan, with corresponding development regulations updated in Title 22.</p>	Your comments will be forwarded to the P/C for their consideration.
RFW02	Ander Russell & Eddy Ury (ReSources), Rein Attemann (Washington Environmental Council), and Tim Trohimovich (Futurewise)	11/12/20	B	C/P Ch. 10	<p>Modify Policy 11AA-5 be modified to read as follows:</p> <p>Policy 11AA-5: <u>Whatcom County shall monitor the impacts of climate change on Whatcom County's shorelands, the shoreline master program's ability to adapt to sea level rise and other aspects of climate change at least every periodic update, and revise the shoreline master program as needed.</u></p> <p>Whatcom County <del>shall</del><u>should</u> periodically assess the best available sea level rise projections and other science related to climate change within shoreline jurisdiction and incorporate them into future program updates, as relevant.</p>	The P/C accepted this recommendation, though retained "should" (instead of "shall") in both the 1 <sup>st</sup> and 2 <sup>nd</sup> sentences.
RFW03	Ander Russell & Eddy Ury (ReSources), Rein Attemann (Washington Environmental Council), and Tim Trohimovich	11/12/20	B	C/P Ch. 11	<p>Add a new Policy 11AA-8 reading: <u>New lots and new and expanded development should be located so they will not interfere with the landward expansion and movement of wetlands and aquatic vegetation as sea level rises.</u></p>	Your comments will be forwarded to the P/C for their consideration.

	(Futurewise)					
RFW04	Ander Russell & Eddy Ury (ReSources), Rein Attemann (Washington Environmental Council), and Tim Trohimovich (Futurewise)	11/12/20	A	C/P Ch. 8	Add an additional policy, possibly under Goal 10D: <u>Protect natural processes and functions of Marine Resource Lands and critical areas in anticipation of climate change impacts, including sea level rise.</u>	Your comments will be forwarded to the P/C for their consideration.
RFW05	Ander Russell & Eddy Ury (ReSources), Rein Attemann (Washington Environmental Council), and Tim Trohimovich (Futurewise)	11/12/20	D, F	Title 23, Ch. 16.16	We recommend that the P/C table all changes to WCC 16.16 and WCC 23.40 until a No Net Loss memo is prepared.	A draft NNL addendum is anticipated in December 2020. The P/C will have it prior to any final action.
MM01	Mike MacKay	11/30/20	D	23.40.190(A)(8)	<p>1. When hard shoreline stabilization measures are demonstrated to be necessary, they must:</p> <ul style="list-style-type: none"> <li>a. Limit the size of stabilization measures to the minimum necessary; and</li> <li>b. Assure no net loss of shoreline ecological functions, <u>including loss of substrate for forage fish spawning; and</u></li> <li>c. <u>Regular beach nourishment must be provided to retain beach material with substrate size suitable for forage fish spawning; and,</u></li> <li>d. Ensure that publicly financed or subsidized shoreline erosion control measures do not restrict appropriate public access to the shoreline except where such access is determined to be infeasible because of incompatible uses, safety, security, or harm to ecological functions.</li> </ul>	<p>Though the commenter cited §23.4.180, the text to which he is referring is found in §23.40.190(A)(8).</p> <p>Though staff agrees with the sentiment, we don't believe the addition to (b) is necessary, as loss of substrate for forage fish spawning is just one of many shoreline ecological functions already addressed in Ch. 16.16. Thus, it is one of many specific aspects already addressed by the general rules. Additionally, such areas are already designated as critical saltwater habitat, which is designated a Habitat Conservation Area in Ch. 16.16.</p> <p>The addition of (c) is similar (one specific aspect already covered by the general). But furthermore, beach nourishment is not always the best solution for all habitats. Determining whether beach nourishment is necessary should be determined through the Critical Area Assessment Report process.</p>
MM02	Mike MacKay	11/30/20		23.50.020	Nonconforming Structures <u>H. Seasonal floating traps and weirs for enumerating salmon on</u>	Staff opposes this addition. We don't believe that we ought to blanket desig-

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p><u>streams and rivers are considered a legally nonconforming structures, provided they do not impede river vessel transport or otherwise affect the normal functions of river flow and sediment transport.</u></p>	<p>nate all seasonal traps and weirs as “legally nonconforming.” To achieve this status, the structure has to have been in the same place prior to August 27, 1976—or permitted prior to being made non-permissible by a change in code—and remain in place without a gap of 18 months. The fact that they’re seasonal and moved around makes that highly unlikely. Nonetheless, seasonal traps and weirs are considered a water-dependent use allowed in the aquatic environment and are permissible (though we can’t recall when anyone’s ever applied for a permit to install one).</p>
MM03	Mike MacKay	11/30/20		23.060.060	<p>"F" definitions 24. <u>"Forage Fish" means a group of marine fishes such as surf smelt, sandlance, and herring which provide an important primary food sources for juvenile salmonids and other fish. Intertidal and subtidal gravel and sand sediments on many beaches provide the essential spawning and incubation habitat for surf smelt and sandlance.</u></p>	<p>Staff isn’t opposed to adding such a definition, but think it unnecessary as “spawning and holding areas for forage fish, such as Pacific herring, surf smelt and Pacific sandlance” is already included in the definition of “Critical saltwater habitat.” Nonetheless, were it to be added it should be added to Ch. 16.16, not Title 23. However, the second sentence isn’t really part of a definition of what these fish are, just a statement of the importance of sediment to them. Staff suggests not including it.</p>
MM04	Mike MacKay	11/30/20		23.40.090	<p>Fill and Excavation 9. <u>Marine fill or excavation shall not impede the normal movement of juvenile salmon to move along the intertidal shoreline (salmon migratory corridor) or to force them into deeper water where they are subject to increased predation.</u></p>	<p>Similar to comment MM01, we find this a very specific issue already covered by the general rules. Subsection (A)(1) (and other sections of Title 23) already state that shoreline uses and modifications cannot impact shoreline ecological functions and ecosystem-wide processes. Part of our goal for this update was to</p>

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
						reduce such redundancies and we don't think each section needs to list all the potential impacts a use or modification may have.
MM05	Mike MacKay	11/30/20		23.60.190	"S" definitions 1. <u>"Salmon migratory corridor" means the intertidal pathway used by juvenile salmonids during the first few months of saltwater migration. This intertidal habitat provides protection from predators during initial entry into saltwater.</u>	Again, were such a definition added it should be added to Ch. 16.16, not Title 23. Nonetheless, staff doesn't think this definition is needed as the term is not used in either Ch. 16.16 or Title 23.
NWSF01	Eleanor Hines, NW Surfrider Foundation	11/11/20	C	Marine Resource Lands	<p>Writing to express our strong support for the addition of marine resource lands in chapter 8 in the Comprehensive Plan.</p> <p>Agriculture, forest, and mineral lands are already recognized in the Whatcom County Comprehensive Plan, so the addition of Marine Resource Lands to Chapter 8 is fully supported by the Surfrider Northwest Straits Chapter. We only regret that Marine Resource Lands were not included sooner as they are extremely important economically, culturally, recreationally, and environmentally to Whatcom County. Marine resource lands deserve the same protection as our other resource lands and would add a unique protection from other current policies and regulations.</p> <p>We strongly support the inclusion of education and recreation in this section, and we ask that appropriate resources and capacity are allocated to ensure the Chapter 8 additions are fulfilled. We will continue to advocate for the effective and sustainable management of our marine resource lands so that future generations enjoy all the economic, cultural, recreational, and environmental benefits they provide.</p>	Your comments will be forwarded to the P/C for their consideration.
RFW06	Ander Russell & Eddy Ury (ReSources), Rein Attemann (Washington Environmental Council), and Tim Trohimovich (Futurewise)	12/10/20	B		<u>Add new Policy 11AA-8: New lots and new and expanded development along the marine shoreline should be located two feet above the OHWM so they will not interfere with the landward expansion and movement of wetlands and aquatic vegetation as sea level rises. Sea level rise elevation data shall be revised every eight years or when the SMP is updated.</u>	Your comments will be forwarded to the P/C for their consideration.

RFW11	Karlee Deatherage (Resources), Tim Trohimovich (Futurewise), & Rein Attemann (WEC)	1/12/21	B	11AA-8	<p>Add new policy:</p> <p><u>11AA-8: The buildable area of new lots and new and expanded development along the marine shoreline should be located two feet above the OHWM so they will be at a lower risk of damage and not interfere with the landward expansion and movement of wetlands and aquatic vegetation as sea level rises. The part of the ownership waterward of the buildable area may be used as required open space. If new data is available, sea level rise elevation data shall be revised during the SMP periodic update.</u></p>	<p>This is a revised proposal after speaking with staff about our implementation concerns. Though staff still takes the position that we should await the CoSMoS model to be completed for Whatcom County, this policy is probably implementable.</p>
RFW11	Karlee Deatherage (Resources), Tim Trohimovich (Futurewise), & Rein Attemann (WEC)	1/12/21	D	23.30.080	<p>Add new section:</p> <p><b><u>23.30.080 Sea Level Rise.</u></b></p> <p>A. <u>The buildable portion of new lots shall be designed and located a minimum of two feet above the OHWM so that the buildable area is outside the area likely to be inundated by sea level rise in 2100 and outside of the area in which wetlands and aquatic vegetation will likely migrate during that time. The part of the ownership waterward of the buildable portion may be used as required open space.</u></p> <p>B. <u>Where lots are large enough, new structures and buildings shall be located a minimum of two feet above the OHWM so that they are outside the area likely to be inundated by sea level rise in 2100 and outside of the area in which wetlands and aquatic vegetation will likely migrate during that time.</u></p> <p>C. <u>New and substantially improved structures shall be elevated above the likely sea level rise elevation in 2100 or for the life of the building, whichever is less.</u></p> <p><b>How the language will work in practice</b> Currently new shoreline development must locate the ordinary high-water mark as part of the application for a shoreline exemption or shoreline permit. The proposed policy and regulations simply require the applicant to locate the buildable area for</p>	<p>This is a revised proposal after speaking with staff about our implementation concerns. Though this tact may be implementable, staff still takes the position that we should await the CoSMoS model to be completed for Whatcom County.</p> <p>There isn't a requirement to address climate change/sea level rise in the SMA, though we could if Council desires. However, what we understand from the DOE is that any such regulations should be built on data, which is what PS-CoSMoS will be providing. Furthermore, once the data is available, we should perform vulnerability and risk assessments to see what kind and where the problems might be, and update our shoreline inventory and characterizations. Without such science, we would be open to challenges.</p>

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>new lots or the new development two feet above the ordinary high-water mark. Where existing lots are not large enough to accommodate this requirement, the new structures or buildings can be elevated. Determining the location of the area two feet above the ordinary high-water mark will require little addition time or expense.</p> <p><b>Why two feet of elevation?</b> The two feet of elevation is based on the Projected Sea Level Rise for Washington State – A 2018 Assessment for Whatcom County. These science-based projections were prepared by a collaboration of Washington Sea Grant, the University of Washington Climate Impacts Group, Oregon State University, the University of Washington, and the US Geological Survey.<sup>3</sup> These projections incorporate:</p> <ul style="list-style-type: none"> <li>• New science showing the potential for higher sea level rise in the 21st century.</li> <li>• The projections are “community-scale.” They were prepared for 171 locations distributed along Washington’s coastline including Puget Sound. The projections account for variations “in the rate of vertical land movement across the state.”<sup>5</sup> That is: the projections include whether an area is uplifting or subsiding.</li> <li>• The report was peer-reviewed.</li> </ul> <p>Sea level rise is a real problem that is happening now. Sea level is rising and floods and erosion are increasing. The National Research Council concluded that global sea level had risen by about seven inches in the 20th century. A recent analysis of sea-level measurements for tide-gage stations, including the Astoria, Oregon and Seattle Washington tide-gauges, shows that sea level rise is accelerating. The Virginia Institute of Marine Science (VIMS) “emeritus professor John Boon, says “the key message from the 2019 report cards is a clear trend toward acceleration in rates of sea-level rise at 25 of our 32 tide-gauge stations. Acceleration can be a game changer in terms of impacts and planning, so we really need to pay heed to these patterns.” We hope the P/C agrees that it is time to address this</p>

						duce flooding and the need to build higher flood prevention berms along the river as the climate continues to change."
PB03	Pam Borso	1/11/21	D	23.50.010(E)	Please approve the following amendment to the Shoreline Management Act as presented by Jim Hansen:  Nonconforming Uses: Jim will propose a change that will no longer allow the replacement of one shoreline nonconforming use (Grandfathered) with another different nonconforming use.	See response to KC02
MM06	Mike MacKay	1/1/21	D	23.40.140	Please consider language which would prohibit mining (gravel scalping) in the Channel Migration Zone.  I have firsthand experience how this activity can seriously impact endangered Chinook salmon in the Nooksack River. I was doing field surveys at the time as a fisheries biologist with the Lummi Tribe. These were spawner surveys documenting locations of Chinook and Chum redds (salmon nests). This took place in late September in the 1980s at a sandbar downstream of the Everson Bridge on the right bank (North side).  At that time it was not widely known about Chinook spawning in that part of the lower river. I had talked to several gravel scalping company employees during this activity and they vehemently denied seeing any salmon spawning at these excavation sites. WA Fish and Wildlife had reluctantly issued permits for gravel scalping activities. Operators were required by WDFW to re-grade areas they excavated at the end of each day. Unfortunately this was routinely ignored.  In this case of the Everson sandbar, the bar was dredged and the sand/silt/gravel material was stockpiled in large heaps immediately upstream of several active Chinook redds that I observed being constructed. A few days later there was a high flow event, as is common this time of year during rainstorms (late September). The stockpiled mounds were eroded away and essentially covered the redds downstream I had observed earlier. I carefully documented this with a report and photos which	See response to PB02

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>was sent to WDFW permit writers. Since this time WDFW has been reluctant to issue new permits for this activity on the Nooksack River.</p> <p>I have researched the effects of fine sediments on salmon redds in the literature. What occurs is that the fines less than 0.5 mm are driven down into the stream bed by the swift water into the newly built redd(s) and form a layer which effectively suffocates the eggs. This fine sediment impedes the flow of oxygenated water around the egg pockets. Adult female salmon are careful to remove fine sediments from the redd during their excavation and egg laying. While some natural occurring fines accumulate in the egg pockets as the result of high flow events, this amount usually doesn't restrict flows of circulating water to any large extent, and certainly not to the degree that an eroded nearby source of newly excavated sediment would.</p> <p>There are numerous sandy/gravel areas in the lowlands of Whatcom County not adjacent to the river available for gravel extraction. Gravel scalping should not be an allowed activity in the Channel Migration Zone or next to any flowing rivers or streams.</p>	
KC03	Kim Clarkin	1/12/21	D	23.30.080	I support the additional policy and regulation proposed by Futurewise, RE-Sources, and WEC regarding limiting new and expanded near-shore building to 2' above the OHWM. Given the projected sea levels in future, and the uncertainty surrounding the exact figure, 2' seems to me an excellent choice. We should definitely not permit people to build right at current OHWM if we want to protect their safety and investment. Please incorporate the additions to Chapter 11 of the Comprehensive Plan, and WCC 23.30.	See response to RFW11.
NTNR01	Michael Maudlin, Nooksack Tribe Natural Resources staff	1/13/21	D	23.30.070	<p><b>Public Access</b> Trail construction within the shorelines buffer is a long-term, permanent impact to instream habitat. The loss of wood recruitment to the channel due to the removal of hazard trees and maintenance of downed wood across the trail needs to be considered in the assessment of trail impacts. The interruption of the process of natural wood delivery to the channel is largely</p>	While the writer's point may be valid, the SMA identified public access to the shorelines as a preferred use (and one of the driving forces in its adoption). While WCC Ch. 16.16 contains numerous standards for where trails may be located in critical areas and how they're built,

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					responsible for the degraded instream habitat conditions for threatened fish stocks and has led to local salmon recovery partners spending millions of dollars installing artificial logjams to offset this impact. Where trails align with existing roads or levees that already receive maintenance this is less of an additional impact, but siting recreational development within the shorelines buffer should be discouraged to be consistent with other general regulation sections.	WCC 16.16 does not address maintenance. We suggest you work w/ Whatcom County Parks Department to address this issue.
NTNR02	Michael Maudlin, Nooksack Tribe Natural Resources staff	1/13/21	D	23.40.140	<b>Mining</b> The Nooksack Natural Resources Department strongly opposes gravel mining in the active channel area and bars of the river. The history of instream habitat degradation associated with past mining operations has been well documented by the Lummi Nation and with the subsequent listing of fish stocks under the Endangered Species Act gravel removal from the channel is not a viable commercial activity. The disturbance from gravel mining can directly impact salmon habitat, disrupt the aquatic food web, degrade water quality, disturb emergent vegetation and alter the natural process of sediment transport and storage- all of which the SMP is designed to protect. It is simply not possible to design and conduct in-channel mining activities that will not lead to a loss of ecological function and natural process. Any sediment management activities in the river, including removal for flood management, need to maintain consistency with the WRIA 1 Salmon Recovery Plan and the on-going integrated floodplain management planning effort. This section should be edited to prohibit gravel mining from the river.	Your comments will be provided to the P/C & Co/C.
NTNR03	Michael Maudlin, Nooksack Tribe Natural Resources staff	1/13/21	D	23.40.160	<b>Recreation</b> As previously mentioned, trails can be a permanent impact to critical area buffers. It is important to make sure that trail location is not degrading riparian function. Limiting trails to the outer 25% of the buffer will help preserve potential wood recruitment to the channel. Ideally, recreational infrastructure would be cited outside of buffer areas to the fullest extent possible.	We agree, and WCC 16.16 does limit trail construction to the outer 25% of the buffer (except in certain limited circumstances) and mitigation is required.
MES27	Ed Miller, Miller Environmental Services	2/19/21	F	16.16.225(D)	Replace "associated with marine, river, or lake shorelines and wetlands" with "within designated critical areas and/or buffers." The term "associated with marine, river or lake shorelines and	This new section is intended to address the SMA's requirement to preserve native plant communities associated with shore-

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					wetlands" is vague. This could imply any native plant communities any distance from a marine area, river, lake or wetland. It seems the intent should be to prioritize native plant communities within designated critical areas and/or buffers – that are specifically covered within this chapter of the CAO. Otherwise, it seems the code would be directing applicants to design projects based on plants and plant communities not covered by the CAO.	lines. Though shorelines are considered critical areas pursuant to 16.16.710, staff thought it would be easier for people to understand this rule by if we just call them out. Thus, this wouldn't expand CAO requirements outside of intended areas. Though it could be changed to read as suggested, it wouldn't have any effect on the regulation. The term "associated" refers to associated with... shorelines, as detailed in the WAC.
MES28	Ed Miller, Miller Environmental Services	2/19/21	F	6.16.255(C)(3)	Strike the new added section "Critical areas assessment reports shall... identify impacts of the proposed use/development on habitat corridors, ecological connectivity, and habitat for salmon and forage fish." Currently, Biodiversity areas and corridors are a WA Fish and Wildlife (WDFW) Priority Habitat. All WDFW priority habitats are currently regulated as HCA's in the CAO. As such applicants are already required to address them. Additionally, habitat for salmon and forage fish are also HCA's covered in the code, as all streams and waters are included as HCA's. The term ecological connectivity is very general and could be widely interpreted to mean many different habitats not covered under the CAO. Otherwise, if that is not staff intent, it would appear this extends CAO jurisdiction over areas not designated as critical areas within the code.	This language, along with other additions, was added to address Council's direction in the Scoping Document to "Consider strengthening ecological connectivity and wildlife corridor requirements" and "Consider ways to improve protections for salmon and forage fish habitat" (Items #8b and 8c). Though, as Mr. Miller argues, Biodiversity areas, wildlife corridors, and WDFW Priority Habitats are designated as critical areas already, addressing them in critical areas assessments was often overlooked. The text was inserted as a reminder that – if there are any such features affected by a development proposal – they should be addressed in the assessment.
MES29	Ed Miller, Miller Environmental Services	2/19/21	F	16.16.270	This section is a complete rewrite of reasonable use procedures and would require a variance (minor and major variance) before reasonable use would apply. Strike the proposed changes and return to the prior language.	The change better aligns with Department of Commerce and Department of Ecology guidance on Reasonable Use Exceptions. The current and previous CAO did not follow the guidance from State Agencies.  The existing code does require a variance process to be completed before a reasonable use exception is granted. The

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
						<p>Hearing Examiner has questioned why he isn't the final decision maker, as the current code allows an administrative determination to be made after a quasi-judicial decision, and in the hierarchy of permitting, applicants should have to exhaust any administrative remedies before seeking a quasi-judicial decision. Thus, we have rewritten the processes and changed the order of the various mechanisms so that the more impactful cases are heard by the Hearing Examiner.</p> <p>Please see the staff report to the P/C dated 4/12/21 for a more detailed explanation as to why staff is proposing this new schema.</p>
MES30	Ed Miller, Miller Environmental Services	2/19/21	F	16.16.270(j)	Add the italicized text at the end of the sentence, "The project includes mitigation for unavoidable critical area and buffer impacts in accordance with the mitigation requirements of this chapter <i>or if the mitigation requirements cannot be met, to the maximum extent feasible on the property.</i>	The section to which Mr. Miller refers is language proposed for deletion. Nonetheless, under the proposed RUE rules, his suggestion would be already be the case.
MES31	Ed Miller, Miller Environmental Services	2/19/21	F	16.16.270(C)(12)	<p>We also propose adding language for the reasonable use section to allow for a development footprint of up to 4,000 square feet for reasonable use single-family residential development. Buffer mitigation should be proposed to offset impacts from reasonable use development as much as possible, but development shall not be denied if the minimum 1:1 mitigation ratio cannot be achieved on the subject property. This would not apply to direct impacts to critical areas themselves, as is the case in the current code.</p> <p>The proposed change is a significant alteration to the code. A significant number of previously designated reasonable use projects, processed administratively, would need to go to the hearing examiner. This will significantly increase costs and time to applicants for simple single-family construction or projects with only buffer impacts – as the current code requires an open</p>	<p>The P/C has already tentatively voted to leave the allowable disturbed area as 4,000 sf.</p> <p>Please see the staff report to the P/C dated 4/12/21 for a more detailed explanation as to why staff proposed to go back to the 2,500 sf under our proposed new schema.</p>

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					public hearing for anything more complex. The change to section j is included so that applicants aren't required to purchase another property for mitigation – which has been required in some cases, precluding any development at all (even for buffer impacts).	
MES32	Ed Miller, Miller Environmental Services	2/19/21	F	16.16.620(D) & .720(D)	Strike the change to “existing legal lots” and keep the current language of “private development sites” in both wetland and HCA sections. This section as modified implies that no new lots could be created (subdivided) if a road would be needed to cross through a wetland or buffer or habitat conservation areas. Access to acres of unencumbered property could be restricted if one small wetland or its buffer would need to be impacted to access a development area.	We believe that Mr. Miller was reviewing an older draft, as this language has already changed. Furthermore, subsection (C) continues to allow for stream crossings to undeveloped land.
MES33	Ed Miller, Miller Environmental Services	2/19/21	F	16.16.630(B) & 6.16.740(A)(1)	Retain the existing language stating that “buffers shall not include areas that are functionally and effectively disconnected from the wetland (or HCA) by an existing, legally established road or other substantial developed surface,” rather than the proposed “buffers shall not include areas of existing, legally established substantially developed surface”. The proposed change would allow buffers to include disconnected area on the opposite side of roads or developed surfaces (such as buildings).	The amendment is proposed so as to be completing consistent with DOE's guidance and not just the portion about functional disconnect. (See Ecology Wetland Science Volume 2.)
MES34	Ed Miller, Miller Environmental Services	2/19/21	F	16.16.640(A)(5)	Regarding Buffer Width Increasing, strike this added section, which is not in the current code and allows staff to extend any Category II wetland buffers out to 300 feet if another wetland or HCA is within 300 feet. HCA's include mature forest, priority snags (logs on the ground, 20 feet long, 12 inches wide), streams, etc. The intent of this appears to be to increase buffers if adjacent critical areas are present. However, this is already accounted for in the wetland rating form. The habitat score, which drives the buffer width, is scored higher if habitat conservation areas are within 330 feet. The proposed draft change seems redundant when these factors are already utilized in determining the buffers in the current code - based on the wetland rating form.	The existing code already allows the Director to increase buffer widths, but with less guidance, which consultants are usually clamoring for. Thus, we “borrowed” language from Skagit County, which provides better detail on when the Director can do so. We don't see how this would result in a double counting towards buffer requirements
MES35	Ed Miller, Miller Environmental Services	2/19/21	F	16.16.640(B)(2) & 16.16.745(B)(2)	Regarding Buffer Width Averaging, strike the proposed language “In the specified locations where a buffer has been re-	In 2005 the Department of Ecology released two volumes of Best Available

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>duced to achieve averaging, the Director may require enhancement to the remaining buffer to ensure no net loss of ecologic function, services, or value.”</p> <p>This new language effectively eliminates the intent of buffer averaging and converts it to buffer reduction by requiring mitigation. Buffer averaging is an important and simple way to allow more flexibility for property owners that need to make minor buffer adjustments. This section will also reduce consistency and predictability (each staff member could apply this differently), and will increase the cost for simple projects by requiring plantings, monitoring, bonding, etc. by thousands of dollars. Additionally, the Director already has the ability to require plantings in a wetland or HCA buffer where it lacks adequate vegetation under 16.16.630.D or 16.740.B.1 – making this code addition redundant.</p>	<p>Science: <a href="#">Volume 1</a> was a synthesis of knowledge to date, and <a href="#">Volume 2</a> addressed management recommendations. Ecology addresses buffer averaging in two locations, the first is in Volume 2 section 8.3.8.3 (Buffer Averaging) and the second, in greater detail, in <a href="#">Appendix 8-C</a> (Guidance on Widths of Buffers and Ratios for Compensatory Mitigation for Use with the Western Washington Wetland Rating System). In Volume 2, Section 8.3.8.3, Ecology explains three reasons why buffer averaging is in the tool kit for protection of wetlands. The first and typical reason is to allow development to occur closer than usual to the wetland in order to fit a particular development “footprint” onto a given site. The second reason is protect a natural feature (e.g., a stand of trees or snags) that otherwise would fall outside of the standard buffer. And the third reason is to provide connections with adjacent habitats or to address those situations where pre-existing development has reduced a buffer area to a width less than the required standard.</p> <p>In Appendix 8-C Ecology states “widths of buffers may be averaged if this will improve the protection of wetland functions or if it is the only way to allow for reasonable use of a parcel. There is no scientific information available to determine if averaging the widths of buffers actually protects functions of wetlands.” Ecology then proceeds to provide criteria for averaging a buffer: 1) It should not be reduced by more than ¼; 2) the area of the standard</p>

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
						<p>and averaged buffer are the same; and 3) the buffer is increased adjacent to the higher functioning buffer, and there is a distinct difference between the higher functioning and lower functioning buffers. The requirement for a high function and lower function buffer eliminates the use of averaging when the buffer is entirely degraded.</p> <p>Thus, staff recommends that we amend the draft language to allow buffer averaging only when there is fully functioning and degraded habitat and add language that supports Ecology's Guidance for allowing averaging to protect ecologically significant areas outside of the buffer or habitat connectivity. Section (B)(2) would read:</p> <ol style="list-style-type: none"> <li>1. Averaging of required buffer widths will be allowed for the following when the dimensional standards of subsection (B)(1) are met: <ol style="list-style-type: none"> <li>a. To protect a natural feature (e.g., a stand of trees or snags) that otherwise would fall outside of the standard buffer.</li> <li>b. To provide connections with adjacent habitats or to address those situations where pre-existing development has reduced a buffer area to a width less than the required standard.</li> </ol> </li> </ol>
MES36	Ed Miller, Miller Environmental Services	2/19/21	F	16.16.640(C)(1)(c)	Regarding Buffer Width Reduction, retain the existing language that allows for up to 50% reduction (or 25 feet) for Category IV wetlands, rather than the proposed "The buffer shall not be re-	The maximum reduction of 75% through buffer averaging is based on DOE guid-

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					duced to less than 75% of the standard buffer.  The existing code section allows for up to a 50% (or minimum of 25 feet) reduction of a Category IV wetland buffer, while higher category wetlands are restricted to a 25% reduction. Under the draft buffer averaging section, Category IV wetlands are still allowed up to a 50% reduction. This will just remove some flexibility for property owners for the lowest category of wetlands.	ance.
MES37	Ed Miller, Miller Environmental Services	2/19/21	F	16.16.640(C)(1)(e)(iii)	Regarding Buffer Width Reduction, strike the new added section requiring "Retention of existing native vegetation on other portions of the site in order to offset habitat loss from buffer reduction."  This added code section appears to increase CAO authority to other areas of the property and other project components outside of critical areas. Staff already has authority to deny proposed buffer reductions, under parts D, F and G of this code section. Part G of this section already requires mitigation for buffer reduction impacts and result in equal or greater protection for the wetland.	This section does not expand CAO authority to areas outside of critical areas; it only provides a pathway to having narrower buffers (see response to item 5, above). The proposed subsections (e) & (f) provide three ways to for an applicant to minimize impacts and provide equivalent functions and values. Subsection (iii) of these subsections lists just one of the ways an applicant of a moderate impact land use project may apply low intensity buffer widths, which are narrower. An applicant need not do this if they don't want to reduce their buffers (the wider buffers would then apply).
MES38	Ed Miller, Miller Environmental Services	2/19/21	F	16.16.640(C)(3) & 16.16.745(C)(2)	Regarding Buffer Width Reduction, strike the draft added section "where a portion of the remaining buffer is degraded, the buffer reduction plan shall include replanting with native vegetation in the degraded portions of the remaining buffer area."  The new language appears to be redundant; C.2.g of the wetland section and C.1.g of the HCA section already requires mitigation and no net loss of function for any buffer reduction. Additionally, Section 16.16.630.D and 16.16.740.A.2 also gives the Director authority to require planting in degraded buffer if needed. The draft language implies any amount of degraded buffer could be required to be planted for buffer impacts, no matter how small. This would penalize applicants who own agricultural property and/or grass/hayfields.	The planting of degraded buffers has been a part of our CAO since 2005 and is based on Best Available Science and DOE guidance. Based on case history, we are only clarifying that the area that might be enhanced is limited to the specific portions of the buffer being reduced, not anywhere on the lot, and certainly not outside critical area buffers (and thus does not "grant unlimited potential for mitigation requirements"). Per DOE guidance, "degraded" is any portion of a buffer that is not in a densely vegetated community. Ecology provides this re-

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
						quirement in Appendix 8C, Section 8C.2.5 to either increase the buffer or enhance with native vegetation. Ecology's guidance for buffer size is based on science with a densely planted vegetative buffer.
MES39	Ed Miller, Miller Environmental Services	2/19/21	F	16.16.680(H)	<p>Regarding Wetland Mitigation Ratios, maintain the existing language and strike the proposed language that requires a higher ratio of mitigation when it's done after the impact occurs.</p> <p>Generally, applicants do not conduct mitigation activities prior to permit approval, and generally go to construction as soon as permits are issued. Additionally, mitigation planting is often tied to the planting season – which is preferably fall through spring to increase survivability. This added code language would appear to add a year to applicants' timeline or penalize them with up to 25% more buffer mitigation. Additionally, no net loss of buffer function already required under 16.16.640(C)(2)(g).</p>	This proposed requirement comes from DOE guidance to account for temporal loss.
MES40	Ed Miller, Miller Environmental Services	2/19/21	F	16.16.710(C)(1)(a)(vi) & 16.16.740(B)	<p>Strike this addition of Type O waters and associated 25-foot buffer. Return the prior designation of Natural Ponds to the buffer Table requiring a 50-foot buffer.</p> <p>The definition of Type O waters is vague and could potentially include ditches and artificial ponds. Type O waters do not correlate with Washington State water typing. If the intent is to include ponds as an HCA, we recommend restoring previous code language that included a 50-foot buffer for natural ponds and lakes under 20 acres in size and no buffer for artificial ponds.</p>	The amendment to create Type O water is proposed so as to align Ch. 16.16 with the County's Manure and Agricultural Nutrient Management regulations (WCC Ch. 16.28), which prohibit "the spreading of manure within 50 feet of drainage ditches leading to rivers and streams." This is the code that our Pollution Identification and Correction (PIC) program uses to curtail the introduction of agricultural runoff into our waterways, thereby protecting our shellfish resources. Creating a Type O water with a 25-foot buffer was suggested by our PIC managers, the Whatcom Conservation District, the Department of Agriculture, and other partner agencies so that there's a buffer between where manure might be spread and our waterways. It was determined that 25-feet

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
						would be adequate for this function. Were we to revert to the existing code, then such waterways/ditches might be considered one of the other types with a larger buffer.
MES41	Ed Miller, Miller Environmental Services	2/19/21	F	16.16.745(A)	Regarding Buffer Width Increasing, strike the new added section 16.16.745(A)(2), allowing the Director to increase HCA buffers under certain conditions.  This is a new provision to the code that allows the Director to extend Type S or F buffers to resources within 300 feet – including Category III wetlands, other HCA's or other waters. Again, this is an exceptionally broad provision to add in additional regulated areas that are not currently designated as critical areas or buffers in the existing or even the proposed amended code. The extension of every fish stream or lake buffer to another resource within 300 feet is essentially extending most of the buffer areas to 300 feet.	The existing code already allows the Director to increase buffer widths, but with less guidance, which consultants are usually clamoring for. Thus, we “borrowed” language from Skagit County, which provides better detail on when the Director can do so. We don't see how this would result in a double counting towards buffer requirements
MES42	Ed Miller, Miller Environmental Services	2/19/21	F	16.16.760(B)(8)	Regarding HCA Buffer Mitigation Ratios, maintain the existing language and strike the proposed language that requires a higher ratio of mitigation when it's done after the impact occurs.  Generally, applicants do not conduct mitigation activities prior to permit approval, and generally go to construction as soon as permits are issued. Additionally, mitigation planting is often tied to the planting season – which is preferably fall through spring to increase survivability. This added code language would appear to add a year to applicants' timeline or penalize them with up to 25% more buffer mitigation. Additionally, no net loss of buffer function already required under 16.16.760.	This proposed requirement comes from DOE guidance to account for temporal loss.
LNTHPO02	Tamela Smart, Lummi Nation Tribal Historic Preservation Office	3/1/21	D	23.30.060(A)(2)	A Cultural Resources <u>survey and</u> report. The current language does not include the word survey.	“Survey and” has been added to this section.
LNTHPO02	Tamela Smart, Lummi Nation Tribal Historic Preservation Office	3/1/21	D	23.30.060(A)(3)	The LNTHPO would like to be consulted whether or not cultural resources were encountered during the survey.	This section directs the County to provide the cultural resource report to DAHP—and if Native American cultural resources are addressed—to the Tribes. Staff isn't sure why such reports would need to be

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
						provided to the LNTHPO if N.A. resources aren't involved. Nonetheless your comment will be provided to the P/C and Co/C.
LNTHPO02	Tamela Smart, Lummi Nation Tribal Historic Preservation Office	3/1/21	D	23.30.060(A)(5)	<p>The LNTHPO recommends that the permit also be conditioned based on the County's consultation with the affected tribes and the Department of Archaeology and Historic Preservation.</p> <p>If no cultural resources are encountered and the consulting parties concur with the findings, the Whatcom County Inadvertent Discovery Plan for cultural resources should be on-site and followed if cultural resources or human remains are encountered.</p>	<p>This section states that "any permit issued shall be conditioned on meeting the approved report's management recommendations." Given that the report, including the management recommendations, would be approved by DAHP and the Tribe(s) through consultation, then this would already be the case.</p> <p>And subsection (6) already states that any activities would still subject to the state and federal regulations regarding inadvertent discoveries regardless of whether any cultural resources are identified or not, so this, too, would already be the case.</p>
LNTHPO02	Tamela Smart, Lummi Nation Tribal Historic Preservation Office	3/1/21	D	23.30.060(A)(6)	The LNTHPO recommends that this point be made broader to state that any activities are still subject to state and federal laws and regulations regarding cultural resources and human remains.	Regardless of whether we state that any activities are still subject to the state and federal regulations, it would still be the case. Nonetheless, we have broadened the language as suggested.
RFW12	Karlee Deatherage (RE Sources), Danielle Shaw (WEC), and Tim Trohovich (Futurewise)	3/4/21	F	16.16.270	Restore Reasonable Use language in Dec 4, 2020 draft. We urge the Commission to revisit their proposed change to expand the maximum impact area for single-family residences to be no larger than 2,500 square feet in 16.16.270.C.12. The purpose of the reasonable use provision is to allow only the minimal "reasonable" use of property to avoid a constitutional taking when fully applying the standards of critical areas regulations. The courts generally decide the concept of reasonable; however, reasonable use is often interpreted as a modest single-family home. A home with a footprint 4,000 square feet is excessive. A median size house built in 2019 has 2,301 square feet of floor area. We can assume that to be less than footprint 1,500 square	Your comment will be provided to the P/C & Co/C for consideration.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>feet.</p> <p>Additionally, we strongly urge the Commission to maintain the new language in the code for the processing of reasonable use exceptions. We understand this is a departure from the current code which allows administrative approval of reasonable use exceptions; however, the way Whatcom County has been processing this is contrary to the intent of reasonable use. Quasi-Judicial bodies like the Hearing Examiner should be making the final call as opposed to staff. All feasible measures to derive use of the property must also be exhausted, which includes pursuing a variance. This mirrors language used in both Skagit County and Snohomish County.</p>	
RFW13	Karlee Deatherage (RE Sources), Danielle Shaw (WEC), and Tim Trohovich (Futurewise)	3/4/21	F	16.16.640(A)(5) and 16.16.745(A)(2)	<p>Regarding Buffer Width Increasing, maintain staff proposed changes.</p> <p>The Commission received a suggestion from Miller Environmental Services, Inc. requesting this section to be removed. We disagree. The wetland rating form is not a part of the CAO and this language should be kept in code. Also, this decision could be made by the Director on a case by case basis to increase the size of the required buffer in specific instances. Striking this from the code could deprive the Director of an important tool to better protect the few remaining areas in the county that are vital for wildlife and water quality functions of wetlands and streams. The Department of Ecology's wetland guidance recommends this as an important tool as well: "Ecology's buffer recommendations are also based on the assumption that the buffer is well vegetated with native species appropriate to the ecoregion. If the buffer does not consist of vegetation adequate to provide the necessary protection, then either the buffer area should be planted or the buffer width should be increased."</p>	Your comment will be provided to the P/C & Co/C for consideration.
RFW14	Karlee Deatherage (RE Sources), Danielle Shaw (WEC), and Tim Trohovich (Futurewise)	3/4/21	F	16.16.640(C)(1)(e)(iii)	Regarding Buffer Width Reduction, maintain staff proposed changes. This change proposed by staff allows the Director to provide flexibility in making buffer reductions while still managing and protecting landscape-scale functions and values. We could see how this could benefit a parcel if buffer reduction is occurring in an area with older stands of native trees and there	Your comment will be provided to the P/C & Co/C for consideration.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					are other trees of similar age onsite that could be preserved and protected from unnecessary clearing. Mature trees serve critical habitat, stormwater control, and water quality functions even if they are not part of a formal buffer for a critical area.	
RFW15	Karlee Deatherage (RE Sources), Danielle Shaw (WEC), and Tim Trohovich (Futurewise)	3/4/21	F	16.16.710(C)(1)(a)(v) and 16.16.740(B)	Regarding Type O Waters and buffer, maintain staff proposed changes.  Miller Environmental Services, Inc. proposes to delete the definition and buffer requirements for Type O waters which connect directly to either waters of the state (Type S waters) or fish habitat (Type F waters) via channel, pipe, culvert, stream, or wetland. We support the staff's proposal to include this because all waters are connected and we must be providing some level of protection from a water quality perspective. Ongoing Agriculture is exempt from this requirement.	Your comment will be provided to the P/C & Co/C for consideration.
RFW16	Karlee Deatherage (RE Sources), Danielle Shaw (WEC), and Tim Trohovich (Futurewise)	3/4/21	F	16.16.745(A)	Regarding Buffer Width Increasing, maintain staff proposed changes.  Having the ability to increase fish and wildlife habitat conservation area buffers is crucial to lend more protection to areas that serve multiple ecosystem functions. This change may only apply to shorelines of the state (Type S waters), fish-bearing waters (Type F waters), or high value wetlands (Category I, II, or III). Again, this is a discretionary decision from the Director which means it may not always happen.	Your comment will be provided to the P/C & Co/C for consideration.
MES43	Ed Miller, Miller Environmental Services	4/12/21	F	16.16.270 & 16.16.273	These sections are a complete rewrite of reasonable use procedures and would require a variance (minor and major variance) before reasonable use would apply.  Current Code: Reasonable use provisions are currently considered prior to a variance application. A variance application is time-consuming, more expensive, and requires review/approval by the hearing examiner with a public hearing. Per 16.16.270.C.1 only reasonable use exceptions for single-family residential building or for other development proposals that would affect only buffers, but not critical areas themselves (e.g., wetlands and streams), shall be processed administratively. Other applications that directly impact critical areas, with the	Our Hearing Examiner has questioned our current schema, in particular why he isn't the final decision maker, as the current code allows an administrative determination to be made after a quasi-judicial decision, and in the hierarchy of permitting, applicants should have to exhaust any administrative remedies before seeking a quasi-judicial decision. Staff is proposing that reasonable use exceptions be the last method of altering standards to allow reasonable economic use of constrained property, and that they be decid-

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>exception of single-family residential, currently have to apply for a variance application. If an applicant currently wants to propose a larger footprint than the allowed 4,000 square feet under reasonable use, they could also apply for a variance.</p> <p><i>Suggested Change:</i> Strike the proposed changes to reasonable use and variance procedures. Return to the current language. Also, add bolded language to section 16.16.270.j. The project includes mitigation for unavoidable critical area and buffer impacts in accordance with the mitigation requirements of this chapter – <b>or if the mitigation requirements cannot be met, to the maximum extent feasible on the property.</b></p> <p><i>Rational for suggested change:</i> The proposed change is a significant alteration to the code and process. A significant number of previously designated reasonable use projects, processed administratively, would need to go to the hearing examiner. This will significantly increase costs and time to applicants for simple single-family construction or projects with only buffer impacts – as the current code requires an open public hearing for anything more complex. This will also create more uncertainty as to what will be allowed when a property is encumbered with critical areas and buffers. It should also be remembered, that reasonable use scenarios have increased significantly over the last four years as the result of larger buffers occurring on properties since 2017 – the result of utilization of updated Ecology wetland rating forms and guidance. Generally, critical areas, primarily wetlands, have not changed but buffers have become significantly larger.</p> <p>The change to section j is included so that applicants aren't required to purchase another property for mitigation – which has been required in some cases, precluding any development at all (even for buffer impacts).</p>	<p>ed upon by the Hearing Examiner (see 16.16.270 Reasonable Use Exceptions).</p> <p>In this schema, the degree to which one can vary standards while providing the least amount of mitigation moves up a level at each step, with the Hearing Examiner making the tougher decisions through a quasi-judicial process. This would return the reasonable use exception to truly the last effort of avoiding a taking.</p> <p>However, to counter the additional time and cost of this process, staff is also proposing to create a new category of variances, called minor variances (16.16.273 Variances). They would be limited to variances for a 25% to 50% reduction of critical area buffers (when mitigated and they meet certain criteria) but would address most of the instances that reasonable use exceptions are currently applied for. We believe that overall, these changes would significantly reduce the number of cases having to go to the Hearing Examiner and cost less to the citizens of Whatcom County overall.</p>
MES44	Ed Miller, Miller Environmental Services	4/12/21	F	16.16.620(D) & 16.16.720(D)	<i>Draft Code:</i> Private Access. 					<p>conservation areas if there are no feasible alternative alignments.</p> <p><i>Current Code:</i> <u>Access to private development sites</u> may be permitted to cross Category II, III or IV wetlands or their buffers, provided...</p> <p><i>Suggested Change:</i> Strike the change and keep the current language, both wetland and HCA sections.</p> <p><i>Rationale for suggested change:</i> This section as modified implies that no new lots could be created (subdivided) if a road would be needed to cross through a wetland or buffer or habitat conservation areas. Access to large areas of unencumbered property could be restricted if one small wetland or its buffer would need to be impacted to access a development area. For example, creating new lots in unencumbered areas (no critical areas) per the underlying zoning might not be allowed on a 40 acre property if the crossing of a non-fish stream or the outer portion of a buffer was required.</p>	<p>sions of Exhibit F (4/5/21)</p>
MES45	Ed Miller, Miller Environmental Services	4/12/21	F	16.16.640(A)(5)	<p><i>Draft Code:</i> Buffer Width Increasing: The Director may require <u>the standard buffer width to be increased by the distance necessary to protect wetland functions and provide connectivity to other wetland and habitat areas for one of the following:</u></p> <p><u>(5) When a Category I or II wetland is located within 300 feet of:</u></p> <ol style="list-style-type: none"> <li>a. <u>Another Category I, II or III wetland; or</u></li> <li>b. <u>A fish and wildlife HCA; or</u></li> <li>c. <u>A type S or F stream; or</u></li> <li>d. <u>A high impact land use that is likely to have additional impacts.</u></li> </ol> <p><i>Suggested Change:</i> Strike the new, added section (5).</p> <p><i>Rationale for suggested change:</i> This added provision, not in the current code, allows staff to extend any Category II wetland buffers out to 300 feet – if another wetland or HCA is within 300 feet. HCA's include mature forest, priority snags (logs on the ground, 20 feet long, 12 inches wide), streams, etc.</p> <p>The intent of this appears to be to increase buffers if adjacent</p>	<p>Staff believes this addition better reflects DOE guidance and Council's direction to improve connectivity.</p>

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					critical areas are present. However, this is already accounted for in the wetland rating form. The habitat score, which drives the buffer width, is scored higher if habitat conservation areas are within 330 feet. The proposed draft change seems redundant when these factors are already utilized in determining the buffers in the current code - based on the wetland rating form. If the intent is also to protect habitat corridors, then it is also redundant, as these are already protected in the habitat conservation section of the code – State priority habitat “Biodiversity areas and corridors”.	
MES46	Ed Miller, Miller Environmental Services	4/12/21	F	16.16.640(B)(2) & 16.16.745(B)(2)	<p><i>Draft code.</i> Buffer Width Averaging: <u>In the specified locations where a buffer has been reduced to achieve averaging, the Director may require enhancement to the remaining buffer to ensure no net loss of ecologic function, services, or value.</u></p> <p><i>Suggested Change:</i> Strike the proposed change.</p> <p><i>Rationale for Suggested Change:</i> This section effectively eliminates the intent of buffer averaging and converts it to buffer reduction by requiring mitigation in the form of added plantings. Buffer averaging is an important and simple way to allow more flexibility for property owners that need to make minor buffer adjustments. This section will also reduce consistency and predictability (each staff member could apply this differently), and will increase the cost for simple projects by requiring plantings, monitoring, bonding, etc. by thousands of dollars. Additionally, the Director already has the ability to require plantings in a wetland or HCA buffer where it lacks adequate vegetation under 16.16.630.D or 16.740.B.1, making this code addition redundant.</p>	This formerly proposed language has already been stricken and reverted to the original language in the most recent version of Exhibit F (4/5/21)
MES47	Ed Miller, Miller Environmental Services	4/12/21	F	16.16.640(C)(1)(c)	<p><i>Buffer Width Reduction draft code:</i> <u>The buffer shall not be reduced to less than 75% of the standard buffer.</u></p> <p><i>Current Code:</i> Allows for a Category IV wetland buffer to be reduced by up to 50% or 25 feet, whichever is greater.</p> <p><i>Suggested Change:</i> Restore prior language to allow for up to 50% reduction (or 25 feet) for Category IV wetlands.</p>	Staff believes this amendment better reflects DOE guidance.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p><i>Rationale for Suggested Change:</i> The existing code section allows for up to a 50% (or minimum of 25 feet) reduction of a Category IV wetland buffer, while higher category wetlands are restricted to a 25% reduction. Under the draft buffer averaging section, Category IV wetlands are still allowed up to a 50% reduction. This proposed change will remove flexibility for property owners for the lowest category of wetlands.</p>	
MES48	Ed Miller, Miller Environmental Services	4/12/21	F	16.16.710(C)(1)(a)(v) & 16.16.740(B)	<p><i>Draft Code:</i> Type O waters include all segments of aquatic areas that are not type S, F, or N waters and that are physically connected to type S or F waters by an above-ground channel, system, pipe, culvert, stream or wetland. And 16.16.740.B. Type O Buffer = 25 feet.</p> <p><i>Current Code:</i> Not present in the current code.</p> <p><i>Suggested Change:</i> Strike this addition of Type O waters and associated 25-foot buffer. Return the prior designation of Natural Ponds to the buffer Table requiring a 50 foot buffer.</p> <p><i>Rationale for Suggested Change:</i> The definition of Type O waters will include ditches and artificial ponds that eventually drain to a fish stream. This will include most of the ditching and artificial ponds in Whatcom County. This will in effect place 25-foot buffers in any front yard along a road with a County ditch – creating protected critical areas buffers along most property road frontage. Any time the County public works excavated new ditching, or extended existing new ditching, they would also be creating new critical areas and encumbering adjacent properties with a buffer for a resource that the County created. This seems problematic and overreaching. Ditching provides a function to control and direct stormwater. The department of Ecology has no recommendations designating artificial ditches as critical areas or for placing buffers on artificial ditching. This would create a new critical area, most of which are within County rights-of-way. Additionally, most of the ditches outside of road right of ways are agricultural in nature and created prior to the growth management act and the clean water act. Additionally, Type O waters do not correlate with Washington State water typing.</p>	This formerly proposed language has already been stricken and amended in the most recent version of Exhibit F (4/5/21)

					<p>the long term, the most effective means of flood hazard reduction is to prevent or remove development in flood-prone areas ...” “Counties and cities should consider the following when designating and classifying frequently flooded areas ... [t]he potential effects of tsunami, high tides with strong winds, sea level rise, and extreme weather events, including those potentially resulting from global climate change ....” The areas subject to sea level rise are flood prone areas just the same as areas along bays, rivers, or streams that are within the 100-year flood plain. RCW 90.58.100(1) and WAC 173-26-201(2)(a) also require “that the ‘most current, accurate, and complete scientific and technical information’ and ‘management recommendations’ [shall to the extent feasible] form the basis of SMP provisions.” This includes the current science on sea level rise.</p> <p>Sea level rise is a real problem that is happening now. Sea level is rising and floods and erosion are increasing. In 2012 the National Research Council concluded that global sea level had risen by about seven inches in the 20th Century. A recent analysis of sea-level measurements for tide-gage stations, including the Seattle, Washington tide-gauge, shows that sea level rise is accelerating.<sup>5</sup> Virginia Institute of Marine Science (VIMS) “emeritus professor John Boon, says ‘The year-to-year trends are becoming very informative. The 2020 report cards continue a clear trend toward acceleration in rates of sea-level rise at 27 of our 28 tide-gauge stations along the continental U.S. coastline.’” “Acceleration can be a game changer in terms of impacts and planning, so we really need to pay heed to these patterns,’ says Boon.” The Seattle tide gage was one of the 27 that had an accelerating rate of sea level rise. The report Projected Sea Level Rise for Washington State – A 2018 Assessment projects that for a low greenhouse gas emission scenario there is a 50 percent probability that sea level rise will reach or exceed 1.2 feet by 2100 around Sandy Point and the west side of the Lummi Peninsula. Projected Sea Level Rise for Washington State – A 2018 Assessment projects that for a higher emission scenario there is a 50 percent probability that sea level rise will reach or exceed 4.5 feet by 2100 for the same area. Projections are</p>	<p>nerability and risk assessments to see what kind and where the problems might be, and update our shoreline inventory and characterizations. Without such science, we would be open to challenges.</p>

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>available for all of the marine shorelines in Whatcom County and Washington State.</p> <p>The extent of the sea level rise currently projected for Whatcom County can be seen on the NOAA Office for Coastal Management Digitalcoast Sea Level Rise Viewer available at: <a href="https://coast.noaa.gov/digitalcoast/tools/slr.html">https://coast.noaa.gov/digitalcoast/tools/slr.html</a>. Please see map images at the bottom of this letter detailing the changes in water elevation from the current mean higher high water (MHHW) to four feet of sea level rise.</p> <p><b>Projected sea level rise will substantially increase flooding. As Ecology writes, “[s]ea level rise and storm surge[s] will increase the frequency and severity of flooding, erosion, and seawater intrusion—thus increasing risks to vulnerable communities, infrastructure, and coastal ecosystems.”</b> Not only our marine shorelines will be impacted, as Ecology writes “[m]ore frequent extreme storms are likely to cause river and coastal flooding, leading to increased injuries and loss of life.”</p> <p>Zillow recently estimated that 31,235 homes in Washington State may be underwater by 2100, 1.32 percent of the state’s total housing stock. The value of the submerged homes is an estimated \$13.7 billion. Zillow wrote:</p> <p>“It’s important to note that 2100 is a long way off, and it’s certainly possible that communities [may] take steps to mitigate these risks. Then again, given the enduring popularity of living near the sea despite its many dangers and drawbacks, it may be that even more homes will be located closer to the water in a century’s time, and these estimates could turn out to be very conservative. Either way, left unchecked, it is clear the threats posed by climate change and rising sea levels have the potential to destroy housing values on an enormous scale.”</p> <p><b>Sea level rise will have an impact beyond rising seas, floods, and storm surges. The National Research Council wrote that:</b></p> <p>“Rising sea levels and increasing wave heights will exacerbate coastal erosion and shoreline retreat in all geomorphic environ-</p>	

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>ments along the west coast. Projections of future cliff and bluff retreat are limited by sparse data in Oregon and Washington and by a high degree of geomorphic variability along the coast. Projections using only historic rates of cliff erosion predict 10–30 meters [33 to 98 feet] or more of retreat along the west coast by 2100. An increase in the rate of sea-level rise combined with larger waves could significantly increase these rates. Future retreat of beaches will depend on the rate of sea-level rise and, to a lesser extent, the amount of sediment input and loss.”</p> <p>These impacts are why the Washington State Department of Ecology recommends “[l]imiting new development in highly vulnerable areas.”</p> <p>Unless wetlands and shoreline vegetation can migrate landward, their area and ecological functions will decline. If development regulations are not updated to address the need for vegetation to migrate landward in feasible locations, wetlands and shoreline vegetation will decline. This loss of shoreline vegetation will harm the environment. It will also deprive marine shorelines of the vegetation that protects property from erosion and storm damage by modifying soils and accreting sediment. WEC and Futurewise’s Sept. 16, 2020 letter included maps that show the extent of this amount of sea level rise in Whatcom County and wetland migration in part of the County if the wetlands are not blocked by development. Additional maps are also enclosed with this letter.</p> <p>Flood plain regulations are not enough to address sea level rise for three reasons. Projected Sea Level Rise for Washington State – A 2018 Assessment explains two of them:</p> <p>“Finally, it is worth emphasizing that sea level rise projections are different from Federal Emergency Management Agency (FEMA) flood insurance studies, because (1) FEMA studies only consider past events, and (2) flood insurance studies only consider the 100-year event, whereas sea level rise affects coastal water elevations at all times.”</p>	

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>The third reason is that floodplain regulations allow fills and pilings to elevate structures and also allow commercial buildings to be flood proofed in certain areas. While this affords some protection to the structure, it does not protect the marshes and wetlands that need to migrate.</p> <p>Because of these significant impacts on people, property, and the environment, “[n]early six in ten Americans supported prohibiting development in flood-prone areas (57%).” It is time for Washington state and local governments to follow the lead of the American people and adopt policies and regulations to protect people, property, and the environment from sea level rise. We recommend the addition of the following regulations as part of the shoreline master program periodic update:</p> <p>X. New lots shall be designed and located so that the buildable area is outside the area likely to be inundated by sea level rise in 2100 and outside of the area in which wetlands and aquatic vegetation will likely migrate during that time.</p> <p>X2. Where lots are large enough, new structures and buildings shall be located so that they are outside the area likely to be inundated by sea level rise in 2100 and outside of the area in which wetlands and aquatic vegetation will likely migrate during that time.</p> <p>X3. New and substantially improved structures shall be elevated above the likely sea level rise elevation in 2100 or for the life of the building, whichever is less.</p>

					<p>areas regulations.</p> <p>The courts generally decide the concept of reasonable; however, reasonable use is often interpreted as a modest single-family home. A home with a footprint of 4,000 square feet is excessive. A median size house built in 2019 has 2,301 square feet of floor area. We can assume that to be less than footprint 1,500 square feet.</p>	
RFW19	Karlee Deatherage (RE Sources), Rein Attemann (WEC), and Tim Trohovich (Futurewise)	4/12/21	F	16.16.730 , Table 4	<p>Incorporate the State of Washington Department of Fish &amp; Wildlife's new riparian buffers guidance.</p> <p>As has been reported in media and scientific reports, the southern resident orcas, or killer whales, are threatened by (1) an inadequate availability of prey, the Chinook salmon, "(2) legacy and new toxic contaminants, and (3) disturbance from noise and vessel traffic." "Recent scientific studies indicate that reduced Chinook salmon runs undermine the potential for the southern resident population to successfully reproduce and recover." The shoreline master program update is an opportunity to take steps to help recover the southern resident orcas, the Chinook salmon, and the species and habitats on which they depend.</p> <p>The SMP Guidelines, in WAC 173-26-221(3)(c), provides in part that "[i]n establishing vegetation conservation regulations, local governments must use available scientific and technical information, as described in WAC 173-26-201 (2)(a). At a minimum, local governments should consult shoreline management assistance materials provided by the department and Management Recommendations for Washington's Priority Habitats, prepared by the Washington state department of fish and wildlife where applicable."</p> <p>The State of Washington Department of Fish and Wildlife has recently updated the Priority Habitat and Species recommendations for riparian areas. The updated management recommendations document that fish and wildlife depend on protecting riparian vegetation and the functions this vegetation performs such as maintaining a complex food web that supports salmon and maintaining temperature regimes to name just a few of the</p>	<p>Pursuant to 23.230.010(B)(4) floodways and contiguous floodplain areas landward two hundred feet from such floodways are within the shoreline jurisdiction.</p> <p>And pursuant to 16.16.730 Table 4, Type S – Freshwater HCAs are proposed to have a 200-foot buffer based on National Wildlife Federation v. FEMA (Federal District Court Case No. 2:11cv-02044-rsm; NMFS Doc. #2006-00472)</p>

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>functions.</p> <p>The updated Riparian Ecosystems, Volume 1: Science synthesis and management implications scientific report concludes that the "[p]rotection and restoration of riparian ecosystems continues to be critically important because: a) they are disproportionately important, relative to area, for aquatic species, e.g., salmon, and terrestrial wildlife, b) they provide ecosystem services such as water purification and fisheries (Naiman and Bilby 2001; NRC 2002; Richardson et al. 2012), and c) by interacting with watershed-scale processes, they contribute to the creation and maintenance of aquatic habitats." The report states that "[t]he width of the riparian ecosystem is estimated by one 200-year site-potential tree height (SPTH) measured from the edge of the active channel or active floodplain. Protecting functions within at least one 200-year SPTH is a scientifically supported approach if the goal is to protect and maintain full function of the riparian ecosystem." These recommendations are explained further in Riparian Ecosystems, Volume 2: Management Recommendations A Priority Habitats and Species Document of The Washington Department of Fish and Wildlife.</p> <p>Based on these new scientific documents, we recommend that shoreline jurisdiction should include the 100-year floodplain and that the buffers for rivers and streams in shoreline jurisdiction be increased to use the newly recommended 200-year SPTH and that this width should be measured from the edge of the channel, channel migration zone, or active floodplain whichever is wider. New development, except water dependent uses should not be allowed within this area. This will help maintain shoreline functions and Chinook habitat.</p>	
TSF01	Diani Taylor, General Counsel, Taylor Shellfish Farms	4/12/21	D	23.40.010	Table 1 of the draft proposes to revise the shoreline use table to prohibit general aquaculture (aquaculture other than commercial geoduck and salmon net pen facilities) in aquatic areas adjacent to the Natural shoreline environment designation (SED). This proposed revision should not be adopted. No scientific or technical information is identified in the Draft Amendment that would support this revision. As recognized by the GMHB, prohibiting	The purpose of the natural shoreline area is to "ensure long-term preservation of ecologically intact shorelines" and "preservation of the area's ecological functions, natural features and overall character must receive priority over any other potential use." The Natural SED is

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					aquaculture in the Natural SED absent such support is impermissible. Allowing aquaculture in the Natural SED is consistent with the purpose and policies of the Natural SED.	only applied in a few areas of the county, primarily the headwaters of the 3 upper Nooksack branches and around state or locally controlled nature preserves. None of these areas would likely be used for aquaculture.
TSF02	Diani Taylor, General Counsel, Taylor Shellfish Farms	4/12/21	D	23.40.050(A)(1)	<p><del>Strike A.1. Aquaculture that involves little or no substrate modification shall be given preference over those that involve substantial modification. The applicant/proponent shall demonstrate that the degree of proposed substrate modification is degree of proposed substrate modification is aquaculture operations at the site.</del></p> <p>The first sentence of this provision is unsuitable for a regulation, as it merely expresses a preference for certain activities over others. Moreover, it is inadequately defined and unsupported by scientific and technical information. To the extent that it would disfavor common shellfish aquaculture practices that have been proven to have insignificant impacts on species and habitat (e.g., those covered by the Programmatic Consultation or analyzed by Washington Sea Grant), it runs directly counter to such information in violation of the SMA and Guidelines. It would also fail to give preference to and foster shellfish aquaculture contrary to state law.</p> <p>The second sentence appears to impose a substantive requirement that any substrate modifications must be the minimum necessary for feasible operations. This restriction is similarly unsupported by scientific and technical information and fails to give preference to and foster shellfish aquaculture. In an analogous context, the GMHB held that an aquaculture regulation requiring gear use be limited to the minimum necessary for feasible operations violated state law and must be stricken.</p>	<p>Though the language is existing, the commenter may be correct regarding the 1<sup>st</sup> sentence, as it does read more like a policy rather than a regulation. And Policy 11CC-3 basically says the same thing, so that 1<sup>st</sup> sentence could be deleted (though it wouldn't have much effect on the regulation).</p> <p>Regarding the 2<sup>nd</sup> sentence (again, existing language), staff sees no legal issue in requiring methods used minimize impacts to shoreline functions. The regulation only states that the applicant demonstrate that the degree of proposed substrate modification is the minimum necessary. We would think that Taylor Shellfish Farms already uses the least impactful methods given how environmentally friendly they purport to be. Nonetheless, your comments will be provided to the P/C and Co/C for their consideration.</p>
TSF03	Diani Taylor, General Counsel, Taylor Shellfish Farms	4/12/21	D	23.40.050(A)(2)	<p><del>Strike A.2 The installation of submerged structures, intertidal structures, and floating structures shall be allowed only when the applicant/proponent demonstrates that no alternative method of operation is feasible.</del></p>	Again, existing language, and it's only asking that the applicant demonstrate that any proposed structures be the least impactful to shoreline functions. Nonetheless,

					Similar to the previous provision, this provision is not only unsupported by scientific and technical information, but such information demonstrates aquaculture structures do not have unacceptable impacts. This provision imposes unjustifiable use restrictions and fails to give preference to and foster aquaculture, and hence it should be deleted.	less, your comments will be provided to the P/C and Co/C for their consideration.
TSF04	Diani Taylor, General Counsel, Taylor Shellfish Farms	4/12/21	D	23.40.050(A)(3)	<p><del>Strike A.3 Aquaculture proposals that involve substantial substrate modification or sedimentation through dredging, trenching, digging, mechanical clam harvesting, or other similar mechanisms, shall not be permitted in areas where the proposal would adversely impact critical saltwater habitat, or other fish and wildlife habitat conservation areas.</del></p> <p>This provision is insufficient in scope and detail to ensure proper implementation, as several key terms are undefined. Moreover, this regulation appears to articulate a zero-impact standard inconsistent with the SMA and the Guidelines, which acknowledge that activities will have some impacts and calls for those impacts to be minimized. This provision is particularly inappropriate given commercial shellfish beds are themselves critical saltwater habitat.</p>	Staff disagrees with the commenters conclusions. The key words are either defined or their common usage is understood, and the regulation does not articulate a zero-impact standard: It only limits certain types of practices that might have significant impacts on critical saltwater habitats.
TSF05	Diani Taylor, General Counsel, Taylor Shellfish Farms	4/12/21	D	23.40.050(B)(9)	<p>"Where aquaculture activities are authorized to use <del>public County</del> facilities, such as boat launches or docks, the County shall reserve the right to require the applicant/proponent to pay a portion of the cost of maintenance and any required improvements commensurate with the use of such facilities."</p> <p>This revision provides important clarification that the authority to require a project proponent pay a portion of maintenance costs and required improvements applies to County, rather than any public (e.g., state or federal), facilities. Use and maintenance of non-County public facilities are properly addressed by the entities or agencies that own or control those facilities.</p>	Staff agrees with the commenter and has made this suggested edit.
TSF06	Diani Taylor, General Counsel, Taylor Shellfish Farms	4/12/21	D	23.40.050(F)(1)	In addition to the minimum application requirements specified in WCC Title 22 (Land Use and Development), applications for aquaculture use or development shall include all information necessary to conduct a thorough evaluation of the proposed aquaculture activity, including but not limited to the following, if	Staff agrees with the commenter, but none of the language prohibits the applicant from submitting materials used in or produced by other permitting processes. Regardless of whether another agency

					<p>the safety of its crews and provide marketable products, shellfish operators frequently need to conduct activities during nights or on weekends when there are low tides. This is recognized in the Guidelines, which state: "Commercial geoduck aquaculture workers oftentimes need to accomplish on-site work during low tides, which may occur at night or on weekends. Local governments must allow work during low tides but may require limits and conditions to reduce impacts, such as noise and lighting, to adjacent existing uses." Restricting operations to certain hours or days may compromise the safety of farm crews and/or render operations infeasible. This requirement in 2.b is incompatible with the SMA and Guidelines, and it should be removed.</p> <p>The requirement in 2.c that aquaculture facilities not introduce incompatible visual elements or substantially degrade the aesthetic qualities of the shoreline is inconsistent with the Guidelines, which instead require that that aquaculture not significantly impact aesthetic qualities. The requirement that aquaculture activities not introduce incompatible visual elements is insufficient in scope and detail to ensure proper implementation. This subsection should be aligned with state law.</p>	
TSF08	Diani Taylor, General Counsel, Taylor Shellfish Farms	4/12/21	D	23.40.050(H)(2)	<p>In the Natural shoreline environment, aquaculture activities that do not require structures, facilities, or mechanized harvest practices and that will not result in the alteration of <u>substantially degrade</u> natural systems or features are permitted.</p> <p>The prohibition on structures, facilities, or mechanized harvest in the Natural environment is unsupported by scientific and technical information and is accordingly inconsistent with the SMA and Guidelines. As discussed above, there is extensive scientific and technical information that demonstrates shellfish aquaculture activities, some of which include these proscribed items, have minimal impacts that are consistent with the Natural environment. The revised language shown here remedies these failures and aligns this regulation with the management policies in the Guidelines for the Natural environment.</p>	Staff disagrees with the commenter. The Natural SED is intended to remain natural and is the only SED where such structures are prohibited. It is not a general prohibition, just one for one certain SED. The Natural SED is only applied in a few areas of the county, primarily the headwaters of the 3 upper Nooksack branches and around state or locally controlled nature preserves. None of these areas would likely be used for aquaculture.
BIAWC08	Robert Lee, BIAWC	4/12/21	F	16.16.273	<b>Reasonable Use and Variances:</b> Staff has proposed major changes to the procedures and criteria for both. The current	Please see the responses provided for Comments GCD14, NES02, NWC02,

					<p>2017 CAO allows PDS staff to grant reasonable use (RU) permits for one single family house under very strict criteria if CAO rules alone would deny "all reasonable and economically viable use" of the property.</p> <p><b>A. Variances:</b> They now require a public hearing and approval by the Hearing Examiner (HE). The applicant must demonstrate "undue hardship" due to CAO "dimensional requirements". Frankly, it's not clear what the difference is between the scope of these and RU applications in current code.</p> <p>Per draft Section 16.16.270.A, p 30-31, Exh. F, if a person only needs a 25 to 50% CAO buffer reduction, they would apply for a Minor Variance, instead of a RU Exception per current code.</p> <p>The draft does not say whether this value is total area, width, or both. Staff decides these permits; notice to neighbors is required. We do appreciate the new minor variance idea allowing staff approval, but why they also have to provide notice to adjacent land owners?</p> <p>A Major Variance is required for any other CAO exceptions. See Section 16.16.273, p 34. Either level of variance will be a costly process; the fee is \$2750, plus critical area reports, possibly consultants and any legal costs.</p> <p>One could only apply for a Reasonable Use Exception RU if their variance app is denied. This means if you don't get adequate relief with a variance approval, one must repeat the permit process to apply for an RU, and pay double fees and costs. A person may also face an appeal to Superior Court from someone.</p>	<p>NWC05, BIA04, MES11, MES29, MES31, MES43, RFW12, &amp; RFW18.</p> <p>In addition, variances have always required a public hearing and approval by the H/E using the same criteria. We have now introduced a "minor" variance (the creation of which has already been approved by Co/C) for minor buffer reductions. An all variances always require public notice, as we're potentially letting applicants use lesser standards than what the code prescribes, which might have impacts on neighbors.</p> <p>We have also put in a request to have a much lower fee for minor variances.</p>
BIAWC09	Robert Lee, BIAWC	4/12/21	F	16.16.270(C)(12)	<p><b>B. Reasonable Use Exception (RU)</b></p> <p>1. Footprint Size:</p> <p>Re draft Sections 270, Item C, p 31, we support the increase in the allowed "impact area" for a house via the RU process to 4,000 sq. ft., from 2,500, recently accepted by the P/C. This limit is a minimally reasonable value when you consider most of the</p>	<p>Please see the responses provided for Comments BIA04, GCD09, GCD14, MES09, MES11, MES31, NES01, RFW12, RFW13, &amp; RFW18.</p> <p>And remember, RUEs are for lots totally constrained by critical areas. Lots that aren't so constrained can build to what-</p>

					<p>sites will be 2 acres or larger, and many rural land owners will want barns, corrals, shops, etc.</p> <p>Also, these and all other CAO rules apply in the county's two Urban Growth Areas: Birch Bay and Columbia Valley, where lot sizes are usually much smaller, and on public sewer and water systems.</p> <p>However, "impact area" is not defined in the draft CAO. We suggest this term be defined to include only artificial impervious surfaces. We support the driveway exception as written, and ask that drainfield areas be listed as excepted too.</p> <p>There appears to be no scientific basis for either value. The 4,000 sf value will often be generally reasonable in this context for smaller lots, e.g., 1 to 5 acres. But several large rural areas are zoned 10 acre minimum. We think consideration should be given to a "sliding scale" proposal, for parcels 5 acres and larger, based on zoning, platting options, availability of drinking water, soils for septic, etc.</p> <p>Many rural residents are horse enthusiasts, and want training rings, which will push the total footprint over the 4,000 sf limit.</p>	<p>ever size the code allows for their zone. We would think that someone who wants barns, training rings, and other large structures would choose a lot not so constrained.</p>
BIAWC10	Robert Lee, BIAWC	4/12/21	E	22.05.020	<p><b>2. RU Process:</b> We believe the RU decision should be made by staff instead of the Hearing Examiner (HE), a far less costly, time consuming and legalistic process.</p> <p>We believe these decisions should be based mainly on a scientific analysis of the particular situation; that is: the functions and values of the resource, and adjacent site character, mainly its natural features: e.g., soils and geology, topography, native vegetation etc.</p> <p>An important question: is there any state law, court decision or code that requires that RU's be decided by the HE, a quasi-judicial official? Or that bars professional and qualified staff from making these mainly technical and science kind of decisions?</p>	<p>Please see the responses provided for Comments GCD14, NES02, NWC02, NWC05, BIA04, MES11, MES29, MES31, MES43, RFW12, &amp; RFW18.</p>
BIAWC11	Robert Lee, BIAWC	4/12/21	F	16.16.270(C)	<p><b>3. RU Criteria:</b></p> <p>a. We also have concerns over the fairness of some of the key</p>	<p>The RUE criteria are basically the same as the existing criteria (old (B)(2)), which come from state law and courts cases on</p>

					<p>words/phrases/values related in the RU code, such as:</p> <p>16.16.270 A, C.2, C.3, etc.: "all reasonable and economically viable use of a property".</p> <p>The words "all" and "viable" seem more arbitrary and subjective than logical and objective. Does staff have a reliable, credible source for this language?</p> <p>The current, 2018, State Department of Commerce guidance on critical areas and this topic states, in part:</p> <p>The reasonable use permit criteria should allow for "reasonable" uses. If the criteria state that the applicant must demonstrate that no other use "is possible," or that there are "no feasible alternatives," it would conflict with the concept of a "reasonable" use as other "possible" alternatives may be so costly as to be unreasonable.</p> <p>Their 3-page excerpt on RU is attached, and a link to the complete report. The Department of Commerce has primary regulatory authority over all GMA elements, including all 5 critical areas.</p> <p>In reviewing the long list of complex criteria, all 12, for approval of a RU application (Section 270.C, almost all of p 31), we note the links in several of "reasonable" with "economics", and use of "all". Why is economics a critical factor here? The test is supposed to be "reasonable".</p> <p>See items C.2, 3, 4 and 5. It appears staff is trying to make it as difficult as possible for a person to obtain a RU exception, and obtain fair relief from the arbitrary buffers per Department of Ecology guidance on wetlands and habitat buffers.</p> <p>We say the buffers are arbitrary because they are not based on a staff accepted scientific assessment of a site's critical area resources and relevant local conditions.</p>	<p>this matter.</p> <p>And if you're going to quote the <a href="#">CAO handbook</a>, might as well quote more of it, for it also says, "Unlike variances, the purpose of a reasonable use exception permit is not to allow general development within critical areas, but to allow only the minimal "reasonable" use of the property so as to avoid a constitutional taking. Four scenarios are provided to illustrate situations where a reasonable use exception might or might not be applicable:</p> <p>A – No reasonable use exception would be granted because there is sufficient space outside the critical area clearing limits.</p> <p>B – A reasonable use exception might be granted since there is insufficient space for a reasonable use. The development area would need to be limited or scaled back in size and located where the impact is minimized. The jurisdiction might consider a variance to the required setback to minimize intrusion into the protection area.</p> <p>C – A reasonable use exception would be granted for a minimal development if the property is completely encumbered and mitigation methods are applied.</p> <p>D – The jurisdiction might consider modifications to the required setback to prevent intrusion into the protection area.</p>

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
						<p>The criteria for reasonable use permits need to be consistent with case law to reduce the potential for appeals and overturned decisions. Key to being consistent with case law is careful use of the term "reasonable." Generally, the concept of "reasonable" has been left to the courts to decide, thereby making it difficult for cities to rule on whether or not a project qualifies. A reasonable use is often thought to be a modest single-family home, although some other structure might be "reasonable" depending on zoning, adjacent uses, and the size of the property.</p> <p>Some jurisdictions have allowed a reasonable use exception in only those situations where <i>all</i> economic use of a property would be denied by the critical areas regulations. Criteria that might be used to allow approval of a reasonable use exception include:</p> <ul style="list-style-type: none"> <li>• No other reasonable economic use of the property has less impact on the critical area;</li> <li>• The proposed impact to the critical area is the minimum necessary to allow for reasonable economic use of the property;</li> <li>• The inability of the applicant to derive reasonable economic use of the property is not the result of actions by the applicant after the effective date of this regulation, or its predecessor;</li> <li>• The proposal does not pose an unreasonable threat to the public health, safety, or welfare on or off the devel-</li> </ul>

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
						<p>opment proposal site;</p> <ul style="list-style-type: none"> <li>• The proposal will result in no net loss of critical area functions and values consistent with the best available science; or</li> <li>• The proposal is consistent with other applicable regulations and standards.”</li> </ul>
BIAWC12	Robert Lee, BIAWC	4/12/21	F	Articles 6 and 7	<p>2. Wetland and Habitat Conservation Area Buffers:</p> <p>A. General Comments: Such buffers are usually the most constraining, and thus costly, elements of compliance with local CAOs for landowners and land users. They often end up consuming more usable land than the area of the wetland they are supposed to protect. We have seen many examples of this, large and small.</p> <p>We're familiar with many situations where buffer requirements appear arbitrary and excessive. In one situation, where a qualified private scientist classified a 6 acre area that has been hayed for at least 75 years a Category IV wetland, the lowest value. He used the 2014 DoE Rating form, 17 pages of detailed questions, some a bit subjective. The PDS staff person said he thought it was a Cat. III. This meant the buffer increased from 60 ft. to 110 ft. of hayfield, almost doubling!</p> <p>Per the draft, DoE and staff don't think that's enough. The new Wetland Buffer table, Sec. 630.E, p 67, based on DoE guidance, will require more than a doubling, from 110 to 225 ft., for a Cat. III of any size, whether the parcel is 10,000 sf or 100 acres. We think this is excessive regulation, and it's quite commonplace in the CAO.</p> <p>The County does not have to adopt DoE staff's arbitrary and excessive buffers. They are not based on the WACs. Remember, the state Department of Commerce is the only state agency with rule making authority on GMA obligations, including critical areas. DoE's main authority on wetlands is limited to controlling the filling or alterations of wetlands through the federal Clean</p>	<p>In July 2018 the Washington Department of Ecology (DOE) modified the habitat score ranges and recommended buffer widths in their wetland buffer tables in the DOE guidance, with some minor text changes to ensure consistency. Some citizens, local environmental consulting firms, and <i>the Building Industry Association of Whatcom County</i> then requested that we amend our code to meet this new guidance, and it was docketed as PLN2019-00008.</p> <p>The project was brought before the Planning Commission on March 14, 2019. But there was confusion as to what we actually had to do at that time and what impacts it would have on development. DOE had informed staff that, while we didn't need to amend our code at that point (having just updated Ch. 16.16 (Critical Areas) (Exhibit F) that they would review our code for consistency with their guidance when Ch. 16.16 was opened for amendment again, noting that that would occur during the 2020 SMP Periodic Update.</p> <p>So at the Commission's request, staff worked with the local wetlands consultants to review the issue and try to deter-</p>

					Water Act.	<p>mine what effects it might have. Three consulting firms provided analyses based on data from projects they had worked on. From these analyses, it appears that many of Whatcom County's lower quality wetlands (e.g., small Category IV wetlands in agricultural fields) would end up with smaller buffers, but that our higher quality wetlands (Categories II and III) would end up with larger buffers. (But even this is speculation, as ATSI noted that the comparison results are not statistically significant.) Thus, farmers may benefit but developers/ builders may suffer, as many of our lower quality wetlands are those found in agriculture fields, while our higher quality wetlands are typically found in non-agriculture rural areas.</p> <p>Nonetheless, given the Department of Ecology's statements that they'll be monitoring the SMP Update to ensure that we meet their latest guidance (which is based on Best Available Science), and given that Comprehensive Plan Policy 10M-2 directs the County to "Develop and adopt criteria to identify and evaluate wetland functions that meet the Best Available Science standard and that are consistent with state and federal guidelines," staff is proposing to amend §16.16.630 (Wetland Buffers) Table 1 (Standard Wetland Buffer Widths) to meet DOE guidance. As indicated, these changes would lessen buffers on lower quality wetlands, and increase them on higher quality ones.</p>

P6605	David Klanica, Phillips 66	4/12/21	B	Policies 11AA -1 through 11AA-7	Regarding General Policies for Climate Change/Sea Level Rise (Policies 11AA -1 through 11AA-7): please explain/provide detail for shoreline development applicant's responsibilities pertaining to climate change and sea level rise. Will development applications be required to address climate change and sea level rise as part of the SMP application or will there be separate analysis and document requirements (e.g. when will a study addressing sea level rise be required)?	These are only general policies; we are not developing CC/SLR regulations at this time.
P6606	David Klanica, Phillips 66	4/12/21	C	Policy 8T-1	Regarding Policy 8T-1, Phillips 66 requests clarification of the methods by which the County will coordinate with landowners to protect marine resource lands.	Well, we generally do that through email, though sometimes letters, phone calls, or meetings.
P6607	David Klanica, Phillips 66	4/12/21	C	Policy 8U-2	Regarding Policy 8U-2, Phillips 66 requests clarification of the types of non-regulatory programs, options, and incentives that owners of marine resource lands can employ to meet or exceed County environmental goals.	We can't provide you a precise list, as they haven't been developed yet, but they could include tax incentives, educational programs, volunteer groups, etc.
P6608	David Klanica, Phillips 66	4/12/21	C	Policy 8V-2	Regarding Policy 8V-2, Phillips 66 requests clarification of the process by which the County will work cooperatively with local, State, Federal and Tribal agencies, adjacent upland property owners, and the general public, as applicable, to address community concerns and land use conflicts that may affect the productivity of marine resource lands.	How would we work cooperatively? Here are 10 simply ways from entrepreneur.com to cultivate team cohesion: <ul style="list-style-type: none"> <li>• Create a clear and compelling cause</li> <li>• Communicate expectations</li> <li>• Establish team goals</li> <li>• Leverage team-member strengths</li> <li>• Foster cohesion between team members</li> <li>• Encourage innovation</li> <li>• Keep promises and honor requests</li> <li>• Recognize, reward and celebrate collaborative behavior</li> </ul>
P6609	David Klanica, Phillips 66	4/12/21	D		The General Provisions of Title 23 indicate that shoreline development must be consistent with the SMA of 1971, the County's shoreline regulations and "other County land use regulations" (See Title 23 draft at lines 11-13). Title 23 then references certain requirements for "existing legal fossil-fuel refinery operations, existing legal transshipment facilities, expansions of these facilities, and new or expansions of renewable fuel refineries or	Yes, staff is well aware of this work and understands that changes have been made to Council's original proposal. However, at the time these documents were 1 <sup>st</sup> edited, their original proposal was all we had on which to rely, which is why the comment bubbles indicate that

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>transshipment facilities". Related definitions are also provided on page 241 at lines 20-36. Expansions of existing fossil fuel and renewable fuel facilities are required to obtain conditional shoreline permits. (See Title 23, page 137 at lines 3-10).</p> <p>As the Planning Department is aware, industry, labor and environmental organization stakeholders have been working together to develop recommended changes to the County Council's October 2019 proposed Comprehensive Plan amendments. Many of the terms and definitions included in this proposal assume that the 2019 proposed Amendments will be adopted as is. Phillips 66 requests that terms borrowed from the 2019 proposal not be adopted at this time. Considerable progress has been made by the stakeholders and is being presented to the County Council for its consideration in the near future. We request that this proposal be delayed until the final work from the ongoing stakeholder effort is accepted or rejected and the "final" definitions and framework for when conditional use permits is finalized.</p>	<p>we will have to substitute in any changes based on Council's final adoption of the Cherry Point fossil fuel amendments.</p>
P6610	David Klanica, Phillips 66	4/12/21	F		<p>Article 7 Fish and Wildlife Habitat Conservation Area was amended to now include Type 0 waters. Phillips 66 requests the addition of a definition of Type 0 waters in the Whatcom County guidance.</p>	<p>This proposal has already been dropped. We suggested you look at the most recent version of Exhibit F, dated 4/5/21.</p>
WH01	Wendy Harris	4/13/21			<p>This is in response to the question that was asked at the last Planning Commission meeting regarding "waters of the state." That is not a term used in the Shoreline Management Act. Rather, it refers to all waters under its jurisdiction as "shorelines of the state" or "shorelands of the state" and these are the appropriate terms to use for waters and exposed land under SMA jurisdiction.</p> <p>Under RCW 90.58.030, "Shorelines" means all of the waters of the state, including reservoirs, and their associated shorelands, together with the lands underlying them; except (i) shorelines of statewide significance; (ii) shorelines on segments of streams upstream of a point where the mean annual flow is twenty cubic feet per second or less and the wetlands associated with such upstream segments; and (iii) shorelines on lakes less than twen-</p>	<p>The commenter is correct, and these are all laid out in 23.20.010 (Shoreline Jurisdiction).</p>

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>ty acres in size and wetlands associated with such small lakes.  <a href="https://apps.leg.wa.gov/RCW/default.aspx?cite=90.58.030">https://apps.leg.wa.gov/RCW/default.aspx?cite=90.58.030</a>.</p> <p>In other words, only waters with minimum quantifiable measurements (size, type, velocity, etc.) are a regulated state shoreline. This is often forgotten when we hear complaints about over-regulation and unreasonableness.</p> <p>Shorelines of the state are specifically set out in the WAC. In Whatcom County, all rivers and streams that are shorelines of the state are set out in WAC 173-18-410.  <a href="https://apps.leg.wa.gov/WaC/default.aspx?cite=173-18-410">https://apps.leg.wa.gov/WaC/default.aspx?cite=173-18-410</a>.</p> <p>Lakes are listed in WAC 173-20-760 and 770.  <a href="https://apps.leg.wa.gov/WaC/default.aspx?cite=173-20-770">https://apps.leg.wa.gov/WaC/default.aspx?cite=173-20-770</a>;  <a href="https://apps.leg.wa.gov/WaC/default.aspx?cite=173-20-760">https://apps.leg.wa.gov/WaC/default.aspx?cite=173-20-760</a>.</p> <p>There are two kinds of shorelines of the state. The most common shoreline under SMA jurisdiction imposes a no net loss standard of review to prevent any degradation beyond baseline conditions, informed by review of best available science.</p> <p>However, particularly large and significant rivers and lakes, as well as marine waters, are designated "Shorelines of Statewide Significance" (SSWS). These have increased protection through a prioritized preference of use, similar to how we apply mitigation standards. These are set out in statute, with preferred use for natural conditions that support the long-term interests of all state residents. RCW 90.58.020(f);  <a href="https://app.leg.wa.gov/RCW/default.aspx?cite=90.58.020">https://app.leg.wa.gov/RCW/default.aspx?cite=90.58.020</a> .</p> <p>The Whatcom County SSWS are the Nooksack River, Lake Whatcom, Baker Lake, and marine waters, including Birch Bay. R CW 90.58.030.</p> <p>The SMA also discusses "shorelands" or "shoreland areas", which includes lands extending landward for two hundred feet in all directions as measured on a horizontal plane from the ordinary high water mark; floodways and contiguous floodplain areas landward two hundred feet from such floodways; and all wet-</p>

					<p>lands and river deltas associated with the streams, lakes, and tidal waters which are subject to the provisions of this chapter; the same to be designated as to location by the department of ecology.</p> <p>RCW 90.58.030(2)(d), <a href="https://app.leg.wa.gov/RCW/default.aspx?cite=90.58.030">https://app.leg.wa.gov/RCW/default.aspx?cite=90.58.030</a>.</p> <p>I recommend the SMP Handbook, which is linked on DOE's website and explains how the SMP process works. Specific issues and provisions are separate chapters in the Handbook. <a href="https://ecology.wa.gov/Regulations-Permits/Guidance-technical-assistance/Shoreline-Master-Plan-handbook">https://ecology.wa.gov/Regulations-Permits/Guidance-technical-assistance/Shoreline-Master-Plan-handbook</a>; <a href="https://apps.ecology.wa.gov/publications/SummaryPages/1106010.html">https://apps.ecology.wa.gov/publications/SummaryPages/1106010.html</a>.</p> <p>P.S. If you are wondering why I have written this, it is because I do not believe that the Planning Commission and citizen committees generally are being provided with relevant and timely information on the laws and policies they are asked to review and this fails to serve public needs and public input requirements. Unless citizen-appointed committees have a comprehensive and complete understanding of the purpose and intent of the policies and laws they are asked to review, they will remain tools of the Planning Department. Please continue to ask questions and ensure that you are provided with all the information you need upfront, before beginning a large review project.</p>	
PB04	Pam Borso	4/21/21	F	16.16.270	<p>Restore Reasonable Use impact area language in the Dec 4, 2020, draft Exhibit F, WCC 16.16.270 Reasonable Use Exceptions.</p> <p>I urge Whatcom County to reject the proposed change from the Planning Commission to expand the maximum impact area for single-family residences from 2,500 sf to 4,000 sf. The purpose of the reasonable use provision is to allow only the minimal "reasonable" use of property to avoid a constitutional taking when fully applying the standards of critical areas regulations. A</p>	Your comments will be forwarded to the P/C & Co/C for their consideration.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					4,000 sf home is excessive.	
PB05	Pam Borso	4/21/21	F		Incorporate the State of Washington Department of Fish & Wildlife's new riparian buffers guidance. The buffer requirements contained in the SMP are less than adequate to ensure no net loss of riparian and stream functions vital to fish, wildlife and our water supply.	Please see the response to comment #FW/WEC09.
PB06	Pam Borso	4/21/21	F		Incorporate regulations to prepare for accelerating sea level rise impacts. Whatcom's SMP does not incorporate protections from this peril. Not only our marine shorelines will be impacted, as Ecology writes "more frequent extreme storms are likely to cause river and coastal flooding, leading to increased injuries and loss of life." 31,235 homes in Washington State may be underwater by 2100; the value of the submerged homes is an estimated \$13.7 billion.	See responses to comments FW/WEC01, FW/WEC12, WCPW08, WCPW09, RES03, RFW07, RFW11, & RFW17.
WSPA01	Holli Johnson, Western States Petroleum Association	4/21/21			The most recent staff memorandum contains several important explanations and clarifications regarding what is meant by the "baseline" condition upon which no net loss project mitigation requirements are measured and recognizes important distinctions between what is appropriate to require for project mitigation obligations and what must be voluntary or incentive-based for restoration. These principles should be built into the language of the code itself or, at a minimum, into the language of the adopting ordinance, so as not to disappear into history once the code amendments are adopted.	Staff doesn't feel this is necessary, as this explanation is based on DOE's guidance and explanatory handouts so it true throughout the state. Nonetheless, your comment will be provided to the P/C and Co/C for consideration.
WSPA01	Holli Johnson, Western States Petroleum Association	4/21/21			The County Council is currently in the final stages of review of comprehensive plan and code amendments for fossil and renewable fuel facilities and expansions. This work is the result of many months of effort and good faith negotiations between the County and interested stakeholders, including WSPA. As noted by staff in several places in the draft shoreline master program amendments, it is imperative that these shoreline master program amendments be fully consistent with the outcome of that other County Council effort. WSPA asks for an additional opportunity to review and provide input on future revisions made by staff to achieve that consistency before these amendments to the shoreline master program are adopted.	Please refer to the response to comment P6609. The P/C's recommended amendments will be forwarded to the Co/C for their review, public hearing, and adoption (during which they may make their own amendments). We would urge you to pay attention to the SMP update page (or Council's agenda page), where new drafts are posted as decisions are made.
WSPA01	Holli Johnson, West-	4/21/21		23.40.010	The Shoreline Use and Modification Use Table establishes a	What is shown in the draft Title 23 regard-

	ern States Petroleum Association				shoreline conditional use permit requirement for expansions of existing legal fossil fuel refinery and transshipment facilities and new or expansion of existing legal renewable fuel refinery operations or renewable fuel transshipment facilities. Conditional use permit review requirements for these facilities are being addressed in the zoning code amendments currently under review by the County Council. A separate, duplicative and potentially inconsistent shoreline conditional use permit review for the same facilities that will undergo thorough zoning code conditional use permit review is unnecessary and should be eliminated. In particular, it is not appropriate to apply shoreline conditional use permit requirements to upland activities that will be fully evaluated under the zoning code requirements applicable to those upland activities. At a minimum, this provision should clarify that such fossil fuel facilities located outside of the shoreline jurisdiction should be evaluated under the zoning code conditional use permit criteria and not pursuant to shoreline conditional use permit requirements.	<p>ing this issue is what staff was provided over a year ago. Once Council makes a final decision on their separate Cherry Point amendments staff will rectify the differences.</p> <p>You should understand, though, that if both Title 20 and Title 23 require a CUP for a certain activity, the permits would be combined under WCC 22.05.030 (Consolidated Permit Review). Shoreline requirements would not be applied outside of the shoreline jurisdiction.</p>
DK01	David Kershner	4/22/21	N/A	N/A	<p>I have served on the Whatcom County Climate Impact Advisory Committee since its inception in 2018. While I am not writing in my capacity as a committee member, I have familiarized myself with the research on sea level rise related to climate change. The financial costs to Whatcom County taxpayers and property owners of not adequately planning for sea level rise are likely to be substantial. As you may know, the real estate company Zillow estimates that nearly \$14 billion worth of housing in Washington State could be submerged in the next 80 years under some climate change scenarios. The ecological costs will also be substantial, if we plan to prevent flooding of structures but not to allow migration of shoreline habitat. That habitat not only supports wildlife populations, it also provides economic benefits, such as recreation and fisheries.</p> <p>To reduce the economic toll of sea level rise and truly protect shorelines consistent with the intent of the Shoreline Management Act, I urge you to recommend revising regulations to ensure that newly-created lots only allow construction in areas that are not likely to be inundated in this century. Where existing lots</p>	See responses to comments FW/WEC01, FW/WEC12, WCPW08, WCPW09, RES03, RFW07, RFW11, & RFW17.

					Washington State Department of Fish and Wildlife recent guidance on riparian guidance.	
PR01	Paula Rotondi	4/22/21	F	16.16.270	<p>As you consider changes to the Shoreline Master Plan (SMP), I urge you to make decisions based upon what will be best for those living here twenty years from now – rather than what is best for corporations' short term profits. Please draft more stringent SMP standards.</p> <p>First, regarding Reasonable Use Exceptions, please reject the proposed change to expand the maximum impact area for single family residences from 2,500 square feet to 4,000 square feet. "Reasonable Use" means there must be some minimal use such as a 2,500 square foot house. If those living here twenty years from now are to have natural treasures such as salmon fishing, crabbing, the sight of Orcas, the SMP cannot afford extravagances such as a 4,000 square foot house that will do more damage to our already damaged shorelines.</p>	Please see the responses provided for Comments BIAWC04, BIAWC09, GCD09, GCD14, MES09, MES11, MES31, NES01, RFW12, RFW13, & RFW18.
PR03	Paula Rotondi	4/22/21			Second, the buffer requirements in the SMP do not adequately protect riparian and stream functions which are essential for sustaining fish, wildlife and protecting our water supply. If people living here twenty or more years from now are to have the fish and wildlife treasures we enjoy today and have adequate supplies of clean water, then the SMP must incorporate the State of Washington Department of Fish & Wildlife's new riparian buffers guidance.	Please see the response to comment #FW/WEC09.
PR03	Paula Rotondi	4/22/21			Third, please do not add to the challenges of those living here twenty years or more from today who will be dealing with increasingly severe ramifications of climate change. Climate change causes sea level to rise and also causes more extreme storms with tide surge coastal flooding and also river flooding. The Washington State Department of Ecology, the Federal Emergency Management Agency, private investment companies, insurance companies, and real estate companies (Redfin most recently) warn that many thousands of homes worth billions of dollars will be lost due to climate change exacerbated flooding. Please include regulations in the SMP to prepare for accelerating sea level rise.	Please see the responses provided for Comments FW/WEC01, FW/WEC02, FW/WEC12, WCPW07, WCPW08, WCPW09, RES03, RFW02, RFW03, RFW04, RFW06, RFW07, RFW11, RFW17, & PB06.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
P6611	Dave Klanica, Phillips 66	4/22/21	D		<i>Extent of Jurisdiction.</i> Given the recent Department of Ecology's revocation of the Port of Kalama and Northwest Innovation Works Shoreline Conditional Use Permit, questions have been raised as to overall shoreline management authority. Whatcom County, as well as other Counties and Ecology must lawfully apply its shoreline management program requirements, particularly when seeking to require mitigation for activities that occur outside the jurisdictional shores of the State. It appears that Ecology unlawfully applied certain mitigations when the only activities within the shoreline were dredging for a new dock berth, portions of the security fence, an infiltration pond, a first-flush pond, fire suppression water storage and a containment berm for certain storage tanks. We ask that Whatcom County commit to act within its jurisdictional boundaries.	We are. Shoreline jurisdiction is addressed in §23.20.010.
P6612	Dave Klanica, Phillips 66	4/22/21			<i>Consistency with Ongoing Comprehensive Plan and Code Amendments.</i> Both WSPA and Phillip 66's previous comments request that the shoreline master program amendments be consistent with the outcome of the ongoing good faith negotiations between the County and interested stakeholders that has occurred over many months related to the Comprehensive Plan and Code Amendments. We request consistency primarily as to definitions as the development of the relevant definitions was a significant effort and even slight differences in wording across county programs could add uncertainty and confusion. Phillips 66 does not believe that all activities which will require a conditional use permit under the Code Amendments should also require a conditional use permit under the shoreline management act. The shoreline program only affects activities that are within the jurisdictional shores of the State. The Zoning requirements cover much broader non-shoreline areas. Additionally, shoreline conditional use permit requirements should not be applied to upland activities that will be fully evaluated under the zoning code requirements applicable to those upland activities. The programs also involve different decision makers and appeal paths. The differences can warrant different permitting approaches.	Please see the responses provided for Comments FW/WEC16, RES10, P6609, WSPA01

	Engineering				<p>minimum length required to reach a moorage depth of 5' below ordinary high water.</p> <p>Ordinary High Water (OHW) elevation 314.5' has been well established on the Lake Whatcom - at least for the multiple projects I've been involved with.</p> <p>The proposed change results in a low water depth at the outer end of the dock (float) of 2'. Design low water has been established at an elevation of 311.5'.</p> <p>In a Jan. 29, 1999 letter from the WA Dept. of Ecology (DOE) to WCPDS and the WC Hearing Examiner, the DOE determined "...an in-water depth of 2.5 feet at 311.5 feet MSL is the minimum necessary draft to accommodate a standard powerboat on Lake Whatcom."</p> <p>The proposed update lowers the design depth from 2.5' to 2.0'. That depth is at the watered end of the dock only. Presumably, depths towards shore are shallower and at low water level a power boat will have less than 2' to moor in. In addition, the landward end of the float may go aground depending on the bottom contours if the outer end is at 2'. If the site is exposed to waves, the dock/boat may be tossed up and down on the lake bed.</p> <p>Assuming a 6'x20' floating dock aligned with its approach ramp, I would propose the overall minimum length required to reach an inshore depth of 5' at OHW (2' depth at 311.5'). That assumes depths offshore increase.</p>	been amended to be 5.5 feet now.
KC04	Kim Clarkin	4/22/21			I am concerned about the current document's lack of land use restrictions on areas that will be affected by sea level rise. I do not agree that waiting to strengthen regulations till more information is available is a good idea. In the meantime, many decisions will be made that may harm critical areas along the changing shoreline. Those decisions may also harm the people who invest in shoreline developments that storm surges could damage. This is the kind of foresight and protection citizens expect from their government—not a laissez-faire attitude such as led	Please see the responses provided for Comments FW/WEC01, FW/WEC02, FW/WEC12, WCPW07, WCPW08, WCPW09, RES03, RFW02, RFW03, RFW04, RFW06, RFW07, RFW11, RFW17, & PB06.

					to the Oso disaster. Other commenters have given strong references for up-to-date scientific information the Planning Dept. can use to write pertinent and reasonable rules to distance new developments from the shoreline.	
KC05	Kim Clarkin	4/22/21			I do not see a reason for expanding the reasonable use exception to 4,000 ft2 in critical areas. That is a trophy home, not a reasonable exception. Critical areas are critical to wildlife, water and other things that we are trying to protect. Let's actually protect them.	Please see the responses provided for Comments BIAWC04, BIAWC09, GCD09, GCD14, MES09, MES11, MES31, NES01, RFW12, RFW13, & RFW18.
KC06	Kim Clarkin	4/22/21			<p>I strongly encourage you to use WDFW's most recent recommendations for riparian buffer widths for new developments. They are based on a thorough knowledge of rivers, valleys, and in-stream habitat development over the long term, and they should be incorporated in our long-term planning. No one is saying that existing developments have to be retired. New development should be completely different; recognizing our expanding understanding of the damage we wreak on ecosystems, we should aggressively seek to avoid that damage.</p> <p>I congratulate you and the Planning Department for making otherwise reasonable updates to a huge document and working toward making regulations more understandable. It has been a long slog for you, and I'm grateful for your attention to this extremely important roadmap to our future relationship with our environment. Please make it as strongly protective as you can.</p>	Please see the response to comment #FW/WEC09.
JM01	Janet Migaki	4/22/21			<p>The SMP, CAO, City and County Comprehensive Plans mention or refer to a quagmire of environmental agencies + regulations, as well as mention or refer to multiple intersecting jurisdictions, permits, ordinances, exemptions and waivers—all used for 'managing' waters of the State.</p> <p>Lake Whatcom, a significant water of the State, is not a healthy or protected source of water, yet it is used for Bellingham's drinking water. The Lake's well documented decline is troublesome since many of the lake's contaminants resist the treatment processes used by the City treatment plant and pass into public drinking water supplies.</p>	Lake Whatcom's water quality is managed through the Lake Whatcom Management Program, under the direction of the Lake Whatcom Policy Group. You can find what you're looking for at <a href="https://www.lakewhatcom.whatcomcounty.org/">https://www.lakewhatcom.whatcomcounty.org/</a> .

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>Where in the SMP and accompanying documents does it mention or discuss the primary and ultimate regulatory agency held fully accountable for protecting the water quality of Lake Whatcom water?</p> <p>The Lake is violating several water quality parameters +contaminants, and the water has not been tested for a full toxicology analysis since late 1990s.</p> <p>Does the SMP address protecting the Lake's total water quality? I know the 50-year TMDL tries to address low DO levels, with not encouraging reports to date. What about so many more lake water quality issues- who is accountable and responsible for protecting and keeping the lake healthy enough to be a drinking water source?</p>	
MRC01	Marine Resources Committee	4/22/21			<p>Thank you for taking the time to review the Whatcom County Marine Resources Committee's (WCMRC) comments on marine land protection. One role of the WCMRC is to work with county leadership and other key constituencies to help protect marine and enhance nearshore habitat through local and state ordinances and regulatory plans. The WCMRC supports regulations and policies that further protect and enhance marine shoreline areas that are vital economically, culturally, recreationally, and environmentally.</p> <p>The Whatcom County Marine Resources Committee supports the inclusion of the proposed amendment to Chapter 8: Marine Resources Lands policy section, as developed by the WCMRC, to the Comprehensive Plan.</p>	Your comment will be provided to the P/C and Co/C for consideration.
BIAWC14	Rob Lee, BIAWC Executive Officer	4/22/21	F		<p>We want to say thank you for:</p> <ul style="list-style-type: none"> <li>• recommending the 4,000 sq. ft. RU area, we request excluding septic systems from this square footage if covered with native landscaping.</li> <li>• For creating the minor variance for buffer reduction of the 25% to 50%. We request that you lower the fee for minor variances.</li> <li>• We request that any buffer reductions under Reasonable Use are decided administratively through a minor variance,</li> </ul>	Your comment will be provided to the P/C and Co/C for consideration.

					Critical areas included.	
BIAWC15	Rob Lee, BIAWC Executive Officer	4/22/21	F	16.16.270 & 16.16.273	<p>Reasonable Use and Variances: We will comment separately on the permit process, "impact area" size, and criteria issues.</p> <p>A. Permit Procedure:</p> <p>1) <i>Present Process</i>: PDS staff has proposed major changes to the procedures. The current 2017 CAO allows staff to grant reasonable use (RU) permits for one single family house under very strict criteria if CAO rules alone would deny "all reasonable and economically viable use" of the property. The next step is a variance requiring Hearing Examiner (HE) approval.</p> <p>We were surprised to learn recently that these RU permits have become a major part of local wetland scientist's workload. This is due mainly to high buffer standards and tight limits on adjustment options. These conflicts between strict environmental rules and permitted, customary land uses are obviously not unusual.</p> <p>2) <i>Staff Proposed Process</i>: As we understand it, the current draft Exh F/CAO proposal, dated 4/2/2021, offers a 3-level process:</p> <p>a) <i>Minor Variance</i>: if a person only needs a 25 to 50% CAO buffer reduction, they will apply for this approval. The draft does not say whether this value is total area, width, or both. Staff decides these permits; an application and notice to neighbors is required. We do appreciate this new minor variance idea allowing staff approval. The concept should be used for other CAO issues. No further CAO permits are needed. See Section 16.16.273, p 34.</p> <p>b) <i>A Major Variance</i> is required if the Minor Variance is denied. One would apply to PDS, and the H/E would decide after a hearing. This is an expensive and slow process; the fees are now \$2,750 each, plus critical area reports, probably consultants doing the applications, a consultant or attorney at the hearing, and possible legal costs if you or an opponent appeals the decision. Anyone testifying, or you, can appeal the decision to Supe-</p>	<p>Regarding the commenter's point A.2.b: A major variance wouldn't be required if the minor variance is denied; a major variance would be applied for if one wants to reduce a buffer more than 50%. They're not sequential: one just applies for the permit one needs.</p> <p>Similarly, regarding the commenter's point A.2.b: With staff's assistance, an applicant should know whether a major variance is attainable, given the required findings (§22.07.050). Thus, if one understood one's chances to be nil, one would just apply for an RUE; so again, they don't have to be sequential.</p> <p>The biggest difference is that through a variance, whether minor or major, one must still mitigate for impacts. Under an RUE the H/E can allow impacts without requiring mitigation. This would apply on a property that is so encumbered by critical areas that nothing could fit on the lot without causing impacts and there's no room to mitigate.</p>

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>rior Court, also costly and slow. See Section 16.16.273, p 34.</p> <p>c). A Reasonable Use Exception is the last resort, virtually identical to the Major Variance process and possible outcomes. It would also be decided by the HE, with high similar costs, and potential litigation. See 16.16.270. A and B.</p> <p>One may apply for an RUE only if their Major Variance app is denied. If you do not get adequate relief with a major variance, you must repeat the process to apply for and hope to be granted an RUE by the HE, paying like fees and costs again. You or an opponent may appeal this decision too to Superior Court from someone, at either stage.</p> <p>3) BIAWC/GAC Proposal: a simpler, less costly, and more practical alternative for all sides:</p> <p>a) Minor Variance (informal staff decision): expand the options to allow buffer adjustments above 50%. This would be determined mainly on a valid scientific analysis of site and vicinity functions and values of the affected wetland(s) and/or habitat(s), acceptable to qualified staff. Also, adjustments should be possible in both total buffer area and width. Can be appealed via RU process.</p> <p>b) Major Variance (formal HE decision): eliminate it, as redundant with the RU option, adding unneeded costs, complexity and time demands on both public and private parties.</p> <p>c) RUE: Use the draft as written; consider simplifying criteria per comments, information, and proposal below, per Item C.</p>	
BIAWC16	Rob Lee, BIAWC Executive Officer	4/22/21	F	16.16.270(C)(12)	<p>B. "Impact Area" size limit: For reasons stated in our April 12 2021 letter, we support the 4,000 sq. ft. value for the "impact area" to be allowed as the upper limit for buildings and other impervious surfaces, except for a minimal standard driveway. We suggest "impact area" be defined for certainty, and exclude landscaped areas using native plants and water features, and septic mounds or areas. The term "footprint" has a different meaning in the construction and real estate worlds.</p>	<p>Please see the responses provided for Comments BIAWC04, BIAWC09, GCD09, GCD14, MES09, MES11, MES31, NES01, RFW12, RFW13, &amp; RFW18.</p> <p>And the commenter is correct about the impact area having no scientific basis; rather, it is a legal basis. The courts have</p>

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					Also, there is no scientific basis for any fixed value, 2,500 or 4,000. Also, some landowners who already have a "pre-CAO" house or other building on their parcel would be severely penalized by the 2,500 value.	consistently interpreted a reasonable use (in SFR zones) to be an averaged sized house in that jurisdiction. In Whatcom County, PDS records indicate that an averaged sized house is 1,820 sf, meaning the footprint would be around 900-1,000 sf (2-story). We would expect that someone wanting a larger home or more appurtenant improvements wouldn't choose a lot that is so encumbered by critical areas that they couldn't fit it on the property.
BIAWC17	Rob Lee, BIAWC Executive Officer	4/22/21	F		<p>C. RU Criteria: In our April 12 2021 statement, we raised several substantive questions on the "reasonableness" of some of the many RU criteria (12! see p 2-3). And we attached the full text of guidance on Reasonable Use from the state Department of Commerce again. We did omit the small p1 diagram because it was not clear how it related to the text on it or overall context.</p> <p>In general, this guidance advises "careful use" of terms such as "alternative or possible uses, etc."; and care with "economic use" etc.; see p 2-3.</p> <p>In the Synopsis of Public Comments updated April 14, 2021, staff commented at length on this guidance (pp 110-113). We have no disagreement with most comments. But in D, p 111, if you as the government are going to say: "the criteria ... need to consistent with case law...", then you have an obligation to impacted citizens to cite at least the more recent and relevant cases and point out the claimed support.</p> <p>Somewhere in the Synopsis, staff also referred to Department of Ecology guidance on this topic. I searched their site and found: "Wetland Guidance for CAO Updates"; 65p, 2016 (attached). The subject is cited on 4 pages: 8, 13 and 31-32. This excerpt is the only substantive guidance in the document, p 8:</p> <p>"Exceptions are typically addressed in a CAO in the context of</p>	Your comments will be provided to the P/C and Co/C.

					<p>reasonable use of property. For more information about this regulatory tool, see Section VII of the Critical Areas Assistance Handbook published by the Washington State Department of Commerce: <a href="http://www.commerce.wa.gov/Documents/GMSCritical-Areas-Assist-Handbook.pdf">http://www.commerce.wa.gov/Documents/GMSCritical-Areas-Assist-Handbook.pdf</a></p> <p>We think this is an important legal issue for many county landowners. We suggest you ask the PDS/Commissions' legal counsel to review these criteria and related resources and produce a memo with a recommended set of criteria for the record before you complete your recommendations on this important issue to the County Council. The adopted CAO definitions of Reasonable Use and RU Exception should be reviewed too; attached.</p>	
BIAWC18	Rob Lee, BIAWC Executive Officer	4/22/21	F		<p>2. Buffers for wetlands and Habitat (HCAs)</p> <p>Our April 12 testimony makes several comments on this important issue. In general, the buffers make more land unusable for all kinds of essential land uses than preserving the actual wetland.</p> <p>At this point, we have carefully reviewed the 3 most recent statements by Miller Environmental Services on the many changes proposed by staff re wetland and habitat buffer and related issues. We have discussed many with him and find that we agree in general with all the comments. A few other wetland scientists have also submitted valuable comments, e.g., NW Ecological Services and NW Wetlands Consulting.</p> <p>We respectfully recommend that Planning Commission members and staff review these comments carefully, and seriously consider acceptance. Almost all are opposed to new, more restrictive language, and do not propose new text or values.</p> <p>Many of staff's proposed changes, and opposed by Miller, would tip whatever balance the CAO now has toward preservation of more non-wetland areas, i.e., buffers. Other items objected to will make the process of obtaining some flexibility in the rules</p>	Your comments will be provided to the P/C and Co/C.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>more difficult, or impossible in some cases.</p> <p>We submitted two of the three Miller letters with our April 12 letter: the February 19, 2021 letter (8 pages; 14 comments, and the Jon Maberry Prepared Motions, one page, 12 issues, dated February 25 2021.</p> <p>We are attaching the firm's most recent April 12, 2021 letter to this statement, 8 issues and 6 p.</p> <p>We are taking this approach because no active members of our GAC or of the BIAWC have the scientific credentials or experience to do the kind of objective analysis of the draft changes that Miller and the other scientists have done.</p> <p>From reading all the Miller comments, we conclude that if the CAO draft is adopted as written today, the Whatcom CAO will be one of the restrictive in the state, if not the most!</p>	
BIAWC19	Rob Lee, BIAWC Executive Officer	4/22/21	F		We do ask that the Planning Commission hold the record open for written comments for at least 2 weeks. We will review the testimony after the hearing and may want to send additional comments.	The P/C considered this request at their 4/22 hearing and denied it.
MES51	Ed Miller, Miller Environmental Services	4/22/21	F	16.16.900	<p><b>P/C Public Hearing Testimony:</b> The WAC definition of "watercourse," which is where the ditches would fall, talks about the presence of a high water mark and the presence of fish; it specifically excludes irrigation ditches, canals, stormwater treatment, conveyance systems, or other entirely artificial watercourses. So it seems to me that ditches, unless they carry fish or convey a prior stream, are not waters of the state. So it seems to me that ditches are not waters of the state unless they carry fish or convey a prior stream. And from a practical standpoint, regulating ditches in Whatcom: If all the ditches become a critical area with a buffer, we'd have to do critical areas report for everyone with the ditch, with a buffer. I'm not sure how that would work. If you filled a ditch, what the mitigation would be for that, would you have to create another ditch? I'm not sure how that would work. If Public Works was to create a new ditch for a new road they'd be creating a new critical area, putting a new buffer on someone's property. Additionally, most all of the ditch-</p>	These comments were considered by the P/C in their deliberations and final recommendation on the definition and regulation of ditches.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					es in Whatcom County that have these buffers are located in County right-of-way, so it just seems from a practical standpoint it's not even doable. Aside from the fact that they don't appear to be waters of the state by state definition.	
TSF09	Diani Taylor, Taylor Shellfish Farms	4/22/21			<b>P/C Public Hearing Testimony:</b> I am a 5 <sup>th</sup> generation shellfish farmer with my family business, Taylor Shellfish Farms. We have been farming shellfish here in the state since 1890 and grow a variety of oysters, mussels, clams and geoduck today. Our company is vertically integrated where we farm-to-table, so we include everything from hatcheries and nurseries to farms, processing facilities, and retail and restaurants. I wanted to introduce myself after we submitted comments on the most recent draft of the SMP document. We really appreciate regulations, especially in the Shoreline Master program, that are so important to protect our environmental resources, including water quality and shoreline and our shoreline ecosystem, which is important and critical for our farms. Our comments are intended to just ensure that the regulations around aquaculture are based on the most current scientific and technical information and align with the state guidelines.	Comment noted. These comments were considered by the P/C in their deliberations and final recommendation. Please see staff responses to TSF's written comments addressing their issues.
RES25	Karlee Deatherage, RE Sources	4/22/21			<b>P/C Public Hearing Testimony:</b> The current version of the SMP is an improvement for protecting our shorelines. However, there are 3 areas to further strengthen. We submitted a letter on April 12 asking the P/C to make changes with respect to reasonable use, sea level rise, and include the use of Department of Fish and Wildlife new riparian buffer guidance in the critical areas ordinance.  The science is clear when it comes to sea level rise. We have been and continue to witness the impacts of rising seas. With storm surges impacting property, we will see the loss of critical shoreline habitats for salmon and forage fish through a phenomenon called coastal squeeze if we don't act now to prevent the construction of buildings or infrastructure in harm's way.  Suggested code for amending 23.30 under general regulations that the new section was included in our letter, please restore the staff proposed language for 16.16.270 (Reasonable Use	These comments were considered by the P/C in their deliberations and final recommendation. Please see staff responses to these previously raised issues.

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>Exceptions) and improvements over the current code to require the Hearing Examiner approval for reasonable use exceptions. However, 4,000 square feet of impact area is excessive, especially when some lots could be 6,000 square feet.</p> <p>Lastly, WDSW release guidance on riparian buffers in July and also in December 2020. We hope the P/C will incorporate best available science from WDW that calls for a one hundred foot buffers known as the "200-year site potential tree height" from the edge of the 100-year floodplain or channel migration zone. This could be applied as a new section to 16.16.420 (General Standards) for frequently flooded areas or a new entry in the table for 16.16.740 (Habitat Conservation Area Buffers).</p>	
PG01	Andrew Gamble, PetroGas	4/22/21			<p><b>P/C Public Hearing Testimony:</b> We do have a few concerns, questions, and clarifications about the update.</p> <ul style="list-style-type: none"> <li>• First of all, we've noticed that there are some overlapping regulations, and we just want to point out that where there's already existing regulation in place and that the SMP need not be layered on and may not actually be necessary.</li> <li>• Another thing that we're looking at is that there's a potential for a maximum height requirement. We don't think that should apply to the Cherry Point UGA.</li> <li>• And then there's maintenance dredging. We think that should probably be a permitted and conditional use, and I think I read somewhere that it was to be prohibited and conditional. That should just be for the maintenance dredging. And then dredge material disposal management actually is already in place, so it doesn't need to be managed again.</li> <li>• And then some clarification on no net loss. We were looking for a bit of an explanation on the baseline condition. Is that the same as it was outlined in, I think it was a 2007 staff report, on a previous update?</li> <li>• And as for mitigation, is that still achieved through voluntary and incentives, or is that going to be permit required mitigation? Could that be applied to legacy or historical problems and not part of a new project proposal?</li> </ul>	<p>These comments were considered by the P/C in their deliberations and final recommendation. But briefly:</p> <ul style="list-style-type: none"> <li>• Staff doesn't believe there are overlapping regulations.</li> <li>• There does need to be height limitations so as to protect the shoreline, especially in terms of protecting views.</li> <li>• Maintenance dredging is proposed to be a Permitted Use.</li> <li>• The baseline condition was set by the 2007 SMP Update and it's corresponding background documents.</li> <li>• Some mitigation may be required for impacts from project proposals, but the County does not require applicants to "fix" existing issues, though applicants are always welcome to do so through voluntary mitigation.</li> <li>• No, Shoreline CUPs already existed in the County's SMP.</li> <li>• Currently only SLR policies are being considered, which would not create</li> </ul>

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<ul style="list-style-type: none"> <li>• And does this SMP Update establish a shoreline conditional use permit?</li> <li>• Then finally, we were looking for some clarification on the sea level rise policies. I heard Mr. Hansen talk about that as well. It's kind of scattered throughout. And we were looking to see if this is going to create new responsibilities for permit applicants.</li> </ul>	<p>new responsibilities for permit applicants. However, we expect that in the not too distant future there may be regulations requiring applicants to address it in their permit analyses.</p>
P6613	Tim Johnson, Phillips 66	4/22/21			<p><b>P/C Public Hearing Testimony:</b> I would refer you to the Phillips 66, April 12<sup>th</sup> written comments as well as some supplemental comments that were submitted today via email. But I would like to highlight a few comments tonight, specifically in Exhibit C, Chapter 8.</p> <p>Regarding Policy 8T -1 we would request some clarification of the methods by which the County will coordinate with landowners to protect marine resource lands</p> <p>In policy 8 U-2 we request some clarification of the types of non-regulatory programs and options and incentives that owners of marine resource lands can employ to meet or exceed the County environmental goals.</p> <p>In Exhibit D, Title 23, the general provisions indicate that shoreline development must be consistent with Shoreline Management Act of 1971, the County Shoreline Regulations, and other County land use regulations. Chapter 23 then references certain requirements for existing legal fossil fuel refinery operations, existing legal transshipment facilities, expansions of those facilities, and new or expansions of renewable fuel refineries or transshipment facilities. And is related definitions also provided on page 241 on expansions of existing fuel, fossil fuel, and renewable fuel facilities that says they are required to obtain conditional shoreline permits. As the planning department is aware, industry, labor, and environmental organization stakeholders have been working together to develop recommendations and changes to the County Council's October 2019 proposed Comprehensive Plan amendments. There's been considerable progress made by the stakeholders, and those have been present-</p>	<p>These comments were considered by the P/C in their deliberations and final recommendation. Please see the staff responses to Phillips 66's written comments on these same issues.</p>

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>ed to the County Council for their consideration, and we request that this SMP draft be delayed until the final work from the stakeholder effort is accepted or rejected and the final definitions and framework for conditional use permit is finalized. And then finally, I would just like to note that we would request an additional opportunity to review and provide input and further revisions made by the staff before the shoreline amendments are finalized.</p>	
WH02	Wendy Harris	4/22/21			<p><b>P/C Public Hearing Testimony:</b> I support the comments that have been submitted by the environmental community; they are well founded.</p> <p>But I want to express my outrage that the P/C majority is using their position to reduce environmental protections for their own interests, ignoring what is best for the public and the planet. This is being done at a time when scientists have issued three distress letters about how we are not doing enough fast enough at the risk of biosphere collapse and extinction of most forms of life, including our own. There are many members of the public who share my views. If you are here for yourself, you're here for the wrong reason.</p> <p>I'm also appalled at the lack of science I failed to hear being discussed. I heard agenda based changes being proposed and I heard nothing regarding the science that supports this. This must have resulted in staff using science as if they were drafting a legal brief to support their argument. Why wasn't the science presented front and center to the topic being discussed? This is troubling. I understand that this round of the SMP update does not require a new review of the foundational elements necessary to determine no net loss. However, DOE indicated that there was an exception for a substantial change in Shoreline function. I believe that applies here and is very relevant since the County still lacks baseline standards, means of quantification, and monitoring protocols. In other words, we have no means of determining no net loss, which leads to the following statement in all but the largest SEPA reviews, which is in regards to species of wildlife present: "none known to the best of</p>	<p>These comments were considered by the P/C in their deliberations and final recommendation.</p>

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>my knowledge." And by that everybody escapes having to care about or mitigate for wildlife impacts or whatever other kind of impacts are around. Other changes in events approved or pending are going to reshape the shoreline in the County jurisdiction in a manner that will make it unrecognizable from its current condition. We've lost one of the most important shoreline keystone species since the last SMP. The sea star numbers established how the loss of even a small number of stars had a significant impact on our healthy shoreline function. There is the Birch Bay berm. There's the Cherry Point update that's allowing expansion of use and of size, and that's going to bring in more tankers which have led to the killer hornets that are here in Blaine, and they're believed to arrive via Cherry Point tanker. And so these are vectors for aquatic invasive disease. Taken as a whole, this is enormous change and it's a loss in shorelines of statewide significance that does not follow the prioritized shoreline use preference so that we estimate one sentence. I asked that the DOE require the County at least provide a concrete example of how the no net loss would work.</p>	
BIAWC20	Roger Almskaar, BIAWC	4/22/21			<p><b>P/C Public Hearing Testimony:</b> We submitted our 2<sup>nd</sup> round of testimony by email. It was late today. Did you see our letter come in a 4-page letter and some attachments? OK, good, thank you. So that's in the record. So I'll move along here.</p> <p>Let's see, I want to say thank you to Cliff Strong for his good work on the staff report, and the synopsis just made our work a lot easier in figuring out what's going on with this extremely complicated project.</p> <p>Most of the impacts on building that we're concerned about are coming from critical area rules, not shoreline rules. We just don't get into the shoreline areas very much anymore.</p> <p>I want to give you something about my background, though I think most of you don't know this. I'm a land use consultant right now, but I got into planning in 1971, being hired by Whatcom County to do the first SMP, which goes back a long time. Our final product adopted in 1976 was about 170 pages. Lots of</p>	<p>These comments were considered by the P/C in their deliberations and final recommendation. Please see the staff responses to the BIAWC's written comments on the proposed reasonable use process.</p>

Comment #	Commenter	Date	Exhibit	Section	Comment (Abbreviated; please see original correspondence for exact language, supporting arguments, and/or supporting material citations.)	Staff Response
					<p>definitions that I had to write. At that time the state guidelines from Ecology were a booklet of about 25 pages. I don't know if Cliff has ever seen that one. Let me move on here.</p> <p>I think the most important thing for me to say tonight is we're very concerned about the reasonable use process. And I've been surprised in the last few months to learn that that process has become a major part of the workload of many of the local wetland scientists. That was not true a few years ago, and I've been doing short plats for a long time and just hadn't heard that. So my most important thing to say tonight is that we are really concerned about the staff's new proposal to have three layers of permit processing to get a reasonable use exception. The first layer would be the staff of (mini?) variance, second would be a variance through the H/E, and the third would be a reasonable use through the H/E. So you'd be going there twice, paying the same amount of money, twice fees and everything. And so our proposal is to eliminate the middle level, the variance that would go to the H/E. And if you're not satisfied with what you are able to negotiate with a staff, with your wetland scientist, work out a deal based on science, not arbitrary numbers, it's politics. But then you can go to the H/E. So we're agreeing to support that. It's still going to be expensive for people, but at least it's not double the cost as it is. But please look at that in detail as quite a bit in our paper on that.</p>

# TECHNICAL MEMORANDUM

---

Date: December 31, 2020  
To: Cliff Strong, Ryan Ericson  
From: Dan Nickel, Mark Daniel, Devin Melville  
Project Name: Whatcom County SMP

## Subject: Whatcom County SMP Periodic Update - No Net Loss Statement

### Introduction

Whatcom County (County) is conducting a periodic review of its Shoreline Master Program (SMP). While the majority of amendments are to comply with current State law and address recent legislative updates, to clarify prior interpretations, and reorganize the SMP to improve usability for both applicants and staff), several amendments are substantive in nature and merit additional documentation to ensure that implementation of the updated SMP and future development will not result in a net loss of shoreline ecological functions.

The Shoreline Management Act guidelines (Guidelines) require local shoreline master programs to regulate new development to “achieve no net loss of ecological function.” The County’s 2007 comprehensive SMP update was approved under this benchmark based on the analyses performed then<sup>1</sup>. This memorandum builds on those analyses and addresses the amendments proposed for this year’s periodic review and specifically identifies amendments that are more substantive in nature.

The following areas of the SMP have amendments that warrant evaluation:

- Pier and dock standards
- Common line setback evaluation
- Trail location standards
- Nonconforming residential development
- Buffer reduction mechanisms
- Residential accessory structures

---

<sup>1</sup> See <https://www.whatcomcounty.us/3119/SMP-Update-2020-Documents>

The purpose of this memo is to describe these amendments and evaluate their potential effects on shoreline ecological functions to ensure the County will continue to meet the Washington State Department of Ecology no net loss criteria.

## No Net Loss Evaluation

### Pier and Dock Standards

**Amendment Description:** WCC 23.40.150(B) (Moorage Structures) (formerly titled Docks, Piers, and Mooring Buoys) contain revised dimensional standards, including overall square footage, for both freshwater and marine moorage (overwater) structures.

**NNL Evaluation:** The amended pier and dock standards in WCC 23.40.150(B), subsections 1 and 2, are extrapolated from the U.S. Army Corps of Engineers (Corps) Regional General Permit 6 and consistent with the Washington Department of Fish and Wildlife standards provided in the hydraulic code rules (WAC 220-660-140 and -380). These state and federal requirements contain provisions to allow overwater structures while ensuring implementation of impact reduction mechanisms to protect aquatic habitats. Furthermore, moorage structures are required to be constructed of materials that will not adversely affect water quality or aquatic plants or animals over the long term (WCC 23.40.150(C)).

While the proposed amendments to the Whatcom County SMP do not explicitly limit the number of future overwater structures, the proposed amendments minimize impacts by regulating overall footprint and dimensional standards, which are known to have a direct correlation to habitats and species. In general, the updated pier and dock standards allow for reduced square footage of overwater structures and a reduction in the total number of docks by prioritizing shared docks over single-user docks. The proposed amendments also avoid future impacts by prohibiting such moorage structures in key shoreline habitat areas (WCC 23.40.150(A)(6)).

### Common-Line Setback

**Amendment Description:** To protect views of the shoreline from existing structures when new development is proposed, WCC 23.30.040 (Views and Aesthetics) of the updated SMP includes a new subsection (B) that now allows setbacks in Urban, Shoreline Residential and Rural environments to be modified pursuant to WCC 23.40.020(D) (Shoreline Bulk Provisions, Setbacks, Common-Line Setback for Single-Family Residences). That section (incorporated from former Appendix F, where it had only applied to nonconforming lots) allows for setbacks to be

reduced or increased, depending on how existing adjacent homes are situated, to provide the greatest view opportunities for both the existing and new development. Furthermore, WCC 23.30.040 (Views and Aesthetics) new subsection (L) precludes new uses or development from substantially obscuring shoreline views within shoreline view areas or from existing residences on adjacent property.

**NNL Evaluation:** When the use of a common-line setback is allowed, compliance with buffer width reduction and mitigation sequencing pursuant to WCC 23.30.010 (Ecological Protection) shall be required. WCC 23.30.010 (B) states that development, use, and activities within the shoreline jurisdiction shall avoid and minimize adverse impacts, and any unavoidable impacts shall be mitigated to meet no net loss of ecological function and ecosystem-wide processes pursuant to WAC 173-26-186, Governing Principles of the Guidelines. Furthermore, WCC 23.30.010 (C) has been added to specifically to add flexibility in buffer modification when approaches include “increased protection of shoreline ecological function and processes.” To minimize impacts to views from the water, a new subsection (C) was added to WCC 23.30.040 (Views and Aesthetics), that now allows the Director to require the planting of vegetation to mitigate the impacts.

## Trail Location Standards

### **Amendment Description:**

WCC 16.16.620 (Wetlands – Use and Modification), Subsection (H) (Recreation) has been amended to allow public trails to include viewing platforms to be closer than the outer 25% of the buffer “when necessary to provide wetland educational opportunities or for public health and safety,” and to be wider than the standard widths when necessary to meet ADA requirements. Corresponding amendments have also been made to WCC 16.16.720(G)(1) (Habitat Conservation Areas – Use and Modification).

**NNL Evaluation:** This allowance is permissible provided that all criteria in WCC 23.40.160(A)(6) (Recreation) are met; this amendment adopts by reference the requirements of WCC Chapter 16.16 (Critical Areas), which contains the standards for trails in critical areas. WCC 16.16.620(H) criteria for passive recreation facilities that are part of a non-motorized trail system or environmental education program, including walkways, wildlife viewing structures, or public education trails, states the trail must minimize erosion and sedimentation, hydrologic alteration, and disruption of natural processes such as wood recruitment and natural wildlife movement patterns. Such trails must be made of pervious material or elevated where feasible,

be designed to avoid removal of significant trees, and be constructed in a manner that minimizes disturbance of the buffer and associated critical areas.

## Nonconforming Residential Development

**Amendment Description:** Standards for addressing the enlargement or expansion of single-family residences non-conforming to the shoreline buffer have been clarified in WCC 23.50.020 (Nonconforming Structures), subsection (F). Expansion of a nonconforming single-family structure may be approved when the expansion does not extend waterward of the existing primary structure's building footprint or the when the expansion is consistent with the constrained lot provisions in WCC 23.40.170.

**NNL Evaluation:** Approved expansion of single-family residences non-conforming to the shoreline buffer is not anticipated to have further impacts to the shoreline under the clarified standards provided in WCC 23.50.020 (F). Subsection (2) includes the following specific restrictions to ensure protection of existing ecological functions and mitigate for impacts. The expansion of nonconforming single-family residences or normal appurtenances greater than the constrained lot provisions of WCC 23.40.170 may be approved once during the life of the structure (100 years), with a total building footprint expansion of no more than 500 square feet. Additionally, the expansion must be landward or lateral of the existing footprint, shall occur on a previously impacted impervious surface, shall not occur waterward of the common line setback, and shall be accompanied by enhancement of an area equivalent to the expansion if the total building footprint increases by more than 250 square feet.

## Buffer Reduction Mechanisms

**Amendment Description:** WCC 16.16.745 and 16.16.640 address buffer modifications within wetlands and habitat conservation areas, including buffer width averaging, buffer width reductions, and buffer width variances. Buffer averaging allows limited reductions of buffer width in specified locations, while requiring increases in others. In such cases, the width of buffers may be averaged if it will improve the protection of functions and the applicant can demonstrate that all specified criteria are met. Buffer width reduction may be approved by the Director on a case-by-case basis, provided that the general standard for alternatives analysis and mitigation sequencing per WCC 16.16.260 have been applied and the applicant demonstrates to the satisfaction of the Director that all of the specified criteria have been met. Standard buffer widths may be reduced more than 25% though a variance pursuant to WCC 16.16.273, provided that buffer averaging beyond the limits allowed by the variance is prohibited.

**NNL Evaluation:** The updated SMP adopts the CAO by reference, allowing for limited buffer reduction mechanisms provided specified criteria are met. For buffer averaging proposals, both WCC\_16.16.745 (B)(2) and WCC 16.16.640 (B)(2) state the Director may require enhancement to the remaining buffer to ensure no net loss of ecological function, services, or value in the specified locations where a buffer has been reduced to achieve averaging. For buffer reduction proposals, both WCC 16.16.745 (C) and WCC 16.16.640 (C) allow the Director to require retention of existing native vegetation on other portions of the site to offset habitat loss from buffer reduction. Additionally, all buffer reduction impacts are required to be mitigated with the result being equal or greater protection of functions and values. In all circumstances where a substantial portion of the remaining buffer is degraded, buffer reduction plans shall include replanting with native vegetation in the degraded portions of the remaining buffer area to further ensure the no net loss standard is achieved.

## Residential Accessory Structures

**Amendment Description:** WCC 16.16.720(G)(4), Accessory Uses, allows for water-oriented accessory structures associated with a residential use to be located in habitat conservation area buffers. Such structures would be limited in area to either 10 percent of the buffer area or 500 square feet, whichever is less. Additionally, no more than 20 percent of the linear length of shoreline could be occupied by such a structure. Per this section, such recreation-oriented applications would only be allowed when all reasonable measures have been taken to avoid adverse effects on species and habitats, including applying recommendations from the Washington Department of Fish and Wildlife, providing mitigation for all adverse impacts that cannot be avoided, and limiting the amount and degree of the alteration to the minimum needed to accomplish the project purpose. As required mitigation for the development, the shoreline must be planted with native vegetation extending at least 15 feet landward from the ordinary high water mark for at least 75 percent of the shoreline length.

**NNL Evaluation:** This allowance for small water-oriented residential accessory structures is intended to offer flexibility to waterfront landowners who would like to enhance their water enjoyment opportunities, typically for viewing or direct water access. To balance these direct impacts to HCA buffers, the County has proposed a planting requirement immediately adjacent to the shoreline. Native vegetation in these locations are known to provide a variety of positive ecological benefits including habitat, water quality, and vegetation functions. Assuming an average waterfront lot width of 100 feet, such a requirement would require a minimum planting area of 1,125 square feet (100 feet long x 15 feet wide x 0.75). This planting area represents over a 2:1 mitigation ratio to the maximum potential impact area of 500 square feet. Even a small lot width of 50 feet would result in approximately 562.5 square feet of native shoreline planting.

Implementation of this provision is expected to improve habitat, water quality, and vegetative conditions as vegetation matures over time.

## Restoration Plan Implementation

The Shoreline Restoration Plan prepared as part of the Comprehensive SMP update in 2007 serves as a valuable resource for the County and its restoration partners to improve impaired ecological functions on the County's shorelines. The plan provides a framework for restoration on all County shorelines outside of incorporated areas.

The plan focuses on restoration projects that are reasonably likely to occur in the foreseeable future. This list has been updated during the periodic SMP update process<sup>2</sup>. Potential restoration opportunities were identified based on recommendations in existing restoration planning documents, as well as input from County staff and restoration partners. The plan lists restoration and protection strategies, including opportunities for specific projects, for each of the County's watersheds.

The plan provides an implementation framework by identifying existing and ongoing plans and programs as well as potential restoration partners at the federal, state, regional, and local levels. The framework builds on local and regional planning coordination among these programs and partners, identifying mechanisms for implementation including development incentives for restoration; landowner outreach and engagement; maximizing mitigation outcomes; and monitoring the effectiveness of restoration actions.

Restoration projects which have been completed or are in progress since 2007 include:

- Removing groins and bulkheads along Birch Bay Drive (ongoing)
- Removal of a failed solid fill pier, large rock groin, concrete debris and derelict piles in the western portion of Legoe Bay (ongoing)
- Lummi Island Quarry Restoration (ongoing)
- Bulkhead removal along Gooseberry Point (ongoing)
- Little Squalicum Creek mouth/estuary debris removal (ongoing)
- Debris removal and restoration of the armored shore at Mount Baker Plywood (ongoing)
- Point Roberts, Lighthouse Park structure removal (complete)
- Lummi View Drive Relocated (complete)

---

<sup>2</sup> Restoration Plan Addendum, March 31, 2020

- West Beach, Lummi Peninsula bulkhead removal (ongoing)

## Cumulative Impacts

The Cumulative Impacts Analysis during the 2007 comprehensive SMP update evaluated the effects of foreseeable development under the SMP and demonstrated that the goals, policies, and regulations, combined with recommendations in the Shoreline Restoration Plan, would prevent degradation of ecological functions relative to baseline conditions.

The Cumulative Impacts Analysis determined that the proposed SMP provides a high level of protection to shoreline ecological functions. The report indicated that on its own, the proposed SMP, which includes the Shoreline Restoration Plan, is expected to protect and improve shorelines within Whatcom County while accommodating foreseeable future shoreline development, resulting in no net loss of shoreline ecological function.

Emphasis is placed on achieving no net loss of ecological function throughout the SMP, with all uses and modifications subject to general and/or specific standards addressing the preservation of water quality, water quantity, and habitat function in the shoreline, as well as basin-wide ecological processes. The following are some of the key features that protect and enhance shoreline ecological functions to ensure that the no net loss standard is met.

- Shoreline environment designations are assigned to shorelines to minimize use conflicts and designate appropriate areas for specific uses and modifications.
- The SMP contains general policies and regulations designed to provide the basis for achieving no net loss of shoreline ecological functions, such as mitigation sequencing, critical areas and flood hazard regulations, and vegetation conservation standards.
- The critical area protection standards ensure that vegetated buffers are retained on wetlands, fish and wildlife habitat conservation areas, and geologically hazardous areas.
- More shoreline uses and modifications are permitted in areas with higher levels of existing disturbance, and allowed uses and modifications are more limited in areas with lower levels of disturbance. Regulations prohibit uses that are incompatible with the existing land use and ecological conditions and emphasize appropriate location and design of various uses.
- The Shoreline Restoration Plan identifies a number of project-specific opportunities for restoration inside and outside of shoreline jurisdiction, and also identifies ongoing

county programs and activities, restoration partners, and recommended strategies and actions consistent with a variety of watershed-level planning efforts.

## Conclusion

The proposed amendments to the SMP described above are not anticipated to have adverse effects on shoreline ecological functions at the planning level. Further, the updated SMP includes a variety of other amendments that are either insignificant when it comes to evaluating impacts to ecological functions or anticipated to strengthen the shoreline ecological protections provided by the SMP. Therefore, the proposed amendments to the SMP are not anticipated to result in a net loss of ecological functions when implemented in tandem with the Shoreline Restoration Plan. Monitoring key indicators is an effective way to ensure the standard of no net loss is being achieved. This can best be implemented by requiring the submission of short-term and long-term monitoring reports as part of permit approvals for development applications and maintaining consistency throughout the permitting process in evaluating mitigation sequencing. Additionally, ongoing efforts by state agencies to monitor land cover change detection, specifically work generated by the Washington Department of Fish and Wildlife, will continue to offer a valuable resource to ensure compliance with no net loss standards.

# TECHNICAL MEMORANDUM

Date: March 31, 2020  
 To: Whatcom County  
 From: Dan Nickel, The Watershed Company  
 Jonathan Waggoner, Herrera Environmental  
 Project Name: Whatcom County SMP Periodic Update  
 Project Number: 181232

## Subject: Whatcom County Shoreline Restoration Plan Addendum

The purpose of this memorandum is to update the previous Shoreline Restoration Plan adopted by Whatcom County in 2007. The Shoreline Restoration Plan is meant to help identify restoration or enhancement projects and areas of the shoreline for improvement. Generally, uses and developments within shorelines cannot always be fully mitigated, which may result in incremental and unavoidable degradation to the baseline conditions of the shoreline. The Restoration Plan aims to counter these incremental degradations by identifying areas and projects for enhancement and restoration which can improve degraded baseline conditions along the shoreline over time.

This addendum references projects listed in the Shoreline Restoration Plan containing enhancement and restoration project proposals and updates them based on information received by the County, agencies, tribes and stakeholder organizations (Table 1). New projects which have been completed or are planned for construction are included in Table 2.

**Table 1. Project updates for restoration actions**

Project Location / Identifier	Environmental component(s)	Status (2020)	Proponent	Notes
Drayton Harbor	The large platform and foundation could be removed to restore the beach and fringing marsh	No change		
Drayton Harbor	Remove bulkheads in two separate locations that protrude into the intertidal	No change		
Drayton Harbor	Remove dilapidated dock	No change		
Birch Bay	Birch Bay Drive & Pedestrian Facility Project – Remove groins and bulkheads along Birch Bay Drive to restore upper beach and backshore habitats	Under construction	Whatcom County	Phase I under construction. Completion expected in 2021. Will restore 7,500 linear feet of shoreline.

Project Location / Identifier	Environmental component(s)	Status (2020)	Proponent	Notes
Pt Whitehorn	Remove bulkheads along these bluffs, which are the sole sediment source for accretionary shoreforms and valuable habitat in Birch Bay and State Park reaches	No change		
Cherry Pt	Remove dumped debris from bluff face and beach	No change		
Conoco Phillips	Sediment would be excavated from landward of the berm and bypassed to the south side of the pier fill area in stages. This would free up impounded sediment to southern shores and create a saltmarsh or estuary in the backshore	No change		
Sandy Pt	Marsh Restoration – Reduce intertidal slope and impervious surfaces and create riparian buffer/dune habitat to aid with flood control issues in the basin. Portions of the undeveloped (filled) uplands could be restored to marsh	No change		
Lummi River Delta	Tidal Connectivity – Restoration opportunities include removing extensive dikes and tide gates across the Red River Delta to restore tidal inundation and greatly increase fish habitat	No change		
Lummi Island, Pt Migley	Remove Bulkheads – Bulkheads could be scaled back or moved landward where possible and picnic structures over what would be active beach should be removed	No change		
Lummi Island, Village Pt	Remove Structures – Remove relict structures in backshore/marsh environments with marsh restoration	No change		
Lummi Island, Village Pt	Remove pier, groin, debris – Removal of a failed solid fill pier, large rock groin, concrete debris and derelict piles in the western portion of Legoe Bay would benefit the nearshore	In early design		Goal is to restore ~150 linear feet
Lummi Island, Village Pt	Remove derelict piles which are likely creosote	No change		
Lummi Island, Smugglers Cove	Lummi Island Quarry Restoration – The shore that is not in use could be restored through removal of fill and riparian restoration to resemble the rocky shore prior to mining operations	In early design	Northwest Straits Foundation	Goal is to restore ~600 linear feet
Eliza Island	Remove derelict piles which are likely creosote in two locations	No change		
Gooseberry Pt	Remove bulkheads	Ongoing	Lummi Tribe	Likely saving as mitigation – goal is to restore ~160 linear feet

Project Location / Identifier	Environmental component(s)	Status (2020)	Proponent	Notes
Gooseberry Pt	Remove bulkheads	No change		
Lummi Shore Rd	Beach monitoring – Conduct beach monitoring to ensure the beach nourishment is continued, as begun under the USACE-constructed revetment	Ongoing	Lummi Tribe	
Lummi Shore Rd	Remove derelict drift nets, debris, and other foreign material from the Lummi Shore Road beaches	No change		
Cliffside Community Beach	Remove abundant wood debris smothering nearshore sediments along the Cliffside community beach	Complete	WDOE	Study complete, removal not recommended
Squalicum Creek	Debris removal and exotic species removal and revegetation with native plants at Little Squalicum Creek mouth/estuary	Permits acquired	City of Bellingham	Funding sources still being sought
Mt Baker Plywood	Debris removal and restoration of the armored shore around the west side of the Mount Baker Plywood area would provide habitat improvements	Design in process	Port of Bellingham	Preliminary design near completion
Chuckanut Bay	Beach Nourishment	No change		
Pt Roberts, Boundary Bluff	Removal of rock bulkheads in the southern and central portion of the reach, where erosion does not appear to be substantial	No change		
Pt Roberts, Boundary Bluff	Remove abandoned pilings north of Lighthouse Park (including by the west end of Gulf Road)	No change		
Pt Roberts, Lighthouse Park	Remove the old telephone building and associated shore defense structures, this includes a soldier pile bulkhead and boulder and debris revetment	Complete	Whatcom County	250 linear feet restored
Pt Roberts, Lilly Pt	A row of houses/cabins with revetments cause bluff sediment impoundment; restore marine riparian vegetation	No change		
Pt Roberts, Lilly Pt	Remove old cannery – Old Cannery - Pilings, slag piles, and various debris such as concrete pieces could be cleaned up from the intertidal and backshore	No change		
Pt Roberts, Maple Beach	The Elm St outfall structure, short groin, and the old pilings could be at least partially removed to free up beach area and remove the foreign material	No change		

Table 2. Completed or planned projects not Included in the previous Shoreline Restoration Plan.

Project Location	Project Description	Status (2020)	Proponent	Notes
Lummi Peninsula	Lummi View Drive Relocated	Complete	Lummi Tribe	The southern end of Lummi View Drive was moved landward to avoid erosion
West Beach, Lummi Peninsula	Bulkhead Removal	In Process	Lummi Commercial Corp	2751 Haxton Way, Restoration design complete
Waypoint Park	Waypoint Park	Complete	City of Bellingham	New beach included in park
Boulevard Park Beach	Boulevard Park Beach	Complete	City of Bellingham	Phase 1 complete, phase 2 to be part of overwater walkway
Post Point Lagoon	Post Point Lagoon	Complete	City of Bellingham	Lagoon shoreline restoration
Chuckanut Bay Shorelands	Chuckanut Bay Shorelands	Complete	City of Bellingham	Beach restoration and fish passage improvements in Mud Bay

## Brief Description of Proposed Amendment

Whatcom County (County) has submitted Shoreline Master Program (SMP) amendments to the Washington Department of Ecology (Ecology) for an initial determination of concurrence to comply with periodic review requirements of RCW 90.58.080(4). The County has elected to utilize the optional joint review process for SMP amendments available per WAC 173-26-104; therefore Ecology is required under WAC 173-26-104(3)(b) to make an initial determination of consistency with applicable laws and rules. The County proposes amendments to bring the SMP into compliance with requirements of the Shoreline Management Act (Act) or State Rules that have been added or changed since the County's comprehensive SMP update. In addition, the County is proposing numerous locally-initiated amendments to its SMP, Critical Areas Ordinance, Comprehensive Plan, and its Permit Procedures Ordinance to address changing local circumstances, reorganization of county code structure, and to address implementation challenges that have occurred since the comprehensive SMP update completed in 2008.

In addition, Whatcom County has elected to combine the final review steps associated with a 2018 locally-initiated SMP (Resolution No. 16-039) and Zoning Code amendments related to short-term rentals. On April 3, 2018, Ecology conditionally approved the SMP amendments subject to four recommended changes. In response, the County has incorporated the proposed SMP changes, along with select Ecology recommended changes into this review and plans to adopt the zoning changes concurrently with final adoption of this SMP amendment. The County has also elected to incorporate another locally-initiated SMP amendment transmitted to Ecology in 2019 (Ordinance No. 19-057) addressing updated hazard tree provisions.

## FINDINGS OF FACT

### Need for amendment

The County's comprehensive update to their SMP went into effect in 2008, although numerous locally-initiated amendments have been completed since that time. These proposed amendments are needed to comply with the statutory deadline for a periodic review of the County's Shoreline Master Program pursuant to RCW 90.58.080(4). The County has identified that this periodic review will result in amendments to the SMP to address updates to the Act or implementing State Rules, changed local circumstances, new information, and improved data.

**Whatcom County  
SMP Periodic Review - Determination of Initial Concurrence**

**SMP provisions to be changed by the amendment as proposed**

Note that the County concurrently processed amendments to its Comprehensive Plan and Critical Areas Ordinance, along with the amendment of its SMP. However, not all of the changes are applicable to shoreline jurisdiction. As such, the following is a list of substantive changes that apply to this SMP amendment.

*Whatcom County Comprehensive Plan Chapter Ten - Environment*

**Administration and Regulation**

Policy 10B-8, which currently refers back to the SMP to constitute the “Shoreline Element” of the Comprehensive plan has been deleted. Alternatively, the county created a stand-alone shoreline chapter to relocate policies from the SMP into the Comprehensive Plan.

**Climate Change**

A new policy has been added as follows:

*Policy 10D-11 – Protect ecological functions and ecosystem-wide processes of Marine Resource Lands and critical areas in anticipation of climate change impacts, including sea level rise.*

**Marine Resources Management**

The Shoreline Management Program section of this chapter has been removed and relocated to the new shoreline chapter of the Comprehensive Plan.

*Whatcom County Comprehensive Plan Chapter Eleven - Shorelines*

This is a completely new chapter of the Comprehensive Plan that relocates portions of Chapter Ten – Environment (as described above). In addition, the new chapter relocates and modifies the following sections, or portions of these sections, of the SMP to constitute the “Shoreline Element” of the Comprehensive Plan:

**WCC 23.10.030 – Governing Principles**

- Minor non-substantive revisions are included to provide clarity to fit within the structure of the Comprehensive Plan

**WCC 23.20 – Overall SMP Goals and Objectives**

- Changes include minor non-substantive revisions to provide clarity and to fit within the structure of the Comprehensive Plan.
- WCC 23.20.080 – Archaeological, Historical and Cultural Resources has been amended to include the Washington Department of Archaeology and Historic Preservation (DAHP) definition of “Cultural Resource”.
- Two new goals were added to the new Cultural Resources subsection of this new Chapter consistent with an existing memorandum of understanding between the County and DAHP as follows:

*Goal 11-3 – Consult with the Washington State Department of Archaeology and Historic Preservation (DAHP) and affected Native American tribes when developing local policies and regulations for identifying, protecting, and preserving cultural resources.*

**Whatcom County**  
**SMP Periodic Review - Determination of Initial Concurrence**

*Goal 11-4 – Where appropriate, restore unique resources that have cultural, archaeological, historic, educational, or scientific value or significance to further enhance the value of the shorelines.*

- WCC 23.20.100 Restoration and Enhancement language in Goal 11-2 has been modified to include a reference to the Shore Friendly Program developed by the Washington Department of Fish and Wildlife (WDFW), Washington Department of Natural Resources (WDNR) and the United States Environmental Protection Agency (USEPA).

**WCC 23.30 – Shoreline Jurisdiction and Areas Designations**

- Minor and non-substantive changes are included to provide clarity and to fit the structure of the Comprehensive Plan.

**WCC 23.40 – Shorelines of Statewide Significance**

- Minor non-substantive changes are included to provide clarity and fit within the structure of the Comprehensive Plan.
- The reference to RCW 90.58.020 has been clarified to follow the preferential order of uses on shorelines of state-wide significance per WAC 173-26-181.

**WCC 23.90 – General Policies and Regulations**

- Minor and non-substantive changes are included to provide clarity and to fit this section into the structure of the Comprehensive Plan.
- WCC 23.90.060 – Vegetation Conservation. A list of important functions that shoreline vegetation provides has been deleted to simplify existing Vegetation Conservation language at WCC 23.90.060.A.1 into new Policy 11X-1.
- WCC 23.90.070 – Archaeological, Historic and Cultural Resources. New preamble language added to this section to establish applicability and state authority. The following policy has been added based on language of an existing memorandum of understanding with DAHP and the Lummi Nation:

*Policy 11X-9: In reviewing development proposals, the County shall take, or cause project applicants to take, all required actions to:*

- 1. Minimize the risk of disturbing cultural resources within Whatcom County shorelines.*
- 2. Due to the limited and irreplaceable nature of the resources(s), prevent the destruction of or damage to any site having historic, cultural, scientific, or educational value as identified by the appropriate authorities, including affected Tribes and the DAHP.*
- 3. Consult with professional archaeologists, DAHP, and affected Tribes before permitting or otherwise approving the use or development of shoreline areas containing cultural resources. This consultation shall be accomplished through the regulations and procedures provided in WCC Title 23.*
- 4. Consult with DAHP and affected Tribes and coordinate with project archaeologists to establish site and project-specific procedures for protection and management of cultural resources.*
- 5. Make informed specific land use decisions based upon information provided by DAHP and Tribes.*
- 6. Ensure the use of the best available information, technology, and techniques in identifying, protecting, preserving, and restoring cultural resources.*

- The following new policies have been added to address climate change and sea level rise:

**Whatcom County**  
**SMP Periodic Review - Determination of Initial Concurrence**

*Policy 11AA-1 – Coordinate with Tribal, Federal, State, and local agencies to address issues related to climate change and sea level rise as related to shoreline management.*

*Policy 11AA-2 – Whatcom County should plan and prepare for the likely impacts of climate change on County-owned facilities, infrastructure, and natural resources and ensure that projects for major maintenance or replacement of utilities, roads, and other public infrastructure consider the impacts of sea level rise in the location, design, and operation of the projects.*

*Policy 11AA-3 – Whatcom County should strive to increase resident and business resiliency to the anticipated impacts of climate changes by implementing land use regulations based on best available science, such as sea level rise, changes in rainfall patterns, changes in flood volumes and frequencies, and changes in average and extreme temperatures.*

*Policy 11AA-4 – Habitat protection and restoration projects in shoreline jurisdiction should consider implications of sea level rise and other climate change impacts to promote resiliency of habitats and species. Those that promote climate change and sea level rise resiliency should be considered priority actions.*

*Policy 11AA-5 – Whatcom County should monitor the impacts of climate change on Whatcom County's shorelands, the shoreline master program's ability to adapt to sea level rise and other aspects of climate changes at least every periodic update, and revise the shoreline master program as needed. Whatcom County should periodically assess the best available sea level rise projections and other science related to climate change within shoreline jurisdiction and incorporate them into future program updates as relevant.*

*Policy 11AA-6 – Public infrastructure such as transportation systems, utilities, flood hazard control, and instream structures and essential public facilities in shoreline areas should be built in a manner that accounts for increased sea level rise and storm surge and flooding that may accompany it*

*Policy 11AA-7 – Whatcom County should evaluate opportunities to protect shoreline environments and infrastructure from the impacts of climate change, as necessary and feasible. Specifically, the County should maintain shoreline protection and erosion control by:*

- Facilitating the installation and maintenance of native vegetation along appropriate areas of shoreline;*
- Revisiting development policies with the objective of providing additional shoreline buffer areas between developed areas and the shoreline; and*
- Only consider structural shoreline stabilization structures when alternative options are unavoidable.*

**WCC 23.90 – General Policies and Regulations**

- Minor and non-substantive changes are included to provide clarity and to fit this section into the format of the Comprehensive Plan.
- WCC 23.100.050 – Boating Facilities, Marinas and Launch Ramps. The following new policy was added regarding live-aboard vessels:

**Whatcom County**  
**SMP Periodic Review - Determination of Initial Concurrence**

*Policy 11DD-13 – Live-aboards should be regulated so as to prevent adverse impacts to public health and safety.*

- WCC 23.100.210 – Cherry Point Management Area (CPMA). The policies of this section have been overhauled based on draft amendments regulating fossil fuels by the Whatcom County Council including new subsections to Policy 11JJ-1 as follows:

*b. Existing legal fossil fuel refineries should be allowed to continue and maintain their operations within limited expansions subject to environmental review, greenhouse gas emission mitigation, and conformance with the Shoreline Master Program and other applicable land use designation.*

*c. It is the policy of Whatcom County to limit the number of industrial piers at Cherry Point to the existing three piers in operation or approved as of January 1, 1998, taking into account the need to:*

- *Act conservatively in land use matters at Cherry Point to prevent further harm to habitat important to the Cherry Point herring stock and Southern Resident Orcas;*
- *Optimally implement the Shoreline Master Program policy regarding shorelines of statewide significance per WCC 23.40;*
- *Encourage the continued County use of best available science;*
- *Support and remain consistent with the state Department of Natural Resources' withdrawal of Cherry Point tidelands and bedlands from the general leasing program and the species recovery goals of the Cherry Point Aquatic Reserve designation and Management Plan;*
- *Recognize federal actions upholding treaty rights;*
- *Protect traditional commercial and tribal fishing; and*
- *Prevent conflicts with vessel shipment operations of existing refineries that could lead to catastrophic oil or fuel spills.*

The following new policy has also been added:

*Policy 11JJ-2 – Whatcom County should ensure that shoreline development applicants demonstrate consistency with the State of Washington Department of Natural Resources' Cherry Point Aquatic Reserve Management Plan.*

The County deleted the existing requirement that review of new uses and development activities within the CPMA are limited to the use regulations specific to the CPMA in the SMP.

- WCC 23.100.130 – Moorage: Docks, Piers and Mooring Buoys. More detail has been added to Policy 11MM-4 related to ways to improve protections for salmon and forage fish habitats.
- WCC 23.100.150 – Residential. The County added reference to a community access requirement for new developments of less than four lots to Policy 11OO-9.
- WCC 23.100.200 – Utilities. New policy added as follows:

*Policy 11TT-8 – Given the different scales of regional, local and accessory utilities and their potential impacts, the County may establish different regulations regarding each.*

**Whatcom County**  
**SMP Periodic Review - Determination of Initial Concurrence**

*Whatcom County Code Title 22 – Land Use and Development*

In an effort to consolidate all of the County’s permitting procedures into a single location, the County has relocated some of its administrative provisions from its SMP into Title 22 – Project Permits. Revisions to SMP specific changes in this title are as follows:

- WCC 22.07.020.B.8 – The cost thresholds for exempt review of freshwater dock construction have been updated for consistency with the current Washington Office of Financial Management (OFM).
- WCC 22.07.020.B.16 – Restoration of native kelp, eelgrass beds and native oyster populations has been added to the activities that qualify for exempt review as a fish habitat enhancement project.
- WCC 22.07.020.B.1 – The general cost threshold for exempt review has been amended for consistency with the current OFM standards.
- WCC 22.60.040.2, 22.05.160.3, 22.07.060.F – Filing procedures have been updated to reflect rule changes by Ecology in 2011.
- WCC 22.07.20.B.17 – A new exemption category has been added for review for retrofitting existing development to comply with the Americans with Disabilities Act (ADA).
- WCC 22.05.130.1.c – A 90-day review target has been added for Washington Department of Transportation (WSDOT) projects per a legislative amendment in 2015.
- WCC 22.05.020 Table 1, 22.05.160 – Appeal procedures have been updated for consistency with 2012 legislative changes.

*Whatcom County Code Title 23 – Shoreline Management Program*

The shoreline management program (SMP) has been substantially reformatted and reorganized, including relocation of all policy language into a new chapter of the Whatcom County Comprehensive Plan as detailed previously within this document. Title 23 now houses only the regulatory provisions of the County’s SMP. Substantive changes to these regulations are summarized as follows:

**WCC 23.05 Purpose and Intent (now referred to as General Provisions)**

- The reference to Stipulated Judgment No. 93-2-02477 related to the development at Governor’s Point has been deleted since the agreement has been extinguished by the all parties.
- The incorporation by reference of the Whatcom County Critical Areas Ordinance (CAO) has been amended to cite the most current update (currently under review).
- The effective date for application of the SMP has been updated for consistency with legislative changes made in 2010.

**WCC 23.10 Administrative Procedures (now referred to as Administrative provisions)**

- The process for review of use and development within the CPMA have been amended so that all applicable SMP policies and regulations now apply in addition to policies and regulations specific to this special area designation.
- The applicability of the SMP to lands under exclusive federal jurisdiction has been clarified in accordance with 2017 Ecology rule amendments.
- Statutory language from the SMA (RCW 90.58.350) has been added to clarify SMP applicability to areas subject to treaty rights.

## Whatcom County

### SMP Periodic Review - Determination of Initial Concurrence

- The applicability of the SMP to remedial actions, boatyard improvements, select WSDOT projects, etc. have been added for consistency with Ecology rule amendments in 2017.
- The applicability of the SMP to the disposal of dredge material to a Dredged Material Management Program (DMMP) site has been added consistent with legislative amendments made in 2019.
- Enforcement provisions now include increased penalties for shoreline violations in the form of increased mitigation requirements.
- Authority to require a financial surety has been added to ensure compliance with conditions of approval when determined by the County.

### WCC 23.20 Shoreline Jurisdiction and Area Designations (now referred to as Shoreline Jurisdiction and Environment Designations)

- A list of jurisdictional areas subject to the SMP has been added.
- The geomorphic floodway, as mapped by the County during its comprehensive SMP update is no longer being used to determine shoreline jurisdiction on the Nooksack and Sumas Rivers. In lieu of this, the County will now include the entire 100-year FEMA floodplain boundary as part of shoreline jurisdiction.
- The Official Shoreline Map has been updated to include the “H Street Wetlands” that include ponded areas that meet the size thresholds to be regulated as lakes under the SMA. The features were originally inventoried as part of the SMP Comprehensive Update in 2008 but for some reason were not included during that amendment.
- New standards to resolve errors of the Official Shoreline Map have been added.
- The CPMA is now listed as its own environment designation rather than applied as an overlay per the current SMP.

### WCC 23.30 General Regulations

#### Ecological Protection

- A new provision allowing the buffer modification and alternative mitigation approaches in the CAO has been added.
- The conditional use permit requirement to use the alternative mitigation approaches in the CAO has been removed.

#### Water Quality and Quantity

- Additional detail has been added to the water quality and quantity regulations to reference the county stormwater regulations applicable to shoreline development.
- New language regulating stormwater and sewer outfalls has been added to the water quality and quantity regulations.

#### Views and Aesthetics

- The County can now require planting of vegetation to mitigate view impacts of new development from the water.
- “Retaining walls” are no longer limited to four-feet in height between the ordinary high water mark and structures.
- Where reductions in shoreline setbacks and buffers are allowed, view impacts must now be considered from shoreline view areas or from existing residences on adjacent properties.

#### Vegetation Management

- Vegetation removal for the purposes of establishing and maintaining view corridors are now regulated by the CAO as an activity allowed with notification.

**Whatcom County**  
**SMP Periodic Review - Determination of Initial Concurrence**

- The existing requirement that new development shall conform to natural contours and minimize disturbance has been modified to require the use of trails or stairs from parking areas on steep slopes if feasible. In addition, tiered foundations are no longer a requirement to meet this provision.

Cultural Resources

- This chapter has been completely rewritten and updated with input from the Lummi Nation Tribal Historic Preservation Office (LNTHPO) and the Department of Archaeology and Historic Preservation (DAHP).

Public Access

- Cost considerations have been removed as a factor in considering whether or not public access is required.
- Public access will no longer be required if:
  - The subject property is physically separated from the water by an existing developed road or an additional parcel.
  - “Reasonable and safe” opportunities already exist within a quarter of a mile from the subject property.
  - The site is part of a larger development that has previously provided public access as part of the permitting process.
  - Utility developments through shoreline jurisdiction to serve developments outside of shoreline jurisdiction.
- Consideration of public access is no longer exempt for: dredging, forest practices, landfill and excavation, mining, private docks serving four or fewer dwelling units, instream structures, shoreline stabilization and ecological restoration projects.
- Larger scale public access planning is now referenced as a tool that could be developed in the future for application in the SMP rather than via a site-by-site analysis; however no such public access planning has been conducted as part of this SMP amendment.
- The priority for water-dependent uses and public access over maintenance of views from adjacent properties has been added per the Shoreline Management Guidelines.
- All location and design, and other standards for implementing the public access requirements have been removed from the SMP (former section 23.90.080.B.8 through 23.90.080.B.17).

**WCC 23.40 Shoreline Use and Modification Regulations**

Shoreline Bulk Provisions – Buffers, Setbacks, Height, Open Space and Impervious Surface Coverage

Agriculture

- New agricultural uses are allowed in the CPMA shoreline environment designations, however liquid manure storage facilities/spreading and animal feeding operations/confined animal feeding operations (AFOs/CAFOs) are prohibited.

Aquaculture

- Siting standards for aquaculture operations near national wildlife refuge lands have been deleted as they rely on outdated guidance from 1986.
- New standards related to commercial geoduck aquaculture have been added in response to 2011 Ecology rule changes.
- Application requirements now include a vegetation habitat survey with consultation from the Washington Department of Fish and Wildlife (WDFW). In addition, an assessment of aquatic species, including forage fish, and spawning and other lifecycle use of, or adjacent to the proposed aquaculture site is now required.

## Whatcom County

### SMP Periodic Review - Determination of Initial Concurrence

- Aquaculture is an allowed use within the CPMA with exception of commercial net pens which are prohibited. Geoduck aquaculture requires a CUP.

#### Marinas and Launch Ramps (formerly Boating Facilities)

- Standards for live-aboard vessels within marinas are now included.
- This section has been clarified to apply to public or quasi-public boat ramps and not to private residential boat ramps which are prohibited in all shoreline environment designations.
- Launch ramps that are part of a marina now require a conditional use permit in the urban conservancy and conservancy shoreline environment designations
- Marinas and associated launch ramps are now prohibited with the resource shoreline environment designation.
- Marinas and associated launch ramps are prohibited in the CPMA environment designation. Public launch ramps are allowed.

#### Commercial

- Water-oriented commercial development is allowed within the CPMA environment designation. Non-water oriented commercial development requires a CUP.

#### Dredging and Dredge Material Disposal

- Dredging is now permitted to obtain fill for approved MTCA/CERCLA projects, and allowed as a CUP for other types of restoration projects.
- This section now clarifies that regular maintenance of approved barge landing sites shall not be considered dredging.
- Dredge disposal on shorelands, wetlands or a river's channel migration zone is only allowed for restoration or enhancement of shoreline ecological functions and processes through review of a CUP.
- This section clarifies that dredge disposal at an approved DMMP site no longer requires a shoreline permit consistent with legislative actions taken in 2019. As such, previous language related to the DMMP review process has been stricken.
- Dredging is prohibited for new development in the CPMA shoreline environment designation, but otherwise allowed through review of a CUP.

#### Fill and Excavation (formerly Landfill and Excavation)

- Language added to emphasize any necessary fill in shoreline jurisdiction must be located, designed and constructed to protect shoreline ecological functions, including channel migration.
- Fill and excavation waterward of the OHWM is no longer allowed for the following purposes:
  - Maintenance of lawfully established developments
  - Development of shoreline stabilization projects, flood control, and instream structures.
- Fill associated with the cleanup and disposal of contaminated sediments as part of an environmental cleanup plan is now allowed below the OHWM with a CUP.
- Fill for the purposes of creating land for residential development is prohibited.

#### Flood Hazard Reduction and Instream Structures (formerly Flood Control Works and Instream Structures)

- Flood hazard reduction standards from the SMP Guidelines [WAC 173-26-221(3)] have been added to this section.
- The use of revetments now only applies to public flood hazard reduction projects.
- The use of weirs or current deflectors are only permitted when necessary to protect public infrastructure.

#### Forest Practices

- The SMP no longer prohibits new road construction on marine or lake shores where slopes exceed 35 percent.

## **Whatcom County**

### **SMP Periodic Review - Determination of Initial Concurrence**

- The current limitation on timber harvest along feeder bluffs and landslide hazard areas is no applicable.
- Timber harvest to convert forest land to other uses is allowed on shorelines of statewide significance to the minimum necessary to accommodate the change of use.
- Per 2017 Ecology rule changes, this section has been clarified that timber cutting alone does not represent “development” under the SMA and that only those forest practices that involve development require review via a shoreline permit.
- Forest practices are no longer prohibited within the urban, urban resort, urban conservancy or shoreline residential shoreline environment designations.
- Forest practices within shorelines of statewide significance now require a CUP.
- Forest practices within a conservancy shoreline environment designation no longer have to comply with critical area buffers/setbacks.
- The caveat that forest practices within a natural shoreline environment designation must be consistent with the purposes of such an SED have been removed. The CUP requirement remains.

#### Industrial and Port Development

- This section now applies to industrial and port developments within the CPMA.
- This section has been clarified to require consideration of public access for both water-oriented and non-water-oriented development.
- New siting criteria for marine rail systems has been added.
- The expansion of existing legal fossil fuel refinery operations and/or transshipment facilities are now only permitted in the Urban and Rural SEDs. A CUP is required in the Resource, Aquatic and the CPMA SEDs. Such expansions are prohibited in all other areas.
- New or expanded, existing legal renewable fuel refinery operations and/or transshipment facilities are now permitted only in the Urban and Rural SEDs. A CUP is required in the Resource, Aquatic and CPMA SEDs. These uses are prohibited in all other areas.

#### Cherry Point Management Area

- New standards for “Fuel Uses – Shoreline Permits and Requirements” has been included as a placeholder until the Whatcom County Council adopts final amendments related to fossil fuel development and expansion. Existing fossil fuel refinery/transshipment facilities may be expanded, and new or expanded renewable fuel refinery/transshipment facilities require review through a CUP within the CPMA.
- Liquid manure storage facilities, spreading of liquid manure and animal feeding operations are prohibited within the CPMA.
- New piers within the CPMA are now limited to those in operation as of January 1, 1998.
- Any fill or excavation waterward of the OHWM requires review of a CUP.

#### Land Division

- This is an entirely new section that was moved from the residential use sections of the existing SMP.
- All land divisions must be configured to avoid significant vegetation removal and shoreline modification when developed in the future.
- Clustering and other low impact development techniques to minimize physical and visual impacts on shorelines “may” now be required. The existing SMP uses the term “shall” be required.

#### Mining

- A prohibition on the use of siphon technologies for in-water mining activities per RCW 90.48 have been added to this section.

## Whatcom County

### SMP Periodic Review - Determination of Initial Concurrence

- The requirement to demonstrate that mining must be dependent upon a shoreline location prior to authorization has been removed.
- The applicability of shoreline jurisdiction to lakes created by mining operations that exceed twenty-acres in size as been removed.
- Specific requirements for mining applications have been deleted and replaced with a general reference to requirements found in RCW 90.44 (Surface Mining) and RCW 77.55 (Construction Projects in State Waters).
- New standards for mining below the OHWM of rivers and streams has been added consistent with the SMP Guidelines.
- Specific standards for open pit mining within floodplain areas has been deleted. The includes requirements that such mining take place outside of channel migration zones, design requirements for mining ponds to eliminate fish stranding and eutrophication, the demonstration that channel avulsion or stream flow changes will not occur as a result of mining, a requirement that equipment be floodproofed, and a demonstration that mining will not have adverse impacts on fish resources, water quality, recreation resources or adversely impact a streams natural capacity to erode, shift, accrete, and/or flood.
- Mining in the CPMA requires a CUP.

#### Moorage Structures (Formerly Moorage, Docks, Piers and Mooring Buoys)

- Marine rail systems are now allowed when no other moorage structures exist and with minimal use of pilings. Marine rails are limited to 20-feet in length from the OHWM.
- The dimensional standards for new moorage structures has been substantially overhauled. For docks, the length is no longer capped at 40 to 60 feet but rather the minimum necessary to reach a maximum water depth of 5.5 feet below the OHWM.
- Ells are now allowed with a maximum width of six feet.
- Fingers are now allowed with a maximum width of 2 feet.
- All moorage structures now have a maximum overall surface area limitation based on whether the structure is for individual or shared use. This limitation can be exceeded only when necessary to reach specific depths.
- Floats are now required to have 30 to 50 percent functional grating depending on size.
- Marine docks must be located at least six feet above the bed at the landward end of the structure.
- Standards for the type and orientation of required grated decking have been added.
- A 10% or 48-square foot threshold for dock repairs now triggers the need to replace solid decking with grated decking within the area of the proposed repair.
- Riprapped or bulkheaded fills are now only allowed for public projects through review of a CUP.
- Pilings must now be spaced no closer than 20-feet.
- Float tubs must now be fully enclosed to prevent breakup of float materials to the water.
- Floatation components shall not be placed below required grated decking.
- New standards associated with piling replacement have been included.
- Moorage pilings are now addressed in the SMP and are limited to two for vessels that exceed the length of the float.
- Overhead wiring or plumbing on docks is prohibited.
- New maximum width requirements for landings, stairways, or steps are now capped at 4 to 6 feet depending on the number of dock users.
- New standards specific to marine docks have been added related to float anchoring, allowance of an access float limited to 6 by 10 feet to allow access during tidal cycles when the moorage

**Whatcom County**  
**SMP Periodic Review - Determination of Initial Concurrence**

float is perpendicular to the pier/ramp, limitation of floats above +5 MLLW and use of float stops to avoid grounding during low water conditions.

- Standards for mooring buoys have been updated to include a requirement to identify the location of the buoy anchor as part of the permit review, a requirement for a midline float to avoid anchor lines contacting the bedlands, specifics on the types of anchors allowed, requirements for minimum swing distances to other structures, and limitations on new mooring buoys in threatened or closed shellfish harvesting areas.
- Platform lifts are now specifically allowed in the SMP in lieu of a standard accessory float.
- Applicants must now demonstrate that alternative moorage, such as mooring bouys or a dock sized to accommodate a tender, are not adequate or feasible before a new individual dock can be authorized in freshwater. The requirement already exists within marine waters.
- Shared use dock standards have been clarified to allow multiple accessory structures depending on the number of users.

Residential

- The standards associated with single-family development on nonconforming lots has been overhauled and is now a new section within this chapter. Changes include the following:
  - The maximum 2,500 square foot building area no longer includes the entire area that will be disturbed to construct the residence and appurtenant developments. It now includes only the constructed developments including the house, sidewalks, driveway and other appurtenant developments.
  - The 2,500-square foot building area no longer includes lawn and landscaping. Now an additional 500-square feet of lawn and landscaping is allowed if located as far from the shoreline as feasible
  - This provision can now be utilized within alluvial fan hazard areas.
  - Prescriptive mitigation standards for buffer enhancement through this process have been removed and replaced with general standards that state that all areas outside of the approved building area shall be “optimized to provide the maximum shoreline ecological functions and ecosystem wide functions.”
  - “Accessory utilities” may be allowed within buffer areas according to applicable critical area provisions incorporated by reference into the SMP.
- Consideration of public access no longer applies to all multi-unit residential development. Instead, public access is required for only multi-family developments greater than 4 units. Specific standards for public access in this situation have also been added.

Restoration and Enhancement

- A reference to the SMP relief mechanism associated with select shoreline restoration projects has been added consistent with WAC 173-27-215.

Shoreline Stabilization

- WDFW’s Marine Shoreline Design Guidelines are not referenced for design of new shoreline stabilization.
- A conditional use permit is no longer required to consider new shoreline stabilization in support of non-water-dependent development, including single-family residences. The requirement that such stabilization be allowed only when erosion threatens reasonable use of the property has also been deleted.
- The requirement that publicly financed or subsidized shoreline stabilization provide appropriate public access has been revised for consistency with the SMP Guidelines.
- Shoreline stabilization in the form of revetments are now prohibited with the exception of water-dependent and public infrastructure projects which required review via a CUP.

## Whatcom County

### SMP Periodic Review - Determination of Initial Concurrence

- The existing prohibition on use of gabion baskets has been lifted on all freshwater shorelines. Such forms of stabilization now require review via a CUP.
- The clarification that bluff stabilization walls also require a demonstration of need through a geotechnical report has been deleted.
- New standards for who can design new shoreline stabilization measures has been added.
- Clarifications have been added on other agency permit requirements/conditions, and the interaction between shoreline stabilization and shoreline restoration have been added.
- A prohibition on the stabilization of vacant lots without an existing primary structure, and use of waste materials has been added.
- A new threshold for when repair of an existing stabilization structure constitutes replacement has been added.
- Replacement of existing stabilization shall now be reviewed as new stabilization, however such structures can still be replaced with similar structures based on a demonstration of need through a geotechnical report. In addition, soft shoreline stabilization must be considered before in-kind replacement.

#### Signs

- Redundant standards with sign requirements found in the zoning ordinance have been removed with a reference to WCC Title 20- Zoning.

#### Utilities

- Clarification added that the utility regulations not apply to certain “accessory utilities” as defined in WCC 23.60.

### **WCC 23.50 Nonconforming Uses, Structures, and Lots (formerly Applicability and Nonconforming Uses)**

#### Nonconforming Uses

- The ability to change from one nonconforming use to another nonconforming use is now prohibited.
- Nonconforming structures that are not maintained in a usable condition, or in situations where the OHWM has established landward of the structure, are now considered abandoned/derelect and can no longer be continued.
- The reconfiguration of existing nonconforming docks through review of a CUP has been removed.
- The permit process to replace a nonconforming structure containing a nonconforming use following unintentional damage/destruction must now be commenced within 12-months instead of 18-months.
- A new section addressing replacement of nonconforming structures that are intentionally demolished has been added.
- The expansion of nonconforming single-family residences no longer requires review through a CUP; however now such expansions cannot result in a total building area greater than 2,500 square feet. Nonconforming residences that are larger than the maximum 2,500 square foot building area, may seek a one-time expansion of the building footprint up to 500-square feet if additional demonstrations can be met.

#### **WCC 23.60 Definitions**

- Some definitions throughout this section have been eliminated if they are already defined in the CAO, as adopted by reference as part of the SMP, or are already defined and applicable through Title 20 – Zoning..

## Whatcom County

### SMP Periodic Review - Determination of Initial Concurrence

- The definition of “Accessory development” has been deleted and now defaults to the zoning definition of the Zoning Ordinance.
- “Accessory structure” has been clarified to not include developments that share a common wall with an existing primary residential structure. Such developments are now considered part of the primary structure.
- The definition of “Agricultural activities” has been clarified to state that new structures or activities that bring a new area into agricultural use are not part of this definition.
- “Anadromous fish” definition has been removed since there is no reference to this term in the SMP.
- The definition of “Appurtenance” has been clarified to include on-site septic systems. The definition also clarifies that grading and fill waterward or the OHWM or within wetlands is not consistent with this definition.
- The definition of “Aquaculture” has been amended for consistency with the definition found in the SMP Guidelines.
- “Aquaculture practices” has been deleted as the term is not used within the body of the SMP.
- The terms “Archaeological object” and “Archaeological resource/site” have been removed and replaced as part of new definitions for “Cultural resource” and “Cultural resource site” per recommendations by DAHP and LNTPO.
- The term “Archaeology” has been removed as it is already defined in the Zoning ordinance.
- The definition of “Average grade level” has been rewritten for clarify.
- The definitions of “Backshore” and “Barrier Beach” have been rewritten to add more detail.
- The definition of “Bioengineered shoreline stabilization has been replaced with a new definition for “Shoreline stabilization, soft treatment” and “Shoreline stabilization, bioengineered”.
- The terms “Boathouse”, “Boat ramp”, “Boat lift”, “Canopy”, “Dock”, “Ells”, “Gangway”, “Launch rail” and “Launch ramp”, “Moorage buoy”, “Moorage structure”, “Lift”, “Moorage pile or piling”, and “Pier”, “Recreational floats”. have been consolidated into the definition of “Moorage Structures”.
- The definition of “Bulkhead” has been modified to remove revetments and seawalls as examples of such structures.
- The definition of “Commercial development” has been modified to no longer include bed and breakfasts and short term rentals. These uses are now part of the amended definition of “Residential development”. The definition changes relate to a 2016 County Council action associated with short-term rentals. An SMP amendment was conditionally-approved but never adopted by County Council. Instead, the County elected to incorporate those changes into this amendment. Also included are new definitions for “Bed and breakfast”, “Short-term rentals”, and “Vacation Rental Unit” as part of the 2016 amendments.
- A definition for “Critical saltwater habitat” has been added.
- “Date of filing” is now defined consistent with Ecology rule changes made in 2017.
- New definitions for “Department” and “Department of Ecology” have been added.
- The definition of “Development” has be reworded and clarified to not include the dismantling or demolition of structures only.
- A new definition of “Director” replaces the term “Shoreline Administrator”.
- The definition of “Dredging” has been modified to no longer apply to regular maintenance of approved barge landing sites.
- “Drift sill” is now defined.
- The definition of “Emergency activities” has been revised to include more detail consistent with WAC 173-27-040.

## Whatcom County

### SMP Periodic Review - Determination of Initial Concurrence

- The definition of “ Essential public facilities” now includes secure community transition facilities per RCW 71.09.020.
- The definition of “Fill” has been amended to include placement of material below the OHWM or within wetlands for consistency with the SMP Guidelines.
- The definition of “Float” has been expanded to include stand-alone structures for boat moorage, swimming and diving.
- New definitions have been added for “Fossil fuels”, Fossil Fuel Transshipment Facility”, “Fossil Fuel Refinery”, “Renewable biomass”, Renewable fuel”, “Renewable Fuel Refinery” and “Small Fossil or Renewable Fuel Storage and Distribution Facilities” pursuant to the Whatcom County Council’s pending draft fossil fuel zoning amendments.
- The terms “Forest Land” and “Forest Practices” have been removed as they are defined in Title 20- Zoning.
- The definition of “Geotechnical report or geotechnical analysis” has been replaced by “Geotechnical assessment” and now just refers to where it applies to select CAO provisions.
- “Gross floor area” has been removed as it is no longer used in the SMP.
- The definition of “Hazard tree” has been deleted with a reference to the CAO definition. This was originally proposed through a locally-initiated SMP amendment submitted to Ecology in 2019. The revision is now being incorporated into this SMP Periodic Review.
- The definition of “Height” has been expanded to clarify that antennas, chimneys, etc. are not subject to the definition unless obstruction of views from neighboring residences would result. The revised definition also clarifies that moorage structure heights be measured from OHWM.
- The definition of “Hydric soil” has been updated for consistency with the CAO.
- “Impervious surface” has been removed since it is defined by Title 20 – Zoning.
- The definition of “Industrial development” and “Port development” have been modified to exclude fossil or renewable fuel refineries or transshipment facilities per the Whatcom County Council’s draft fossil fuel amendments.
- The definition of “Lot” and Lot area or lot size” have been removed as they are already defined in Title 20- Zoning.
- The term “Major development” has been deleted as it is no longer used.
- Multi-family dwelling” and “Native vegetation” have been removed as it is defined in Title 20 – Zoning.
- The definition of “Nearshore habitat” has been replaced with a new definition of “Nearshore or nearshore zone”.
- The definition of “Nonconforming lot” eliminates the 20,000 square foot requirement and is now defined as any lot that contains less than the required width, depth or area due to subsequent changes in the SMP.
- The definitions of “Nonconforming use” and “Nonconforming structure” have been revised to be consistent with Ecology rule amendments in 2017.
- “Responsible party or party responsible” is now defined.
- The definition of “Revetment” has been rewritten and now has a more specific meaning than the previous, more general definition.
- New definitions related to shoreline stabilization have been added including “Shoreline stabilization, bioengineered”, “Shoreline stabilization, nonstructural”, “Shoreline stabilization, replacement”, “Shoreline stabilization, soft treatment”, “Shoreline stabilization, hard structure”, “Shoreline stabilization, hybrid structure”, “Shoreline stabilization, new” and “Shoreline stabilization, structural”.
- A definition for “Standing” is now included in the SMP.

**Whatcom County  
SMP Periodic Review - Determination of Initial Concurrence**

- The definition of “Substantial development” has been amended to reference exceptions to the SMA per legislative amendments made in 2016 and 2017.
- New definitions for “Accessory utilities”, “Local utilities”, and “Regional utilities” have been added.

*Whatcom County Code Title 16.16 – Critical Areas Ordinance*

Concurrent with the periodic review of its SMP, Whatcom County proposed changes to its Critical Areas Ordinance. Note that not all of the changes to WCC 16.16 are incorporated as part of the SMP, and as such, only the following substantive changes are applicable within shoreline jurisdiction:

**WCC 16.16.225 General Regulations (formerly Regulated Activities)**

- Alterations of Type III and IV wetlands with low habitat scores is now allowed for new commercial developments within urban growth areas.
- New language requiring consideration of ecological connectivity and habitat corridors be considered has been added.
- General language associated with mitigation sequencing has been expanded to include an order of preference associated with vegetation clearing avoidance.

**WCC 16.16.235 Activities Allowed With Notification**

- This section has been clarified that if any of these activities within shoreline jurisdiction required a shoreline permit or statement of exemption, as applicable.
- New standards associated with approved vegetation pruning and removal, as well as hazard tree removal and mitigation have been added.
- Standards for clearing and thinning for the purposes of view enhancement have been added and revised. The updated standards require consideration of pruning and limbing in areas dominated by non-native vegetation and now prohibit tree removal regardless of size.

**WCC 16.16.250 Critical Areas Review Process (formerly Submittal requirements and Critical Areas Review Process)**

- Review of critical areas within 300-feet of a proposed project is now required.

**WCC 16.16.255 Critical Areas Assessment Reports**

- Habitat Management Plans have been added to the list of elements required in a critical area site assessment when applicable.
- Critical area assessment reports shall now require the identification of impacts on habitat corridors, ecological connectivity, and habitat for salmon and forage fish.
- Greater detail has been added to what should be considered in an alternatives analysis.

**WCC 16.16.260 General Mitigation Requirements**

- New standards have been added to allow off-site and in-kind, and on-site and out-of-kind forms of mitigation within the same watershed in addition to the preferred form of mitigation which is on-site and in-kind.
- Mitigation monitoring reports are now a minimum of five-years with the ability of the Director to reduce down to three years following review of the year-three monitoring report.
- Mitigation monitoring is now at the discretion of the Director and no longer an outright requirement.

**WCC 16.16.265 Critical Area Protection Measures**

- Building setbacks from critical areas and/or buffers have been modified to allow reduction by the Director when a shorter distance is determined to accomplish the same intent to avoid conflict with tree branches and/or critical root zones of existing and/or planted trees within the

## **Whatcom County**

### **SMP Periodic Review - Determination of Initial Concurrence**

buffer. Decks allowed within the setback areas now must be less than 30-inches in height, and utilities including wells, septic systems, and propane tanks up to 500 gallons are now allowed within the building setback.

- Standards for protection of existing trees during construction activities have been added.

#### **WCC 16.16.320 Geologically Hazardous Areas – Protective Standards (formerly General Standards)**

- Stormwater management requirements must use low impact development techniques unless demonstrated to be infeasible.

#### **WCC 16.16.325 Landslide Hazard Areas - Use and Modifications (formerly Landslide Hazard Areas – Standards)**

- The Director can now prescribe a minimum landslide hazard area setback in accordance with adopted building codes. This would be in addition to setbacks recommended by a qualified professional.

#### **WCC 16.16.355 Erosion Hazard Areas – Use and Modifications (formerly Erosion Hazard Areas – Standards)**

- The Director can now prescribe a minimum erosion hazard area setback in accordance with adopted building codes. This would be in addition to setbacks recommended by a qualified professional.

#### **WCC 16.16.375 Geologically Hazardous Areas – Review and Reporting Requirements**

- More detail has been added regarding what must be addressed in a geologic hazards assessment report.

#### **WCC 16.16.430 Frequently Flood Areas – Review and Report Requirements**

- The requirement for a critical areas assessment report can now be waived when both the Director and the Public Works Department determine that FEMA requirements for a habitat assessment are not triggered.

### **Article 6 Wetlands**

- An alternatives analysis is now required to determine the least impactful construction or installation method when utility development is proposed within wetlands or their buffers.

### **Article 7 Fish & Wildlife Habitat Conservation Areas (HCAs)**

- An alternatives analysis is now required to determine the least impactful construction or installation method when utility development is proposed within HCAs or their buffers.
- On-site septic systems are now allowed anywhere within a Fish and Wildlife Habitat Conservation Area (FWHCA) buffers. The existing SMP restricts OSS to the outer 50% of FWHCA buffers.
- Trail construction within HCAs and their buffers may now exceed the maximum widths if necessary to meet Americans with Disabilities Act requirements. Trails must also be designed to avoid the removal of significant trees. The limitation of trails to the outer 25% of buffers has been relaxed if the trail segment is necessary to provide educational opportunities.
- Residential accessory structures that are water-oriented may now be located within the HCA buffer up to 10% of the buffer area or 500-square feet whichever is less, and may occupy up to 20% of the linear length of shoreline. In order to be eligible for this buffer encroachment, 75% of the existing buffer must either be vegetated or planted with native species to a minimum depth of 15-feet landward of the OHWM.
- New buffer standards have been added specific to timber harvest proposals through a Conversion Option Harvest Plan (COHP) or a Class IV General Forest Practices Application (FPA). The system eliminates prescriptive buffer requirements for a flexible system based on a functional analysis and shore type.

## Whatcom County

### SMP Periodic Review - Determination of Initial Concurrence

- Buffers have been increased on shoreline stream systems from 150-feet to 200-feet based on National Wildlife Federation v. FEMA (Federal District Court Case No. 2:11cv-02044-rsm; NMFS Doc. #2006-00472). Non shoreline streams located within shoreline jurisdiction have also increased from 100-feet to 150-feet if fish bearing.
- Mitigation standards now refer to the Army Corps of Engineers Regional General Permit 6 for projects with impacts to inland marine waters.
- Mitigation ratios are now set by the timing of installation. If installation occurs within one year, the ratio is 1:1. If installation occurs after one year, the ratio is 1.25:1. Mitigation ratios of after-the-fact review of project impacts may be up to 2:1.

### Article 9 Definitions

- The definition of “Accessory structure” has been clarified to not include structures that share a common wall with a primary structure.
- The definition of “Clearing” has been modified to include cutting, felling, thinning, flooding, killing, poisoning, girdling, uprooting and burning.
- A new definition for “Critical facilities (essential facilities)” has been added.
- The definition of “Development” has been amended to match the definition found in the SMP.
- The definitions of “Floodplain” and “Floodway” have been updated to be consistent with the SMP Guidelines.
- The definition of “Low-intensity land use” and “Moderate intensity land use” have been modified for consistency with Ecology’s guidance related to wetlands.
- A new definition for “Retroactive permit” has been included.
- A new definition for “Special Flood Hazard Area (SFHA)” has been added.
- “Substantially developed surface” is now defined.
- The term “Technical administrator” has been deleted as it is now been replaced with “Director”.
- The definition of “Waters of the state” or “state waters” has been revised for consistency with RCW 90.48.020.

### Public Comment

The County and Ecology held a joint local/state comment period on the proposed periodic review amendment following the procedures outlined in WAC 173-26-104. The comment period began on March 12, 2021 and continued through April 12, 2021. A joint public hearing before the Planning Commission was held virtually via Zoom on April 22, 2021.

A total of seventeen (17) written comments were received during the comment period and seven (7) verbal comments were made at the public hearing. Comments were received by Miller Environmental Services, RE Sources, Taylor Shellfish Farms, Building Industry Association of Whatcom County, Phillips 66, Western States Petroleum Association, Ashton Engineering, Whatcom County Marine Resource Committee, Petrogas and eight (8) members of the public.

The County compiled these comments and prepared a comment summary and response matrix included as Attachment 2. Also included in Attachment 2 are the county’s responses to public comments received during a 2018 locally-initiated SMP amendment that has now been incorporated within this periodic review amendment. The amendment was related to a change in the definition of “Hazard Tree” for consistency between the CAO and SMP.

## Whatcom County SMP Periodic Review - Determination of Initial Concurrence

The summary demonstrates the County considered all comments, and as a result made several changes to the SMP amendment as referenced in Appendix B. Additional discussion is provided below on a subset of topics raised:

### Non-applicable CAO Provisions

A bulk of the comments submitted were related to concerns with amendments to CAO provisions that do not apply within shoreline jurisdiction (reasonable use, administrative variance review, 4,000 square foot buffer impact allowance, regulation of Type O waters, etc.). These CAO sections are specifically barred from incorporation into shoreline jurisdiction and as such, these comments were not addressed by Ecology.

### Sea Level Rise

Several commenters brought up the need for the County to address climate change, and specifically sea-level rise within its updated SMP. In response, the County identified several changes addressing sea level rise within the SMP at the policy level, but does not plan to add regulatory provisions addressing this topic within this amendment. In its response to comments, the County explains that they are a participating agency in a United States Geological Survey (USGS) Coastal Storm Modeling System (CoSMoS) study for the region. The CoSMoS study will help inform predicted sea level rise in coastal areas of Whatcom County as well as its impacts to flooding on the Nooksack River. Whatcom County plans to use this information to conduct a formal sea-level rise risk and vulnerability assessment prior to developing regulations and is currently seeking grant funds to conduct such a study.

Ecology agrees climate change and related effects are important topics. The agency is actively engaged at the statewide level in work being done on climate change and sea level rise. The Shoreline Management Act (SMA) and the Shoreline Master Program (SMP) Guidelines contain no explicit requirements for SMPs to address climate change or sea level rise. However, they require local jurisdictions to take into account scientific and technical information pertinent to shoreline management issues. The Guidelines require local governments use “the most current, accurate and complete scientific and technical information available” [WAC 173-26-201(2)(a)]. The Guidelines also encourage local governments to consult Ecology’s guidance for applicable new information on emerging topics such as sea level rise [WAC 173-26-090(1)].<sup>1</sup>

Ecology finds addressing these topics within the community, and more specifically in a local SMP, is currently left to the discretion of each city and county. Nonetheless, Ecology is seeing increased interest in discussing these issues. Some communities have chosen to address these issues through their comprehensive plan or through other regulatory codes, such as flood hazard ordinances. In most cases, the addition of climate change policies and regulations to a shoreline master program are a result of a community-wide effort, considering the entire geography of the place, and not limited to the comparatively narrow shoreline jurisdictional area. This comprehensive approach has led to more fully integrated responses to these risks within and outside of shoreline jurisdiction in those communities.

Ecology finds that the County has considered the comments related to climate change and sea level rise and has chosen to postpone making regulatory changes while technical studies are still being completed. SMP policies have been included within the SMP within this amendment and establish a firm framework in which future regulations will implement.

---

**Whatcom County**  
**SMP Periodic Review - Determination of Initial Concurrence**

Riparian Buffers

Numerous commenters expressed concerns that the County's riparian buffers should be increased to be consistent with recent guidance published by the Washington State Department of Fish and Wildlife (WDFW). The WDFW riparian ecosystem management recommendations prescribe that buffers should be based on the 200-year Site Potential Tree Height (SPTH).

The current riparian buffer provisions of the SMP were adopted during the County's Comprehensive SMP Update after extensive public review and comment, supported by a technical review committee and Shoreline Inventory and Characterization. Currently, habitat conservation area buffers apply a prescriptive 150-foot buffer to all shoreline streams and a 50 to 100-foot buffer, based on fish presence, for all non-shoreline streams that flow through shoreline jurisdiction. These buffers presume the presence of a dense vegetated community adequate to protect the ecological functions and values at the time of the proposed activity. In situations where existing buffer areas lack adequate vegetation, the County has the authority to increase the standard buffer or require buffer enhancement. Buffers in Whatcom County are measured from the OHWM, however where a channel migration zone (CMZ) is identified, the buffers are applied from the CMZ.

Through this amendment, the County has amended its buffer scheme for consistency with the decision in *National Wildlife Federation v. FEMA* (Federal District Court Case No. 2:11cv-02044-rsm; NMFS Doc. #2006-00472). The County has also adopted the Washington Department of Natural Resources stream typing system, and will now apply 200-foot buffers for all shoreline streams, 150-foot buffers for all other fish-bearing streams, and maintain the 50-foot buffer requirement for all non-fish-bearing streams flowing through shoreline jurisdiction. Whatcom County has also incorporated the entire 100-year floodplain into shoreline jurisdiction based on recently updated mapping completed by FEMA.

In its response to comments, the County points out that its amended buffers are overall consistent with WDFW's riparian guidance as applied in Whatcom County. The County's responses were completed while WDFW's guidance was still in draft form, and based on that version, the County concluded that their proposed 200-foot buffers on shoreline streams were just under WDFW's recommendation at 208-feet.

Ecology finds that the County considered these comments but made no changes at the time of this initial determination. The County's revised approach to protecting riparian buffers increases protections already in place and will achieve no net loss of shoreline ecological functions consistent with the SMA and SMP guidelines.

## INITIAL DETERMINATION

Ecology is required to review all SMPs to ensure consistency with the Shoreline Management Act (SMA) and implementing rules including WAC 173-26, State Master Program Approval/Amendment Procedures and Master Program Guidelines. WAC 173-26-186(11) specifies that Ecology "shall insure that the state's interest in shorelines is protected, including compliance with the policy and provisions of RCW 90.58.020."

Based on review of the proposed amendments to the SMP for consistency with applicable SMP Guidelines requirements and the Shoreline Management Act, and consideration of supporting materials, including public and agency comments in the record submitted by the County, Ecology has determined

**Whatcom County**  
**SMP Periodic Review - Determination of Initial Concurrence**

that the proposed amendments, subject to Ecology's required and recommended changes (itemized in Attachment 1), are consistent with the policy standards of RCW 90.58.020 and RCW 90.58.090 and the applicable SMP guidelines (WAC 173-26-171 through 251 and .020 definitions.

## Next Steps

- Consider the changes recommended by Ecology as required and recommended to resolve the issues identified within Attachment 1. Please let me know if you would like to discuss alternative language or different approaches for resolving these issues.
- If these issues are resolved prior to local adoption, we anticipate being able to approve your SMP Periodic Review amendment "as submitted" promptly after formal submittal is provided consistent with WAC 173-26-110.

## Attachment 1: Whatcom County – Initial Ecology Required and Recommended Changes

The changes in **red are required** for consistency with the SMA (RCW 90.58) and the SMP Guidelines (WAC 173-26, Part III). Changes in **blue are recommended** and consistent with SMA (RCW 90.58) policy and the SMP Guidelines (WAC 173-26, Part III). Note that all references to SMP Provisions are based on the proposed SMP numbering and naming conventions.

ITEM	PROVISION	BILL FORMAT CHANGES (underline = additions; strikethrough = deletions)	RATIONALE	W/C Response
Rec-1	23.05.040.E.2.b	Conditions of approval for compliance with <u>this</u> Title shall be added to such permit. The conditions of approval shall be enforced with the provisions of <del>this Title</del> <u>Title</u> .23.10.160 <del>Violations</del> <u>Violations</u> , Enforcement and <del>Penalties</del> <u>Penalties</u> .	Recommended Change – Scrivener’s errors.	Done.
Req-1	23.05.065.A – Critical Areas	The Whatcom County critical areas regulations (CAO), WCC Chapter 16.16 (ordinance No. <del>2019-013 dated February 12, 2019</del> ), are hereby adopted in whole as a part of this program, except that the provisions of WCC 16.16.270 (Reasonable Use Exceptions), 16.16.275 (Nonconforming Uses, Structures, and Lots), <del>and</del> 16.16.285 (Penalties and Enforcement) <u>and as specifically excluded elsewhere within this Title</u> , shall not apply within shoreline jurisdiction. All references to the critical areas ordinance (CAO), WCC Chapter 16.16, are for this specific version.	Required Change – Whatcom County is concurrently updating its CAO regulations along with this Shoreline Master Program (SMP) amendment. The final adopting ordinance is required in the provision once known.  The added language clarifies that this provision does not represent an exhaustive list of CAO provisions that do not apply within the context of the SMP. There are numerous other sections of the CAO that conflict with statutory and rule requirements related to shoreline permit processing such as 16.16.230 (Activities Allowed without Notification), 16.16.235 (Activities Allowed with Notification) and 16.16.275 (Variances). These sections contain language either requiring SMP review or excluding their applicability within shoreline jurisdiction.	Done.
Req-2	23.10.190.B – Amendments	All regulatory elements of this Program shall be considered a part of the County’s development regulations. Certain non-regulatory elements of this master program, including but not limited to the Shoreline Restoration Plan or administrative procedures (WCC Title 22), may be updated and amended at any time without requiring a formal master program amendment. <u>Future changes to WCC Title 22 shall remain consistent with the Shoreline Management Act and associated rules, specifically RCW 90.58.140, 90.58.143, 90.58.210, 90.58.220 and Chapter 173-27 WAC.</u>	Required Change – This change clarifies that while administrative provisions can be codified within a local ordinance separate from the SMP, such changes shall remain consistent with the Shoreline Management Act (SMA) and applicable rules (See SMP Guidelines at WAC 173-26-191(2)(a)(iii)(C).	Done.
Req-3	23.20.010.B – Shoreline Jurisdiction	The shoreline master program jurisdiction applies to all shorelines of the state and their associated shorelands. This includes:  4. Floodways and <u>the entire 100-year contiguous</u> floodplain <del>areas landward two hundred feet from such floodways</del> ; and  9. Associated <del>palustrine</del> wetlands that extend greater than two hundred feet landward of the OHWM of the shoreline: the jurisdictional boundary shall extend to the <del>OHWM</del> <u>delineated edge</u> of the wetland.	Required Change – Whatcom County has removed the previously adopted “geomorphic floodplain” on the Official Shoreline Map to determine jurisdiction for the Nooksack and Sumas Rivers and has elected to set its jurisdiction as the extent of the 100-year floodplain recently remapped by FEMA. This change is necessary for consistency with the map change.  Required Change – Shoreline associated wetlands are not limited to palustrine wetlands for the purposes of determining shoreline jurisdiction. Also, the latera extent of wetlands is not always consistent with the OHWM of the primary waterbody. As such, these changes are necessary for consistency with the definition of “Shorelands” found in RCW 90.58.030(2)(f).	Done.

ITEM	PROVISION	BILL FORMAT CHANGES (underline = additions; strikethrough = deletions)	RATIONALE	W/C Response
Req-4	<b>23.20.020.H – Official Shoreline Map</b>	All shorelines east of the Mount Baker National Forest western boundary are designated <del>natural</del> or conservancy unless there are federal projects on federal lands.	Required Change – This change restores existing language and The Official Shoreline Map does not include the eastern portions of the county, and thus a Conservancy designation would be assigned as a default pursuant to the SMP Guidelines at WAC 173-26-211(2)(e).	Done.
Req-5	<b>23.20.020.I – Official Shoreline Map</b>	All areas within shorelines that are not mapped and/or designated and <del>are not directly adjacent to other shoreline designated areas</del> are automatically assigned a conservancy designation. Within urban growth areas, such shorelines shall be automatically assigned an urban conservancy designation until such time that the shoreline environment can be re-designated through a formal amendment.	Required Change – This change restores existing language by removing a proviso that is not applicable to unmapped and/or designated shorelines per WAC 173-26-211(2)(e).	Done.
Req-6	<b>Official Shoreline Map</b>	Note on jurisdiction no longer accurate		Done. Changed to language of 23.20.020(B) and added “floodplain” to both.
Req-7	<b>23.20.040.2 – Mapping Errors</b>	<del>In the event that a jurisdictional area, including associated wetlands, is not mapped, it will automatically be assigned a “resource,” “conservancy,” or “urban conservancy” designation depending on its location. If outside a UGA and adjacent to an existing “resource” designation, it shall be “resource,” if adjacent to “conservancy,” it shall be “conservancy. If inside of a UGA or LAMIRD is shall be “urban conservancy.” Such designation will apply until a master program amendment is approved that assigns the appropriate designation to the subject area.</del>	Required Change – The SMP Guidelines require that unmapped and/or undesignated shorelines automatically be assigned a Conservancy or Urban Conservancy environment designation until a subsequent SMP amendment can be approved (WAC 173-26-211(2)(e). This is already covered by the SMP at WCC 23.20.020.I. In situations where the lateral extent of shoreline jurisdiction is not depicted on The Official Shoreline Map, the environment designation of the adjacent mapped portions of the shoreline would extend to the outward edge of shoreline jurisdiction as determined on a case-by-case basis per WCC 23.20.020.B. For example, the map assigns a Conservancy designation to a particular reach of river but does not illustrate associated wetlands on the property. The Conservancy designation would apply to the delineated wetland edge beyond the area illustrated on the map.	Done.
Rec-2	<b>23.30.010 – Ecological Protection</b>	Ecological protection of shoreline environments shall be achieved through compliance <u>with the applicable provisions of</u> WCC Chapter 16.16 (Critical Areas) and (B) and (C) of this subsection	Recommended Change – This change clarifies that that not all of WCC 16.16 is applicable within the SMP.	Done.
Req-8	<b>23.30.010.C – Ecological Protection</b>	To provide for flexibility in the administration of the ecological protection provisions of this program, buffer modification and alternative mitigation approaches as provided for in WCC 16.16 may be approved within shorelines where such approaches provide increased protection of shoreline ecological functions and processes over the standard provisions of this program and are scientifically supported. <u>Use of 16.16.261 (Alternative Mitigation Plans) and 16.16.262 (Watershed-Based Management Plans) within shoreline jurisdiction shall require review of a Conditional Use Permit.</u>	Required Change – This change maintains the existing requirement for a CUP for use of select alternative mitigation approaches outlined within the CAO. This change is necessary due to the fact that the impacts from such future proposals using these provisions cannot be reasonably identified at the time of the amendment consistent with the SMP Guidelines at 173-26-201(3)(d)(i)(E)(iii). The CUP requirement maintains the flexibility sought by the proposed language without prohibiting the use of these CAO provisions.	Done.
Rec-3	<b>23.30.030.B – Views and Aesthetics</b>	To protect views of the shoreline from existing structures, setbacks may be modified pursuant to WCC 23.400.020(D) (Shoreline Bulk Provisions, Setbacks).	Recommended Change – Scrivener’s error at code citation.	Done.

ITEM	PROVISION	BILL FORMAT CHANGES (underline = additions; strikethrough = deletions)	RATIONALE	W/C Response
Rec-4	<b>23.30.030.1 – Views and Aesthetics</b>	Fences, walls <del>other than retaining walls</del> , hedges, and other similar accessory structures, excluding those associated with agricultural uses, <u>and retaining walls necessary to protect existing primary structures from erosion, landslides or other geologic hazards</u> , shall be limited to four feet in height between the ordinary high water mark and structures, and within shoreline view areas as defined in WCC Chapter 23.60 (Definitions); provided, that, within shoreline view areas, the Director may approve a greater height where a fence or other features is parallel to the right-of-way and does not extend above a line of sight between the ordinary high water mark and a point three and one half feet above the centerline of the road.	Recommended Change – This change clarifies the intent of Whatcom County Planning & Development Services Staff in Scoping Document Item 17e to allow for increased walls in situations where structural mitigation in the form of a retaining wall is the appropriate solution to stabilize an existing primary structure subject to unforeseen hazards. The language as amended provides no context and is vague as to what the difference is between a retaining wall and a wall.	Done.
Rec-5	<b>23.30.40.2 – Vegetation Management</b>	Vegetation management within the shoreline buffer shall adhere to the <u>applicable</u> regulations of WCC Chapter 16.16.(Critical Areas)...	Recommended Change – This change clarifies that that not all of WCC 16.16 is applicable within the SMP.	Done
Rec-6	<b>23.30.040.2 – Vegetation Management</b>	Shoreline development shall conform to natural contours and minimize disturbance to soils and native vegetation as feasible. Feasible shall include incorporation of trails or stairs from parking areas on steep slopes, and other design elements to lessen the need to alter natural contours and minimize soils and native vegetation disturbance. <del>Tiered</del> Foundations shall <u>be tiered incorporate with earth retention incorporated</u> into the structural design.	Recommended Change – This change maintains the existing requirement that tiered foundations be utilized to meet the objectives of this provision.	Done.
Req-9	<b>23.30.060.A.2 – Public Access</b>	<del>The parcel is separated from the water by an existing developed road or an additional parcel that serves to create a distinct break in connectivity to the shoreline.</del>	Required Change – This change deletes this new exception to consideration of public access as it is overly prescriptive and inconsistent with the SMP Guidelines at WAC 173-26-221(4). Direct connectivity is not a requirement to accomplish proportionate public access. Public access includes the ability of the general public to reach, touch and enjoy the water's edge, travel on the waters of the state, <u>and to view the water from adjacent locations [WAC 173-26-211(4)(a)]</u> . Visual access to the shoreline is not necessarily precluded due to the presence of a developed road or additional parcel between the subject development and the shoreline.	Done.
Req-10	<b>23.30.060.A.3 – Public Access</b>	<del>Other reasonable and safe opportunities for public access to the shoreline are located within one quarter mile of the proposed development site.</del>	Required Change – This change deletes this new exception to consideration of public access as it is inconsistent with the SMP Guidelines at WAC 173-26-211(4). Increased development within shoreline areas can provide a nexus for the need for increased locations and forms of public access proportionate to such impacts.	Done.
Req-11	<b>23.60.060.A.4 – Public Access</b>	<u>The proposed development has already been considered as</u> site is part of a larger development project that has previously provided public access as part of the development permitting process.	Required Change – This change is necessary to ensure consistency with the SMP Guidelines at WAC 173-26-221(4) and clarifies the applicability of this exemption only if it had previously been analyzed through a broader development review such as a Planned Unit Development or other similar process.	Done.
Req-12	<b>23.30.060.A.9 – Public Access</b>	The proposal consists solely of a new or expanded utility crossing through shoreline jurisdiction serving development located outside shoreline jurisdiction, <u>provided that no adverse impacts to existing public access result.</u>	Required Change – Utility development is not specifically exempted from the requirement to consider public access in the SMP Guidelines. The proposed change modifies this new exemption to require public access considerations if impacts to existing forms of public access provide such a nexus.	Done.

ITEM	PROVISION	BILL FORMAT CHANGES (underline = additions; strikethrough = deletions)	RATIONALE	W/C Response
Req-13	<b>23.30.060.A – Public Access</b>	<p><u>Prior to deciding public access is not required pursuant to 23.60.060.A.above, the county must determine that all reasonable alternatives have been exhausted; including but not limited to:</u></p> <ol style="list-style-type: none"> <li>1. <u>Regulating access by such means as maintaining a gate and/or limiting hours of use;</u></li> <li>2. <u>Designing separation of uses and activities (e.g., fences, terracing, use of one way glazing, hedges, landscaping, etc.); and</u></li> <li>3. <u>Providing for access at a site geographically separated from the proposal such as a street end, vista, tideland or trail system.</u></li> </ol>	Required Change – This additional language added to the end of 23.60.060.A restores existing language proposed for deletion. The change is necessary for consistency with the SMP Guidelines at 173-26-221(4)(d)(B) which requires consideration of alternative methods of providing access when potential conflicts are identified with traditional forms of access.	Done.
Req-14	<b>23.30.060 – Public Access</b>	<p><u>I. Public access shall incorporate the following location and design criteria:</u></p> <ol style="list-style-type: none"> <li>1. <u>Where open space is provided along the shoreline, and public access can be provided in a manner that will not adversely impact shoreline ecological functions and/or processes, a public pedestrian access walkway parallel to the ordinary high water mark of the property is preferred. The walkway shall be buffered from sensitive ecological features and provide limited and controlled access to sensitive features and the water’s edge where appropriate. Fencing may be provided to control damage to plants and other sensitive ecological features and where appropriate. Trails shall be constructed of permeable materials and limited to five feet in width to reduce impacts to ecologically sensitive resources.</u></li> <li>2. <u>Public access shall be located adjacent to other public areas, accesses and connecting trails, connected to the nearest public street; and include provisions for differently-abled persons where feasible.</u></li> <li>3. <u>Where views of the water or shoreline are available and physical access to the water’s edge is not present or appropriate, a public viewing area shall be provided.</u></li> <li>4. <u>Design shall minimize intrusions on privacy by avoiding locations adjacent to windows and/or outdoor private open spaces or by screening or other separation techniques.</u></li> <li>5. <u>Design shall provide for the safety of users, including the control of offensive conduct through public visibility of the public access area, or through provisions for oversight. The administrator may authorize a public access to be temporarily closed in order to develop a program to address offensive conduct. If offensive conduct cannot be reasonably controlled, alternative facilities may be approved through a permit revision.</u></li> <li>6. <u>Public amenities appropriate to the use of a public access area such as benches, picnic tables and sufficient public parking to serve the users shall be provided.</u></li> </ol>	Required Change – This change restores existing standards necessary for meaningful implementation of the public access requirements as required by the SMP Guidelines at WAC 173-26-222(4)(d)(iii).	Done.

ITEM	PROVISION	BILL FORMAT CHANGES (underline = additions; strikethrough = deletions)	RATIONALE	W/C Response
		<p>7. <u>Commercial developments that attract a substantial number of persons and developments by government/public entities may be required to provide public restrooms, facilities for disposal of animal waste and other appropriate public facilities.</u></p> <p>8. <u>The minimum width of public access easements shall be 10 feet, unless the administrator determines that undue hardship would result. In such cases, easement widths may be reduced only to the extent necessary to relieve the hardship.</u></p> <p>9. <u>The requirement for public access on a specific site may be fulfilled by:</u>  <u>a. Participation in a public access plan incorporated in the program; or</u>  <u>b. Provision of facilities specified in a permit approval.</u></p> <p>10. <u>Required public access sites shall be fully developed and available for public use at the time of occupancy of the use or activity or in accordance with other provisions for guaranteeing installation through a monetary performance assurance.</u></p> <p>11. <u>Public access facilities shall be maintained over the life of the use or development. Future actions by successors in interest or other parties shall not diminish the usefulness or value of required public access areas and associated improvements.</u></p> <p>12. <u>Public access provisions shall run with the land and be recorded via a legal instrument such as an easement, or as a dedication on the face of a plat or short plat. Such legal instruments shall be recorded with the county auditor's office prior to the time of building permit approval, occupancy or plat recordation, whichever comes first.</u></p> <p>13. <u>Maintenance of the public access facility shall be the responsibility of the owner unless otherwise accepted by a public or nonprofit agency through a formal agreement recorded with the county auditor's office.</u></p> <p>14. <u>Public access facilities shall be available to the public 24 hours per day unless specific exceptions are granted though the shoreline permit process subject to the provisions of subsection (B)(1) of this section.</u></p> <p>15. <u>The standard state-approved logo or other approved signs that indicate the public's right of access and hours of access shall be installed and maintained by the owner. Such signs shall be posted in conspicuous locations at public access sites.</u></p> <p>16. <u>Incentives for public access improvements such as density or bulk and dimensional bonuses shall be considered through applicable provisions of zoning and subdivision regulations.</u></p>		
Rec-7	<b>Table 1 – Shoreline Use by Environment</b>	Add the following general footnote: <u>In the event that there is a conflict between the use(s) identified in Table 1 above and the applicable written policies or</u>	Recommended Change – This change restores an existing footnote that prescribes a solution when the table conflicts with the written text. Due to the	Not done. This language is already

ITEM	PROVISION	BILL FORMAT CHANGES (underline = additions; strikethrough = deletions)	RATIONALE	W/C Response
	<b>Designation</b>	<u>regulations of this Program, the text within the policies and regulations shall prevail.</u>	difficulty in capturing all of the detail of regulatory text within a matrix such as Table 1, the footnote provides clarity in the event a conflict is identified during implementation.	included in 2.40.010(B).
Rec-8	<b>23.40.020.D.2 – Common Line Setback for Single-Family Residences</b>	<b>Common-Line Setback for Single-Family Residences.</b> For the purpose of accommodating views <u>to be adequate and similar, but not necessarily equivalent,</u> for new residences while protecting predominant shoreline views of the water from legally existing primary residences in developed residential areas, the shoreline buffer (setback) may be modified for primary residential structures in the Urban, Shoreline Residential, and Rural environments (only), consistent with the following. The presence of nearby shacks, sheds, or dilapidated structures does not constitute the existence of a residence, nor can such structures be used to determine a common-line setback.	Recommended Change – This change restores existing language that clarifies that the common-line setback provisions do not guarantee the exact same view as existing residences adjacent to a development site. This is reflected in the standards that follow at 23.40.020.2.a through 23.40.020.2.d that limit reductions in this scenario to 25% of the standard buffers per WCC 16.16 or 50-feet from the OHWM, whichever is greater.	Done.
Req-15	<b>23.40.020.D.2.a – Common Line Setback for Single-Family Residences</b>	<p>a. Where there are legally established single-family residential primary structures within <del>±</del>50 feet on both sides of the proposed residence, the setback shall be determined as the greater of either:</p> <ul style="list-style-type: none"> <li>i. A common line drawn between the nearest corners of the foundation closest to the sideyard property line of the proposed residence to each adjacent residence, or</li> <li>ii. A common line calculated by the average of both adjacent residences’ existing setbacks.</li> </ul> <p>b. Where there is a legally established single family residential primary structure within <del>±</del>50 feet only one of the proposed residence, the common line setback shall be determined as the greater of either:</p> <ul style="list-style-type: none"> <li>i. A common line drawn between the nearest corner of the foundation closest to the sideyard property line of the proposed residence to the adjacent residence and the nearest point of the standard buffer on the adjacent vacant lot, or</li> <li>ii. A common line calculated by the average of the adjacent residence’s setback and the standard buffer for the adjacent vacant lot.</li> </ul>	Required Change – This change restores the existing language to apply the common-line setback provisions only to existing structures within 50-feet of a proposed residence. The amendment record contains no justification to extend this distance to 150-feet, which is most cases is two to three times the width of most existing lots where view these provisions would apply. The No Net Loss analysis related to this change does not take into consideration the increase in applicability if these setback reductions county-wide by increasing the distance from 50-feet to 100-feet.	Done.
Req-16	<b>23.40.020.D.2.d – Common Line Setback for Single-Family Residences</b>	In no case shall development be located waterward of the common line setback or a minimum of 50 feet from the ordinary high water <del>mark, unless approved to be closer as part of a constrained lot review WCC 23.40.170(c) (Residential)</del>	<p>Required Change – This change clarifies the appropriate point of measurement of buffers/setbacks under the SMA which is ordinary high water mark.</p> <p>Required Change – This change is necessary for consistency with the referenced constrained lot provisions found at WCC 23.40.170.c.4. This section states that consideration shall be given to view impacts in accordance with the common-line setback standards of 23.40.020.d.2. The change eliminates an endless loop to where the two provisions continue to refer to one another without resolve, and clarifies that new residential development should not be allowed waterward of existing development through either process.</p>	Done.

ITEM	PROVISION	BILL FORMAT CHANGES (underline = additions; strikethrough = deletions)	RATIONALE	W/C Response
Req-	<b>23.40.020.D.2 – Common Line Setback for Single-Family Residences</b>	<u>e. The lot is not subject to landslide hazard areas, or riverine or coastal erosion hazard areas or associated buffers (see WCC 16.16.310).</u>	Required Change – This change adds the same standard found in the constrained lot provisions at 23.40.170.B.5. In no case should the common line setback be used that would place a single-family residence within a hazardous area.	Done.
Rec-9	<b>23.40.020.G – Uses Allowed in Buffers and Setbacks</b>	9. Where permitted, fences, walls other than <del>retaining walls</del> <u>those allowed by 23.70.020.G.8 above</u> , hedges and other similar structures shall be limited to four feet in height within shoreline setbacks and six feet in height outside of shoreline setbacks; provided, that the Director may exempt security fencing from this requirement as required by federal or state regulations.	Recommended Change – This change clarifies the difference between a wall and a retaining wall that may exceed this height limitation. See also Rec 4	Done.
Rec-10	<b>23.40-020.G – Uses Allowed in Buffers and Setbacks</b>	12. <del>Accessory structures as allowed by 16.16.720(G)(4) Habitat Conservation Areas – Use and Modification</del>	Recommended Change – Consider copying or moving 16.16.720.G.4, as amended in Req 27, to this location for clarity as the provision only applies within shoreline jurisdiction.	Done.
Rec-11	<b>23.40.030 – General Shoreline Use and Modification Regulations</b>	G. Accessory uses/ <u>structures</u> that do not require a shoreline location shall be sited away from the land/water interface and not placed waterward of the principal use <u>unless otherwise allowed by this Program.</u>	Recommended Change – See <b>Rec X.</b>  Recommended Change – The added language clarifies that there are exceptions to this general regulation (See 16.16.720.G.4 as modified in Req-27.	Done.
Req-17	<b>23.40.100.A.5 Flood Hazard Reduction and Instream Structures</b>	Structural flood hazard reduction works shall be permitted only when it is demonstrated by engineering and scientific evaluations that: a. They are necessary to protect health/safety and/or existing development; b. Nonstructural flood hazard reduction measures are infeasible; and c. Measures are consistent with an adopted comprehensive flood hazard management plan that evaluates cumulative impacts to the watershed system <del>or otherwise approved by Whatcom County Public Works' River and Flood Division.</del>	Required Change – There is nothing within the SMP Flood Hazard Reduction Guidelines (WAC 173-26 221(3)) that allow a local government entity to override when new structural flood hazard reduction measures should be allowed within shoreline jurisdiction.	Done.
Req-18	<b>23.40.100.A.12 – Flood Hazard Reduction and Instream Structures</b>	Flood hazard reduction works <del>should</del> <u>shall</u> provide access to public shorelines whenever possible, unless it is demonstrated that public access would cause unavoidable public health and safety hazards, security problems, unmitigatable ecological impacts, unavoidable conflicts with proposed uses, or unreasonable cost. At a minimum, flood hazard reduction works should not decrease public access or use potential of shorelines.	Required Change – The consideration for public access associated with new flood hazard reduction measures is a requirement of the SMP Guidelines at WAC 173-26-221(3)(c)(iv).	Done
Rec-12	<b>23.40.150.B.1 – Dimensional Standards for Freshwater</b>	Where a pier or dock cannot reasonably be constructed under the area limitation above to obtain a moorage depth of <u>5.5</u> feet measured below the ordinary high water mark, an additional 4 sq. ft. of area may be added for each additional foot of pier or dock length needed to reach <u>5.5</u> feet of water depth at the waterward end of the pier or dock; provided, that all other area dimensions, such as maximum width and length, have been minimized	Recommended Change – This change makes this provision consistent with the maximum length standards listed later within this same table at 5.5 feet. The change is consistent with other changes the county made to this section based on comments received by Bill Haynes of Ashton Engineering on April 22, 2021.	Done.
Req-19	<b>23.40.150.B.2 – Dimensional Standards for Marine Waters</b>	<u>Maximum Width</u> <ul style="list-style-type: none"> <li>• For moorage structures accessory to a residential use</li> <li>• 4 feet <del>for a single use or 6 feet for a joint use</del> for pier or dock walkway or ramp</li> <li>• <del>For a joint use structure – 8 feet</del></li> </ul>	Required Change – This change removes the ambiguous reference to an 8-foot maximum associated with joint use structures. After consultation with Whatcom County PDS staff, these changes clarify the original intent that the 8-foot width maximum applied to joint-use residential moorage structures. Staff also	Done.

ITEM	PROVISION	BILL FORMAT CHANGES (underline = additions; strikethrough = deletions)		RATIONALE	W/C Response
				suggested limiting the maximum width of such structures to 6-feet.	
Rec-13	<b>23.40.150.B.1 – Dimensional Standards for Freshwater</b>	<b>Maximum Length</b> o Marine Rails o Floats	<ul style="list-style-type: none"> <li>20 feet <u>waterward from the ordinary high water mark</u></li> <li>20 feet <del>for float decking per user (e.g. single user – 20 feet, 2-users – 40 feet, etc.)</del></li> </ul>	<p>Recommended Change – This change clarifies that the 20 foot maximum length requirement for rail systems is measured waterward of the ordinary high water mark and not landward.</p> <p>Recommended Change – This change would provide flexibility for maximum float length for Joint-use docks which are preferred over single-user docks within the SMP. The changes are consistent with the proposed float length maximums for marine joint-use docks found in 23.40.150.B.2.</p>	Done.
Rec-14	<b>23.40.150.D.4 – Additional Standards for Individual Moorage</b>	b. Alternative moorage, such as mooring buoys or a dock <u>or marine rail</u> sized to accommodate a tender to provide access in conjunction with a mooring buoy, are not adequate or feasible; and		Recommended Change – Now that the SMP allows small marine rail systems, they should be considered for tender moorage accessory to a mooring buoy prior to permitting a new dock.	Done.
Rec-15	<b>23.40.150.E.2 – Additional Standards for Shared Moorage</b>	e. On marine shorelines a dock or pier may be approved only if it is not feasible to provide mooring buoys with an adequate landing area or a dock <u>or marine rail system</u> sized to accommodate tenders.		Recommended Change – Now that the SMP allows small marine rail systems, they should be considered for tender moorage accessory to a mooring buoy prior to permitting a new dock.	Done.
Rec-16	<b>23.40.170.B – Standards for Single-Family Residential Use on Constrained Lots</b>	3. The building area shall not exceed 2,500 square feet. The building area means <u>the proposed residence, normal appurtenances (except drainfields), and any proposed residential accessory structures.</u> <del>Sidewalks and similar structures (except the single path allowed for shoreline access, parking areas, normal appurtenances (except drainfields).</del> Additionally, another 500 square feet of low-impact development (LID) landscaping, including any lawn, turf, ornamental vegetation, or gardens is allowed, provided that it is set back as far as feasible from the shoreline.		Recommended Change – This change clarifies that the house itself is also part of what constitutes the building area. Other changes simplify this provision without changing its meaning. A single footpath to access the shoreline is already allowed within buffers elsewhere within the SMP.	Done.
Rec-17	<b>23.40.170.B – Standards for Single-Family Residential Use on Constrained Lots</b>	4. <del>Consideration shall be given to view impacts in accordance with</del> <u>In no case shall the proposed residence be located waterward of the common-line setback as determined in applicable sections of WCC 23.40.020(D)(2) (Common-Line Setback).</u>		Recommended Change – This change clarifies that the intent of this provision is to protect views from existing adjacent residences.	Done.
Rec-18	<b>23.40.170.B – Standards for Single-Family Residential Use on Constrained Lots</b>	7. Appropriate measures are taken to mitigate all adverse impacts, including but not limited to locating the <del>residence building area and landscaping allowance</del> in the least environmentally damaging location relative to the shoreline and any critical areas and their buffers.		Recommended Change – This change clarifies that the entire 2,500 square foot building area and the additional 500-square foot allowance for lawn/landscaping is required to locate in the least environmentally damaging location.	Done.
Rec-19	<b>23.40.170.B – Standards for Single-Family Residential Use on Constrained Lots</b>	8. All reductions to side yard and/or frontage setbacks are pursued, <u>Such reductions may be approved administratively without a zoning variance,</u> when doing so will not create a hazardous condition or a condition that is inconsistent with this program and WCC Title 20.		Recommended Change – Without the proposed change, every application to use the constrained lot provisions will require a concurrent application for a variance to WCC Title 20 – Zoning. For many years, the Zoning Ordinance contained a “shoreline flip” provision that allowed for administrative reduction of the roadside setback down to five-feet when it was determined by Whatcom County Public Works that such a distance met applicable development standards for site distance, etc. This change would restore this administrative option and result in	Done.

ITEM	PROVISION	BILL FORMAT CHANGES (underline = additions; strikethrough = deletions)	RATIONALE	W/C Response
			more expeditious review of new residential development in this scenario.	
Req-20	<b>23.40.170.B – Standards for Single-Family Residential Use on Constrained Lots</b>	10. The shoreline jurisdiction shoreline area outside of the approved development is <u>retained if fully functional, and/or enhanced with native trees, shrubs and groundcovers through development of a mitigation plan, including monitoring and maintenance contingencies per 16.16.260.G.</u> <del>optimized to provide the maximum shoreline ecological functions and ecosystem wide functions;</del>	Required Change – It is unclear what the term “optimized” means but this change restores the exiting requirement that the remaining buffer areas are enhanced with trees, shrubs and groundcovers and maintained in perpetuity.	Done.
Req-21	<b>23.40.170.C – Additional Standards for Multifamily Residential Development</b>	3. Multifamily development <del>with more than four units and</del> shall incorporate public access to waters of the state as provided for in WCC 23.30.070 (Public Access) unless the site is designated in a shoreline public access plan for a greater component of public access or public access is demonstrated to be infeasible or inappropriate. The amount and configuration of public access shall depend on the proposed use(s) and the following criteria:	Required Change – This change restores the existing language that requires consideration for all multifamily development. There is nothing in the public access standards of the SMP Guidelines that exempt multifamily developments under a certain unit size [WAC 173-26-221(4)]	Done.
Rec-20	<b>23.40.170.D – Additional Standards for Accessory Uses and Development</b>	Restore the following language: 2. Shoreline permits shall be required for accessory development that does not meet the intent and definition of an appurtenance as defined in WCC 23.100.010(16).	Recommended Change – This change would restore an existing clarification that comes up often in SMP implementation that explains the difference between a residential appurtenance which can be exempt from the requirement to obtain a shoreline substantial development permit and a residential accessory structure that may require a substantial development permit.	Done.
Req-22 Rec-21	<b>23.40.190.A – Shoreline Stabilization</b>	5. Alternatives for shoreline stabilization shall be based on the following order of preference: a. No action, <del>increase building setbacks, relocate structures;</del> b. Nonstructural shoreline <del>stabilization</del> <u>stabilization, including building setbacks, relocation of structures to be protected and groundwater management;</u> c. Other Soft shoreline stabilization treatment; d. Hybrid shoreline stabilization; e. Hard shoreline stabilization.	Required Change – This change clarifies that increased setbacks are a form of nonstructural shoreline stabilization. In addition, the change restores existing language that requires consideration of structure relocation when feasible to avoid the need for stabilization and lists additional forms of nonstructural stabilization measures per the SMP Guidelines at WAC 173-26-231(3)(a).  Recommended Change – Scrivener’s error (spelling).	Done.
Rec-22	<b>23.40.190 – Shoreline Stabilization</b>	12. Revetments <del>are prohibited, except for use in water dependent and public infrastructure projects, which</del> may be permitted as <u>a</u> conditional use.	Recommended Change – It is unclear why a revetment would be a prohibited form of shoreline stabilization when determined to be the least damaging and most appropriate choice for protection of primary structures. This change retains the conditional use requirement which will bring added scrutiny to these types of proposals to determine whether a revetment treatment is appropriate.	Not done. Should not normally be allowed.
Rec-23	<b>23.40.190 – Shoreline Stabilization</b>	15. Minimize disturbance pertaining to beach access by avoiding trails <u>that may be subject to loss or damage by erosion</u> <del>require hard stabilization.</del>	Recommended Change – This change clarifies that trails are not primary structures allowed to be protected with hard stabilization per the SMP. The provision has been reworded to leave the intent while removing language that could be perceived as allowing hard stabilization to protect accessory developments/structures.	Done.

ITEM	PROVISION	BILL FORMAT CHANGES (underline = additions; strikethrough = deletions)	RATIONALE	W/C Response
Rec-24	<b>23.60.030 – “C” Definitions</b>	Restore the following condition of “Clearing”: <u>“Clearing” means the removal of vegetation or plant cover by manual, chemical, or mechanical means. Clearing includes, but is not limited to, actions such as cutting, felling, thinning, flooding, killing, poisoning, girdling, uprooting, or burning.</u>	Recommended Change – While this term is defined in WCC 16.16 and incorporated into the SMP by reference, the term could apply outside of critical areas within shoreline jurisdiction. In such cases, a definition within the SMP could be helpful for implementation purposes.	Done.
Req-23	<b>16.16.225.B – General Regulations</b>	7. Alteration of Type III or IV wetlands, <u>within exception of shoreline associated wetlands subject to WCC Title 23</u> , that have a habitat area score of less than 6 when associated with an approved commercial development within an Urban Growth Area; or	Required Change – This change is based on conversations with Whatcom County clarifying that this exception does not apply within shoreline jurisdiction.	Done.
Req-24	<b>16.16.230 – Activities Allowed without Notification</b>	The following activities do not require authorization from Whatcom County. However, this chapter shall not be construed to grant authorization for any work to be done in any manner in violation of the provisions of this chapter or any other laws or ordinances of this jurisdiction. <u>Activities within the shoreline jurisdiction (WCC 23.20.10) may require a shoreline permit or statement of exemption.</u>	Required Change – This change is required for consistency with minimum procedural requirements for permit review in WAC 173-27. There may be instances where a shoreline permit or statement of exemption are required for developments that may otherwise be exempt outside of shoreline jurisdiction. The required language mimics that included in WCC 16.16.235.1 – Activities Allowed with Notification	Done.
Req-25	<b>16.16.235.A – Activities Allowed With Notification</b>	1. The applicant provides a written notification to the Director on a form provided by the Department. Activities within the shoreline jurisdiction (WCC 23.20.010) <del>shall</del> <u>may</u> require a shoreline permit or statement of exemption.	Required Change – This change clarifies the fact that some actions allowed through this process may not meet the definition of “Development” as defined by the SMP. In such cases, a shoreline permit or statement of exemption would technically not be required. In such instances, any applicable standards of the SMP would still apply but the process outlined within this section could still be utilized. For example, removal of a single hazard tree would not require a development permit or exemption per the SMP, however mitigation would still be required consistent with the SMP, including applicable sections of the CAO.	Done.
Req-26	<b>16.16.270.C.12 – Reasonable Use Exceptions</b>	a. <del>On lots outside of the shoreline jurisdiction, w</del> hen an extended driveway is necessary to access a portion of a development site with the least impact on critical areas and/or buffers, those portions of the driveway shall be excluded from the 4,000-square foot maximum impact area; provided, that the access road or driveway meets the standards of WCC 16.16.620(D) or 16.16.720(D), as applicable.  b. <del>On lots within the shoreline jurisdiction, when an extended driveway is necessary to access a portion of a development site with the least impact on critical areas and/or buffers, the applicant shall demonstrate that the size and location of the driveway is the minimum necessary to access the development site.</del>	Required Change – This change removes any reference to the SMP as 16.16.270 is not incorporated by reference as part of the SMP at 23.05.065.A.	Done.
Rec-25 Req-27	<b>16.16.720.G.4 – Accessory Uses</b>	Accessory <del>Uses</del> <u>Structures</u> . When located in the shoreline jurisdiction, residential <del>water-oriented</del> accessory structures <u>including a boat equipment storage shed, an uncovered small boat storage rack, a fire pit, and a pathway leading to the shoreline,</u> may be permitted in an HCA buffer; provided.  a. <u>Such structures are located as far from the shoreline as feasible and on previously-impacted buffer areas, and</u>	Recommended Change – This change clarifies that this section is related to accessory structures rather than uses.  Required Changes – These changes are required for consistency with the SMP Guidelines governing principle that SMP regulations must be designed to achieve no net loss of ecological functions (WAC 173-26-186(8)). The changes add	Done.

ITEM	PROVISION	BILL FORMAT CHANGES (underline = additions; strikethrough = deletions)	RATIONALE	W/C Response
		<ul style="list-style-type: none"> <li>b. <u>The maximum area, inclusive of existing lawfully-established accessory structures, They</u> shall be limited to 10% of the buffer's area or 500 square feet, whichever is less; and,</li> <li>c. No more than 20% of the linear length of shoreline is occupied by a building or structure; and</li> <li>d. <u>Individual structures shall be limited to a total footprint area of 100-square feet and 10-feet in height, and</u></li> <li>e. The shoreline is 75% planted (or replanted), <u>or at ratios outlined in 16.16.760 whichever is greater</u>, with native vegetation to a minimum depth of 15 feet landward from the ordinary high water mark.</li> <li>f. <u>This provision shall not apply to residential developments authorized using the constrained lot provisions outlined in 23.40.150.B.</u></li> </ul>	<p>appropriate sideboards to allow a limited and predictable list of common residential developments that may be located within regulated buffers. The changes include more emphasis on the required mitigation sequence including avoidance, minimization and mitigation of impacts to buffers [WAC 173-26-201(2)(e)]</p>	
Rec-26	<b>16.16.730.A – Habitat Conservation Area Buffers</b>	<p>1. Buffers shall be established for activities adjacent to habitat conservation areas as necessary to protect the integrity, functions, and values of the resource. Buffer widths shall reflect the sensitivity of the species or habitat present and the type and intensity of the proposed adjacent human use or activity. Buffers shall not include areas that are functionally and effectively disconnected from the <del>wetland</del> <u>habitat conservation area</u> by an existing, legally established road or other substantially developed surface.</p>	<p>Recommended Change – Scrivener's error correction. It appears this language was copied from the wetland section without changing the reference to HCAs.</p>	Done.
Rec-27	<b>16.16.740. C – Habitat Conservation Area Buffer Modification</b>	<p>2. In all circumstances when the buffer between the area of reduction and the <del>wetland</del> <u>habitat conservation area</u> is degraded, this degraded portion of the buffer shall include replanting with native vegetation in order to achieve a dense vegetative community.</p>	<p>Recommended Change – Scrivener's error correction. It appears this language was copied from the wetland section without changing the reference to HCAs.</p>	Done.

## Attachment 2: 2020 Whatcom County SMP Periodic Review Amendment – Public Comment Summary

The following comments were received during the joint public comment period between March 12, 2021 and April 22, 2021. In addition, public comments received at the joint public hearing are also included below:

Comment #	Commenter	Date	Section	Comment Summary	Whatcom County Response
MES43	Ed Miller, Miller Environmental Services	4/12/21	16.16.270 & 16.16.273	<p>These sections are a complete rewrite of reasonable use procedures and would require a variance (minor and major variance) before reasonable use would apply.</p> <p>Current Code: Reasonable use provisions are currently considered prior to a variance application. A variance application is time-consuming, more expensive, and requires review/approval by the hearing examiner with a public hearing. Per 16.16.270.C.1 only reasonable use exceptions for single-family residential building or for other development proposals that would affect only buffers, but not critical areas themselves (e.g., wetlands and streams), shall be processed administratively. Other applications that directly impact critical areas, with the exception of single-family residential, currently have to apply for a variance application. If an applicant currently wants to propose a larger footprint than the allowed 4,000 square feet under reasonable use, they could also apply for a variance.</p> <p><i>Suggested Change:</i> Strike the proposed changes to reasonable use and variance procedures. Return to the current language. Also, add bolded language to section 16.16.270.j. The project includes mitigation for unavoidable critical area and buffer impacts in accordance with the mitigation requirements of this chapter – <b>or if the mitigation requirements cannot be met, to the maximum extent feasible on the property.</b></p> <p><i>Rational for suggested change:</i> The proposed change is a significant alteration to the code and process. A significant number of previously designated reasonable use projects, processed administratively, would need to go to the hearing examiner. This will significantly increase costs and time to applicants for simple single-family construction or projects with only buffer impacts – as the current code requires an open public hearing for anything more complex. This will also create more uncertainty as to what will be allowed when a property is encumbered with critical areas and buffers. It should also be remembered, that reasonable use scenarios have increased significantly over the last four years as the result of larger buffers occurring on properties since 2017 – the result of utilization of updated Ecology wetland rating forms and guidance. Generally, critical areas, primarily wetlands, have not changed but buffers have become significantly larger.</p> <p>The change to section j is included so that applicants aren't required to purchase another property for mitigation – which has been required in some cases, precluding any development at all (even for buffer impacts).</p>	<p>Our Hearing Examiner has questioned our current schema, in particular why he isn't the final decision maker, as the current code allows an administrative determination to be made after a quasi-judicial decision, and in the hierarchy of permitting, applicants should have to exhaust any administrative remedies before seeking a quasi-judicial decision. Staff is proposing that reasonable use exceptions be the last method of altering standards to allow reasonable economic use of constrained property, and that they be decided upon by the Hearing Examiner (see 16.16.270 Reasonable Use Exceptions).</p> <p>In this schema, the degree to which one can vary standards while providing the least amount of mitigation moves up a level at each step, with the Hearing Examiner making the tougher decisions through a quasi-judicial process. This would return the reasonable use exception to truly the last effort of avoiding a taking.</p> <p>However, to counter the additional time and cost of this process, staff is also proposing to create a new category of variances, called minor variances (16.16.273 Variances). They would be limited to variances for a 25% to 50% reduction of critical area buffers (when mitigated and they meet certain criteria) but would address most of the instances that reasonable use exceptions are currently applied for. We believe that overall, these changes would significantly reduce the number of cases having to go to the Hearing Examiner and cost less to the citizens of Whatcom County overall.</p>

MES44	Ed Miller, Miller Environmental Services	4/12/21	16.16.620(D) & 16.16.720(D)	<p><i>Draft Code:</i> Private Access. Access to existing legal lots may be permitted to cross Category II, III or IV wetlands or their buffers, provided the access meets the following... And. Private Access. Access to existing legal lots may be permitted to cross habitat conservation areas if there are no feasible alternative alignments.</p> <p><i>Current Code:</i> <u>Access to private development sites</u> may be permitted to cross Category II, III or IV wetlands or their buffers, provided...</p> <p><i>Suggested Change:</i> Strike the change and keep the current language, both wetland and HCA sections.</p> <p><i>Rationale for suggested change:</i> This section as modified implies that no new lots could be created (subdivided) if a road would be needed to cross through a wetland or buffer or habitat conservation areas. Access to large areas of unencumbered property could be restricted if one small wetland or its buffer would need to be impacted to access a development area. For example, creating new lots in unencumbered areas (no critical areas) per the underlying zoning might not be allowed on a 40 acre property if the crossing of a non-fish stream or the outer portion of a buffer was required.</p>	This formerly proposed language has already been stricken and reverted to the original language in the more recent versions of Exhibit F (4/5/21)
MES45	Ed Miller, Miller Environmental Services	4/12/21	16.16.640(A)(5)	<p><i>Draft Code:</i> Buffer Width Increasing: <u>The Director may require the standard buffer width to be increased by the distance necessary to protect wetland functions and provide connectivity to other wetland and habitat areas for one of the following:</u></p> <p><u>(5) When a Category I or II wetland is located within 300 feet of:</u></p> <ol style="list-style-type: none"> <li>a. <u>Another Category I, II or III wetland; or</u></li> <li>b. <u>A fish and wildlife HCA; or</u></li> <li>c. <u>A type S or F stream; or</u></li> <li>d. <u>A high impact land use that is likely to have additional impacts.</u></li> </ol> <p><i>Suggested Change:</i> Strike the new, added section (5).</p> <p><i>Rationale for suggested change:</i> This added provision, not in the current code, allows staff to extend any Category II wetland buffers out to 300 feet – if another wetland or HCA is within 300 feet. HCA's include mature forest, priority snags (logs on the ground, 20 feet long, 12 inches wide), streams, etc.</p> <p>The intent of this appears to be to increase buffers if adjacent critical areas are present. However, this is already accounted for in the wetland rating form. The habitat score, which drives the buffer width, is scored higher if habitat conservation areas are within 330 feet. The proposed draft change seems redundant when these factors are already utilized in determining the buffers in the current code - based on the wetland rating form. If the intent is also to protect habitat corridors, then it is also redundant, as these are already protected in the habitat conservation section of the code – State priority habitat “Biodiversity areas and corridors”.</p>	Staff believes this addition better reflects DOE guidance and Council's direction to improve connectivity.
MES46	Ed Miller, Miller Environmental Services	4/12/21	16.16.640(B)(2) & 16.16.745(B)(2)	<p><i>Draft code.</i> Buffer Width Averaging: <u>In the specified locations where a buffer has been reduced to achieve averaging, the Director may require enhancement to the remaining buffer to ensure no net loss of ecologic function, services, or value.</u></p> <p><i>Suggested Change:</i> Strike the proposed change.</p>	This formerly proposed language has already been stricken and reverted to the original language in the most recent version of Exhibit F (4/5/21)

				<p><i>Rationale for Suggested Change:</i> This section effectively eliminates the intent of buffer averaging and converts it to buffer reduction by requiring mitigation in the form of added plantings. Buffer averaging is an important and simple way to allow more flexibility for property owners that need to make minor buffer adjustments. This section will also reduce consistency and predictability (each staff member could apply this differently), and will increase the cost for simple projects by requiring plantings, monitoring, bonding, etc. by thousands of dollars. Additionally, the Director already has the ability to require plantings in a wetland or HCA buffer where it lacks adequate vegetation under 16.16.630.D or 16.740.B.1, making this code addition redundant.</p>	
MES47	Ed Miller, Miller Environmental Services	4/12/21	16.16.640(C)(1)(c)	<p><i>Buffer Width Reduction draft code:</i> The buffer shall not be reduced to less than 75% of the standard buffer.</p> <p><i>Current Code:</i> Allows for a Category IV wetland buffer to be reduced by up to 50% or 25 feet, whichever is greater.</p> <p><i>Suggested Change:</i> Restore prior language to allow for up to 50% reduction (or 25 feet) for Category IV wetlands.</p> <p><i>Rationale for Suggested Change:</i> The existing code section allows for up to a 50% (or minimum of 25 feet) reduction of a Category IV wetland buffer, while higher category wetlands are restricted to a 25% reduction. Under the draft buffer averaging section, Category IV wetlands are still allowed up to a 50% reduction. This proposed change will remove flexibility for property owners for the lowest category of wetlands.</p>	Staff believes this amendment better reflects DOE guidance.
MES48	Ed Miller, Miller Environmental Services	4/12/21	16.16.710(C)(1)(a)(v) & 16.16.740(B)	<p><i>Draft Code:</i> Type O waters include all segments of aquatic areas that are not type S, F, or N waters and that are physically connected to type S or F waters by an above-ground channel, system, pipe, culvert, stream or wetland. And 16.16.740.B. Type O Buffer = 25 feet.</p> <p><i>Current Code:</i> Not present in the current code.</p> <p><i>Suggested Change:</i> Strike this addition of Type O waters and associated 25-foot buffer. Return the prior designation of Natural Ponds to the buffer Table requiring a 50 foot buffer.</p> <p><i>Rationale for Suggested Change:</i> The definition of Type O waters will include ditches and artificial ponds that eventually drain to a fish stream. This will include most of the ditching and artificial ponds in Whatcom County. This will in effect place 25-foot buffers in any front yard along a road with a County ditch – creating protected critical areas buffers along most property road frontage. Any time the County public works excavated new ditching, or extended existing new ditching, they would also be creating new critical areas and encumbering adjacent properties with a buffer for a resource that the County created. This seems problematic and overreaching. Ditching provides a function to control and direct stormwater. The department of Ecology has no recommendations designating artificial ditches as critical areas or for placing buffers on artificial ditching. This would create a new critical area, most of which are within County rights-of-way. Additionally, most of the ditches outside of road right of ways are agricultural in nature and created prior to the growth management act and the clean water act. Additionally, Type O waters do not correlate with Washington State water typing.</p>	This formerly proposed language has already been stricken and amended in the most recent version of Exhibit F (4/5/21)

MES49	Ed Miller, Miller Environmental Services	4/12/21	16.16.710(C)(b)(i)	<p><i>Draft Code:</i> Ditches or other artificial water courses are considered streams for the purposes of this chapter when: i. used to convey <u>waters of the state</u> existing prior to human alteration; and/or...</p> <p><i>Current Code:</i> Ditches or other artificial water courses are considered streams for the purposes of this chapter when: i. used to convey <u>natural streams</u> existing prior to human alteration; and/or...</p> <p><i>Suggested Change:</i> Strike the change and replace the current language.</p> <p><i>Rationale for suggested change:</i> This change seems to make the section more confusing. State definitions (italics added):</p> <p>“Waters of the state includes all lakes, rivers, ponds, streams, inland waters, underground waters, salt waters and all other surface waters and watercourses located within the jurisdiction of the state of Washington (RCW 90.48.020).”</p> <p>“WAC 220-660-030(153) Watercourse, river or stream means any portion of a stream or river channel, bed, bank, or bottom waterward of the ordinary high water line of waters of the state. Watercourse also means areas in which fish may spawn, reside, or pass, and tributary waters with defined bed or banks that influence the quality of habitat downstream. Watercourse also means waters that flow intermittently or that fluctuate in level during the year, and the term applies to the entire bed of such waters whether or not the water is at peak level. A watercourse includes all surface-water-connected wetlands that provide or maintain habitat that supports fish life. This definition does not include irrigation ditches, canals, stormwater treatment and conveyance systems, or other entirely artificial watercourses, except where they exist in a natural watercourse that has been altered by humans.”</p> <p>Per state definition, waters of the state (that might be found in a ditch) have an ordinary high water mark and are not artificial – essentially a “natural stream”. It seems the current language is consistent with state definitions and is clearer.</p>	Based on public comment and direction from the P/C, staff has rewritten this section to be clearer and allow lesser buffers on modified waterways that are not regulated by WDFW. See 16.16.710(C) & (D)(2) in the most recent version of Exhibit F (4/5/21).
MES50	Ed Miller, Miller Environmental Services	4/12/21	16.16.745(A)(2)	<p><i>Draft Code:</i> Buffer Width Increasing. The Director may require the standard buffer width to be increased or to establish a non-riparian buffer, when such buffers are necessary for one of the following:</p> <ol style="list-style-type: none"> <li>1) To protect priority fish or wildlife using the HCA</li> <li>2) <u>To provide connectivity when a Type S or F water body is located within 300 feet of:</u> <ol style="list-style-type: none"> <li>a. <u>Another Type S or F water body; or</u></li> <li>b. <u>A fish and wildlife HCA; or</u></li> <li>c. <u>A Category I, II or III wetland.</u></li> </ol> </li> </ol> <p><i>Current Code:</i> 16.16.745.A.2 - language added, not in the current code.</p> <p><i>Suggest Changed:</i> strike the new added section 16.16.745.A.2.</p> <p><i>Rationale for suggested change:</i> This is a new provision to the code that allows the Director to extend Type S or F buffers to resources within 300 feet – including Category III wetlands, other HCA’s or other waters. Again, this is an exceptionally broad provision to add in additional</p>	Staff believes this addition better reflects DOE guidance and Council’s direction to improve connectivity.

				regulated areas that are not currently designated as critical areas or buffers in the existing or even the proposed amended code. The extension of every fish stream or lake buffer to another resource within 300 feet is essentially extending most of the buffer areas to 300 feet. If the intent is also to protect habitat corridors, then it is also redundant, as these are already protected in the habitat conservation section of the code – State priority habitat “Biodiversity areas and corridors”.	
RFW17	Karlee Deatherage (RE Sources), Rein Attemann (WEC), and Tim Trohimovich (Futurewise)	4/12/21		<p>Incorporate regulations to prepare for accelerating sea level rise impacts.</p> <p>The SMA and SMP Guidelines require shoreline master programs to address the flooding that will be caused by sea level rise. RCW 90.58.100(2)(h) requires that shoreline master programs “shall include” “[a]n element that gives consideration to the statewide interest in the prevention and minimization of flood damages ...” WAC 173-26-221(3)(b) provides in part that “[o]ver the long term, the most effective means of flood hazard reduction is to prevent or remove development in flood-prone areas ...” “Counties and cities should consider the following when designating and classifying frequently flooded areas ... [t]he potential effects of tsunamis, high tides with strong winds, sea level rise, and extreme weather events, including those potentially resulting from global climate change ...” The areas subject to sea level rise are flood prone areas just the same as areas along bays, rivers, or streams that are within the 100-year flood plain. RCW 90.58.100(1) and WAC 173-26-201(2)(a) also require “that the ‘most current, accurate, and complete scientific and technical information’ and ‘management recommendations’ [shall to the extent feasible] form the basis of SMP provisions.” This includes the current science on sea level rise.</p> <p>Sea level rise is a real problem that is happening now. Sea level is rising and floods and erosion are increasing. In 2012 the National Research Council concluded that global sea level had risen by about seven inches in the 20th Century. A recent analysis of sea-level measurements for tide-gage stations, including the Seattle, Washington tide-gauge, shows that sea level rise is accelerating.5 Virginia Institute of Marine Science (VIMS) “emeritus professor John Boon, says ‘The year-to-year trends are becoming very informative. The 2020 report cards continue a clear trend toward acceleration in rates of sea-level rise at 27 of our 28 tide-gauge stations along the continental U.S. coastline.’” “Acceleration can be a game changer in terms of impacts and planning, so we really need to pay heed to these patterns,’ says Boon.” The Seattle tide gage was one of the 27 that had an accelerating rate of sea level rise. The report Projected Sea Level Rise for Washington State – A 2018 Assessment projects that for a low greenhouse gas emission scenario there is a 50 percent probability that sea level rise will reach or exceed 1.2 feet by 2100 around Sandy Point and the west side of the Lummi Peninsula. Projected Sea Level Rise for Washington State – A 2018 Assessment projects that for a higher emission scenario there is a 50 percent probability that sea level rise will reach or exceed 4.5 feet by 2100 for the same area. Projections are available for all of the marine shorelines in Whatcom County and Washington State.</p> <p>The extent of the sea level rise currently projected for Whatcom County can be seen on the NOAA Office for Coastal Management Digitalcoast Sea Level Rise Viewer available at: <a href="https://coast.noaa.gov/digitalcoast/tools/slr.html">https://coast.noaa.gov/digitalcoast/tools/slr.html</a>. Please see map images at the bottom of this</p>	<p>There isn’t a requirement to address climate change/sea level rise in the SMA, though we could if Council desires. However, what we understand from the DOE is that any such regulations should be built on data, which is what PS-CoSMoS will be providing. Furthermore, once the data is available, we should perform vulnerability and risk assessments to see what kind and where the problems might be, and update our shoreline inventory and characterizations. Without such science, we would be open to challenges.</p>

			<p>letter detailing the changes in water elevation from the current mean higher high water (MHHW) to four feet of sea level rise.</p> <p>Projected sea level rise will substantially increase flooding. As Ecology writes, “[s]ea level rise and storm surge[s] will increase the frequency and severity of flooding, erosion, and seawater intrusion—thus increasing risks to vulnerable communities, infrastructure, and coastal ecosystems.” Not only our marine shorelines will be impacted, as Ecology writes “[m]ore frequent extreme storms are likely to cause river and coastal flooding, leading to increased injuries and loss of life.”</p> <p>Zillow recently estimated that 31,235 homes in Washington State may be underwater by 2100, 1.32 percent of the state’s total housing stock. The value of the submerged homes is an estimated \$13.7 billion. Zillow wrote:</p> <p>“It’s important to note that 2100 is a long way off, and it’s certainly possible that communities [may] take steps to mitigate these risks. Then again, given the enduring popularity of living near the sea despite its many dangers and drawbacks, it may be that even more homes will be located closer to the water in a century’s time, and these estimates could turn out to be very conservative. Either way, left unchecked, it is clear the threats posed by climate change and rising sea levels have the potential to destroy housing values on an enormous scale.”</p> <p>Sea level rise will have an impact beyond rising seas, floods, and storm surges. The National Research Council wrote that:</p> <p>“Rising sea levels and increasing wave heights will exacerbate coastal erosion and shoreline retreat in all geomorphic environments along the west coast. Projections of future cliff and bluff retreat are limited by sparse data in Oregon and Washington and by a high degree of geomorphic variability along the coast. Projections using only historic rates of cliff erosion predict 10–30 meters [33 to 98 feet] or more of retreat along the west coast by 2100. An increase in the rate of sea-level rise combined with larger waves could significantly increase these rates. Future retreat of beaches will depend on the rate of sea-level rise and, to a lesser extent, the amount of sediment input and loss.”</p> <p>These impacts are why the Washington State Department of Ecology recommends “[l]imiting new development in highly vulnerable areas.”</p> <p>Unless wetlands and shoreline vegetation can migrate landward, their area and ecological functions will decline. If development regulations are not updated to address the need for vegetation to migrate landward in feasible locations, wetlands and shoreline vegetation will decline. This loss of shoreline vegetation will harm the environment. It will also deprive marine shorelines of the vegetation that protects property from erosion and storm damage by modifying soils and accreting sediment. WEC and Futurewise’s Sept. 16, 2020 letter included maps that show the extent of this amount of sea level rise in Whatcom County and wetland migration in part of the County if the wetlands are not blocked by development. Additional maps are also enclosed with this letter.</p>	
--	--	--	---	--

				<p>Flood plain regulations are not enough to address sea level rise for three reasons. Projected Sea Level Rise for Washington State – A 2018 Assessment explains two of them:</p> <p>“Finally, it is worth emphasizing that sea level rise projections are different from Federal Emergency Management Agency (FEMA) flood insurance studies, because (1) FEMA studies only consider past events, and (2) flood insurance studies only consider the 100-year event, whereas sea level rise affects coastal water elevations at all times.”</p> <p>The third reason is that floodplain regulations allow fills and pilings to elevate structures and also allow commercial buildings to be flood proofed in certain areas. While this affords some protection to the structure, it does not protect the marshes and wetlands that need to migrate.</p> <p>Because of these significant impacts on people, property, and the environment, “[n]early six in ten Americans supported prohibiting development in flood-prone areas (57%).” It is time for Washington state and local governments to follow the lead of the American people and adopt policies and regulations to protect people, property, and the environment from sea level rise. We recommend the addition of the following regulations as part of the shoreline master program periodic update:</p> <p>X. New lots shall be designed and located so that the buildable area is outside the area likely to be inundated by sea level rise in 2100 and outside of the area in which wetlands and aquatic vegetation will likely migrate during that time.</p> <p>X2. Where lots are large enough, new structures and buildings shall be located so that they are outside the area likely to be inundated by sea level rise in 2100 and outside of the area in which wetlands and aquatic vegetation will likely migrate during that time.</p> <p>X3. New and substantially improved structures shall be elevated above the likely sea level rise elevation in 2100 or for the life of the building, whichever is less.</p>	
RFW18	Karlee Deatherage (RE Sources), Rein Attemann (WEC), and Tim Trohimovich (Futurewise)	4/12/21	16.16.270	<p>Restore Reasonable Use impact area language in the Dec 4, 2020 draft Exhibit F, WCC 16.16.270 Reasonable Use Exceptions.</p> <p>We urge Whatcom County to restore the proposed change from the P/C to expand the maximum impact area for single-family residences from 4,000 square feet to 2,500 square feet in 16.16.270.C.12. The purpose of the reasonable use provision is to allow only the minimal “reasonable” use of property to avoid a constitutional taking when fully applying the standards of critical areas regulations.</p> <p>The courts generally decide the concept of reasonable; however, reasonable use is often interpreted as a modest single-family home. A home with a footprint of 4,000 square feet is excessive. A median size house built in 2019 has 2,301 square feet of floor area. We can assume that to be less than footprint 1,500 square feet.</p>	Your comment will be provided to the P/C & Co/C for consideration.
RFW19	Karlee Deatherage (RE Sources), Rein Attemann (WEC), and Tim Trohimovich (Futurewise)	4/12/21	16.16.730 , Table 4	<p>Incorporate the State of Washington Department of Fish &amp; Wildlife’s new riparian buffers guidance.</p> <p>As has been reported in media and scientific reports, the southern resident orcas, or killer whales, are threatened by (1) an inadequate availability of prey, the Chinook salmon, “(2)</p>	Pursuant to 23.230.010(B)(4) floodways and contiguous floodplain areas landward two hundred feet from such floodways are within the shoreline jurisdiction.

				<p>legacy and new toxic contaminants, and (3) disturbance from noise and vessel traffic.”</p> <p>“Recent scientific studies indicate that reduced Chinook salmon runs undermine the potential for the southern resident population to successfully reproduce and recover.” The shoreline master program update is an opportunity to take steps to help recover the southern resident orcas, the Chinook salmon, and the species and habitats on which they depend.</p> <p>The SMP Guidelines, in WAC 173-26-221(3)(c), provides in part that “[i]n establishing vegetation conservation regulations, local governments must use available scientific and technical information, as described in WAC 173-26-201 (2)(a). At a minimum, local governments should consult shoreline management assistance materials provided by the department and Management Recommendations for Washington’s Priority Habitats, prepared by the Washington state department of fish and wildlife where applicable.”</p> <p>The State of Washington Department of Fish and Wildlife has recently updated the Priority Habitat and Species recommendations for riparian areas. The updated management recommendations document that fish and wildlife depend on protecting riparian vegetation and the functions this vegetation performs such as maintaining a complex food web that supports salmon and maintaining temperature regimes to name just a few of the functions.</p> <p>The updated Riparian Ecosystems, Volume 1: Science synthesis and management implications scientific report concludes that the “[p]rotection and restoration of riparian ecosystems continues to be critically important because: a) they are disproportionately important, relative to area, for aquatic species, e.g., salmon, and terrestrial wildlife, b) they provide ecosystem services such as water purification and fisheries (Naiman and Bilby 2001; NRC 2002; Richardson et al. 2012), and c) by interacting with watershed-scale processes, they contribute to the creation and maintenance of aquatic habitats.” The report states that “[t]he width of the riparian ecosystem is estimated by one 200-year site-potential tree height (SPTH) measured from the edge of the active channel or active floodplain. Protecting functions within at least one 200-year SPTH is a scientifically supported approach if the goal is to protect and maintain full function of the riparian ecosystem.” These recommendations are explained further in Riparian Ecosystems, Volume 2: Management Recommendations A Priority Habitats and Species Document of The Washington Department of Fish and Wildlife.</p> <p>Based on these new scientific documents, we recommend that shoreline jurisdiction should include the 100-year floodplain and that the buffers for rivers and streams in shoreline jurisdiction be increased to use the newly recommended 200-year SPTH and that this width should be measured from the edge of the channel, channel migration zone, or active floodplain whichever is wider. New development, except water dependent uses should not be allowed within this area. This will help maintain shoreline functions and Chinook habitat.</p>	<p>And pursuant to 16.16.730 Table 4, Type S – Freshwater HCAs are proposed to have a 200-foot buffer based on National Wildlife Federation v. FEMA (Federal District Court Case No. 2:11cv-02044-rsm; NMFS Doc. #2006-00472)</p>
TSF01	Diani Taylor, General Counsel, Taylor Shellfish Farms	4/12/21	23.40.010	<p>Table 1 of the draft proposes to revise the shoreline use table to prohibit general aquaculture (aquaculture other than commercial geoduck and salmon net pen facilities) in aquatic areas adjacent to the Natural shoreline environment designation (SED). This proposed revision should not be adopted. No scientific or technical information is identified in the Draft Amendment that would support this revision. As recognized by the GMHB, prohibiting</p>	<p>The purpose of the natural shoreline area is to “ensure long-term preservation of ecologically intact shorelines” and “preservation of the area’s ecological functions, natural features and overall character must receive priority over any other potential use.” The Natural SED is only applied in a few areas of the county, primarily the headwaters of the 3</p>

				aquaculture in the Natural SED absent such support is impermissible. Allowing aquaculture in the Natural SED is consistent with the purpose and policies of the Natural SED.	upper Nooksack branches and around state or locally controlled nature preserves. None of these areas would likely be used for aquaculture.
TSF02	Diani Taylor, General Counsel, Taylor Shellfish Farms	4/12/21	23.40.050(A)(1)	<p><del>Strike A.1. Aquaculture that involves little or no substrate modification shall be given preference over those that involve substantial modification. The applicant/proponent shall demonstrate that the degree of proposed substrate modification is degree of proposed substrate modification is aquaculture operations at the site.</del></p> <p>The first sentence of this provision is unsuitable for a regulation, as it merely expresses a preference for certain activities over others. Moreover, it is inadequately defined and unsupported by scientific and technical information. To the extent that it would disfavor common shellfish aquaculture practices that have been proven to have insignificant impacts on species and habitat (e.g., those covered by the Programmatic Consultation or analyzed by Washington Sea Grant), it runs directly counter to such information in violation of the SMA and Guidelines. It would also fail to give preference to and foster shellfish aquaculture contrary to state law.</p> <p>The second sentence appears to impose a substantive requirement that any substrate modifications must be the minimum necessary for feasible operations. This restriction is similarly unsupported by scientific and technical information and fails to give preference to and foster shellfish aquaculture. In an analogous context, the GMHB held that an aquaculture regulation requiring gear use be limited to the minimum necessary for feasible operations violated state law and must be stricken.</p>	<p>Though the language is existing, the commenter may be correct regarding the 1<sup>st</sup> sentence, as it does read more like a policy rather than a regulation. And Policy 11CC-3 basically says the same thing, so that 1<sup>st</sup> sentence could be deleted (though it wouldn't have much effect on the regulation).</p> <p>Regarding the 2<sup>nd</sup> sentence (again, existing language), staff sees no legal issue in requiring methods used minimize impacts to shoreline functions. The regulation only states that the applicant demonstrate that the degree of proposed substrate modification is the minimum necessary. We would think that Taylor Shellfish Farms already uses the least impactful methods given how environmentally friendly they purport to be. Nonetheless, your comments will be provided to the P/C and Co/C for their consideration.</p>
TSF03	Diani Taylor, General Counsel, Taylor Shellfish Farms	4/12/21	23.40.050(A)(2)	<p><del>Strike A.2 The installation of submerged structures, intertidal structures, and floating structures shall be allowed only when the applicant/proponent demonstrates that no alternative method of operation is feasible.</del></p> <p>Similar to the previous provision, this provision is not only unsupported by scientific and technical information, but such information demonstrates aquaculture structures do not have unacceptable impacts. This provision imposes unjustifiable use restrictions and fails to give preference to and foster aquaculture, and hence it should be deleted.</p>	Again, existing language, and it's only asking that the applicant demonstrate that any proposed structures be the least impactful to shoreline functions. Nonetheless, your comments will be provided to the P/C and Co/C for their consideration.
TSF04	Diani Taylor, General Counsel, Taylor Shellfish Farms	4/12/21	23.40.050(A)(3)	<p><del>Strike A.3 Aquaculture proposals that involve substantial substrate modification or sedimentation through dredging, trenching, digging, mechanical clam harvesting, or other similar mechanisms, shall not be permitted in areas where the proposal would adversely impact critical saltwater habitat, or other fish and wildlife habitat conservation areas.</del></p> <p>This provision is insufficient in scope and detail to ensure proper implementation, as several key terms are undefined. Moreover, this regulation appears to articulate a zero-impact standard inconsistent with the SMA and the Guidelines, which acknowledge that activities will have some impacts and calls for those impacts to be minimized. This provision is particularly inappropriate given commercial shellfish beds are themselves critical saltwater habitat.</p>	Staff disagrees with the commenters conclusions. The key words are either defined or their common usage is understood, and the regulation does not articulate a zero-impact standard: It only limits certain types of practices that might have significant impacts on critical saltwater habitats.
TSF05	Diani Taylor, General Counsel, Taylor Shellfish Farms	4/12/21	23.40.050(B)(9)	"Where aquaculture activities are authorized to use public County facilities, such as boat launches or docks, the County shall reserve the right to require the applicant/proponent to pay a portion of the cost of maintenance and any required improvements commensurate with the use of such facilities."	Staff agrees with the commenter and has made this suggested edit.

				This revision provides important clarification that the authority to require a project proponent pay a portion of maintenance costs and required improvements applies to County, rather than any public (e.g., state or federal), facilities. Use and maintenance of non-County public facilities are properly addressed by the entities or agencies that own or control those facilities.	
TSF06	Diani Taylor, General Counsel, Taylor Shellfish Farms	4/12/21	23.40.050(F)(1)	<p>In addition to the minimum application requirements specified in WCC Title 22 (Land Use and Development), applications for aquaculture use or development shall include all information necessary to conduct a thorough evaluation of the proposed aquaculture activity, including but not limited to the following, <u>if not already provided in other local, state, or federal permit applications or equivalent reports</u>:</p> <p>Aquaculture operations are subject to numerous laws and regulatory programs. Applicants for new aquaculture projects must obtain several federal and state approvals in addition to shoreline permits. The County should allow aquaculture applicants to utilize information provided in other local, state, or federal permit applications or equivalent reports in order to satisfy shoreline permit application requirements. This allowance will not hinder the County's interest in ensuring it has all information necessary to conduct a thorough evaluation of aquaculture proposals, and it is critical to avoid unnecessary burdens on applicants and streamline permitting consistent with the laws and policies discussed above.</p>	Staff agrees with the commenter, but none of the language prohibits the applicant from submitting materials used in or produced by other permitting processes. Regardless of whether another agency has made a decision on a permit, the County is still required to maintain a record of our decision making and would need copies of those materials to come to a rational conclusion.
TSF07	Diani Taylor, General Counsel, Taylor Shellfish Farms	4/12/21	23.40.050(F)(2)	<p>Applications for aquaculture activities must demonstrate that the proposed activity will be compatible with surrounding existing and planned uses.</p> <ol style="list-style-type: none"> <li>Aquaculture activities shall comply with all applicable noise, air, and water quality standards. All projects shall be designed, operated and maintained to minimize odor and noise.</li> <li><del>Aquaculture activities shall be restricted to reasonable hours and/or days of operation when necessary to</del> minimize substantial, adverse impacts from noise, light, and/or glare on nearby residents, other sensitive uses or critical habitat.</li> <li><del>Aquaculture facilities shall not introduce incompatible visual elements or substantially degrade</del> significantly impact the aesthetic qualities of the shoreline. Aquaculture structures and equipment, except navigation aids, shall be designed, operated and maintained to blend into their surroundings through the use of appropriate colors and materials.</li> </ol> <p>Taylor Shellfish, along with other responsible farmers, employ numerous practices to avoid and minimize potential noise and light impacts on other shoreline users. However, to help protect the safety of its crews and provide marketable products, shellfish operators frequently need to conduct activities during nights or on weekends when there are low tides. This is recognized in the Guidelines, which state: "Commercial geoduck aquaculture workers oftentimes need to accomplish on-site work during low tides, which may occur at night or on weekends. Local governments must allow work during low tides but may require limits and conditions to reduce impacts, such as noise and lighting, to adjacent existing uses." Restricting operations to certain hours or days may compromise the safety of farm crews and/or render operations infeasible. This requirement in 2.b is incompatible with the SMA and Guidelines, and it should be removed.</p>	Staff agrees with the commenter and has amended this section as suggested.

				The requirement in 2.c that aquaculture facilities not introduce incompatible visual elements or substantially degrade the aesthetic qualities of the shoreline is inconsistent with the Guidelines, which instead require that that aquaculture not significantly impact aesthetic qualities. The requirement that aquaculture activities not introduce incompatible visual elements is insufficient in scope and detail to ensure proper implementation. This subsection should be aligned with state law.	
TSF08	Diani Taylor, General Counsel, Taylor Shellfish Farms	4/12/21	23.40.050(H)(2)	<p>In the Natural shoreline environment, aquaculture activities that do not <del>require structures, facilities, or mechanized harvest practices and that will not result in the alteration of</del> <u>substantially degrade</u> natural systems or features are permitted.</p> <p>The prohibition on structures, facilities, or mechanized harvest in the Natural environment is unsupported by scientific and technical information and is accordingly inconsistent with the SMA and Guidelines. As discussed above, there is extensive scientific and technical information that demonstrates shellfish aquaculture activities, some of which include these proscribed items, have minimal impacts that are consistent with the Natural environment. The revised language shown here remedies these failures and aligns this regulation with the management policies in the Guidelines for the Natural environment.</p>	Staff disagrees with the commenter. The Natural SED is intended to remain natural and is the only SED where such structures are prohibited. It is not a general prohibition, just one for one certain SED. The Natural SED is only applied in a few areas of the county, primarily the headwaters of the 3 upper Nooksack branches and around state or locally controlled nature preserves. None of these areas would likely be used for aquaculture.
BIAWC08	Robert Lee, BIAWC	4/12/21	16.16.273	<p><b>Reasonable Use and Variances:</b> Staff has proposed major changes to the procedures and criteria for both. The current 2017 CAO allows PDS staff to grant reasonable use (RU) permits for one single family house under very strict criteria if CAO rules alone would deny "all reasonable and economically viable use" of the property.</p> <p><b>A. Variances:</b> They now require a public hearing and approval by the Hearing Examiner (HE). The applicant must demonstrate "undue hardship" due to CAO "dimensional requirements". Frankly, it's not clear what the difference is between the scope of these and RU applications in current code.</p> <p>Per draft Section 16.16.270.A, p 30-31, Exh. F, if a person only needs a 25 to 50% CAO buffer reduction, they would apply for a Minor Variance, instead of a RU Exception per current code.</p> <p>The draft does not say whether this value is total area, width, or both. Staff decides these permits; notice to neighbors is required. We do appreciate the new minor variance idea allowing staff approval, but why they also have to provide notice to adjacent land owners?</p> <p>A Major Variance is required for any other CAO exceptions. See Section 16.16.273, p 34. Either level of variance will be a costly process; the fee is \$2750, plus critical area reports, possibly consultants and any legal costs.</p> <p>One could only apply for a Reasonable Use Exception RU if their variance app is denied. This means if you don't get adequate relief with a variance approval, one must repeat the permit process to apply for an RU, and pay double fees and costs. A person may also face an appeal to Superior Court from someone.</p>	<p>Please see the responses provided for Comments GCD14, NES02, NWC02, NWC05, BIA04, MES11, MES29, MES31, MES43, RFW12, &amp; RFW18.</p> <p>In addition, variances have always required a public hearing and approval by the H/E using the same criteria. We have now introduced a "minor" variance (the creation of which has already been approved by Co/C) for minor buffer reductions. An all variances always require public notice, as we're potentially letting applicants use lesser standards than what the code prescribes, which might have impacts on neighbors.</p> <p>We have also put in a request to have a much lower fee for minor variances.</p>
BIAWC09	Robert Lee, BIAWC	4/12/21	16.16.270(C)(12)	<p><b>B. Reasonable Use Exception (RU)</b></p> <p>1. Footprint Size:</p>	Please see the responses provided for Comments BIA04, GCD09, GCD14, MES09, MES11, MES31, NES01, RFW12, RFW13, & RFW18.

				<p>Re draft Sections 270, Item C, p 31, we support the increase in the allowed "impact area" for a house via the RU process to 4,000 sq. ft., from 2,500, recently accepted by the P/C. This limit is a minimally reasonable value when you consider most of the sites will be 2 acres or larger, and many rural land owners will want barns, corrals, shops, etc.</p> <p>Also, these and all other CAO rules apply in the county's two Urban Growth Areas: Birch Bay and Columbia Valley, where lot sizes are usually much smaller, and on public sewer and water systems.</p> <p>However, "impact area" is not defined in the draft CAO. We suggest this term be defined to include only artificial impervious surfaces. We support the driveway exception as written, and ask that drainfield areas be listed as excepted too.</p> <p>There appears to be no scientific basis for either value. The 4,000 sf value will often be generally reasonable in this context for smaller lots, e.g., 1 to 5 acres. But several large rural areas are zoned 10 acre minimum. We think consideration should be given to a "sliding scale" proposal, for parcels 5 acres and larger, based on zoning, platting options, availability of drinking water, soils for septic, etc.</p> <p>Many rural residents are horse enthusiasts, and want training rings, which will push the total footprint over the 4,000 sf limit.</p>	<p>And remember, RUEs are for lots totally constrained by critical areas. Lots that aren't so constrained can build to whatever size the code allows for their zone. We would think that someone who wants barns, training rings, and other large structures would choose a lot not so constrained.</p>
BIAWC10	Robert Lee, BIAWC	4/12/21	22.05.020	<p><b>2. RU Process:</b> We believe the RU decision should be made by staff instead of the Hearing Examiner (HE), a far less costly, time consuming and legalistic process.</p> <p>We believe these decisions should be based mainly on a scientific analysis of the particular situation; that is: the functions and values of the resource, and adjacent site character, mainly its natural features: e.g., soils and geology, topography, native vegetation etc.</p> <p>An important question: is there any state law, court decision or code that requires that RU's be decided by the HE, a quasi-judicial official? Or that bars professional and qualified staff from making these mainly technical and science kind of decisions?</p>	<p>Please see the responses provided for Comments GCD14, NES02, NWC02, NWC05, BIA04, MES11, MES29, MES31, MES43, RFW12, &amp; RFW18.</p>
BIAWC11	Robert Lee, BIAWC	4/12/21	16.16.270(C)	<p><b>3. RU Criteria:</b></p> <p>a. We also have concerns over the fairness of some of the key words/phrases/values related in the RU code, such as:</p> <p style="padding-left: 40px;">16.16.270 A, C.2, C.3, etc.: "all reasonable and economically viable use of a property".</p> <p>The words "all" and "viable" seem more arbitrary and subjective than logical and objective. Does staff have a reliable, credible source for this language?</p> <p>The current, 2018, State Department of Commerce guidance on critical areas and this topic states, in part:</p> <p style="padding-left: 40px;">The reasonable use permit criteria should allow for "reasonable" uses. If the criteria state that the applicant must demonstrate that no other use "is possible," or that there are "no feasible alternatives," it would conflict with the concept of a "reasonable" use as other "possible" alternatives may be so costly as to be unreasonable.</p>	<p>The RUE criteria are basically the same as the existing criteria (old (B)(2)), which come from state law and courts cases on this matter.</p> <p>And if you're going to quote the <a href="#">CAO handbook</a>, might as well quote more of it, for it also says, "Unlike variances, the purpose of a reasonable use exception permit is not to allow general development within critical areas, but to allow only the minimal "reasonable" use of the property so as to avoid a constitutional taking. Four scenarios are provided to illustrate situations where a reasonable use exception might or might not be applicable:</p> <p style="padding-left: 40px;">A – No reasonable use exception would be granted because there is sufficient space outside the critical area clearing limits.</p> <p style="padding-left: 40px;">B – A reasonable use exception might be granted since there is insufficient space for a reasonable use. The development area would</p>

				<p>Their 3-page excerpt on RU is attached, and a link to the complete report. The Department of Commerce has primary regulatory authority over all GMA elements, including all 5 critical areas.</p> <p>In reviewing the long list of complex criteria, all 12, for approval of a RU application (Section 270.C, almost all of p 31), we note the links in several of "reasonable" with "economics", and use of "all". Why is economics a critical factor here? The test is supposed to be "reasonable".</p> <p>See items C.2, 3, 4 and 5. It appears staff is trying to make it as difficult as possible for a person to obtain a RU exception, and obtain fair relief from the arbitrary buffers per Department of Ecology guidance on wetlands and habitat buffers.</p> <p>We say the buffers are arbitrary because they are not based on a staff accepted scientific assessment of a site's critical area resources and relevant local conditions.</p>	<p>need to be limited or scaled back in size and located where the impact is minimized. The jurisdiction might consider a variance to the required setback to minimize intrusion into the protection area.</p> <p>C – A reasonable use exception would be granted for a minimal development if the property is completely encumbered and mitigation methods are applied.</p> <p>D – The jurisdiction might consider modifications to the required setback to prevent intrusion into the protection area.</p> <p>The criteria for reasonable use permits need to be consistent with case law to reduce the potential for appeals and overturned decisions. Key to being consistent with case law is careful use of the term "reasonable." Generally, the concept of "reasonable" has been left to the courts to decide, thereby making it difficult for cities to rule on whether or not a project qualifies. A reasonable use is often thought to be a modest single-family home, although some other structure might be "reasonable" depending on zoning, adjacent uses, and the size of the property.</p> <p>Some jurisdictions have allowed a reasonable use exception in only those situations where <i>all</i> economic use of a property would be denied by the critical areas regulations. Criteria that might be used to allow approval of a reasonable use exception include:</p> <ul style="list-style-type: none"> <li>• No other reasonable economic use of the property has less impact on the critical area;</li> <li>• The proposed impact to the critical area is the minimum necessary to allow for reasonable economic use of the property;</li> <li>• The inability of the applicant to derive reasonable economic use of the property is not the result of actions by the applicant after the effective date of this regulation, or its predecessor;</li> <li>• The proposal does not pose an unreasonable threat to the public health, safety, or welfare on or off the development proposal site;</li> <li>• The proposal will result in no net loss of critical area functions and values consistent with the best available science; or</li> <li>• The proposal is consistent with other applicable regulations and standards."</li> </ul>
BIAWC12	Robert Lee, BIAWC	4/12/21	Articles 6 and 7	<p>2. Wetland and Habitat Conservation Area Buffers:</p> <p>A. General Comments: Such buffers are usually the most constraining, and thus costly, elements of compliance with local CAOs for landowners and land users. They often end up consuming more usable land</p>	<p>In July 2018 the Washington Department of Ecology (DOE) modified the habitat score ranges and recommended buffer widths in their wetland buffer tables in the DOE guidance, with some minor text changes to ensure consistency. Some citizens, local environmental consulting firms, and <i>the Building Industry Association of Whatcom</i></p>

				<p>than the area of the wetland they are supposed to protect. We have seen many examples of this, large and small.</p> <p>We're familiar with many situations where buffer requirements appear arbitrary and excessive. In one situation, where a qualified private scientist classified a 6 acre area that has been hayed for at least 75 years a Category IV wetland, the lowest value. He used the 2014 DoE Rating form, 17 pages of detailed questions, some a bit subjective. The PDS staff person said he thought it was a Cat. III. This meant the buffer increased from 60 ft. to 110 ft. of hayfield, almost doubling!</p> <p>Per the draft, DoE and staff don't think that's enough. The new Wetland Buffer table, Sec. 630.E, p 67, based on DoE guidance, will require more than a doubling, from 110 to 225 ft., for a Cat. III of any size, whether the parcel is 10,000 sf or 100 acres. We think this is excessive regulation, and it's quite commonplace in the CAO.</p> <p>The County does not have to adopt DoE staff's arbitrary and excessive buffers. They are not based on the WACs. Remember, the state Department of Commerce is the only state agency with rule making authority on GMA obligations, including critical areas. DoE's main authority on wetlands is limited to controlling the filling or alterations of wetlands through the federal Clean Water Act.</p>	<p><b>County</b> then requested that we amend our code to meet this new guidance, and it was docketed as PLN2019-00008.</p> <p>The project was brought before the Planning Commission on March 14, 2019. But there was confusion as to what we actually had to do at that time and what impacts it would have on development. DOE had informed staff that, while we didn't need to amend our code at that point (having just updated Ch. 16.16 (Critical Areas) (Exhibit F) that they would review our code for consistency with their guidance when Ch. 16.16 was opened for amendment again, noting that that would occur during the 2020 SMP Periodic Update.</p> <p>So at the Commission's request, staff worked with the local wetlands consultants to review the issue and try to determine what effects it might have. Three consulting firms provided analyses based on data from projects they had worked on. From these analyses, it appears that many of Whatcom County's lower quality wetlands (e.g., small Category IV wetlands in agricultural fields) would end up with smaller buffers, but that our higher quality wetlands (Categories II and III) would end up with larger buffers. (But even this is speculation, as ATSI noted that the comparison results are not statistically significant.) Thus, farmers may benefit but developers/ builders may suffer, as many of our lower quality wetlands are those found in agriculture fields, while our higher quality wetlands are typically found in non-agriculture rural areas.</p> <p>Nonetheless, given the Department of Ecology's statements that they'll be monitoring the SMP Update to ensure that we meet their latest guidance (which is based on Best Available Science), and given that Comprehensive Plan Policy 10M-2 directs the County to "Develop and adopt criteria to identify and evaluate wetland functions that meet the Best Available Science standard and that are consistent with state and federal guidelines," staff is proposing to amend §16.16.630 (Wetland Buffers) Table 1 (Standard Wetland Buffer Widths) to meet DOE guidance. As indicated, these changes would lessen buffers on lower quality wetlands, and increase them on higher quality ones.</p>
BIAWC13	Robert Lee, BIAWC	4/12/21	Articles 6 and 7	<p><b>B. Buffer Details in the Draft:</b></p> <p>We have reviewed the Wetland and Habitat drafts and the detailed comments on them submitted February 19 and 25, 2019, for Jon Maberry by Ed Miller and Liliana Hansen, both Professional Wetland Scientists (PWS). GAC members discussed these issues with Ed recently.</p> <p>We firmly agree with the scope and substance of all 14 comments in their firm's 8-page February 19 letter, including its recommendation to delete 12 of the draft changes/additions</p>	<p>Your comment will be provided to the P/C and Co/C for consideration.</p>

				<p>(attached). The Miller firm is highly regarded by many BIAWC members for their professional approach to complex environmental issues.</p> <p>We also agree with the reasonable and constructive suggestions in Jon Maberry's Prepared Motions submitted to the Planning Committee February 25, attached.</p> <p>Finally, it appears to us there's a pattern in these and other parts of the draft CAO of making the rules more restrictive and less balanced between the government's legitimate police power authority and the constitutional rights of private land owners and land users.</p>	
P6601	David Klanica, Phillips 66	4/12/21	10D-11	<p>Policy 10D-11 was added that addresses climate change: "Protect ecological functions and ecosystem-wide processes of Marine Resource Lands and critical areas in anticipation of climate change impacts, including sea level rise."</p> <p>Phillips 66 is requesting further explanation and clarification whether upland property owners who propose bulkheads, armoring, or bank stabilization to prevent shoreline erosion or sloughing due to sea level rise will be subject to new limitations or requirements that could affect the current or future use of their property.</p>	The amendments regarding shoreline stabilization regulations are found in Exhibit D (Title 23). You would want to look at both 23.40.010, Table 1, and 23.40.190.
P6602	David Klanica, Phillips 66	4/12/21	Governing Principle (C)(2)	<p>The Shoreline Management Act was adopted in 1971 to protect the shorelines of the state of Washington. Certain shorelines were designated as "shorelines of statewide significance" including those areas of Puget Sound and the Strait of Juan de Fuca and adjacent salt waters north to the Canadian line and lying seaward from the line of extreme low tide. The Act established a system where local governments would ensure that certain developments in shoreline areas would be reviewed and protected. More specifically, these agencies would review "substantial developments" which were those that would have a "significant adverse" impact on the environment including, but not limited to fish, wildlife, fish or wildlife habitat, water quality, and aesthetic values.</p> <p>Whatcom County has proposed in its Governing Principles (GPC2) that it will include "policies and regulations that require mitigation of adverse impact in a manner that ensures no net loss of shoreline ecological functions." Phillips 66 is concerned about how this revised policy will be implemented as a practical matter. First, it appears to go beyond the County's statutory authority outlined in the SMA. Second, Phillips 66 is concerned that, without further clarification, it may be used inconsistently across the County. For instance, what is meant by "adverse" versus the original "significant adverse"? Must all land use permits affecting the shoreline now indicate what, if any adverse impacts might occur? Phillips 66 requests that the P/C provide more information as to how the removal of the word "significant" will change day-to-day shoreline management activities.</p>	As explained in the comment bubble tagged on this change, the word "significant" is proposed for deletion as there is no such threshold under SMA. Under the SMA, all adverse impacts must be mitigated in order to help achieve NNL. (The term "significant impact" comes from SEPA.)
P6603	David Klanica, Phillips 66	4/12/21	Policies 11G-3 & 11G-4	Regarding Policy 11G-3 and Policy 11G-4 addressing the County's MOU with DAHP and Lummi Nation require the County to consult with DAHP and the Tribes. Phillips 66 is requesting additional clarification for applicant/property owner responsibilities.	Please read 23.30.050 (Cultural Resources) in Exhibit D, as that should provide the additional clarification you seek.
P6604	David Klanica, Phillips 66	4/12/21	Overall Goals & Policies	Regarding Overall SMP Goals and Objectives for the Restoration and Enhancement Element were revised as follows: "This element provides for the timely restoration and enhancement of ecologically impaired areas in a manner that achieves a net gain in shoreline ecological functions and processes above baseline conditions as of the adoption of this program."	<p>The baseline condition was set by the comprehensive update done in 2007. As part of that update the County developed:</p> <ul style="list-style-type: none"> <li>• Vol. 1 - Inventory and Characterization Report</li> <li>• Vol. II - Scientific Literature Review</li> <li>• Vol. III - Restoration Plan</li> </ul>

				Phillips 66 requests additional clarification and definition for "baseline condition" (e.g. baseline conditions at the time of application?).	<ul style="list-style-type: none"> <li>Vol. IV - Cumulative Effects Analysis</li> </ul> all of which can be found on our SMP Update <a href="#">webpage</a> .
P6605	David Klanica, Phillips 66	4/12/21	Policies 11AA -1 through 11AA-7	Regarding General Policies for Climate Change/Sea Level Rise (Policies 11AA -1 through 11AA-7): please explain/provide detail for shoreline development applicant's responsibilities pertaining to climate change and sea level rise. Will development applications be required to address climate change and sea level rise as part of the SMP application or will there be separate analysis and document requirements (e.g. when will a study addressing sea level rise be required)?	These are only general policies; we are not developing CC/SLR regulations at this time.
P6606	David Klanica, Phillips 66	4/12/21	Policy 8T-1	Regarding Policy 8T-1, Phillips 66 requests clarification of the methods by which the County will coordinate with landowners to protect marine resource lands.	Well, we generally do that through email, though sometimes letters, phone calls, or meetings.
P6607	David Klanica, Phillips 66	4/12/21	Policy 8U-2	Regarding Policy 8U-2, Phillips 66 requests clarification of the types of non-regulatory programs, options, and incentives that owners of marine resource lands can employ to meet or exceed County environmental goals.	We can't provide you a precise list, as they haven't been developed yet, but they could include tax incentives, educational programs, volunteer groups, etc.
P6608	David Klanica, Phillips 66	4/12/21	Policy 8V-2	Regarding Policy 8V-2, Phillips 66 requests clarification of the process by which the County will work cooperatively with local, State, Federal and Tribal agencies, adjacent upland property owners, and the general public, as applicable, to address community concerns and land use conflicts that may affect the productivity of marine resource lands.	<p>How would we work cooperatively? Here are 10 simply ways from entrepreneur.com to cultivate team cohesion:</p> <ul style="list-style-type: none"> <li>• Create a clear and compelling cause</li> <li>• Communicate expectations</li> <li>• Establish team goals</li> <li>• Leverage team-member strengths</li> <li>• Foster cohesion between team members</li> <li>• Encourage innovation</li> <li>• Keep promises and honor requests</li> <li>• Recognize, reward and celebrate collaborative behavior</li> </ul>
P6609	David Klanica, Phillips 66	4/12/21		<p>The General Provisions of Title 23 indicate that shoreline development must be consistent with the SMA of 1971, the County's shoreline regulations and "other County land use regulations" (See Title 23 draft at lines 11-13). Title 23 then references certain requirements for "existing legal fossil-fuel refinery operations, existing legal transshipment facilities, expansions of these facilities, and new or expansions of renewable fuel refineries or transshipment facilities". Related definitions are also provided on page 241 at lines 20-36. Expansions of existing fossil fuel and renewable fuel facilities are required to obtain conditional shoreline permits. (See Title 23, page 137 at lines 3-10).</p> <p>As the Planning Department is aware, industry, labor and environmental organization stakeholders have been working together to develop recommended changes to the County Council's October 2019 proposed Comprehensive Plan amendments. Many of the terms and definitions included in this proposal assume that the 2019 proposed Amendments will be adopted as is. Phillips 66 requests that terms borrowed from the 2019 proposal not be adopted at this time. Considerable progress has been made by the stakeholders and is being presented to the County Council for its consideration in the near future. We request that this proposal be delayed until the final work from the ongoing stakeholder effort is accepted or rejected and the "final" definitions and framework for when conditional use permits is finalized.</p>	Yes, staff is well aware of this work and understands that changes have been made to Council's original proposal. However, at the time these documents were 1 <sup>st</sup> edited, their original proposal was all we had on which to rely, which is why the comment bubbles indicate that we will have to substitute in any changes based on Council's final adoption of the Cherry Point fossil fuel amendments.

P6610	David Klanica, Phillips 66	4/12/21		Article 7 Fish and Wildlife Habitat Conservation Area was amended to now include Type O waters. Phillips 66 requests the addition of a definition of Type O waters in the Whatcom County guidance.	This proposal has already been dropped. We suggested you look at the most recent version of Exhibit F, dated 4/5/21.
WH01	Wendy Harris	4/13/21		<p>This is in response to the question that was asked at the last Planning Commission meeting regarding "waters of the state." That is not a term used in the Shoreline Management Act. Rather, it refers to all waters under its jurisdiction as "shorelines of the state" or "shorelands of the state" and these are the appropriate terms to use for waters and exposed land under SMA jurisdiction.</p> <p>Under RCW 90.58.030, "Shorelines" means all of the waters of the state, including reservoirs, and their associated shorelands, together with the lands underlying them; except (i) shorelines of statewide significance; (ii) shorelines on segments of streams upstream of a point where the mean annual flow is twenty cubic feet per second or less and the wetlands associated with such upstream segments; and (iii) shorelines on lakes less than twenty acres in size and wetlands associated with such small lakes.  <a href="https://apps.leg.wa.gov/RCW/default.aspx?cite=90.58.030">https://apps.leg.wa.gov/RCW/default.aspx?cite=90.58.030</a>.</p> <p>In other words, only waters with minimum quantifiable measurements (size, type, velocity, etc.) are a regulated state shoreline. This is often forgotten when we hear complaints about over-regulation and unreasonableness.</p> <p>Shorelines of the state are specifically set out in the WAC. In Whatcom County, all rivers and streams that are shorelines of the state are set out in WAC 173-18-410.  <a href="https://apps.leg.wa.gov/WaC/default.aspx?cite=173-18-410">https://apps.leg.wa.gov/WaC/default.aspx?cite=173-18-410</a>.</p> <p>Lakes are listed in WAC 173-20-760 and 770.  <a href="https://apps.leg.wa.gov/WaC/default.aspx?cite=173-20-770">https://apps.leg.wa.gov/WaC/default.aspx?cite=173-20-770</a>;  <a href="https://apps.leg.wa.gov/WaC/default.aspx?cite=173-20-760">https://apps.leg.wa.gov/WaC/default.aspx?cite=173-20-760</a>.</p> <p>There are two kinds of shorelines of the state. The most common shoreline under SMA jurisdiction imposes a no net loss standard of review to prevent any degradation beyond baseline conditions, informed by review of best available science.</p> <p>However, particularly large and significant rivers and lakes, as well as marine waters, are designated "Shorelines of Statewide Significance" (SSWS). These have increased protection through a prioritized preference of use, similar to how we apply mitigation standards. These are set out in statute, with preferred use for natural conditions that support the long-term interests of all state residents. RCW 90.58.020(f);  <a href="https://app.leg.wa.gov/RCW/default.aspx?cite=90.58.020">https://app.leg.wa.gov/RCW/default.aspx?cite=90.58.020</a> .</p> <p>The Whatcom County SSWS are the Nooksack River, Lake Whatcom, Baker Lake, and marine waters, including Birch Bay. R CW 90.58.030.</p> <p>The SMA also discusses "shorelands" or "shoreland areas", which includes lands extending landward for two hundred feet in all directions as measured on a horizontal plane from the ordinary high water mark; floodways and contiguous floodplain areas landward two hundred feet from such floodways; and all wetlands and river deltas associated with the streams, lakes,</p>	The commenter is correct, and these are all laid out in 23.20.010 (Shoreline Jurisdiction).

				<p>and tidal waters which are subject to the provisions of this chapter; the same to be designated as to location by the department of ecology.</p> <p>RCW 90.58.030(2)(d), <a href="https://app.leg.wa.gov/RCW/default.aspx?cite=90.58.030">https://app.leg.wa.gov/RCW/default.aspx?cite=90.58.030</a>.</p> <p>I recommend the SMP Handbook, which is linked on DOE's website and explains how the SMP process works. Specific issues and provisions are separate chapters in the Handbook. <a href="https://ecology.wa.gov/Regulations-Permits/Guidance-technical-assistance/Shoreline-Master-Plan-handbook">https://ecology.wa.gov/Regulations-Permits/Guidance-technical-assistance/Shoreline-Master-Plan-handbook</a>;</p> <p><a href="https://apps.ecology.wa.gov/publications/SummaryPages/1106010.html">https://apps.ecology.wa.gov/publications/SummaryPages/1106010.html</a>.</p> <p>P.S. If you are wondering why I have written this, it is because I do not believe that the Planning Commission and citizen committees generally are being provided with relevant and timely information on the laws and policies they are asked to review and this fails to serve public needs and public input requirements. Unless citizen-appointed committees have a comprehensive and complete understanding of the purpose and intent of the policies and laws they are asked to review, they will remain tools of the Planning Department. Please continue to ask questions and ensure that you are provided with all the information you need upfront, before beginning a large review project.</p>	
PB04	Pam Borso	4/21/21	16.16.270	<p>Restore Reasonable Use impact area language in the Dec 4, 2020, draft Exhibit F, WCC 16.16.270 Reasonable Use Exceptions.</p> <p>I urge Whatcom County to reject the proposed change from the Planning Commission to expand the maximum impact area for single-family residences from 2,500 sf to 4,000 sf. The purpose of the reasonable use provision is to allow only the minimal "reasonable" use of property to avoid a constitutional taking when fully applying the standards of critical areas regulations. A 4,000 sf home is excessive.</p>	Your comments will be forwarded to the P/C & Co/C for their consideration.
PB05	Pam Borso	4/21/21		<p>Incorporate the State of Washington Department of Fish &amp; Wildlife's new riparian buffers guidance. The buffer requirements contained in the SMP are less than adequate to ensure no net loss of riparian and stream functions vital to fish, wildlife and our water supply.</p>	Please see the response to comment #FW/WEC09.
PB06	Pam Borso	4/21/21		<p>Incorporate regulations to prepare for accelerating sea level rise impacts. Whatcom's SMP does not incorporate protections from this peril. Not only our marine shorelines will be impacted, as Ecology writes "more frequent extreme storms are likely to cause river and coastal flooding, leading to increased injuries and loss of life." 31,235 homes in Washington State may be underwater by 2100; the value of the submerged homes is an estimated \$13.7 billion.</p>	See responses to comments FW/WEC01, FW/WEC12, WCPW08, WCPW09, RES03, RFW07, RFW11, & RFW17.
WSPA01	Holli Johnson, Western States Petroleum Association	4/21/21		<p>The most recent staff memorandum contains several important explanations and clarifications regarding what is meant by the "baseline" condition upon which no net loss project mitigation requirements are measured and recognizes important distinctions between what is appropriate to require for project mitigation obligations and what must be voluntary or incentive-based for restoration. These principles should be built into the language of the code itself or, at a minimum, into the language of the adopting ordinance, so as not to disappear into history once the code amendments are adopted.</p>	Staff doesn't feel this is necessary, as this explanation is based on DOE's guidance and explanatory handouts so it true throughout the state. Nonetheless, your comment will be provided to the P/C and Co/C for consideration.

WSPA01	Holti Johnson, Western States Petroleum Association	4/21/21		<p>The County Council is currently in the final stages of review of comprehensive plan and code amendments for fossil and renewable fuel facilities and expansions. This work is the result of many months of effort and good faith negotiations between the County and interested stakeholders, including WSPA. As noted by staff in several places in the draft shoreline master program amendments, it is imperative that these shoreline master program amendments be fully consistent with the outcome of that other County Council effort. WSPA asks for an additional opportunity to review and provide input on future revisions made by staff to achieve that consistency before these amendments to the shoreline master program are adopted.</p>	<p>Please refer to the response to comment P6609. The P/C's recommended amendments will be forwarded to the Co/C for their review, public hearing, and adoption (during which they may make their own amendments). We would urge you to pay attention to the SMP update page (or Council's agenda page), where new drafts are posted as decisions are made.</p>
WSPA01	Holti Johnson, Western States Petroleum Association	4/21/21	23.40.010	<p>The Shoreline Use and Modification Use Table establishes a shoreline conditional use permit requirement for expansions of existing legal fossil fuel refinery and transshipment facilities and new or expansion of existing legal renewable fuel refinery operations or renewable fuel transshipment facilities. Conditional use permit review requirements for these facilities are being addressed in the zoning code amendments currently under review by the County Council. A separate, duplicative and potentially inconsistent shoreline conditional use permit review for the same facilities that will undergo thorough zoning code conditional use permit review is unnecessary and should be eliminated. In particular, it is not appropriate to apply shoreline conditional use permit requirements to upland activities that will be fully evaluated under the zoning code requirements applicable to those upland activities. At a minimum, this provision should clarify that such fossil fuel facilities located outside of the shoreline jurisdiction should be evaluated under the zoning code conditional use permit criteria and not pursuant to shoreline conditional use permit requirements.</p>	<p>What is shown in the draft Title 23 regarding this issue is what staff was provided over a year ago. Once Council makes a final decision on their separate Cherry Point amendments staff will rectify the differences.</p> <p>You should understand, though, that if both Title 20 and Title 23 require a CUP for a certain activity, the permits would be combined under WCC 22.05.030 (Consolidated Permit Review). Shoreline requirements would not be applied outside of the shoreline jurisdiction.</p>
DK01	David Kershner	4/22/21	N/A	<p>I have served on the Whatcom County Climate Impact Advisory Committee since its inception in 2018. While I am not writing in my capacity as a committee member, I have familiarized myself with the research on sea level rise related to climate change. The financial costs to Whatcom County taxpayers and property owners of not adequately planning for sea level rise are likely to be substantial. As you may know, the real estate company Zillow estimates that nearly \$14 billion worth of housing in Washington State could be submerged in the next 80 years under some climate change scenarios. The ecological costs will also be substantial, if we plan to prevent flooding of structures but not to allow migration of shoreline habitat. That habitat not only supports wildlife populations, it also provides economic benefits, such as recreation and fisheries.</p> <p>To reduce the economic toll of sea level rise and truly protect shorelines consistent with the intent of the Shoreline Management Act, I urge you to recommend revising regulations to ensure that newly-created lots only allow construction in areas that are not likely to be inundated in this century. Where existing lots are large enough to still allow residential, commercial, or industrial uses compatible with the zoning, I urge you to recommend a similar revision. In addition, I support revising the regulations to ensure that new or substantially changed structures be elevated above the likely sea level rise elevation for the life of the structure.</p> <p>Waterfront property that I own on Lummi Island would likely be constrained in its use due to these regulations. Nevertheless, new protections are the only responsible approach to shoreline planning, given what we know about sea level rise.</p>	<p>See responses to comments FW/WEC01, FW/WEC12, WCPW08, WCPW09, RES03, RFW07, RFW11, &amp; RFW17.</p>

DK01	David Kershner	4/22/21		As a former commercial salmon fisher, I also support strengthening riparian buffer restrictions consistent with recommendations of the Washington Department of Fish and Wildlife Riparian Ecosystems Volumes I and II. Salmon populations have declined in part due to riparian habitat degradation. We need to protect this habitat to restore healthy salmon populations.	Your comment will be forwarded to the P/C & Co/C for their consideration.
AC01	Alan Chapman	4/22/21		I have been involved in fisheries management, and watershed resource issues in Whatcom County for over 30 years.  Regardless of the level of belief one might have in projections of climate change and sea level rise and associated storm surges, it does not make sense to allow development in areas of high risk. I urge the county, in the interests in avoiding significant damage to life, property and natural resources to not allow creation of lots where reasonable use would be subject to a high risk of damage from climate change effects, sea level rise, or reduce public trust ecological benefits within the foreseeable future. Where existing lots are large enough to still allow residential, commercial, or industrial uses compatible with the zoning, I urge you to recommend or require a similar risk avoidance approach. In addition, I support revising the regulations to ensure that new or substantially changed structures be elevated above the likely sea level rise elevation for the life of the structure.	See responses to comments FW/WEC01, FW/WEC12, WCPW08, WCPW09, RES03, RFW07, RFW11, & RFW17.
AC02	Alan Chapman	4/22/21		In the interest of protecting and achieving a net ecological gain of shoreline functions through consideration of locational relevant riparian buffer requirements that might be identified in the Washington State Department of Fish and Wildlife recent guidance on riparian guidance.	Your comment will be forwarded to the P/C & Co/C for their consideration.
PR01	Paula Rotondi	4/22/21	16.16.270	As you consider changes to the Shoreline Master Plan (SMP), I urge you to make decisions based upon what will be best for those living here twenty years from now – rather than what is best for corporations' short term profits. Please draft more stringent SMP standards.  First, regarding Reasonable Use Exceptions, please reject the proposed change to expand the maximum impact area for single family residences from 2,500 square feet to 4,000 square feet. "Reasonable Use" means there must be some minimal use such as a 2,500 square foot house. If those living here twenty years from now are to have natural treasures such as salmon fishing, crabbing, the sight of Orcas, the SMP cannot afford extravagances such as a 4,000 square foot house that will do more damage to our already damaged shorelines.	Please see the responses provided for Comments BIAWC04, BIAWC09, GCD09, GCD14, MES09, MES11, MES31, NES01, RFW12, RFW13, & RFW18.
PR03	Paula Rotondi	4/22/21		Second, the buffer requirements in the SMP do not adequately protect riparian and stream functions which are essential for sustaining fish, wildlife and protecting our water supply. If people living here twenty or more years from now are to have the fish and wildlife treasures we enjoy today and have adequate supplies of clean water, then the SMP must incorporate the State of Washington Department of Fish & Wildlife's new riparian buffers guidance.	Please see the response to comment #FW/WEC09.
PR03	Paula Rotondi	4/22/21		Third, please do not add to the challenges of those living here twenty years or more from today who will be dealing with increasingly severe ramifications of climate change. Climate change causes sea level to rise and also causes more extreme storms with tide surge coastal flooding and also river flooding. The Washington State Department of Ecology, the Federal Emergency Management Agency, private investment companies, insurance companies, and real estate companies (Redfin most recently) warn that many thousands of homes worth billions of dollars will be lost due to climate change exacerbated flooding. Please include regulations in the SMP to prepare for accelerating sea level rise.	Please see the responses provided for Comments FW/WEC01, FW/WEC02, FW/WEC12, WCPW07, WCPW08, WCPW09, RES03, RFW02, RFW03, RFW04, RFW06, RFW07, RFW11, RFW17, & PB06.

P6611	Dave Klanica, Phillips 66	4/22/21		<p><i>Extent of Jurisdiction.</i> Given the recent Department of Ecology's revocation of the Port of Kalama and Northwest Innovation Works Shoreline Conditional Use Permit, questions have been raised as to overall shoreline management authority. Whatcom County, as well as other Counties and Ecology must lawfully apply its shoreline management program requirements, particularly when seeking to require mitigation for activities that occur outside the jurisdictional shores of the State. It appears that Ecology unlawfully applied certain mitigations when the only activities within the shoreline were dredging for a new dock berth, portions of the security fence, an infiltration pond, a first-flush pond, fire suppression water storage and a containment berm for certain storage tanks. We ask that Whatcom County commit to act within its jurisdictional boundaries.</p>	We are. Shoreline jurisdiction is addressed in §23.20.010.
P6612	Dave Klanica, Phillips 66	4/22/21		<p><i>Consistency with Ongoing Comprehensive Plan and Code Amendments.</i> Both WSPA and Phillip 66's previous comments request that the shoreline master program amendments be consistent with the outcome of the ongoing good faith negotiations between the County and interested stakeholders that has occurred over many months related to the Comprehensive Plan and Code Amendments. We request consistency primarily as to definitions as the development of the relevant definitions was a significant effort and even slight differences in wording across county programs could add uncertainty and confusion. Phillips 66 does not believe that all activities which will require a conditional use permit under the Code Amendments should also require a conditional use permit under the shoreline management act. The shoreline program only affects activities that are within the jurisdictional shores of the State. The Zoning requirements cover much broader non-shoreline areas. Additionally, shoreline conditional use permit requirements should not be applied to upland activities that will be fully evaluated under the zoning code requirements applicable to those upland activities. The programs also involve different decision makers and appeal paths. The differences can warrant different permitting approaches.</p>	Please see the responses provided for Comments FW/WEC16, RES10, P6609, WSPA01
BH01	Bill Haynes, Ashton Engineering	4/22/21	23.50.140	<p>Regarding the Table for Dimensional Standards (page 147), the minimum length required to reach a moorage depth of 5' below ordinary high water.</p> <p>Ordinary High Water (OHW) elevation 314.5' has been well established on the Lake Whatcom - at least for the multiple projects I've been involved with.</p> <p>The proposed change results in a low water depth at the outer end of the dock (float) of 2'. Design low water has been established at an elevation of 311.5'.</p> <p>In a Jan. 29, 1999 letter from the WA Dept. of Ecology (DOE) to WCPDS and the WC Hearing Examiner, the DOE determined "...an in-water depth of 2.5 feet at 311.5 feet MSL is the minimum necessary draft to accommodate a standard powerboat on Lake Whatcom."</p> <p>The proposed update lowers the design depth from 2.5' to 2.0'. That depth is at the watered end of the dock only. Presumably, depths towards shore are shallower and at low water level a power boat will have less than 2' to moor in. In addition, the landward end of the float may go aground depending on the bottom contours if the outer end is at 2'. If the site is exposed to waves, the dock/boat may be tossed up and down on the lake bed.</p>	We agree; our math was wrong. It has been amended to be 5.5 feet now.

				Assuming a 6'x20' floating dock aligned with its approach ramp, I would propose the overall minimum length required to reach an inshore depth of 5' at OHW (2' depth at 311.5'). That assumes depths offshore increase.	
KC04	Kim Clarkin	4/22/21		I am concerned about the current document's lack of land use restrictions on areas that will be affected by sea level rise. I do not agree that waiting to strengthen regulations till more information is available is a good idea. In the meantime, many decisions will be made that may harm critical areas along the changing shoreline. Those decisions may also harm the people who invest in shoreline developments that storm surges could damage. This is the kind of foresight and protection citizens expect from their government—not a laissez-faire attitude such as led to the Oso disaster. Other commenters have given strong references for up-to-date scientific information the Planning Dept. can use to write pertinent and reasonable rules to distance new developments from the shoreline.	Please see the responses provided for Comments FW/WEC01, FW/WEC02, FW/WEC12, WCPW07, WCPW08, WCPW09, RES03, RFW02, RFW03, RFW04, RFW06, RFW07, RFW11, RFW17, & PB06.
KC05	Kim Clarkin	4/22/21		I do not see a reason for expanding the reasonable use exception to 4,000 ft2 in critical areas. That is a trophy home, not a reasonable exception. Critical areas are critical to wildlife, water and other things that we are trying to protect. Let's actually protect them.	Please see the responses provided for Comments BIAWC04, BIAWC09, GCD09, GCD14, MES09, MES11, MES31, NES01, RFW12, RFW13, & RFW18.
KC06	Kim Clarkin	4/22/21		I strongly encourage you to use WDFW's most recent recommendations for riparian buffer widths for new developments. They are based on a thorough knowledge of rivers, valleys, and in-stream habitat development over the long term, and they should be incorporated in our long-term planning. No one is saying that existing developments have to be retired. New development should be completely different; recognizing our expanding understanding of the damage we wreak on ecosystems, we should aggressively seek to avoid that damage.  I congratulate you and the Planning Department for making otherwise reasonable updates to a huge document and working toward making regulations more understandable. It has been a long slog for you, and I'm grateful for your attention to this extremely important roadmap to our future relationship with our environment. Please make it as strongly protective as you can.	Please see the response to comment #FW/WEC09.
JM01	Janet Migaki	4/22/21		The SMP, CAO, City and County Comprehensive Plans mention or refer to a quagmire of environmental agencies + regulations, as well as mention or refer to multiple intersecting jurisdictions, permits, ordinances, exemptions and waivers—all used for 'managing' waters of the State.  Lake Whatcom, a significant water of the State, is not a healthy or protected source of water, yet it is used for Bellingham's drinking water. The Lake's well documented decline is troublesome since many of the lake's contaminants resist the treatment processes used by the City treatment plant and pass into public drinking water supplies.  Where in the SMP and accompanying documents does it mention or discuss the primary and ultimate regulatory agency held fully accountable for protecting the water quality of Lake Whatcom water?  The Lake is violating several water quality parameters +contaminants, and the water has not been tested for a full toxicology analysis since late 1990s.  Does the SMP address protecting the Lake's total water quality? I know the 50-year TMDL tries to address low DO levels, with not encouraging reports to date. What about so many more	Lake Whatcom's water quality is managed through the Lake Whatcom Management Program, under the direction of the Lake Whatcom Policy Group. You can find what you're looking for at <a href="https://www.lakewhatcom.whatcomcounty.org/">https://www.lakewhatcom.whatcomcounty.org/</a> .

				lake water quality issues- who is accountable and responsible for protecting and keeping the lake healthy enough to be a drinking water source?	
MRC01	Marine Resources Committee	4/22/21		<p>Thank you for taking the time to review the Whatcom County Marine Resources Committee's (WCMRC) comments on marine land protection. One role of the WCMRC is to work with county leadership and other key constituencies to help protect marine and enhance nearshore habitat through local and state ordinances and regulatory plans. The WCMRC supports regulations and policies that further protect and enhance marine shoreline areas that are vital economically, culturally, recreationally, and environmentally.</p> <p>The Whatcom County Marine Resources Committee supports the inclusion of the proposed amendment to Chapter 8: Marine Resources Lands policy section, as developed by the WCMRC, to the Comprehensive Plan.</p>	Your comment will be provided to the P/C and Co/C for consideration.
BIAWC14	Rob Lee, BIAWC Executive Officer	4/22/21		<p>We want to say thank you for:</p> <ul style="list-style-type: none"> <li>recommending the 4,000 sq. ft. RU area, we request excluding septic systems from this square footage if covered with native landscaping.</li> <li>For creating the minor variance for buffer reduction of the 25% to 50%. We request that you lower the fee for minor variances.</li> <li>We request that any buffer reductions under Reasonable Use are decided administratively through a minor variance, Critical areas included.</li> </ul>	Your comment will be provided to the P/C and Co/C for consideration.
BIAWC15	Rob Lee, BIAWC Executive Officer	4/22/21	16.16.270 & 16.16.273	<p>Reasonable Use and Variances: We will comment separately on the permit process, "impact area" size, and criteria issues.</p> <p>A. Permit Procedure:</p> <p>1) <i>Present Process</i>: PDS staff has proposed major changes to the procedures. The current 2017 CAO allows staff to grant reasonable use (RU) permits for one single family house under very strict criteria if CAO rules alone would deny "all reasonable and economically viable use" of the property. The next step is a variance requiring Hearing Examiner (HE) approval.</p> <p>We were surprised to learn recently that these RU permits have become a major part of local wetland scientist's workload. This is due mainly to high buffer standards and tight limits on adjustment options. These conflicts between strict environmental rules and permitted, customary land uses are obviously not unusual.</p> <p>2) <i>Staff Proposed Process</i>: As we understand it, the current draft Exh F/CAO proposal, dated 4/2/2021, offers a 3-level process:</p> <p>a) <i>Minor Variance</i>: if a person only needs a 25 to 50% CAO buffer reduction, they will apply for this approval. The draft does not say whether this value is total area, width, or both. Staff decides these permits; an application and notice to neighbors is required. We do appreciate this new minor variance idea allowing staff approval. The concept should be used for other CAO issues. No further CAO permits are needed. See Section 16.16.273, p 34.</p> <p>b) <i>A Major Variance</i> is required if the Minor Variance is denied. One would apply to PDS, and the H/E would decide after a hearing. This is an expensive and slow process; the fees are now \$2,750 each, plus critical area reports, probably consultants doing the applications, a</p>	<p>Regarding the commenter's point A.2.b: A major variance wouldn't be required if the minor variance is denied; a major variance would be applied for if one wants to reduce a buffer more than 50%. They're not sequential: one just applies for the permit one needs.</p> <p>Similarly, regarding the commenter's point A.2.b: With staff's assistance, an applicant should know whether a major variance is attainable, given the required findings (§22.07.050). Thus, if one understood one's chances to be nil, one would just apply for an RUE; so again, they don't have to be sequential.</p> <p>The biggest difference is that through a variance, whether minor or major, one must still mitigate for impacts. Under an RUE the H/E can allow impacts without requiring mitigation. This would apply on a property that is so encumbered by critical areas that nothing could fit on the lot without causing impacts and there's no room to mitigate.</p>

				<p>consultant or attorney at the hearing, and possible legal costs if you or an opponent appeals the decision. Anyone testifying, or you, can appeal the decision to Superior Court, also costly and slow. See Section 16.16.273, p 34.</p> <p>c). A Reasonable Use Exception is the last resort, virtually identical to the Major Variance process and possible outcomes. It would also be decided by the HE, with high similar costs, and potential litigation. See 16.16.270. A and B.</p> <p>One may apply for an RUE only if their Major Variance app is denied. If you do not get adequate relief with a major variance, you must repeat the process to apply for and hope to be granted an RUE by the HE, paying like fees and costs again. You or an opponent may appeal this decision too to Superior Court from someone, at either stage.</p> <p>3) BIAWC/GAC Proposal: a simpler, less costly, and more practical alternative for all sides:</p> <p>a) Minor Variance (informal staff decision): expand the options to allow buffer adjustments above 50%. This would be determined mainly on a valid scientific analysis of site and vicinity functions and values of the affected wetland(s) and/or habitat(s), acceptable to qualified staff. Also, adjustments should be possible in both total buffer area and width. Can be appealed via RU process.</p> <p>b) Major Variance (formal HE decision): eliminate it, as redundant with the RU option, adding unneeded costs, complexity and time demands on both public and private parties.</p> <p>c) RUE: Use the draft as written; consider simplifying criteria per comments, information, and proposal below, per Item C.</p>	
BIAWC16	Rob Lee, BIAWC Executive Officer	4/22/21	16.16.270(C)(12)	<p>B. "Impact Area" size limit: For reasons stated in our April 12 2021 letter, we support the 4,000 sq. ft. value for the "impact area" to be allowed as the upper limit for buildings and other impervious surfaces, except for a minimal standard driveway. We suggest "impact area" be defined for certainty, and exclude landscaped areas using native plants and water features, and septic mounds or areas. The term "footprint" has a different meaning in the construction and real estate worlds.</p> <p>Also, there is no scientific basis for any fixed value, 2,500 or 4,000. Also, some landowners who already have a "pre-CAO" house or other building on their parcel would be severely penalized by the 2,500 value.</p>	<p>Please see the responses provided for Comments BIAWC04, BIAWC09, GCD09, GCD14, MES09, MES11, MES31, NES01, RFW12, RFW13, &amp; RFW18.</p> <p>And the commenter is correct about the impact area having no scientific basis; rather, it is a legal basis. The courts have consistently interpreted a reasonable use (in SFR zones) to be an averaged sized house in that jurisdiction. In Whatcom County, PDS records indicate that an averaged sized house is 1,820 sf, meaning the footprint would be around 900-1,000 sf (2-story). We would expect that someone wanting a larger home or more appurtenant improvements wouldn't choose a lot that is so encumbered by critical areas that they couldn't fit it on the property.</p>
BIAWC17	Rob Lee, BIAWC Executive Officer	4/22/21		<p>C. RU Criteria: In our April 12 2021 statement, we raised several substantive questions on the "reasonableness" of some of the many RU criteria (12! see p 2-3). And we attached the full text of guidance on Reasonable Use from the state Department of Commerce again. We did omit the small p1 diagram because it was not clear how it related to the text on it or overall context.</p>	<p>Your comments will be provided to the P/C and Co/C.</p>

			<p>In general, this guidance advises "careful use" of terms such as "alternative or possible uses, etc."; and care with "economic use" etc.; see p 2-3.</p> <p>In the Synopsis of Public Comments updated April 14, 2021, staff commented at length on this guidance (pp 110-113). We have no disagreement with most comments. But in D, p 111, if you as the government are going to say: "the criteria ... need to consistent with case law...", then you have an obligation to impacted citizens to cite at least the more recent and relevant cases and point out the claimed support.</p> <p>Somewhere in the Synopsis, staff also referred to Department of Ecology guidance on this topic. I searched their site and found: "Wetland Guidance for CAO Updates"; 65p, 2016 (attached). The subject is cited on 4 pages: 8, 13 and 31-32. This excerpt is the only substantive guidance in the document, p 8:</p> <p>"Exceptions are typically addressed in a CAO in the context of reasonable use of property. For more information about this regulatory tool, see Section VII of the Critical Areas Assistance Handbook published by the Washington State Department of Commerce: <a href="http://www.commerce.wa.gov/Documents/GMSCritical-Areas-Assist-Handbook.pdf">http://www.commerce.wa.gov/Documents/GMSCritical-Areas-Assist-Handbook.pdf</a></p> <p>We think this is an important legal issue for many county landowners. We suggest you ask the PDS/Commissions' legal counsel to review these criteria and related resources and produce a memo with a recommended set of criteria for the record before you complete your recommendations on this important issue to the County Council. The adopted CAO definitions of Reasonable Use and RU Exception should be reviewed too; attached.</p>	
BIAWC18	Rob Lee, BIAWC Executive Officer	4/22/21	<p>2. Buffers for wetlands and Habitat (HCAs)</p> <p>Our April 12 testimony makes several comments on this important issue. In general, the buffers make more land unusable for all kinds of essential land uses than preserving the actual wetland.</p> <p>At this point, we have carefully reviewed the 3 most recent statements by Miller Environmental Services on the many changes proposed by staff re wetland and habitat buffer and related issues. We have discussed many with him and find that we agree in general with all the comments. A few other wetland scientists have also submitted valuable comments, e.g., NW Ecological Services and NW Wetlands Consulting.</p> <p>We respectfully recommend that Planning Commission members and staff review these comments carefully, and seriously consider acceptance. Almost all are opposed to new, more restrictive language, and do not propose new text or values.</p> <p>Many of staff's proposed changes, and opposed by Miller, would tip whatever balance the CAO now has toward preservation of more non-wetland areas, i.e., buffers. Other items objected to will make the process of obtaining some flexibility in the rules more difficult, or impossible in some cases.</p>	Your comments will be provided to the P/C and Co/C.

				<p>We submitted two of the three Miller letters with our April 12 letter: the February 19, 2021 letter (8 pages; 14 comments, and the Jon Maberry Prepared Motions, one page, 12 issues, dated February 25 2021.</p> <p>We are attaching the firm's most recent April 12, 2021 letter to this statement, 8 issues and 6 p.</p> <p>We are taking this approach because no active members of our GAC or of the BIAWC have the scientific credentials or experience to do the kind of objective analysis of the draft changes that Miller and the other scientists have done.</p> <p>From reading all the Miller comments, we conclude that if the CAO draft is adopted as written today, the Whatcom CAO will be one of the restrictive in the state, if not the most!</p>	
BIAWC19	Rob Lee, BIAWC Executive Officer	4/22/21		We do ask that the Planning Commission hold the record open for written comments for at least 2 weeks. We will review the testimony after the hearing and may want to send additional comments.	The P/C considered this request at their 4/22 hearing and denied it.
MES51	Ed Miller, Miller Environmental Services	4/22/21	16.16.900	<p><b>P/C Public Hearing Testimony:</b> The WAC definition of "watercourse," which is where the ditches would fall, talks about the presence of a high water mark and the presence of fish; it specifically excludes irrigation ditches, canals, stormwater treatment, conveyance systems, or other entirely artificial watercourses. So it seems to me that ditches, unless they carry fish or convey a prior stream, are not waters of the state. So it seems to me that ditches are not waters of the state unless they carry fish or convey a prior stream. And from a practical standpoint, regulating ditches in Whatcom: If all the ditches become a critical area with a buffer, we'd have to do critical areas report for everyone with the ditch, with a buffer. I'm not sure how that would work. If you filled a ditch, what the mitigation would be for that, would you have to create another ditch? I'm not sure how that would work. If Public Works was to create a new ditch for a new road they'd be creating a new critical area, putting a new buffer on someone's property. Additionally, most all of the ditches in Whatcom County that have these buffers are located in County right-of-way, so it just seems from a practical standpoint it's not even doable. Aside from the fact that they don't appear to be waters of the state by state definition.</p>	These comments were considered by the P/C in their deliberations and final recommendation on the definition and regulation of ditches.
TSF09	Diani Taylor, Taylor Shellfish Farms	4/22/21		<p><b>P/C Public Hearing Testimony:</b> I am a 5<sup>th</sup> generation shellfish farmer with my family business, Taylor Shellfish Farms. We have been farming shellfish here in the state since 1890 and grow a variety of oysters, mussels, clams and geoduck today. Our company is vertically integrated where we farm-to-table, so we include everything from hatcheries and nurseries to farms, processing facilities, and retail and restaurants. I wanted to introduce myself after we submitted comments on the most recent draft of the SMP document. We really appreciate regulations, especially in the Shoreline Master program, that are so important to protect our environmental resources, including water quality and shoreline and our shoreline ecosystem, which is important and critical for our farms. Our comments are intended to just ensure that the regulations around aquaculture are based on the most current scientific and technical information and align with the state guidelines.</p>	Comment noted. These comments were considered by the P/C in their deliberations and final recommendation. Please see staff responses to TSF's written comments addressing their issues.
RES25	Karlee Deatherage, RE Sources	4/22/21		<p><b>P/C Public Hearing Testimony:</b> The current version of the SMP is an improvement for protecting our shorelines. However, there are 3 areas to further strengthen. We submitted a letter on April 12 asking the P/C to make changes with respect to reasonable use, sea level</p>	These comments were considered by the P/C in their deliberations and final recommendation. Please see staff responses to these previously raised issues.

			<p>rise, and include the use of Department of Fish and Wildlife new riparian buffer guidance in the critical areas ordinance.</p> <p>The science is clear when it comes to sea level rise. We have been and continue to witness the impacts of rising seas. With storm surges impacting property, we will see the loss of critical shoreline habitats for salmon and forage fish through a phenomenon called coastal squeeze if we don't act now to prevent the construction of buildings or infrastructure in harm's way.</p> <p>Suggested code for amending 23.30 under general regulations that the new section was included in our letter, please restore the staff proposed language for 16.16.270 (Reasonable Use Exceptions) and improvements over the current code to require the Hearing Examiner approval for reasonable use exceptions. However, 4,000 square feet of impact area is excessive, especially when some lots could be 6,000 square feet.</p> <p>Lastly, WDSW release guidance on riparian buffers in July and also in December 2020. We hope the P/C will incorporate best available science from WDW that calls for a one hundred foot buffers known as the "200-year site potential tree height" from the edge of the 100-year floodplain or channel migration zone. This could be applied as a new section to 16.16.420 (General Standards) for frequently flooded areas or a new entry in the table for 16.16.740 (Habitat Conservation Area Buffers).</p>	
PG01	Andrew Gamble, PetroGas	4/22/21	<p><b>P/C Public Hearing Testimony:</b> We do have a few concerns, questions, and clarifications about the update.</p> <ul style="list-style-type: none"> <li>• First of all, we've noticed that there are some overlapping regulations, and we just want to point out that where there's already existing regulation in place and that the SMP need not be layered on and may not actually be necessary.</li> <li>• Another thing that we're looking at is that there's a potential for a maximum height requirement. We don't think that should apply to the Cherry Point UGA.</li> <li>• And then there's maintenance dredging. We think that should probably be a permitted and conditional use, and I think I read somewhere that it was to be prohibited and conditional. That should just be for the maintenance dredging. And then dredge material disposal management actually is already in place, so it doesn't need to be managed again.</li> <li>• And then some clarification on no net loss. We were looking for a bit of an explanation on the baseline condition. Is that the same as it was outlined in, I think it was a 2007 staff report, on a previous update?</li> <li>• And as for mitigation, is that still achieved through voluntary and incentives, or is that going to be permit required mitigation? Could that be applied to legacy or historical problems and not part of a new project proposal?</li> <li>• And does this SMP Update establish a shoreline conditional use permit?</li> <li>• Then finally, we were looking for some clarification on the sea level rise policies. I heard Mr. Hansen talk about that as well. It's kind of scattered throughout. And we were looking to see if this is going to create new responsibilities for permit applicants.</li> </ul>	<p>These comments were considered by the P/C in their deliberations and final recommendation. But briefly:</p> <ul style="list-style-type: none"> <li>• Staff doesn't believe there are overlapping regulations.</li> <li>• There does need to be height limitations so as to protect the shoreline, especially in terms of protecting views.</li> <li>• Maintenance dredging is proposed to be a Permitted Use.</li> <li>• The baseline condition was set by the 2007 SMP Update and it's corresponding background documents.</li> <li>• Some mitigation may be required for impacts from project proposals, but the County does not require applicants to "fix" existing issues, though applicants are always welcome to do so through voluntary mitigation.</li> <li>• No, Shoreline CUPs already existed in the County's SMP.</li> <li>• Currently only SLR policies are being considered, which would not create new responsibilities for permit applicants. However, we expect that in the not too distant future there may be regulations requiring applicants to address it in their permit analyses.</li> </ul>

P6613	Tim Johnson, Phillips 66	4/22/21		<p><b>P/C Public Hearing Testimony:</b> I would refer you to the Phillips 66, April 12<sup>th</sup> written comments as well as some supplemental comments that were submitted today via email. But I would like to highlight a few comments tonight, specifically in Exhibit C, Chapter 8.</p> <p>Regarding Policy 8T -1 we would request some clarification of the methods by which the County will coordinate with landowners to protect marine resource lands</p> <p>In policy 8 U-2 we request some clarification of the types of non-regulatory programs and options and incentives that owners of marine resource lands can employ to meet or exceed the County environmental goals.</p> <p>In Exhibit D, Title 23, the general provisions indicate that shoreline development must be consistent with Shoreline Management Act of 1971, the County Shoreline Regulations, and other County land use regulations. Chapter 23 then references certain requirements for existing legal fossil fuel refinery operations, existing legal transshipment facilities, expansions of those facilities, and new or expansions of renewable fuel refineries or transshipment facilities. And is related definitions also provided on page 241 on expansions of existing fuel, fossil fuel, and renewable fuel facilities that says they are required to obtain conditional shoreline permits. As the planning department is aware, industry, labor, and environmental organization stakeholders have been working together to develop recommendations and changes to the County Council's October 2019 proposed Comprehensive Plan amendments. There's been considerable progress made by the stakeholders, and those have been presented to the County Council for their consideration, and we request that this SMP draft be delayed until the final work from the stakeholder effort is accepted or rejected and the final definitions and framework for conditional use permit is finalized. And then finally, I would just like to note that we would request an additional opportunity to review and provide input and further revisions made by the staff before the shoreline amendments are finalized.</p>	<p>These comments were considered by the P/C in their deliberations and final recommendation. Please see the staff responses to Phillips 66's written comments on these same issues.</p>
WH02	Wendy Harris	4/22/21		<p><b>P/C Public Hearing Testimony:</b> I support the comments that have been submitted by the environmental community; they are well founded.</p> <p>But I want to express my outrage that the P/C majority is using their position to reduce environmental protections for their own interests, ignoring what is best for the public and the planet. This is being done at a time when scientists have issued three distress letters about how we are not doing enough fast enough at the risk of biosphere collapse and extinction of most forms of life, including our own. There are many members of the public who share my views. If you are here for yourself, you're here for the wrong reason.</p> <p>I'm also appalled at the lack of science I failed to hear being discussed. I heard agenda based changes being proposed and I heard nothing regarding the science that supports this. This must have resulted in staff using science as if they were drafting a legal brief to support their argument. Why wasn't the science presented front and center to the topic being discussed? This is troubling. I understand that this round of the SMP update does not require a new review of the foundational elements necessary to determine no net loss. However, DOE indicated that there was an exception for a substantial change in Shoreline function. I believe that applies here and is very relevant since the County still lacks baseline standards, means of</p>	<p>These comments were considered by the P/C in their deliberations and final recommendation.</p>

			<p>quantification, and monitoring protocols. In other words, we have no means of determining no net loss, which leads to the following statement in all but the largest SEPA reviews, which is in regards to species of wildlife present: "none known to the best of my knowledge." And by that everybody escapes having to care about or mitigate for wildlife impacts or whatever other kind of impacts are around. Other changes in events approved or pending are going to reshape the shoreline in the County jurisdiction in a manner that will make it unrecognizable from its current condition. We've lost one of the most important shoreline keystone species since the last SMP. The sea star numbers established how the loss of even a small number of stars had a significant impact on our healthy shoreline function. There is the Birch Bay berm. There's the Cherry Point update that's allowing expansion of use and of size, and that's going to bring in more tankers which have led to the killer hornets that are here in Blaine, and they're believed to arrive via Cherry Point tanker. And so these are vectors for aquatic invasive disease. Taken as a whole, this is enormous change and it's a loss in shorelines of statewide significance that does not follow the prioritized shoreline use preference so that we estimate one sentence. I asked that the DOE require the County at least provide a concrete example of how the no net loss would work.</p>	
BIAWC20	Roger Almskaar, BIAWC	4/22/21	<p><b>P/C Public Hearing Testimony:</b> We submitted our 2<sup>nd</sup> round of testimony by email. It was late today. Did you see our letter come in a 4-page letter and some attachments? OK, good, thank you. So that's in the record. So I'll move along here.</p> <p>Let's see, I want to say thank you to Cliff Strong for his good work on the staff report, and the synopsis just made our work a lot easier in figuring out what's going on with this extremely complicated project.</p> <p>Most of the impacts on building that we're concerned about are coming from critical area rules, not shoreline rules. We just don't get into the shoreline areas very much anymore.</p> <p>I want to give you something about my background, though I think most of you don't know this. I'm a land use consultant right now, but I got into planning in 1971, being hired by Whatcom County to do the first SMP, which goes back a long time. Our final product adopted in 1976 was about 170 pages. Lots of definitions that I had to write. At that time the state guidelines from Ecology were a booklet of about 25 pages. I don't know if Cliff has ever seen that one. Let me move on here.</p> <p>I think the most important thing for me to say tonight is we're very concerned about the reasonable use process. And I've been surprised in the last few months to learn that that process has become a major part of the workload of many of the local wetland scientists. That was not true a few years ago, and I've been doing short plats for a long time and just hadn't heard that. So my most important thing to say tonight is that we are really concerned about the staff's new proposal to have three layers of permit processing to get a reasonable use exception. The first layer would be the staff of (mini?) variance, second would be a variance through the H/E, and the third would be a reasonable use through the H/E. So you'd be going there twice, paying the same amount of money, twice fees and everything. And so our proposal is to eliminate the middle level, the variance that would go to the H/E. And if you're not satisfied with what you are able to negotiate with a staff, with your wetland scientist, work</p>	<p>These comments were considered by the P/C in their deliberations and final recommendation. Please see the staff responses to the BIAWC's written comments on the proposed reasonable use process.</p>

				out a deal based on science, not arbitrary numbers, it's politics. But then you can go to the H/E. So we're agreeing to support that. It's still going to be expensive for people, but at least it's not double the cost as it is. But please look at that in detail as quite a bit in our paper on that.

# Initial Determination

## 2019 Whatcom County Locally Initiated SMP Amendment– Public Comment Summary

The following comments were received during the Ecology comment period from October 28, 2019 to November 27, 2019. The comments are associated with the above-referenced 2019 SMP amendment which has now been incorporated into this SMP periodic review amendment at the request of Whatcom County. Since the changes from the 2019 amendment are being rolled into this amendment, the comments have been included here.

Comment #	SMP Section	Commenter	Comment / Concern	Local Government Response / Rationale
01	WCC 23.90.060.B – Vegetation Conservation Regulations	Tani Sutley	<p>Regarding Hazard Tree Definition Changes and 23.90.060(B):</p> <p>Since this limited amendment is intended to consolidate the multiple location code definitions of “hazard trees,” can you clarify if the SMP regulation 23.90.060B(9) will still supersede CAO hazard tree removal regulations <b>in shorelines</b> as determined by the Whatcom County Hearing Examiner?*</p> <p>“Vegetation conservation standards do not apply to the removal of hazard trees pursuant to WCC 16.16.230.F.” WCC 23.90.060B(9)</p> <p>“Shoreline developments shall comply with the vegetation conservation policies of this program through compliance with the critical areas standards of WCC 16.16.335, 16.16.360, 16.16.630, and 16.16.740 for protection and maintenance of critical areas and buffer vegetation.” WCC 23.90.060.B.1</p> <p><i>*Ecology Note: It is assumed that the commenter is referring to a January 2019 decision by the Whatcom County Hearing Examiner (Norman Chang v. Whatcom County APL2018-0004) that hazard tree removal is allowed outright in shoreline jurisdiction without any review or mitigation even when located in geologic hazard areas.</i></p>	<p>Yes, the whole point of the amendments of Ord2019-013 and Ord2019-057 was to close this loophole by making the text less ambiguous and less likely to be misinterpreted.</p> <p>The intent of the amendments in Ord2019-013 regarding the definition of “hazard tree” was to develop one clear, unambiguous definition that is consistent in the zoning code, Critical Areas Ordinance, and the Shoreline Management Program. This was followed by Ord2019-057, which tightened up the rules for tree canopy retention in the Lake Whatcom and Water Resource Protection Overlay Districts, including within the shoreline jurisdiction and critical areas. These amendments made it clear that, unless it’s an emergency, an arborist’s report is required to remove any tree canopy, even hazard trees.</p> <p>Ms. Sutley has found some bad references, however.</p> <p>WCC 16.16.230(F) was a reference to the 2007 CAO, in which removing hazard trees from critical areas was exempt (“The landowner may cut hazard trees within critical areas and buffers.”). The 2017 CAO update deleted that exemption, and instead made “The felling of hazard trees within critical areas and buffers, with an approved tree risk assessment completed by a qualified professional” an Activity Allowed with Notification (WCC 16.16.235(B)(4).</p> <p>WCC 23.90.060(B)(1) should probably now read:</p> <p>“Shoreline developments shall comply with the vegetation conservation policies of this program through compliance with the critical areas standards of WCC 16.16.335, 16.16.360, 16.16.630, and 16.16.740 for protection and maintenance of critical areas and buffer vegetation.”</p>

Comment #	SMP Section	Commenter	Comment / Concern	Local Government Response / Rationale
				<p>Or maybe more succinctly (and to cut down on potential bad cross references):</p> <p>“Shoreline developments shall comply with the vegetation conservation policies of this program through compliance with the critical areas standards of WCC 16.16.335, 16.16.360, 16.16.630, and 16.16.740 for protection and maintenance of critical areas and buffer vegetation.”</p> <p>Such bad cross references can be common over time, and our attorney and Clerk have informed us that having a bad cross reference does not negate the intent of the regulation. As the Ms. Sutley knows, we are currently undergoing a periodic update of the SMP, and many of these sections are being rewritten and any cross references updated. We will fix these though either the periodic update or through “scrivener’s error” rules, which allows us to fix bad cross references without an ordinance.</p> <p>An additional note is that WCC 23.90.060(B)(9) is interpreted by our Natural Resources Supervisor to mean that while the removal of hazard trees in the shoreline setback is exempt from the requirements for conservation of vegetation and shoreline use regulations, it does not mean that those activities are exempt from mitigation in 23.90.030 or 16.16.260. Mitigation would still be required.</p>
02	WCC 23.90.060.B – Vegetation Conservation Regulations	Tani Sutley	<p>WCC 16.16.230.F is referenced by WCC 23.90.060 but it is no longer the original provision before the last CAO comprehensive update removed the CAO allowance to cut danger trees in critical areas.</p> <p><b>Question:</b> Should this be corrected so 23.90.060.B.9 correctly identifies that the previous language in 16.16.230.F was deleted or do you really want it to now include residential maintenance exceptions as 16.16.230.F now references?</p> <p>2005-068 Ordinance said: 16.16.230 F – The landowner may cut hazard trees within critical areas. (Exemption)</p>	<p>See the response to Item 01, as it addresses this bad cross reference (which should point to WCC 16.16.235(B)(4)).</p> <p>Such bad cross references can be common over time, and our attorney and Clerk have informed us that having a bad cross reference does not negate the intent of the regulation. As the Ms. Sutley knows, we are currently undergoing a periodic update of the SMP, and many of these sections are being rewritten and any cross references updated. We will fix these though either the periodic update or through “scrivener’s error” rules, which allows us to fix bad cross references without an ordinance.</p>
03	WCC 23.90.060.B – Vegetation	Tani Sutley	Regarding Hazard Tree Definition Changes and 23.90.060(B)(6), 16.16.235.G and 16.16.235(B)(4)	Yes, Ms. Sutley found another bad cross reference (perhaps we should hire her to proof all cross references☺).

Comment #	SMP Section	Commenter	Comment / Concern	Local Government Response / Rationale
	Conservation Regulations		<p>WCC 23.90.060(B)(6) <i>Clearing, pruning and re-vegetation of buffer areas, except landslide hazard areas and buffers and riverine and coastal erosion hazard areas and buffers, may be conducted in accordance with the regulations in WCC 16.16.235.G.</i></p> <p><b>B16.16.235G does not exist.</b></p> <p>However, the CAO provision 16.16.235(B)(4) now includes hazard tree Activities Allowed with Notification and states: “The felling of hazard trees within critical areas and buffers, with an approved tree risk assessment completed by a qualified professional.”</p> <p><b>Questions:</b></p> <p>Since Whatcom County is amending hazard tree definitions for the SMP shouldn't WCC 23.90.060(B)(6) also be amended as well?</p> <p>Is Whatcom County assuming provision 16.16.235(B)(4) supersedes WCC 23.90.060B(6) because of WCC 23.10.08? (Severability)”</p>	<p>WCC 23.90.060(B)(6) should now point to WCC 16.16.235(B)(5), not WCC 16.16.235(G) to read:</p> <p>“Clearing, pruning and re-vegetation of buffer areas, except landslide hazard areas and buffers and riverine and coastal erosion hazard areas and buffers, may be conducted in accordance with the regulations in WCC 16.16.235(B)(5)(G).”</p> <p>Such bad cross references can be common over time, and our attorney and Clerk have informed us that having a bad cross reference does not negate the intent of the regulation. As the Ms. Sutley knows, we are currently undergoing a periodic update of the SMP, and many of these sections are being rewritten and any cross references updated. We will fix these through either the periodic update or through “scrivener’s error” rules, which allows us to fix bad cross references without an ordinance.</p>
04	WCC 16.16.900 – Definitions	Tani Sutley	<p>In shorelines, Hazard Tree as defined by the new proposed definition could allow all large trees removed on small lots for home construction to prevent damage to the new residential home and also existing homes where trees have grown and now meet the definition of hazard tree.</p> <p><b>Question:</b> Is this correct or not correct and why?</p> <p>As now proposed for amendment, a hazard tree might include any tree that poses “potential damage to permanent physical improvements to property causing personal injury and consequences” while the old definition for shorelines only included “<i>any tree that is susceptible to immediate fall due to its condition (damaged, diseased, or dead) or other factors</i>”.</p>	<p>No, it is not correct. The newer definition of “hazard tree,” which currently applies countywide, but through this amendment would also include areas within the shoreline jurisdiction, would be:</p> <p>“Hazard tree” means a tree whose risk evaluation, as determined through a Whatcom County approved tree risk assessment method, is high. Risk evaluation is the combined measurement of: tree failure identification, probability of failure, potential damage to permanent physical improvements to property causing personal injury, and consequences. A tree that constitutes an airport hazard is considered a hazard tree. A hazard tree whose failure is imminent and consequences of damage to permanent physical improvements to property causing personal injury are significant is considered an emergency. “Imminent” in this instance means failure has started or is most likely to occur in the near future, even if there is no significant wind or increased load. Imminent may be determined by a qualified consultant (defined in this section) or when mutually agreed upon by a landowner and Whatcom County.</p>

Comment #	SMP Section	Commenter	Comment / Concern	Local Government Response / Rationale
				This definition places a stricter onus on the property owner to prove a hazardous condition via a professionally acceptable evaluation method. It would make it less likely that “all large trees removed on small lots for home construction to prevent damage to the new residential home and also existing homes where trees have grown.”
05	WAC 173-26-110 – SMP Amendment Submittal Requirements	Tani Sutley	<p>Regarding WAC 173-26-110(8) “A summary of amendments made in response to comments received.”</p> <p>What amendments were made in response to comments received as required by WAC 173-26-110(8)?</p> <p>Were WAC 173-26-110(8) requirements documented with the submittal of this limited amendment?</p>	Staff has no record of any public comments received during the processing of these amendments.
06	WCC 23.10.030 – Governing Principles	Tani Sutley	<p>The completed checklist did not demonstrate compliance with the No Net Loss provisions of WAC 173-26-201(1)(c)(iv) and WCC 23.100.03 but did state:</p> <p><i>“New definition of hazard tree ensures that mitigation is required for removal within shoreline jurisdiction.”</i></p> <p>WAC 173-26-201(1)(c)(iv)</p> <p><i>(c) Master program amendments may be approved by the department provided:</i></p> <p><i>(iv) Master program guidelines analytical requirements and substantive standards have been satisfied, where they reasonably apply to the amendment. All master program amendments must demonstrate that the amendment will not result in a net loss of shoreline ecological functions.</i></p> <p><b>WCC 23.10.03</b> This Program and any future amendment hereto shall ensure not net loss of shoreline ecological functions and processes on a programmatic basis in accordance with the baseline functions present as of the date of adoption of this Program, February 27, 2007:</p> <p><b>Questions:</b></p>	<p>Amending the definition of “hazard tree” to place a stricter onus on the property owner to prove a hazardous condition via a professionally acceptable evaluation method (Ord2019-013), as well as making the tree removal regulations more clear (Ord2019-057) would result in fewer non-hazard trees being cut in critical areas and the shoreline/HCA buffer. This could only result in less loss of ecological function than previously, whereby through bad code construction some applicants successfully argued to the Hearing Examiner that the code did not apply to their situation.</p> <p>Whatcom County’s NNL compliance program consists of our regulations, mitigation for direct impacts, the County’s code enforcement program, and implementation of the 2007 SMP Restoration Plan.</p>

Comment #	SMP Section	Commenter	Comment / Concern	Local Government Response / Rationale
			<p>How does this limited amendment meet the requirements of WCC 23.10.03 and WAC 173-26-201(1)(c)(iv)?</p> <p>What current NNL documented compliance program is WC using to demonstrate and ensure no net loss of shoreline ecological functions and processes on a programmatic basis as required by WCC 23.10.03 and WAC 173-26-201(1)(c)(iv) and that the “<i>New definition of hazard tree</i>” actually “<i>ensures that mitigation is required for removal within shoreline jurisdiction.</i>”</p>	
07	WCC 23.90.060.B.6 – Vegetation Conservation Regulations	Tani Sutley	<p>No Net Loss Alternative Documentation</p> <p><b>Since the provisions in WCC 23.90.060(B)(6) is relying on conde in the CAO that does (sic) exist then it is unclear to me how NNL is achieved.</b></p> <p><i>Clearing, pruning and re-vegetation of buffer area, except landslide hazard areas and buffers and riverine and coastal erosion hazard areas and buffers, may be conducted in accordance with the regulations in WCC 16.16.235.G. 16.16.235G does not exist</i></p> <p>It may be difficult to document compliance with No Net Loss if there are conflicts in the existing code preventing implementation of new regulations. Whatcom County did not submit any amendments with this current Locally Initiated Amendment to the SMP to fix consistency issues between the CAO and the SMP.</p> <p>Is WCC 23.10.08 currently being used to implement new SMP amendment regulations that conflict with existing SMP regulation problems that the County has decided not to amend?</p> <p>Can Whatcom County demonstrate and ensure No Net Loss provisions of WCC 23.10.03 and WAC 173-26-201(1)(c)(iv) by documenting WCC 23.10.08 as a tool of issuing permits and enforcement instead of using consistency in code since there seems to be some reluctance to amendment (sic) the inconsistency issues?</p> <p><b>23.10.08 Severability</b></p> <p>The Act and this Program adopted pursuant thereto comprise the basic state and County law regulating use of shorelines in the county. In the</p>	<p>NNL is achieved with mitigation in WCC 23.90.030 and 16.16.260. Again, the reference to 16.16.235(G) is a bad cross reference, as pointed out above.</p> <p>Such bad cross references can be common over time, and our attorney and Clerk have informed us that having a bad cross reference does not negate the intent of the regulation. As the Ms. Sutley knows, we are currently undergoing a periodic update of the SMP, and many of these sections are being rewritten and any cross references updated. We will fix these though either the periodic update or through “scrivener’s error” rules, which allows us to fix bad cross references without an ordinance.</p>

Comment #	SMP Section	Commenter	Comment / Concern	Local Government Response / Rationale
			<p>event provisions of this Program conflict with other applicable county policies or regulations, <b>the more restrictive shall prevail</b>. Should any section or provision of this Program be declared invalid, such decision shall not affect the validity of this Program as a whole.</p>	
08	WCC 23.10.060 – References to plans, regulations or information sources	Tani Sutley	<p>“Whatcom County submitted a letter dated August 2, 2019 with their Locally Initiated SMP update amendment regarding the changes being made to their SMP WCC 23.10.060 References to plans, regulations or information sources.</p> <p><i>“Note that it also clears up some of the language regarding which portions of the CAO are not applicable in the shoreline jurisdiction, as we spoke about during the last limited update.”</i></p> <p>However, the changes presented to Ecology in this letter are NOT the changes proposed for some future SMP update during the last SMP update. Those changes are documented on the 2017 Update Responsiveness Summary, which included:</p> <p>“There are also 3 sections that our <b>Natural Resources Supervisor now believes should be included in the exemption (WCC 16.169.230 (Exempt Activities), WCC 16.16.235 (Activities Allowed with Notification), WCC 16.16.250 (Submittal requirements and critical area review process), WCC 16.16.270 (Reasonable Use Exceptions), 16.16.273 (Variances), 16.16.275 (Nonconforming Uses/Buildings), 16.16.280 (Appeals), and 16.16.285 (Penalties and Enforcement).</b>” See attached.</p> <p>Whatcom County and Ecology made an agreement that Whatcom County would change WCC 23.10.060 References to plans, regulations or information sources at some future date instead of using the procedures of required or recommended changes documented in the guidelines used by Ecology. WAC 173-26-120</p> <p>By delaying a very simple change, the result was confusing and I fault Ecology for not following their own guidelines.</p> <p>WAC 173-26-120(ii) <b>Either approve the proposal as submitted, recommend specific changes necessary to make the proposal</b></p>	<p>The current amendment does not include the NR Supervisors previous suggestion; it was dropped for the time being to the make this amendment move along faster.</p> <p>However, the previous suggestion is being considered through our current periodic update.</p>

Comment #	SMP Section	Commenter	Comment / Concern	Local Government Response / Rationale
			<p><b>consistent with chapter 90.58 RCW policy and its applicable guidelines, or deny the proposal</b></p> <p>Ecology should now require the changes agreed upon since Whatcom County has already documented their intent. I assume Whatcom County simply forgot what they agreed to do.</p> <p>I simply do not understand Ecology's reluctance to use recommended or required changes for amendment updates to the SMP as documented in the Guidelines procedures.</p> <p>I hope Ecology will start being more transparent.</p>

### **TITLE FOR AGENDA ITEM:**

Resolution adopting the 2022 budget for the Whatcom County Flood Control Zone District and Subzones (Council acting as the Flood Control Zone District Board of Supervisors)

### **SUMMARY STATEMENT OR LEGAL NOTICE LANGUAGE:**

Consistent with RCW 86.15.140, the FCZD must adopt an annual budget that includes the County-wide district and the subzones of the District. The attached resolution establishes the overall budget consistent with the appropriation items outlined in the law.

Public Works respectfully requests that the FCZD Board of Supervisors adopt the attached resolution to establish a 2022 budget for the County-wide District and the following subzones:

- Acme/Van Zandt Subzone
- Lynden/Everson Subzone
- Sumas/Nooksack/Everson Subzone
- Samish Watershed Subzone
- Birch Bay Watershed and Aquatic Resources Management District

Paula J. Harris, River and Flood Division Manager

**DATE:** **October 18<sup>th</sup>, 2021**

**RE:** 2022 Flood Control Zone District Budget

---

Enclosed is a resolution establishing the 2022 budget for the Whatcom County Flood Control Zone District (FCZD) for your review and adoption. Supporting documentation detailing the programs and projects included in the budget are also attached.

**Requested Action:**

Public Works respectfully requests that the FCZD Board of Supervisors adopt the attached resolution to establish a 2022 budget for the County-wide District and the following subzones:

- Acme/Van Zandt Subzone
- Lynden/Everson Subzone
- Sumas/Nooksack/Everson Subzone
- Samish Watershed Subzone
- Birch Bay Watershed and Aquatic Resources Management District

**Background and Purpose:**

Consistent with RCW 86.15.140, the FCZD must adopt an annual budget that includes the County-wide district and the subzones of the District. The attached resolution establishes the overall budget consistent with the appropriation items outlined in the law.

PROPOSED BY: Public Works

INTRODUCTION DATE: 11/09/2021

RESOLUTION NO. \_\_\_\_\_

(A Resolution of the Whatcom County Flood Control  
Zone District Board of Supervisors)

**ADOPTING THE 2022 BUDGET FOR THE  
WHATCOM COUNTY FLOOD CONTROL ZONE DISTRICT AND SUBZONES**

**WHEREAS**, RCW 86.15.140 requires that the Board of Supervisors of each flood control zone district and subzone adopt an annual budget for the zone; and

**WHEREAS**, the statute further requires that the zone or subzone budget be divided into four appropriation items: overhead and administration; maintenance and operation; construction and improvements; and bond retirement and interest; and

**WHEREAS**, under the appropriation item for construction and improvements, the Board is required to list each flood control improvement or storm water control improvement planned for the budget year and the estimated expenditure for each during the next year; and

**WHEREAS**, the budget may only be adopted after a public hearing for which proper notice has been given; and

**WHEREAS**, Fund No. 169 is managed by the County on behalf of the Whatcom County Flood Control Zone District for purposes of funding flood control, storm water management, and other water resources work by the County that are consistent with the powers of the District under RCW 86.15 and RCW 39.34.190; and

**WHEREAS**, funds obtained by the County through grants or cooperative agreements for flood control and other water resources work are also managed through Fund No. 169; and

**WHEREAS**, the 2022 budget proposed by the County Executive for the Whatcom County Flood Control Zone District includes proposed expenditures out of Fund 169 to pay for flood control, storm water management, and other water resources work consistent with the powers of the District under RCW 86.15 and RCW 39.34.190;

**NOW, THEREFORE, BE IT RESOLVED** by the Board of Supervisors as follows:

Section I. Approval of the Budget

The Board hereby adopts the 2022 budget for the Flood Control Zone District Fund No. 169 in the amounts presented below and further described Exhibit A of this resolution:

**OVERALL BUDGET SUMMARY**

Budget Code	Program	RCW Appropriation Item	2022 Budget	
			Revenues	Expenditures
169100	Administration	Overhead & administration	\$5,210,000	\$877,331
169119	Natural Resources Administration	Overhead & administration	-	624,949
169120	AIS Administration	Overhead & administration	-	-
169121	Water Planning Administration	Overhead & administration	5,586	129,272
169100	Stormwater Administration (Transfer)	Overhead & administration	-	729,811
169102	Flood Response	Maintenance & operations	-	110,000
169104	Flood Planning	Maintenance & operations	70,000	940,000
169106	Technical Assistance	Maintenance & operations	-	75,000
169108	NFIP and CRS	Maintenance & operations	12,000	127,000
169110	Early Warning	Maintenance & operations	4,413	133,000
169119	Natural Resources Operations	Maintenance & operations	744,139	1,677,710
169120	AIS Operations	Maintenance & operations	-	192,944
169121	Water Planning Operations	Maintenance & operations	414,414	954,642
169100	Stormwater Lake Whatcom Operations (Transfer)	Maintenance & operations	-	346,000
169700	Stormwater NPDES Phase II	Maintenance & operations	-	160,320
169100	Stormwater Lake Whatcom Capital (Transfer)	Construction & improvements	-	-
169112	Repair and Maintenance	Construction & improvements	715,000	1,692,439
169114	Flood Hazard Reduction	Construction & improvements	3,169,846	4,437,456
<b>Total 2022 FCZD Budget</b>			<b>\$10,345,398</b>	<b>\$13,207,874</b>
			<b>\$(2,862,476)</b>	

Code	Program		Revenues	Expenditures
16923	Acme/VanZandt Subzone	Overhead & administration	-	\$1,500
16925	Birch Bay Subzone	Overhead & administration	872,200	387,921
16921	Lynden/Everson Subzone	Maintenance & operations	45,460	32,500

			<b>\$(501,487)</b>	

Section II. Provisions Restricting Expenditures, Authorizing Actions, and Setting Expectations.

For purposes of purchasing and award, projects listed in the attached exhibit (B) FCZD Construction and Improvements Work Plan shall be administered pursuant to WCC Chapter 3.08.100 A.(2) and A.(3) using the process prescribed for capital budget appropriations. Contracts for goods and services on individual items or projects listed in Exhibit (B) may be exceeded by up to 10%, provided expenditures in total do not exceed the total appropriation for the FCZD construction and improvement Work Plan.

APPROVED this \_\_\_\_ day of \_\_\_\_\_, 2021.

ATTEST:

WHATCOM COUNTY FLOOD CONTROL ZONE  
DISTRICT BOARD OF SUPERVISORS  
WHATCOM COUNTY, WASHINGTON

\_\_\_\_\_  
Dana Brown-Davis, Clerk of the Council

\_\_\_\_\_  
Barry Buchanan, Chair of Board of Supervisors

APPROVED AS TO FORM:

DETAIL FOR FCZD PROGRAM AREAS

FLOOD MAINTENANCE AND OPERATIONS			
Flood Response (169102)	Proposed 2022 Budget		Assumptions/Notes
	Revenues	Expenditures	
Wage and Benefits		\$ 10,000	
Sand and sandbags		\$ 35,000	Includes pre-deployed and sand bags for training
Preparedness training		\$ 5,000	Road and M&O employees and equipment
Sector observers during response		\$ 40,000	Road employees wages and benefits for 1 significant flood event
Construction contracts		\$ 20,000	During and immediately following response
<b>TOTAL</b>	\$ -	\$ 110,000	Budget based on 2009 flood with cost & wage increases
<b>NET IMPACT TO FUND BALANCE</b>	\$ (110,000.0)		<b>2021 YE projection assumes small fall flood</b>
Flood Planning (169104)	Proposed 2022 Budget		Assumptions/Notes
	Revenues	Expenditures	
<b>Lower Nooksack</b>			
Wage and Benefits		\$ 130,000	
CFHMP refinement/update			
Facilitation		\$ 75,000	2021 BA inc 37,550 CA for CollinsW; need 2022 BA to cover est balance (35000) and amendment
Hydraulic modeling/alternatives analyses		\$ 60,000	2021 PO will CA (est bal is 10k) 2022 for FEQ model support
FLIP process support/Engineering design/Plan		\$ 300,000	2021 BA inc 5025 CA for NWIC; Herrera balance will CA into 2022 (2021 PO); NEP grant ends in 2021
Sediment management		\$ 200,000	likely to get under contract in 2022
Reach 1 Sediment	\$ -	\$ 75,000	2020 PO for \$85.7 balance + amendment for updated survey; 2021 BA for follow-up work with reach team
FLIP support for ag (AWB, farmer stipends)	\$ 70,000.0	\$ 75,000	Pass through funding for ag consultant, farmers stipends and tribes- revenues from F&D
High water mark survey		\$ 25,000	
<b>TOTAL</b>	\$ 70,000.0	\$ 940,000	
<b>NET IMPACT TO FUND BALANCE</b>	\$ (870,000.0)		
Technical Assistance (169106)	Proposed 2022 Budget		Assumptions/Notes
	Revenues	Expenditures	
Wage and Benefits		\$ 75,000	
Postage for Special District reassessments		\$ -	CDID#5 was updated in 2020 with improved parcel coverage
<b>TOTAL</b>	\$ -	\$ 75,000	
<b>NET IMPACT TO FUND BALANCE</b>	\$ (75,000.0)		
National Flood Insurance Prgm (169108)	Proposed 2022 Budget		Assumptions/Notes
	Revenues	Expenditures	
Wage and Benefits		\$ 100,000	
FEMA Floodplain mapping	\$ -	\$ 12,000	Assumes LNR mapping in 2022 - expenditures for public meeting notice
Permit reviews	\$ 12,000.0	\$ -	Flood permit fees
Public education/CRS activities	\$ -	\$ 15,000	CRS mailings
<b>TOTAL</b>	\$ 12,000.0	\$ 127,000	
<b>NET IMPACT TO FUND BALANCE</b>	\$ (115,000.0)

Misc			
<b>Construction Projects</b>			
Emergency/new projects as needed	\$ 50,000.0	\$ 350,000	Assumed costs for responding to flood/new repairs (assumes no fall 2021 flood)
Miscellaneous repair projects	\$ -	\$ 50,000	Placeholder for small projects; fall 2019 flood assumed
Marine Drive Levee Repair 2020 damage (720004)	\$ 251,250.0	\$ 300,000	Surveyed in 2020, construction in 2022 (FEMA)
Truck Road 2020 Damage (720008)	\$ 253,750.0	\$ 250,000	2021 contract for alt analysis; 2021 amendment for design: rev are 75% FEMA and 12.5% Roads
Everson Overflow Pipeline Bank Stabilization (720009)	\$ 135,000.0	\$ 150,000	Alt anal in 2021; design in 2022; FEMA reimburses 75%
Bertrand Creek Levee Stabilization (721002)	\$ 25,000.0	\$ 250,000	Start design in 2021 and construct in 2022; potential cost-share from DD#4
<b>Mitigation Planning/Implementation</b>			
Jail crew	\$ -	\$ 117,439	Jail crew labor for FCZD and SWIF projects; available to diking or subzones
Reveg planning/coordination	\$ -	\$ 30,000	New 2-year contract in 2021
Reveg/misc supplies	\$ -	\$ 10,000	Increased to cover plant replacement costs for Deming and other past projects as needed
<b>TOTAL</b>	<b>\$ 715,000.0</b>	<b>\$ 1,692,439</b>	
<b>NET IMPACT TO FUND BALANCE</b>	<b>\$ (977,439.0)</b>		
<b>Flood Hazard Reduction (169114)</b>			
<b>Proposed 2022 Budget</b>			
	<b>Revenues</b>	<b>Expenditures</b>	<b>Assumptions/Notes</b>
Wage and Benefits		\$ 315,000	
Misc	\$ -		
<b>Swift Creek</b>			
Bank stabilization/channel excavation	\$ -	\$ 114,624	300k commitment per year; 150k Roads; remainder cost-shared 70/30 b/w FCZD and SNE Subzone Subject to CPI-W Increases
<b>Lower Nooksack River</b>			
Marietta property acquisition & demo New properties	\$ -	\$ 50,000	New owner interested in selling
Leases for agriculture	\$ 3,780.0	\$ -	River Rd and Emmerson Rd properties
Walton Property Management	\$ 16,800.0	\$ -	Revenues are from lease; 2021 expenses to deal with barn fire (demo, electric and well house)
Floodplain acquisition	\$ 847,866.0	\$ 1,059,832	Revenues from FbD grant; 2021 BA reduced by 200k for transfer to Jones Crk; 2022 is remaining grant task balance if not used for GG
Ferndale Levee Improvement Project (719008)	\$ 422,400.0	\$ 528,000	2021 BA from R&E CA; 2022 BA cover contract balance + amendment for 60% design; rev from FbD
Lynden Levee Improvement Project (in conjunction with USACE rehab project) (718005)	\$ 36,000.0	\$ 45,000	Chanel construction and USACE cost-share in 2021; planting and O&M plan in 2022
Abbott Levee Improvement (SWIF) (718010)	\$ 155,000.0	\$ 260,000	Assumes Roads pays 50%; design and contract bank repair in 2021; 2022 BA is for Phase 2 design; 2021 BA inc NHC CA
Cougar Creek Early Action Project Design (720010)	\$ 60,000.0	\$ 75,000	2021 rev is NOAA funding through TNC; complete design and permit in 2022 as early action project for FbD?
Other FbD Early Action Projects (TBD)	\$ 300,000.0	\$ 375,000	Balance of task budget in 2019-21 FbD grant; projects TBD
<b>South Fork Fish Camp Project (72100x)</b>			
Phase 1 design/construction	\$ 880,000.0	\$ 880,000	Pass-through FbD funding to Nooksack Tribe for integrated fish-flood project: Tribe to provide grant match (not included in WRIP)
<b>Dahlberg Wetland Mitigation Site (719006)</b>			
Wetland plan development		\$ 130,000	2021 costs for BLA to settle claim; 2022 BA for work to start on site plan development/monitoring
<b>Jones Creek Deflection Berm (712004)</b>			
Berm and bridge design	\$ 54,000.0	\$ 130,000	2021 BA inc CA for Swift appraisals; 2021 PO for PSE contract balance; Permitting assistance from Roads (30k/yr) design cost-shared 70/30 with Roads
Land/easement acquisition	\$ 50,000.0	\$ -	Derus and Swift properties plus two easements in 2021; revenues from FbD; 2022 revenues is from road for new ROW
Construction	\$ 124,000.0	\$ 155,000	Demo and cleanup of Derus- likely to slip to 2022 due to movers
<b>High Creek Sediment Management</b>			
Sediment trap maintenance (720005)	\$ -	\$ 45,000	Cleaning only one trap in 2021
<b>Glacier-Gallup Creek Alluvial Fan Restoration (718007)</b>			
Outreach	\$ 20,000.0	\$ 25,000	2021 YE exp is contract balance - 2021 PO
Preliminary design	\$ 200,000.0	\$ 250,000	interim repair alt analysis in 2021; 60% design in 2022

**Attachments:** Proposed Resolution

**PROPOSED BY:** Executive  
**INTRODUCTION DATE:** November 09, 2021

**RESOLUTION NO. \_\_\_\_\_**  
**RESOLUTION AUTHORIZING THE LEVY OF TAXES**  
**FOR THE WHATCOM COUNTY FLOOD CONTROL ZONE DISTRICT FOR 2022**

**WHEREAS**, RCW 86.15.160(3) authorizes the Board of Supervisors of the Whatcom County Flood Control Zone District (WCFCZD) to impose an ad valorem property tax levy of up to fifty cents per thousand dollars of assessed value upon real property within the district; and

**WHEREAS**, the Board of Supervisors of the WCFCZD has reviewed the proposed annual budget, including all sources of revenues and anticipated expenditures; and,

**WHEREAS**, the annual budget provides detailed listings of various revenues including property taxes; and,

**WHEREAS**, the WCFCZD Board of Supervisors has held a public hearing concerning the annual budget, the property tax rates, and revenues included therein.

**NOW, THEREFORE, BE IT RESOLVED** by the **WCFCZD Board of Supervisors** that amounts collected through the WCFCZD levy shall be limited to the amount of 2021 taxes, increased for the addition of new construction and improvements to property and any increase in the value of state assessed property. A property tax increase, in addition to the amount resulting from the addition of new construction and improvements to property and any increase in the value of state-assessed property, is hereby authorized for the 2022 levy in the amount of \$0, which is a percentage increase of 0% from the previous year.

**ADOPTED** this \_\_\_\_ day of \_\_\_\_\_, 2021.

ATTEST:

WHATCOM COUNTY FLOOD CONTROL  
ZONE DISTRICT BOARD OF SUPERVISORS  
WHATCOM COUNTY, WASHINGTON
