RE: Catholic Community Services – Housing Case Management Contract Amendment #1

DATE: November 10, 2021

Attached is a contract amendment between Whatcom County and Catholic Community Services for your review and signature.

- **Background and Purpose**

This contract funds the provision of housing case management services for individuals and families that may be experiencing homelessness or residing in scattered units as well as staffed housing programs. The majority of clients served by this contract have a history of behavioral health disorders and/or medical problems that require intensive case management services. Case management improves housing stability and promotes housing retention, thereby reducing homelessness in Whatcom County. The purpose of this amendment is to extend the contract for an additional year and increase funding based on an annual budget rather than the previously approved 6-month budget.

- **Funding Amount and Source**

Funding for this contract, in an amount not to exceed \$336,678, is provided by local document recording fees, HB 1590 and the Washington State Department of Commerce Emergency Solutions COVID-19 Grant (CFDA 14.231). These funds will be included in the 2022 budget. Council approval is required as funding for this extended contract period exceeds 10% of the approved budget.

Please contact Ann Beck, Human Services Supervisor at 360-778-6055 (ABeck@co.whatcom.wa.us) or Kathleen Roy, Assistant Director at 360-778-6007 (KRoy@co.whatcom.wa.us), if you have any questions or concerns regarding this request.

**WHATCOM COUNTY

Exhibit B – Amendment #1
(COMPENSATION)

- I. **Source of Funding and Budget:** The source of funding for this contract, in an amount not to exceed \$336,678, is local document recording fees, HB 1590, and the Washington State Department of Commerce Emergency Solutions COVID-19 Grant (CFDA 14.231). COMMERCE and the State of Washington are not liable for claims or damages arising from Subcontractor's performance of this contract. The budget for this contract is as follows:

*Cost Description (Funded by Document Recording Fees):	Documents Required with Invoices	Budget
Housing Case Managers	Approved Composite Billing Rate Worksheet for each staff member and timesheets for the period.	\$229,390
Homeless Housing Program Director		\$17,598
Supplies	GL Detail	\$2,400
Cell Phone/Data Processing/IT Support		\$5,607
Mileage	Mileage log to include: name of staff member, date of travel, starting point and destination of travel, number of miles traveled, federal reimbursement rate (per www.gsa.gov) and a brief description of the purpose of travel	\$6,000
Travel/Training	Ground transportation, coach airfare and ferries will be reimbursed at cost when accompanied by receipts. Reimbursement requests for allowable travel must include name of staff member, dates of travel, starting point and destination, brief description of the purpose. Receipts for registration fees or other documentation of professional training expenses. Lodging and meal costs for training are not to exceed the U.S General Services Administration Domestic Per Diem Rates (www.gsa.gov), specific to location. Receipts for meals are not required.	\$3,750
Occupancy	GL Detail	\$4,176
Rental History/Background Checks		\$900
Flex Funds	Flex Fund Spreadsheet plus copies of receipts	\$1,000
SUBTOTAL		\$270,821
**Indirect Costs (Document Recording Fee Funds) @ 13.3%		\$36,019
Document Recording Fee Funding Total		\$306,840
Cost Description (Funded by ESG-CV):		Budget
Case Aide	Approved Composite Billing Rate Worksheet for each staff member and timesheets for the period.	\$25,676
Cell Phone & Data Plan for Case Aide	GL Detail	\$658
SUBTOTAL		\$26,334
**Indirect Costs (ESG-CV Funds) @ 7%		\$1,844
ESG-CV Funding Total		\$28,178
**Indirect Costs from Document Recording Fees to Supplement ESG-CV Indirect (6.3%)		\$1,660
TOTAL BUDGET:		\$336,678

*Changes to the line item budget that exceed 10% of the line item amount must be approved in writing by the County.

**Indirect costs shall not exceed the currently approved indirect cost allocation plan.

II. **Invoicing:**

1. The Contractor shall submit itemized invoices on a monthly basis in a format approved by the County. Monthly invoices must be submitted by the 15th of the month, following the month of service. Invoices submitted for payment must include the items identified in the table above.
2. The Contractor shall submit invoices to HL-BusinessOffice@co.whatcom.wa.us.
3. Payment by the County will be considered timely if it is made within 30 days of the receipt and acceptance of billing information from Contractor. The county may withhold payment of an invoice if the Contractor submits it more than 30 days after the expiration of this contract.
4. Invoices must include the following statement, with an authorized signature and date:

I certify that the materials have been furnished, the services rendered, or the labor performed as described on this invoice.

5. Duplication of Billed Costs or Payments for Service: The Contractor shall not bill the County for services performed or provided under this contract, and the County shall not pay the Contractor, if the Contractor has been or will be paid by any other source, including grants, for those costs used to perform or provide the services in this contract. The Contractor is responsible for any audit exceptions or disallowed amounts paid as a result of this contract.

RE: Lydia Place – Housing Case Management Contract Amendment #2

DATE: November 10, 2021

Attached is a contract amendment between Whatcom County and Lydia Place for your review and signature.

- **Background and Purpose**

This contract funds the provision of housing case management services in association with the Whatcom Homeless Service Center. The purpose of this contract is to provide funding for case management and supportive services to families with children and individuals experiencing homelessness or who are newly housed, in order to improve housing stability and reduce homelessness in Whatcom County. The purpose of this amendment is to extend the contract for an additional year, revise outcomes, and increase funding based on an annual budget rather than the previously approved 6-month budget.

- **Funding Amount and Source**

Funding for this contract, in an amount not to exceed \$377,158, is provided by local document recording fees and the Washington State Department of Commerce Consolidated Homeless and Emergency Solutions COVID-19 (CFDA 14.231) Grants. These funds will be included in the 2022 budget. Council approval is required as funding for the extended contract period exceeds 10% of the approved budget.

Please contact Ann Beck, Human Services Supervisor at 360-778-6055 (ABeck@co.whatcom.wa.us) or Kathleen Roy, Assistant Director at 360-778-6007 (KRoy@co.whatcom.wa.us), if you have any questions or concerns regarding this request.

EXHIBIT "A" – Amendment #2
(SCOPE OF WORK)

I. Background

According to the annual Point In Time Count of homeless persons conducted in January 2021, at least 859 people in Whatcom County were homeless. Throughout the year, more may face the prospect of losing their homes. Whatcom County's Plan to End Homelessness provides a blueprint for how our community will work together to prevent and end homelessness. The provision of housing assistance and case management services are key strategies of the Plan.

Housing case management includes both rental subsidy and housing case management components. Through this contract, Lydia Place will serve as one of the WHSC's partner agencies providing housing case management. The WHSC staff determines client eligibility for services and authorizes and distributes rent subsidies to local landlords on behalf of participating clients, makes referrals for case management to partner agencies, and coordinates required data collection efforts.

The purpose of this contract is to provide case management for individuals and families experiencing homelessness in order to improve housing stability and reduce homelessness in Whatcom County.

II. Definitions

Housing Interest Pool (HP)	Quasi wait list that serves clients waiting for housing services based on their needs and available resources instead of a first come, first served basis.
HMIS	Washington's Homeless Management Information System Database
Permanent Supportive Housing (PHS)	Chronically homeless individuals/households with significant barriers to permanent housing; will receive deep rent subsidies and intensive housing case management.
Whatcom Homeless Service Center (WHSC)	WHSC programs provide (1). centralized coordinated system of access, (2). targeted prevention assistance to reduce the number of households that become homeless, (3). re-housing of those who become homeless, (4) supportive services promoting housing stability and self-sufficiency, and (5). data management and tracking information for people receiving homeless housing services in Whatcom county and according to Washington State Department of Commerce HMIS data collection requirements.

III. Statement of Work

The Contractor will provide housing case management services. Housing case management activities include arrangement, coordination, monitoring, and delivery of services related to meeting the housing needs of households and helping them obtain housing stability. Services and activities include:

1. Developing, securing, coordinating, and retaining services and suitable housing. Services include but are not limited to:
 - a. Tenant counseling;
 - b. Assisting individuals and households with understanding leases;
 - c. Securing utilities;
 - d. Making moving arrangements;
 - e. Representative payee services concerning rent and utilities;
 - f. Mediation and outreach to property owners related to locating or retaining housing.

2. Monitoring and evaluating household progress;
3. Assuring that household rights are protected;
4. Developing an individualized housing and service plan, including a path to permanent housing stability subsequent to assistance.

Services will be provided to low-income and/or homeless individuals and households residing in Whatcom County. Eligible individuals and households served shall have income at or below 50% Area Median Income (AMI). Income eligibility will be determined by the funding source used for case management.

IV. Program Outcomes

During this contract period, the housing case management services provided by the Contractor will deliver the following outcomes:

1. Four (4) households will receive CM during the year while unsheltered.
2. Four (4) individuals will receive CM during the year while unsheltered.
3. Thirty-eight (38) households will receive CM during the year while in emergency/temporary housing.
4. Ninety-four (94) individuals will receive CM during the year while in emergency/temporary housing.
5. Eighteen (18) households will receive CM during the year in PSH.
6. Forty-four (44) households will receive CM during the year in RRH.
7. Thirty-eight (38) unduplicated, new households will receive CM during the year.
8. Ninety-five (95) unduplicated total individuals will receive CM during the year.
9. The average length of time receiving CM while homeless prior to permanent housing will be 80 days.
10. The median length of time receiving CM while homeless prior to permanent housing will be 65 days.
11. Fifty (50) households receiving CM will be stably housed for at least 6 months.
12. Forty-five (45) case managed households will be stably housed for at least 12 months.
13. Zero (0) households receiving case management will exit to homelessness.
14. Twenty (20) households will achieve stable housing while receiving case management.

V. Additional Requirements

The Contractor will:

1. Comply with:
 - a. Special Terms & Conditions of Commerce Grants, herein incorporated as Exhibit D.
 - b. Comply with all State of Washington Department of Commerce Consolidated Homeless Grant (CHG) requirements, policies and procedures in the CHG Guidelines including periodic updates to the Guidelines which can be accessed at the following link:
<https://deptofcommerce.app.box.com/s/4d1ilui45uqljmhseufez4flxqv1q6b>
 - c. Commit to ending homelessness in Whatcom County, by:
 1. Assessing each household's needs and facilitating housing stability with the goal of obtaining or maintaining permanent housing.
 2. Employing a progressive engagement service model.

3. Prioritizing households likely to become homeless when using prevention rental assistance.
- d. Ensure that all costs incurred comply with funding guidelines.
- e. Commit to reporting complete quality data that is timely, truthful and accurate (per funding guidelines and HMIS Partner Agreement <http://www.commerce.wa.gov/wp-content/uploads/2018/06/hau-hmis-agency-partner-agreement-2018.pdf>).
- f. Consequences of non-compliance with guidelines, as per the Department of Commerce, include:
 1. If Commerce determines that a Grantee is failing to comply with the Guidelines, Terms and Conditions, Commerce will notify Grantee that Grantee will receive technical assistance and be required to respond to a corrective action plan to address and remedy the non-compliance.
 2. If the Grantee is still out of compliance after the technical assistance, Commerce may move the Grantee into a probationary period with a second corrective action plan and may reduce the grant total by 20%.
 3. If the Grantee remains out of compliance after the probation period, Commerce may terminate the grant per the General Terms and Conditions TERMINATION FOR CAUSE.
2. Comply with relevant State of Washington Department of Commerce Emergency Solutions COVID-19 Grant requirements and guidelines, including periodic updates to the guidelines, which can be accessed at the following links:
<https://www.commerce.wa.gov/wp-content/uploads/2020/06/Commerce-ESG-CV-Overview-.pdf> and <https://deptofcommerce.app.box.com/s/fsmf4pmwkroszjt702j1l9cfvkv5ixmq>
3. Participate in HMIS data collection efforts as directed by the WHSC; including HMIS training, HMIS data entry, updating client data as necessary, and exiting clients from HMIS. Services which must be inputted into HMIS include (but are not limited to) financial services – including deposits, rental payments, and completed home visits.
4. Comply with the following Housing Pool (HP) referral procedure. When Contractor staff believes a referral from the HP is not a good fit for their program, a situation that should be rare, the following procedure must be followed:
 - a. Contractor will submit a written description of the situation that justifies returning the client to the HP.
 - b. An in-person case conference must be scheduled within five days of request to return a referral. The case conference will include Contractor staff, WHSC housing referral specialist, and HP case management services coordinator (or designee).
 - c. The course of action mutually agree to at the case conference will be recorded in writing, constituting a binding agreement.
 - d. As the parties to this contract learn more about referral success factors, procedures may be amended accordingly.
5. Promote public health in homeless housing and preserve the safety and stability of available housing stock for homeless housing by:
 - a. Informing clients/tenants of the importance of upholding safety and health in homeless housing, and of preserving continued access to housing by our homeless housing system.
 - b. Informing clients/tenants that they may be expected to participate in cleaning and decontaminating their housing unit when necessary for health reasons.
 - c. Informing clients/tenants that damages to their unit may result in eviction and loss of the unit in the future for our homeless housing system.

- d. In scattered sites, master lease, public housing, and staffed housing programs, case managers will work with the client/tenant to address the issues of health and safety that arise, including that of suspected methamphetamine use. The WCHD will provide case managers with free and confidential technical assistance on effective methods for cleaning apartment units that have been contaminated, whenever requested.
 - e. Documenting in each client file that these expectations were communicated to the client/tenant.
- 6. Requiring professional development training for direct service staff and supervisors.
- 7. Attending Whatcom County Coalition to End Homelessness meetings and sponsored activities.
- 8. Attending meetings and events coordinated by WHSC.

VI. Reporting Requirements

1. The Contractor shall submit quarterly reports* to the WCHD utilizing HMIS data by using the quarterly reporting template accessed on the County website, as noted below. Reports will demonstrate the Contractor's progress toward achieving the program outcomes identified above. Quarterly reports are due on April 15, July 15, October 15, and January 15.

*Contractors will be notified via email of updates to quarterly reporting templates. Current reporting templates will be posted on the Whatcom County Health Department Housing Program website which may be accessed at: <http://www.whatcomcounty.us/DocumentCenter/View/37570/WCHDquarterlyCMreportLP>.

2. Reports will include data for only those clients served under this contract and include:
 - a. Number of homeless households that received case management during the quarter.
 - b. Number of homeless individuals that received case management during the quarter.
 - c. Number of households in permanent supportive housing that received case management services during the quarter.
 - d. Number of households in rapid re-housing programs that received case management services during the quarter.
 - e. Average length of time homeless (unsheltered, sheltered, and/or transitional housing project) in case management prior to being housed (in RRH, PSH, or other stable housing situation).
 - f. Median length of time homeless (unsheltered, sheltered, and/or transitional housing project) in case management prior to being housed (in RRH, PSH, or other stable housing situation).
 - g. Number of case managed households that lost stable housing or exited case management while homeless.
 - h. Number of case managed households that achieved housing stability while receiving case management services.

Exhibit B – Amendment #2
(COMPENSATION)

- I. **Source of Funding and Budget:** The source of funding for this contract, in an amount not to exceed \$377,158, is local document recording fees, the Washington State Department of Commerce Consolidated Homeless Grant, and the Washington State Department of Commerce Emergency Solutions COVID-19 Grants (CFDA 14.231). COMMERCE and the State of Washington are not liable for claims or damages arising from Subcontractor's performance of this contract. The budget for this contract is as follows:

*Cost Description	Documents Required with Invoices	Budget
Document Recording Fee Funding		
Case Management Staff	Approved Composite Billing Rate Worksheet for each staff member and timesheets for the period.	\$216,503
Program Management Staff		\$43,588
Mileage	Mileage log to include: name of staff member, date of travel, starting point and destination of travel, number of miles traveled, federal reimbursement rate (per www.gsa.gov) and a brief description of the purpose of travel.	\$3,000
Direct Service Staff Training	Ground transportation, coach airfare and ferries will be reimbursed at cost when accompanied by receipts. Reimbursement requests for allowable travel must include name of staff member, dates of travel, starting point and destination, brief description of the purpose. Receipts for registration fees or other documentation of professional training expenses. Lodging and meal costs for training are not to exceed the U.S General Services Administration Domestic Per Diem Rates (www.gsa.gov), specific to location. Receipts for meals are not required.	\$1,000
Program Specific Occupancy Costs	GL Detail	\$8,000
Program Specific Supplies & Postage		\$2,000
Program Specific Utilities & Phone		\$2,000
Professional Services		\$3,000
SUBTOTAL		\$279,091
*Consolidated Homeless Grant (CHG)		
Rental Assistance for Families with Children in PSH	For Rental Assistance – itemize payee for-profit/non-profit status. Expanded GL Report for the period plus documentation including client ID, payee, and amount of payment.	\$20,000
Case Management for Families with Children in PSH	Approved Composite Billing Rate Worksheet for each staff member and timesheets for the period.	\$16,507
SUBTOTAL		\$36,507
*Emergency Solutions Grant COVID Funding		
Case Management Staff	Approved Composite Billing Rate Worksheet for each staff member and timesheets for the period.	\$24,052
Program Management Staff		\$3,986
SUBTOTAL		\$28,038
**Document Recording Fee Indirect Costs @ 10%		\$27,909
**CHG Indirect Costs @ 10%		\$3,651
**ESG-CV Indirect Costs @ 7%		\$1,962
SUBTOTAL		\$33,522
TOTAL BUDGET		\$377,158

*Changes to the line item budget that exceed 10% of the line item amount must be approved in writing by the County.

**In no instance shall indirect costs indicated in the table above exceed the identified rate.

II. **Invoicing:**

1. The Contractor shall submit itemized invoices on a monthly basis in a format approved by the County. Monthly invoices must be submitted by the 15th of the month, following the month of service. Invoices submitted for payment must include the items identified in the table above.
2. The Contractor shall submit invoices to HL-BusinessOffice@co.whatcom.wa.us.
3. Payment by the County will be considered timely if it is made within 30 days of the receipt and acceptance of billing information from Contractor. The county may withhold payment of an invoice if the Contractor submits it more than 30 days after the expiration of this contract.
4. Invoices must include the following statement, with an authorized signature and date:

I certify that the materials have been furnished, the services rendered, or the labor performed as described on this invoice.
5. Duplication of Billed Costs or Payments for Service: The Contractor shall not bill the County for services performed or provided under this contract, and the County shall not pay the Contractor, if the Contractor has been or will be paid by any other source, including grants, for those costs used to perform or provide the services in this contract. The Contractor is responsible for any audit exceptions or disallowed amounts paid as a result of this contract.

RE: Northwest Youth Services – Housing Case Management Contract Amendment #2

DATE: November 10, 2021

Attached is a contract amendment between Whatcom County and Northwest Youth Services for your review and signature.

- **Background and Purpose**

This contract provides funding to support housing case management and supportive services to youth through age 24, who are referred by the Whatcom Homeless Service Center. The goal of these services is to improve housing stability and reduce homelessness in Whatcom County. The purpose of this amendment is to extend the contract for an additional year and increase funding based on an annual budget rather than the previously approved 6-month budget.

- **Funding Amount and Source**

Funding for this contract, in an amount not to exceed \$357,542, is provided by local document recording fees and the Washington State Department of Commerce Emergency Solutions COVID-19 Grant (CFDA 14.231). These funds will be included in the 2022 budget. Council approval is required as funding provided by this amendment exceeds 10% of the approved budget.

Please contact Ann Beck, Human Services Supervisor at 360-778-6055 (ABeck@co.whatcom.wa.us) or Kathleen Roy, Assistant Director at 360-778-6007 (KRoy@co.whatcom.wa.us), if you have any questions or concerns regarding this request.

jasonm@nwys.org

EXHIBIT "A" – Amendment #2
(SCOPE OF WORK)

I. Background

Whatcom County's Plan to End Homelessness identifies youth, aged up to 24, as a population impacted by homelessness and lists the provision of safe, affordable housing with supportive services as a way to reduce and end youth homelessness. Provision of services at shelters and other interim housing options is also a component of the service continuum that increases success in reaching housing stability. Northwest Youth Services (NWYS) is the only non-tribal agency serving youth in Whatcom County by offering housing services for homeless youth. NWYS has had a significant backlog of young people awaiting housing and services due to limited operating capacity.

Through this contract, NWYS will serve as one of the Whatcom Homeless Service Center (WHSC) partner agencies providing housing case management and will serve as a specialized portal of entry into WHSC housing services for youth. The purpose of this contract is to provide housing case management for youth waiting for housing services in order to achieve housing stability and reduce youth homelessness in Whatcom County.

II. Definitions

Housing Pool (HP)	Quasi wait list that serves clients waiting for housing services based on their needs and available resources instead of a first come, first served basis.
HMIS	Washington's Homeless Management Information System Database
Whatcom Homeless Service Center (WHSC)	WHSC programs provide (1). centralized coordinated system of access, (2). targeted prevention assistance to reduce the number of households that become homeless, (3). re-housing of those who become homeless, (4) supportive services promoting housing stability and self-sufficiency, and (5). data management and tracking information for people receiving homeless housing services in Whatcom county and according to Washington State Department of Commerce HMIS data collection requirements.

III. Statement of Work

The Contractor will provide housing case management services. Housing case management activities include arrangement, coordination, monitoring, and delivery of services related to meeting the housing needs of households and helping them obtain housing stability. Services and activities include:

1. Developing, securing, coordinating, and retaining services and suitable housing. Services include but are not limited to:
 - a. Tenant counseling;
 - b. Assisting individuals and households with understanding leases;
 - c. Securing utilities;
 - d. Making moving arrangements;

- e. Representative payee services concerning rent and utilities;
 - f. Mediation and outreach to property owners related to locating or retaining housing;
 - g. Monitoring and evaluating household progress;
 - h. Assuring that household rights are protected;
 - i. Developing an individualized housing and service plan, including a path to permanent housing stability subsequent to assistance.
2. Intake – Contractor will provide intake services to youth in Whatcom County seeking housing to collect client information, assess barriers to stable housing, and eligibility for housing programs. Services will be provided to low-income and/or homeless youth residing in Whatcom County.
 3. Youth Housing Pool (YHP) – Youth housing pool case management includes services designed to educate youth who are homeless or almost homeless, about available programs, provide them with a point of access to housing services by working collaboratively with the WHSC, and engage with them to address barriers to housing.

Individuals and households served shall have incomes at or below 50% Area Median Income (AMI). Income eligibility will be determined by the funding sources used for case management.

IV. Program Outcomes

During this contract period, the housing case management services provided by the Contractor will deliver the following outcomes:

1. At least thirty-five (35) unsheltered youth households will receive case management services.
2. At least thirty (30) youth in emergency shelters or transitional housing will receive case management services.
3. At least thirty-five (35) youth in permanent housing will receive case management services.
4. At least forty (40) youth will achieve housing stability while receiving case management services.
5. At least 85% of youth households who obtained housing will remain stably housed six months after existing case management services.

V. Additional Requirements

The Contractor will:

1. Comply with:
 - a. Relevant State of Washington Department of Commerce Emergency Solutions COVID-19 Grant guidelines, including periodic updates to the guidelines, which can be accessed at the following links:
<https://www.commerce.wa.gov/wp-content/uploads/2020/06/Commerce-ESG-CV-Overview-.pdf> and <https://deptofcommerce.box.com/s/fsmf4pmwkroszjt702j1l9cfnvk5ixmq>

- b. Special Terms and Conditions of Commerce Emergency Solutions – COVID-19 (ESG-CV) Grant, herein incorporated as Exhibit E.
2. Participate in HMIS data collection efforts as directed by the WHSC; including HMIS training, HMIS data entry, updating client data as necessary, and exiting clients from HMIS. Services which must be inputted into HMIS include (but are not limited to) financial services – including deposits, rental payments, and completed home visits.
3. Comply with the following Housing Pool (HP) Referral procedure. When Contractor staff believes a referral from the HP is not a good fit for their program, a situation which should be rare, the following procedures must be followed:
 - a. Contractor will submit a written description of the situation that justifies returning the client to the HP, and
 - b. An in-person case conference must be scheduled within five days of request to return a referral. The case conference will include Contractor staff, WHSC housing referral specialist, and HP case management services coordinator (or designee).
 - c. The course of action mutually agreed to at the case conference will be recorded in writing, constituting a binding agreement.
 - d. As the parties to this contract learn more about referral success factors, procedures may be amended accordingly.
4. Promote public health in homeless housing and preserve the safety and stability of available housing stock for homeless housing by:
 - a. Informing clients/tenants of the importance of upholding safety and health in homeless housing, and of preserving continued access to housing by our homeless housing system.
 - b. Informing clients/tenants that they may be expected to participate in cleaning and decontaminating their housing unit when necessary for health reasons.
 - c. Informing clients/tenants that damages to their unit may result in eviction and loss of the unit in the future for our homeless housing system.
 - d. Informing prospective tenants that they need to maintain a safe and clean apartment in advance of receiving housing and periodically after they are in housing.
 - e. In scattered sites, master lease, public housing, and staffed housing programs, case managers will work with the client/tenant to address the issues of health and safety that arise, including that of suspected methamphetamine use. The WCHD will provide case managers with free and confidential technical assistance on effective methods for cleaning apartment units that have been contaminated, whenever requested.
 - f. Documenting in each client file that these expectations were communicated to the client/tenant.
5. Require professional development training for direct service staff and supervisors.
6. Attend Whatcom County Coalition to End Homelessness meetings and sponsored activities.

7. Attend meetings and events coordinated by the WHSC.

VI. Reporting Requirements

The Contractor shall submit quarterly reports* to the WCHD utilizing HMIS data by using the quarterly reporting template accessed on the County website, as noted below. Reports will demonstrate the Contractor's progress toward achieving the program outcomes identified above. Quarterly reports are due on April 15, July 15, October 15, and January 15.

*Contractors will be notified via email of updates to quarterly reporting templates. Current reporting templates will be posted on the Whatcom County Health Department Housing Program website which may be accessed at: <https://www.whatcomcounty.us/DocumentCenter/View/56308/Reporting-Tool---Case-Management-NWYS-2021>.

Reports will include data for only those clients served under this contract and include:

1. Number of unsheltered households that received case management during the quarter.
2. Number of sheltered households that received case management during the quarter.
3. Number of individuals in permanent supportive housing that received case management services during the quarter.
4. Average length of time homeless (unsheltered, sheltered, and/or transitional housing project) in case management prior to being housed (RRH, PSH, or other stable housing situation).
5. Median length of time homeless (unsheltered, sheltered, and/or transitional housing project) in case management prior to being housed (in RRH, PSH, or other stable housing situation).
6. Number of case managed households that have been stably housed for six (6) months.
7. Number of case managed households that have been stably housed for twelve (12) months or more.
8. Number of case managed households that lost stable housing or exited case management while homeless.
9. Number of case managed households that achieved housing stability while receiving case management services.

VII. Flex Funding

Flex funds must follow the Guidelines established by the County and be reported on the spreadsheet provided by the County (Exhibit D) and signed by an authorized agency signatory. In addition, all flex funds must be accompanied by receipts.

Exhibit B – Amendment #2
(COMPENSATION)

- I. **Source of Funding and Budget:** The source of funding for this contract, in an amount not to exceed \$357,542, is local document recording fees, and the Washington State Department of Commerce Emergency Solutions COVID-19 Grant (CFDA 14.231). COMMERCE and the State of Washington are not liable for claims or damages arising from Subcontractor's performance of this contract. The budget for this contract is as follows:

*Cost Description	Documents Required with Invoices	Amount
Document Recording Fee Funding		
Scattered Site Housing Program Manager (.5 FTE)	Approved composite billing rate worksheet for each staff member and timesheets for the period.	\$35,016
Housing Program Director (.25 FTE)		\$14,242
Assistant Director of Housing (.5 FTE)		\$45,167
Housing Program Coordinator (.5 FTE)		\$32,708
Case Managers (2 FTE)		\$107,425
Data Analytics and Reporting (.1 FTE)		\$6,516
Data Entry Assistant (.05 FTE)		\$1,907
Travel/Training	Include name of traveler, dates, start & end point, and purpose. Receipts are required for transportation costs, registration fees, etc. Lodging & meal costs follow federal guidelines (www.gsa.gov). Receipts for meals are not required.	\$4,000
Program Specific Rent/Occupancy Costs	GL Detail	\$5,000
Program Specific Phones, Supplies, Printing/Copier, Postage		\$5,887
Flex Funds	Flex fund spreadsheet and copies of receipts	\$3,000
SUBTOTAL		\$260,868
Emergency Solutions Grant COVID Funding		
Scattered Site Housing Program Manager (.1 FTE)	Approved Composite Billing Rate Worksheet for each staff member and timesheets for the period.	\$6,249
Case Manager (.5 FTE)		\$25,213
Housing Program Coordinator (.5 FTE)		\$32,708
SUBTOTAL		\$64,170
**Indirect Costs – shall not exceed the rates indicated below:		
Document Recording Fee Indirect Costs @ 10%		\$26,087
ESG-CV Indirect Costs at 7%		\$4,492
Additional Document Recording Fee Indirect (3% of ESG-CV Costs)		\$1,925
SUBTOTAL Indirect		\$32,504
TOTAL BUDGET:		\$357,542

*Changes to the line item budget that exceed 10% of the line item amount must be approved in writing by the County.

**In no instance shall indirect rates exceed those indicated in the table above.

II. **Invoicing:**

- The Contractor shall submit itemized invoices on a monthly basis in a format approved by the County. Monthly invoices must be submitted by the 15th of the month, following the month of service. Invoices submitted for payment must include the items identified in the table above.
- The Contractor shall submit invoices to HL-BusinessOffice@co.whatcom.wa.us.

3. Payment by the County will be considered timely if it is made within 30 days of the receipt and acceptance of billing information from Contractor. The county may withhold payment of an invoice if the Contractor submits it more than 30 days after the expiration of this contract.
4. Invoices must include the following statement, with an authorized signature and date:
I certify that the materials have been furnished, the services rendered, or the labor performed as described on this invoice.
5. Duplication of Billed Costs or Payments for Service: The Contractor shall not bill the County for services performed or provided under this contract, and the County shall not pay the Contractor, if the Contractor has been or will be paid by any other source, including grants, for those costs used to perform or provide the services in this contract. The Contractor is responsible for any audit exceptions or disallowed amounts paid as a result of this contract.

RE: YWCA Bellingham – Housing Case Management Contract Amendment #1

DATE: November 10, 2021

Attached is a contract amendment between Whatcom County and YWCA Bellingham for your review and signature.

- **Background and Purpose**

This contract funds the provision of housing case management services in association with the Whatcom Homeless Service Center. The purpose of this contract is to provide case management and supportive services to those individuals experiencing homelessness or who are newly housed, in order to improve housing stability and reduce homelessness in Whatcom County. The purpose of this amendment is to extend the contract for an additional year and increase funding based on an annual budget rather than the previously approved 6-month budget.

- **Funding Amount and Source**

Funding for this contract, in an amount not to exceed \$78,565, is provided by the Washington State Department of Commerce Emergency Solutions COVID-19 Grant (CFDA 14.231) and local document recording fees. These funds will be included in the 2022 budget. Council approval is required as funding exceeds \$40,000.

Please contact Ann Beck, Human Services Supervisor at 360-778-6055 (ABeck@co.whatcom.wa.us) or Kathleen Roy, Assistant Director at 360-778-6007 (KRoy@co.whatcom.wa.us), if you have any questions or concerns regarding this request.

Exhibit B – Amendment #1
(COMPENSATION)

- I. **Source of Funding and Budget:** The source of funding for this contract, in an amount not to exceed \$78,565, is the Washington State Department of Commerce Emergency Solutions Grant (ESG-CV) (\$38,151) and local document recording fees (\$40,414). COMMERCE and the State of Washington are not liable for claims or damages arising from Subcontractor's performance of this contract. The budget for this contract is as follows:

*Item Description:	Documents Required with Invoices	Budget
Housing Case Management for Clients in Emergency Shelter	County approved hourly billing rate and timesheet showing total hours and hours charged to this contract.	\$55,028
Transportation: Costs of participant's travel to and from medical care, employment, child care, certain legal services, or other eligible essential service facilities. These costs include the following: travel on public transportation, mileage allowance for service workers to visit program participants, travel costs of staff to accompany or assist program participants to use public transportation, transporting staff or participants to/from vaccine events.	Mileage log to include: name of staff member, date of travel, starting point and destination of travel, number of miles traveled, federal reimbursement rate (per www.gsa.gov) and a brief description of the purpose of travel. Ground transportation will be reimbursed at cost when accompanied by receipts. Reimbursement requests for allowable travel must include name of staff member or participant ID number, dates of travel, starting point and destination, brief description of the purpose.	\$600
Shelter Operations: Computer and technology equipment, insurance, security, food, furnishings, utilities, maintenance (including minor and routine repairs), and other supplies necessary for the operation of the emergency shelter.	Paid invoices or receipts	\$15,795
SUBTOTAL		\$71,423
**Indirect costs at 7% of ESG-CV funded items (\$35,650)		\$2,495.50
**Indirect costs not covered by ESG-CV (3% of \$35,650 and paid with DRF)		\$1,069.50
**Indirect costs at 10% of DRF funded items (\$35,773)		\$3,577
Subtotal Indirect Costs		\$7,142
TOTAL		\$78,565

*Changes to the line item budget that exceed 10% of the line item amount must be approved in writing by the County.

**Indirect costs shall not exceed the currently approved indirect cost allocation plan.

II. **Invoicing:**

- The Contractor shall submit itemized invoices on a monthly basis in a format approved by the County. Monthly invoices must be submitted by the 15th of the month, following the month of service. Invoices submitted for payment must include the items identified in the table above.
- The Contractor shall submit invoices to HL-BusinessOffice@co.whatcom.wa.us.
- Payment by the County will be considered timely if it is made within 30 days of the receipt and acceptance of billing information from Contractor. The county may withhold payment of an invoice if the Contractor submits it more than 30 days after the expiration of this contract.
- Invoices must include the following statement, with an authorized signature and date: **I certify that the materials have been furnished, the services rendered, or the labor performed as described on this invoice.**
- Duplication of Billed Costs or Payments for Service:** The Contractor shall not bill the County for services performed or provided under this contract, and the County shall not pay the Contractor, if the Contractor has been or will be paid by any other source, including grants, for those costs used to perform or provide the services in this contract. The Contractor is responsible for any audit exceptions or disallowed amounts paid as a result of this contract.

FROM: Erika Lautenbach, Director

RE: Lydia Place – Shelter Grant Contract Amendment #4

DATE: August 11, 2021

Attached is a contract amendment between Whatcom County and Lydia Place for your review and signature.

▪ **Background and Purpose**

This contract provides year-round funding for four motel rooms to be used as emergency housing for families experiencing unsheltered homelessness as well as a variable number of additional motel rooms to be used on an as-needed basis for families with children who would otherwise experience unsheltered homelessness. A portion of the funds will be used to provide supportive services to help those families exit motel rooms into permanent, stable housing. This amendment extends the contract for an additional year and increases funding by \$288,000 from the Washington State Department of Commerce Consolidated Homeless Grant's (CHG) new Hotel Leasing and Rapid ReHousing funds, intended to support an estimated 45 families in a variable number of additional motel rooms.

▪ **Funding Amount and Source**

Funding for this contract, in an amount not to exceed \$493,074, is provided by the Washington State Department of Commerce Shelter, Consolidated Homeless, and Emergency Solutions COVID-19 (CFDA 14.231) Grants and local Document Recording Fees. These funds will be included in the 2022 budget. Council approval is required as the additional funding provided by this amendment exceeds 10% of the approved budget.

Please contact Ann Beck, Human Services Supervisor at 360-778-6055 (ABeck@co.whatcom.wa.us) or Kathleen Roy, Assistant Director at 360-778-6007 (KRoy@co.whatcom.wa.us), if you have any questions or concerns regarding this request.

EXHIBIT "A" – Amendment #4
(SCOPE OF WORK)

I. Background

The 2021 Whatcom County Point In Time Count confirmed that unsheltered homelessness continues to be detrimental to the wellbeing of families with children in Whatcom County. The Whatcom Homeless Service Center's monthly housing pool reports have shown that the number of families waiting for permanent housing placements, including families living in cars and other places not meant for human habitation, has grown in recent years. Homelessness is a traumatic experience that is associated with a wide range of negative health outcomes; however, there are very few resources in our community dedicated to families who are experiencing homelessness together. This contract provides year-round funding for four motel rooms and additional funding for as-needed motel rooms to be used as emergency housing for families experiencing unsheltered homelessness and also funds supportive services to help those families exit their motel rooms into permanent housing. The shelter provided to these families, as well as the case management services, will allow them to avoid the dangerous conditions of unsheltered homelessness and give them opportunities to connect with services that improve their odds of achieving long term housing stability.

II. Statement of Work

Lydia Place will utilize funding in this contract to make four motel rooms available throughout the year, and more rooms on an as-needed basis to local families with children who are experiencing unsheltered homelessness. The anticipated number of families to be served annually is 45 households. While the families are staying in the motel rooms, they will benefit from supportive services from Lydia Place staff who will help the families identify and overcome their barriers to stable housing.

Lydia Place staff will connect clients to case managers within 48 hours of their referral from Whatcom County's coordinated entry homelessness response system. Weekly meetings between families and Lydia Place staff will outline goals and objectives that are important to the client. The program will strive to find permanent housing within 30 days, although some families will require more time to locate appropriate housing and resolve challenges to housing placement.

III. Program Requirements

Client referrals will be issued by the Whatcom Homeless Service Center's coordinated entry homelessness response system. All services will be provided in compliance with:

1. Washington State Department of Commerce Shelter Program Grant Guidelines:
<https://www.commerce.wa.gov/serving-communities/homelessness/office-of-family-and-adult-homelessness/shelter-program-grant/>
2. Washington State Department of Commerce ESG-CV Emergency Solutions Grant Guidelines, including periodic updates to the guidelines which can be accessed at:
[https://www.commerce.wa.gov/wp-content/uploads/2020/06/Commerce-ESG-CV - Overview.pdf](https://www.commerce.wa.gov/wp-content/uploads/2020/06/Commerce-ESG-CV-Overview.pdf) and <https://www.commerce.wa.gov/wp-content/uploads/2016/10/hau-esg-guidelines-2017-2019.pdf>.
3. Washington State Department of Commerce Consolidated Homeless Grant Guidelines, including periodic updates to the guidelines which can be accessed at:
<https://deptofcommerce.app.box.com/s/4d1ilui45uqljmhseufez4flxqv1q6b>

IV. Reporting Requirements

The contractor shall submit quarterly reports* utilizing the Interim Housing Facility Report template accessed on the Whatcom County Health Department Housing Program website at the following link: <https://www.whatcomcounty.us/DocumentCenter/View/51905/WCHDQuarterlyESreportLPmotelshelter>

Quarterly reports are due April 15th, July 15th, October 15th, and January 15th.

*Contractors will be notified via email of updates to this quarterly reporting template, which will be posted on the website.

Reports will include the following information:

- A. Unique households sheltered over the quarter.
- B. Number of nights that the four rooms were in use.
- C. Length of stay for each household at their time of exit (mean and median).
- D. Percent of exiting guests that are enrolled or participated in new activities/programs that have been shown to increase housing retention.
- E. Number of exits over the quarter and the destination type for each exiting household.
- F. Number of new households that became sheltered over the quarter and the type of housing condition they were in prior to entry to motel room.

EXHIBIT “B” – Amendment #4
(COMPENSATION)

- I. **Budget and Source of Funding:** The source of funding for this contract, in an amount not to exceed \$493,074 is the Washington State Department of Commerce Shelter Program, Consolidated Homeless and Emergency Solutions COVID-19 (CFDA 14.231) Grants as well as local Document Recording Fees (DRF). COMMERCE and the State of Washington are not liable for claims or damages arising from Subcontractor’s performance of this contract. The budget for this contract is as follows:

*Cost Description	Documents Required Each Invoice	Budget
ESG Funding – Personnel	GL Detail	\$13,030
ESG Funding – Operating resources (including office/program supplies, phone service, internet, utilities, etc.)		\$1,083
ESG Funding – As Needed Motel Rooms		\$100,000
Subtotal		\$114,113
**Indirect @ 7%		\$7,987
ESG-CV Total		\$122,100
DRF Funding – Case Management and Supportive Services (Personnel)	GL Detail	\$5,358
**Indirect (DRF Funding @ 10%)		\$536
DRF Total		\$5,894
Shelter Grant Funding – Four Annual Motel Rooms (does not include indirect costs)	GL Detail	\$81,760
Shelter Grant Total		\$81,760
CHG Funding – Hotel Leasing and Rapid Re-housing: As-Needed Hotel/Motel Rooms (Room Rental Costs Only)	GL Detail	\$241,200
**Indirect (CHG Funding @ 10%)		\$24,120
Reimbursement to motels for damages over and above normal wear and tear		\$18,000
CHG Total		\$283,320
TOTAL		\$493,074

* The Contractor may transfer funds among budget line items in an amount up to 10% of the total budget. Changes to the line item budget that exceed 10% of the contract amount must be approved in writing by the County.

** In no instance shall indirect costs exceed the amount indicated above.

II. **Invoicing**

- The Contractor shall submit itemized invoices on a monthly basis in a format approved by the County. Monthly invoices must be submitted by the 15th of the month, following the month of service. Invoices submitted for payment must include the items identified in the table above.
- Contractor shall submit invoices to (include contract/PO#) to HL-BusinessOffice@co.whatcom.wa.us.
- Payment by the County will be considered timely if it is made within 30 days of the receipt and acceptance of billing information from Contractor. The County may withhold payment of an invoice if the Contractor submits it more than 30 days after the expiration of this contract.
- Invoices must include the following statement, with an authorized signature and date: **I certify that the materials have been furnished, the services rendered, or the labor performed as described on this invoice.**
- Duplication of Billed Costs or Payments for Service: The Contractor shall not bill the County for services performed or provided under this contract, and the County shall not pay the Contractor, if the Contractor has been or will be paid by any other source, including grants, for those costs used to perform or provide the services in this contract. The Contractor is responsible for any audit exceptions or disallowed amounts paid as a result of this contract.

Attachments: Staff Memo, Amendment

MEMO TO: County Council Members

CC: Satpal Sidhu, County Executive
Tyler Schroeder, Deputy Executive

FROM: Melissa Keeley, Human Resources Manager

DATE: November 24, 2021

SUBJECT: Teamsters Local 231 – Master Collective Bargaining Agreement Amendment 2022

The County and Union have agreed to renew all terms and conditions of the 2019-2021 Collective Bargaining Agreement through 2022 with a few amendments. We are pleased to have reached a quick settlement agreement consistent with budget authority.

This amendment represents 453 employees throughout the County and includes Administrative Services, the Elected Offices, the Courts staff, clerical staff in the Health Department, Parks & Recreation, Planning, Public Defender, Public Works, clerical staff in the Sheriff's Office, and clerical staff in the WSU Extension office.

Highlights are summarized below:

Wages

3% across the board wage increase in January 2022

Health and Welfare Benefits

Monthly County contribution to medical increased from \$1,291 to \$1,313.20

Holidays

Observation of 11 holidays following State holiday schedule to include the addition of Juneteenth National Independence Day

Lump Sum

The first full pay period in April 2022, each active employee on payroll will receive a one-time lump sum payment in the amount of \$1,000.

Market Study

The parties agree to work on a collaborative market/comparable study during 2022.

Should you have any questions, I am available by email at mkeeley@co.whatcom.wa.us or at extension 5305

**LETTER OF UNDERSTANDING
BY AND BETWEEN
WHATCOM COUNTY, WASHINGTON
AND
TEAMSTERS LOCAL 231**

This Letter of Understanding is by and between Whatcom County ("the County") and Teamsters Local 231 ("the Union") regarding the Master Collective Bargaining Agreement ("CBA") dated April 23, 2019 - December 31, 2021.

The parties have met, conferred, and bargained as required by law to extend the CBA through December 31, 2022 as follows:

The parties agree to renew all terms and conditions of the 2019-2021 CBA as provided below:

1. Effective the first full pay period in January 2022, each wage step in all ranges of the 2021 hourly matrix shall increase by 3%.
2. Section **8.04a(1) County Contribution** will be modified as follows:
For the calendar year 2022, based on the preceding month's hours, the County shall pay the monthly premium cost of \$1,313.20 to fund the Washington Teamsters Welfare Trust Plan "B" and optional Plan "D" Time Loss Plan.
3. Section **15.02 Holiday Schedule** will be modified as follows:

New Year's Day	Veteran's Day
Martin Luther King's Birthday	Thanksgiving Day
President's Day	Day after Thanksgiving
Memorial Day	Day before Christmas
<i>Juneteenth National Independence Day (NEW)</i>	Christmas Day
Independence Day	Personal Holiday
Labor Day	
4. Effective the first full pay period in April 2022, each active employee on payroll will receive a one-time lump sum payment in the amount of one thousand dollars (\$1,000).

During the life of this agreement, should the County provide a lump sum payment to any other group of employees represented or non-represented, not including interest arbitration and the newly certified Public Defenders unit who have not received a wage increase since January 2020, that is greater than the one thousand-dollar (\$1000.00) lump sum payment as referenced in #4 of this agreement, the County shall provide the same lump sum payment to employees covered by this agreement.

5. In 2022, the parties agree to work on a collaborative market/comparable study for positions covered under the Whatcom County Master Collective Bargaining Agreement between Whatcom County and Teamsters Union Local 231. The Union and the County shall create a committee. The committee shall include two (2) Union Representatives, and up to three (3) Union bargaining unit members appointed by the Union. The County may appoint up to an equal number of County representatives for the committee.
 - a. The Committee will work collaboratively in an effort to establish comparables, define a methodology, and determine the appropriate number of benchmark positions necessary to provide a comprehensive study of Whatcom County Master Bargaining Unit positions.

- b. The Committee will collect data, research and perform the market/comparable study together and shall establish a meeting format and location for work sessions.
 - c. The parties agree that the market/comparable study will be relevant information in negotiations for a successor agreement and as referenced in section 6 below, although neither party is bound by the results of the study regarding any specific proposals or positions taken during negotiations.
6. The Parties agree to continue negotiations in good faith during 2022 for a 2023 Agreement.
 7. During the life of this agreement, should the County provide a cost of living increase to any group of employees not currently bound by a collective bargaining agreement, represented or non-represented, not including interest arbitration and the newly certified Public Defenders unit who have not received a cost of living increase since January 2020, greater than the increase specified in this agreement, the County shall apply the same cost of living increase to employees covered by the Teamsters Master CBA.
 8. Any disputes regarding application of this LOU are subject to the CBA grievance procedure.
 9. This LOU may be amended at any time with mutual agreement of the County and the Union.

The foregoing being the agreement of the Parties is in addition to such other provisions in the CBA. This Letter of Understanding shall be effective as of the date of Council approval and shall supersede any conflicting provision in the CBA.

RE: Opportunity Council – Whatcom Homeless Service Center Contract Amendment #7

DATE: November 16, 2021

Attached is a contract amendment between Whatcom County and Opportunity Council for your review and signature.

- **Background and Purpose**

The Whatcom Homeless Service Center (WHSC) provides coordinated entry for the homeless housing system. The WHSC makes referrals to partner agencies for housing case management services, cultivates and maintains relationships with local landlords, and serves as liaison for homeless housing activities to the network of service providers and other community stakeholders. The purpose of this amendment is to extend the contract for an additional year and increase funding and program outcomes and measures to support an annual budget, outcomes, and measures, rather than those indicated in the previously approved six-month budget.

- **Funding Amount and Source**

Funding for this contract, in an amount not to exceed \$1,650,248 is provided by the Washington State Department of Commerce Consolidated Homeless Grant, (including supplemental Shelter and RRH Grant), the federal Emergency Solutions-CV Grant (CFDA 14.231), local document recording fees, the Veteran's Assistance Fund, and HB 1406. These funds will be included in the 2022 budget. Council approval is required as funding for this amendment exceeds 10% of the approved budget.

Please contact Ann Beck, Human Services Supervisor at 360-778-6055 (ABeck@co.whatcom.wa.us) or Kathleen Roy, Assistant Director at 360-778-6007 (KRoy@co.whatcom.wa.us), if you have any questions or concerns regarding this request.

EXHIBIT “A” – Amendment #7
(SCOPE OF WORK)

I. Background

The annual Point in Time Count of homelessness conducted in January 2021, counted 859 people in Whatcom County who were experiencing homeless. Throughout the year, hundreds more face the prospect of losing their homes. The Whatcom Homeless Service Center (WHSC) was established in 2008 to serve as a centralized point of entry for homelessness prevention and re-housing services for Whatcom County residents. The WHSC implements programs and services identified in Whatcom County’s Plan to End Homelessness. The WHSC authorizes and coordinates service delivery among partner agencies.

The WHSC is modeled upon evidence-based approaches to homelessness diversion, permanent supportive housing and rapid re-housing (RRH). WHSC housing services work to shift the focus from reliance upon night-by-night emergency shelters and costly institutional facilities in meeting the needs of those experiencing or at risk of homelessness to diversion and permanent housing. By serving as a centralized coordinating system of access to homeless services and by transitioning homeless individuals and families as quickly as possible to permanent housing, WHSC will improve outcomes for homeless individuals and families and ensure more efficient use of public resources.

WHSC programs include both rental assistance and case management components. WHSC staff manages the Housing Pool list, authorizes and distributes rent subsidies to local landlords on behalf of participating clients, makes referrals to partner agencies for housing case management services, manages the Homeless Management Information Services (HMIS) data collection and reporting requirements, cultivates and maintains relationships with local landlords, and serves as liaison for homeless housing activities to the network of service providers and other community stakeholders.

Services will be provided to low-income and/or homeless individuals and households residing in Whatcom County. Individuals and households served must meet the eligibility requirements of the program funding sources as further referenced in Section IV. – Program Requirements.

II. Definitions

Diversion	Diversion can be the first response to resolving a homelessness episode by focusing on re-housing without a family entering a longer-term housing program. Diversion starts with problem-solving conversations to identify a household’s own strengths and resources, and services are tailored to meet each family’s most critical needs to quickly move into housing. Diversion services can include short-term/one-time financial support (i.e., deposit assistance, flex funding, etc.).
Housing Pool	Quasi wait list that serves clients waiting for housing services based on their needs and available resources instead of a first come, first served basis.
HMIS	Washington’s Homeless Management Information Services – A database used by housing service providers to collect and manage data gathered during the course of providing housing assistance to homeless people or households at risk of losing their housing.
Partner Agencies	Agencies that contract with Whatcom County for the delivery of housing case management services, in connection with the WHSC.
Permanent Supportive Housing Population	Chronically homeless individuals/households with significant barriers to permanent housing; will receive deep rent subsidies and intensive housing case management. Chronically Homeless Families (CHF) have one head of household that meets the definition of chronic homelessness (as stated in CHG Guidelines), and one or more dependents defined as minor children, disabled dependents, or full-time students. Household income may not exceed 50% of area median gross income as defined by HUD.

ESG-CV Prevention	An intervention providing financial assistance including rent, utilities, and case management, for households at imminent risk of or at-risk of, homelessness.
Rapid Re-housing (RRH)	An intervention in which families and individuals experiencing homelessness are rapidly connected to permanent housing through a tailored package of assistance that may include the use of time-limited financial assistance including rent and utilities, and targeted supportive services including case management.
ESG-CV Rapid Rehousing and Prevention; Other Financial Assistance	Inclusive of: rental application fees charge by the owner to all applicants; security deposits; last month's rent; moving costs; utility deposits; utility payments; landlord and volunteer incentives.
SHB 1406	SHB 1406 legislation passed in 2019 provides the ability for local communities to retain a portion of sales tax collections to use for rental assistance, operations of new units of supportive and affordable housing, and acquiring, rehabilitating, or construction of affordable housing, for residents with an income of 60% or less of the area median income.
Whatcom Homeless Service Center (WHSC)	WHSC programs provide (1) centralized coordinated system of access (2) re-housing of those who become homeless (3) supportive services promoting housing stability and self-sufficiency, and (4) data management and tracking information for people receiving homeless housing services in Whatcom County and according to the Washington State Department of Commerce HMIS data collection requirements. WHSC works in conjunction with Partner Agencies to operate all activities necessary to operate as a system.

III. Statement of Work

The Contractor will be responsible for programmatic and administrative services associated with the operation of the Whatcom Homeless Service Center. Administrative and programmatic services include all activities necessary to operate the WHSC as set forth in Sections 1 and 2, below:

1. Administrative Responsibilities

The Contractor will:

- A. Provide all Human Resource and administrative services to WHSC employees (e.g., payroll, office supplies and equipment, space rental, IT support, etc.).
- B. Perform all disbursement, accounting, financial management, and reporting functions necessary to manage the funds allocated to WHSC operations. Contractor will maintain a strong internal control system over rental subsidy disbursements to assure funds are used as intended by this contract. Contractor will maintain written policies and procedures describing how these transactions are processed.
- C. Support WHSC and other housing partners in the management of the HMIS, providing troubleshooting and technical assistance, as needed.
- D. Maintain all client financial and eligibility documentation as described/referenced in Exhibit E.
- E. Maintain all financial documentation as required in Exhibits B and E.
- F. Ensure that the processes and internal controls are operating as planned and make policy adjustments, as needed.

- G. Conduct program evaluation as directed by the Whatcom County Health Department to ensure WHSC programs are meeting the Whatcom County Plan to End Homelessness and subsequent Local Plan Updates.
- H. Send staff to trainings, conferences, and technical assistance events related to carrying out the functions of WHSC and the goals of Whatcom County's Plan to End Homelessness and subsequent Local Plan Updates.

2. Programmatic Services

The Contractor will:

- A. Manage a coordinated, centralized homeless housing intake system working collaboratively with Opportunity Council's Community Service Division and Northwest Youth Services intake staff.
- B. Maintain a Housing Pool, which includes prioritizing households for services according to need and available resources and managing a wait list.
- C. Determine and document client eligibility for WHSC rent subsidies and case management services based on funding source requirements.
- D. Refer eligible clients to partner agencies for housing case management services.
- E. Administer rental assistance – authorize and disburse subsidies based on housing assessment and determination of need and eligibility. Authorize and disburse emergency assistance per procedures as outlined in the WHSC Policies and Procedures Manual.
- F. Develop the local permanent housing inventory component of the homeless housing system – Search out new housing stock, cultivate and maintain relationships with participating landlords; provide housing search assistance to partner agencies as needed; work to create innovative housing models using best and promising practices as identified by the National Alliance to End Homelessness or other nationally recognized homeless housing organizations.
- G. Manage the community-wide HMIS data system in compliance with the standards set forth by the Washington State Department of Commerce.
- H. Provide guidance to the partner agency staff to ensure effective operations of the WHSC system; keeping partner agencies updated in policies and procedures, HMIS requirements, research and best practices related to homeless housing, specific program requirements, and confidentiality laws.
- I. Provide leadership to community stakeholders regarding activities focused on homelessness and housing stability.
- J. Compile and keep up-to-date WHSC Policies and Procedures Manual consistent with the Washington State Department of Commerce Consolidated Homeless Grant and the Emergency Solutions Grant-CV.
- K. Chair Whatcom County Coalition to End Homelessness meetings and sponsored activities in partnership with Whatcom County Health Department.
- L. Complete the Whatcom County Coalition to End Homelessness Annual Report (Point In Time Count Report). This annual report shall be completed and ready for distribution no later than June

1. An exception to this will be made in extenuating circumstances when the annual Point in Time Count is not required by the WA State Department of Commerce.

IV. Program Requirements

Under the terms of this contract, the Contractor will:

1. Comply with all Washington State Department of Commerce Consolidated Homeless Grant requirements, policies and procedures in the Consolidated Homeless Grant Guidelines including periodic updates to the Guidelines which can be accessed at: <http://www.commerce.wa.gov/serving-communities/homelessness/consolidated-homeless-grant/>
2. Comply with all of the Department of Housing and Urban Development (HUD) coordinated entry requirements as per the HUD Notice Establishing Additional Requirements for a Continuum of Care Centralized or Coordinated Assessment System regarding the development and implementation of coordinated entry. This Notice, under the authority of 24 CFR 578.7(a)(8), establishes new requirements that Continuums of Care (CoC) and recipients of CoC Program and Emergency Solutions Grant (ESG) Program funding must meet and relate to development and use of a coordinated entry system. This Notice can be accessed at: <https://www.hudexchange.info/resource/5208/notice-establishing-additional-requirements-for-a-continuum-of-care-centralized-or-coordinated-assessment-system/>
3. Comply with relevant State of Washington, Department of Commerce Emergency Solutions COVID-19 Grant guidelines, including periodic updates to the guidelines which can be accessed at: <https://deptofcommerce.app.box.com/s/s2w7o65zm4buhz2bk7t0n3femanl7tml> and <https://deptofcommerce.app.box.com/s/fsmf4pmwkroszjt702j1l9cfvkv5ixmq>
 - a. Per ESG-CV Guideline 3.3.1 Landlord Incentives funding may be used to pay for landlord incentives that are reasonable and necessary to assist households in obtaining housing.
 - i. Grantees may not use ESG-CV funds to pay landlord incentives an amount that exceeds three times the rent charged for the unit.
 - ii. Landlord incentives can include signing bonuses, security deposits, costs to repair damages, and extra cleaning fees.
 - iii. Grantee must maintain program records that document that program costs are reasonable.
4. Commit to ending homelessness in Whatcom County by:
 - a. Prioritizing unsheltered homeless households for services (as per CHG Guidelines)
 - b. Assessing each household's housing needs and facilitating housing stability with the goal of obtaining or maintaining a permanent housing (as per CHG Guidelines)
 - c. Employing a progressive engagement service model (as per CHG Guidelines)
 - d. Prioritizing households that are literally homeless when using diversion rent assistance
5. Comply with eligibility requirements for serving veterans as set forth in Whatcom County Code 2.150 and 2.152, and RCW 73.08.005 and incorporated into this contract by reference. Contractor shall determine eligibility based on Items A and B of WCC 2.150.025 and shall not have utilization of Item C for determining veteran eligibility. The point of contact for the Veteran's Assistance Fund is:

Elizabeth Witowski, Veterans Specialist

Whatcom County Health Department
360-778-6050
EWitowsk@co.whatcom.wa.us

6. Comply with eligibility requirements for serving people with rental assistance that are at risk of homelessness as set forth in Substitute House Bill 1406, and RCW 82.14.540, to include an area median income of 60% or less for those served.
7. Comply with Special Conditions of Commerce Grants incorporated herein as Exhibit E.
8. Comply with Special Terms and Conditions of Washington State Department of Health COVID-19 Local CARES Grant, incorporated herein as Exhibit G.
9. Comply with Business Associate Agreement incorporated herein as Exhibit D.
10. Comply with state confidentiality laws and regulations.
11. Ensure that all costs incurred comply with CHG Guidelines as specified in Section IV.(A.) and IV.(C.) above and Exhibit E.
12. Commit to reporting complete quality data that is timely, truthful and accurate (as per CHG Guidelines and HMIS User Agreement).
13. Consequences of non-compliance with CHG and ESG-CV Guidelines as per the WA State Department of Commerce:
 - a. If Commerce determines that a Grantee is failing to comply with Guidelines, Terms and Conditions, Commerce will notify Grantee that Grantee will receive technical assistance and be required to respond to a corrective action plan to address and remedy the non-compliance.
 - b. If the Grantee is still out of compliance after the technical assistance, Commerce may move the Grantee into a probationary period with a second corrective action plan and may reduce the grant total by 20%.
 - c. If the Grantee remains out of compliance after the probation period, Commerce may terminate the grant per the General Terms and Conditions TERMINATION FOR CAUSE.
14. 1406 Rental Assistance Guidelines:
 - a. 1406 will be used to fund rental assistance only for households meeting 1406 eligibility criteria as outlined in RCW 82.14.540 who have been prioritized by the coordinated entry process.
 - b. Funding is to be used to in accordance with the recommendations of the Whatcom County Housing Advisory Committee.
 - c. Households must have an income of 60% or less of the area median income.
 - d. Rental assistance can be provided for up to 6 months per households, with the option to request extensions.
 - e. Case management services are not an allowable expense of this funding.

V. Program Outcomes

The following are the expected outcomes of WHSC in conjunction with its partner agencies. These outcomes are for a calendar year period. The WHSC must ensure rental subsidies are available to support the expected numbers of households served as follows:

1. Re-Housing

- A. At least 217 new households that have become homeless receive short term rent subsidies and case management.
 - B. Fewer than 15% of re-housing households will re-enter homelessness one year after stable exit from the program.
2. Permanent Supportive Housing Population
- A. At least 62 households receive housing subsidies and case management.
 - a. Two units will be from Opportunity Council owned housing units.
 - B. Up to 4 chronically homeless (CH) families with children (FWC) will receive housing subsidies funded by a subcategory of CHG funding designated specifically for permanent supportive housing for CH FWC. Case management for these families will be funded separately and provided by the Opportunity Council Community Services Program.
 - C. At least 85% retain their housing for six months.
3. Emergency Shelter
- A. At least 72 households will receive emergency shelter assistance.
 - B. At least 50% of those households are placed in permanent housing after receiving shelter services.
4. Veterans
- A. At least 110 Veterans will receive housing subsidies and case management support. These outcomes will be achieved by leveraging additional funding resources.
 - B. Fewer than 15% of Veterans served will re-enter homelessness one year after stable exit from the program.
5. 1406 Funds
- A. At least 15 households will receive rental assistance for permanent housing projects to prevent or end homelessness.

VI. Reporting Requirements

1. The Contractor shall submit two quarterly reports in formats approved by the County showing the Contractor's progress toward achieving the outcomes identified above. Quarterly reports are due on April 30th, July 31st, October 31st, and January 31st.

The quarterly fund reports will include:

- A. Re-Housing:
 - i. # of households that have received short term rent subsidies and case management this quarter and year to date
 - ii. # of households who re-enter homelessness after stably exiting from re-housing services
 - iii. # of households that are Veterans
 - iv. # and % of households who re-enter homelessness within one year after stably exiting from re-housing services
- B. Permanent Supportive Housing Assistance

- i. # of households receiving housing subsidies and case management this quarter and year to date
 - ii. # of units will be from Opportunity Council owned housing units
 - iii. # and % who retain their housing for six months
- C. Permanent Supportive Housing for Chronically Homeless Families with Children
 - i. # of households receiving housing subsidies and case management this quarter and year to date
 - ii. # and % who retain their housing for six months
 - iii. # of households who re-entered homelessness after receiving PSH for CH FWC subsidies
- D. Emergency Shelter
 - i. # of households who received emergency shelter assistance this quarter and year to date
 - ii. # and % of households who received emergency shelter were placed in permanent housing
- E. Veterans
 - i. # of Veterans who received housing assistance this quarter and year to date
 - ii. # of Veterans who re-enter homelessness one y
 - iii. ear after stably exiting the program
 - iv. # of honorably discharged Veterans with at least 180 days of service provided housing assistance
 - v. # of honorably discharged Veterans with less than 180 days of service provided housing assistance
 - vi. # of general or under-honorably discharged Veterans with at least 180 days of service provided housing assistance

2. The quarterly coordinated entry reports will include the following measures and targets:

- A. Number of households (HHs) added to Housing Pool (HP): Annual Target 600
- B. Number of households (HHs) added to Housing Pool (HP) this quarter:
- C. Number of HHs removed from HP due to successful project referral: Annual Target 485
- D. Number of HHs removed from HP due to inactivity: Annual Target 150
- E. Of all HHs removed from HP over reporting quarter, the percent that accepted a project referral: Annual Target 75%
- F. Number of partner agency referral requests made for households that included minors: Annual Target 150
- G. Number of partner agency referral requests made for households that did not include minors: Annual Target 200
- H. Number of partner agency referral requests made during this quarter (total): Annual Target 350
- I. Mean number of days to complete referral requests for households that include minors: 3
- J. Median number of days to complete referral requests for households that include minors: 1

- K. Mean number of days to fill referral for households that do not include minors: 4
- L. Median number of days to fill referral for households that do not include minors: 1
- M. Number of new staff trained to conduct intake assessments: 5
- N. Number of multi-agency housing partner meetings to improve function of local homeless/housing system with participation from WHSC staff: 36
- O. Number of community stakeholder meetings with participation from WHSC staff: 36
- P. Amount of rental assistance (including eviction prevention, motel rentals, and other stabilizing financial services) dispersed on behalf of partner agency's low-income households: Annual Target is \$950,000
- Q. Cumulative number of homeless households provided with emergency shelter in the form of motel stays between January 1, 2022 – December 31, 2022: 80
- R. Dates and descriptions of community or partner meetings with significant input from WHSC staff

Additionally, projects falling under specific intervention types and funded by the Consolidated Homeless Grant (CHG) will be expected to meet or make progress meeting the System Performance Measures and benchmarks as required by the Washington State Department of Commerce. System-wide performance measures and benchmarks specific to intervention type (HMIS Project type) are provided on the CHG System Performance Measures Chart on our website at: http://www.whatcomcounty.us/910/Housing_Program. Changes to the CHG System-wide Mandatory Performance Measures may be made without contract amendment. In the event of an update, the County will provide email notification with a link to the current chart on the County's website. CHG Grantees must meet or demonstrate progress towards established performance measure targets by meeting the indicated benchmarks. Targeted Prevention performance measures are exempted from the Department of Commerce's "Consequences of Non-Compliance" listed in IV.(K.) above wherein "Grantee" refers to the County being the CHG recipient.

EXHIBIT “B” – Amendment #7
(COMPENSATION)

- I. **Budget and Source of Funding:** Funding for this contract may not exceed \$1,650,248. The source of funding is local document recording fees (\$212,881), Washington State Department of Commerce Consolidated Homeless and Hotel & RRH Grants (\$808,547), Emergency Solutions COVID-19 (CFDA 14.231) Grant (\$402,320), the Veterans Assistance Fund (\$76,500), and HB 1406 (\$150,000). COMMERCE and the State of Washington are not liable for claims or damages arising from Subcontractor’s performance of this contract. The budget for this contract period (01/01/2022 – 12/31/2022) is as follows:

2022 Whatcom Homeless Service Center Contract Budget		
*Line Item	Documentation Required with Invoice	Budget

Veteran's Fund (Admin. 12%)		\$8,196	
Indirect and Admin. Subtotal:		\$176,812	
TOTAL BUDGET:		\$1,650,248	

*Changes to the line item budget that exceed 10% of the line item amount must be approved in writing by the County. Indirect and fringe benefit cost rates shall not exceed the current federally approved rates. All allocated direct costs must be based on approved cost allocation plan.

**During this grant period, a minimum of 36% of Rental Assistance – CHG Funds - must be paid out to for-profit or nonprofit private landlords, as required by the Washington Department of Commerce.

II. Invoicing

1. The Contractor shall submit invoices to (include contract/PO #) HL-BusinessOffice@co.whatcom.wa.us.
2. The Contractor shall submit itemized invoices on a monthly basis in a format approved by the County. Monthly invoices must be submitted by the 15th of the month following the month of service. Invoices submitted for payment must include the items identified in the table above. Send invoice-related communication to Barbara Johnson-Vinna.
3. The Contractor shall submit the following monthly deliverables on time with truthful, accurate information:
 - a. 2021-23 Report from HMIS included with the Invoice (refer to related section of the CHG Guidelines addressing this requirement).
4. Payment by the County will be considered timely if it is made within 30 days of the receipt and acceptance of billing information from Contractor. The County may withhold payment of an invoice if the Contractor submits it more than 30 days after the expiration of this contract.

This is not research and development.

5. Invoices must include the following statement, with an authorized signature and date:

I certify that the materials have been furnished, the services rendered, or the labor performed as described on this invoice.

6. Duplication of Billed Costs or Payments for Service: The Contractor shall not bill the County for services performed or provided under this contract, and the County shall not pay the Contractor, if the Contractor has been or will be paid by any other source, including grants, for those costs used to perform or provide the services in this contract. The Contractor is responsible for any audit exceptions or disallowed amounts paid as a result of this contract.

MEMORANDUM

TO: Satpal Sidhu, County Executive

FROM: Tawni Helms, Administrative Coordinator

RE: Mount Baker Foothills Chamber of Commerce

DATE: November 17, 2021

Enclosed is the Contract for Services between Whatcom County and Mount Baker Foothills Chamber of Commerce for your review and signature.

- **Background and Purpose**

Contractor has received Convention Center funding to pay for the operations of the Mount Baker Foothills Visitor Center.

- **Funding Amount and Source**

Funding in the amount of \$110,000 will come from the Convention Center Fund (aka Lodging Tax) as recommended by the Lodging Tax Advisory Committee and approved on September 14, 2021 by the Whatcom County Council through Resolution No. 2021-037.

- **Differences from Previous Contract**

No substantive changes.

Please contact Tawni Helms at extension 5208, if you have any questions or concerns regarding the terms of this agreement.

CONTRACT FOR SERVICES
Between Whatcom County and Mount Baker Foothills Chamber of Commerce

Mount Baker Foothills Chamber of Commerce, hereinafter called **Contractor** and Whatcom County, hereinafter referred to as **County**, agree and contract as set forth in this Agreement, including:

General Conditions, pp. 3 to 13,
Exhibit A (Scope of Work), p. 14
Exhibit B (Compensation), p. 15
Exhibit C (Sample Survey), p. 16
Exhibit D (Certificate of Insurance) p. 17.

Copies of these items are attached hereto and incorporated herein by this reference as if fully set forth herein.

The term of this Agreement shall commence on the 1st day of January, 2022, and shall, unless terminated or renewed as elsewhere provided in the Agreement, terminate on the 31st day of December, 2022.

The general purpose or objective of this Agreement is to: support Mount Baker Foothills Chamber for the operational costs associated with the Visitor Center, as more fully and definitively described in Exhibit A hereto. The language of Exhibit A controls in case of any conflict between it and that provided here.

The maximum consideration for the initial term of this agreement or for any renewal term shall not exceed **\$110,000**. The Contract Number, set forth above, shall be included on all billings or correspondence in connection therewith.

Contractor acknowledges and by signing this contract agrees that the Indemnification provisions set forth in Paragraphs 11.1, 21.1, 30.1, 31.2, 32.1, 34.2, and 34.3, if included, are totally and fully part of this contract and have been mutually negotiated by the parties.

Each signatory below to this Contract warrants that he/she is the authorized agent of the respective party; and that he/she has the authority to enter into the contract and to bind the party thereto.

IN WITNESS WHEREOF, the parties have executed this Agreement this ____ day of _____, 2022.

GENERAL CONDITIONS

Series 00-09: Provisions Related to Scope and Nature of Services

0.1 Scope of Services:

The Contractor agrees to provide to the County services and any materials as set forth in the project narrative identified as Exhibit "A", during the agreement period. No material, labor, or facilities will be furnished by the County, unless otherwise provided for in the Agreement.

Series 10-19: Provisions Related to Term and Termination

10.1 Term:

Services provided by Contractor prior to or after the term of this contract shall be performed at the expense of Contractor and are not compensable under this contract unless both parties hereto agree to such provision in writing. The term of this Agreement may be extended by mutual agreement of the parties; provided, however, that the Agreement is in writing and signed by both parties.

10.2 Extension:

The duration of this Agreement may be extended by mutual written consent of the parties, for a period of up to one year, and for a total of no longer than three years.

11.1 Termination for Default:

If the Contractor defaults by failing to perform any of the obligations of the contract or becomes insolvent or is declared bankrupt or commits any act of bankruptcy or insolvency or makes an assignment for the benefit of creditors, the County may, by depositing written notice to the Contractor in the U.S. mail, first class postage prepaid, terminate the contract, and at the County's option, obtain performance of the work elsewhere. Termination shall be effective upon Contractor's receipt of the written notice, or within three (3) days of the mailing of the notice, whichever occurs first. If the contract is terminated for default, the Contractor shall not be entitled to receive any further payments under the contract until all work called for has been fully performed. Any extra cost or damage to the County resulting from such default(s) shall be deducted from any money due or coming due to the Contractor. The Contractor shall bear any extra expenses incurred by the County in completing the work, including all increased costs for completing the work, and all damage sustained, or which may be sustained by the County by reason of such default.

11.2 Termination for Reduction in Funding:

In the event that funding from State, Federal or other sources is withdrawn, reduced, or limited in any way after the effective date of this Agreement, and prior to its normal completion, the County may summarily terminate this Agreement as to the funds withdrawn, reduced, or limited, notwithstanding any other termination provisions of this Agreement. If the level of funding withdrawn, reduced or limited is so great that the County deems that the continuation of the programs covered by this Agreement is no longer in the best interest of the County, the County may summarily terminate this Agreement in whole, notwithstanding any other termination provisions of this Agreement. Termination under this section shall be effective upon receipt of written notice as specified herein, or within three days of the mailing of the notice, whichever occurs first.

11.3 Termination for Public Convenience:

The County may terminate the Agreement in whole or in part whenever the County determines, in its sole discretion, that such termination is in the interests of the County. Whenever the Agreement is terminated in accordance with this paragraph, the Contractor shall be entitled to payment for actual work performed at unit contract prices for completed items of work. An equitable adjustment in the contract price for partially completed items of work will be made, but such adjustment shall not include provision for loss of anticipated profit on deleted or uncompleted work. Termination of this Agreement by the County at any time during the term, whether for default or convenience, shall not constitute breach of contract by the County.

Series 20-29: Provisions Related to Consideration and Payments

20.1 Accounting and Payment for Contractor Services:

Payment to the Contractor for services rendered under this Agreement shall be as set forth in Exhibit "B." Where Exhibit "B" requires payments by the County, payment shall be based upon written claims supported, unless otherwise provided in Exhibit "B," by documentation of units of work actually performed and amounts earned, including, where appropriate, the actual number of days worked each month, total number of hours for the month, and the total dollar payment requested, so as to comply with municipal auditing requirements.

Unless specifically stated in Exhibit "B" or approved in writing in advance by the official executing this Agreement for the County or his designee (hereinafter referred to as the "Administrative Officer") the County will not reimburse the Contractor for any costs or expenses incurred by the Contractor in the performance of this contract. Where required, the County shall, upon receipt of appropriate documentation, compensate the Contractor, no more often than monthly, in accordance with the County's customary procedures, pursuant to the fee schedule set forth in Exhibit "B."

21.1 Taxes:

The Contractor understands and acknowledges that the County will not withhold Federal or State income taxes. Where required by State or Federal law, the Contractor authorizes the County to withhold for any taxes other than income taxes (i.e., Medicare). All compensation received by the Contractor will be reported to the Internal Revenue Service at the end of the calendar year in accordance with the applicable IRS regulations. It is the responsibility of the Contractor to make the necessary estimated tax payments throughout the year, if any, and the Contractor is solely liable for any tax obligation arising from the Contractor's performance of this Agreement. The Contractor hereby agrees to indemnify the County against any demand to pay taxes arising from the Contractor's failure to pay taxes on compensation earned pursuant to this Agreement.

The County will pay sales and use taxes imposed on goods or services acquired hereunder as required by law. The Contractor must pay all other taxes, including, but not limited to, Business and Occupation Tax, taxes based on the Contractor's gross or net income, or personal property to which the County does not hold title. The County is exempt from Federal Excise Tax.

22.1 Withholding Payment:

In the event the County's Administrative Officer determines that the Contractor has failed to perform any obligation under this Agreement within the times set forth in this Agreement, then the County may withhold from amounts otherwise due and payable to Contractor the amount determined by the County as necessary to cure the default, until the Administrative Officer determines that such failure to perform has been cured. Withholding under this clause shall not be deemed a breach entitling Contractor to termination or damages, provided that the County promptly gives notice in writing to the Contractor of the nature of the default or failure to perform, and in no case more than 10 days after it determines to withhold amounts otherwise due. A determination of the Administrative Officer set forth in a notice to the Contractor of the action required and/or the amount required to cure any alleged failure to perform shall be deemed conclusive, except to the extent that the Contractor acts within the times and in strict accord with the provisions of the Disputes clause of this Agreement. The County may act in accordance with any determination of the Administrative Officer which has become conclusive under this clause, without prejudice to any other remedy under the Agreement, to take all or any of the following actions: (1) cure any failure or default, (2) to pay any amount so required to be paid and to charge the same to the account of the Contractor, (3) to set off any amount so paid or incurred from amounts due or to become due the Contractor. In the event the Contractor obtains relief upon a claim under the Disputes clause, no penalty or damages shall accrue to Contractor by reason of good faith withholding by the County under this clause.

23.1 Labor Standards:

The Contractor agrees to comply with all applicable state and federal requirements, including but not limited to those pertaining to payment of wages and working conditions, in accordance with RCW 39.12.040, the Prevailing Wage Act; the Americans with Disabilities Act of 1990; the Davis-Bacon Act; and the Contract Work Hours and Safety Standards Act providing for weekly payment of prevailing wages,

minimum overtime pay, and providing that no laborer or mechanic shall be required to work in surroundings or under conditions which are unsanitary, hazardous, or dangerous to health and safety as determined by regulations promulgated by the Federal Secretary of Labor and the State of Washington.

Series 30-39: Provisions Related to Administration of Agreement

30.1 Independent Contractor:

The Contractor's services shall be furnished by the Contractor as an independent contractor, and nothing herein contained shall be construed to create a relationship of employer-employee or master-servant, but all payments made hereunder and all services performed shall be made and performed pursuant to this Agreement by the Contractor as an independent contractor.

The Contractor acknowledges that the entire compensation for this Agreement is specified in Exhibit "B" and the Contractor is not entitled to any benefits including, but not limited to: vacation pay, holiday pay, sick leave pay, medical, dental, or other insurance benefits, or any other rights or privileges afforded to employees of the County. The Contractor represents that he/she/it maintains a separate place of business, serves clients other than the County, will report all income and expense accrued under this contract to the Internal Revenue Service, and has a tax account with the State of Washington Department of Revenue for payment of all sales and use and Business and Occupation taxes collected by the State of Washington.

Contractor will defend, indemnify and hold harmless the County, its officers, agents or employees from any loss or expense, including, but not limited to, settlements, judgments, setoffs, attorneys' fees or costs incurred by reason of claims or demands because of breach of the provisions of this paragraph

30.2 Assignment and Subcontracting:

The performance of all activities contemplated by this agreement shall be accomplished by the Contractor. No portion of this contract may be assigned or subcontracted to any other individual, firm or entity without the express and prior written approval of the County.

30.3 No Guarantee of Employment:

The performance of all or part of this contract by the Contractor shall not operate to vest any employment rights whatsoever and shall not be deemed to guarantee any employment of the Contractor or any employee of the Contractor or any subcontractor or any employee of any subcontractor by the County at the present time or in the future.

31.1 Ownership of Items Produced and Public Records Act:

All writings, programs, data, public records or other materials prepared by the Contractor and/or its consultants or subcontractors, in connection with performance of this Agreement, shall be the sole and absolute property of the County. If the Contractor creates any copyrightable materials or invents any patentable property, the Contractor may copyright or patent the same, but the County retains a royalty-free, nonexclusive and irrevocable license to reproduce, publish, recover, or otherwise use the materials or property and to authorize other governments to use the same for state or local governmental purposes. Contractor further agrees to make research, notes, and other work products produced in the performance of this Agreement available to the County upon request.

Ownership. Any and all data, writings, programs, public records, reports, analyses, documents, photographs, pamphlets, plans, specifications, surveys, films or any other materials created, prepared, produced, constructed, assembled, made, performed or otherwise produced by the Contractor or the Contractor's subcontractors or consultants for delivery to the County under this Contract shall be the sole and absolute property of the County. Such property shall constitute "work made for hire" as defined by the U.S. Copyright Act of 1976, 17 U.S.C. § 101, and the ownership of the copyright and any other intellectual property rights in such property shall vest in the County at the time of its creation. Ownership of the intellectual property includes the right to copyright, patent, and register, and the ability to transfer these rights. Material which the Contractor uses to perform this Contract but is not created, prepared, constructed, assembled, made, performed or otherwise produced for or paid for by the County is owned by the Contractor and is not "work made for hire" within the terms of this Agreement.

Public Records Act. This Contract and all records associated with this Contract shall be available for inspection and copying by the public where required by the Public Records Act, Chapter 42.56 RCW (the "Act"). To the extent that public records then in the custody of the Contractor are needed for the County to respond to a request under the Act, as determined by the County, the Contractor agrees to make them promptly available to the County at no cost to the County. If the Contractor considers any portion of any record provided to the County under this Agreement, whether in electronic or hard copy form, to be protected from disclosure under law, the Contractor shall clearly identify any specific information that it claims to be confidential or proprietary. If the County receives a request under the Act to inspect or copy the information so identified by the Contractor and the County determines that release of the information is required by the Act or otherwise appropriate, the County's sole obligations shall be to notify the Contractor (a) of the request and (b) of the date that such information will be released to the requester unless the Contractor obtains a court order to enjoin that disclosure

pursuant to RCW 42.56.540. If the Contractor fails to timely obtain a court order enjoining disclosure, the County will release the requested information on the date specified.

The County has, and by this section assumes, no obligation on behalf of the Contractor to claim any exemption from disclosure under the Act. The County shall not be liable to the Contractor for releasing records not clearly identified by the Contractor as confidential or proprietary. The County shall not be liable to the Contractor for any records that the County releases in compliance with this section or in compliance with an order of a court of competent jurisdiction.

The Contractor shall be liable to the requester for any and all fees, costs, penalties or damages imposed or alleged as a result of the Contractor's failure to provide adequate or timely records.

This provision and the obligations it establishes shall remain in effect after the expiration of this contract.

31.2 Patent/Copyright Infringement:

Contractor will defend and indemnify the County from any claimed action, cause or demand brought against the County, to the extent such action is based on the claim that information supplied by the Contractor infringes any patent or copyright. The Contractor will pay those costs and damages attributable to any such claims that are finally awarded against the County in any action. Such defense and payments are conditioned upon the following:

A. The Contractor shall be notified promptly in writing by the County of any notice of such claim.

B. Contractor shall have the right, hereunder, at its option and expense, to obtain for the County the right to continue using the information, in the event such claim of infringement, is made, provided no reduction in performance or loss results to the County.

32.1 Confidentiality:

The Contractor, its employees, subcontractors, and their employees shall maintain the confidentiality of all information provided by the County or acquired by the Contractor in performance of this Agreement, except upon the prior written consent of the County or an order entered by a court after having acquired jurisdiction over the County. Contractor shall immediately give to the County notice of any judicial proceeding seeking disclosure of such information. Contractor shall indemnify and hold harmless the County, its officials, agents or employees from all loss or expense, including, but not limited to, settlements, judgments, setoffs, attorneys' fees and costs resulting from Contractor's breach of this provision.

33.1 Right to Review:

This contract is subject to review by any Federal, State or County auditor. The County or its designee shall have the right to review and monitor the financial and service components of this program by whatever means are deemed expedient by the Administrative Officer or by the County Auditor's Office. Such review may occur with or without notice and may include, but is not limited to, on-site inspection by County agents or employees, inspection of all records or other materials which the County deems pertinent to the Agreement and its performance, and any and all communications with or evaluations by service recipients under this Agreement. The Contractor shall preserve and maintain all financial records and records relating to the performance of work under this Agreement for three (3) years after contract termination, and shall make them available for such review, within Whatcom County, State of Washington, upon request. Contractor also agrees to notify the Administrative Officer in advance of any inspections, audits, or program review by any individual, agency, or governmental unit whose purpose is to review the services provided within the terms of this Agreement. If no advance notice is given to the Contractor, then the Contractor agrees to notify the Administrative Officer as soon as it is practical.

34.1 Insurance:

The Contractor shall, at its own expense, obtain and continuously maintain the following insurance coverage for the duration of this contract, which shall include insurance against claims for injuries to persons or damage to property which may arise from or in connection with the performance of the work hereunder by the Contractor, its agents, representatives, subcontractors or employees. All insurers providing such insurance shall have an A.M. Best Rating of not less than A- (or otherwise be acceptable to the County) and be licensed to do business in the State of Washington and admitted by the Washington State Insurance Commissioner. Coverage limits shall be the minimum limits identified in this Contract or the coverage limits provided or available under the policies maintained by the Contractor without regard to this Contract, whichever are greater.

1. Commercial General Liability

Property Damage	\$500,000.00, per occurrence
General Liability & bodily injury	\$1,000,000.00, per occurrence
Annual Aggregate	\$2,000,000.00

At least as broad as ISO form CG 00 01 or the equivalent, which coverage shall include personal injury, bodily injury and property damage for Premises Operations, Products and Completed Operations, Personal/Advertising Injury, Contractual Liability, Independent Contractor Liability, medical payments and Stop Gap/Employer's Liability. Coverage shall not exclude or contain sub-limits less than the minimum limits required, unless approved in writing by the County.

2. Professional Liability

Professional Liability - \$1,000,000 per occurrence

- a. Obtain professional liability insurance covering the negligent acts, errors, or omissions of the professional in connection with the performance of services to the County. If any insurance policy or the professional liability insurance is written on a claims made form, its retroactive date, and that of all subsequent renewals, shall be no later than the effective date of this Contract. The policy shall state that coverage is claims made, and state the retroactive date. Claims-made form coverage shall be maintained by the Contractor for a minimum of 36 months following the Completion Date or earlier termination of this Contract, and the Contractor shall annually provide the Contracting Agency with proof of renewal. If renewal of the claims made form of coverage becomes unavailable, or economically prohibitive, the Contractor shall purchase an extended reporting period ("tail") or execute another form of guarantee acceptable to the Contracting Agency to assure financial responsibility for liability for services performed.

3. Business Automobile Liability

\$1,000,000.00 Minimum, per occurrence

\$2,000,000.00 Minimum, Annual Aggregate

Contractor shall provide auto liability coverage for owned, non-owned and hired autos using ISO Business Auto Coverage form CA 00 01 or the exact equivalent with a limit of no less than \$1,000,000 per accident. If Contractor owns no vehicles this requirement may be met through a non-owned auto Endorsement to the CGL policy.

4. Additional Insurance Requirements and Provisions

- a. All insurance policies shall provide coverage on an occurrence basis.
- b. Additional Insureds. Whatcom County, its departments, elected and appointed officials, employees, agents and volunteers shall be included as additional insureds on Contractor's and Contractor's subcontractors' insurance policies by way of endorsement for the full available limits of insurance required in this contract or maintained by the Contractor and subcontractor, whichever is greater.
- c. Primary and Non-contributory Insurance. Contractor shall provide primary insurance coverage and the County's insurance shall be non-contributory. Any insurance, self-insured retention, deductible, risk retention or insurance pooling maintained or participated in by the County shall be excess and non-contributory to Contractor's insurance.
- d. Waiver of Subrogation. The insurance policy shall provide a waiver of subrogation with respect to each insurance policy maintained under this Contract. When required by an insurer, or if a policy condition does not permit Contractor to enter into a pre-loss agreement to waive subrogation without an endorsement, then Contractor agrees to notify the insurer and obtain such endorsement. This requirement shall not apply to any policy which includes a condition expressly prohibiting waiver of subrogation by the insured or which voids coverage should the Contractor enter into such a waiver of subrogation on a pre-loss basis.
- e. Review of and Revision of Policy Provisions. Upon request, the Contractor shall provide a full and complete certified copy of all requested insurance policies to the County. The County reserves the right, but not the obligation, to revise any insurance requirement, including but not limited to limits, coverages and endorsements, or to reject any insurance policies which fail to meet the requirements of this Contract. Additionally, the County reserves the right, but not the obligation, to review and reject any proposed insurer providing coverage based upon the insurer's financial condition or licensing status in Washington.
- f. Verification of Coverage/Certificates and Endorsements. The Contractor shall furnish the County with a certificate of insurance and endorsements required by this contract. The certificates and endorsements for each policy shall be signed by a person authorized by the insurer to bind coverage on its behalf. The certificate and endorsements for each insurance policy

are to be on forms approved by the County prior to commencement of activities associated with the contract. The certificate and endorsements, and renewals thereof, shall be attached hereto as Exhibit "C". If Exhibit C is not attached, the Contractor must submit the certificate and endorsements required in this contract to the County prior to the commencement of any work on the contracted project. A certificate alone is insufficient proof of the required insurance; endorsements must be included with the certificate. The certificate of insurance must reflect the insurance required in this contract, including appropriate limits, insurance coverage dates, per occurrence, and in the description of operations, include the County project, Whatcom County, its departments, officials, employees, agents and volunteers as additional insureds, primary, non-contributory, and waiver of subrogation.

- g. The County must be notified immediately in writing of any cancellation of the policy, exhaustion of aggregate limits, notice of intent not to renew insurance coverage, expiration of policy or change in insurer carrier. Contractor shall always provide the County with a current copy of the certificate and endorsements throughout the duration of the contract.
- h. No Limitation on Liability. The insurance maintained under this Contract shall not in any manner limit the liability or qualify the liabilities or obligations of the Contractor to the coverage provided by such insurance, or otherwise limit the County's recourse to any remedy available at law or equity.
- i. Payment Conditioned on Insurance and Failure to Maintain Insurance. Compensation and/or payments due to the Contractor under this Contract are expressly conditioned upon the Contractor's compliance with all insurance requirements. Failure on the part of the Contractor to maintain the insurance as required shall constitute a material breach of contract. Payment to the Contractor may be suspended in the event of non-compliance, upon which the County may, after giving five business days' notice to the Contractor to correct the breach, immediately terminate the contract or, at its discretion, procure or renew such insurance and pay any and all premiums in connection therewith, with any sums so expended to be repaid to the County on demand or offset against funds due the Contractor. Upon receipt of evidence of Contractor's compliance, payments not otherwise subject to withholding or set-off will be released to the Contractor.
- j. Workers' Compensation. The Contractor shall maintain Workers' Compensation coverage as required under the Washington State Industrial Insurance Act, RCW Title 51, for all Contractors' employees, agents and volunteers eligible for such coverage under the Industrial Insurance Act.
- k. Failure of the Contractor to take out and/or maintain required insurance shall not relieve the Contractor or subcontractors from any liability under the contract, nor shall the insurance requirements be construed to conflict with or otherwise limit the obligations concerning indemnification. The County does not waive any insurance requirements even in the event the certificate or endorsements provided by the Contractor were insufficient or inadequate proof of coverage but not objected to by the County. The County's failure to confirm adequate proof of insurance requirements does not constitute a waiver of the Contractor's insurance requirements under this Contract.
- l. Availability of Contractor Limits. If the Contractor maintains higher insurance limits than the minimums shown above, the County shall be insured for the full available limits, including Excess or Umbrella liability maintained by the Contractor, irrespective of whether such limits maintained by the Contractor are greater than those required by this contract or whether any certificate furnished to the County evidences limits of liability lower than those maintained by the Contractor.
- m. Insurance for Subcontractors. If the Contractor subcontracts (if permitted in the contract) any portion of this Contract, the Contractor shall include all subcontractors as insureds under its policies or shall require separate certificates of insurance and policy endorsements from each subcontractor. Insurance coverages by subcontractors must comply with the insurance requirements of the Contractor in this contract and shall be subject to all of the requirements stated herein, including naming the County as additional insured.
- n. The Contractor agrees Contractor's insurance obligation shall survive the completion or termination of this Contract for a minimum period of three years.

34.3 Defense & Indemnity Agreement. To the fullest extent permitted by law, the Contractor agrees to indemnify, defend and hold the County

and its departments, elected and appointed officials, employees, agents and volunteers, harmless from and against any and all claims, damages, losses and expenses, including but not limited to court costs, attorney's fees, and alternative dispute resolution costs, for any personal injury, for any bodily injury, sickness, disease, or death and for any damage to or destruction of any property (including the loss of use resulting therefrom) which: 1) are caused in whole or in part by any error, act or omission, negligent or otherwise, of the Contractor, its employees, agents or volunteers or Contractor's subcontractors and their employees, agents or volunteers; or 2) directly or indirectly arise out of or occur in connection with performance of this Contract or 3) are based upon the Contractor's or its subcontractors' use of, presence upon, or proximity to the property of the County. This indemnification obligation of the Contractor shall not apply in the limited circumstance where the claim, damage, loss, or expense is caused by the sole negligence of the County.

Should a court of competent jurisdiction determine that this contract is subject to RCW 4.24.115, then in the event of concurrent negligence of the Contractor, its subcontractors, employees or agents, and the County, its employees or agents, this indemnification obligation of the Contractor shall be valid and enforceable only to the extent of the negligence of the Contractor, its subcontractors, employees, and agents. This indemnification obligation of the Contractor shall not be limited in any way by the Washington State Industrial Insurance Act, RCW Title 51, or by application of any other workmen's compensation act, disability benefit act or other employee benefit act, and the Contractor hereby expressly waives any immunity afforded by such acts.

It is further provided that no liability shall attach to the County by reason of entering into this contract, except as expressly provided herein. The parties specifically agree that this Contract is for the benefit of the parties only and this Contract shall create no rights in any third party. The County reserves the right, but not the obligation, to participate in the defense of any claim, damages, losses, or expenses, and such participation shall not constitute a waiver of Contractor's indemnity obligations under this Agreement.

In the event the Contractor enters into subcontracts to the extent allowed under this Contract, the Contractor's subcontractors shall indemnify the County on a basis equal to or exceeding Contractor's indemnity obligations to the County. The Contractor shall pay all attorney's fees and expenses incurred by the County in establishing and enforcing the County's rights under this indemnification provision, whether or not suit was instituted.

The Contractor agrees all Contractor's indemnity obligations shall survive the completion, expiration or termination of this Agreement. The foregoing indemnification obligations of the Contractor are a material inducement to County to enter into this Agreement and are reflected in the Contractor's compensation.

By signing this contract, the Contractor acknowledges that it has freely negotiated and agreed to the indemnification requirements to defend, indemnify and hold harmless the County from all claims and suits including those brought against the County by the Contractor's own employees, arising from this contract.

35.1 Non-Discrimination in Employment:

The County's policy is to provide equal opportunity in all terms, conditions and privileges of employment for all qualified applicants and employees without regard to race, color, creed, religion, national origin, sex, sexual orientation (including gender identity), age, marital status, disability, or veteran status. The Contractor shall comply with all laws prohibiting discrimination against any employee or applicant for employment on the grounds of race, color, creed, religion, national origin, sex, sexual orientation (including gender identity), age, marital status, disability, political affiliation, or veteran status, except where such constitutes a bona fide occupational qualification.

Furthermore, in those cases in which the Contractor is governed by such laws, the Contractor shall take affirmative action to ensure that applicants are employed, and treated during employment, without regard to their race, color, creed, religion, national origin, sex, age, marital status, sexual orientation (including gender identity), disability, or veteran status, except where such constitutes a bona fide occupational qualification. Such action shall include, but not be limited to: advertising, hiring, promotions, layoffs or terminations, rate of pay or other forms of compensation benefits, selection for training including apprenticeship, and participation in recreational and educational activities. In all solicitations or advertisements for employees placed by them or on their behalf, the Contractor shall state that all qualified applicants will receive consideration for employment without regard to race, color, religion, sex or national origin.

The foregoing provisions shall also be binding upon any subcontractor, provided that the foregoing provision shall not apply to contracts or subcontractors for standard commercial supplies or raw materials, or to sole proprietorships with no employees.

35.2 Non-Discrimination in Client Services:

The Contractor shall not discriminate on the grounds of race, color, creed, religion, national origin, sex, age, marital status, sexual orientation (including gender identity), disability, or veteran status; or deny an individual or business any service or benefits under this Agreement unless otherwise allowed by applicable law; or subject an individual or business to segregation or separate treatment in any manner related to his/her/its receipt any service or services or other benefits provided under this Agreement unless otherwise allowed by applicable law; or deny an individual or business an opportunity to participate in any program provided by this Agreement unless otherwise allowed by applicable law.

36.1 Waiver of Noncompetition:

Contractor irrevocably waives any existing rights which it may have, by contract or otherwise, to require another person or corporation to refrain from submitting a proposal to or performing work or providing supplies to the County, and contractor further promises that it will not in the future, directly or indirectly, induce or solicit any person or corporation to refrain from submitting a bid or proposal to or from performing work or providing supplies to the County.

36.2 Conflict of Interest:

If at any time prior to commencement of, or during the term of this Agreement, Contractor or any of its employees involved in the performance of this Agreement shall have or develop an interest in the subject matter of this Agreement that is potentially in conflict with the County's interest, then Contractor shall immediately notify the County of the same. The notification of the County shall be made with sufficient specificity to enable the County to make an informed judgment as to whether or not the County's interest may be compromised in any manner by the existence of the conflict, actual or potential. Thereafter, the County may require the Contractor to take reasonable steps to remove the conflict of interest. The County may also terminate this contract according to the provisions herein for termination.

37.1 Administration of Contract:

This Agreement shall be subject to all laws, rules, and regulations of the United States of America, the State of Washington, and political subdivisions of the State of Washington. The Contractor also agrees to comply with applicable federal, state, county or municipal standards for licensing, certification and operation of facilities and programs, and accreditation and licensing of individuals.

The County hereby appoints, and the Contractor hereby accepts, the Whatcom County Executive, and his or her designee, as the County's representative, hereinafter referred to as the Administrative Officer, for the purposes of administering the provisions of this Agreement, including the County's right to receive and act on all reports and documents, and any auditing performed by the County related to this Agreement. The Administrative Officer for purposes of this agreement is:

Tawni Helms, Administrative Coordinator
Whatcom County Executive's Office
311 Grand Avenue, Suite 108
Bellingham, WA 98225

37.2 Notice:

Any notices or communications required or permitted to be given by this Contract must be (i) given in writing and (ii) personally delivered or mailed, by prepaid, certified mail or overnight courier, or transmitted by electronic mail transmission (including PDF), to the party to whom such notice or communication is directed, to the mailing address or regularly-monitored electronic mail address of such party as follows:

PARTY 1: Mount Baker Foothills Chamber of Commerce and Visitor Information Center
Rebecca Boonstra, Executive Director
P.O. Box 866
Maple Falls, WA 98266
360-371-5004
info@mtbakerchamber.org

PARTY 2: Tawni Helms, Administrative Coordinator
Whatcom County Executive's Office
311 Grand Avenue, Suite 108
Bellingham, WA 98225
360-778-5208
thelms@co.whatcom.wa.us

Any such notice or communication shall be deemed to have been given on (i) the day such notice or communication is personally delivered, (ii) three (3) days after such notice or communication is mailed by prepaid certified or registered mail, (iii) one (1) working

day after such notice or communication is sent by overnight courier, or (iv) the day such notice or communication is sent electronically, provided that the sender has received a confirmation of such electronic transmission. A party may, for purposes of this Agreement, change his, her or its address, email address or the person to whom a notice or other communication is marked to the attention of, by giving notice of such change to the other party pursuant to this Section.

37.3 If agreed by the parties, this Contract may be executed by Email transmission and PDF signature and Email transmission and PDF signature shall constitute an original for all purposes.

38.1 Certification of Public Works Contractor's Status under State Law:

If applicable, Contractor certifies that it has fully met the responsibility criteria required of public works contractors under RCW 39.04.350 (1), which include: (a) having a certificate of registration in compliance with RCW 18.27; (b) having a current state unified business identifier number; (c) if applicable, having industrial insurance coverage for its employees working in Washington as required in Title 51 RCW, an employment security department number as required in Title 50 RCW, and a state excise tax registration number as required in Title 82 RCW; and (d) not being disqualified from bidding on any public works contract under RCW 39.06.010 or 39.12.065 (3).

38.2 Certification Regarding Federal Debarment, Suspension, Ineligibility and Voluntary Exclusion - Lower Tier Covered Transactions:

If applicable, the Contractor further certifies, by executing this contract, that neither it nor its principles is presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participation in this transaction by any Federal department or Agency.

The Contractor also agrees that it shall not knowingly enter into any lower tier covered transactions (a transaction between the Contractor and any other person) with a person who is proposed for debarment, debarred, suspended, declared ineligible, or voluntarily excluded from participation in this covered transaction, and the Contractor agrees to include this clause titled "Certification Regarding Federal Debarment, Suspension, Ineligibility and Voluntary Exclusion - Lower Tier Covered Transaction" without modification, in all lower tier covered transactions and in all solicitations for lower tier transactions.

The "Excluded Parties List System in the System for Award Management (SAM) website is available to research this information at WWW.SAM.GOV. Contractor shall immediately notify Whatcom County if, during the term of this Contract, Contractor becomes debarred.

38.3 E-Verify:

The E-Verify contractor program for Whatcom County applies to contracts of \$100,000 or more and sub contracts for \$25,000 or more if the primary contract is for \$100,000 or more. If applicable, Contractor represents and warrants that it will, for at least the duration of this contract, register and participate in the status verification system for all newly hired employees. The term "employee" as used herein means any person that is hired to perform work for Whatcom County. As used herein, "status verification system" means the Illegal Immigration Reform and Immigration Responsibility Act of 1996 that is operated by the United States Department of Homeland Security, also known as the E-Verify Program, or any other successor electronic verification system replacing the E-Verify Program. Contractor/Seller agrees to maintain records of such compliance and, upon request of the County, to provide a copy of each such verification to the County. Contractor/Seller further represents and warrants that any person assigned to perform services hereunder meets the employment eligibility requirements of all immigration laws of the State of Washington. Contractor/Seller understands and agrees that any breach of these warranties may subject Contractor/Seller to the following: (a) termination of this Agreement and ineligibility for any Whatcom County contract for up to three (3) years, with notice of such cancellation/termination being made public. In the event of such termination/cancellation, Contractor/Seller would also be liable for any additional costs incurred by the County due to contract cancellation or loss of license or permit." Contractor will review and enroll in the E-Verify program through this website: www.uscis.gov

Series 40-49: Provisions Related to Interpretation of Agreement and Resolution of Disputes

40.1 Modifications:

Either party may request changes in the Agreement. Any and all agreed modifications, to be valid and binding upon either party, shall be in writing and signed by both of the parties.

40.2 Contractor Commitments, Warranties and Representations:

Any written commitment received from the Contractor concerning this Agreement shall be binding upon the Contractor, unless otherwise specifically provided herein with reference to this paragraph. Failure of the Contractor to fulfill such a commitment shall render the Contractor liable for damages to the County. A commitment includes, but is not limited to, any representation made prior to execution of this Agreement, whether or not incorporated elsewhere herein by reference, as to performance of services or equipment, prices or options for future acquisition to remain in effect for a fixed period, or warranties.

41.1 Severability:

If any term or condition of this contract or the application thereof to any person(s) or circumstances is held invalid, such invalidity shall not affect other terms, conditions or applications which can be given effect without the invalid term, condition or application. To this end, the terms and conditions of this contract are declared severable.

41.2 Waiver:

Waiver of any breach or condition of this contract shall not be deemed a waiver of any prior or subsequent breach. No term or condition of this contract shall be held to be waived, modified or deleted except by an instrument, in writing, signed by the parties hereto. The failure of the County to insist upon strict performance of any of the covenants and agreements of this Agreement, or to exercise any option herein conferred in any one or more instances, shall not be construed to be a waiver or relinquishment of any such, or any other covenants or agreements, but the same shall be and remain in full force and effect.

42.1 Disputes:

a. General:

Differences between the Contractor and the County, arising under and by virtue of the Contract Documents, shall be brought to the attention of the County at the earliest possible time in order that such matters may be settled or other appropriate action promptly taken. Except for such objections as are made of record in the manner hereinafter specified and within the time limits stated, the records, orders, rulings, instructions, and decisions of the Administrative Officer shall be final and conclusive.

b. Notice of Potential Claims:

The Contractor shall not be entitled to additional compensation which otherwise may be payable, or to extension of time for (1) any act or failure to act by the Administrative Officer or the County, or (2) the happening of any event or occurrence, unless the Contractor has given the County a written Notice of Potential Claim within ten (10) days of the commencement of the act, failure, or event giving rise to the claim, and before final payment by the County. The written Notice of Potential Claim shall set forth the reasons for which the Contractor believes additional compensation or extension of time is due, the nature of the cost involved, and insofar as possible, the amount of the potential claim. Contractor shall keep full and complete daily records of the work performed, labor and material used, and all costs and additional time claimed to be additional.

c. Detailed Claim:

The Contractor shall not be entitled to claim any such additional compensation, or extension of time, unless within thirty (30) days of the accomplishment of the portion of the work from which the claim arose, and before final payment by the County, the Contractor has given the County a detailed written statement of each element of cost or other compensation requested and of all elements of additional time required, and copies of any supporting documents evidencing the amount or the extension of time claimed to be due.

d. Arbitration:

Other than claims for injunctive relief, temporary restraining order, or other provisional remedy to preserve the status quo or prevent irreparable harm, brought by a party hereto (which may be brought either in court or pursuant to this arbitration provision), and consistent with the provisions hereinabove, any claim, dispute or controversy between the parties under, arising out of, or related to this Contract or otherwise, including issues of specific performance, shall be determined by arbitration in Bellingham, Washington, under the applicable American Arbitration Association (AAA) rules in effect on the date hereof, as modified by this Agreement. There shall be one arbitrator selected by the parties within ten (10) days of the arbitration demand, or if not, by the AAA or any other group having similar credentials. Any issue about whether a claim is covered by this Contract shall be determined by the arbitrator. The arbitrator shall apply substantive law and may award injunctive relief, equitable relief (including specific performance), or any other remedy available from a judge but shall not have the power to award punitive damages. Each Party shall pay all their own costs, attorney fees and expenses of arbitration and the parties shall share equally in the Arbitrator's fees and costs. The decision of the arbitrator shall be final and binding and an order confirming the award or judgment upon the award may be entered in any court having jurisdiction. The parties agree that the decision of the arbitrator shall be the sole and exclusive remedy between them regarding any dispute presented or pled before the arbitrator. At the request of either party made not later than forty-five (45) days after the arbitration demand, the parties agree to submit the dispute to nonbinding mediation, which shall not delay the arbitration hearing date; provided, that either party may decline to mediate and proceed with arbitration.

Any arbitration proceeding commenced to enforce or interpret this Contract shall be brought within six years after the initial occurrence giving rise to the claim, dispute, or issue for which arbitration is commenced, regardless of the date of discovery or whether the claim, dispute, or issue was continuing in nature. Claims, disputes, or issues arising more than six years prior to a written request or demand for arbitration issued under this Contract are not subject to arbitration.

- e. The parties may agree in writing signed by both parties that a claim or dispute may be brought in Whatcom County Superior Court rather than mediation or arbitration.

Unless otherwise specified herein, this Contract shall be governed by the laws of Whatcom County and the State of Washington.

43.1 Venue and Choice of Law:

In the event that any litigation should arise concerning the construction or interpretation of any of the terms of this Agreement, the venue of such action of litigation shall be in the courts of the State of Washington in and for the County of Whatcom. This Agreement shall be governed by the laws of the State of Washington.

44.1 Survival:

The provisions of paragraphs 11.1, 11.2, 11.3, 21.1, 22.1, 30.1, 31.1, 31.2, 32.1, 33.1, 34.2, 34.3, 36.1, 40.2, 41.2, 42.1, and 43.1, if utilized, shall survive, notwithstanding the termination or invalidity of this Agreement for any reason.

45.1 Entire Agreement:

This written Agreement, comprised of the writings signed or otherwise identified and attached hereto, represents the entire Agreement between the parties and supersedes any prior oral statements, discussions or understandings between the parties.

EXHIBIT "A"
(SCOPE OF WORK)

The Mount Baker Foothills Chamber of Commerce will use tourism promotion funds to:

1. Fund the operations of the Visitor Center
2. Expenses will include salaries, benefits and marketing/promotion and travel.

Promotional materials regarding the proposed activity must mention that it is made possible in part by a Tourism Promotion Grant from Whatcom County. The scale of this credit should be commensurate with the County's level of financial support. It should include the name and logo of the County. It is not expected that this credit be displayed in all materials, but at a minimum it should be placed in such documents as programs and annual reports.

Within 30 days after the end of the contract term, the Chamber shall submit a final project report (the "Final Project Report") detailing:

- How the evaluation criteria were met by the event
- What elements worked well and which did not.
- Modifications, if any, planned for future activities.
- Summarize the results of the year's activities and accomplishments.
- Provide Budget vs. Actual Financials.

Failure to complete and deliver the Final Project Report in a timely manner may render recipient ineligible for future funding. Pursuant to RCW 67.28.1816, recipients of lodging tax funds must provide the following information:

The estimated number of tourists, persons traveling over fifty miles to the destination, persons remaining at the destination overnight, and lodging stays generated per festival, special event or tourism-related facility owned or sponsored by a nonprofit organization or local jurisdiction.

EXHIBIT "B"
(COMPENSATION)

Maximum consideration for this contract shall be \$110,000. ***The Contract Number shall be included on all billings or correspondence.***

Allowable Expenses include:

Allowable Expenses include:

Wages and benefits	\$ 88,860
Administration (rent, janitor, taxes, office supplies, travel)	\$ 17,600
Marketing/Promotion (website design, maint. & hosting)	<u>\$ 3,540</u>
TOTAL	\$110,000

Mount Baker Foothills Chamber and Visitor Information Center will submit invoices detailing allowable expenditures as outlined in Exhibit A to the Whatcom County Executive's Office. Payment is for reimbursement only and copies of receipts must be attached to invoices. Payment will be made no more than one time per month.

Mount Baker Chamber and Visitor Information Center will also provide Whatcom County with a copy of all brochures and advertisements included with invoices.

EXHIBIT "C"
(Certificate of Insurance)

ATTACHMENT D
Whatcom County Contractor's E-Verify Declaration Form

I. CONTRACTOR INFORMATION

Contractor Name:		Phone:	
Contact Person:		Fax:	
Address:			

II. E-VERIFY ENROLLMENT (check box and submit copy of MOU for verification)

Contractors with funded contracts of \$100,000 or more must be enrolled in E-Verify system. Work related subcontract is \$25,000 or higher. www.uscis.gov/e-verify

☐ Contractor is enrolled in E-Verify; copy of the signed E-Verify Memorandum of Understanding is attached.

I declare under penalty of perjury under the laws of the State of Washington that the foregoing is true and correct, and that I am authorized to bind this entity contractually.

Exhibit D (Certificate of Insurance) p. 17.

Copies of these items are attached hereto and incorporated herein by this reference as if fully set forth herein.

The term of this Agreement shall commence on the 1st day of January, 2022, and shall, unless terminated or renewed as elsewhere provided in the Agreement, terminate on the 31st day of December, 2022.

The general purpose or objective of this Agreement is to: support Northwest Tune-Up for marketing and operational costs associated with the Northwest Tune-Up tourism event, as more fully and definitively described in Exhibit A hereto. The language of Exhibit A controls in case of any conflict between it and that provided here.

The maximum consideration for the initial term of this agreement or for any renewal term shall not exceed **\$50,000**. The Contract Number, set forth above, shall be included on all billings or correspondence in connection therewith.

Contractor acknowledges and by signing this contract agrees that the Indemnification provisions set forth in Paragraphs 11.1, 21.1, 30.1, 31.2, 32.1, 34.2, and 34.3, if included, are totally and fully part of this contract and have been mutually negotiated by the parties.

Each signatory below to this Contract warrants that he/she is the authorized agent of the respective party; and that he/she has the authority to enter into the contract and to bind the party thereto.

IN WITNESS WHEREOF, the parties have executed this Agreement this ____ day of _____, 2022.

Satpal Singh Sidhu, Whatcom County Executive

GENERAL CONDITIONS

Series 00-09: Provisions Related to Scope and Nature of Services

0.1 Scope of Services:

The Contractor agrees to provide to the County services and any materials as set forth in the project narrative identified as Exhibit "A", during the agreement period. No material, labor, or facilities will be furnished by the County, unless otherwise provided for in the Agreement.

Series 10-19: Provisions Related to Term and Termination

10.1 Term:

Services provided by Contractor prior to or after the term of this contract shall be performed at the expense of Contractor and are not compensable under this contract unless both parties hereto agree to such provision in writing. The term of this Agreement may be extended by mutual agreement of the parties; provided, however, that the Agreement is in writing and signed by both parties.

10.2 Extension:

The duration of this Agreement may be extended by mutual written consent of the parties, for a period of up to one year, and for a total of no longer than three years.

11.1 Termination for Default:

If the Contractor defaults by failing to perform any of the obligations of the contract or becomes insolvent or is declared bankrupt or commits any act of bankruptcy or insolvency or makes an assignment for the benefit of creditors, the County may, by depositing written notice to the Contractor in the U.S. mail, first class postage prepaid, terminate the contract, and at the County's option, obtain performance of the work elsewhere. Termination shall be effective upon Contractor's receipt of the written notice, or within three (3) days of the mailing of the notice, whichever occurs first. If the contract is terminated for default, the Contractor shall not be entitled to receive any further payments under the contract until all work called for has been fully performed. Any extra cost or damage to the County resulting from such default(s) shall be deducted from any money due or coming due to the Contractor. The Contractor shall bear any extra expenses incurred by the County in completing the work, including all increased costs for completing the work, and all damage sustained, or which may be sustained by the County by reason of such default.

11.2 Termination for Reduction in Funding:

In the event that funding from State, Federal or other sources is withdrawn, reduced, or limited in any way after the effective date of this Agreement, and prior to its normal completion, the County may summarily terminate this Agreement as to the funds withdrawn, reduced, or limited, notwithstanding any other termination provisions of this Agreement. If the level of funding withdrawn, reduced or limited is so great that the County deems that the continuation of the programs covered by this Agreement is no longer in the best interest of the County, the County may summarily terminate this Agreement in whole, notwithstanding any other termination provisions of this Agreement. Termination under this section shall be effective upon receipt of written notice as specified herein, or within three days of the mailing of the notice, whichever occurs first.

11.3 Termination for Public Convenience:

The County may terminate the Agreement in whole or in part whenever the County determines, in its sole discretion, that such termination is in the interests of the County. Whenever the Agreement is terminated in accordance with this paragraph, the Contractor shall be entitled to payment for actual work performed at unit contract prices for completed items of work. An equitable adjustment in the contract price for partially completed items of work will be made, but such adjustment shall not include provision for loss of anticipated profit on deleted or uncompleted work. Termination of this Agreement by the County at any time during the term, whether for default or convenience, shall not constitute breach of contract by the County.

Series 20-29: Provisions Related to Consideration and Payments

20.1 Accounting and Payment for Contractor Services:

Payment to the Contractor for services rendered under this Agreement shall be as set forth in Exhibit "B." Where Exhibit "B" requires payments by the County, payment shall be based upon written claims supported, unless otherwise provided in Exhibit "B," by documentation of units of work actually performed and amounts earned, including, where appropriate, the actual number of days worked each month, total number of hours for the month, and the total dollar payment requested, so as to comply with municipal auditing requirements.

Unless specifically stated in Exhibit "B" or approved in writing in advance by the official executing this Agreement for the County or his designee (hereinafter referred to as the "Administrative Officer") the County will not reimburse the Contractor for any costs or expenses incurred by the Contractor in the performance of this contract. Where required, the County shall, upon receipt of appropriate documentation, compensate the Contractor, no more often than monthly, in accordance with the County's customary procedures, pursuant to the fee schedule set forth in Exhibit "B."

21.1 Taxes:

The Contractor understands and acknowledges that the County will not withhold Federal or State income taxes. Where required by State or Federal law, the Contractor authorizes the County to withhold for any taxes other than income taxes (i.e., Medicare). All compensation received by the Contractor will be reported to the Internal Revenue Service at the end of the calendar year in accordance with the applicable IRS regulations. It is the responsibility of the Contractor to make the necessary estimated tax payments throughout the year, if any, and the Contractor is solely liable for any tax obligation arising from the Contractor's performance of this Agreement. The Contractor hereby agrees to indemnify the County against any demand to pay taxes arising from the Contractor's failure to pay taxes on compensation earned pursuant to this Agreement.

The County will pay sales and use taxes imposed on goods or services acquired hereunder as required by law. The Contractor must pay all other taxes, including, but not limited to, Business and Occupation Tax, taxes based on the Contractor's gross or net income, or personal property to which the County does not hold title. The County is exempt from Federal Excise Tax.

22.1 Withholding Payment:

In the event the County's Administrative Officer determines that the Contractor has failed to perform any obligation under this Agreement within the times set forth in this Agreement, then the County may withhold from amounts otherwise due and payable to Contractor the amount determined by the County as necessary to cure the default, until the Administrative Officer determines that such failure to perform has been cured. Withholding under this clause shall not be deemed a breach entitling Contractor to termination or damages, provided that the County promptly gives notice in writing to the Contractor of the nature of the default or failure to perform, and in no case more than 10 days after it determines to withhold amounts otherwise due. A determination of the Administrative Officer set forth in a notice to the Contractor of the action required and/or the amount required to cure any alleged failure to perform shall be deemed conclusive, except to the extent that the Contractor acts within the times and in strict accord with the provisions of the Disputes clause of this Agreement. The County may act in accordance with any determination of the Administrative Officer which has become conclusive under this clause, without prejudice to any other remedy under the Agreement, to take all or any of the following actions: (1) cure any failure or default, (2) to pay any amount so required to be paid and to charge the same to the account of the Contractor, (3) to set off any amount so paid or incurred from amounts due or to become due the Contractor. In the event the Contractor obtains relief upon a claim under the Disputes clause, no penalty or damages shall accrue to Contractor by reason of good faith withholding by the County under this clause.

23.1 Labor Standards:

The Contractor agrees to comply with all applicable state and federal requirements, including but not limited to those pertaining to payment of wages and working conditions, in accordance with RCW 39.12.040, the Prevailing Wage Act; the Americans with Disabilities Act of 1990; the Davis-Bacon Act; and the Contract Work Hours and Safety Standards Act providing for weekly payment of prevailing wages,

minimum overtime pay, and providing that no laborer or mechanic shall be required to work in surroundings or under conditions which are unsanitary, hazardous, or dangerous to health and safety as determined by regulations promulgated by the Federal Secretary of Labor and the State of Washington.

Series 30-39: Provisions Related to Administration of Agreement

30.1 Independent Contractor:

The Contractor's services shall be furnished by the Contractor as an independent contractor, and nothing herein contained shall be construed to create a relationship of employer-employee or master-servant, but all payments made hereunder and all services performed shall be made and performed pursuant to this Agreement by the Contractor as an independent contractor.

The Contractor acknowledges that the entire compensation for this Agreement is specified in Exhibit "B" and the Contractor is not entitled to any benefits including, but not limited to: vacation pay, holiday pay, sick leave pay, medical, dental, or other insurance benefits, or any other rights or privileges afforded to employees of the County. The Contractor represents that he/she/it maintains a separate place of business, serves clients other than the County, will report all income and expense accrued under this contract to the Internal Revenue Service, and has a tax account with the State of Washington Department of Revenue for payment of all sales and use and Business and Occupation taxes collected by the State of Washington.

Contractor will defend, indemnify and hold harmless the County, its officers, agents or employees from any loss or expense, including, but not limited to, settlements, judgments, setoffs, attorneys' fees or costs incurred by reason of claims or demands because of breach of the provisions of this paragraph

30.2 Assignment and Subcontracting:

The performance of all activities contemplated by this agreement shall be accomplished by the Contractor. No portion of this contract may be assigned or subcontracted to any other individual, firm or entity without the express and prior written approval of the County.

30.3 No Guarantee of Employment:

The performance of all or part of this contract by the Contractor shall not operate to vest any employment rights whatsoever and shall not be deemed to guarantee any employment of the Contractor or any employee of the Contractor or any subcontractor or any employee of any subcontractor by the County at the present time or in the future.

31.1 Ownership of Items Produced and Public Records Act:

All writings, programs, data, public records or other materials prepared by the Contractor and/or its consultants or subcontractors, in connection with performance of this Agreement, shall be the sole and absolute property of the County. If the Contractor creates any copyrightable materials or invents any patentable property, the Contractor may copyright or patent the same, but the County retains a royalty-free, nonexclusive and irrevocable license to reproduce, publish, recover, or otherwise use the materials or property and to authorize other governments to use the same for state or local governmental purposes. Contractor further agrees to make research, notes, and other work products produced in the performance of this Agreement available to the County upon request.

Ownership. Any and all data, writings, programs, public records, reports, analyses, documents, photographs, pamphlets, plans, specifications, surveys, films or any other materials created, prepared, produced, constructed, assembled, made, performed or otherwise produced by the Contractor or the Contractor's subcontractors or consultants for delivery to the County under this Contract shall be the sole and absolute property of the County. Such property shall constitute "work made for hire" as defined by the U.S. Copyright Act of 1976, 17 U.S.C. § 101, and the ownership of the copyright and any other intellectual property rights in such property shall vest in the County at the time of its creation. Ownership of the intellectual property includes the right to copyright, patent, and register, and the ability to transfer these rights. Material which the Contractor uses to perform this Contract but is not created, prepared, constructed, assembled, made, performed or otherwise produced for or paid for by the County is owned by the Contractor and is not "work made for hire" within the terms of this Agreement.

Public Records Act. This Contract and all records associated with this Contract shall be available for inspection and copying by the public where required by the Public Records Act, Chapter 42.56 RCW (the "Act"). To the extent that public records then in the custody of the Contractor are needed for the County to respond to a request under the Act, as determined by the County, the Contractor agrees to make them promptly available to the County at no cost to the County. If the Contractor considers any portion of any record provided to the County under this Agreement, whether in electronic or hard copy form, to be protected from disclosure under law, the Contractor shall clearly identify any specific information that it claims to be confidential or proprietary. If the County receives a request under the Act to inspect or copy the information so identified by the Contractor and the County determines that release of the information is required by the Act or otherwise appropriate, the County's sole obligations shall be to notify the Contractor (a) of the request and (b) of the date that such information will be released to the requester unless the Contractor obtains a court order to enjoin that disclosure

pursuant to RCW 42.56.540. If the Contractor fails to timely obtain a court order enjoining disclosure, the County will release the requested information on the date specified.

The County has, and by this section assumes, no obligation on behalf of the Contractor to claim any exemption from disclosure under the Act. The County shall not be liable to the Contractor for releasing records not clearly identified by the Contractor as confidential or proprietary. The County shall not be liable to the Contractor for any records that the County releases in compliance with this section or in compliance with an order of a court of competent jurisdiction.

The Contractor shall be liable to the requester for any and all fees, costs, penalties or damages imposed or alleged as a result of the Contractor's failure to provide adequate or timely records.

This provision and the obligations it establishes shall remain in effect after the expiration of this contract.

31.2 Patent/Copyright Infringement:

Contractor will defend and indemnify the County from any claimed action, cause or demand brought against the County, to the extent such action is based on the claim that information supplied by the Contractor infringes any patent or copyright. The Contractor will pay those costs and damages attributable to any such claims that are finally awarded against the County in any action. Such defense and payments are conditioned upon the following:

A. The Contractor shall be notified promptly in writing by the County of any notice of such claim.

B. Contractor shall have the right, hereunder, at its option and expense, to obtain for the County the right to continue using the information, in the event such claim of infringement, is made, provided no reduction in performance or loss results to the County.

32.1 Confidentiality:

The Contractor, its employees, subcontractors, and their employees shall maintain the confidentiality of all information provided by the County or acquired by the Contractor in performance of this Agreement, except upon the prior written consent of the County or an order entered by a court after having acquired jurisdiction over the County. Contractor shall immediately give to the County notice of any judicial proceeding seeking disclosure of such information. Contractor shall indemnify and hold harmless the County, its officials, agents or employees from all loss or expense, including, but not limited to, settlements, judgments, setoffs, attorneys' fees and costs resulting from Contractor's breach of this provision.

33.1 Right to Review:

This contract is subject to review by any Federal, State or County auditor. The County or its designee shall have the right to review and monitor the financial and service components of this program by whatever means are deemed expedient by the Administrative Officer or by the County Auditor's Office. Such review may occur with or without notice and may include, but is not limited to, on-site inspection by County agents or employees, inspection of all records or other materials which the County deems pertinent to the Agreement and its performance, and any and all communications with or evaluations by service recipients under this Agreement. The Contractor shall preserve and maintain all financial records and records relating to the performance of work under this Agreement for three (3) years after contract termination, and shall make them available for such review, within Whatcom County, State of Washington, upon request. Contractor also agrees to notify the Administrative Officer in advance of any inspections, audits, or program review by any individual, agency, or governmental unit whose purpose is to review the services provided within the terms of this Agreement. If no advance notice is given to the Contractor, then the Contractor agrees to notify the Administrative Officer as soon as it is practical.

34.1 Insurance:

The Contractor shall, at its own expense, obtain and continuously maintain the following insurance coverage for the duration of this contract, which shall include insurance against claims for injuries to persons or damage to property which may arise from or in connection with the performance of the work hereunder by the Contractor, its agents, representatives, subcontractors or employees. All insurers providing such insurance shall have an A.M. Best Rating of not less than A- (or otherwise be acceptable to the County) and be licensed to do business in the State of Washington and admitted by the Washington State Insurance Commissioner. Coverage limits shall be the minimum limits identified in this Contract or the coverage limits provided or available under the policies maintained by the Contractor without regard to this Contract, whichever are greater.

1. Commercial General Liability

Property Damage	\$500,000.00, per occurrence
General Liability & bodily injury	\$1,000,000.00, per occurrence
Annual Aggregate	\$2,000,000.00

At least as broad as ISO form CG 00 01 or the equivalent, which coverage shall include personal injury, bodily injury and property damage for Premises Operations, Products and Completed Operations, Personal/Advertising Injury, Contractual Liability, Independent Contractor Liability, medical payments and Stop Gap/Employer's Liability. Coverage shall not exclude or contain sub-limits less than the minimum limits required, unless approved in writing by the County.

2. Business Automobile Liability

\$1,000,000.00 Minimum, per occurrence
\$2,000,000.00 Minimum, Annual Aggregate

Contractor shall provide auto liability coverage for owned, non-owned and hired autos using ISO Business Auto Coverage form CA 00 01 or the exact equivalent with a limit of no less than \$1,000,000 per accident. If Contractor owns no vehicles this requirement may be met through a non-owned auto Endorsement to the CGL policy.

4. Additional Insurance Requirements and Provisions

- a. All insurance policies shall provide coverage on an occurrence basis.
- b. Additional Insureds. Whatcom County, its departments, elected and appointed officials, employees, agents and volunteers shall be included as additional insureds on Contractor's and Contractor's subcontractors' insurance policies by way of endorsement for the full available limits of insurance required in this contract or maintained by the Contractor and subcontractor, whichever is greater.
- c. Primary and Non-contributory Insurance. Contractor shall provide primary insurance coverage and the County's insurance shall be non-contributory. Any insurance, self-insured retention, deductible, risk retention or insurance pooling maintained or participated in by the County shall be excess and non-contributory to Contractor's insurance.
- d. Waiver of Subrogation. The insurance policy shall provide a waiver of subrogation with respect to each insurance policy maintained under this Contract. When required by an insurer, or if a policy condition does not permit Contractor to enter into a pre-loss agreement to waive subrogation without an endorsement, then Contractor agrees to notify the insurer and obtain such endorsement. This requirement shall not apply to any policy which includes a condition expressly prohibiting waiver of subrogation by the insured or which voids coverage should the Contractor enter into such a waiver of subrogation on a pre-loss basis.
- e. Review of and Revision of Policy Provisions. Upon request, the Contractor shall provide a full and complete certified copy of all requested insurance policies to the County. The County reserves the right, but not the obligation, to revise any insurance requirement, including but not limited to limits, coverages and endorsements, or to reject any insurance policies which fail to meet the requirements of this Contract. Additionally, the County reserves the right, but not the obligation, to review and reject any proposed insurer providing coverage based upon the insurer's financial condition or licensing status in Washington.
- f. Verification of Coverage/Certificates and Endorsements. The Contractor shall furnish the County with a certificate of insurance and endorsements required by this contract. The certificates and endorsements for each policy shall be signed by a person authorized by the insurer to bind coverage on its behalf. The certificate and endorsements for each insurance policy are to be on forms approved by the County prior to commencement of activities associated with the contract. The certificate and endorsements, and renewals thereof, shall be attached hereto as Exhibit "C". If Exhibit C is not attached, the Contractor must submit the certificate and endorsements required in this contract to the County prior to the commencement of any work on the contracted project. A certificate alone is insufficient proof of the required insurance; endorsements must be included with the certificate. The certificate of insurance must reflect the insurance required in this contract, including appropriate limits, insurance coverage dates, per occurrence, and in the description of operations, include the County project, Whatcom County, its departments, officials, employees, agents and volunteers as additional insureds, primary, non-contributory, and waiver of subrogation.
- g. The County must be notified immediately in writing of any cancellation of the policy, exhaustion of aggregate limits, notice of intent not to renew insurance coverage, expiration of policy or change in insurer carrier. Contractor shall always provide the County with a current copy of the certificate and endorsements throughout the duration of the contract.

- h. No Limitation on Liability. The insurance maintained under this Contract shall not in any manner limit the liability or qualify the liabilities or obligations of the Contractor to the coverage provided by such insurance, or otherwise limit the County's recourse to any remedy available at law or equity.
- i. Payment Conditioned on Insurance and Failure to Maintain Insurance. Compensation and/or payments due to the Contractor under this Contract are expressly conditioned upon the Contractor's compliance with all insurance requirements. Failure on the part of the Contractor to maintain the insurance as required shall constitute a material breach of contract. Payment to the Contractor may be suspended in the event of non-compliance, upon which the County may, after giving five business days' notice to the Contractor to correct the breach, immediately terminate the contract or, at its discretion, procure or renew such insurance and pay any and all premiums in connection therewith, with any sums so expended to be repaid to the County on demand or offset against funds due the Contractor. Upon receipt of evidence of Contractor's compliance, payments not otherwise subject to withholding or set-off will be released to the Contractor.
- j. Workers' Compensation. The Contractor shall maintain Workers' Compensation coverage as required under the Washington State Industrial Insurance Act, RCW Title 51, for all Contractors' employees, agents and volunteers eligible for such coverage under the Industrial Insurance Act.
- k. Failure of the Contractor to take out and/or maintain required insurance shall not relieve the Contractor or subcontractors from any liability under the contract, nor shall the insurance requirements be construed to conflict with or otherwise limit the obligations concerning indemnification. The County does not waive any insurance requirements even in the event the certificate or endorsements provided by the Contractor were insufficient or inadequate proof of coverage but not objected to by the County. The County's failure to confirm adequate proof of insurance requirements does not constitute a waiver of the Contractor's insurance requirements under this Contract.
- l. Availability of Contractor Limits. If the Contractor maintains higher insurance limits than the minimums shown above, the County shall be insured for the full available limits, including Excess or Umbrella liability maintained by the Contractor, irrespective of whether such limits maintained by the Contractor are greater than those required by this contract or whether any certificate furnished to the County evidences limits of liability lower than those maintained by the Contractor.
- m. Insurance for Subcontractors. If the Contractor subcontracts (if permitted in the contract) any portion of this Contract, the Contractor shall include all subcontractors as insureds under its policies or shall require separate certificates of insurance and policy endorsements from each subcontractor. Insurance coverages by subcontractors must comply with the insurance requirements of the Contractor in this contract and shall be subject to all of the requirements stated herein, including naming the County as additional insured.
- n. The Contractor agrees Contractor's insurance obligation shall survive the completion or termination of this Contract for a minimum period of three years.

34.3 Defense & Indemnity Agreement. To the fullest extent permitted by law, the Contractor agrees to indemnify, defend and hold the County and its departments, elected and appointed officials, employees, agents and volunteers, harmless from and against any and all claims, damages, losses and expenses, including but not limited to court costs, attorney's fees, and alternative dispute resolution costs, for any personal injury, for any bodily injury, sickness, disease, or death and for any damage to or destruction of any property (including the loss of use resulting therefrom) which: 1) are caused in whole or in part by any error, act or omission, negligent or otherwise, of the Contractor, its employees, agents or volunteers or Contractor's subcontractors and their employees, agents or volunteers; or 2) directly or indirectly arise out of or occur in connection with performance of this Contract or 3) are based upon the Contractor's or its subcontractors' use of, presence upon, or proximity to the property of the County. This indemnification obligation of the Contractor shall not apply in the limited circumstance where the claim, damage, loss, or expense is caused by the sole negligence of the County.

Should a court of competent jurisdiction determine that this contract is subject to RCW 4.24.115, then in the event of concurrent negligence of the Contractor, its subcontractors, employees or agents, and the County, its employees or agents, this indemnification obligation of the Contractor shall be valid and enforceable only to the extent of the negligence of the Contractor, its subcontractors,

employees, and agents. This indemnification obligation of the Contractor shall not be limited in any way by the Washington State Industrial Insurance Act, RCW Title 51, or by application of any other workmen's compensation act, disability benefit act or other employee benefit act, and the Contractor hereby expressly waives any immunity afforded by such acts.

It is further provided that no liability shall attach to the County by reason of entering into this contract, except as expressly provided herein. The parties specifically agree that this Contract is for the benefit of the parties only and this Contract shall create no rights in any third party. The County reserves the right, but not the obligation, to participate in the defense of any claim, damages, losses, or expenses, and such participation shall not constitute a waiver of Contractor's indemnity obligations under this Agreement.

In the event the Contractor enters into subcontracts to the extent allowed under this Contract, the Contractor's subcontractors shall indemnify the County on a basis equal to or exceeding Contractor's indemnity obligations to the County. The Contractor shall pay all attorney's fees and expenses incurred by the County in establishing and enforcing the County's rights under this indemnification provision, whether or not suit was instituted.

The Contractor agrees all Contractor's indemnity obligations shall survive the completion, expiration or termination of this Agreement. The foregoing indemnification obligations of the Contractor are a material inducement to County to enter into this Agreement and are reflected in the Contractor's compensation.

By signing this contract, the Contractor acknowledges that it has freely negotiated and agreed to the indemnification requirements to defend, indemnify and hold harmless the County from all claims and suits including those brought against the County by the Contractor's own employees, arising from this contract.

35.1 Non-Discrimination in Employment:

The County's policy is to provide equal opportunity in all terms, conditions and privileges of employment for all qualified applicants and employees without regard to race, color, creed, religion, national origin, sex, sexual orientation (including gender identity), age, marital status, disability, or veteran status. The Contractor shall comply with all laws prohibiting discrimination against any employee or applicant for employment on the grounds of race, color, creed, religion, national origin, sex, sexual orientation (including gender identity), age, marital status, disability, political affiliation, or veteran status, except where such constitutes a bona fide occupational qualification.

Furthermore, in those cases in which the Contractor is governed by such laws, the Contractor shall take affirmative action to ensure that applicants are employed, and treated during employment, without regard to their race, color, creed, religion, national origin, sex, age, marital status, sexual orientation (including gender identity), disability, or veteran status, except where such constitutes a bona fide occupational qualification. Such action shall include, but not be limited to: advertising, hiring, promotions, layoffs or terminations, rate of pay or other forms of compensation benefits, selection for training including apprenticeship, and participation in recreational and educational activities. In all solicitations or advertisements for employees placed by them or on their behalf, the Contractor shall state that all qualified applicants will receive consideration for employment without regard to race, color, religion, sex or national origin.

The foregoing provisions shall also be binding upon any subcontractor, provided that the foregoing provision shall not apply to contracts or subcontractors for standard commercial supplies or raw materials, or to sole proprietorships with no employees.

35.2 Non-Discrimination in Client Services:

The Contractor shall not discriminate on the grounds of race, color, creed, religion, national origin, sex, age, marital status, sexual orientation (including gender identity), disability, or veteran status; or deny an individual or business any service or benefits under this Agreement unless otherwise allowed by applicable law; or subject an individual or business to segregation or separate treatment in any manner related to his/her/its receipt any service or services or other benefits provided under this Agreement unless otherwise allowed by applicable law; or deny an individual or business an opportunity to participate in any program provided by this Agreement unless otherwise allowed by applicable law.

36.1 Waiver of Noncompetition:

Contractor irrevocably waives any existing rights which it may have, by contract or otherwise, to require another person or corporation to refrain from submitting a proposal to or performing work or providing supplies to the County, and contractor further promises that it will not in the future, directly or indirectly, induce or solicit any person or corporation to refrain from submitting a bid or proposal to or from performing work or providing supplies to the County.

36.2 Conflict of Interest:

If at any time prior to commencement of, or during the term of this Agreement, Contractor or any of its employees involved in the performance of this Agreement shall have or develop an interest in the subject matter of this Agreement that is potentially in conflict with the County's interest, then Contractor shall immediately notify the County of the same. The notification of the County shall be made with sufficient specificity to enable the County to make an informed judgment as to whether or not the County's interest may be compromised in any manner by the existence of the conflict, actual or potential. Thereafter, the County may require the Contractor to take reasonable steps to remove the conflict of interest. The County may also terminate this contract according to the provisions herein for termination.

37.1 Administration of Contract:

This Agreement shall be subject to all laws, rules, and regulations of the United States of America, the State of Washington, and political subdivisions of the State of Washington. The Contractor also agrees to comply with applicable federal, state, county or municipal standards for licensing, certification and operation of facilities and programs, and accreditation and licensing of individuals.

The County hereby appoints, and the Contractor hereby accepts, the Whatcom County Executive, and his or her designee, as the County's representative, hereinafter referred to as the Administrative Officer, for the purposes of administering the provisions of this Agreement, including the County's right to receive and act on all reports and documents, and any auditing performed by the County related to this Agreement. The Administrative Officer for purposes of this agreement is:

Tawni Helms, Administrative Coordinator
Whatcom County Executive's Office
311 Grand Avenue, Suite 108
Bellingham, WA 98225

37.2 Notice:

Any notices or communications required or permitted to be given by this Contract must be (i) given in writing and (ii) personally delivered or mailed, by prepaid, certified mail or overnight courier, or transmitted by electronic mail transmission (including PDF), to the party to whom such notice or communication is directed, to the mailing address or regularly-monitored electronic mail address of such party as follows:

PARTY 1: Tune-Up Events, LLC
Brandon Watts, Managing Director
501 Meador Avenue, Suite 104
Bellingham, WA 98225
360-441-4871
brandon@freehubmag.com

PARTY 2: Tawni Helms, Administrative Coordinator
Whatcom County Executive's Office
311 Grand Avenue, Suite 108
Bellingham, WA 98225
360-778-5208
thelms@co.whatcom.wa.us

Any such notice or communication shall be deemed to have been given on (i) the day such notice or communication is personally delivered, (ii) three (3) days after such notice or communication is mailed by prepaid certified or registered mail, (iii) one (1) working day after such notice or communication is sent by overnight courier, or (iv) the day such notice or communication is sent electronically, provided that the sender has received a confirmation of such electronic transmission. A party may, for purposes of this Agreement, change his, her or its address, email address or the person to whom a notice or other communication is marked to the attention of, by giving notice of such change to the other party pursuant to this Section.

37.3 If agreed by the parties, this Contract may be executed by Email transmission and PDF signature and Email transmission and PDF signature shall constitute an original for all purposes.

38.1 Certification of Public Works Contractor's Status under State Law:

If applicable, Contractor certifies that it has fully met the responsibility criteria required of public works contractors under RCW 39.04.350 (1), which include: (a) having a certificate of registration in compliance with RCW 18.27; (b) having a current state unified business identifier number; (c) if applicable, having industrial insurance coverage for its employees working in Washington as required in Title 51 RCW, an employment security department number as required in Title 50 RCW, and a state excise tax registration number as required in Title 82 RCW; and (d) not being disqualified from bidding on any public works contract under RCW 39.06.010 or 39.12.065 (3).

- 38.2 Certification Regarding Federal Debarment, Suspension, Ineligibility and Voluntary Exclusion - Lower Tier Covered Transactions:
If applicable, the Contractor further certifies, by executing this contract, that neither it nor its principles is presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participation in this transaction by any Federal department or Agency.

The Contractor also agrees that it shall not knowingly enter into any lower tier covered transactions (a transaction between the Contractor and any other person) with a person who is proposed for debarment, debarred, suspended, declared ineligible, or voluntarily excluded from participation in this covered transaction, and the Contractor agrees to include this clause titled "Certification Regarding Federal Debarment, Suspension, Ineligibility and Voluntary Exclusion - Lower Tier Covered Transaction" without modification, in all lower tier covered transactions and in all solicitations for lower tier transactions.

The "Excluded Parties List System in the System for Award Management (SAM) website is available to research this information at WWW.SAM.GOV. Contractor shall immediately notify Whatcom County if, during the term of this Contract, Contractor becomes debarred.

38.3 E-Verify:

The E-Verify contractor program for Whatcom County applies to contracts of \$100,000 or more and sub contracts for \$25,000 or more if the primary contract is for \$100,000 or more. If applicable, Contractor represents and warrants that it will, for at least the duration of this contract, register and participate in the status verification system for all newly hired employees. The term "employee" as used herein means any person that is hired to perform work for Whatcom County. As used herein, "status verification system" means the Illegal Immigration Reform and Immigration Responsibility Act of 1996 that is operated by the United States Department of Homeland Security, also known as the E-Verify Program, or any other successor electronic verification system replacing the E-Verify Program. Contractor/Seller agrees to maintain records of such compliance and, upon request of the County, to provide a copy of each such verification to the County. Contractor/Seller further represents and warrants that any person assigned to perform services hereunder meets the employment eligibility requirements of all immigration laws of the State of Washington. Contractor/Seller understands and agrees that any breach of these warranties may subject Contractor/Seller to the following: (a) termination of this Agreement and ineligibility for any Whatcom County contract for up to three (3) years, with notice of such cancellation/termination being made public. In the event of such termination/cancellation, Contractor/Seller would also be liable for any additional costs incurred by the County due to contract cancellation or loss of license or permit." Contractor will review and enroll in the E-Verify program through this website: www.uscis.gov

Series 40-49: Provisions Related to Interpretation of Agreement and Resolution of Disputes

40.1 Modifications:

Either party may request changes in the Agreement. Any and all agreed modifications, to be valid and binding upon either party, shall be in writing and signed by both of the parties.

40.2 Contractor Commitments, Warranties and Representations:

Any written commitment received from the Contractor concerning this Agreement shall be binding upon the Contractor, unless otherwise specifically provided herein with reference to this paragraph. Failure of the Contractor to fulfill such a commitment shall render the Contractor liable for damages to the County. A commitment includes, but is not limited to, any representation made prior to execution of this Agreement, whether or not incorporated elsewhere herein by reference, as to performance of services or equipment, prices or options for future acquisition to remain in effect for a fixed period, or warranties.

41.1 Severability:

If any term or condition of this contract or the application thereof to any person(s) or circumstances is held invalid, such invalidity shall not affect other terms, conditions or applications which can be given effect without the invalid term, condition or application. To this end, the terms and conditions of this contract are declared severable.

41.2 Waiver:

Waiver of any breach or condition of this contract shall not be deemed a waiver of any prior or subsequent breach. No term or condition of this contract shall be held to be waived, modified or deleted except by an instrument, in writing, signed by the parties hereto. The failure of the County to insist upon strict performance of any of the covenants and agreements of this Agreement, or to exercise any option herein conferred in any one or more instances, shall not be construed to be a waiver or relinquishment of any such, or any other covenants or agreements, but the same shall be and remain in full force and effect.

42.1 Disputes:

a. General:

Differences between the Contractor and the County, arising under and by virtue of the Contract Documents, shall be brought to the attention of the County at the earliest possible time in order that such matters may be settled or other appropriate action promptly taken. Except for such objections as are made of record in the manner hereinafter specified and within the time limits stated, the records, orders, rulings, instructions, and decisions of the Administrative Officer shall be final and conclusive.

b. **Notice of Potential Claims:**

The Contractor shall not be entitled to additional compensation which otherwise may be payable, or to extension of time for (1) any act or failure to act by the Administrative Officer or the County, or (2) the happening of any event or occurrence, unless the Contractor has given the County a written Notice of Potential Claim within ten (10) days of the commencement of the act, failure, or event giving rise to the claim, and before final payment by the County. The written Notice of Potential Claim shall set forth the reasons for which the Contractor believes additional compensation or extension of time is due, the nature of the cost involved, and insofar as possible, the amount of the potential claim. Contractor shall keep full and complete daily records of the work performed, labor and material used, and all costs and additional time claimed to be additional.

c. **Detailed Claim:**

The Contractor shall not be entitled to claim any such additional compensation, or extension of time, unless within thirty (30) days of the accomplishment of the portion of the work from which the claim arose, and before final payment by the County, the Contractor has given the County a detailed written statement of each element of cost or other compensation requested and of all elements of additional time required, and copies of any supporting documents evidencing the amount or the extension of time claimed to be due.

d. **Arbitration:**

Other than claims for injunctive relief, temporary restraining order, or other provisional remedy to preserve the status quo or prevent irreparable harm, brought by a party hereto (which may be brought either in court or pursuant to this arbitration provision), and consistent with the provisions hereinabove, any claim, dispute or controversy between the parties under, arising out of, or related to this Contract or otherwise, including issues of specific performance, shall be determined by arbitration in Bellingham, Washington, under the applicable American Arbitration Association (AAA) rules in effect on the date hereof, as modified by this Agreement. There shall be one arbitrator selected by the parties within ten (10) days of the arbitration demand, or if not, by the AAA or any other group having similar credentials. Any issue about whether a claim is covered by this Contract shall be determined by the arbitrator. The arbitrator shall apply substantive law and may award injunctive relief, equitable relief (including specific performance), or any other remedy available from a judge but shall not have the power to award punitive damages. Each Party shall pay all their own costs, attorney fees and expenses of arbitration and the parties shall share equally in the Arbitrator's fees and costs. The decision of the arbitrator shall be final and binding and an order confirming the award or judgment upon the award may be entered in any court having jurisdiction. The parties agree that the decision of the arbitrator shall be the sole and exclusive remedy between them regarding any dispute presented or pled before the arbitrator. At the request of either party made not later than forty-five (45) days after the arbitration demand, the parties agree to submit the dispute to nonbinding mediation, which shall not delay the arbitration hearing date; provided, that either party may decline to mediate and proceed with arbitration.

Any arbitration proceeding commenced to enforce or interpret this Contract shall be brought within six years after the initial occurrence giving rise to the claim, dispute, or issue for which arbitration is commenced, regardless of the date of discovery or whether the claim, dispute, or issue was continuing in nature. Claims, disputes, or issues arising more than six years prior to a written request or demand for arbitration issued under this Contract are not subject to arbitration.

- e. The parties may agree in writing signed by both parties that a claim or dispute may be brought in Whatcom County Superior Court rather than mediation or arbitration.

Unless otherwise specified herein, this Contract shall be governed by the laws of Whatcom County and the State of Washington.

43.1 **Venue and Choice of Law:**

In the event that any litigation should arise concerning the construction or interpretation of any of the terms of this Agreement, the venue of such action of litigation shall be in the courts of the State of Washington in and for the County of Whatcom. This Agreement shall be governed by the laws of the State of Washington.

44.1 **Survival:**

The provisions of paragraphs 11.1, 11.2, 11.3, 21.1, 22.1, 30.1, 31.1, 31.2, 32.1, 33.1, 34.2, 34.3, 36.1, 40.2, 41.2, 42.1, and 43.1, if utilized, shall survive, notwithstanding the termination or invalidity of this Agreement for any reason.

45.1 **Entire Agreement:**

This written Agreement, comprised of the writings signed or otherwise identified and attached hereto, represents the entire Agreement between the parties and supersedes any prior oral statements, discussions or understandings between the parties.

EXHIBIT "A"
(SCOPE OF WORK)

Tune-Up Events, LLC will use tourism promotion funds to:

1. Fund the marketing and promotional expenses incurred for the Northwest Tune-Up Event.
 - Creative services and assets creation (graphic design, photography and production)
 - Printing of promotional materials designed to attract overnight visitors
 - Mailing of promotional materials outside of Whatcom County in an effort to attract overnight visitors
 - Advertising of the event through media outlets outside of Whatcom County, including social media and internet advertising, for the purposes of bringing visitors to Whatcom County
2. Up to 25% of the Lodging Tax Funding allocation can be used to fund operational costs associated with the Northwest Tune-Up Event.

Promotional materials regarding the proposed activity must mention that it is made possible in part by a Tourism Promotion Grant from Whatcom County. The scale of this credit should be commensurate with the County's level of financial support. It should include the name and logo of the County. It is not expected that this credit be displayed in all materials, but at a minimum it should be placed in such documents as programs and annual reports.

Within 30 days after the end of the contract term, the Chamber shall submit a final project report (the "Final Project Report") detailing:

- How the evaluation criteria were met by the event
- What elements worked well and which did not.
- Modifications, if any, planned for future activities.
- Summarize the results of the year's activities and accomplishments.
- Provide Budget vs. Actual Financials.

Failure to complete and deliver the Final Project Report in a timely manner may render recipient ineligible for future funding. Pursuant to RCW 67.28.1816, recipients of lodging tax funds must provide the following information:

The estimated number of tourists, persons traveling over fifty miles to the destination, persons remaining at the destination overnight, and lodging stays generated per festival, special event or tourism-related facility owned or sponsored by a nonprofit organization or local jurisdiction.

EXHIBIT "B"
(COMPENSATION)

Maximum consideration for this contract shall be \$50,000. ***The Contract Number shall be included on all billings or correspondence.***

Allowable Expenses include:

GENERAL LEDGER DETAIL for OPERATIONS STAFF not to exceed 25% (\$12,500) of the LTAC funding allocation:

- Salaries
- Payroll taxes
- Health insurance

RECIEPTS:

- Marketing, promotional
- Creative services and asset creation (graphic design, photography and production)
- Printing of promotional materials (*for annual multi-day events designed to encourage tourism and overnight stays*)
- Advertising
- Postage costs

Tune-Up Events, LLC will submit invoices detailing allowable expenditures as outlined in Exhibit A to the Whatcom County Executive's Office. Payment is for reimbursement only and copies of receipts must be attached to invoices.

Invoices will be certified by the Executive Director with the following certification:

I certify that the materials have been furnished, the services rendered, or the labor performed as described on this invoice.

Payment will be made no more than one time per month.

Tune-Up Events, LLC will also provide Whatcom County with a copy of all brochures and advertisements included with invoices.

EXHIBIT "C"
(Certificate of Insurance)

CONTRACT FOR SERVICES
Between Whatcom County and Tune-Up Events, LLC

Tune-Up Events, LLC, hereinafter called **Contractor** and Whatcom County, hereinafter referred to as **County**, agree and contract as set forth in this Agreement, including:

General Conditions, pp. 3 to 13,
Exhibit A (Scope of Work), p. 14
Exhibit B (Compensation), p. 15
Exhibit C (Sample Survey), p. 16
Exhibit D (Certificate of Insurance) p. 17.

Copies of these items are attached hereto and incorporated herein by this reference as if fully set forth herein.

The term of this Agreement shall commence on the 1st day of January, 2022, and shall, unless terminated or renewed as elsewhere provided in the Agreement, terminate on the 31st day of December, 2022.

The general purpose or objective of this Agreement is to: support Northwest Tune-Up for marketing and operational costs associated with the Northwest Tune-Up tourism event, as more fully and definitively described in Exhibit A hereto. The language of Exhibit A controls in case of any conflict between it and that provided here.

The maximum consideration for the initial term of this agreement or for any renewal term shall not exceed **\$50,000**. The Contract Number, set forth above, shall be included on all billings or correspondence in connection therewith.

Contractor acknowledges and by signing this contract agrees that the Indemnification provisions set forth in Paragraphs 11.1, 21.1, 30.1, 31.2, 32.1, 34.2, and 34.3, if included, are totally and fully part of this contract and have been mutually negotiated by the parties.

Each signatory below to this Contract warrants that he/she is the authorized agent of the respective party; and that he/she has the authority to enter into the contract and to bind the party thereto.

IN WITNESS WHEREOF, the parties have executed this Agreement this ____ day of _____, 2022.

Approved:
Accepted for Whatcom County:

By: _____
Satpal Singh Sidhu, Whatcom County Executive

GENERAL CONDITIONS

Series 00-09: Provisions Related to Scope and Nature of Services

0.1 Scope of Services:

The Contractor agrees to provide to the County services and any materials as set forth in the project narrative identified as Exhibit "A", during the agreement period. No material, labor, or facilities will be furnished by the County, unless otherwise provided for in the Agreement.

Series 10-19: Provisions Related to Term and Termination

10.1 Term:

Services provided by Contractor prior to or after the term of this contract shall be performed at the expense of Contractor and are not compensable under this contract unless both parties hereto agree to such provision in writing. The term of this Agreement may be extended by mutual agreement of the parties; provided, however, that the Agreement is in writing and signed by both parties.

10.2 Extension:

The duration of this Agreement may be extended by mutual written consent of the parties, for a period of up to one year, and for a total of no longer than three years.

11.1 Termination for Default:

If the Contractor defaults by failing to perform any of the obligations of the contract or becomes insolvent or is declared bankrupt or commits any act of bankruptcy or insolvency or makes an assignment for the benefit of creditors, the County may, by depositing written notice to the Contractor in the U.S. mail, first class postage prepaid, terminate the contract, and at the County's option, obtain performance of the work elsewhere. Termination shall be effective upon Contractor's receipt of the written notice, or within three (3) days of the mailing of the notice, whichever occurs first. If the contract is terminated for default, the Contractor shall not be entitled to receive any further payments under the contract until all work called for has been fully performed. Any extra cost or damage to the County resulting from such default(s) shall be deducted from any money due or coming due to the Contractor. The Contractor shall bear any extra expenses incurred by the County in completing the work, including all increased costs for completing the work, and all damage sustained, or which may be sustained by the County by reason of such default.

11.2 Termination for Reduction in Funding:

In the event that funding from State, Federal or other sources is withdrawn, reduced, or limited in any way after the effective date of this Agreement, and prior to its normal completion, the County may summarily terminate this Agreement as to the funds withdrawn, reduced, or limited, notwithstanding any other termination provisions of this Agreement. If the level of funding withdrawn, reduced or limited is so great that the County deems that the continuation of the programs covered by this Agreement is no longer in the best interest of the County, the County may summarily terminate this Agreement in whole, notwithstanding any other termination provisions of this Agreement. Termination under this section shall be effective upon receipt of written notice as specified herein, or within three days of the mailing of the notice, whichever occurs first.

11.3 Termination for Public Convenience:

The County may terminate the Agreement in whole or in part whenever the County determines, in its sole discretion, that such termination is in the interests of the County. Whenever the Agreement is terminated in accordance with this paragraph, the Contractor shall be entitled to payment for actual work performed at unit contract prices for completed items of work. An equitable adjustment in the contract price for partially completed items of work will be made, but such adjustment shall not include provision for loss of anticipated profit on deleted or uncompleted work. Termination of this Agreement by the County at any time during the term, whether for default or convenience, shall not constitute breach of contract by the County.

Series 20-29: Provisions Related to Consideration and Payments

20.1 Accounting and Payment for Contractor Services:

Payment to the Contractor for services rendered under this Agreement shall be as set forth in Exhibit "B." Where Exhibit "B" requires payments by the County, payment shall be based upon written claims supported, unless otherwise provided in Exhibit "B," by documentation of units of work actually performed and amounts earned, including, where appropriate, the actual number of days worked each month, total number of hours for the month, and the total dollar payment requested, so as to comply with municipal auditing requirements.

Unless specifically stated in Exhibit "B" or approved in writing in advance by the official executing this Agreement for the County or his designee (hereinafter referred to as the "Administrative Officer") the County will not reimburse the Contractor for any costs or expenses incurred by the Contractor in the performance of this contract. Where required, the County shall, upon receipt of appropriate documentation, compensate the Contractor, no more often than monthly, in accordance with the County's customary procedures, pursuant to the fee schedule set forth in Exhibit "B."

21.1 Taxes:

The Contractor understands and acknowledges that the County will not withhold Federal or State income taxes. Where required by State or Federal law, the Contractor authorizes the County to withhold for any taxes other than income taxes (i.e., Medicare). All compensation received by the Contractor will be reported to the Internal Revenue Service at the end of the calendar year in accordance with the applicable IRS regulations. It is the responsibility of the Contractor to make the necessary estimated tax payments throughout the year, if any, and the Contractor is solely liable for any tax obligation arising from the Contractor's performance of this Agreement. The Contractor hereby agrees to indemnify the County against any demand to pay taxes arising from the Contractor's failure to pay taxes on compensation earned pursuant to this Agreement.

The County will pay sales and use taxes imposed on goods or services acquired hereunder as required by law. The Contractor must pay all other taxes, including, but not limited to, Business and Occupation Tax, taxes based on the Contractor's gross or net income, or personal property to which the County does not hold title. The County is exempt from Federal Excise Tax.

22.1 Withholding Payment:

In the event the County's Administrative Officer determines that the Contractor has failed to perform any obligation under this Agreement within the times set forth in this Agreement, then the County may withhold from amounts otherwise due and payable to Contractor the amount determined by the County as necessary to cure the default, until the Administrative Officer determines that such failure to perform has been cured. Withholding under this clause shall not be deemed a breach entitling Contractor to termination or damages, provided that the County promptly gives notice in writing to the Contractor of the nature of the default or failure to perform, and in no case more than 10 days after it determines to withhold amounts otherwise due. A determination of the Administrative Officer set forth in a notice to the Contractor of the action required and/or the amount required to cure any alleged failure to perform shall be deemed conclusive, except to the extent that the Contractor acts within the times and in strict accord with the provisions of the Disputes clause of this Agreement. The County may act in accordance with any determination of the Administrative Officer which has become conclusive under this clause, without prejudice to any other remedy under the Agreement, to take all or any of the following actions: (1) cure any failure or default, (2) to pay any amount so required to be paid and to charge the same to the account of the Contractor, (3) to set off any amount so paid or incurred from amounts due or to become due the Contractor. In the event the Contractor obtains relief upon a claim under the Disputes clause, no penalty or damages shall accrue to Contractor by reason of good faith withholding by the County under this clause.

23.1 Labor Standards:

The Contractor agrees to comply with all applicable state and federal requirements, including but not limited to those pertaining to payment of wages and working conditions, in accordance with RCW 39.12.040, the Prevailing Wage Act; the Americans with Disabilities Act of 1990; the Davis-Bacon Act; and the Contract Work Hours and Safety Standards Act providing for weekly payment of prevailing wages,

minimum overtime pay, and providing that no laborer or mechanic shall be required to work in surroundings or under conditions which are unsanitary, hazardous, or dangerous to health and safety as determined by regulations promulgated by the Federal Secretary of Labor and the State of Washington.

Series 30-39: Provisions Related to Administration of Agreement

30.1 Independent Contractor:

The Contractor's services shall be furnished by the Contractor as an independent contractor, and nothing herein contained shall be construed to create a relationship of employer-employee or master-servant, but all payments made hereunder and all services performed shall be made and performed pursuant to this Agreement by the Contractor as an independent contractor.

The Contractor acknowledges that the entire compensation for this Agreement is specified in Exhibit "B" and the Contractor is not entitled to any benefits including, but not limited to: vacation pay, holiday pay, sick leave pay, medical, dental, or other insurance benefits, or any other rights or privileges afforded to employees of the County. The Contractor represents that he/she/it maintains a separate place of business, serves clients other than the County, will report all income and expense accrued under this contract to the Internal Revenue Service, and has a tax account with the State of Washington Department of Revenue for payment of all sales and use and Business and Occupation taxes collected by the State of Washington.

Contractor will defend, indemnify and hold harmless the County, its officers, agents or employees from any loss or expense, including, but not limited to, settlements, judgments, setoffs, attorneys' fees or costs incurred by reason of claims or demands because of breach of the provisions of this paragraph

30.2 Assignment and Subcontracting:

The performance of all activities contemplated by this agreement shall be accomplished by the Contractor. No portion of this contract may be assigned or subcontracted to any other individual, firm or entity without the express and prior written approval of the County.

30.3 No Guarantee of Employment:

The performance of all or part of this contract by the Contractor shall not operate to vest any employment rights whatsoever and shall not be deemed to guarantee any employment of the Contractor or any employee of the Contractor or any subcontractor or any employee of any subcontractor by the County at the present time or in the future.

31.1 Ownership of Items Produced and Public Records Act:

All writings, programs, data, public records or other materials prepared by the Contractor and/or its consultants or subcontractors, in connection with performance of this Agreement, shall be the sole and absolute property of the County. If the Contractor creates any copyrightable materials or invents any patentable property, the Contractor may copyright or patent the same, but the County retains a royalty-free, nonexclusive and irrevocable license to reproduce, publish, recover, or otherwise use the materials or property and to authorize other governments to use the same for state or local governmental purposes. Contractor further agrees to make research, notes, and other work products produced in the performance of this Agreement available to the County upon request.

Ownership. Any and all data, writings, programs, public records, reports, analyses, documents, photographs, pamphlets, plans, specifications, surveys, films or any other materials created, prepared, produced, constructed, assembled, made, performed or otherwise produced by the Contractor or the Contractor's subcontractors or consultants for delivery to the County under this Contract shall be the sole and absolute property of the County. Such property shall constitute "work made for hire" as defined by the U.S. Copyright Act of 1976, 17 U.S.C. § 101, and the ownership of the copyright and any other intellectual property rights in such property shall vest in the County at the time of its creation. Ownership of the intellectual property includes the right to copyright, patent, and register, and the ability to transfer these rights. Material which the Contractor uses to perform this Contract but is not created, prepared, constructed, assembled, made, performed or otherwise produced for or paid for by the County is owned by the Contractor and is not "work made for hire" within the terms of this Agreement.

Public Records Act. This Contract and all records associated with this Contract shall be available for inspection and copying by the public where required by the Public Records Act, Chapter 42.56 RCW (the "Act"). To the extent that public records then in the custody of the Contractor are needed for the County to respond to a request under the Act, as determined by the County, the Contractor agrees to make them promptly available to the County at no cost to the County. If the Contractor considers any portion of any record provided to the County under this Agreement, whether in electronic or hard copy form, to be protected from disclosure under law, the Contractor shall clearly identify any specific information that it claims to be confidential or proprietary. If the County receives a request under the Act to inspect or copy the information so identified by the Contractor and the County determines that release of the information is required by the Act or otherwise appropriate, the County's sole obligations shall be to notify the Contractor (a) of the request and (b) of the date that such information will be released to the requester unless the Contractor obtains a court order to enjoin that disclosure

pursuant to RCW 42.56.540. If the Contractor fails to timely obtain a court order enjoining disclosure, the County will release the requested information on the date specified.

The County has, and by this section assumes, no obligation on behalf of the Contractor to claim any exemption from disclosure under the Act. The County shall not be liable to the Contractor for releasing records not clearly identified by the Contractor as confidential or proprietary. The County shall not be liable to the Contractor for any records that the County releases in compliance with this section or in compliance with an order of a court of competent jurisdiction.

The Contractor shall be liable to the requester for any and all fees, costs, penalties or damages imposed or alleged as a result of the Contractor's failure to provide adequate or timely records.

This provision and the obligations it establishes shall remain in effect after the expiration of this contract.

31.2 Patent/Copyright Infringement:

Contractor will defend and indemnify the County from any claimed action, cause or demand brought against the County, to the extent such action is based on the claim that information supplied by the Contractor infringes any patent or copyright. The Contractor will pay those costs and damages attributable to any such claims that are finally awarded against the County in any action. Such defense and payments are conditioned upon the following:

A. The Contractor shall be notified promptly in writing by the County of any notice of such claim.

B. Contractor shall have the right, hereunder, at its option and expense, to obtain for the County the right to continue using the information, in the event such claim of infringement, is made, provided no reduction in performance or loss results to the County.

32.1 Confidentiality:

The Contractor, its employees, subcontractors, and their employees shall maintain the confidentiality of all information provided by the County or acquired by the Contractor in performance of this Agreement, except upon the prior written consent of the County or an order entered by a court after having acquired jurisdiction over the County. Contractor shall immediately give to the County notice of any judicial proceeding seeking disclosure of such information. Contractor shall indemnify and hold harmless the County, its officials, agents or employees from all loss or expense, including, but not limited to, settlements, judgments, setoffs, attorneys' fees and costs resulting from Contractor's breach of this provision.

33.1 Right to Review:

This contract is subject to review by any Federal, State or County auditor. The County or its designee shall have the right to review and monitor the financial and service components of this program by whatever means are deemed expedient by the Administrative Officer or by the County Auditor's Office. Such review may occur with or without notice and may include, but is not limited to, on-site inspection by County agents or employees, inspection of all records or other materials which the County deems pertinent to the Agreement and its performance, and any and all communications with or evaluations by service recipients under this Agreement. The Contractor shall preserve and maintain all financial records and records relating to the performance of work under this Agreement for three (3) years after contract termination, and shall make them available for such review, within Whatcom County, State of Washington, upon request. Contractor also agrees to notify the Administrative Officer in advance of any inspections, audits, or program review by any individual, agency, or governmental unit whose purpose is to review the services provided within the terms of this Agreement. If no advance notice is given to the Contractor, then the Contractor agrees to notify the Administrative Officer as soon as it is practical.

34.1 Insurance:

The Contractor shall, at its own expense, obtain and continuously maintain the following insurance coverage for the duration of this contract, which shall include insurance against claims for injuries to persons or damage to property which may arise from or in connection with the performance of the work hereunder by the Contractor, its agents, representatives, subcontractors or employees. All insurers providing such insurance shall have an A.M. Best Rating of not less than A- (or otherwise be acceptable to the County) and be licensed to do business in the State of Washington and admitted by the Washington State Insurance Commissioner. Coverage limits shall be the minimum limits identified in this Contract or the coverage limits provided or available under the policies maintained by the Contractor without regard to this Contract, whichever are greater.

1. Commercial General Liability

Property Damage	\$500,000.00, per occurrence
General Liability & bodily injury	\$1,000,000.00, per occurrence
Annual Aggregate	\$2,000,000.00

At least as broad as ISO form CG 00 01 or the equivalent, which coverage shall include personal injury, bodily injury and property damage for Premises Operations, Products and Completed Operations, Personal/Advertising Injury, Contractual Liability, Independent Contractor Liability, medical payments and Stop Gap/Employer's Liability. Coverage shall not exclude or contain sub-limits less than the minimum limits required, unless approved in writing by the County.

2. Business Automobile Liability

\$1,000,000.00 Minimum, per occurrence
\$2,000,000.00 Minimum, Annual Aggregate

Contractor shall provide auto liability coverage for owned, non-owned and hired autos using ISO Business Auto Coverage form CA 00 01 or the exact equivalent with a limit of no less than \$1,000,000 per accident. If Contractor owns no vehicles this requirement may be met through a non-owned auto Endorsement to the CGL policy.

4. Additional Insurance Requirements and Provisions

- a. All insurance policies shall provide coverage on an occurrence basis.
- b. Additional Insureds. Whatcom County, its departments, elected and appointed officials, employees, agents and volunteers shall be included as additional insureds on Contractor's and Contractor's subcontractors' insurance policies by way of endorsement for the full available limits of insurance required in this contract or maintained by the Contractor and subcontractor, whichever is greater.
- c. Primary and Non-contributory Insurance. Contractor shall provide primary insurance coverage and the County's insurance shall be non-contributory. Any insurance, self-insured retention, deductible, risk retention or insurance pooling maintained or participated in by the County shall be excess and non-contributory to Contractor's insurance.
- d. Waiver of Subrogation. The insurance policy shall provide a waiver of subrogation with respect to each insurance policy maintained under this Contract. When required by an insurer, or if a policy condition does not permit Contractor to enter into a pre-loss agreement to waive subrogation without an endorsement, then Contractor agrees to notify the insurer and obtain such endorsement. This requirement shall not apply to any policy which includes a condition expressly prohibiting waiver of subrogation by the insured or which voids coverage should the Contractor enter into such a waiver of subrogation on a pre-loss basis.
- e. Review of and Revision of Policy Provisions. Upon request, the Contractor shall provide a full and complete certified copy of all requested insurance policies to the County. The County reserves the right, but not the obligation, to revise any insurance requirement, including but not limited to limits, coverages and endorsements, or to reject any insurance policies which fail to meet the requirements of this Contract. Additionally, the County reserves the right, but not the obligation, to review and reject any proposed insurer providing coverage based upon the insurer's financial condition or licensing status in Washington.
- f. Verification of Coverage/Certificates and Endorsements. The Contractor shall furnish the County with a certificate of insurance and endorsements required by this contract. The certificates and endorsements for each policy shall be signed by a person authorized by the insurer to bind coverage on its behalf. The certificate and endorsements for each insurance policy are to be on forms approved by the County prior to commencement of activities associated with the contract. The certificate and endorsements, and renewals thereof, shall be attached hereto as Exhibit "C". If Exhibit C is not attached, the Contractor must submit the certificate and endorsements required in this contract to the County prior to the commencement of any work on the contracted project. A certificate alone is insufficient proof of the required insurance; endorsements must be included with the certificate. The certificate of insurance must reflect the insurance required in this contract, including appropriate limits, insurance coverage dates, per occurrence, and in the description of operations, include the County project, Whatcom County, its departments, officials, employees, agents and volunteers as additional insureds, primary, non-contributory, and waiver of subrogation.
- g. The County must be notified immediately in writing of any cancellation of the policy, exhaustion of aggregate limits, notice of intent not to renew insurance coverage, expiration of policy or change in insurer carrier. Contractor shall always provide the County with a current copy of the certificate and endorsements throughout the duration of the contract.

- h. No Limitation on Liability. The insurance maintained under this Contract shall not in any manner limit the liability or qualify the liabilities or obligations of the Contractor to the coverage provided by such insurance, or otherwise limit the County's recourse to any remedy available at law or equity.
- i. Payment Conditioned on Insurance and Failure to Maintain Insurance. Compensation and/or payments due to the Contractor under this Contract are expressly conditioned upon the Contractor's compliance with all insurance requirements. Failure on the part of the Contractor to maintain the insurance as required shall constitute a material breach of contract. Payment to the Contractor may be suspended in the event of non-compliance, upon which the County may, after giving five business days' notice to the Contractor to correct the breach, immediately terminate the contract or, at its discretion, procure or renew such insurance and pay any and all premiums in connection therewith, with any sums so expended to be repaid to the County on demand or offset against funds due the Contractor. Upon receipt of evidence of Contractor's compliance, payments not otherwise subject to withholding or set-off will be released to the Contractor.
- j. Workers' Compensation. The Contractor shall maintain Workers' Compensation coverage as required under the Washington State Industrial Insurance Act, RCW Title 51, for all Contractors' employees, agents and volunteers eligible for such coverage under the Industrial Insurance Act.
- k. Failure of the Contractor to take out and/or maintain required insurance shall not relieve the Contractor or subcontractors from any liability under the contract, nor shall the insurance requirements be construed to conflict with or otherwise limit the obligations concerning indemnification. The County does not waive any insurance requirements even in the event the certificate or endorsements provided by the Contractor were insufficient or inadequate proof of coverage but not objected to by the County. The County's failure to confirm adequate proof of insurance requirements does not constitute a waiver of the Contractor's insurance requirements under this Contract.
- l. Availability of Contractor Limits. If the Contractor maintains higher insurance limits than the minimums shown above, the County shall be insured for the full available limits, including Excess or Umbrella liability maintained by the Contractor, irrespective of whether such limits maintained by the Contractor are greater than those required by this contract or whether any certificate furnished to the County evidences limits of liability lower than those maintained by the Contractor.
- m. Insurance for Subcontractors. If the Contractor subcontracts (if permitted in the contract) any portion of this Contract, the Contractor shall include all subcontractors as insureds under its policies or shall require separate certificates of insurance and policy endorsements from each subcontractor. Insurance coverages by subcontractors must comply with the insurance requirements of the Contractor in this contract and shall be subject to all of the requirements stated herein, including naming the County as additional insured.
- n. The Contractor agrees Contractor's insurance obligation shall survive the completion or termination of this Contract for a minimum period of three years.

34.3 Defense & Indemnity Agreement. To the fullest extent permitted by law, the Contractor agrees to indemnify, defend and hold the County and its departments, elected and appointed officials, employees, agents and volunteers, harmless from and against any and all claims, damages, losses and expenses, including but not limited to court costs, attorney's fees, and alternative dispute resolution costs, for any personal injury, for any bodily injury, sickness, disease, or death and for any damage to or destruction of any property (including the loss of use resulting therefrom) which: 1) are caused in whole or in part by any error, act or omission, negligent or otherwise, of the Contractor, its employees, agents or volunteers or Contractor's subcontractors and their employees, agents or volunteers; or 2) directly or indirectly arise out of or occur in connection with performance of this Contract or 3) are based upon the Contractor's or its subcontractors' use of, presence upon, or proximity to the property of the County. This indemnification obligation of the Contractor shall not apply in the limited circumstance where the claim, damage, loss, or expense is caused by the sole negligence of the County.

Should a court of competent jurisdiction determine that this contract is subject to RCW 4.24.115, then in the event of concurrent negligence of the Contractor, its subcontractors, employees or agents, and the County, its employees or agents, this indemnification obligation of the Contractor shall be valid and enforceable only to the extent of the negligence of the Contractor, its subcontractors,

employees, and agents. This indemnification obligation of the Contractor shall not be limited in any way by the Washington State Industrial Insurance Act, RCW Title 51, or by application of any other workmen's compensation act, disability benefit act or other employee benefit act, and the Contractor hereby expressly waives any immunity afforded by such acts.

It is further provided that no liability shall attach to the County by reason of entering into this contract, except as expressly provided herein. The parties specifically agree that this Contract is for the benefit of the parties only and this Contract shall create no rights in any third party. The County reserves the right, but not the obligation, to participate in the defense of any claim, damages, losses, or expenses, and such participation shall not constitute a waiver of Contractor's indemnity obligations under this Agreement.

In the event the Contractor enters into subcontracts to the extent allowed under this Contract, the Contractor's subcontractors shall indemnify the County on a basis equal to or exceeding Contractor's indemnity obligations to the County. The Contractor shall pay all attorney's fees and expenses incurred by the County in establishing and enforcing the County's rights under this indemnification provision, whether or not suit was instituted.

The Contractor agrees all Contractor's indemnity obligations shall survive the completion, expiration or termination of this Agreement. The foregoing indemnification obligations of the Contractor are a material inducement to County to enter into this Agreement and are reflected in the Contractor's compensation.

By signing this contract, the Contractor acknowledges that it has freely negotiated and agreed to the indemnification requirements to defend, indemnify and hold harmless the County from all claims and suits including those brought against the County by the Contractor's own employees, arising from this contract.

35.1 Non-Discrimination in Employment:

The County's policy is to provide equal opportunity in all terms, conditions and privileges of employment for all qualified applicants and employees without regard to race, color, creed, religion, national origin, sex, sexual orientation (including gender identity), age, marital status, disability, or veteran status. The Contractor shall comply with all laws prohibiting discrimination against any employee or applicant for employment on the grounds of race, color, creed, religion, national origin, sex, sexual orientation (including gender identity), age, marital status, disability, political affiliation, or veteran status, except where such constitutes a bona fide occupational qualification.

Furthermore, in those cases in which the Contractor is governed by such laws, the Contractor shall take affirmative action to ensure that applicants are employed, and treated during employment, without regard to their race, color, creed, religion, national origin, sex, age, marital status, sexual orientation (including gender identity), disability, or veteran status, except where such constitutes a bona fide occupational qualification. Such action shall include, but not be limited to: advertising, hiring, promotions, layoffs or terminations, rate of pay or other forms of compensation benefits, selection for training including apprenticeship, and participation in recreational and educational activities. In all solicitations or advertisements for employees placed by them or on their behalf, the Contractor shall state that all qualified applicants will receive consideration for employment without regard to race, color, religion, sex or national origin.

The foregoing provisions shall also be binding upon any subcontractor, provided that the foregoing provision shall not apply to contracts or subcontractors for standard commercial supplies or raw materials, or to sole proprietorships with no employees.

35.2 Non-Discrimination in Client Services:

The Contractor shall not discriminate on the grounds of race, color, creed, religion, national origin, sex, age, marital status, sexual orientation (including gender identity), disability, or veteran status; or deny an individual or business any service or benefits under this Agreement unless otherwise allowed by applicable law; or subject an individual or business to segregation or separate treatment in any manner related to his/her/its receipt any service or services or other benefits provided under this Agreement unless otherwise allowed by applicable law; or deny an individual or business an opportunity to participate in any program provided by this Agreement unless otherwise allowed by applicable law.

36.1 Waiver of Noncompetition:

Contractor irrevocably waives any existing rights which it may have, by contract or otherwise, to require another person or corporation to refrain from submitting a proposal to or performing work or providing supplies to the County, and contractor further promises that it will not in the future, directly or indirectly, induce or solicit any person or corporation to refrain from submitting a bid or proposal to or from performing work or providing supplies to the County.

36.2 Conflict of Interest:

If at any time prior to commencement of, or during the term of this Agreement, Contractor or any of its employees involved in the performance of this Agreement shall have or develop an interest in the subject matter of this Agreement that is potentially in conflict with the County's interest, then Contractor shall immediately notify the County of the same. The notification of the County shall be made with sufficient specificity to enable the County to make an informed judgment as to whether or not the County's interest may be compromised in any manner by the existence of the conflict, actual or potential. Thereafter, the County may require the Contractor to take reasonable steps to remove the conflict of interest. The County may also terminate this contract according to the provisions herein for termination.

37.1 Administration of Contract:

This Agreement shall be subject to all laws, rules, and regulations of the United States of America, the State of Washington, and political subdivisions of the State of Washington. The Contractor also agrees to comply with applicable federal, state, county or municipal standards for licensing, certification and operation of facilities and programs, and accreditation and licensing of individuals.

The County hereby appoints, and the Contractor hereby accepts, the Whatcom County Executive, and his or her designee, as the County's representative, hereinafter referred to as the Administrative Officer, for the purposes of administering the provisions of this Agreement, including the County's right to receive and act on all reports and documents, and any auditing performed by the County related to this Agreement. The Administrative Officer for purposes of this agreement is:

Tawni Helms, Administrative Coordinator
Whatcom County Executive's Office
311 Grand Avenue, Suite 108
Bellingham, WA 98225

37.2 Notice:

Any notices or communications required or permitted to be given by this Contract must be (i) given in writing and (ii) personally delivered or mailed, by prepaid, certified mail or overnight courier, or transmitted by electronic mail transmission (including PDF), to the party to whom such notice or communication is directed, to the mailing address or regularly-monitored electronic mail address of such party as follows:

PARTY 1: Tune-Up Events, LLC
Brandon Watts, Managing Director
501 Meador Avenue, Suite 104
Bellingham, WA 98225
360-441-4871
brandon@freehubmag.com

PARTY 2: Tawni Helms, Administrative Coordinator
Whatcom County Executive's Office
311 Grand Avenue, Suite 108
Bellingham, WA 98225
360-778-5208
thelms@co.whatcom.wa.us

Any such notice or communication shall be deemed to have been given on (i) the day such notice or communication is personally delivered, (ii) three (3) days after such notice or communication is mailed by prepaid certified or registered mail, (iii) one (1) working day after such notice or communication is sent by overnight courier, or (iv) the day such notice or communication is sent electronically, provided that the sender has received a confirmation of such electronic transmission. A party may, for purposes of this Agreement, change his, her or its address, email address or the person to whom a notice or other communication is marked to the attention of, by giving notice of such change to the other party pursuant to this Section.

37.3 If agreed by the parties, this Contract may be executed by Email transmission and PDF signature and Email transmission and PDF signature shall constitute an original for all purposes.

38.1 Certification of Public Works Contractor's Status under State Law:

If applicable, Contractor certifies that it has fully met the responsibility criteria required of public works contractors under RCW 39.04.350 (1), which include: (a) having a certificate of registration in compliance with RCW 18.27; (b) having a current state unified business identifier number; (c) if applicable, having industrial insurance coverage for its employees working in Washington as required in Title 51 RCW, an employment security department number as required in Title 50 RCW, and a state excise tax registration number as required in Title 82 RCW; and (d) not being disqualified from bidding on any public works contract under RCW 39.06.010 or 39.12.065 (3).

- 38.2 Certification Regarding Federal Debarment, Suspension, Ineligibility and Voluntary Exclusion - Lower Tier Covered Transactions:
If applicable, the Contractor further certifies, by executing this contract, that neither it nor its principles is presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participation in this transaction by any Federal department or Agency.

The Contractor also agrees that it shall not knowingly enter into any lower tier covered transactions (a transaction between the Contractor and any other person) with a person who is proposed for debarment, debarred, suspended, declared ineligible, or voluntarily excluded from participation in this covered transaction, and the Contractor agrees to include this clause titled "Certification Regarding Federal Debarment, Suspension, Ineligibility and Voluntary Exclusion - Lower Tier Covered Transaction" without modification, in all lower tier covered transactions and in all solicitations for lower tier transactions.

The "Excluded Parties List System in the System for Award Management (SAM) website is available to research this information at WWW.SAM.GOV. Contractor shall immediately notify Whatcom County if, during the term of this Contract, Contractor becomes debarred.

38.3 E-Verify:

The E-Verify contractor program for Whatcom County applies to contracts of \$100,000 or more and sub contracts for \$25,000 or more if the primary contract is for \$100,000 or more. If applicable, Contractor represents and warrants that it will, for at least the duration of this contract, register and participate in the status verification system for all newly hired employees. The term "employee" as used herein means any person that is hired to perform work for Whatcom County. As used herein, "status verification system" means the Illegal Immigration Reform and Immigration Responsibility Act of 1996 that is operated by the United States Department of Homeland Security, also known as the E-Verify Program, or any other successor electronic verification system replacing the E-Verify Program. Contractor/Seller agrees to maintain records of such compliance and, upon request of the County, to provide a copy of each such verification to the County. Contractor/Seller further represents and warrants that any person assigned to perform services hereunder meets the employment eligibility requirements of all immigration laws of the State of Washington. Contractor/Seller understands and agrees that any breach of these warranties may subject Contractor/Seller to the following: (a) termination of this Agreement and ineligibility for any Whatcom County contract for up to three (3) years, with notice of such cancellation/termination being made public. In the event of such termination/cancellation, Contractor/Seller would also be liable for any additional costs incurred by the County due to contract cancellation or loss of license or permit." Contractor will review and enroll in the E-Verify program through this website: www.uscis.gov

Series 40-49: Provisions Related to Interpretation of Agreement and Resolution of Disputes

40.1 Modifications:

Either party may request changes in the Agreement. Any and all agreed modifications, to be valid and binding upon either party, shall be in writing and signed by both of the parties.

40.2 Contractor Commitments, Warranties and Representations:

Any written commitment received from the Contractor concerning this Agreement shall be binding upon the Contractor, unless otherwise specifically provided herein with reference to this paragraph. Failure of the Contractor to fulfill such a commitment shall render the Contractor liable for damages to the County. A commitment includes, but is not limited to, any representation made prior to execution of this Agreement, whether or not incorporated elsewhere herein by reference, as to performance of services or equipment, prices or options for future acquisition to remain in effect for a fixed period, or warranties.

41.1 Severability:

If any term or condition of this contract or the application thereof to any person(s) or circumstances is held invalid, such invalidity shall not affect other terms, conditions or applications which can be given effect without the invalid term, condition or application. To this end, the terms and conditions of this contract are declared severable.

41.2 Waiver:

Waiver of any breach or condition of this contract shall not be deemed a waiver of any prior or subsequent breach. No term or condition of this contract shall be held to be waived, modified or deleted except by an instrument, in writing, signed by the parties hereto. The failure of the County to insist upon strict performance of any of the covenants and agreements of this Agreement, or to exercise any option herein conferred in any one or more instances, shall not be construed to be a waiver or relinquishment of any such, or any other covenants or agreements, but the same shall be and remain in full force and effect.

42.1 Disputes:

a. General:

Differences between the Contractor and the County, arising under and by virtue of the Contract Documents, shall be brought to the attention of the County at the earliest possible time in order that such matters may be settled or other appropriate action promptly taken. Except for such objections as are made of record in the manner hereinafter specified and within the time limits stated, the records, orders, rulings, instructions, and decisions of the Administrative Officer shall be final and conclusive.

b. **Notice of Potential Claims:**

The Contractor shall not be entitled to additional compensation which otherwise may be payable, or to extension of time for (1) any act or failure to act by the Administrative Officer or the County, or (2) the happening of any event or occurrence, unless the Contractor has given the County a written Notice of Potential Claim within ten (10) days of the commencement of the act, failure, or event giving rise to the claim, and before final payment by the County. The written Notice of Potential Claim shall set forth the reasons for which the Contractor believes additional compensation or extension of time is due, the nature of the cost involved, and insofar as possible, the amount of the potential claim. Contractor shall keep full and complete daily records of the work performed, labor and material used, and all costs and additional time claimed to be additional.

c. **Detailed Claim:**

The Contractor shall not be entitled to claim any such additional compensation, or extension of time, unless within thirty (30) days of the accomplishment of the portion of the work from which the claim arose, and before final payment by the County, the Contractor has given the County a detailed written statement of each element of cost or other compensation requested and of all elements of additional time required, and copies of any supporting documents evidencing the amount or the extension of time claimed to be due.

d. **Arbitration:**

Other than claims for injunctive relief, temporary restraining order, or other provisional remedy to preserve the status quo or prevent irreparable harm, brought by a party hereto (which may be brought either in court or pursuant to this arbitration provision), and consistent with the provisions hereinabove, any claim, dispute or controversy between the parties under, arising out of, or related to this Contract or otherwise, including issues of specific performance, shall be determined by arbitration in Bellingham, Washington, under the applicable American Arbitration Association (AAA) rules in effect on the date hereof, as modified by this Agreement. There shall be one arbitrator selected by the parties within ten (10) days of the arbitration demand, or if not, by the AAA or any other group having similar credentials. Any issue about whether a claim is covered by this Contract shall be determined by the arbitrator. The arbitrator shall apply substantive law and may award injunctive relief, equitable relief (including specific performance), or any other remedy available from a judge but shall not have the power to award punitive damages. Each Party shall pay all their own costs, attorney fees and expenses of arbitration and the parties shall share equally in the Arbitrator's fees and costs. The decision of the arbitrator shall be final and binding and an order confirming the award or judgment upon the award may be entered in any court having jurisdiction. The parties agree that the decision of the arbitrator shall be the sole and exclusive remedy between them regarding any dispute presented or pled before the arbitrator. At the request of either party made not later than forty-five (45) days after the arbitration demand, the parties agree to submit the dispute to nonbinding mediation, which shall not delay the arbitration hearing date; provided, that either party may decline to mediate and proceed with arbitration.

Any arbitration proceeding commenced to enforce or interpret this Contract shall be brought within six years after the initial occurrence giving rise to the claim, dispute, or issue for which arbitration is commenced, regardless of the date of discovery or whether the claim, dispute, or issue was continuing in nature. Claims, disputes, or issues arising more than six years prior to a written request or demand for arbitration issued under this Contract are not subject to arbitration.

- e. The parties may agree in writing signed by both parties that a claim or dispute may be brought in Whatcom County Superior Court rather than mediation or arbitration.

Unless otherwise specified herein, this Contract shall be governed by the laws of Whatcom County and the State of Washington.

43.1 **Venue and Choice of Law:**

In the event that any litigation should arise concerning the construction or interpretation of any of the terms of this Agreement, the venue of such action of litigation shall be in the courts of the State of Washington in and for the County of Whatcom. This Agreement shall be governed by the laws of the State of Washington.

44.1 **Survival:**

The provisions of paragraphs 11.1, 11.2, 11.3, 21.1, 22.1, 30.1, 31.1, 31.2, 32.1, 33.1, 34.2, 34.3, 36.1, 40.2, 41.2, 42.1, and 43.1, if utilized, shall survive, notwithstanding the termination or invalidity of this Agreement for any reason.

45.1 **Entire Agreement:**

This written Agreement, comprised of the writings signed or otherwise identified and attached hereto, represents the entire Agreement between the parties and supersedes any prior oral statements, discussions or understandings between the parties.

EXHIBIT "A"
(SCOPE OF WORK)

Tune-Up Events, LLC will use tourism promotion funds to:

1. Fund the marketing and promotional expenses incurred for the Northwest Tune-Up Event.
 - Creative services and assets creation (graphic design, photography and production)
 - Printing of promotional materials designed to attract overnight visitors
 - Mailing of promotional materials outside of Whatcom County in an effort to attract overnight visitors
 - Advertising of the event through media outlets outside of Whatcom County, including social media and internet advertising, for the purposes of bringing visitors to Whatcom County
2. Up to 25% of the Lodging Tax Funding allocation can be used to fund operational costs associated with the Northwest Tune-Up Event.

Promotional materials regarding the proposed activity must mention that it is made possible in part by a Tourism Promotion Grant from Whatcom County. The scale of this credit should be commensurate with the County's level of financial support. It should include the name and logo of the County. It is not expected that this credit be displayed in all materials, but at a minimum it should be placed in such documents as programs and annual reports.

Within 30 days after the end of the contract term, the Chamber shall submit a final project report (the "Final Project Report") detailing:

- How the evaluation criteria were met by the event
- What elements worked well and which did not.
- Modifications, if any, planned for future activities.
- Summarize the results of the year's activities and accomplishments.
- Provide Budget vs. Actual Financials.

Failure to complete and deliver the Final Project Report in a timely manner may render recipient ineligible for future funding. Pursuant to RCW 67.28.1816, recipients of lodging tax funds must provide the following information:

The estimated number of tourists, persons traveling over fifty miles to the destination, persons remaining at the destination overnight, and lodging stays generated per festival, special event or tourism-related facility owned or sponsored by a nonprofit organization or local jurisdiction.

EXHIBIT "B"
(COMPENSATION)

Maximum consideration for this contract shall be \$50,000. ***The Contract Number shall be included on all billings or correspondence.***

Allowable Expenses include:

GENERAL LEDGER DETAIL for OPERATIONS STAFF not to exceed 25% (\$12,500) of the LTAC funding allocation:

- Salaries
- Payroll taxes
- Health insurance

RECIEPTS:

- Marketing, promotional
- Creative services and asset creation (graphic design, photography and production)
- Printing of promotional materials *(for annual multi-day events designed to encourage tourism and overnight stays)*
- Advertising
- Postage costs

Tune-Up Events, LLC will submit invoices detailing allowable expenditures as outlined in Exhibit A to the Whatcom County Executive's Office. Payment is for reimbursement only and copies of receipts must be attached to invoices.

Invoices will be certified by the Executive Director with the following certification:

I certify that the materials have been furnished, the services rendered, or the labor performed as described on this invoice.

Payment will be made no more than one time per month.

Tune-Up Events, LLC will also provide Whatcom County with a copy of all brochures and advertisements included with invoices.

MEMORANDUM

To: Satpal Sidhu, County Executive

From: Bill Elfo, Sheriff 

Date: November 15, 2021

Subject: Interagency Agreement
Washington Traffic Safety Commission
High Visibility Enforcement (HVE) Patrols FY22
2022-HVE-4452-Region 11 Target Zero Task Force

Enclosed for your review and signature is one (1) original agreement between Whatcom County Sheriff's Office and the Washington Traffic Safety Commission for High Visibility Enforcement (HVE) Patrols to address distracted driving and motorcycle safety.

Background and Purpose

This agreement provides funding for the Whatcom County Sheriff's Office to conduct overtime high visibility enforcement (HVE) traffic safety emphasis patrols to address distracted driving and motorcycle safety with the goal of reducing traffic accidents.

Funding Amount and Source

Whatcom County Sheriff's Office allocation is \$7,800 (approximately 10.06% of the total Region 11 award of \$77,500) from Washington Traffic Safety Commission. Funds originate from the United States Department of Transportation (USDOT) National Highway Traffic Safety Administration.

Differences from Previous Contract

There is no change in dollar amount from the previous grant.

Please contact Undersheriff Chadwick at extension 6618 if you have any questions or concerns regarding the terms of this agreement.

Thank you.

Contract or Grant Administrator:	Doug Chadwick, Undersheriff
Contractor's / Agency Name:	Washington Traffic Safety Commission
Is this a New Contract? If not, is this an Amendment or Renewal to an Existing Contract? Yes <input checked="" type="radio"/> No <input type="radio"/> Yes <input type="radio"/> No <input checked="" type="radio"/> If Amendment or Renewal, (per WCC 3.08.100 (a)) Original Contract #: _____	
Does contract require Council Approval? Yes <input checked="" type="radio"/> No <input type="radio"/> If No, include WCC: _____ Already approved? Council Approved Date: _____ (Exclusions see: Whatcom County Codes 3.06.010, 3.08.090 and 3.08.100)	
Is this a grant agreement? Yes <input checked="" type="radio"/> No <input type="radio"/> If yes, grantor agency contract number(s): <u>2022-HVE-4452</u> CFDA#: <u>20.600 and 20.608</u>	
Is this contract grant funded? Yes <input type="radio"/> No <input checked="" type="radio"/> If yes, Whatcom County grant contract number(s): _____	
Is this contract the result of a RFP or Bid process? Yes <input type="radio"/> No <input checked="" type="radio"/> If yes, RFP and Bid number(s): _____ Contract _____ Cost Center: <u>2965</u>	
Is this agreement excluded from E-Verify? No <input type="radio"/> Yes <input checked="" type="radio"/> If no, include Attachment D Contractor Declaration form.	
If YES, indicate exclusion(s) below: <input type="checkbox"/> Professional services agreement for certified/licensed professional. <input type="checkbox"/> Goods and services provided due to an emergency <input type="checkbox"/> Contract work is for less than \$100,000. <input type="checkbox"/> Contract for Commercial off the shelf items (COTS). <input type="checkbox"/> Contract work is for less than 120 days. <input type="checkbox"/> Work related subcontract less than \$25,000. <input checked="" type="checkbox"/> Interlocal Agreement (between Governments). <input type="checkbox"/> Public Works - Local Agency/Federally Funded FHWA.	
Contract Amount:(sum of original contract amount and any prior amendments): \$ <u>7,800.00</u> This Amendment Amount: \$ _____ Total Amended Amount: \$ <u>7,800.00</u>	Council approval required for; all property leases, contracts or bid awards exceeding \$40,000 , and professional service contract amendments that have an increase greater than \$10,000 or 10% of contract amount, whichever is greater, except when: 1. Exercising an option contained in a contract previously approved by the council. 2. Contract is for design, construction, r-o-w acquisition, prof. services, or other capital costs approved by council in a capital budget appropriation ordinance. 3. Bid or award is for supplies. 4. Equipment is included in Exhibit "B" of the Budget Ordinance. 5. Contract is for manufacturer's technical support and hardware maintenance of electronic systems and/or technical support and software maintenance from the developer of proprietary software currently used by Whatcom County.
Summary of Scope: _____	
This agreement provides funding for the Sheriff's Office to conduct high visibility enforcement (HVE) traffic safety emphasis overtime patrols to address distracted driving and motorcycle safety with the goal of reducing traffic accidents. Whatcom County Sheriff's Office allocation is \$7,800 (approximately 10.06% of the total Region 11 award of \$77,500).	
Term of Contract: 10/1/21 Expiration Date: 9/30/22	

Contract Routing:	1. Prepared by: <u>Donna Duling</u>	Date: <u>11/8/21</u>
	2. Attorney signoff: <u>Approved via email BW/dd</u>	Date: <u>11/5/21</u>

	4. IT reviewed (if IT related): _____	Date: _____
	5. Contractor signed: _____	Date: _____
	6. Submitted to Exec.: _____	Date: _____
	7. Council approved (if necessary): _____	Date: _____
	8. Executive signed: _____	Date: _____
	9. Original to Council: _____	Date: _____

INTERAGENCY AGREEMENT

BETWEEN THE

Washington Traffic Safety Commission

AND

Whatcom County Sheriff's Office

THIS AGREEMENT is made and entered into by and between the Washington Traffic Safety Commission, hereinafter referred to as "WTSC," and Whatcom County Sheriff's Office, hereinafter referred to as "SUB-RECIPIENT."

NOW THEREFORE, in consideration of the terms, conditions, covenants, and performance contained herein, or attached and incorporated and made a part hereof, the Parties mutually agree as follows:

1. PURPOSE OF THE AGREEMENT

The purpose of this Agreement is to provide funding, provided by the United States Department of Transportation (USDOT) National Highway Traffic Safety Administration (NHTSA) and allowed under the Assistance Listings Catalog of Federal Domestic Assistance (CFDA) numbers 20.600 and 20.608, for traffic safety grant project **2022-HVE-4452-Region 11 Target Zero Task Force**, specifically to provide funding for the law enforcement agencies in WTSC Region 11 to conduct overtime high-visibility enforcement (HVE) traffic safety emphasis patrols as outlined in the Statement of Work (SOW), in support of Target Zero priorities. The Target Zero Manager (TzM) and/or the Law Enforcement Liaison (LEL) shall coordinate the SOW with the SUB-RECIPIENT with the goal of reducing traffic crashes.

Grant **2022-HVE-4452-Region 11 Target Zero Task Force** was awarded to the **Region 11** to support collaborative efforts to conduct HVE activities. By signing this agreement, the SUB-RECIPIENT is able to seek reimbursement for approved overtime expenses incurred as a participant in the region's HVE grant.

2. PERIOD OF PERFORMANCE

The period of performance of this Agreement shall commence upon the date of execution by both Parties, but not earlier than October 1, 2021, and remain in effect until September 30, 2022 unless terminated sooner, as provided herein.

3. STATEMENT OF WORK

SCOPE OF WORK:

Problem and Opportunity Statement / Project Overview

The main causes of serious injury and fatality collisions on Washington's roadways are driver impairment through drug and/or alcohol use, and distracted driving. Motorcyclists also represent a high number of injured and killed as a result of unsafe and poorly trained riders and the challenges vehicle drivers face in observing motorcycles on the road.

This project will fund locally coordinated high visibility enforcement mobilizations for distracted driving and motorcycle safety. Selected regions will also be given funding for Impaired Driving HVE. Overtime patrols will be organized by local Target Zero Managers (TZMs) & the statewide Law Enforcement Liaison networks and their local Target Zero Task Force. These patrols will also be coordinated with the Washington State Patrol (WSP). Target Zero Managers will establish or strengthen relationships with key WSP district personnel to improve interagency coordination.

Goal

Prevent traffic crashes to reduce traffic related deaths and serious injuries through active, visible, consistent, and targeted traffic law enforcement.

Strategy

Prevent drivers from engaging in high-risk behaviors by increasing their perception of the risk of receiving a citation through high visibility enforcement campaigns (HVE).

HVE Campaigns influence driver behavior by creating the perception that there is an increased risk of engaging in risky driving behaviors. This perception is achieved through 1) an increase in media messages about upcoming emphasis periods so that the targeted drivers know when the patrols will occur and what will be enforced and 2) drivers have the perception of increased enforcement because they can see a significant and noticeable increase in law enforcement presence (officers pulling cars over) that reinforces the media messages they received and influences them to modify their driving behavior.

Objectives and Requirements for All High Visibility Patrols

1. SUB-RECIPIENT will participate in their task force to plan and execute HVE events. The SUB-RECIPIENT in cooperation with the local task force will:
 - a. Conduct robust planning for each HVE event. WTSC recommends creating an operational plan developed by the local traffic safety task force for each HVE event that includes:
 - i. Goals for the event – For example, what behaviors is the event intended to influence?
 - ii. Summary of participating law enforcement agencies, target violations, and target locations.
 - iii. Summary of the public outreach that will be done to promote the event so that drivers in the targeted locations are forewarned and can anticipate it.
 - iv. Use data and information such as crash data, anecdotes of near misses, and professional judgement to pick target locations where the patrols will occur.

- b. The planning for HVE events will be data informed; based on crash data, anecdotal evidence, and the professional judgement of task force members.
- c. Execute the event using multiple officers (a minimum of three) at the same time in the same target areas to create a visible presence so that the driving public has the perception of law enforcement omnipresence on the targeted roads. Enforcement is highly visible – clearly more than a typical day.
- d. Participating officers should maximize their contacts during their patrols so that their activity contributes to the goals of the HVE event. See this requirement described below in the section called Other Considerations, Exceptions, And Notes Regarding HVE Events.
- e. Promote the event through all earned, owned and, if funded, paid media that is available so that the public is made aware of the event before, during, and after the enforcement takes place. Translate messages as needed to reach the majority of drivers in the targeted locations.
- f. Invite local media involvement in the effort to reach communities in which HVE will occur.
- g. Strive to actively enforce traffic safety laws focused on collision causing behaviors in priority areas throughout the year outside of HVE events.
- h. Ensure all participating personnel will use the WEMS system provided by the WTSC to record all activities in digital activity logs conducted by their commissioned officers pursuant to the HVE events. Participating officers will fill out all applicable fields of the digital activity log and use the comments field to provide details on an irregularities, challenges or other details that would help explain what was encountered during their shift. SUB-RECIPIENT will also ensure all supervisors and fiscal staff have the ability to review and edit those activity logs.
- i. Ensure all participating personnel will receive a briefing prior to the event so that every participant understands the purpose and goals of the HVE event. This can be done in person (preferred) or electronic via telephone or virtual software. Below is a recommended briefing checklist:
 - i. Event goals, and summary of participating law enforcement agencies and officers, target violations, and target locations.
 - ii. List of on-call DREs and request procedures
 - iii. How to fill out their digital activity log in WEMS
 - iv. Information on how the Mobile Impaired Driving Unit will be used (if applicable)
 - v. Dispatch information
 - vi. Spotter processes (if applicable)
 - vii. Available Draeger machines and locations

- j. Ensure all officers participating in these patrols is BAC certified and received and passed the SFST refresher training.
- k. Support the promotion of HVE events utilizing all of their owned media channels (i.e., Facebook, Twitter, website, email newsletters, or other social media).
- l. Ensure at least one individual available for weekend media contacts, beginning at noon on Fridays before HVE mobilizations.

Objectives and Requirements for Distracted Driving HVE Patrols

1. SUB-RECIPIENT must use the spotter method for all distracted driving HVE events. This method will utilize a team of no less than three officers – one spotter identifying violations and at least two officers responding to violations.
2. Participating officers will document, in the “Comments” box of their activity log, the names of the spotter and chasers with which they were working.
3. SUB-RECIPIENTS utilizing motorcycle officers are exempt from the spotter requirement.
4. SUB-RECIPIENT agrees that distracted driving patrols conducted without using the spotter method will not be compensated by the WTSC.
5. SUB-RECIPIENT will only expend funds for these HVE events in support of the national distracted driving campaign from April 4 to April 11.
6. SUB-RECIPIENT may expend funds outside of the April national campaign, but only when 1) the Target Zero Manager receives written approval from WTSC in advance and 2) the event is in support of a distracted driving focused HVE event organized by the Task Force. Patrols conducted outside of the campaign window, and without pre-approval from WTSC will not be reimbursed.

Objectives and Requirements for Motorcycle Safety HVE Patrols

1. SUB-RECIPIENT will focus on the illegal and unsafe driving actions of all other motor vehicles when relating to motorcycles. This includes speeding, failure to yield to a motorcycle, following too closely to a motorcycle, distracted driving, etc.
2. SUB-RECIPIENT ensures that enforcement will focus on the illegal and unsafe driving actions of motorcycles that are known to cause serious and fatal crashes. This includes impaired driving, speeding, and following too closely.
3. The SUB-RECIPIENT will utilize motorcycle officers in these patrols to the fullest extent possible.
4. The SUB-RECIPIENT will only expend funds for these motorcycle HVE events in support of the following campaigns:
5. It’s a Fine Line – (July 8-10, July 15-17, or July 22-24). Note: Patrols must take place Friday, Saturday, or Sunday during the campaign.

6. Oyster Run Event – Summer 2022 (Region 11 only).
7. ABATE Spring Opener – Summer 2022 (Region 12 only).
8. Hog Wild Ocean Shores Motorcycle Event – Summer 2022 (Region 2 only).
9. Motorcycle HVE Patrols must take place Friday, Saturday, or Sunday during the It's a Fine Line campaign, however the local Traffic Safety Task Force can request to conduct patrols during other days in the week if data shows the need for this or for special events. These requests must be sent to Mark Medalen via email (mmedalen@wtsc.wa.gov) at least one week in advance of the proposed event. During special events, patrols should be scheduled during the dates of the event and could start one day before the official event start date and end one day after the official event end date.

Other Considerations, Exceptions, And Notes Regarding HVE Events

Maximizing contacts: Participating law enforcement officers should make as many contacts as they can during their patrol in the spirit of changing driving behavior. Active, visible, consistent, and targeted traffic law enforcement has an impact on helping to modify driver behavior. A traffic stop affects future driving habits that has a positive influence on reducing the number and severity of collisions. People believe what they hear from each other and it influences what they do. Traffic stops act as a deterrent to risky driving behavior. This strategy has three primary purposes that traffic stops achieve:

- The first purpose is to stop a violation of the law for public safety. Officers will accomplish this purpose merely by stopping vehicles.
- The second purpose of the stop is to serve as a general deterrent to other drivers. Officers' visible presence with a vehicle at the roadside has this symbolic effect on other drivers.
- Finally, the third purpose is to change the drivers' future driving behavior.

Process Measures

- Percent of officers that receive a briefing prior to HVE events.
- Percent of HVE activity logs with a start date and end date / time within prescribed campaign windows.
- Percent of stops resulting in an infraction or citations issued for high-risk behaviors including but not limited to impaired driving, speeding, distracted driving, and aggressive driving.

Objectives and Requirements for Impaired Driving HVE Patrols

1. SUB-RECIPIENT will implement a data driven, sustained enforcement and education efforts.
 - a. Use local traffic crash data and any other useful data to identify the locations where the enforcement patrols should occur.
 - b. Education and local media efforts should incorporate a Positive Community Norms approach with the desired outcome of influencing drivers with the highest potential of causing traffic crashes.

- c. Commit to an increased level of sustained enforcement as outlined in the operations plan. *NOTE: These funds are meant to provide an increase in DUI enforcement efforts, not meant to replace current DUI enforcement.*
2. SUB-RECIPIENT will participate in national impaired driving HVE events including:
 - a. Holiday DUI Patrols (December 15 – January 1)
 - b. Drive Sober or Get Pulled Over (August 17 – September 5)
3. SUB-RECIPIENT will focus enforcement efforts on driving behaviors that are commonly exhibited by drivers operating a motor vehicle under the influence of alcohol/drugs or a combination. Stopping vehicles for “high discretionary” style stops should not be the priority.
4. SUB-RECIPIENT ensures all officers participating in these patrols has received the Advanced Roadside Impaired Driving Enforcement (ARIDE) training.
5. SUB-RECIPIENT should not supplant regular patrol officer activity during HVE events.

Operations

- The hours for the High Visibility Enforcement (HVE) patrols for community or holiday events will be determined by the nature of the event, the size of the event and when alcohol is being served.
- HVE patrols will be in the evening hours consistent with the National Mobilizations.
- National mobilizations will be scheduled in the dusk and evening hours as the data from the WSP Collision Analysis Tool indicates these are the times when most impaired driving crashes occur in Region 11.

- DUI Mentorship Policy will provide the guidelines for utilizing WTSC Impaired Driving funds. The DUI Mentorship Policy will utilize Regional Drug Recognition Experts (DREs) as mentors to help other officers gain the knowledge, experience, and confidence levels to more effectively pursue DUI Offenders.
- HVE Patrols will follow the standard 3 officers/deputies minimum but the enforcement officers will not be subject to the 3 stops per hour minimum.
- Traffic stops will focus on "low discretionary" stops that are categorized as collision-causing offenses such as suspected impaired drivers, distracted driving and aggressive driving, with an emphasis on the 24 Initial Visual DUI Detection Cues.
- To be eligible to participate in WTSC funded Impaired Driving HVEs, officers/deputies will go through a selection process. The Region 11 TQM will keep a roster of active officers approved to participate in the HVE patrols.
- DRE Training Officers, enforcement officers and dispatchers will receive overtime or straight time during the WTSC Funded HVE Patrols.
- HVE funds are meant to provide an increase DUI enforcement effort and not meant to replace current DUI enforcement or supplant regular patrols.

Schedule of Events

1st Quarter October 2021 through December 31, 2021	2nd Quarter January 1 to March 31, 2022	3rd Quarter April 1 to June 30, 2022	4th Quarter July 1 to September 30, 2022
Halloween, October 31	Super Bowl Sunday, February 7	Cinco de Mayo, May 5	Fourth of July Celebration, July 4
World Day of Remembrance for Road Traffic Victims, November 21	St. Patrick's Day, March 17	Ski to Sea, May 21- 25	Target Zero DUI Drive Sober or Get Pulled Over, August 20 - Sept 6
Target Zero - Holiday DUI emphasis, December 15 - 31			

Measures

In addition to officer activity logs, Region 11 will measure the output and effort of the impaired driving grant through the following metrics:

Activity	Planned/Expected	Actual
HVE patrols conducted	9	
Officers/deputies participating	62	
DUI arrests	25	
Educational flyers distributed to drivers	500	
Media releases distributed	18	
Social media content developed/shared	27	

Publicity/Earned Media Efforts/ Visibility Efforts

All HVEs will include publicity pre-event, during and post event. The publicity will utilize the Positive Community Norms (PCN) messaging where appropriate. Pre-event media releases will be shared with local media outlets and radio stations.

HVEs will utilize social media messaging advising that the HVEs are in progress. Post-event messaging will distribute the results of the HVE patrols to the public and stakeholders in the community through media releases and social media.

Media outreach efforts will be made to individuals in the community with limited English proficiency through rack cards that have been translated and distributed by officers during HVE patrols. The same translated information will be distributed on the NW Region Target Zero social media.

Earned Media

The following are some of the free earned media we plan to use to inform the community about our HVE efforts and the Target Zero vision and goals utilizing the Positive Community Norms (PCN) messaging.

- Press releases / Press events: Announcing the event; Pre-event; Post-event
- Letters to the editor
- Flyers, brochures
- Media ride-alongs
- Interviews

Social Media

Region 11 TZM or partner agency will post information on our Northwest Region Target Zero social media sites along with utilizing the regional Task Force's social media network to promote voluntary compliance of traffic laws, reporting results and relevant data and information from the WTSC. This messaging will also utilize the Positive Community Norms (PCN) messaging strategies.

High Visibility Features

Region 11 plans to utilize the following high visibility features to complement our publicity campaign. These visual prompts are intended to remind drivers of the serious consequence of driving impaired and create deterrence:

- Electronic reader boards
- Business reader boards
- Flyers/ brochures handed out to motorist

Budget and Budget Narrative

Region 11 consistently patrols and enforces impaired driving laws as staffing permits.

If an HVE is canceled due to the Covid Pandemic, insufficient law enforcement staffing or other unforeseen circumstance the TZM will consult with the Task Force to identify an event or date in Region 11 where the

funding can be utilized for an extra Impaired Driving HVE. These funds can also be used for DRE Mentoring which would not be restricted by the HVE minimum of 3 officers per patrol. The WTSC Program Manager will be kept informed as to any changes to the schedule or budget.

1st Quarter - October 2021 through December 31, 2021

Halloween, October 31	\$2,800
World Day of Remembrance for Road Traffic Victims, November 21	\$2,800
Target Zero - Holiday DUI emphasis, December 15 - 31	<u>\$10,450</u>
Sub Total:	\$16,050

2nd Quarter – January 1 to March 31, 2022

Super Bowl Sunday, February 7	\$ 2,800
St. Patrick's Day - March 17	<u>\$ 2,800</u>
Sub Total:	\$ 5,600

3rd Quarter – April 1 to June 30, 2022

Cinco de Mayo, May 5	\$ 2,800
Ski to Sea - May 21-25	<u>\$ 2,800</u>
Sub Total:	\$ 5,600

4th Quarter – July 1 to September 30, 2022

July 4th Celebration, July 4th	\$ 2,800
Target Zero DUI Drive Sober or Get Pulled Over, August 20 - Sept 6	<u>\$10,450</u>
Sub Total:	\$13,250

Grand Total: \$40,500

3.1. MILESTONES AND DELIVERABLES

Mobilization	Dates
Holiday DUI	December 15, 2021 – January 1, 2022
U Drive. U Text. U Pay.	April 4 – 11, 2022
It's a Fine Line	July 8 – 24, 2022
DUI Drive Sober or Get Pulled Over	August 17 – September 5, 2022

3.2. COMPENSATION

3.2.1. Compensation for the overtime work provided in accordance with this Agreement has been established under the terms of RCW 39.34. The cost of accomplishing the work described in the SOW will not exceed dollar total from amounts listed below. Payment for satisfactory performance of the overtime

work shall not exceed this amount unless the WTSC and SUB-RECIPIENT mutually agree to a higher amount in a written Amendment to this Agreement executed by both the WTSC and SUB-RECIPIENT. Comp-time is not considered overtime and will not be approved for payment. All law enforcement agencies who are active members of the Region 11 traffic safety task force with a fully executed grant agreement are eligible to participate in this grant.

3.2.2. WTSC will reimburse for personnel overtime expenses at 150 percent of the officer's normal salary rate plus SUB-RECIPIENT's contributions to employee benefits, limited to the following:

- FICA
- Medicare
- Any portion of L & I that is paid by the employer (SUB-RECIPIENT)
- Retirement contributions paid by the employer (SUB-RECIPIENT) can be included if the contribution is based on a percentage of their hours worked

Health insurance, or any other benefits not listed above, are not eligible for reimbursement.

The SUB-RECIPIENT will provide law enforcement officers with appropriate equipment (e.g., vehicles, radars, portable breath testers, etc.) to participate in the emphasis patrols.

3.2.3. Funding alterations are permitted as follows: Upon agreement by the regional TZM and all other parties impacted by a proposed budget alteration, the allocation amounts may be increased or decreased without amending this agreement. HVE grant funds should be managed collaboratively by the SUB-RECIPIENT and the TZM.

These alterations must be requested through email communication among all involved parties, including the TZM, and the WTSC Fiscal Analyst. This communication shall include an HVE Allocation Adjustment form, which details the funding alterations.

Funds within the same HVE campaign budget category only, can be increased and decreased across parties, so long as the modified total does not exceed the regional total allocation per funding category.

3.2.4. These funds, designated for salaries and benefits, are intended to pay for the hourly overtime costs and proportional amounts of fringe benefits of commissioned staff pursuing the activities described in the statement of work. These funds may not be used for any other purpose for example any work required to maintain a law enforcement commission including recertification trainings like firearm qualification.

3.2.5. Dispatch: WTSC will reimburse communications officers/dispatch personnel for work on this project providing SUB-RECIPIENT has received prior approval from their region's TZM. This activity must be overtime and only the expenses listed in section 3.2 and its subsections will be reimbursed.

3.2.6. Transport Officers: WTSC will reimburse transport officers for their work on this project providing SUB-RECIPIENT has received approval from their regions TZM. The TZM will work with the regional LEL to

determine if need is warranted for the type of HVE activity. This activity must be overtime and only the expenses listed in section 3.2 and its subsections will be reimbursed.

3.2.7. The law enforcement agency involved will not schedule individual officer overtime shifts for longer than eight hours. WTSC understands there may be instances when more than eight hours are billed due to DUI processing or other reasons and an explanation should be provided on the WEMS Officer Activity Log.

3.2.8. The law enforcement agency involved will ensure that any reserve officer for whom reimbursement is claimed has exceeded his/her normal weekly working hours when participating in an emphasis patrol and is authorized to be paid at the amount requested. Reserve officers may only be paid at the normal hourly rate and not at the 150 percent overtime rate.

3.3. SUMMARY OF PROJECT COSTS

The WTSC has awarded **\$77,500.00** to the **Region 11 Traffic Safety Task Force** for the purpose of conducting coordinated overtime HVE activities. By signing this agreement, the SUB-RECIPIENT is able to seek reimbursement for approved overtime expenses incurred as a participant in this grant. All activity must be coordinated by the region's traffic safety task force and TZM in order to be eligible for reimbursement.

The funding for **Region 11** is as follows:

EMPHASIS PATROL

Impaired Driving Patrols (Section 402, CFDA 20.600)	\$40,500.00
Distracted Driving Patrols (Section 402, CFDA 20.600)	\$17,000.00
Motorcycle Safety (164 Funds, CFDA 20.608)	\$20,000.00
TOTAL	\$77,500.00

3.3.1. The funds issued under this Agreement are only to be used for the specified category and shall not be commingled between categories.

APPLICABLE STATE AND FEDERAL TERMS AND CONDITIONS:

4. ACTIVITY REPORTS

The SUB-RECIPIENT agrees to have all personnel who work HVE patrols submit a WEMS Officer Activity Log within 24 hours of the end of all shifts worked. These same logs will be associated with invoices as detailed

in the "BILLING PROCEDURE" section. Use of the Officer Activity Log in the WTSC's online grant management system, WEMS, is required. Supervisor review and accuracy certification will also be done in WEMS.

5. ADVANCE PAYMENTS PROHIBITED

No payments in advance of or in anticipation of goods or services to be provided under this Agreement shall be made by the WTSC.

6. AGREEMENT ALTERATIONS AND AMENDMENTS

This Agreement may be amended by mutual agreement of the Parties in the form of a written request to amend this Agreement. Such amendments shall only be binding if they are in writing and signed by personnel authorized to bind each of the Parties. Changes to the budget, SUB-RECIPIENT'S Primary Contact, and WTSC Program Manager can be made through email communication and signatures are not required.

7. ALL WRITINGS CONTAINED HEREIN

This Agreement contains all the terms and conditions agreed upon by the Parties. No other understandings, oral or otherwise, regarding the subject matter of this Agreement shall be deemed to exist or to bind any of the Parties hereto.

8. ASSIGNMENT

The SUB-RECIPIENT may not assign the work to be provided under this Agreement, in whole or in part, without the express prior written consent of the WTSC, which consent shall not be unreasonably withheld. The SUB-RECIPIENT shall provide the WTSC a copy of all third-party contracts and agreements entered into for purposes of fulfilling the SOW. Such third-party contracts and agreements must follow applicable federal, state, and local law, including but not limited to procurement law, rules, and procedures. If any of the funds provided under this Agreement include funds from NHTSA, such third-party contracts and agreements must include the federal provisions set forth in this Agreement in sections 34 through 42.

9. ATTORNEYS' FEES

In the event of litigation or other action brought to enforce the Agreement terms, each Party agrees to bear its own attorney fees and costs.

10. BILLING PROCEDURE

All invoices for reimbursement of HVE activities will be done using the WTSC's grant management system, WEMS. WEMS Officer Activity logs will be attached to invoices, directly linking the cost of the activity to the invoice. Because the activity, approval, and invoicing are all done within WEMS, no back up documentation is required in most cases.

Once submitted by the SUB-RECIPIENT, invoices are routed to the regional TZM for review and approval. The TZM will submit all approved invoices to the WTSC via WEMS within 10 days of receipt.

Payment to the SUB-RECIPIENT for approved and completed work will be made by warrant or account transfer by WTSC within 30 days of receipt of such properly documented invoices acceptable to WTSC. Upon expiration of the Agreement, any claim for payment not already made shall be submitted within 45 days after the expiration date of this Agreement. All invoices for goods received or services performed on or prior

to June 30, 2021, **must be received by WTSC no later than August 10, 2022.** All invoices for goods received or services performed between July 1, 2022 and September 30, 2022, **must be received by WTSC no later than November 15, 2022.**

11. CONFIDENTIALITY/SAFEGUARDING OF INFORMATION

The SUB-RECIPIENT shall not use or disclose any information concerning the WTSC, or information which may be classified as confidential, for any purpose not directly connected with the administration of this Agreement, except with prior written consent of the WTSC, or as may be required by law.

12. COST PRINCIPLES

Costs incurred under this Agreement shall adhere to provisions of 2 CFR Part 200 Subpart E.

13. COVENANT AGAINST CONTINGENT FEES

The SUB-RECIPIENT warrants that it has not paid, and agrees not to pay, any bonus, commission, brokerage, or contingent fee to solicit or secure this Agreement or to obtain approval of any application for federal financial assistance for this Agreement. The WTSC shall have the right, in the event of breach of this section by the SUB-RECIPIENT, to annul this Agreement without liability.

14. DISPUTES

14.1. Disputes arising in the performance of this Agreement, which are not resolved by agreement of the Parties, shall be decided in writing by the WTSC Deputy Director or designee. This decision shall be final and conclusive, unless within 10 days from the date of the SUB-RECIPIENT's receipt of WTSC's written decision, the SUB-RECIPIENT furnishes a written appeal to the WTSC Director. The SUB-RECIPIENT's appeal shall be decided in writing by the Director or designee within 30 days of receipt of the appeal by the Director. The decision shall be binding upon the SUB-RECIPIENT and the SUB-RECIPIENT shall abide by the decision.

14.2. Performance During Dispute. Unless otherwise directed by WTSC, the SUB-RECIPIENT shall continue performance under this Agreement while matters in dispute are being resolved.

15. GOVERNANCE

15.1. This Agreement is entered into pursuant to and under the authority granted by the laws of the state of Washington and any applicable federal laws. The provisions of this Agreement shall be construed to conform to those laws.

15.2. In the event of an inconsistency in the terms of this Agreement, or between its terms and any applicable statute or rule, the inconsistency shall be resolved by giving precedence in the following order:

15.2.1. Applicable federal and state statutes and rules

15.2.2. Terms and Conditions of this Agreement

15.2.3. Any Amendment executed under this Agreement

15.2.4. Any SOW executed under this Agreement

15.2.5. Any other provisions of the Agreement, including materials incorporated by reference

16. INCOME

Any income earned by the SUB-RECIPIENT from the conduct of the SOW (e.g., sale of publications, registration fees, or service charges) must be accounted for, and that income must be applied to project purposes or used to reduce project costs.

17. INDEMNIFICATION

17.1. To the fullest extent permitted by law, the SUB-RECIPIENT shall indemnify and hold harmless the WTSC, its officers, employees, and agents, and process and defend at its own expense any and all claims, demands, suits at law or equity, actions, penalties, losses, damages, or costs of whatsoever kind ("claims") brought against WTSC arising out of or in connection with this Agreement and/or the SUB-RECIPIENT's performance or failure to perform any aspect of the Agreement. This indemnity provision applies to all claims against WTSC, its officers, employees, and agents arising out of, in connection with, or incident to the acts or omissions of the SUB-RECIPIENT, its officers, employees, agents, contractors, and subcontractors. Provided, however, that nothing herein shall require the SUB-RECIPIENT to indemnify and hold harmless or defend the WTSC, its agents, employees, or officers to the extent that claims are caused by the negligent acts or omissions of the WTSC, its officers, employees or agents; and provided further that if such claims result from the concurrent negligence of (a) the SUB-RECIPIENT, its officers, employees, agents, contractors, or subcontractors, and (b) the WTSC, its officers, employees, or agents, or involves those actions covered by RCW 4.24.115, the indemnity provisions provided herein shall be valid and enforceable only to the extent of the negligence of the SUB-RECIPIENT, its officers, employees, agents, contractors, or subcontractors.

17.2. The SUB-RECIPIENT waives its immunity under Title 51 RCW to the extent it is required to indemnify, defend, and hold harmless the WTSC, its officers, employees, or agents.

17.3. The indemnification and hold harmless provision shall survive termination of this Agreement.

18. INDEPENDENT CAPACITY

The employees or agents of each Party who are engaged in the performance of this Agreement shall continue to be employees or agents of that Party and shall not be considered for any purpose to be employees or agents of the other Party.

19. INSURANCE COVERAGE

19.1. The SUB-RECIPIENT shall comply with the provisions of Title 51 RCW, Industrial Insurance, if required by law.

19.2. If the SUB-RECIPIENT is not required to maintain insurance in accordance with Title 51 RCW, prior to the start of any performance of work under this Agreement, the SUB-RECIPIENT shall provide WTSC with proof of insurance coverage (e.g., vehicle liability insurance, private property liability insurance, or commercial property liability insurance), as determined appropriate by WTSC, which protects the SUB-RECIPIENT and WTSC from risks associated with executing the SOW associated with this Agreement.

20. LICENSING, ACCREDITATION, AND REGISTRATION

The SUB-RECIPIENT shall comply with all applicable local, state, and federal licensing, accreditation, and registration requirements and standards necessary for the performance of this Agreement. The SUB-

RECIPIENT shall complete registration with the Washington State Department of Revenue, if required, and be responsible for payment of all taxes due on payments made under this Agreement.

21. RECORDS MAINTENANCE

21.1. During the term of this Agreement and for six years thereafter, the SUB-RECIPIENT shall maintain books, records, documents, and other evidence that sufficiently and properly reflect all direct and indirect costs expended in the performance of the services described herein. These records shall be subject to inspection, review, or audit by authorized personnel of the WTSC, the Office of the State Auditor, and federal officials so authorized by law. All books, records, documents, and other material relevant to this Agreement will be retained for six years after expiration. The Office of the State Auditor, federal auditors, the WTSC, and any duly authorized representatives shall have full access and the right to examine any of these materials during this period.

21.2. Records and other documents, in any medium, furnished by one Party to this Agreement to the other Party, will remain the property of the furnishing Party, unless otherwise agreed. The receiving Party will not disclose or make available this material to any third Parties without first giving notice to the furnishing Party and giving them a reasonable opportunity to respond. Each Party will utilize reasonable security procedures and protections to assure that records and documents provided by the other Party are not erroneously disclosed to third Parties.

22. RIGHT OF INSPECTION

The SUB-RECIPIENT shall provide right of access to its facilities to the WTSC or any of its officers, or to any other authorized agent or official of the state of Washington or the federal government, at all reasonable times, in order to monitor and evaluate performance, compliance, and/or quality assurance under this Agreement. The SUB-RECIPIENT shall make available information necessary for WTSC to comply with the right to access, amend, and receive an accounting of disclosures of their Personal Information according to the Health Insurance Portability and Accountability Act of 1996 (HIPAA) or any regulations enacted or revised pursuant to the HIPAA provisions and applicable provisions of Washington State law. The SUB-RECIPIENT shall upon request make available to the WTSC and the United States Secretary of the Department of Health and Human Services all internal policies and procedures, books, and records relating to the safeguarding, use, and disclosure of Personal Information obtained or used as a result of this Agreement.

23. RIGHTS IN DATA

23.1. WTSC and SUB-RECIPIENT agree that all data and work products (collectively called "Work Product") pursuant to this Agreement shall be considered works made for hire under the U.S. Copyright Act, 17 USC §101 et seq., and shall be owned by the state of Washington. Work Product includes, but is not limited to, reports, documents, pamphlets, advertisement, books, magazines, surveys, studies, computer programs, films, tapes, sound reproductions, designs, plans, diagrams, drawings, software, and/or databases to the extent provided by law. Ownership includes the right to copyright, register the copyright, distribute, prepare derivative works, publicly perform, publicly display, and the ability to otherwise use and transfer these rights.

23.2. If for any reason the Work Product would not be considered a work made for hire under applicable law, the SUB-RECIPIENT assigns and transfers to WTSC the entire right, title, and interest in and to all rights in the Work Product and any registrations and copyright applications relating thereto and any renewals and extensions thereof.

23.3. The SUB-RECIPIENT may publish, at its own expense, the results of project activities without prior review by the WTSC, provided that any publications (written, visual, or sound) contain acknowledgment of the support provided by NHTSA and the WTSC. Any discovery or invention derived from work performed under this project shall be referred to the WTSC, who will determine through NHTSA whether patent protections will be sought, how any rights will be administered, and other actions required to protect the public interest.

24. SAVINGS

In the event funding from state, federal, or other sources is withdrawn, reduced, or limited in any way after the effective date of this Agreement and prior to completion of the SOW under this Agreement, the WTSC may terminate the Agreement under the "TERMINATION FOR CONVENIENCE" clause, without the 30-day notice requirement. The Agreement is subject to renegotiation at the WTSC's discretion under any new funding limitations or conditions.

25. SEVERABILITY

If any provision of this Agreement or any provision of any document incorporated by reference shall be held invalid, such invalidity shall not affect the other provisions of this Agreement which can be given effect without the invalid provision, if such remainder conforms to the requirements of applicable law and the fundamental purpose of this Agreement, and to this end the provisions of this Agreement are declared to be severable.

26. SITE SECURITY

While on WTSC premises, the SUB-RECIPIENT, its agents, employees, or sub-contractors shall conform in all respects with all WTSC physical, fire, or other security policies and applicable regulations.

27. TAXES

All payments of payroll taxes, unemployment contributions, any other taxes, insurance, or other such expenses for the SUB-RECIPIENT or its staff shall be the sole responsibility of the SUB-RECIPIENT.

28. TERMINATION FOR CAUSE

If the SUB-RECIPIENT does not fulfill in a timely and proper manner its obligations under this Agreement or violates any of these terms and conditions, the WTSC will give the SUB-RECIPIENT written notice of such failure or violation, and may terminate this Agreement immediately. At the WTSC's discretion, the SUB-RECIPIENT may be given 15 days to correct the violation or failure. In the event that the SUB-RECIPIENT is given the opportunity to correct the violation and the violation is not corrected within the 15-day period, this Agreement may be terminated at the end of that period by written notice of the WTSC.

29. TERMINATION FOR CONVENIENCE

Except as otherwise provided in this Agreement, either Party may terminate this Agreement, without cause

or reason, with 30 days written notice to the other Party. If this Agreement is so terminated, the WTSC shall be liable only for payment required under the terms of this Agreement for services rendered or goods delivered prior to the effective date of termination.

30. TREATMENT OF ASSETS

30.1. Title to all property furnished by the WTSC shall remain property of the WTSC. Title to all property furnished by the SUB-RECIPIENT for the cost of which the SUB-RECIPIENT is entitled to be reimbursed as a direct item of cost under this Agreement shall pass to and vest in the WTSC upon delivery of such property by the SUB-RECIPIENT. Title to other property, the cost of which is reimbursable to the SUB-RECIPIENT under this Agreement, shall pass to and vest in the WTSC upon (i) issuance for use of such property in the performance of this Agreement, or (ii) commencement of use of such property in the performance of this Agreement, or (iii) reimbursement of the cost thereof by the WTSC in whole or in part, whichever first occurs.

30.2. Any property of the WTSC furnished to the SUB-RECIPIENT shall, unless otherwise provided herein or approved by the WTSC, be used only for the performance of this Agreement.

30.3. The SUB-RECIPIENT shall be responsible for any loss or damage to property of the WTSC which results from the negligence of the SUB-RECIPIENT or which results from the failure on the part of the SUB-RECIPIENT to maintain and administer that property in accordance with sound management practices.

30.4. If any WTSC property is lost, destroyed, or damaged, the SUB-RECIPIENT shall immediately notify the WTSC and shall take all reasonable steps to protect the property from further damage.

30.5. The SUB-RECIPIENT shall surrender to the WTSC all property of the WTSC upon completion, termination, or cancellation of this Agreement.

30.6. All reference to the SUB-RECIPIENT under this clause shall also include SUB-RECIPIENT's employees, agents, or sub-contractors.

31. WAIVER

A failure by either Party to exercise its rights under this Agreement shall not preclude that Party from subsequent exercise of such rights and shall not constitute a waiver of any other rights under this Agreement.

APPLICABLE CERTIFICATIONS AND ASSURANCES FOR HIGHWAY SAFETY GRANTS (23 CFR PART 1300 APPENDIX A):

32. BUY AMERICA ACT

The SUB-RECIPIENT will comply with the Buy America requirement (23 U.S.C. 313) when purchasing items using federal funds. Buy America requires the SUB-RECIPIENT to purchase only steel, iron, and manufactured products produced in the United States, unless the Secretary of Transportation determines that such domestically produced items would be inconsistent with the public interest, that such materials are not reasonably available and of a satisfactory quality, or that inclusion of domestic materials will

increase the cost of the overall project contract by more than 25 percent. In order to use federal funds to purchase foreign produced items, the WTSC must submit a waiver request that provides an adequate basis and justification, and which is approved by the Secretary of Transportation.

33. DEBARMENT AND SUSPENSION

Instructions for Lower Tier Certification

33.1. By signing this Agreement, the SUB-RECIPIENT (hereinafter in this section referred to as the “lower tier participant”) is providing the certification set out below and agrees to comply with the requirements of 2 CFR part 180 and 23 CFR part 1300.

33.2. The certification in this section is a material representation of fact upon which reliance was placed when this transaction was entered into. If it is later determined that the lower tier participant knowingly rendered an erroneous certification, in addition to other remedies available to the federal government, the department or agency with which this transaction originated may pursue available remedies, including suspension and/or debarment.

33.3. The lower tier participant shall provide immediate written notice to the WTSC if at any time the lower tier participant learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.

33.4. The terms covered transaction, debarment, suspension, ineligible, lower tier, participant, person, primary tier, principal, and voluntarily excluded, as used in this clause, have the meanings set out in the Definitions and Covered Transactions sections of 2 CFR part 180.

33.5. The lower tier participant agrees by signing this Agreement that it shall not knowingly enter into any lower tier covered transaction with a person who is proposed for debarment under 48 CFR part 9, subpart 9.4, debarred, suspended, declared ineligible, or voluntarily excluded from participation in this covered transaction, unless authorized by NHTSA.

33.6. The lower tier participant further agrees by signing this Agreement that it will include the clause titled “Instructions for Lower Tier Certification” including the “Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion - Lower Tier Covered Transaction,” without modification, in all lower tier covered transactions and in all solicitations for lower tier covered transactions, and will require lower tier participants to comply with 2 CFR part 180 and 23 CFR part 1300.

33.7. A participant in a covered transaction may rely upon a certification of a prospective participant in a lower tier covered transaction that it is not proposed for debarment under 48 CFR part 9, subpart 9.4, debarred, suspended, ineligible, or voluntarily excluded from the covered transaction, unless it knows that the certification is erroneous. A participant may decide the method and frequency by which it determines the eligibility of its principals. Each participant may, but is not required to, check the List of Parties Excluded from Federal Procurement and Non-procurement Programs.

33.8. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render in good faith the certification required by this clause. The knowledge and information of a participant is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

33.9. Except for transactions authorized under paragraph 35.5. of these instructions, if a participant in a covered transaction knowingly enters into a lower tier covered transaction with a person who is proposed for debarment under 48 CFR part 9, subpart 9.4, suspended, debarred, ineligible, or voluntarily excluded from participation in this transaction, the department or agency with which this transaction originated may disallow costs, annul or terminate the transaction, issue a stop work order, debar or suspend you, or take other remedies as appropriate.

Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion - Lower Tier Covered Transactions

33.10. The lower tier participant certifies, by signing this Agreement, that neither it nor its principals are presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participation in this transaction by any federal department or agency.

33.11. Where the lower tier participant is unable to certify to any of the statements in this certification, such participant shall attach an explanation to this Agreement.

34. THE DRUG-FREE WORKPLACE ACT OF 1988 (41 U.S.C. 8103)

34.1. The SUB-RECIPIENT shall:

34.1.1. Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession, or use of a controlled substance is prohibited in the workplace and shall specify the actions that will be taken against employees for violation of such prohibition.

34.1.2. Establish a drug-free awareness program to inform employees about the dangers of drug abuse in the workplace; the SUB-RECIPIENT's policy of maintaining a drug-free workplace; any available drug counseling, rehabilitation, and employee assistance programs; and the penalties that may be imposed upon employees for drug violations occurring in the workplace.

34.1.3. Make it a requirement that each employee engaged in the performance of the grant be given a copy of the statement required by paragraph 36.1.1. of this section.

34.1.4. Notify the employee in the statement required by paragraph 36.1.1. of this section that, as a condition of employment under the grant, the employee will abide by the terms of the statement, notify the employer of any criminal drug statute conviction for a violation occurring in the workplace no later than five days after such conviction, and notify the WTSC within 10 days after receiving notice from an employee or otherwise receiving actual notice of such conviction.

34.1.5. Take one of the following actions within 30 days of receiving notice under paragraph 36.1.3. of this section, with respect to any employee who is so convicted: take appropriate personnel action against such an employee, up to and including termination, and/or require such employee to participate satisfactorily in a drug abuse assistance or rehabilitation program approved for such purposes by a federal, state, or local health, law enforcement, or other appropriate agency.

34.1.6. Make a good faith effort to continue to maintain a drug-free workplace through implementation of all of the paragraphs above.

35. FEDERAL FUNDING ACCOUNTABILITY AND TRANSPARENCY ACT (FFATA)

In accordance with FFATA, the SUB-RECIPIENT shall, upon request, provide WTSC the names and total compensation of the five most highly compensated officers of the entity, if the entity in the preceding fiscal year received 80 percent or more of its annual gross revenues in federal awards, received \$25,000,000 or more in annual gross revenues from federal awards, and if the public does not have access to information about the compensation of the senior executives of the entity through periodic reports filed under section 13(a) or 15(d) of the Securities Exchange Act of 1934 or section 6104 of the Internal Revenue Code of 1986.

36. FEDERAL LOBBYING

36.1. The undersigned certifies, to the best of his or her knowledge and belief, that:

36.1.1. No federal appropriated funds have been paid or will be paid, by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any federal contract, the making of any federal grant, the making of any federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any federal contract, grant, loan, or cooperative agreement.

36.1.2. If any funds other than federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form-LLL, Disclosure Form to Report Lobbying, in accordance with its instructions.

36.1.3. The undersigned shall require that the language of this certification be included in the award documents for all sub-awards at all tiers (including sub-contracts, sub-grants, and contracts under grant, loans, and cooperative agreements), and that all sub-recipients shall certify and disclose accordingly.

36.2. This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by Section 1352, Title 31, U.S. Code. Any person who fails to file the required certification shall be subject to a civil penalty of not less than \$10,000 and not more than \$100,000 for each such failure.

37. NONDISCRIMINATION (Title VI, 42 U.S.C. § 2000d et seq.)

37.1. During the performance of this Agreement, the SUB-RECIPIENT agrees:

37.1.1. To comply with all federal nondiscrimination laws and regulations, as may be amended from time to time.

37.1.2. Not to participate directly or indirectly in the discrimination prohibited by any federal non-discrimination law or regulation, as set forth in Appendix B of 49 CFR Part 21 and herein.

37.1.3. To permit access to its books, records, accounts, other sources of information, and its facilities as required by the WTSC, USDOT, or NHTSA.

37.1.4. That, in the event a contractor/funding recipient fails to comply with any nondiscrimination provisions in this contract/funding Agreement, the WTSC will have the right to impose such contract/agreement sanctions as it or NHTSA determine are appropriate, including but not limited to withholding payments to the contractor/funding recipient under the contract/agreement until the contractor/funding recipient complies, and/or cancelling, terminating, or suspending a contract or funding agreement, in whole or in part.

37.1.5. To insert this clause, including all paragraphs, in every sub-contract and sub-agreement and in every solicitation for a sub-contract or sub-agreement that receives federal funds under this program.

38. POLITICAL ACTIVITY (HATCH ACT)

The SUB-RECIPIENT will comply with provisions of the Hatch Act (5 U.S.C. 1501-1508), which limit the political activities of employees whose principal employment activities are funded in whole or in part with federal funds.

39. PROHIBITION ON USING GRANT FUNDS TO CHECK FOR HELMET USAGE

The SUB-RECIPIENT will not use 23 U.S.C. Chapter 4 grant funds for programs to check helmet usage or to create checkpoints that specifically target motorcyclists. This Agreement does not include any aspects or elements of helmet usage or checkpoints, and so fully complies with this requirement.

40. STATE LOBBYING

None of the funds under this Agreement will be used for any activity specifically designed to urge or influence a state or local legislator to favor or oppose the adoption of any specific legislative proposal pending before any state or local legislative body. Such activities include both direct and indirect (e.g., "grassroots") lobbying activities, with one exception. This does not preclude a state official whose salary is supported with NHTSA funds from engaging in direct communications with state or local legislative officials, in accordance with customary state practice, even if such communications urge legislative officials to favor or oppose the adoption of a specific pending legislative proposal.

41. DESIGNATED CONTACTS

The following named individuals will serve as designated contacts for each of the Parties for all communications, notices, and reimbursement regarding this Agreement:

MEMORANDUM

To: Satpal Sidhu, County Executive

From: Bill Elfo, Sheriff 

Date: November 15, 2021

Subject: Interagency Agreement
Washington Traffic Safety Commission
High Visibility Enforcement (HVE) Patrols FY22
2022-AG-4305-Bellingham Protecting Mobility for All

Enclosed for your review and signature is one (1) original agreement between Whatcom County Sheriff's Office and the Washington Traffic Safety Commission for High Visibility Enforcement (HVE) Patrols to address road safety for pedestrians and bicyclists.

Background and Purpose

This agreement provides funding for the Whatcom County Sheriff's Office to conduct overtime high visibility enforcement (HVE) traffic safety emphasis patrols to address road safety for vulnerable road users such as pedestrians and bicyclists.

Funding Amount and Source

Whatcom County Sheriff's Office allocation is \$15,000 (approximately 41.66% of the total Region 11 award of \$36,000) from Washington Traffic Safety Commission. Funds originate from the United States Department of Transportation (USDOT) National Highway Traffic Safety Administration.

Differences from Previous Contract

This is a new grant from Washington Traffic Safety Commission.

Please contact Undersheriff Chadwick at extension 6618 if you have any questions or concerns regarding the terms of this agreement.

Thank you.

INTERAGENCY AGREEMENT

BETWEEN THE

Washington Traffic Safety Commission

AND

Whatcom County Sheriff's Office

THIS AGREEMENT is made and entered into by and between the Washington Traffic Safety Commission, hereinafter referred to as "WTSC," and Whatcom County Sheriff's Office, hereinafter referred to as "SUB-RECIPIENT."

NOW THEREFORE, in consideration of the terms, conditions, covenants, and performance contained herein, or attached and incorporated and made a part hereof, the Parties mutually agree as follows:

1. PURPOSE OF THE AGREEMENT

The purpose of this Agreement is to provide funding, provided by the United States Department of Transportation (USDOT) National Highway Traffic Safety Administration (NHTSA) and allowed under the Assistance Listings Catalog of Federal Domestic Assistance (CFDA) number 20.616, for traffic safety grant project **2022-AG-4305-Bellingham Protecting Mobility for All**, specifically to provide funding for the law enforcement agencies in **WTSC Region 11** to conduct overtime high-visibility enforcement (HVE) traffic safety emphasis patrols as outlined in the Statement of Work (SOW), in support of Target Zero priorities. The Target Zero Manager (TQM) and/or the Law Enforcement Liaison (LEL) shall coordinate the SOW with the SUB-RECIPIENT with the goal of reducing traffic crashes.

Grant **2022-AG-4305-Bellingham Protecting Mobility for All** was awarded to **Region 11** to conduct education and HVE activities. By signing this agreement, the SUB-RECIPIENT is able to seek reimbursement for approved overtime expenses incurred as a participant in the region's grant.

2. PERIOD OF PERFORMANCE

The period of performance of this Agreement shall commence upon the date of execution by both Parties, but not earlier than October 1, 2021, and remain in effect until September 30, 2022 unless terminated sooner, as provided herein.

3. STATEMENT OF WORK

SCOPE OF WORK:

Problem ID and Opportunity

Between 2016-2020, there were four walkers killed and 32 others seriously injured on Bellingham's roadways. During that same time, there were three bicycle riders killed (all in the past two years) as well as 20 bicycle riders seriously injured on Bellingham's streets. That works out to be one fatality or serious injury for a walker or roller in Bellingham every month for the past five years. Proactive policing and community engagement is needed in priority areas to reduce risk of collisions involving school children and other people walking and rolling.

Goals

Positively change walker, roller, and motor vehicle driver behaviors through law enforcement patrols and media efforts.

Reduce the incidence of crashes involving pedestrians and bicyclists through a mix of communication and enforcement.

Increase the number of police officers trained to understand and enforce current state laws designed to protect vulnerable roadway users including walkers and rollers.

Increase the compliance of all Bellingham road users with rules and best practices that increase safety for vulnerable road users like walkers and rollers through positive community engagement that focuses on increasing key beliefs and knowledge about the issues.

Strategies

Law enforcement officers will gain skills to identify and focus on populations and locations with a higher proportion of walkers and rollers including school zones.

Use current best practices for community engagement (focus on positive messaging for drivers, walkers, and rollers) in priority locations.

The project team will use positive community norming messages to gain support and behavior change.

This project will narrow that focus further by concentrating on protecting walkers and rollers in areas where schools have a free and reduced lunch rate higher than 45 percent, major walking and biking routes, low-income housing and neighborhoods, and areas of the city where languages other than English are spoken.

This project will leverage the success of Bellingham's Travel With Care public safety campaign, by including public safety announcements and videos by local police officers and profiles of community members who walk and roll in Bellingham on a mix of paid and public media.

Objectives

The Project Team includes (but not limited to) members of the Region 11 Target Zero Task Force including Bellingham PD and Whatcom County Sheriff's Office. The Project Team will deliver the Objectives listed in this SOW.

Enforcement Objectives

Engage multiple law enforcement agencies in the design and development of an enforcement plan, community outreach, and education activities for the project period.

Deliver training to all uniformed staff by July 1, 2022. This training time will be tracked by the Bellingham PD Training Division. This time will be documented and will apply to the mandatory training time as required by the WA State Criminal Justice Training Commission.

Law enforcement officers from agencies including Bellingham PD and Whatcom County Sheriff's Office will conduct proactive traffic safety emphasis patrols in identified problem locations.

Sub-recipient will collaborate with Public Works transportation planners to identify collision locations involving people walking and rolling. They will specifically look for common risk factors and safety countermeasures – including temporary or permanent infrastructure - to reduce collision risk.

Other Considerations, Exceptions, And Notes Regarding HVE Patrols

Maximizing contacts: Participating law enforcement officers should make as many contacts as they can during these patrols to positively influence driving behavior.

Process Measures

Number of enforcement patrols completed during the project period.

Activity logs and enforcement data of participating officers during enforcement patrols.

Observational studies of walker, roller, and driver behaviors at intersections before and after enforcement patrols.

Pre and post training surveys of participating law enforcement officers to determine understanding of current state laws, local crash data, and other issues related to walkers, rollers, and all vulnerable road users.

Reach and frequency results of media outreach and public awareness campaigns.

Number of times video aired on BTV.

Number of project stories aired by local radio stations.

Short Term Outcomes (Skills, knowledge, beliefs)

Increased number of drivers with knowledge of bike and pedestrian laws.

Increased number of police officers trained to understand and enforce current state laws designed to protect vulnerable roadway users.

Increased awareness by drivers and walker/rollers at intersections where enforcement events are focused as measured by observational studies.

Increased awareness and positive community norming by drivers towards walkers and rollers to include yielding to walkers and rollers in the intersections.

Increased public awareness of safety issues faced by walkers and rollers and other vulnerable roadway users.

Increased number of drivers with knowledge of school zone laws.

Increased number of drivers who comply with speed limits in school zones.

Walkers and rollers demonstrate best safety practices on all roadways.

School age children demonstrate safe walking and biking knowledge and skills.

Intermediate Outcomes (Behaviors)

Increased compliance of safety issues faced by walkers and rollers and other vulnerable roadway users.

Increased compliance of state laws designed to protect walkers and rollers and other vulnerable road users.

Increased number of drivers who park safely and legally when dropping off or picking up their children from school.

Increased number of students who practice safe walking and biking.

Increased number of drivers yielding to pedestrians in crosswalks.

Increased number of pedestrians using marked crosswalks when available.

Decreased number of pedestrians crossing mid-block and not in crosswalks.

Decreased number of rollers on the sidewalks in the downtown district.

Reduced number of complaints associated with rollers on the sidewalks.

Increased compliance with safe and legal speeds in school zones.

Long Term Outcomes (Crash involvement)

Decreased number of crashes that include both motor vehicles and vulnerable road users (walkers and rollers).

Projected Safety Impacts

Reduced number of crashes where both a motor vehicle and vulnerable road user (walkers and rollers) is involved.

3.2. COMPENSATION

3.2.1. Compensation for the overtime work provided in accordance with this Agreement has been established under the terms of RCW 39.34. The cost of accomplishing the work described in the SOW will not exceed dollar total from amounts listed below. Payment for satisfactory performance of the overtime work shall not exceed this amount unless the WTSC and SUB-RECIPIENT mutually agree to a higher amount in a written Amendment to this Agreement executed by both the WTSC and SUB-RECIPIENT. Comp-time is not considered overtime and will not be approved for payment. All law enforcement agencies who are active members of the traffic safety task force with a fully executed grant agreement are eligible to participate in this grant.

3.2.2. WTSC will reimburse for personnel overtime expenses at 150 percent of the officer's normal salary rate plus SUB-RECIPIENT's contributions to employee benefits, limited to the following:

- FICA
- Medicare
- Any portion of L & I that is paid by the employer (SUB-RECIPIENT)
- Retirement contributions paid by the employer (SUB-RECIPIENT) can be included if the contribution is based on a percentage of their hours worked

Health insurance, or any other benefits not listed above, are not eligible for reimbursement.

The SUB-RECIPIENT will provide law enforcement officers with appropriate equipment (e.g., vehicles, radars, portable breath testers, etc.) to participate in the emphasis patrols.

3.2.3. Funding alterations are permitted as follows: Upon agreement by the regional TZM and all other parties impacted by a proposed budget alteration, the allocation amounts may be increased or decreased

without amending this agreement. HVE grant funds should be managed collaboratively by the SUB-RECIPIENT and the TZM.

These alterations must be requested through email communication among all involved parties, including the TZM, and the WTSC Fiscal Analyst. This communication shall include an HVE Allocation Adjustment form, which details the funding alterations.

Funds within the same HVE campaign budget category only, can be increased and decreased across parties, so long as the modified total does not exceed the regional total allocation per funding category.

3.2.4. These funds, designated for salaries and benefits, are intended to pay for the hourly overtime costs and proportional amounts of fringe benefits of commissioned staff pursuing the activities described in the statement of work. These funds may not be used for any other purpose for example any work required to maintain a law enforcement commission including recertification trainings like firearm qualification.

3.2.5. Dispatch: WTSC will reimburse communications officers/dispatch personnel for work on this project providing SUB-RECIPIENT has received prior approval from their region's TZM. This activity must be overtime and only the expenses listed in section 3.2 and its subsections will be reimbursed.

3.2.6. Transport Officers: WTSC will reimburse transport officers for their work on this project providing SUB-RECIPIENT has received approval from their regions TZM. The TZM will work with the regional LEL to determine if need is warranted for the type of HVE activity. This activity must be overtime and only the expenses listed in section 3.2 and its subsections will be reimbursed.

3.2.7. The law enforcement agency involved will not schedule individual officer overtime shifts for longer than eight hours. WTSC understands there may be instances when more than eight hours are billed due to DUI processing or other reasons and an explanation should be provided on the WEMS Officer Activity Log.

3.2.8. The law enforcement agency involved will ensure that any reserve officer for whom reimbursement is claimed has exceeded his/her normal weekly working hours when participating in an emphasis patrol and is authorized to be paid at the amount requested. Reserve officers may only be paid at the normal hourly rate and not at the 150 percent overtime rate.

3.3. SUMMARY OF PROJECT COSTS

The WTSC has awarded \$36,000 to the **Region 11 Target Zero Task Force** for the purpose of conducting coordinated walker roller safety overtime HVE patrols. **The Region 11 Target Zero Task Force Coordinator** will distribute the funding allotment to the participating and eligible law enforcement agencies. By signing this agreement, the SUB-RECIPIENT is able to seek reimbursement for approved overtime expenses incurred as a participant in this grant.

APPLICABLE STATE AND FEDERAL TERMS AND CONDITIONS:

4. ACTIVITY REPORTS

The SUB-RECIPIENT agrees to have all personnel who work HVE patrols submit a WEMS Officer Activity Log within 24 hours of the end of all shifts worked. These same logs will be associated with invoices as detailed in the "BILLING PROCEDURE" section. Use of the Officer Activity Log in the WTSC's online grant management system, WEMS, is required. Supervisor review and accuracy certification will also be done in WEMS.

5. ADVANCE PAYMENTS PROHIBITED

No payments in advance of or in anticipation of goods or services to be provided under this Agreement shall be made by the WTSC.

6. AGREEMENT ALTERATIONS AND AMENDMENTS

This Agreement may be amended by mutual agreement of the Parties in the form of a written request to amend this Agreement. Such amendments shall only be binding if they are in writing and signed by personnel authorized to bind each of the Parties. Changes to the budget, SUB-RECIPIENT'S Primary Contact, and WTSC Program Manager can be made through email communication and signatures are not required.

7. ALL WRITINGS CONTAINED HEREIN

This Agreement contains all the terms and conditions agreed upon by the Parties. No other understandings, oral or otherwise, regarding the subject matter of this Agreement shall be deemed to exist or to bind any of the Parties hereto.

8. ASSIGNMENT

The SUB-RECIPIENT may not assign the work to be provided under this Agreement, in whole or in part, without the express prior written consent of the WTSC, which consent shall not be unreasonably withheld. The SUB-RECIPIENT shall provide the WTSC a copy of all third-party contracts and agreements entered into for purposes of fulfilling the SOW. Such third-party contracts and agreements must follow applicable federal, state, and local law, including but not limited to procurement law, rules, and procedures. If any of the funds provided under this Agreement include funds from NHTSA, such third-party contracts and agreements must include the federal provisions set forth in this Agreement in sections 34 through 42.

9. ATTORNEYS' FEES

In the event of litigation or other action brought to enforce the Agreement terms, each Party agrees to bear its own attorney fees and costs.

10. BILLING PROCEDURE

All invoices for reimbursement of HVE activities will be done using WTSC's Enterprise Management System (WEMS). WEMS Officer Activity logs will be attached to invoices, directly linking the cost of the activity to the invoice. Because the activity, approval, and invoicing are all done within WEMS, no back up documentation is required in most cases.

Once submitted by the SUB-RECIPIENT, invoices are routed to the regional TZM for review and approval. The TZM will submit all approved invoices to the WTSC via WEMS within 10 days of receipt.

Payment to the SUB-RECIPIENT for approved and completed work will be made by warrant or account transfer by WTSC within 30 days of receipt of such properly documented invoices acceptable to WTSC. Upon expiration of the Agreement, any claim for payment not already made shall be submitted within 45 days after the expiration date of this Agreement. All invoices for goods received or services performed on or prior to June 30, 2022, **must be received by WTSC no later than August 10, 2022.** All invoices for goods received or services performed between July 1, 2022 and September 30, 2022, **must be received by WTSC no later than November 15, 2022.**

11. CONFIDENTIALITY/SAFEGUARDING OF INFORMATION

The SUB-RECIPIENT shall not use or disclose any information concerning the WTSC, or information which may be classified as confidential, for any purpose not directly connected with the administration of this Agreement, except with prior written consent of the WTSC, or as may be required by law.

12. COST PRINCIPLES

Costs incurred under this Agreement shall adhere to provisions of 2 CFR Part 200 Subpart E.

13. COVENANT AGAINST CONTINGENT FEES

The SUB-RECIPIENT warrants that it has not paid, and agrees not to pay, any bonus, commission, brokerage, or contingent fee to solicit or secure this Agreement or to obtain approval of any application for federal financial assistance for this Agreement. The WTSC shall have the right, in the event of breach of this section by the SUB-RECIPIENT, to annul this Agreement without liability.

14. DISPUTES

14.1. Disputes arising in the performance of this Agreement, which are not resolved by agreement of the Parties, shall be decided in writing by the WTSC Deputy Director or designee. This decision shall be final and conclusive, unless within 10 days from the date of the SUB-RECIPIENT's receipt of WTSC's written decision, the SUB-RECIPIENT furnishes a written appeal to the WTSC Director. The SUB-RECIPIENT's appeal shall be decided in writing by the Director or designee within 30 days of receipt of the appeal by the Director. The decision shall be binding upon the SUB-RECIPIENT and the SUB-RECIPIENT shall abide by the decision.

14.2. Performance During Dispute. Unless otherwise directed by WTSC, the SUB-RECIPIENT shall continue performance under this Agreement while matters in dispute are being resolved.

15. GOVERNANCE

15.1. This Agreement is entered into pursuant to and under the authority granted by the laws of the state of Washington and any applicable federal laws. The provisions of this Agreement shall be construed to conform to those laws.

15.2. In the event of an inconsistency in the terms of this Agreement, or between its terms and any applicable statute or rule, the inconsistency shall be resolved by giving precedence in the following order:

15.2.1. Applicable federal and state statutes and rules

15.2.2. Terms and Conditions of this Agreement

15.2.3. Any Amendment executed under this Agreement

15.2.4. Any SOW executed under this Agreement

15.2.5. Any other provisions of the Agreement, including materials incorporated by reference

16. INCOME

Any income earned by the SUB-RECIPIENT from the conduct of the SOW (e.g., sale of publications, registration fees, or service charges) must be accounted for, and that income must be applied to project purposes or used to reduce project costs.

17. INDEMNIFICATION

17.1. To the fullest extent permitted by law, the SUB-RECIPIENT shall indemnify and hold harmless the WTSC, its officers, employees, and agents, and process and defend at its own expense any and all claims, demands, suits at law or equity, actions, penalties, losses, damages, or costs of whatsoever kind ("claims") brought against WTSC arising out of or in connection with this Agreement and/or the SUB-RECIPIENT's performance or failure to perform any aspect of the Agreement. This indemnity provision applies to all claims against WTSC, its officers, employees, and agents arising out of, in connection with, or incident to the acts or omissions of the SUB-RECIPIENT, its officers, employees, agents, contractors, and subcontractors. Provided, however, that nothing herein shall require the SUB-RECIPIENT to indemnify and hold harmless or defend the WTSC, its agents, employees, or officers to the extent that claims are caused by the negligent acts or omissions of the WTSC, its officers, employees or agents; and provided further that if such claims result from the concurrent negligence of (a) the SUB-RECIPIENT, its officers, employees, agents, contractors, or subcontractors, and (b) the WTSC, its officers, employees, or agents, or involves those actions covered by RCW 4.24.115, the indemnity provisions provided herein shall be valid and enforceable only to the extent of the negligence of the SUB-RECIPIENT, its officers, employees, agents, contractors, or subcontractors.

17.2. The SUB-RECIPIENT waives its immunity under Title 51 RCW to the extent it is required to indemnify, defend, and hold harmless the WTSC, its officers, employees, or agents.

17.3. The indemnification and hold harmless provision shall survive termination of this Agreement.

18. INDEPENDENT CAPACITY

The employees or agents of each Party who are engaged in the performance of this Agreement shall continue to be employees or agents of that Party and shall not be considered for any purpose to be employees or agents of the other Party.

19. INSURANCE COVERAGE

19.1. The SUB-RECIPIENT shall comply with the provisions of Title 51 RCW, Industrial Insurance, if required by law.

19.2. If the SUB-RECIPIENT is not required to maintain insurance in accordance with Title 51 RCW, prior to the start of any performance of work under this Agreement, the SUB-RECIPIENT shall provide WTSC with proof of insurance coverage (e.g., vehicle liability insurance, private property liability insurance, or

commercial property liability insurance), as determined appropriate by WTSC, which protects the SUB-RECIPIENT and WTSC from risks associated with executing the SOW associated with this Agreement.

20. LICENSING, ACCREDITATION, AND REGISTRATION

The SUB-RECIPIENT shall comply with all applicable local, state, and federal licensing, accreditation, and registration requirements and standards necessary for the performance of this Agreement. The SUB-RECIPIENT shall complete registration with the Washington State Department of Revenue, if required, and be responsible for payment of all taxes due on payments made under this Agreement.

21. RECORDS MAINTENANCE

21.1. During the term of this Agreement and for six years thereafter, the SUB-RECIPIENT shall maintain books, records, documents, and other evidence that sufficiently and properly reflect all direct and indirect costs expended in the performance of the services described herein. These records shall be subject to inspection, review, or audit by authorized personnel of the WTSC, the Office of the State Auditor, and federal officials so authorized by law. All books, records, documents, and other material relevant to this Agreement will be retained for six years after expiration. The Office of the State Auditor, federal auditors, the WTSC, and any duly authorized representatives shall have full access and the right to examine any of these materials during this period.

21.2. Records and other documents, in any medium, furnished by one Party to this Agreement to the other Party, will remain the property of the furnishing Party, unless otherwise agreed. The receiving Party will not disclose or make available this material to any third Parties without first giving notice to the furnishing Party and giving them a reasonable opportunity to respond. Each Party will utilize reasonable security procedures and protections to assure that records and documents provided by the other Party are not erroneously disclosed to third Parties.

22. RIGHT OF INSPECTION

The SUB-RECIPIENT shall provide right of access to its facilities to the WTSC or any of its officers, or to any other authorized agent or official of the state of Washington or the federal government, at all reasonable times, in order to monitor and evaluate performance, compliance, and/or quality assurance under this Agreement. The SUB-RECIPIENT shall make available information necessary for WTSC to comply with the right to access, amend, and receive an accounting of disclosures of their Personal Information according to the Health Insurance Portability and Accountability Act of 1996 (HIPAA) or any regulations enacted or revised pursuant to the HIPAA provisions and applicable provisions of Washington State law. The SUB-RECIPIENT shall upon request make available to the WTSC and the United States Secretary of the Department of Health and Human Services all internal policies and procedures, books, and records relating to the safeguarding, use, and disclosure of Personal Information obtained or used as a result of this Agreement.

23. RIGHTS IN DATA

23.1. WTSC and SUB-RECIPIENT agree that all data and work products (collectively called "Work Product") pursuant to this Agreement shall be considered works made for hire under the U.S. Copyright Act, 17 USC §101 et seq., and shall be owned by the state of Washington. Work Product includes, but is not limited to, reports, documents, pamphlets, advertisement, books, magazines, surveys, studies, computer programs,

films, tapes, sound reproductions, designs, plans, diagrams, drawings, software, and/or databases to the extent provided by law. Ownership includes the right to copyright, register the copyright, distribute, prepare derivative works, publicly perform, publicly display, and the ability to otherwise use and transfer these rights.

23.2. If for any reason the Work Product would not be considered a work made for hire under applicable law, the SUB-RECIPIENT assigns and transfers to WTSC the entire right, title, and interest in and to all rights in the Work Product and any registrations and copyright applications relating thereto and any renewals and extensions thereof.

23.3. The SUB-RECIPIENT may publish, at its own expense, the results of project activities without prior review by the WTSC, provided that any publications (written, visual, or sound) contain acknowledgment of the support provided by NHTSA and the WTSC. Any discovery or invention derived from work performed under this project shall be referred to the WTSC, who will determine through NHTSA whether patent protections will be sought, how any rights will be administered, and other actions required to protect the public interest.

24. SAVINGS

In the event funding from state, federal, or other sources is withdrawn, reduced, or limited in any way after the effective date of this Agreement and prior to completion of the SOW under this Agreement, the WTSC may terminate the Agreement under the "TERMINATION FOR CONVENIENCE" clause, without the 30-day notice requirement. The Agreement is subject to renegotiation at the WTSC's discretion under any new funding limitations or conditions.

25. SEVERABILITY

If any provision of this Agreement or any provision of any document incorporated by reference shall be held invalid, such invalidity shall not affect the other provisions of this Agreement which can be given effect without the invalid provision, if such remainder conforms to the requirements of applicable law and the fundamental purpose of this Agreement, and to this end the provisions of this Agreement are declared to be severable.

26. SITE SECURITY

While on WTSC premises, the SUB-RECIPIENT, its agents, employees, or sub-contractors shall conform in all respects with all WTSC physical, fire, or other security policies and applicable regulations.

27. TAXES

All payments of payroll taxes, unemployment contributions, any other taxes, insurance, or other such expenses for the SUB-RECIPIENT or its staff shall be the sole responsibility of the SUB-RECIPIENT.

28. TERMINATION FOR CAUSE

If the SUB-RECIPIENT does not fulfill in a timely and proper manner its obligations under this Agreement or violates any of these terms and conditions, the WTSC will give the SUB-RECIPIENT written notice of such failure or violation and may terminate this Agreement immediately. At the WTSC's discretion, the SUB-RECIPIENT may be given 15 days to correct the violation or failure. In the event that the SUB-RECIPIENT is

given the opportunity to correct the violation and the violation is not corrected within the 15-day period, this Agreement may be terminated at the end of that period by written notice of the WTSC.

29. TERMINATION FOR CONVENIENCE

Except as otherwise provided in this Agreement, either Party may terminate this Agreement, without cause or reason, with 30 days written notice to the other Party. If this Agreement is so terminated, the WTSC shall be liable only for payment required under the terms of this Agreement for services rendered or goods delivered prior to the effective date of termination.

30. TREATMENT OF ASSETS

30.1. Title to all property furnished by the WTSC shall remain property of the WTSC. Title to all property furnished by the SUB-RECIPIENT for the cost of which the SUB-RECIPIENT is entitled to be reimbursed as a direct item of cost under this Agreement shall pass to and vest in the WTSC upon delivery of such property by the SUB-RECIPIENT. Title to other property, the cost of which is reimbursable to the SUB-RECIPIENT under this Agreement, shall pass to and vest in the WTSC upon (i) issuance for use of such property in the performance of this Agreement, or (ii) commencement of use of such property in the performance of this Agreement, or (iii) reimbursement of the cost thereof by the WTSC in whole or in part, whichever first occurs.

30.2. Any property of the WTSC furnished to the SUB-RECIPIENT shall, unless otherwise provided herein or approved by the WTSC, be used only for the performance of this Agreement.

30.3. The SUB-RECIPIENT shall be responsible for any loss or damage to property of the WTSC which results from the negligence of the SUB-RECIPIENT or which results from the failure on the part of the SUB-RECIPIENT to maintain and administer that property in accordance with sound management practices.

30.4. If any WTSC property is lost, destroyed, or damaged, the SUB-RECIPIENT shall immediately notify the WTSC and shall take all reasonable steps to protect the property from further damage.

30.5. The SUB-RECIPIENT shall surrender to the WTSC all property of the WTSC upon completion, termination, or cancellation of this Agreement.

30.6. All reference to the SUB-RECIPIENT under this clause shall also include SUB-RECIPIENT's employees, agents, or sub-contractors.

31. WAIVER

A failure by either Party to exercise its rights under this Agreement shall not preclude that Party from subsequent exercise of such rights and shall not constitute a waiver of any other rights under this Agreement.

APPLICABLE CERTIFICATIONS AND ASSURANCES FOR HIGHWAY SAFETY GRANTS (23 CFR PART 1300 APPENDIX A):

32. BUY AMERICA ACT

The SUB-RECIPIENT will comply with the Buy America requirement (23 U.S.C. 313) when purchasing items using federal funds. Buy America requires the SUB-RECIPIENT to purchase only steel, iron, and manufactured products produced in the United States, unless the Secretary of Transportation determines that such domestically produced items would be inconsistent with the public interest, that such materials are not reasonably available and of a satisfactory quality, or that inclusion of domestic materials will increase the cost of the overall project contract by more than 25 percent. In order to use federal funds to purchase foreign produced items, the WTSC must submit a waiver request that provides an adequate basis and justification, and which is approved by the Secretary of Transportation.

33. DEBARMENT AND SUSPENSION

Instructions for Lower Tier Certification

33.1. By signing this Agreement, the SUB-RECIPIENT (hereinafter in this section referred to as the "lower tier participant") is providing the certification set out below and agrees to comply with the requirements of 2 CFR part 180 and 23 CFR part 1300.

33.2. The certification in this section is a material representation of fact upon which reliance was placed when this transaction was entered into. If it is later determined that the lower tier participant knowingly rendered an erroneous certification, in addition to other remedies available to the federal government, the department or agency with which this transaction originated may pursue available remedies, including suspension and/or debarment.

33.3. The lower tier participant shall provide immediate written notice to the WTSC if at any time the lower tier participant learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.

33.4. The terms covered transaction, debarment, suspension, ineligible, lower tier, participant, person, primary tier, principal, and voluntarily excluded, as used in this clause, have the meanings set out in the Definitions and Covered Transactions sections of 2 CFR part 180.

33.5. The lower tier participant agrees by signing this Agreement that it shall not knowingly enter into any lower tier covered transaction with a person who is proposed for debarment under 48 CFR part 9, subpart 9.4, debarred, suspended, declared ineligible, or voluntarily excluded from participation in this covered transaction, unless authorized by NHTSA.

33.6. The lower tier participant further agrees by signing this Agreement that it will include the clause titled "Instructions for Lower Tier Certification" including the "Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion - Lower Tier Covered Transaction," without modification, in all lower tier covered transactions and in all solicitations for lower tier covered transactions, and will require lower tier participants to comply with 2 CFR part 180 and 23 CFR part 1300.

33.7. A participant in a covered transaction may rely upon a certification of a prospective participant in a lower tier covered transaction that it is not proposed for debarment under 48 CFR part 9, subpart 9.4,

debarred, suspended, ineligible, or voluntarily excluded from the covered transaction, unless it knows that the certification is erroneous. A participant may decide the method and frequency by which it determines the eligibility of its principals. Each participant may, but is not required to, check the List of Parties Excluded from Federal Procurement and Non-procurement Programs.

33.8. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render in good faith the certification required by this clause. The knowledge and information of a participant is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

33.9. Except for transactions authorized under paragraph 35.5. of these instructions, if a participant in a covered transaction knowingly enters into a lower tier covered transaction with a person who is proposed for debarment under 48 CFR part 9, subpart 9.4, suspended, debarred, ineligible, or voluntarily excluded from participation in this transaction, the department or agency with which this transaction originated may disallow costs, annul or terminate the transaction, issue a stop work order, debar or suspend you, or take other remedies as appropriate.

Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion - Lower Tier Covered Transactions

33.10. The lower tier participant certifies, by signing this Agreement, that neither it nor its principals are presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participation in this transaction by any federal department or agency.

33.11. Where the lower tier participant is unable to certify to any of the statements in this certification, such participant shall attach an explanation to this Agreement.

34. THE DRUG-FREE WORKPLACE ACT OF 1988 (41 U.S.C. 8103)

34.1. The SUB-RECIPIENT shall:

34.1.1. Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession, or use of a controlled substance is prohibited in the workplace and shall specify the actions that will be taken against employees for violation of such prohibition.

34.1.2. Establish a drug-free awareness program to inform employees about the dangers of drug abuse in the workplace; the SUB-RECIPIENT's policy of maintaining a drug-free workplace; any available drug counseling, rehabilitation, and employee assistance programs; and the penalties that may be imposed upon employees for drug violations occurring in the workplace.

34.1.3. Make it a requirement that each employee engaged in the performance of the grant be given a copy of the statement required by paragraph 36.1.1. of this section.

34.1.4. Notify the employee in the statement required by paragraph 36.1.1. of this section that, as a condition of employment under the grant, the employee will abide by the terms of the statement, notify

the employer of any criminal drug statute conviction for a violation occurring in the workplace no later than five days after such conviction, and notify the WTSC within 10 days after receiving notice from an employee or otherwise receiving actual notice of such conviction.

34.1.5. Take one of the following actions within 30 days of receiving notice under paragraph 36.1.3. of this section, with respect to any employee who is so convicted: take appropriate personnel action against such an employee, up to and including termination, and/or require such employee to participate satisfactorily in a drug abuse assistance or rehabilitation program approved for such purposes by a federal, state, or local health, law enforcement, or other appropriate agency.

34.1.6. Make a good faith effort to continue to maintain a drug-free workplace through implementation of all of the paragraphs above.

35. FEDERAL FUNDING ACCOUNTABILITY AND TRANSPARENCY ACT (FFATA)

In accordance with FFATA, the SUB-RECIPIENT shall, upon request, provide WTSC the names and total compensation of the five most highly compensated officers of the entity, if the entity in the preceding fiscal year received 80 percent or more of its annual gross revenues in federal awards, received \$25,000,000 or more in annual gross revenues from federal awards, and if the public does not have access to information about the compensation of the senior executives of the entity through periodic reports filed under section 13(a) or 15(d) of the Securities Exchange Act of 1934 or section 6104 of the Internal Revenue Code of 1986.

36. FEDERAL LOBBYING

36.1. The undersigned certifies, to the best of his or her knowledge and belief, that:

36.1.1. No federal appropriated funds have been paid or will be paid, by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any federal contract, the making of any federal grant, the making of any federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any federal contract, grant, loan, or cooperative agreement.

36.1.2. If any funds other than federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form-LLL, Disclosure Form to Report Lobbying, in accordance with its instructions.

36.1.3. The undersigned shall require that the language of this certification be included in the award documents for all sub-awards at all tiers (including sub-contracts, sub-grants, and contracts under grant, loans, and cooperative agreements), and that all sub-recipients shall certify and disclose accordingly.

36.2. This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by Section 1352, Title 31, U.S. Code. Any person who fails to file the

required certification shall be subject to a civil penalty of not less than \$10,000 and not more than \$100,000 for each such failure.

37. NONDISCRIMINATION (Title VI, 42 U.S.C. § 2000d et seq.)

37.1. During the performance of this Agreement, the SUB-RECIPIENT agrees:

37.1.1. To comply with all federal nondiscrimination laws and regulations, as may be amended from time to time.

37.1.2. Not to participate directly or indirectly in the discrimination prohibited by any federal non-discrimination law or regulation, as set forth in Appendix B of 49 CFR Part 21 and herein.

37.1.3. To permit access to its books, records, accounts, other sources of information, and its facilities as required by the WTSC, USDOT, or NHTSA.

37.1.4. That, in the event a contractor/funding recipient fails to comply with any nondiscrimination provisions in this contract/funding Agreement, the WTSC will have the right to impose such contract/agreement sanctions as it or NHTSA determine are appropriate, including but not limited to withholding payments to the contractor/funding recipient under the contract/agreement until the contractor/funding recipient complies, and/or cancelling, terminating, or suspending a contract or funding agreement, in whole or in part.

37.1.5. To insert this clause, including all paragraphs, in every sub-contract and sub-agreement and in every solicitation for a sub-contract or sub-agreement that receives federal funds under this program.

38. POLITICAL ACTIVITY (HATCH ACT)

The SUB-RECIPIENT will comply with provisions of the Hatch Act (5 U.S.C. 1501-1508), which limit the political activities of employees whose principal employment activities are funded in whole or in part with federal funds.

39. PROHIBITION ON USING GRANT FUNDS TO CHECK FOR HELMET USAGE

The SUB-RECIPIENT will not use 23 U.S.C. Chapter 4 grant funds for programs to check helmet usage or to create checkpoints that specifically target motorcyclists. This Agreement does not include any aspects or elements of helmet usage or checkpoints, and so fully complies with this requirement.

40. STATE LOBBYING

None of the funds under this Agreement will be used for any activity specifically designed to urge or influence a state or local legislator to favor or oppose the adoption of any specific legislative proposal pending before any state or local legislative body. Such activities include both direct and indirect (e.g., "grassroots") lobbying activities, with one exception. This does not preclude a state official whose salary is supported with NHTSA funds from engaging in direct communications with state or local legislative officials, in accordance with customary state practice, even if such communications urge legislative officials to favor or oppose the adoption of a specific pending legislative proposal.

41. DESIGNATED CONTACTS

The following named individuals will serve as designated contacts for each of the Parties for all communications, notices, and reimbursement regarding this Agreement:

The Contact for the SUB-RECIPIENT is:	The Target Zero Manager for Region 14 is:	The Contact for WTSC is:
Donna Duling dduling@co.whatcom.wa.us Dawn Pierce dpierce@co.whatcom.wa.us	Carr Lanham Region 11 Target Zero Manager clanham@wtscwa.com 360-815-4243	Mark Medalen WTSC Program Manager mmedalen@wtsc.wa.gov 360-725-9878

42. AUTHORITY TO SIGN

The undersigned acknowledges that they are authorized to execute this Agreement and bind their respective agencies or entities to the obligation set forth herein.

IN WITNESS WHEREOF, the parties have executed this Agreement.

FROM: Tawni Helms, Administrative Coordinator

RE: Bellingham Whatcom County Tourism

DATE: November 10, 2021

Enclosed is a Contract for Services between Whatcom County and Bellingham Whatcom County Tourism for your review and approval.

▪ **Background and Purpose**

Contractor has received Lodging Tax funding for the purposes of marketing and operational costs associated with the tourism promotion activities and special projects delivered by Bellingham Whatcom County Tourism.

▪ **Funding Amount and Source**

Funding in the amount of \$290,000 will come from the Lodging Tax Fund as recommended by the Lodging Tax Advisory Committee and presented to the Whatcom County Council for approval on December 7, 2021.

▪ **Differences from Previous Contract**

No changes from the previous contract.

Please contact Tawni Helms at extension 5208, if you have any questions or concerns regarding the terms of this agreement.

CONTRACT FOR SERVICES
Between Whatcom County and Bellingham, Whatcom County Tourism

Bellingham Whatcom County Tourism, hereinafter called **Contractor** and Whatcom County, hereinafter referred to as **County**, agree and contract as set forth in this Agreement, including:

General Conditions, pp. 3 to 13,

Exhibit A (Scope of Work), p. 14

Exhibit B (Compensation), p. 15

Exhibit C (Sample Survey), p. 16

Exhibit D (Certificate of Insurance) p. 17.

Copies of these items are attached hereto and incorporated herein by this reference as if fully set forth herein.

The term of this Agreement shall commence on the 1st day of January, 2022, and shall, unless terminated or renewed as elsewhere provided in the Agreement, terminate on the 31st day of December, 2022.

The general purpose or objective of this Agreement is to: support Bellingham Whatcom County Tourism marketing and operations costs associated with tourism efforts, as more fully and definitively described in Exhibit A hereto. The language of Exhibit A controls in case of any conflict between it and that provided here.

The maximum consideration for the initial term of this agreement or for any renewal term shall not exceed **\$290,000**. The Contract Number, set forth above, shall be included on all billings or correspondence in connection therewith.

Contractor acknowledges and by signing this contract agrees that the Indemnification provisions set forth in Paragraphs 11.1, 21.1, 30.1, 31.2, 32.1, 34.2, and 34.3, if included, are totally and fully part of this contract and have been mutually negotiated by the parties.

Each signatory below to this Contract warrants that he/she is the authorized agent of the respective party; and that he/she has the authority to enter into the contract and to bind the party thereto.

IN WITNESS WHEREOF, the parties have executed this Agreement this ____ day of _____, 2022.

GENERAL CONDITIONS

Series 00-09: Provisions Related to Scope and Nature of Services

0.1 Scope of Services:

The Contractor agrees to provide to the County services and any materials as set forth in the project narrative identified as Exhibit "A", during the agreement period. No material, labor, or facilities will be furnished by the County, unless otherwise provided for in the Agreement.

Series 10-19: Provisions Related to Term and Termination

10.1 Term:

Services provided by Contractor prior to or after the term of this contract shall be performed at the expense of Contractor and are not compensable under this contract unless both parties hereto agree to such provision in writing. The term of this Agreement may be extended by mutual agreement of the parties; provided, however, that the Agreement is in writing and signed by both parties.

10.2 Extension:

The duration of this Agreement may be extended by mutual written consent of the parties, for a period of up to one year, and for a total of no longer than three years.

11.1 Termination for Default:

If the Contractor defaults by failing to perform any of the obligations of the contract or becomes insolvent or is declared bankrupt or commits any act of bankruptcy or insolvency or makes an assignment for the benefit of creditors, the County may, by depositing written notice to the Contractor in the U.S. mail, first class postage prepaid, terminate the contract, and at the County's option, obtain performance of the work elsewhere. Termination shall be effective upon Contractor's receipt of the written notice, or within three (3) days of the mailing of the notice, whichever occurs first. If the contract is terminated for default, the Contractor shall not be entitled to receive any further payments under the contract until all work called for has been fully performed. Any extra cost or damage to the County resulting from such default(s) shall be deducted from any money due or coming due to the Contractor. The Contractor shall bear any extra expenses incurred by the County in completing the work, including all increased costs for completing the work, and all damage sustained, or which may be sustained by the County by reason of such default.

11.2 Termination for Reduction in Funding:

In the event that funding from State, Federal or other sources is withdrawn, reduced, or limited in any way after the effective date of this Agreement, and prior to its normal completion, the County may summarily terminate this Agreement as to the funds withdrawn, reduced, or limited, notwithstanding any other termination provisions of this Agreement. If the level of funding withdrawn, reduced or limited is so great that the County deems that the continuation of the programs covered by this Agreement is no longer in the best interest of the County, the County may summarily terminate this Agreement in whole, notwithstanding any other termination provisions of this Agreement. Termination under this section shall be effective upon receipt of written notice as specified herein, or within three days of the mailing of the notice, whichever occurs first.

11.3 Termination for Public Convenience:

The County may terminate the Agreement in whole or in part whenever the County determines, in its sole discretion, that such termination is in the interests of the County. Whenever the Agreement is terminated in accordance with this paragraph, the Contractor shall be entitled to payment for actual work performed at unit contract prices for completed items of work. An equitable adjustment in the contract price for partially completed items of work will be made, but such adjustment shall not include provision for loss of anticipated profit on deleted or uncompleted work. Termination of this Agreement by the County at any time during the term, whether for default or convenience, shall not constitute breach of contract by the County.

Series 20-29: Provisions Related to Consideration and Payments

20.1 Accounting and Payment for Contractor Services:

Payment to the Contractor for services rendered under this Agreement shall be as set forth in Exhibit "B." Where Exhibit "B" requires payments by the County, payment shall be based upon written claims supported, unless otherwise provided in Exhibit "B," by documentation of units of work actually performed and amounts earned, including, where appropriate, the actual number of days worked each month, total number of hours for the month, and the total dollar payment requested, so as to comply with municipal auditing requirements.

Unless specifically stated in Exhibit "B" or approved in writing in advance by the official executing this Agreement for the County or his designee (hereinafter referred to as the "Administrative Officer") the County will not reimburse the Contractor for any costs or expenses incurred by the Contractor in the performance of this contract. Where required, the County shall, upon receipt of appropriate documentation, compensate the Contractor, no more often than monthly, in accordance with the County's customary procedures, pursuant to the fee schedule set forth in Exhibit "B."

21.1 Taxes:

The Contractor understands and acknowledges that the County will not withhold Federal or State income taxes. Where required by State or Federal law, the Contractor authorizes the County to withhold for any taxes other than income taxes (i.e., Medicare). All compensation received by the Contractor will be reported to the Internal Revenue Service at the end of the calendar year in accordance with the applicable IRS regulations. It is the responsibility of the Contractor to make the necessary estimated tax payments throughout the year, if any, and the Contractor is solely liable for any tax obligation arising from the Contractor's performance of this Agreement. The Contractor hereby agrees to indemnify the County against any demand to pay taxes arising from the Contractor's failure to pay taxes on compensation earned pursuant to this Agreement.

The County will pay sales and use taxes imposed on goods or services acquired hereunder as required by law. The Contractor must pay all other taxes, including, but not limited to, Business and Occupation Tax, taxes based on the Contractor's gross or net income, or personal property to which the County does not hold title. The County is exempt from Federal Excise Tax.

22.1 Withholding Payment:

In the event the County's Administrative Officer determines that the Contractor has failed to perform any obligation under this Agreement within the times set forth in this Agreement, then the County may withhold from amounts otherwise due and payable to Contractor the amount determined by the County as necessary to cure the default, until the Administrative Officer determines that such failure to perform has been cured. Withholding under this clause shall not be deemed a breach entitling Contractor to termination or damages, provided that the County promptly gives notice in writing to the Contractor of the nature of the default or failure to perform, and in no case more than 10 days after it determines to withhold amounts otherwise due. A determination of the Administrative Officer set forth in a notice to the Contractor of the action required and/or the amount required to cure any alleged failure to perform shall be deemed conclusive, except to the extent that the Contractor acts within the times and in strict accord with the provisions of the Disputes clause of this Agreement. The County may act in accordance with any determination of the Administrative Officer which has become conclusive under this clause, without prejudice to any other remedy under the Agreement, to take all or any of the following actions: (1) cure any failure or default, (2) to pay any amount so required to be paid and to charge the same to the account of the Contractor, (3) to set off any amount so paid or incurred from amounts due or to become due the Contractor. In the event the Contractor obtains relief upon a claim under the Disputes clause, no penalty or damages shall accrue to Contractor by reason of good faith withholding by the County under this clause.

23.1 Labor Standards:

The Contractor agrees to comply with all applicable state and federal requirements, including but not limited to those pertaining to payment of wages and working conditions, in accordance with RCW 39.12.040, the Prevailing Wage Act; the Americans with Disabilities Act of 1990; the Davis-Bacon Act; and the Contract Work Hours and Safety Standards Act providing for weekly payment of prevailing wages,

minimum overtime pay, and providing that no laborer or mechanic shall be required to work in surroundings or under conditions which are unsanitary, hazardous, or dangerous to health and safety as determined by regulations promulgated by the Federal Secretary of Labor and the State of Washington.

Series 30-39: Provisions Related to Administration of Agreement

30.1 Independent Contractor:

The Contractor's services shall be furnished by the Contractor as an independent contractor, and nothing herein contained shall be construed to create a relationship of employer-employee or master-servant, but all payments made hereunder and all services performed shall be made and performed pursuant to this Agreement by the Contractor as an independent contractor.

The Contractor acknowledges that the entire compensation for this Agreement is specified in Exhibit "B" and the Contractor is not entitled to any benefits including, but not limited to: vacation pay, holiday pay, sick leave pay, medical, dental, or other insurance benefits, or any other rights or privileges afforded to employees of the County. The Contractor represents that he/she/it maintains a separate place of business, serves clients other than the County, will report all income and expense accrued under this contract to the Internal Revenue Service, and has a tax account with the State of Washington Department of Revenue for payment of all sales and use and Business and Occupation taxes collected by the State of Washington.

Contractor will defend, indemnify and hold harmless the County, its officers, agents or employees from any loss or expense, including, but not limited to, settlements, judgments, setoffs, attorneys' fees or costs incurred by reason of claims or demands because of breach of the provisions of this paragraph

30.2 Assignment and Subcontracting:

The performance of all activities contemplated by this agreement shall be accomplished by the Contractor. No portion of this contract may be assigned or subcontracted to any other individual, firm or entity without the express and prior written approval of the County.

30.3 No Guarantee of Employment:

The performance of all or part of this contract by the Contractor shall not operate to vest any employment rights whatsoever and shall not be deemed to guarantee any employment of the Contractor or any employee of the Contractor or any subcontractor or any employee of any subcontractor by the County at the present time or in the future.

31.1 Ownership of Items Produced and Public Records Act:

All writings, programs, data, public records or other materials prepared by the Contractor and/or its consultants or subcontractors, in connection with performance of this Agreement, shall be the sole and absolute property of the County. If the Contractor creates any copyrightable materials or invents any patentable property, the Contractor may copyright or patent the same, but the County retains a royalty-free, nonexclusive and irrevocable license to reproduce, publish, recover, or otherwise use the materials or property and to authorize other governments to use the same for state or local governmental purposes. Contractor further agrees to make research, notes, and other work products produced in the performance of this Agreement available to the County upon request.

Ownership. Any and all data, writings, programs, public records, reports, analyses, documents, photographs, pamphlets, plans, specifications, surveys, films or any other materials created, prepared, produced, constructed, assembled, made, performed or otherwise produced by the Contractor or the Contractor's subcontractors or consultants for delivery to the County under this Contract shall be the sole and absolute property of the County. Such property shall constitute "work made for hire" as defined by the U.S. Copyright Act of 1976, 17 U.S.C. § 101, and the ownership of the copyright and any other intellectual property rights in such property shall vest in the County at the time of its creation. Ownership of the intellectual property includes the right to copyright, patent, and register, and the ability to transfer these rights. Material which the Contractor uses to perform this Contract but is not created, prepared, constructed, assembled, made, performed or otherwise produced for or paid for by the County is owned by the Contractor and is not "work made for hire" within the terms of this Agreement.

Public Records Act. This Contract and all records associated with this Contract shall be available for inspection and copying by the public where required by the Public Records Act, Chapter 42.56 RCW (the "Act"). To the extent that public records then in the custody of the Contractor are needed for the County to respond to a request under the Act, as determined by the County, the Contractor agrees to make them promptly available to the County at no cost to the County. If the Contractor considers any portion of any record provided to the County under this Agreement, whether in electronic or hard copy form, to be protected from disclosure under law, the Contractor shall clearly identify any specific information that it claims to be confidential or proprietary. If the County receives a request under the Act to inspect or copy the information so identified by the Contractor and the County determines that release of the information is required by the Act or otherwise appropriate, the County's sole obligations shall be to notify the Contractor (a) of the request and (b) of the date that such information will be released to the requester unless the Contractor obtains a court order to enjoin that disclosure

pursuant to RCW 42.56.540. If the Contractor fails to timely obtain a court order enjoining disclosure, the County will release the requested information on the date specified.

The County has, and by this section assumes, no obligation on behalf of the Contractor to claim any exemption from disclosure under the Act. The County shall not be liable to the Contractor for releasing records not clearly identified by the Contractor as confidential or proprietary. The County shall not be liable to the Contractor for any records that the County releases in compliance with this section or in compliance with an order of a court of competent jurisdiction.

The Contractor shall be liable to the requester for any and all fees, costs, penalties or damages imposed or alleged as a result of the Contractor's failure to provide adequate or timely records.

This provision and the obligations it establishes shall remain in effect after the expiration of this contract.

31.2 Patent/Copyright Infringement:

Contractor will defend and indemnify the County from any claimed action, cause or demand brought against the County, to the extent such action is based on the claim that information supplied by the Contractor infringes any patent or copyright. The Contractor will pay those costs and damages attributable to any such claims that are finally awarded against the County in any action. Such defense and payments are conditioned upon the following:

A. The Contractor shall be notified promptly in writing by the County of any notice of such claim.

B. Contractor shall have the right, hereunder, at its option and expense, to obtain for the County the right to continue using the information, in the event such claim of infringement, is made, provided no reduction in performance or loss results to the County.

32.1 Confidentiality:

The Contractor, its employees, subcontractors, and their employees shall maintain the confidentiality of all information provided by the County or acquired by the Contractor in performance of this Agreement, except upon the prior written consent of the County or an order entered by a court after having acquired jurisdiction over the County. Contractor shall immediately give to the County notice of any judicial proceeding seeking disclosure of such information. Contractor shall indemnify and hold harmless the County, its officials, agents or employees from all loss or expense, including, but not limited to, settlements, judgments, setoffs, attorneys' fees and costs resulting from Contractor's breach of this provision.

33.1 Right to Review:

This contract is subject to review by any Federal, State or County auditor. The County or its designee shall have the right to review and monitor the financial and service components of this program by whatever means are deemed expedient by the Administrative Officer or by the County Auditor's Office. Such review may occur with or without notice and may include, but is not limited to, on-site inspection by County agents or employees, inspection of all records or other materials which the County deems pertinent to the Agreement and its performance, and any and all communications with or evaluations by service recipients under this Agreement. The Contractor shall preserve and maintain all financial records and records relating to the performance of work under this Agreement for three (3) years after contract termination, and shall make them available for such review, within Whatcom County, State of Washington, upon request. Contractor also agrees to notify the Administrative Officer in advance of any inspections, audits, or program review by any individual, agency, or governmental unit whose purpose is to review the services provided within the terms of this Agreement. If no advance notice is given to the Contractor, then the Contractor agrees to notify the Administrative Officer as soon as it is practical.

34.1 Insurance:

The Contractor shall, at its own expense, obtain and continuously maintain the following insurance coverage for the duration of this contract, which shall include insurance against claims for injuries to persons or damage to property which may arise from or in connection with the performance of the work hereunder by the Contractor, its agents, representatives, subcontractors or employees. All insurers providing such insurance shall have an A.M. Best Rating of not less than A- (or otherwise be acceptable to the County) and be licensed to do business in the State of Washington and admitted by the Washington State Insurance Commissioner. Coverage limits shall be the minimum limits identified in this Contract or the coverage limits provided or available under the policies maintained by the Contractor without regard to this Contract, whichever are greater.

1. Commercial General Liability

Property Damage	\$500,000.00, per occurrence
General Liability & bodily injury	\$1,000,000.00, per occurrence
Annual Aggregate	\$2,000,000.00

At least as broad as ISO form CG 00 01 or the equivalent, which coverage shall include personal injury, bodily injury and property damage for Premises Operations, Products and Completed Operations, Personal/Advertising Injury, Contractual Liability, Independent Contractor Liability, medical payments and Stop Gap/Employer's Liability. Coverage shall not exclude or contain sub-limits less than the minimum limits required, unless approved in writing by the County.

2. Professional Liability

Professional Liability - \$1,000,000 per occurrence

- a. Obtain professional liability insurance covering the negligent acts, errors, or omissions of the professional in connection with the performance of services to the County. If any insurance policy or the professional liability insurance is written on a claims made form, its retroactive date, and that of all subsequent renewals, shall be no later than the effective date of this Contract. The policy shall state that coverage is claims made, and state the retroactive date. Claims-made form coverage shall be maintained by the Contractor for a minimum of 36 months following the Completion Date or earlier termination of this Contract, and the Contractor shall annually provide the Contracting Agency with proof of renewal. If renewal of the claims made form of coverage becomes unavailable, or economically prohibitive, the Contractor shall purchase an extended reporting period ("tail") or execute another form of guarantee acceptable to the Contracting Agency to assure financial responsibility for liability for services performed.

3. Business Automobile Liability

\$1,000,000.00 Minimum, per occurrence

\$2,000,000.00 Minimum, Annual Aggregate

Contractor shall provide auto liability coverage for owned, non-owned and hired autos using ISO Business Auto Coverage form CA 00 01 or the exact equivalent with a limit of no less than \$1,000,000 per accident. If Contractor owns no vehicles this requirement may be met through a non-owned auto Endorsement to the CGL policy.

4. Additional Insurance Requirements and Provisions

- a. All insurance policies shall provide coverage on an occurrence basis.
- b. Additional Insureds. Whatcom County, its departments, elected and appointed officials, employees, agents and volunteers shall be included as additional insureds on Contractor's and Contractor's subcontractors' insurance policies by way of endorsement for the full available limits of insurance required in this contract or maintained by the Contractor and subcontractor, whichever is greater.
- c. Primary and Non-contributory Insurance. Contractor shall provide primary insurance coverage and the County's insurance shall be non-contributory. Any insurance, self-insured retention, deductible, risk retention or insurance pooling maintained or participated in by the County shall be excess and non-contributory to Contractor's insurance.
- d. Waiver of Subrogation. The insurance policy shall provide a waiver of subrogation with respect to each insurance policy maintained under this Contract. When required by an insurer, or if a policy condition does not permit Contractor to enter into a pre-loss agreement to waive subrogation without an endorsement, then Contractor agrees to notify the insurer and obtain such endorsement. This requirement shall not apply to any policy which includes a condition expressly prohibiting waiver of subrogation by the insured or which voids coverage should the Contractor enter into such a waiver of subrogation on a pre-loss basis.
- e. Review of and Revision of Policy Provisions. Upon request, the Contractor shall provide a full and complete certified copy of all requested insurance policies to the County. The County reserves the right, but not the obligation, to revise any insurance requirement, including but not limited to limits, coverages and endorsements, or to reject any insurance policies which fail to meet the requirements of this Contract. Additionally, the County reserves the right, but not the obligation, to review and reject any proposed insurer providing coverage based upon the insurer's financial condition or licensing status in Washington.
- f. Verification of Coverage/Certificates and Endorsements. The Contractor shall furnish the County with a certificate of insurance and endorsements required by this contract. The certificates and endorsements for each policy shall be signed by a person authorized by the insurer to bind coverage on its behalf. The certificate and endorsements for each insurance policy

are to be on forms approved by the County prior to commencement of activities associated with the contract. The certificate and endorsements, and renewals thereof, shall be attached hereto as Exhibit "C". If Exhibit C is not attached, the Contractor must submit the certificate and endorsements required in this contract to the County prior to the commencement of any work on the contracted project. A certificate alone is insufficient proof of the required insurance; endorsements must be included with the certificate. The certificate of insurance must reflect the insurance required in this contract, including appropriate limits, insurance coverage dates, per occurrence, and in the description of operations, include the County project, Whatcom County, its departments, officials, employees, agents and volunteers as additional insureds, primary, non-contributory, and waiver of subrogation.

- g. The County must be notified immediately in writing of any cancellation of the policy, exhaustion of aggregate limits, notice of intent not to renew insurance coverage, expiration of policy or change in insurer carrier. Contractor shall always provide the County with a current copy of the certificate and endorsements throughout the duration of the contract.
- h. No Limitation on Liability. The insurance maintained under this Contract shall not in any manner limit the liability or qualify the liabilities or obligations of the Contractor to the coverage provided by such insurance, or otherwise limit the County's recourse to any remedy available at law or equity.
- i. Payment Conditioned on Insurance and Failure to Maintain Insurance. Compensation and/or payments due to the Contractor under this Contract are expressly conditioned upon the Contractor's compliance with all insurance requirements. Failure on the part of the Contractor to maintain the insurance as required shall constitute a material breach of contract. Payment to the Contractor may be suspended in the event of non-compliance, upon which the County may, after giving five business days' notice to the Contractor to correct the breach, immediately terminate the contract or, at its discretion, procure or renew such insurance and pay any and all premiums in connection therewith, with any sums so expended to be repaid to the County on demand or offset against funds due the Contractor. Upon receipt of evidence of Contractor's compliance, payments not otherwise subject to withholding or set-off will be released to the Contractor.
- j. Workers' Compensation. The Contractor shall maintain Workers' Compensation coverage as required under the Washington State Industrial Insurance Act, RCW Title 51, for all Contractors' employees, agents and volunteers eligible for such coverage under the Industrial Insurance Act.
- k. Failure of the Contractor to take out and/or maintain required insurance shall not relieve the Contractor or subcontractors from any liability under the contract, nor shall the insurance requirements be construed to conflict with or otherwise limit the obligations concerning indemnification. The County does not waive any insurance requirements even in the event the certificate or endorsements provided by the Contractor were insufficient or inadequate proof of coverage but not objected to by the County. The County's failure to confirm adequate proof of insurance requirements does not constitute a waiver of the Contractor's insurance requirements under this Contract.
- l. Availability of Contractor Limits. If the Contractor maintains higher insurance limits than the minimums shown above, the County shall be insured for the full available limits, including Excess or Umbrella liability maintained by the Contractor, irrespective of whether such limits maintained by the Contractor are greater than those required by this contract or whether any certificate furnished to the County evidences limits of liability lower than those maintained by the Contractor.
- m. Insurance for Subcontractors. If the Contractor subcontracts (if permitted in the contract) any portion of this Contract, the Contractor shall include all subcontractors as insureds under its policies or shall require separate certificates of insurance and policy endorsements from each subcontractor. Insurance coverages by subcontractors must comply with the insurance requirements of the Contractor in this contract and shall be subject to all of the requirements stated herein, including naming the County as additional insured.
- n. The Contractor agrees Contractor's insurance obligation shall survive the completion or termination of this Contract for a minimum period of three years.

34.3 Defense & Indemnity Agreement. To the fullest extent permitted by law, the Contractor agrees to indemnify, defend and hold the County

and its departments, elected and appointed officials, employees, agents and volunteers, harmless from and against any and all claims, damages, losses and expenses, including but not limited to court costs, attorney's fees, and alternative dispute resolution costs, for any personal injury, for any bodily injury, sickness, disease, or death and for any damage to or destruction of any property (including the loss of use resulting therefrom) which: 1) are caused in whole or in part by any error, act or omission, negligent or otherwise, of the Contractor, its employees, agents or volunteers or Contractor's subcontractors and their employees, agents or volunteers; or 2) directly or indirectly arise out of or occur in connection with performance of this Contract or 3) are based upon the Contractor's or its subcontractors' use of, presence upon, or proximity to the property of the County. This indemnification obligation of the Contractor shall not apply in the limited circumstance where the claim, damage, loss, or expense is caused by the sole negligence of the County.

Should a court of competent jurisdiction determine that this contract is subject to RCW 4.24.115, then in the event of concurrent negligence of the Contractor, its subcontractors, employees or agents, and the County, its employees or agents, this indemnification obligation of the Contractor shall be valid and enforceable only to the extent of the negligence of the Contractor, its subcontractors, employees, and agents. This indemnification obligation of the Contractor shall not be limited in any way by the Washington State Industrial Insurance Act, RCW Title 51, or by application of any other workmen's compensation act, disability benefit act or other employee benefit act, and the Contractor hereby expressly waives any immunity afforded by such acts.

It is further provided that no liability shall attach to the County by reason of entering into this contract, except as expressly provided herein. The parties specifically agree that this Contract is for the benefit of the parties only and this Contract shall create no rights in any third party. The County reserves the right, but not the obligation, to participate in the defense of any claim, damages, losses, or expenses, and such participation shall not constitute a waiver of Contractor's indemnity obligations under this Agreement.

In the event the Contractor enters into subcontracts to the extent allowed under this Contract, the Contractor's subcontractors shall indemnify the County on a basis equal to or exceeding Contractor's indemnity obligations to the County. The Contractor shall pay all attorney's fees and expenses incurred by the County in establishing and enforcing the County's rights under this indemnification provision, whether or not suit was instituted.

The Contractor agrees all Contractor's indemnity obligations shall survive the completion, expiration or termination of this Agreement. The foregoing indemnification obligations of the Contractor are a material inducement to County to enter into this Agreement and are reflected in the Contractor's compensation.

By signing this contract, the Contractor acknowledges that it has freely negotiated and agreed to the indemnification requirements to defend, indemnify and hold harmless the County from all claims and suits including those brought against the County by the Contractor's own employees, arising from this contract.

35.1 Non-Discrimination in Employment:

The County's policy is to provide equal opportunity in all terms, conditions and privileges of employment for all qualified applicants and employees without regard to race, color, creed, religion, national origin, sex, sexual orientation (including gender identity), age, marital status, disability, or veteran status. The Contractor shall comply with all laws prohibiting discrimination against any employee or applicant for employment on the grounds of race, color, creed, religion, national origin, sex, sexual orientation (including gender identity), age, marital status, disability, political affiliation, or veteran status, except where such constitutes a bona fide occupational qualification.

Furthermore, in those cases in which the Contractor is governed by such laws, the Contractor shall take affirmative action to ensure that applicants are employed, and treated during employment, without regard to their race, color, creed, religion, national origin, sex, age, marital status, sexual orientation (including gender identity), disability, or veteran status, except where such constitutes a bona fide occupational qualification. Such action shall include, but not be limited to: advertising, hiring, promotions, layoffs or terminations, rate of pay or other forms of compensation benefits, selection for training including apprenticeship, and participation in recreational and educational activities. In all solicitations or advertisements for employees placed by them or on their behalf, the Contractor shall state that all qualified applicants will receive consideration for employment without regard to race, color, religion, sex or national origin.

The foregoing provisions shall also be binding upon any subcontractor, provided that the foregoing provision shall not apply to contracts or subcontractors for standard commercial supplies or raw materials, or to sole proprietorships with no employees.

35.2 Non-Discrimination in Client Services:

The Contractor shall not discriminate on the grounds of race, color, creed, religion, national origin, sex, age, marital status, sexual orientation (including gender identity), disability, or veteran status; or deny an individual or business any service or benefits under this Agreement unless otherwise allowed by applicable law; or subject an individual or business to segregation or separate treatment in any manner related to his/her/its receipt any service or services or other benefits provided under this Agreement unless otherwise allowed by applicable law; or deny an individual or business an opportunity to participate in any program provided by this Agreement unless otherwise allowed by applicable law.

36.1 Waiver of Noncompetition:

Contractor irrevocably waives any existing rights which it may have, by contract or otherwise, to require another person or corporation to refrain from submitting a proposal to or performing work or providing supplies to the County, and contractor further promises that it will not in the future, directly or indirectly, induce or solicit any person or corporation to refrain from submitting a bid or proposal to or from performing work or providing supplies to the County.

36.2 Conflict of Interest:

If at any time prior to commencement of, or during the term of this Agreement, Contractor or any of its employees involved in the performance of this Agreement shall have or develop an interest in the subject matter of this Agreement that is potentially in conflict with the County's interest, then Contractor shall immediately notify the County of the same. The notification of the County shall be made with sufficient specificity to enable the County to make an informed judgment as to whether or not the County's interest may be compromised in any manner by the existence of the conflict, actual or potential. Thereafter, the County may require the Contractor to take reasonable steps to remove the conflict of interest. The County may also terminate this contract according to the provisions herein for termination.

37.1 Administration of Contract:

This Agreement shall be subject to all laws, rules, and regulations of the United States of America, the State of Washington, and political subdivisions of the State of Washington. The Contractor also agrees to comply with applicable federal, state, county or municipal standards for licensing, certification and operation of facilities and programs, and accreditation and licensing of individuals.

The County hereby appoints, and the Contractor hereby accepts, the Whatcom County Executive, and his or her designee, as the County's representative, hereinafter referred to as the Administrative Officer, for the purposes of administering the provisions of this Agreement, including the County's right to receive and act on all reports and documents, and any auditing performed by the County related to this Agreement. The Administrative Officer for purposes of this agreement is:

Tawni Helms, Administrative Coordinator
Whatcom County Executive's Office
311 Grand Avenue, Suite 108
Bellingham, WA 98225

37.2 Notice:

Any notices or communications required or permitted to be given by this Contract must be (i) given in writing and (ii) personally delivered or mailed, by prepaid, certified mail or overnight courier, or transmitted by electronic mail transmission (including PDF), to the party to whom such notice or communication is directed, to the mailing address or regularly-monitored electronic mail address of such party as follows:

PARTY 1: Bellingham Whatcom County Tourism
Sandy Ward, President
904 Potter Avenue
Bellingham, WA 98229
360-671-3990
Sandy@bellingham.org

PARTY 2: Tawni Helms, Administrative Coordinator
Whatcom County Executive's Office
311 Grand Avenue, Suite 108
Bellingham, WA 98225
360-778-5208
thelms@co.whatcom.wa.us

Any such notice or communication shall be deemed to have been given on (i) the day such notice or communication is personally delivered, (ii) three (3) days after such notice or communication is mailed by prepaid certified or registered mail, (iii) one (1) working

day after such notice or communication is sent by overnight courier, or (iv) the day such notice or communication is sent electronically, provided that the sender has received a confirmation of such electronic transmission. A party may, for purposes of this Agreement, change his, her or its address, email address or the person to whom a notice or other communication is marked to the attention of, by giving notice of such change to the other party pursuant to this Section.

37.3 If agreed by the parties, this Contract may be executed by Email transmission and PDF signature and Email transmission and PDF signature shall constitute an original for all purposes.

38.1 Certification of Public Works Contractor's Status under State Law:

If applicable, Contractor certifies that it has fully met the responsibility criteria required of public works contractors under RCW 39.04.350 (1), which include: (a) having a certificate of registration in compliance with RCW 18.27; (b) having a current state unified business identifier number; (c) if applicable, having industrial insurance coverage for its employees working in Washington as required in Title 51 RCW, an employment security department number as required in Title 50 RCW, and a state excise tax registration number as required in Title 82 RCW; and (d) not being disqualified from bidding on any public works contract under RCW 39.06.010 or 39.12.065 (3).

38.2 Certification Regarding Federal Debarment, Suspension, Ineligibility and Voluntary Exclusion - Lower Tier Covered Transactions:

If applicable, the Contractor further certifies, by executing this contract, that neither it nor its principles is presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participation in this transaction by any Federal department or Agency.

The Contractor also agrees that it shall not knowingly enter into any lower tier covered transactions (a transaction between the Contractor and any other person) with a person who is proposed for debarment, debarred, suspended, declared ineligible, or voluntarily excluded from participation in this covered transaction, and the Contractor agrees to include this clause titled "Certification Regarding Federal Debarment, Suspension, Ineligibility and Voluntary Exclusion - Lower Tier Covered Transaction" without modification, in all lower tier covered transactions and in all solicitations for lower tier transactions.

The "Excluded Parties List System in the System for Award Management (SAM) website is available to research this information at WWW.SAM.GOV. Contractor shall immediately notify Whatcom County if, during the term of this Contract, Contractor becomes debarred.

38.3 E-Verify:

The E-Verify contractor program for Whatcom County applies to contracts of \$100,000 or more and sub contracts for \$25,000 or more if the primary contract is for \$100,000 or more. If applicable, Contractor represents and warrants that it will, for at least the duration of this contract, register and participate in the status verification system for all newly hired employees. The term "employee" as used herein means any person that is hired to perform work for Whatcom County. As used herein, "status verification system" means the Illegal Immigration Reform and Immigration Responsibility Act of 1996 that is operated by the United States Department of Homeland Security, also known as the E-Verify Program, or any other successor electronic verification system replacing the E-Verify Program. Contractor/Seller agrees to maintain records of such compliance and, upon request of the County, to provide a copy of each such verification to the County. Contractor/Seller further represents and warrants that any person assigned to perform services hereunder meets the employment eligibility requirements of all immigration laws of the State of Washington. Contractor/Seller understands and agrees that any breach of these warranties may subject Contractor/Seller to the following: (a) termination of this Agreement and ineligibility for any Whatcom County contract for up to three (3) years, with notice of such cancellation/termination being made public. In the event of such termination/cancellation, Contractor/Seller would also be liable for any additional costs incurred by the County due to contract cancellation or loss of license or permit." Contractor will review and enroll in the E-Verify program through this website: www.uscis.gov

Series 40-49: Provisions Related to Interpretation of Agreement and Resolution of Disputes

40.1 Modifications:

Either party may request changes in the Agreement. Any and all agreed modifications, to be valid and binding upon either party, shall be in writing and signed by both of the parties.

40.2 Contractor Commitments, Warranties and Representations:

Any written commitment received from the Contractor concerning this Agreement shall be binding upon the Contractor, unless otherwise specifically provided herein with reference to this paragraph. Failure of the Contractor to fulfill such a commitment shall render the Contractor liable for damages to the County. A commitment includes, but is not limited to, any representation made prior to execution of this Agreement, whether or not incorporated elsewhere herein by reference, as to performance of services or equipment, prices or options for future acquisition to remain in effect for a fixed period, or warranties.

41.1 Severability:

If any term or condition of this contract or the application thereof to any person(s) or circumstances is held invalid, such invalidity shall not affect other terms, conditions or applications which can be given effect without the invalid term, condition or application. To this end, the terms and conditions of this contract are declared severable.

41.2 Waiver:

Waiver of any breach or condition of this contract shall not be deemed a waiver of any prior or subsequent breach. No term or condition of this contract shall be held to be waived, modified or deleted except by an instrument, in writing, signed by the parties hereto. The failure of the County to insist upon strict performance of any of the covenants and agreements of this Agreement, or to exercise any option herein conferred in any one or more instances, shall not be construed to be a waiver or relinquishment of any such, or any other covenants or agreements, but the same shall be and remain in full force and effect.

42.1 Disputes:

a. General:

Differences between the Contractor and the County, arising under and by virtue of the Contract Documents, shall be brought to the attention of the County at the earliest possible time in order that such matters may be settled or other appropriate action promptly taken. Except for such objections as are made of record in the manner hereinafter specified and within the time limits stated, the records, orders, rulings, instructions, and decisions of the Administrative Officer shall be final and conclusive.

b. Notice of Potential Claims:

The Contractor shall not be entitled to additional compensation which otherwise may be payable, or to extension of time for (1) any act or failure to act by the Administrative Officer or the County, or (2) the happening of any event or occurrence, unless the Contractor has given the County a written Notice of Potential Claim within ten (10) days of the commencement of the act, failure, or event giving rise to the claim, and before final payment by the County. The written Notice of Potential Claim shall set forth the reasons for which the Contractor believes additional compensation or extension of time is due, the nature of the cost involved, and insofar as possible, the amount of the potential claim. Contractor shall keep full and complete daily records of the work performed, labor and material used, and all costs and additional time claimed to be additional.

c. Detailed Claim:

The Contractor shall not be entitled to claim any such additional compensation, or extension of time, unless within thirty (30) days of the accomplishment of the portion of the work from which the claim arose, and before final payment by the County, the Contractor has given the County a detailed written statement of each element of cost or other compensation requested and of all elements of additional time required, and copies of any supporting documents evidencing the amount or the extension of time claimed to be due.

d. Arbitration:

Other than claims for injunctive relief, temporary restraining order, or other provisional remedy to preserve the status quo or prevent irreparable harm, brought by a party hereto (which may be brought either in court or pursuant to this arbitration provision), and consistent with the provisions hereinabove, any claim, dispute or controversy between the parties under, arising out of, or related to this Contract or otherwise, including issues of specific performance, shall be determined by arbitration in Bellingham, Washington, under the applicable American Arbitration Association (AAA) rules in effect on the date hereof, as modified by this Agreement. There shall be one arbitrator selected by the parties within ten (10) days of the arbitration demand, or if not, by the AAA or any other group having similar credentials. Any issue about whether a claim is covered by this Contract shall be determined by the arbitrator. The arbitrator shall apply substantive law and may award injunctive relief, equitable relief (including specific performance), or any other remedy available from a judge but shall not have the power to award punitive damages. Each Party shall pay all their own costs, attorney fees and expenses of arbitration and the parties shall share equally in the Arbitrator's fees and costs. The decision of the arbitrator shall be final and binding and an order confirming the award or judgment upon the award may be entered in any court having jurisdiction. The parties agree that the decision of the arbitrator shall be the sole and exclusive remedy between them regarding any dispute presented or pled before the arbitrator. At the request of either party made not later than forty-five (45) days after the arbitration demand, the parties agree to submit the dispute to nonbinding mediation, which shall not delay the arbitration hearing date; provided, that either party may decline to mediate and proceed with arbitration.

Any arbitration proceeding commenced to enforce or interpret this Contract shall be brought within six years after the initial occurrence giving rise to the claim, dispute, or issue for which arbitration is commenced, regardless of the date of discovery or whether the claim, dispute, or issue was continuing in nature. Claims, disputes, or issues arising more than six years prior to a written request or demand for arbitration issued under this Contract are not subject to arbitration.

- e. The parties may agree in writing signed by both parties that a claim or dispute may be brought in Whatcom County Superior Court rather than mediation or arbitration.

Unless otherwise specified herein, this Contract shall be governed by the laws of Whatcom County and the State of Washington.

43.1 Venue and Choice of Law:

In the event that any litigation should arise concerning the construction or interpretation of any of the terms of this Agreement, the venue of such action of litigation shall be in the courts of the State of Washington in and for the County of Whatcom. This Agreement shall be governed by the laws of the State of Washington.

44.1 Survival:

The provisions of paragraphs 11.1, 11.2, 11.3, 21.1, 22.1, 30.1, 31.1, 31.2, 32.1, 33.1, 34.2, 34.3, 36.1, 40.2, 41.2, 42.1, and 43.1, if utilized, shall survive, notwithstanding the termination or invalidity of this Agreement for any reason.

45.1 Entire Agreement:

This written Agreement, comprised of the writings signed or otherwise identified and attached hereto, represents the entire Agreement between the parties and supersedes any prior oral statements, discussions or understandings between the parties.

EXHIBIT "A"
(SCOPE OF WORK)

The Bellingham Whatcom County Tourism will use tourism promotion funds to:

Funding provided by Whatcom County is used to provide year-round services to promote tourism in Whatcom County and support other projects that promote countywide tourism.

Projects include:

- Coordinate COVID-19 pandemic recovery efforts to support the travel tourism and hospitality industry in Whatcom County
- Continue Cultural Heritage Tourism Strategic Plan Implementation
- Create a Strategic Tourism Master Plan for the Future
- Continue data collection to include AirDNA (comparable to the STR occupancy/ADR/RevPAR report)
- Support countywide VIC efforts provided by Chambers of Commerce in Blaine, Birch Bay, Ferndale, Lynden, Mt. Baker Foothills, and Point Roberts
- Collect visitor data via SeeSource
- Develop, promote and gamify several trails such as the Culture and Arts Trail, Oyster Trail, Voyagers Welcome (private boaters) Trail and more via Bandwango

This includes staffing and operating information centers that serve and/or interact with more than one million existing and potential visitors each year, referrals to local agencies and businesses plus the publication and distribution of community information in an effort to promote tourism. Maximum consideration for this agreement is \$290,000.

Allowable expenses under RCW 67.28.210, tourism promotion includes daily tourism operations:

Rent
Utilities
Salaries
Payroll taxes
Health insurance
Telephone service
Printing of promotional materials
Postage costs

Facilities will be open to the public seven days a week, 9:00 a.m. to 5:00 p.m. (except holidays). Advertising, promotional brochures and marketing of special events and festivals designed to attract visitors and encourage tourist expansion.

Promotional materials regarding the proposed activity must mention that it is made possible in part by a Tourism Promotion Grant from Whatcom County. The scale of this credit should be commensurate with the County's level of financial support. It should include the name and logo of the County. It is not expected that this credit be displayed in all materials, but at a minimum it should be placed in such documents as programs and annual reports.

Within 30 days after the end of the contract term, the Festival shall submit a final project report (the "Final Project Report") detailing:

- How the evaluation criteria were met by the event
- What elements worked well and which did not.
- Modifications, if any, planned for future activities.
- Summarize the results of the year's activities and major accomplishments.
- Provide Budget vs. Actual Financials.

Failure to complete and deliver the Final Project Report in a timely manner may render recipient ineligible for future funding. Pursuant to RCW 67.28.1816, recipients of lodging tax funds must provide the following information:

The estimated number of tourists, persons traveling over fifty miles to the destination, persons remaining at the destination overnight, and lodging stays generated per festival, special event or tourism-related facility owned or sponsored by a nonprofit organization or local jurisdiction.

EXHIBIT "B"
(COMPENSATION)

Maximum consideration for this contract shall be \$290,000. ***The Contract Number shall be included on all billings or correspondence.***

Allowable Expenses include:

GENERAL LEDGER DETAIL:

Salaries
Payroll taxes
Health insurance

RECIEPTS:

Rent
Utilities
Telephone service
Printing of promotional materials
Postage costs

Bellingham Whatcom County Tourism will submit invoices detailing allowable expenditures as outlined in Exhibit A to the Whatcom County Executive's Office. Payment is for reimbursement only and copies of receipts must be attached to invoices. Payment will be made no more than one time per month.

Bellingham Whatcom County Tourism will also provide Whatcom County with a copy of all brochures and advertisements included with invoices.

RE: Birch Bay Chamber of Commerce

DATE: November 17, 2021

Enclosed is the Contract for Services between Whatcom County and Birch Bay Chamber of Commerce for your review and signature.

- **Background and Purpose**

Contractor has received Convention Center funding to pay for the operations of the Birch Bay Visitor Center.

- **Funding Amount and Source**

Funding in the amount of \$110,000 will come from the Convention Center Fund (aka Lodging Tax) as recommended by the Lodging Tax Advisory Committee and approved on September 14, 2021 by the Whatcom County Council through Resolution No. 2021-037.

- **Differences from Previous Contract**

No substantive changes.

Please contact Tawni Helms at extension 5208, if you have any questions or concerns regarding the terms of this agreement.

Encl.

CONTRACT FOR SERVICES
Between Whatcom County and Birch Bay Chamber of Commerce

Birch Bay Chamber of Commerce, hereinafter called **Contractor** and Whatcom County, hereinafter referred to as **County**, agree and contract as set forth in this Agreement, including:

General Conditions, pp. 3 to 13,

Exhibit A (Scope of Work), p. 14

Exhibit B (Compensation), p. 15

Exhibit C (Sample Survey), p. 16

Exhibit D (Certificate of Insurance) p. 17.

Copies of these items are attached hereto and incorporated herein by this reference as if fully set forth herein.

The term of this Agreement shall commence on the 1st day of January, 2022, and shall, unless terminated or renewed as elsewhere provided in the Agreement, terminate on the 31st day of December, 2022.

The general purpose or objective of this Agreement is to: support Birch Bay Chamber for the operational costs associated with the Visitor Center, as more fully and definitively described in Exhibit A hereto. The language of Exhibit A controls in case of any conflict between it and that provided here.

The maximum consideration for the initial term of this agreement or for any renewal term shall not exceed **\$110,000**. The Contract Number, set forth above, shall be included on all billings or correspondence in connection therewith.

Contractor acknowledges and by signing this contract agrees that the Indemnification provisions set forth in Paragraphs 11.1, 21.1, 30.1, 31.2, 32.1, 34.2, and 34.3, if included, are totally and fully part of this contract and have been mutually negotiated by the parties.

Each signatory below to this Contract warrants that he/she is the authorized agent of the respective party; and that he/she has the authority to enter into the contract and to bind the party thereto.

IN WITNESS WHEREOF, the parties have executed this Agreement this ____ day of _____, 2022.

Accepted for Whatcom County:

By: _____
Satpal Singh Sidhu, Whatcom County Executive

GENERAL CONDITIONS

Series 00-09: Provisions Related to Scope and Nature of Services

0.1 Scope of Services:

The Contractor agrees to provide to the County services and any materials as set forth in the project narrative identified as Exhibit "A", during the agreement period. No material, labor, or facilities will be furnished by the County, unless otherwise provided for in the Agreement.

Series 10-19: Provisions Related to Term and Termination

10.1 Term:

Services provided by Contractor prior to or after the term of this contract shall be performed at the expense of Contractor and are not compensable under this contract unless both parties hereto agree to such provision in writing. The term of this Agreement may be extended by mutual agreement of the parties; provided, however, that the Agreement is in writing and signed by both parties.

10.2 Extension:

The duration of this Agreement may be extended by mutual written consent of the parties, for a period of up to one year, and for a total of no longer than three years.

11.1 Termination for Default:

If the Contractor defaults by failing to perform any of the obligations of the contract or becomes insolvent or is declared bankrupt or commits any act of bankruptcy or insolvency or makes an assignment for the benefit of creditors, the County may, by depositing written notice to the Contractor in the U.S. mail, first class postage prepaid, terminate the contract, and at the County's option, obtain performance of the work elsewhere. Termination shall be effective upon Contractor's receipt of the written notice, or within three (3) days of the mailing of the notice, whichever occurs first. If the contract is terminated for default, the Contractor shall not be entitled to receive any further payments under the contract until all work called for has been fully performed. Any extra cost or damage to the County resulting from such default(s) shall be deducted from any money due or coming due to the Contractor. The Contractor shall bear any extra expenses incurred by the County in completing the work, including all increased costs for completing the work, and all damage sustained, or which may be sustained by the County by reason of such default.

11.2 Termination for Reduction in Funding:

In the event that funding from State, Federal or other sources is withdrawn, reduced, or limited in any way after the effective date of this Agreement, and prior to its normal completion, the County may summarily terminate this Agreement as to the funds withdrawn, reduced, or limited, notwithstanding any other termination provisions of this Agreement. If the level of funding withdrawn, reduced or limited is so great that the County deems that the continuation of the programs covered by this Agreement is no longer in the best interest of the County, the County may summarily terminate this Agreement in whole, notwithstanding any other termination provisions of this Agreement. Termination under this section shall be effective upon receipt of written notice as specified herein, or within three days of the mailing of the notice, whichever occurs first.

11.3 Termination for Public Convenience:

The County may terminate the Agreement in whole or in part whenever the County determines, in its sole discretion, that such termination is in the interests of the County. Whenever the Agreement is terminated in accordance with this paragraph, the Contractor shall be entitled to payment for actual work performed at unit contract prices for completed items of work. An equitable adjustment in the contract price for partially completed items of work will be made, but such adjustment shall not include provision for loss of anticipated profit on deleted or uncompleted work. Termination of this Agreement by the County at any time during the term, whether for default or convenience, shall not constitute breach of contract by the County.

Series 20-29: Provisions Related to Consideration and Payments

20.1 Accounting and Payment for Contractor Services:

Payment to the Contractor for services rendered under this Agreement shall be as set forth in Exhibit "B." Where Exhibit "B" requires payments by the County, payment shall be based upon written claims supported, unless otherwise provided in Exhibit "B," by documentation of units of work actually performed and amounts earned, including, where appropriate, the actual number of days worked each month, total number of hours for the month, and the total dollar payment requested, so as to comply with municipal auditing requirements.

Unless specifically stated in Exhibit "B" or approved in writing in advance by the official executing this Agreement for the County or his designee (hereinafter referred to as the "Administrative Officer") the County will not reimburse the Contractor for any costs or expenses incurred by the Contractor in the performance of this contract. Where required, the County shall, upon receipt of appropriate documentation, compensate the Contractor, no more often than monthly, in accordance with the County's customary procedures, pursuant to the fee schedule set forth in Exhibit "B."

21.1 Taxes:

The Contractor understands and acknowledges that the County will not withhold Federal or State income taxes. Where required by State or Federal law, the Contractor authorizes the County to withhold for any taxes other than income taxes (i.e., Medicare). All compensation received by the Contractor will be reported to the Internal Revenue Service at the end of the calendar year in accordance with the applicable IRS regulations. It is the responsibility of the Contractor to make the necessary estimated tax payments throughout the year, if any, and the Contractor is solely liable for any tax obligation arising from the Contractor's performance of this Agreement. The Contractor hereby agrees to indemnify the County against any demand to pay taxes arising from the Contractor's failure to pay taxes on compensation earned pursuant to this Agreement.

The County will pay sales and use taxes imposed on goods or services acquired hereunder as required by law. The Contractor must pay all other taxes, including, but not limited to, Business and Occupation Tax, taxes based on the Contractor's gross or net income, or personal property to which the County does not hold title. The County is exempt from Federal Excise Tax.

22.1 Withholding Payment:

In the event the County's Administrative Officer determines that the Contractor has failed to perform any obligation under this Agreement within the times set forth in this Agreement, then the County may withhold from amounts otherwise due and payable to Contractor the amount determined by the County as necessary to cure the default, until the Administrative Officer determines that such failure to perform has been cured. Withholding under this clause shall not be deemed a breach entitling Contractor to termination or damages, provided that the County promptly gives notice in writing to the Contractor of the nature of the default or failure to perform, and in no case more than 10 days after it determines to withhold amounts otherwise due. A determination of the Administrative Officer set forth in a notice to the Contractor of the action required and/or the amount required to cure any alleged failure to perform shall be deemed conclusive, except to the extent that the Contractor acts within the times and in strict accord with the provisions of the Disputes clause of this Agreement. The County may act in accordance with any determination of the Administrative Officer which has become conclusive under this clause, without prejudice to any other remedy under the Agreement, to take all or any of the following actions: (1) cure any failure or default, (2) to pay any amount so required to be paid and to charge the same to the account of the Contractor, (3) to set off any amount so paid or incurred from amounts due or to become due the Contractor. In the event the Contractor obtains relief upon a claim under the Disputes clause, no penalty or damages shall accrue to Contractor by reason of good faith withholding by the County under this clause.

23.1 Labor Standards:

The Contractor agrees to comply with all applicable state and federal requirements, including but not limited to those pertaining to payment of wages and working conditions, in accordance with RCW 39.12.040, the Prevailing Wage Act; the Americans with Disabilities Act of 1990; the Davis-Bacon Act; and the Contract Work Hours and Safety Standards Act providing for weekly payment of prevailing wages,

minimum overtime pay, and providing that no laborer or mechanic shall be required to work in surroundings or under conditions which are unsanitary, hazardous, or dangerous to health and safety as determined by regulations promulgated by the Federal Secretary of Labor and the State of Washington.

Series 30-39: Provisions Related to Administration of Agreement

30.1 Independent Contractor:

The Contractor's services shall be furnished by the Contractor as an independent contractor, and nothing herein contained shall be construed to create a relationship of employer-employee or master-servant, but all payments made hereunder and all services performed shall be made and performed pursuant to this Agreement by the Contractor as an independent contractor.

The Contractor acknowledges that the entire compensation for this Agreement is specified in Exhibit "B" and the Contractor is not entitled to any benefits including, but not limited to: vacation pay, holiday pay, sick leave pay, medical, dental, or other insurance benefits, or any other rights or privileges afforded to employees of the County. The Contractor represents that he/she/it maintains a separate place of business, serves clients other than the County, will report all income and expense accrued under this contract to the Internal Revenue Service, and has a tax account with the State of Washington Department of Revenue for payment of all sales and use and Business and Occupation taxes collected by the State of Washington.

Contractor will defend, indemnify and hold harmless the County, its officers, agents or employees from any loss or expense, including, but not limited to, settlements, judgments, setoffs, attorneys' fees or costs incurred by reason of claims or demands because of breach of the provisions of this paragraph

30.2 Assignment and Subcontracting:

The performance of all activities contemplated by this agreement shall be accomplished by the Contractor. No portion of this contract may be assigned or subcontracted to any other individual, firm or entity without the express and prior written approval of the County.

30.3 No Guarantee of Employment:

The performance of all or part of this contract by the Contractor shall not operate to vest any employment rights whatsoever and shall not be deemed to guarantee any employment of the Contractor or any employee of the Contractor or any subcontractor or any employee of any subcontractor by the County at the present time or in the future.

31.1 Ownership of Items Produced and Public Records Act:

All writings, programs, data, public records or other materials prepared by the Contractor and/or its consultants or subcontractors, in connection with performance of this Agreement, shall be the sole and absolute property of the County. If the Contractor creates any copyrightable materials or invents any patentable property, the Contractor may copyright or patent the same, but the County retains a royalty-free, nonexclusive and irrevocable license to reproduce, publish, recover, or otherwise use the materials or property and to authorize other governments to use the same for state or local governmental purposes. Contractor further agrees to make research, notes, and other work products produced in the performance of this Agreement available to the County upon request.

Ownership. Any and all data, writings, programs, public records, reports, analyses, documents, photographs, pamphlets, plans, specifications, surveys, films or any other materials created, prepared, produced, constructed, assembled, made, performed or otherwise produced by the Contractor or the Contractor's subcontractors or consultants for delivery to the County under this Contract shall be the sole and absolute property of the County. Such property shall constitute "work made for hire" as defined by the U.S. Copyright Act of 1976, 17 U.S.C. § 101, and the ownership of the copyright and any other intellectual property rights in such property shall vest in the County at the time of its creation. Ownership of the intellectual property includes the right to copyright, patent, and register, and the ability to transfer these rights. Material which the Contractor uses to perform this Contract but is not created, prepared, constructed, assembled, made, performed or otherwise produced for or paid for by the County is owned by the Contractor and is not "work made for hire" within the terms of this Agreement.

Public Records Act. This Contract and all records associated with this Contract shall be available for inspection and copying by the public where required by the Public Records Act, Chapter 42.56 RCW (the "Act"). To the extent that public records then in the custody of the Contractor are needed for the County to respond to a request under the Act, as determined by the County, the Contractor agrees to make them promptly available to the County at no cost to the County. If the Contractor considers any portion of any record provided to the County under this Agreement, whether in electronic or hard copy form, to be protected from disclosure under law, the Contractor shall clearly identify any specific information that it claims to be confidential or proprietary. If the County receives a request under the Act to inspect or copy the information so identified by the Contractor and the County determines that release of the information is required by the Act or otherwise appropriate, the County's sole obligations shall be to notify the Contractor (a) of the request and (b) of the date that such information will be released to the requester unless the Contractor obtains a court order to enjoin that disclosure

pursuant to RCW 42.56.540. If the Contractor fails to timely obtain a court order enjoining disclosure, the County will release the requested information on the date specified.

The County has, and by this section assumes, no obligation on behalf of the Contractor to claim any exemption from disclosure under the Act. The County shall not be liable to the Contractor for releasing records not clearly identified by the Contractor as confidential or proprietary. The County shall not be liable to the Contractor for any records that the County releases in compliance with this section or in compliance with an order of a court of competent jurisdiction.

The Contractor shall be liable to the requester for any and all fees, costs, penalties or damages imposed or alleged as a result of the Contractor's failure to provide adequate or timely records.

This provision and the obligations it establishes shall remain in effect after the expiration of this contract.

31.2 Patent/Copyright Infringement:

Contractor will defend and indemnify the County from any claimed action, cause or demand brought against the County, to the extent such action is based on the claim that information supplied by the Contractor infringes any patent or copyright. The Contractor will pay those costs and damages attributable to any such claims that are finally awarded against the County in any action. Such defense and payments are conditioned upon the following:

A. The Contractor shall be notified promptly in writing by the County of any notice of such claim.

B. Contractor shall have the right, hereunder, at its option and expense, to obtain for the County the right to continue using the information, in the event such claim of infringement, is made, provided no reduction in performance or loss results to the County.

32.1 Confidentiality:

The Contractor, its employees, subcontractors, and their employees shall maintain the confidentiality of all information provided by the County or acquired by the Contractor in performance of this Agreement, except upon the prior written consent of the County or an order entered by a court after having acquired jurisdiction over the County. Contractor shall immediately give to the County notice of any judicial proceeding seeking disclosure of such information. Contractor shall indemnify and hold harmless the County, its officials, agents or employees from all loss or expense, including, but not limited to, settlements, judgments, setoffs, attorneys' fees and costs resulting from Contractor's breach of this provision.

33.1 Right to Review:

This contract is subject to review by any Federal, State or County auditor. The County or its designee shall have the right to review and monitor the financial and service components of this program by whatever means are deemed expedient by the Administrative Officer or by the County Auditor's Office. Such review may occur with or without notice and may include, but is not limited to, on-site inspection by County agents or employees, inspection of all records or other materials which the County deems pertinent to the Agreement and its performance, and any and all communications with or evaluations by service recipients under this Agreement. The Contractor shall preserve and maintain all financial records and records relating to the performance of work under this Agreement for three (3) years after contract termination, and shall make them available for such review, within Whatcom County, State of Washington, upon request. Contractor also agrees to notify the Administrative Officer in advance of any inspections, audits, or program review by any individual, agency, or governmental unit whose purpose is to review the services provided within the terms of this Agreement. If no advance notice is given to the Contractor, then the Contractor agrees to notify the Administrative Officer as soon as it is practical.

34.1 Insurance:

The Contractor shall, at its own expense, obtain and continuously maintain the following insurance coverage for the duration of this contract, which shall include insurance against claims for injuries to persons or damage to property which may arise from or in connection with the performance of the work hereunder by the Contractor, its agents, representatives, subcontractors or employees. All insurers providing such insurance shall have an A.M. Best Rating of not less than A- (or otherwise be acceptable to the County) and be licensed to do business in the State of Washington and admitted by the Washington State Insurance Commissioner. Coverage limits shall be the minimum limits identified in this Contract or the coverage limits provided or available under the policies maintained by the Contractor without regard to this Contract, whichever are greater.

1. Commercial General Liability

Property Damage	\$500,000.00, per occurrence
General Liability & bodily injury	\$1,000,000.00, per occurrence
Annual Aggregate	\$2,000,000.00

At least as broad as ISO form CG 00 01 or the equivalent, which coverage shall include personal injury, bodily injury and property damage for Premises Operations, Products and Completed Operations, Personal/Advertising Injury, Contractual Liability, Independent Contractor Liability, medical payments and Stop Gap/Employer's Liability. Coverage shall not exclude or contain sub-limits less than the minimum limits required, unless approved in writing by the County.

2. Professional Liability

Professional Liability - \$1,000,000 per occurrence

- a. Obtain professional liability insurance covering the negligent acts, errors, or omissions of the professional in connection with the performance of services to the County. If any insurance policy or the professional liability insurance is written on a claims made form, its retroactive date, and that of all subsequent renewals, shall be no later than the effective date of this Contract. The policy shall state that coverage is claims made, and state the retroactive date. Claims-made form coverage shall be maintained by the Contractor for a minimum of 36 months following the Completion Date or earlier termination of this Contract, and the Contractor shall annually provide the Contracting Agency with proof of renewal. If renewal of the claims made form of coverage becomes unavailable, or economically prohibitive, the Contractor shall purchase an extended reporting period ("tail") or execute another form of guarantee acceptable to the Contracting Agency to assure financial responsibility for liability for services performed.

3. Business Automobile Liability

\$1,000,000.00 Minimum, per occurrence

\$2,000,000.00 Minimum, Annual Aggregate

Contractor shall provide auto liability coverage for owned, non-owned and hired autos using ISO Business Auto Coverage form CA 00 01 or the exact equivalent with a limit of no less than \$1,000,000 per accident. If Contractor owns no vehicles this requirement may be met through a non-owned auto Endorsement to the CGL policy.

4. Additional Insurance Requirements and Provisions

- a. All insurance policies shall provide coverage on an occurrence basis.
- b. Additional Insureds. Whatcom County, its departments, elected and appointed officials, employees, agents and volunteers shall be included as additional insureds on Contractor's and Contractor's subcontractors' insurance policies by way of endorsement for the full available limits of insurance required in this contract or maintained by the Contractor and subcontractor, whichever is greater.
- c. Primary and Non-contributory Insurance. Contractor shall provide primary insurance coverage and the County's insurance shall be non-contributory. Any insurance, self-insured retention, deductible, risk retention or insurance pooling maintained or participated in by the County shall be excess and non-contributory to Contractor's insurance.
- d. Waiver of Subrogation. The insurance policy shall provide a waiver of subrogation with respect to each insurance policy maintained under this Contract. When required by an insurer, or if a policy condition does not permit Contractor to enter into a pre-loss agreement to waive subrogation without an endorsement, then Contractor agrees to notify the insurer and obtain such endorsement. This requirement shall not apply to any policy which includes a condition expressly prohibiting waiver of subrogation by the insured or which voids coverage should the Contractor enter into such a waiver of subrogation on a pre-loss basis.
- e. Review of and Revision of Policy Provisions. Upon request, the Contractor shall provide a full and complete certified copy of all requested insurance policies to the County. The County reserves the right, but not the obligation, to revise any insurance requirement, including but not limited to limits, coverages and endorsements, or to reject any insurance policies which fail to meet the requirements of this Contract. Additionally, the County reserves the right, but not the obligation, to review and reject any proposed insurer providing coverage based upon the insurer's financial condition or licensing status in Washington.
- f. Verification of Coverage/Certificates and Endorsements. The Contractor shall furnish the County with a certificate of insurance and endorsements required by this contract. The certificates and endorsements for each policy shall be signed by a person authorized by the insurer to bind coverage on its behalf. The certificate and endorsements for each insurance policy

are to be on forms approved by the County prior to commencement of activities associated with the contract. The certificate and endorsements, and renewals thereof, shall be attached hereto as Exhibit "C". If Exhibit C is not attached, the Contractor must submit the certificate and endorsements required in this contract to the County prior to the commencement of any work on the contracted project. A certificate alone is insufficient proof of the required insurance; endorsements must be included with the certificate. The certificate of insurance must reflect the insurance required in this contract, including appropriate limits, insurance coverage dates, per occurrence, and in the description of operations, include the County project, Whatcom County, its departments, officials, employees, agents and volunteers as additional insureds, primary, non-contributory, and waiver of subrogation.

- g. The County must be notified immediately in writing of any cancellation of the policy, exhaustion of aggregate limits, notice of intent not to renew insurance coverage, expiration of policy or change in insurer carrier. Contractor shall always provide the County with a current copy of the certificate and endorsements throughout the duration of the contract.
- h. No Limitation on Liability. The insurance maintained under this Contract shall not in any manner limit the liability or qualify the liabilities or obligations of the Contractor to the coverage provided by such insurance, or otherwise limit the County's recourse to any remedy available at law or equity.
- i. Payment Conditioned on Insurance and Failure to Maintain Insurance. Compensation and/or payments due to the Contractor under this Contract are expressly conditioned upon the Contractor's compliance with all insurance requirements. Failure on the part of the Contractor to maintain the insurance as required shall constitute a material breach of contract. Payment to the Contractor may be suspended in the event of non-compliance, upon which the County may, after giving five business days' notice to the Contractor to correct the breach, immediately terminate the contract or, at its discretion, procure or renew such insurance and pay any and all premiums in connection therewith, with any sums so expended to be repaid to the County on demand or offset against funds due the Contractor. Upon receipt of evidence of Contractor's compliance, payments not otherwise subject to withholding or set-off will be released to the Contractor.
- j. Workers' Compensation. The Contractor shall maintain Workers' Compensation coverage as required under the Washington State Industrial Insurance Act, RCW Title 51, for all Contractors' employees, agents and volunteers eligible for such coverage under the Industrial Insurance Act.
- k. Failure of the Contractor to take out and/or maintain required insurance shall not relieve the Contractor or subcontractors from any liability under the contract, nor shall the insurance requirements be construed to conflict with or otherwise limit the obligations concerning indemnification. The County does not waive any insurance requirements even in the event the certificate or endorsements provided by the Contractor were insufficient or inadequate proof of coverage but not objected to by the County. The County's failure to confirm adequate proof of insurance requirements does not constitute a waiver of the Contractor's insurance requirements under this Contract.
- l. Availability of Contractor Limits. If the Contractor maintains higher insurance limits than the minimums shown above, the County shall be insured for the full available limits, including Excess or Umbrella liability maintained by the Contractor, irrespective of whether such limits maintained by the Contractor are greater than those required by this contract or whether any certificate furnished to the County evidences limits of liability lower than those maintained by the Contractor.
- m. Insurance for Subcontractors. If the Contractor subcontracts (if permitted in the contract) any portion of this Contract, the Contractor shall include all subcontractors as insureds under its policies or shall require separate certificates of insurance and policy endorsements from each subcontractor. Insurance coverages by subcontractors must comply with the insurance requirements of the Contractor in this contract and shall be subject to all of the requirements stated herein, including naming the County as additional insured.
- n. The Contractor agrees Contractor's insurance obligation shall survive the completion or termination of this Contract for a minimum period of three years.

34.3 Defense & Indemnity Agreement. To the fullest extent permitted by law, the Contractor agrees to indemnify, defend and hold the County

and its departments, elected and appointed officials, employees, agents and volunteers, harmless from and against any and all claims, damages, losses and expenses, including but not limited to court costs, attorney's fees, and alternative dispute resolution costs, for any personal injury, for any bodily injury, sickness, disease, or death and for any damage to or destruction of any property (including the loss of use resulting therefrom) which: 1) are caused in whole or in part by any error, act or omission, negligent or otherwise, of the Contractor, its employees, agents or volunteers or Contractor's subcontractors and their employees, agents or volunteers; or 2) directly or indirectly arise out of or occur in connection with performance of this Contract or 3) are based upon the Contractor's or its subcontractors' use of, presence upon, or proximity to the property of the County. This indemnification obligation of the Contractor shall not apply in the limited circumstance where the claim, damage, loss, or expense is caused by the sole negligence of the County.

Should a court of competent jurisdiction determine that this contract is subject to RCW 4.24.115, then in the event of concurrent negligence of the Contractor, its subcontractors, employees or agents, and the County, its employees or agents, this indemnification obligation of the Contractor shall be valid and enforceable only to the extent of the negligence of the Contractor, its subcontractors, employees, and agents. This indemnification obligation of the Contractor shall not be limited in any way by the Washington State Industrial Insurance Act, RCW Title 51, or by application of any other workmen's compensation act, disability benefit act or other employee benefit act, and the Contractor hereby expressly waives any immunity afforded by such acts.

It is further provided that no liability shall attach to the County by reason of entering into this contract, except as expressly provided herein. The parties specifically agree that this Contract is for the benefit of the parties only and this Contract shall create no rights in any third party. The County reserves the right, but not the obligation, to participate in the defense of any claim, damages, losses, or expenses, and such participation shall not constitute a waiver of Contractor's indemnity obligations under this Agreement.

In the event the Contractor enters into subcontracts to the extent allowed under this Contract, the Contractor's subcontractors shall indemnify the County on a basis equal to or exceeding Contractor's indemnity obligations to the County. The Contractor shall pay all attorney's fees and expenses incurred by the County in establishing and enforcing the County's rights under this indemnification provision, whether or not suit was instituted.

The Contractor agrees all Contractor's indemnity obligations shall survive the completion, expiration or termination of this Agreement. The foregoing indemnification obligations of the Contractor are a material inducement to County to enter into this Agreement and are reflected in the Contractor's compensation.

By signing this contract, the Contractor acknowledges that it has freely negotiated and agreed to the indemnification requirements to defend, indemnify and hold harmless the County from all claims and suits including those brought against the County by the Contractor's own employees, arising from this contract.

35.1 Non-Discrimination in Employment:

The County's policy is to provide equal opportunity in all terms, conditions and privileges of employment for all qualified applicants and employees without regard to race, color, creed, religion, national origin, sex, sexual orientation (including gender identity), age, marital status, disability, or veteran status. The Contractor shall comply with all laws prohibiting discrimination against any employee or applicant for employment on the grounds of race, color, creed, religion, national origin, sex, sexual orientation (including gender identity), age, marital status, disability, political affiliation, or veteran status, except where such constitutes a bona fide occupational qualification.

Furthermore, in those cases in which the Contractor is governed by such laws, the Contractor shall take affirmative action to ensure that applicants are employed, and treated during employment, without regard to their race, color, creed, religion, national origin, sex, age, marital status, sexual orientation (including gender identity), disability, or veteran status, except where such constitutes a bona fide occupational qualification. Such action shall include, but not be limited to: advertising, hiring, promotions, layoffs or terminations, rate of pay or other forms of compensation benefits, selection for training including apprenticeship, and participation in recreational and educational activities. In all solicitations or advertisements for employees placed by them or on their behalf, the Contractor shall state that all qualified applicants will receive consideration for employment without regard to race, color, religion, sex or national origin.

The foregoing provisions shall also be binding upon any subcontractor, provided that the foregoing provision shall not apply to contracts or subcontractors for standard commercial supplies or raw materials, or to sole proprietorships with no employees.

35.2 Non-Discrimination in Client Services:

The Contractor shall not discriminate on the grounds of race, color, creed, religion, national origin, sex, age, marital status, sexual orientation (including gender identity), disability, or veteran status; or deny an individual or business any service or benefits under this Agreement unless otherwise allowed by applicable law; or subject an individual or business to segregation or separate treatment in any manner related to his/her/its receipt any service or services or other benefits provided under this Agreement unless otherwise allowed by applicable law; or deny an individual or business an opportunity to participate in any program provided by this Agreement unless otherwise allowed by applicable law.

36.1 Waiver of Noncompetition:

Contractor irrevocably waives any existing rights which it may have, by contract or otherwise, to require another person or corporation to refrain from submitting a proposal to or performing work or providing supplies to the County, and contractor further promises that it will not in the future, directly or indirectly, induce or solicit any person or corporation to refrain from submitting a bid or proposal to or from performing work or providing supplies to the County.

36.2 Conflict of Interest:

If at any time prior to commencement of, or during the term of this Agreement, Contractor or any of its employees involved in the performance of this Agreement shall have or develop an interest in the subject matter of this Agreement that is potentially in conflict with the County's interest, then Contractor shall immediately notify the County of the same. The notification of the County shall be made with sufficient specificity to enable the County to make an informed judgment as to whether or not the County's interest may be compromised in any manner by the existence of the conflict, actual or potential. Thereafter, the County may require the Contractor to take reasonable steps to remove the conflict of interest. The County may also terminate this contract according to the provisions herein for termination.

37.1 Administration of Contract:

This Agreement shall be subject to all laws, rules, and regulations of the United States of America, the State of Washington, and political subdivisions of the State of Washington. The Contractor also agrees to comply with applicable federal, state, county or municipal standards for licensing, certification and operation of facilities and programs, and accreditation and licensing of individuals.

The County hereby appoints, and the Contractor hereby accepts, the Whatcom County Executive, and his or her designee, as the County's representative, hereinafter referred to as the Administrative Officer, for the purposes of administering the provisions of this Agreement, including the County's right to receive and act on all reports and documents, and any auditing performed by the County related to this Agreement. The Administrative Officer for purposes of this agreement is:

Tawni Helms, Administrative Coordinator
Whatcom County Executive's Office
311 Grand Avenue, Suite 108
Bellingham, WA 98225

37.2 Notice:

Any notices or communications required or permitted to be given by this Contract must be (i) given in writing and (ii) personally delivered or mailed, by prepaid, certified mail or overnight courier, or transmitted by electronic mail transmission (including PDF), to the party to whom such notice or communication is directed, to the mailing address or regularly-monitored electronic mail address of such party as follows:

PARTY 1: Birch Bay Chamber of Commerce and Visitor Information Center
Danielle Gaughen, Executive Director
7900 Birch Bay
Birch Bay, WA 98230
360-371-5004
director@birchbaychamber.com

PARTY 2: Tawni Helms, Administrative Coordinator
Whatcom County Executive's Office
311 Grand Avenue, Suite 108
Bellingham, WA 98225
360-778-5208
thelms@co.whatcom.wa.us

Any such notice or communication shall be deemed to have been given on (i) the day such notice or communication is personally delivered, (ii) three (3) days after such notice or communication is mailed by prepaid certified or registered mail, (iii) one (1) working

day after such notice or communication is sent by overnight courier, or (iv) the day such notice or communication is sent electronically, provided that the sender has received a confirmation of such electronic transmission. A party may, for purposes of this Agreement, change his, her or its address, email address or the person to whom a notice or other communication is marked to the attention of, by giving notice of such change to the other party pursuant to this Section.

37.3 If agreed by the parties, this Contract may be executed by Email transmission and PDF signature and Email transmission and PDF signature shall constitute an original for all purposes.

38.1 Certification of Public Works Contractor's Status under State Law:

If applicable, Contractor certifies that it has fully met the responsibility criteria required of public works contractors under RCW 39.04.350 (1), which include: (a) having a certificate of registration in compliance with RCW 18.27; (b) having a current state unified business identifier number; (c) if applicable, having industrial insurance coverage for its employees working in Washington as required in Title 51 RCW, an employment security department number as required in Title 50 RCW, and a state excise tax registration number as required in Title 82 RCW; and (d) not being disqualified from bidding on any public works contract under RCW 39.06.010 or 39.12.065 (3).

38.2 Certification Regarding Federal Debarment, Suspension, Ineligibility and Voluntary Exclusion - Lower Tier Covered Transactions:

If applicable, the Contractor further certifies, by executing this contract, that neither it nor its principles is presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participation in this transaction by any Federal department or Agency.

The Contractor also agrees that it shall not knowingly enter into any lower tier covered transactions (a transaction between the Contractor and any other person) with a person who is proposed for debarment, debarred, suspended, declared ineligible, or voluntarily excluded from participation in this covered transaction, and the Contractor agrees to include this clause titled "Certification Regarding Federal Debarment, Suspension, Ineligibility and Voluntary Exclusion - Lower Tier Covered Transaction" without modification, in all lower tier covered transactions and in all solicitations for lower tier transactions.

The "Excluded Parties List System in the System for Award Management (SAM) website is available to research this information at WWW.SAM.GOV. Contractor shall immediately notify Whatcom County if, during the term of this Contract, Contractor becomes debarred.

38.3 E-Verify:

The E-Verify contractor program for Whatcom County applies to contracts of \$100,000 or more and sub contracts for \$25,000 or more if the primary contract is for \$100,000 or more. If applicable, Contractor represents and warrants that it will, for at least the duration of this contract, register and participate in the status verification system for all newly hired employees. The term "employee" as used herein means any person that is hired to perform work for Whatcom County. As used herein, "status verification system" means the Illegal Immigration Reform and Immigration Responsibility Act of 1996 that is operated by the United States Department of Homeland Security, also known as the E-Verify Program, or any other successor electronic verification system replacing the E-Verify Program. Contractor/Seller agrees to maintain records of such compliance and, upon request of the County, to provide a copy of each such verification to the County. Contractor/Seller further represents and warrants that any person assigned to perform services hereunder meets the employment eligibility requirements of all immigration laws of the State of Washington. Contractor/Seller understands and agrees that any breach of these warranties may subject Contractor/Seller to the following: (a) termination of this Agreement and ineligibility for any Whatcom County contract for up to three (3) years, with notice of such cancellation/termination being made public. In the event of such termination/cancellation, Contractor/Seller would also be liable for any additional costs incurred by the County due to contract cancellation or loss of license or permit." Contractor will review and enroll in the E-Verify program through this website: www.uscis.gov

Series 40-49: Provisions Related to Interpretation of Agreement and Resolution of Disputes

40.1 Modifications:

Either party may request changes in the Agreement. Any and all agreed modifications, to be valid and binding upon either party, shall be in writing and signed by both of the parties.

40.2 Contractor Commitments, Warranties and Representations:

Any written commitment received from the Contractor concerning this Agreement shall be binding upon the Contractor, unless otherwise specifically provided herein with reference to this paragraph. Failure of the Contractor to fulfill such a commitment shall render the Contractor liable for damages to the County. A commitment includes, but is not limited to, any representation made prior to execution of this Agreement, whether or not incorporated elsewhere herein by reference, as to performance of services or equipment, prices or options for future acquisition to remain in effect for a fixed period, or warranties.

41.1 Severability:

If any term or condition of this contract or the application thereof to any person(s) or circumstances is held invalid, such invalidity shall not affect other terms, conditions or applications which can be given effect without the invalid term, condition or application. To this end, the terms and conditions of this contract are declared severable.

41.2 Waiver:

Waiver of any breach or condition of this contract shall not be deemed a waiver of any prior or subsequent breach. No term or condition of this contract shall be held to be waived, modified or deleted except by an instrument, in writing, signed by the parties hereto. The failure of the County to insist upon strict performance of any of the covenants and agreements of this Agreement, or to exercise any option herein conferred in any one or more instances, shall not be construed to be a waiver or relinquishment of any such, or any other covenants or agreements, but the same shall be and remain in full force and effect.

42.1 Disputes:

a. General:

Differences between the Contractor and the County, arising under and by virtue of the Contract Documents, shall be brought to the attention of the County at the earliest possible time in order that such matters may be settled or other appropriate action promptly taken. Except for such objections as are made of record in the manner hereinafter specified and within the time limits stated, the records, orders, rulings, instructions, and decisions of the Administrative Officer shall be final and conclusive.

b. Notice of Potential Claims:

The Contractor shall not be entitled to additional compensation which otherwise may be payable, or to extension of time for (1) any act or failure to act by the Administrative Officer or the County, or (2) the happening of any event or occurrence, unless the Contractor has given the County a written Notice of Potential Claim within ten (10) days of the commencement of the act, failure, or event giving rise to the claim, and before final payment by the County. The written Notice of Potential Claim shall set forth the reasons for which the Contractor believes additional compensation or extension of time is due, the nature of the cost involved, and insofar as possible, the amount of the potential claim. Contractor shall keep full and complete daily records of the work performed, labor and material used, and all costs and additional time claimed to be additional.

c. Detailed Claim:

The Contractor shall not be entitled to claim any such additional compensation, or extension of time, unless within thirty (30) days of the accomplishment of the portion of the work from which the claim arose, and before final payment by the County, the Contractor has given the County a detailed written statement of each element of cost or other compensation requested and of all elements of additional time required, and copies of any supporting documents evidencing the amount or the extension of time claimed to be due.

d. Arbitration:

Other than claims for injunctive relief, temporary restraining order, or other provisional remedy to preserve the status quo or prevent irreparable harm, brought by a party hereto (which may be brought either in court or pursuant to this arbitration provision), and consistent with the provisions hereinabove, any claim, dispute or controversy between the parties under, arising out of, or related to this Contract or otherwise, including issues of specific performance, shall be determined by arbitration in Bellingham, Washington, under the applicable American Arbitration Association (AAA) rules in effect on the date hereof, as modified by this Agreement. There shall be one arbitrator selected by the parties within ten (10) days of the arbitration demand, or if not, by the AAA or any other group having similar credentials. Any issue about whether a claim is covered by this Contract shall be determined by the arbitrator. The arbitrator shall apply substantive law and may award injunctive relief, equitable relief (including specific performance), or any other remedy available from a judge but shall not have the power to award punitive damages. Each Party shall pay all their own costs, attorney fees and expenses of arbitration and the parties shall share equally in the Arbitrator's fees and costs. The decision of the arbitrator shall be final and binding and an order confirming the award or judgment upon the award may be entered in any court having jurisdiction. The parties agree that the decision of the arbitrator shall be the sole and exclusive remedy between them regarding any dispute presented or pled before the arbitrator. At the request of either party made not later than forty-five (45) days after the arbitration demand, the parties agree to submit the dispute to nonbinding mediation, which shall not delay the arbitration hearing date; provided, that either party may decline to mediate and proceed with arbitration.

Any arbitration proceeding commenced to enforce or interpret this Contract shall be brought within six years after the initial occurrence giving rise to the claim, dispute, or issue for which arbitration is commenced, regardless of the date of discovery or whether the claim, dispute, or issue was continuing in nature. Claims, disputes, or issues arising more than six years prior to a written request or demand for arbitration issued under this Contract are not subject to arbitration.

- e. The parties may agree in writing signed by both parties that a claim or dispute may be brought in Whatcom County Superior Court rather than mediation or arbitration.

Unless otherwise specified herein, this Contract shall be governed by the laws of Whatcom County and the State of Washington.

43.1 Venue and Choice of Law:

In the event that any litigation should arise concerning the construction or interpretation of any of the terms of this Agreement, the venue of such action of litigation shall be in the courts of the State of Washington in and for the County of Whatcom. This Agreement shall be governed by the laws of the State of Washington.

44.1 Survival:

The provisions of paragraphs 11.1, 11.2, 11.3, 21.1, 22.1, 30.1, 31.1, 31.2, 32.1, 33.1, 34.2, 34.3, 36.1, 40.2, 41.2, 42.1, and 43.1, if utilized, shall survive, notwithstanding the termination or invalidity of this Agreement for any reason.

45.1 Entire Agreement:

This written Agreement, comprised of the writings signed or otherwise identified and attached hereto, represents the entire Agreement between the parties and supersedes any prior oral statements, discussions or understandings between the parties.

EXHIBIT "A"
(SCOPE OF WORK)

The Birch Bay Chamber of Commerce will use tourism promotion funds to:

1. Fund the operations of the Visitor Center
2. Fund the advertising and marketing for annual multi-day events designed to promote tourism and overnight stays.

Promotional materials regarding the proposed activity must mention that it is made possible in part by a Tourism Promotion Grant from Whatcom County. The scale of this credit should be commensurate with the County's level of financial support. It should include the name and logo of the County. It is not expected that this credit be displayed in all materials, but at a minimum it should be placed in such documents as programs and annual reports.

Within 30 days after the end of the contract term, the Chamber shall submit a final project report (the "Final Project Report") detailing:

- How the evaluation criteria were met by the event
- What elements worked well and which did not.
- Modifications, if any, planned for future activities.
- Summarize the results of the year's activities and accomplishments.
- Provide Budget vs. Actual Financials.

Failure to complete and deliver the Final Project Report in a timely manner may render recipient ineligible for future funding. Pursuant to RCW 67.28.1816, recipients of lodging tax funds must provide the following information:

The estimated number of tourists, persons traveling over fifty miles to the destination, persons remaining at the destination overnight, and lodging stays generated per festival, special event or tourism-related facility owned or sponsored by a nonprofit organization or local jurisdiction.

EXHIBIT "B"
(COMPENSATION)

Maximum consideration for this contract shall be \$110,000. ***The Contract Number shall be included on all billings or correspondence.***

Allowable Expenses include:

GENERAL LEDGER DETAIL:

Salaries
Payroll taxes
Health insurance

RECIEPTS:

Rent
Utilities
Telephone service
Printing of promotional materials (*for annual multi-day events designed to encourage tourism and overnight stays*)
Postage costs

Birch Bay Chamber and Visitor Information Center will submit invoices detailing allowable expenditures as outlined in Exhibit A to the Whatcom County Executive's Office. Payment is for reimbursement only and copies of receipts must be attached to invoices. Payment will be made no more than one time per month.

Birch Bay Chamber and Visitor Information Center will also provide Whatcom County with a copy of all brochures and advertisements included with invoices.

EXHIBIT "C"
(Certificate of Insurance)

ATTACHMENT D
Whatcom County Contractor's E-Verify Declaration Form

I. CONTRACTOR INFORMATION

Contractor Name:		Phone:	
Contact Person:		Fax:	
Address:			

II. E-VERIFY ENROLLMENT (check box and submit copy of MOU for verification)

Contractors with funded contracts of \$100,000 or more must be enrolled in E-Verify system. Work related subcontract is \$25,000 or higher. www.uscis.gov/e-verify

☐ Contractor is enrolled in E-Verify; copy of the signed E-Verify Memorandum of Understanding is attached.

I declare under penalty of perjury under the laws of the State of Washington that the foregoing is true and correct, and that I am authorized to bind this entity contractually.

RE: Agreement for NeoGov Human Resources Recruiting Software

DATE: November 28, 2021

Enclosed is a proposed agreement between Whatcom County and Insight Public Sector for the NeoGov Insight online recruitment software.

■ Background and Purpose

Recruitment activity has increased dramatically over the last year due to the pandemic with continued activity expected for growth and retirements. Recruitment work is becoming more challenging and time consuming as the labor market changes. Our current system has not been able to meet these expanded needs and does not have additional modules such as onboarding, training and performance management / evaluation. A new recruitment system is needed that can also be expanded to meet other areas of Human Resources for a more integrated approach.

This proposed agreement is for the NeoGov Insight online recruitment platform pursuant to State of Washington Master Contract No. 06016 which expires 1/7/2022. Insight Public Sector is a Software Value Added Reseller under this agreement. The purposed agreement is for a 3-year subscription along with professional services to assist with the implementation. As a new customer, entering into a 3-year agreement will save the first year of subscription at a savings of approximately \$19,000.

■ Funding Amount and Source

This agreement is for a total of \$47,610.25 for a 3-year subscription for the NeoGov Insight online recruiting software along with implementation services. In the recent 2021–2022 Mid Biennium Review, Council approved ASR #2021-3517 to fund enhanced recruitment software.

Please contact Donnie LaPlante (x5306) or Perry Rice at x5235 if you have any questions or concerns regarding the terms of this agreement.

A. Terms and Conditions

1. Agreement. This Ordering Document and the Services purchased herein are expressly conditioned upon the acceptance by Customer of the terms of the NEOGOV Services Agreement either affixed hereto or the version most recently published prior to execution of this Ordering Form available at <https://www.neogov.com/service-specifications>. Unless otherwise stated, all capitalized terms used but not defined in this Order Form shall have the meanings given to them in the NEOGOV Services Agreement.
2. Effectiveness & Modification. Neither Customer nor NEOGOV will be bound by this Ordering Document until it has been signed by its authorized representative (the "Effective Date"). Unless otherwise stated, all SaaS Subscriptions shall commence on the Effective Date. This Order Form may not be modified or amended except through a written instrument signed by the parties.
3. Summary of Fees. Listed above is a summary of Fees under this Order. Once placed, your order shall be non-cancelable and the sums paid nonrefundable, except as provided in the Agreement.
4. Order of Precedence. This Ordering Document shall take precedence in the event of direct conflict with the Services Agreement, applicable Schedules, and Service Specifications.

B. Special Conditions (if any).

1. *** Services procured through Insight Public Sector- NASPO Software Value- Added Reseller Co-Op Agreement. ***
2. Initial Term 36 months
3. After expiration of the Initial Term, Subscription Fees shall not Increase more than 5% from the previous annual Subscription.
4. Termination for Non-appropriations If Customer is subject to federal, state or local law which makes Customer's financial obligations under this Agreement contingent upon sufficient appropriation of funds by the applicable legislature (or other appropriate governmental body), and If such funds are not forthcoming or are insufficient due to failure of such appropriation, then Customer will have the right to terminate the Agreement at no additional cost and with no penalty by giving prior written notice documenting the lack of funding. Customer will provide at least thirty (30) days advance written notice of such termination. Customer will use reasonable efforts to ensure appropriated funds are available

IN WITNESS WHEREOF, the parties have caused this Order to be executed by their respective duly authorized officers as of the date set forth below, and consent to the Agreement.

NEOGOV SERVICES AGREEMENT

V020121

You agree that by placing an order through a NEOGOV standard ordering document (the "Order" or "Ordering Document") you agree to follow and be bound by the terms and conditions set forth herein. "Governmentjobs.com", "NEOGOV", "we", and "our" means Governmentjobs.com, Inc.(dba "NEOGOV") and, where applicable, its affiliates; "Customer", "you", "your" means the Governmentjobs.com client, customer, or subscriber identified in the Ordering Document.

If you are placing such an Order on behalf of a legal entity, you represent that you have the authority to bind such entity to the terms and conditions of the Ordering Document and these terms and, in such event, "you" and "your" as used in these agreement terms shall refer to such entity. "Agreement" shall be used to collectively refer to this NEOGOV Services Agreement (the "Services Agreement"), documents incorporated herein including the applicable Ordering Document and Schedule(s), and Special Conditions (if any).

1. **Provision of Services.** Subject to the terms of this Agreement NEOGOV hereby agrees to provide Customer with access to its SaaS Applications and Professional Services (each defined below) included or ordered by Customer in the applicable Ordering Document (collectively referred to as the "Services"). Customer hereby acknowledges and agrees that NEOGOV's provision and performance of, and Customer's access to, the Services is dependent and conditioned upon Customer's full performance of its duties, obligations and responsibilities hereunder. This Agreement entered into as of the date of your signature on an applicable Ordering Document or use of the Services commences (the "Effective Date"). The Agreement supersedes any prior and contemporaneous discussions, agreements or representations and warranties.
2. **SaaS Subscription.**
 - a) **Subscription Grant.** "SaaS Applications" means each proprietary NEOGOV web-based software-as-a-service application that may be set forth on an Order and subsequently made available by NEOGOV to Customer, and associated components as described in the Service Specifications made available to Customer by NEOGOV. Subject to and conditioned on Customer's and its Authorized Users' compliance with the terms and conditions of this Agreement, NEOGOV hereby grants to Customer a limited, non-exclusive, non-transferable, and non-sublicensable right to (a) access and use, and to permit Authorized Users to access and use, the SaaS Applications specified in the Order solely for Customer's internal, non-commercial purposes; (b) generate, print, and download Customer Data as may result from any access to or use of the SaaS Applications; and (c) train Authorized Users in uses of the SaaS Applications permitted hereunder (these rights shall collectively be referred to as the "SaaS Subscription"). "Authorized Users" means (i) Customer employees, agents, contractors, consultants who are authorized by Customer to access and use the Services under the rights granted to Customer pursuant to this Services Agreement and (ii) for whom access to the Services has been purchased hereunder. You may not access the SaaS Applications if you are a direct competitor of NEOGOV or its affiliates. In addition, you may not access the SaaS Applications for purposes of monitoring their availability, performance, or functionality, or for any other benchmarking or competitive purposes.
 - b) **Delivery and Subscription Term.** NEOGOV delivers each SaaS Application by providing Customer with online access. When you access NEOGOV SaaS Applications, you are accepting it for use in accordance with this Agreement. Unless otherwise specified in an applicable Ordering Document, SaaS Subscriptions shall commence on the Effective Date and remain in effect for twelve (12) consecutive months, unless terminated earlier in accordance with this Agreement (the "Initial Term"). Thereafter, SaaS Subscriptions shall automatically renew for successive twelve (12) month terms (each a "Renewal Term" and together with the Initial Term, collectively, the "Term") unless a party delivers to the other party, at least thirty (30) days prior to the expiration of the Initial Term or the applicable Renewal Term, written notice of such party's intention to not renew this Agreement, or unless terminated earlier in accordance with this Agreement. NEOGOV shall provide Customer access to the SaaS Applications within a reasonable time following the Effective Date unless otherwise agreed.
 - c) **Content and Program Documentation.** Should Customer purchase access to SaaS Applications containing audio-visual content ("Licensed Content"), NEOGOV grants to Customer a non-exclusive, non-transferable, and non-sublicensable license, during the applicable Term, for Authorized Users to access and view the Licensed Content within the SaaS Application. Customer shall not permit the Licensed Content to be, or appear to be, reproduced, performed, displayed, or distributed on, as part of or in connection with any website or other online area other than the SaaS Application. Customer shall not edit, alter, modify, combine with other

content, or create any derivative works of the Licensed Content. "Program Documentation" shall mean all user guides, training, and implementation material, and Service descriptions provided by NEOGOV to Customer in connection with the Services. NEOGOV hereby grants to Customer a non-exclusive, non-sublicensable, non-transferable license to use, print, and distribute internally via non-public platforms, the Program Documentation during the Term solely for Customer's internal business purposes in connection with its use of the Services.

3. Professional Services. "Professional Services" shall mean consulting, training services purchased by Customer in an applicable Ordering Document or NEOGOV Scope of Work (SOW) relating to assistance, training, deployment, usage, customizations, accessory data processing, and best practices of and concerning the SaaS Applications. NEOGOV shall provide the Professional Services purchased in the applicable Order Form or SOW, as the case may be. Professional Services may be ordered by Customer pursuant to a SOW and Service Specifications describing the work to be performed, fees, and any applicable milestones, dependencies, and other technical specifications or related information. Order Forms or SOWs must be signed by both parties before NEOGOV shall commence work. If the parties do not execute a separate Statement of Work, the Services shall be provided as stated on the Order Form and this Agreement and documents incorporated herein shall control.
4. Payment Terms. Unless otherwise stated in an Ordering Document, Customer shall pay all Subscription fees ("Subscription Fees") and Professional Service fees ("Professional Service Fees", collectively the "Fees") within thirty (30) days of Customer's receipt of NEOGOV's invoice. Fees shall be invoiced annually in advance and in a single invoice for each Term. Invoices shall be delivered to the stated "Bill To" party on the Ordering Document. Unless explicitly provided otherwise, once placed the Ordering Document is non-cancellable and sums paid nonrefundable. Subscription Fees are based upon the Customer's employee count. Customer shall not exceed the employee amount its Subscription Fees are based off of unless applicable supplemental Subscription Fees are paid. The Term for the Services is a continuous and non-divisible commitment for the full duration regardless of any invoice schedule. The purchase of any Service is separate from any other order for any other Service. Customer may purchase certain Services independently of other Services. Your obligation to pay for any Service is not contingent on performance of any other Service or delivery of any other Service. If Customer issues a purchase order, then it shall be for the full amount set forth in the applicable NEOGOV invoice or Ordering Document. Failure to provide NEOGOV with a corresponding purchase order shall not relieve Customer of its payment obligations. Except as otherwise specifically stated in the Ordering Document, NEOGOV may change the charges for the Services with effect from the start of each Renewal Term by giving Customer at least thirty (30) day notice prior to commencement of a Renewal Term. Customer will pay all taxes, duties and levies imposed by all federal, state, and local authorities (including, without limitation, export, sales, use, excise, and value-added taxes) based on the transactions or payments under this Agreement, except those taxes imposed or based on NEOGOV's net income or those exempt by applicable state law. Customer shall provide NEOGOV with a certificate or other evidence of such exemption with ten (10) days of NEOGOV's request therefor.
5. Term and Termination.
 - a) Term. Unless otherwise specified in an applicable Ordering Document, this Agreement shall commence on the Effective Date. This Agreement shall remain in effect until all SaaS Subscriptions have expired and/or both parties have achieved full performance of Professional Services or other services detailed in a SOW, unless it is terminated earlier in accordance with this Agreement.
 - b) Termination for Cause; Effect of Termination. Either Party may terminate this Agreement immediately if the other is in material breach of this Agreement and such breach is not cured within thirty (30) days following non-breaching party's written specification of the breach. NEOGOV may suspend the Services or terminate this Agreement immediately in the event the Services or Customer's use of the Services provided hereunder become illegal or contrary to any applicable law, rule, regulation, or public policy. Upon expiration or any termination of this Agreement, Customer shall cease all use and refrain from all further use of the Services and other NEOGOV intellectual property. Additionally, Customer shall be obligated to pay, as of the effective date of such expiration or termination, all amounts due and unpaid to NEOGOV under this Agreement. Unless otherwise specified, after expiration or termination of this Agreement NEOGOV may remove Customer Data from NEOGOV Services and without Customer consent or notice.
6. Service Specifications. "Service Specifications" means Program Documentation, Service Schedules, Security Statements, and Service Level Warranties if applicable. The Service Specifications describe and govern the Services and are incorporated herein by reference. Online Service Specifications may be made available at <https://www.neogov.com/service-specifications> or provided upon Customer request. Excluding Service Schedules, NEOGOV may update the Service Specifications to reflect changes in, among other things, laws, regulations,

rules, technology, industry practices, patterns of system use, Updates and Upgrades, and availability of third-party services.

7. Maintenance; Modifications; Support Services.

- a) Maintenance, Updates, Upgrades. NEOGOV maintains NEOGOV's hardware and software infrastructure for the Services and is responsible for maintaining the NEOGOV server operation and NEOGOV database security. NEOGOV may in its sole discretion, periodically modify, Update, and Upgrade the features, components, and functionality of the Services during the Term. "Update" means any update, bug fix, patch or correction of the Services or underlying NEOGOV software that NEOGOV makes generally available to its customers of the same module, excluding Upgrades. Updates are automatic and available upon Customer's next login to the Services following an Update at no additional cost to Customer. "Upgrade" means any update of the Services or underlying NEOGOV software such as platform updates, and major product enhancements and/or new features that NEOGOV makes commercially available. NEOGOV shall have no obligation to provide Upgrades to customers and retains the right to offer Upgrades free of cost or on a per customer basis at additional cost. NEOGOV shall have no liability for, or any obligations to, investments in, or modifications to Customer's hardware, systems or other software which may be necessary to use or access the Services due to a modification, Update, or Upgrade of the Services.
- b) Training Materials; Support. Primary training of NEOGOV Services is conducted by self-review of online materials. NEOGOV's pre-built, online training consists of a series of tutorials to introduce the standard features and functions (the "Training Materials"). The Training Materials may be used as reference material by Customer Personnel conducting day-to-day activities.
- c) Implementation. For Services requiring implementation, NEOGOV implementation supplements the Training Materials and is conducted off-site unless otherwise agreed in the Ordering Document. NEOGOV personnel will provide consultation on best practices for setting up the Services, answer Customer questions during the implementation period, and ensure Authorized User Admins grasp the system.
- d) Support. Phone support for the Services is available to Customer Monday through Friday, excluding NEOGOV holidays. Online support for the Services is available 24 hours a day, seven days a week. The length of time for a resolution of any problem is dependent on the type of case.
- e) Limitations. Unless otherwise specified in the Ordering Document, this Agreement does not obligate NEOGOV to render any maintenance or support services that are not expressly provided herein, including, but not limited to data uploads, manual data entry, migration services, data conversion, refinement, purification, reformatting, SQL dump, or process consultation.

8. NEOGOV Intellectual Property. NEOGOV shall exclusively own all right, title and interest in and to all pre-existing and future intellectual property developed or delivered by NEOGOV including all Services, products, systems, software (including any source code or object code) or Service Specifications related thereto, Updates or Upgrades, trademarks, service marks, logos and other distinctive brand features of NEOGOV and all proprietary rights embodied therein (collectively, the "NEOGOV Intellectual Property"). This Agreement does not convey or transfer title or ownership of the NEOGOV Intellectual Property to Customer or any of its users. All rights not expressly granted herein are reserved by NEOGOV. Other than recommendation use or as required by law, all use of NEOGOV Trademarks must be pre-approved by NEOGOV prior to use. Trademarks shall include any word, name, symbol, color, designation or device, or any combination thereof that functions as a source identifier, including any trademark, trade dress, service mark, trade name, logo, design mark, or domain name, whether or not registered.

9. Data Processing and Privacy.

- a) Customer & Platform Data. "Customer Data" shall mean all data that is owned or developed by Customer, whether provided to NEOGOV by Customer or provided by a third party to NEOGOV in connection with NEOGOV's provision of Services to Customer, including Personnel or Job Seeker Profile Data collected, loaded into, or located in Customer data files maintained by NEOGOV. NEOGOV intellectual property, including but not limited to the Services and all derivative works thereof, NEOGOV Confidential Information, and Platform Data do not fall within the meaning of the term "Customer Data". Customer exclusively own all right, title, and interest in and to all Customer Data. Customer grants NEOGOV a license to host, use, process, display, create non-personal derivative works of, and transmit Customer Data to provide the Services. "Platform Data" shall mean any data reflecting the access or use of the Services by or on behalf of Customer or any user, including statistical or other analysis and performance information related to the provision and

NEOGOV

operation of the Services including any end user visit, session, impression, clickthrough or click stream data, as well as log, device, transaction data, or other analysis, information, or data based on or derived from any of the foregoing. NEOGOV shall exclusively own all right, title and interest in and to all Platform Data. NEOGOV grants to Customer a limited, non-perpetual, non-exclusive, non-transferable, and non-sublicensable license during the Term to use and access, and to permit Authorized Users to use and access, Platform Data of which NEOGOV makes available through the SaaS Applications solely for Customer's internal purposes. Customer acknowledges NEOGOV may compile Platform based on Customer Data input into the Services. Customer agrees that NEOGOV may (i) make Platform Data publicly available in compliance with applicable law, and (ii) use Platform Data to the extent and in the manner permitted under applicable law.

- b) Privacy Policy; Data Processing Agreement. NEOGOV shall process all data in accord with the NEOGOV Privacy Policy available at <https://www.neogov.com/privacy-policy>. The defined terms in the Privacy Policy shall have the same meaning in this Agreement unless otherwise specified herein. To the extent Customer uses the Services to target and collect personal information from users located in the European Union, European Economic Area, or Switzerland (the "EU"), or has Authorized Users accessing the Services from the EU, the NEOGOV Data Processing Addendum ("DPA") available at <https://www.neogov.com/service-specifications> is incorporated herein by reference.
 - c) Data Responsibilities. Customer is solely responsible for the development, content, operation, maintenance, and use of Customer Data. NEOGOV will have no responsibility or liability for the accuracy of the Customer Data prior to receipt of such data into the Services. Customer shall be solely responsible for and shall comply with all applicable laws and regulations relating to (i) the accuracy and completeness of all information input, submitted, or uploaded to the Services, (ii) the privacy of users of the Services, including, without limitation, providing appropriate notices to and obtaining appropriate consents from any individuals to whom Customer Data relates; and (iii) the collection, use, modification, alteration, extraction, retention, copying, external storage, disclosure, transfer, disposal, and other processing of any Customer Data. NEOGOV is not responsible for lost data caused by the action or inaction of Customer or Authorized Users. Unless vital to provide the Services or otherwise mutually agreed in writing, Customer shall not maintain any financial, health, payment card, or similarly sensitive data that imposes specific data security or data protection obligations within the Services.
 - d) Breach Notice. In the event of a data or security breach, as defined by applicable law, by anyone other than your employee, contractor, or agent, upon discovery of such breach, NEOGOV will initiate remedial actions and notify Customer of the breach as required by and in compliance with applicable law. NEOGOV's notification of, or response to, a data breach under this Section will not be construed as an acknowledgement by NEOGOV of any fault or liability with respect to the breach. In the event of a security breach, as defined by applicable law, by your Personnel, Authorized, or unauthorized user, contractor or agent, you shall have sole responsibility for initiating remedial actions and you shall notify NEOGOV of the breach and steps you will take to remedy the breach as soon as possible. Customer is solely responsible for complying with data breach notification laws applicable to the Customer and fulfilling any third-party notification obligations related to any data breach(es).
10. Subcontractors; Third Party Products. NEOGOV may from time to time in its discretion engage third parties to perform Services (each, a "Subcontractor"). "Third-Party Products" means any products, content, services, information, websites, or other materials that are owned by third parties and are incorporated into or accessible through the Services. The Services may permit access to Third-Party Products. For purposes of this Services Agreement, such Third-Party Products are subject to their own terms and conditions presented to you for acceptance by website link or otherwise. If you do not agree to abide by the applicable terms for any such Third-Party Products, then you should not install, access, or use such Third-Party Products. NEOGOV cannot guarantee the continued availability of such Third-Party Products and may cease providing them without entitling Customer to any refund, credit, or other compensation, if for example and without limitation, the provider of a Third-Party Product ceases to make the third-party application available for interoperation with the corresponding NEOGOV Service in a manner acceptable to NEOGOV.
11. Nondisclosure. Through exercise of each party's rights under this Agreement, each party may be exposed to the other party's technical, financial, business, marketing, planning, and other information and data in written, oral, electronic, magnetic, photographic, and/or other forms, including, but not limited to (a) oral and written communications of one party with the officers and staff of the other party which are marked or identified as confidential or secret or similarly marked or identified, (b) other communications which a reasonable person would recognize from the surrounding facts and circumstances to be confidential or secret, and (c) trade secrets (collectively, "Confidential Information"). In recognition of the other party's need to protect its legitimate business interests, each party hereby covenants and agrees that it shall regard and treat each item of information or data

NEOGOV

constituting Confidential Information of the other party as strictly confidential and wholly owned by such other party and that it will not, (x) without the express prior written consent of the other party, (y) except as permitted or authorized herein or, (z) except as required by law including the Public Records Act of the Customer's State, redistribute, market, publish, disclose, or divulge to any other person, firm or entity, or use or modify for use, directly or indirectly in any way for any person or entity: (i) any of the other party's Confidential Information during the Term and for a period of three (3) years thereafter or, if later, from the last date Services (including any warranty work) are performed by the disclosing party hereunder; and (ii) any of the other party's trade secrets at any time during which such information shall constitute a trade secret under applicable law. In association with NEOGOV's concern for the protection of trade secrets, Confidential Information, and fair market competition, Customer acknowledges all photos, "screen captures", videos, or related media of NEOGOV products, pages, and related documentation shall be approved by NEOGOV prior to any publicly accessible disclosure of such media.

12. Representations, Warranties, and Disclaimers.

- a) **Service Performance Warranty.** NEOGOV warrants that it provides the Services using a commercially reasonable level of care and skill. THE FOREGOING WARRANTY DOES NOT APPLY, AND NEOGOV STRICTLY DISCLAIMS ALL WARRANTIES, WITH RESPECT TO ANY THIRD-PARTY PRODUCTS.
- b) **No Other Warranty.** EXCEPT FOR THE EXPRESS WARRANTIES SET FORTH IN THIS WARRANTY SECTION, THE SERVICES ARE PROVIDED ON AN "AS IS" BASIS, AND CUSTOMER'S USE OF THE SERVICES IS AT ITS OWN RISK. NEOGOV DOES NOT MAKE, AND HEREBY DISCLAIMS, ANY AND ALL OTHER EXPRESS AND/OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, NONINFRINGEMENT AND TITLE, AND ANY WARRANTIES ARISING FROM A COURSE OF DEALING, USAGE, OR TRADE PRACTICE. NEOGOV DOES NOT WARRANT THAT THE SERVICES WILL BE UNINTERRUPTED, ERROR-FREE, OR COMPLETELY SECURE, OR THAT ANY ERROR WILL BE CORRECTED.
- c) **Disclaimer of Actions Caused by and/or Under the Control of Third Parties.** NEOGOV DOES NOT AND CANNOT CONTROL THE FLOW OF DATA TO OR FROM THE NEOGOV SYSTEM AND OTHER PORTIONS OF THE INTERNET. SUCH FLOW DEPENDS IN LARGE PART ON THE PERFORMANCE OF INTERNET SERVICES PROVIDED OR CONTROLLED BY THIRD PARTIES. AT TIMES, ACTIONS OR INACTIONS OF SUCH THIRD PARTIES CAN IMPAIR OR DISRUPT CUSTOMER'S CONNECTIONS TO THE INTERNET (OR PORTIONS THEREOF). ALTHOUGH NEOGOV WILL USE COMMERCIAL REASONABLE EFFORTS TO TAKE ALL ACTIONS IT DEEMS APPROPRIATE TO REMEDY AND AVOID SUCH EVENTS, NEOGOV CANNOT GUARANTEE THAT SUCH EVENTS WILL NOT OCCUR. ACCORDINGLY, NEOGOV DISCLAIMS ANY AND ALL LIABILITY RESULTING FROM OR RELATED TO SUCH EVENTS.
- d) **Services Do Not Constitute Advice or Credit Reporting.** NEOGOV does not provide its customers with legal advice regarding compliance, data privacy, or other relevant applicable laws in the jurisdictions in which you use the Services. YOU ACKNOWLEDGE AND AGREE THAT THE SERVICES PROVIDED HEREUNDER ARE NOT INTENDED TO BE AND WILL NOT BE RELIED UPON BY YOU AS EITHER LEGAL, FINANCIAL, INSURANCE, OR TAX ADVICE. TO THE EXTENT YOU REQUIRE ANY SUCH ADVICE, YOU REPRESENT THAT YOU WILL SEEK SUCH ADVICE FROM QUALIFIED LEGAL, FINANCIAL, INSURANCE, ACCOUNTING, OR OTHER PROFESSIONALS. YOU SHOULD REVIEW APPLICABLE LAW IN ALL JURISDICTIONS WHERE YOU OPERATE AND HAVE EMPLOYEES AND CONSULT EXPERIENCED COUNSEL FOR LEGAL ADVICE. YOU ACKNOWLEDGE THAT NEOGOV IS NOT A "CONSUMER REPORTING AGENCY" AS THAT TERM IS DEFINED IN THE FAIR CREDIT REPORTING ACT AS AMENDED.
- e) **Configurable Services.** The Services can be used in ways that do not comply with applicable laws and it is Customer's sole responsibility to monitor the use of the Services to ensure that such use complies with and is in accordance with applicable law. In no event shall NEOGOV be responsible or liable for Customer failure to comply with applicable law in connection with your use of the Services. NEOGOV is not responsible for any harm caused by users who were not authorized to have access to the Services but who were able to gain access because usernames, passwords, or accounts were not terminated on a timely basis by Customer. Customer acknowledges that NEOGOV exercises no control over specific human resource practices implemented using the Service or Customer's decisions as to employment, promotion, termination, or compensation of any personnel or Authorized User of the Services. Customer further agrees and acknowledge that NEOGOV does not have a direct relationship with Customer employees and that Customer is responsible for all contact, questions, Customer Data updates and collection, with Customer employees.

NEOGOV

13. **Customer Compliance.** Customer shall be responsible for ensuring that Customer's use of the Services and the performance of Customer's other obligations hereunder comply with all applicable rules, regulations, laws, codes, and ordinances. Customer is responsible for Customer's information technology infrastructure, including computers, software, databases, electronic systems (including database management systems), and networks, whether operated directly by Customer or through the use of third-party services equipment and facilities required to access the Services. All users of the Services are obligated to abide by the Terms of Use available at <https://www.neogov.com/terms-of-use>. Customer shall be responsible for procuring all licenses of third-party software necessary for Customer's use of the Services. Customer is responsible and liable for all uses of the Services, directly or indirectly, whether such access or use is permitted by or in violation of this Agreement.
14. **Indemnification.**
- a) **Indemnity.** Subject to subsections (b) through (d) of this Section, if a third party makes a claim against Customer that any NEOGOV intellectual property furnished by NEOGOV and used by Customer infringes a third party's intellectual property rights, NEOGOV will defend the Customer against the claim and indemnify the Customer from the damages and liabilities awarded by the court to the third-party claiming infringement or the settlement agreed to by NEOGOV, if Customer does the following:
 - i) Notifies NEOGOV promptly in writing, not later than thirty (30) days after Customer receives notice of the claim (or sooner if required by applicable law);
 - ii) Gives NEOGOV sole control of the defense and any settlement negotiations; and
 - iii) Gives NEOGOV the information, authority, and assistance NEOGOV needs to defend against or settle the claim.
 - b) **Alternative Resolution.** If NEOGOV believes or it is determined that any of the Services may have violated a third party's intellectual property rights, NEOGOV may choose to either modify the Services to be non-infringing or obtain a license to allow for continued use. If these alternatives are not commercially reasonable, NEOGOV may end the subscription or license for the Services and refund a pro-rata portion of any fees covering the whole months that would have remained, absent such early termination, following the effective date of such early termination.
 - c) **No Duty to Indemnify.** NEOGOV will not indemnify Customer if Customer alters the Service or Service Specifications, or uses it outside the scope of use or if Customer uses a version of the Service or Service Specifications which has been superseded, if the infringement claim could have been avoided by using an unaltered current version of the Services or Service Specifications which was provided to Customer, or if the Customer continues to use the infringing material after the subscription expires. NEOGOV will not indemnify the Customer to the extent that an infringement claim is based upon any information, design, specification, instruction, software, data, or material not furnished by NEOGOV. NEOGOV will not indemnify Customer for any portion of an infringement claim that is based upon the combination of Service or Service Specifications with any products or services not provided by NEOGOV. NEOGOV will not indemnify Customer for infringement caused by Customer's actions against any third party if the Services as delivered to Customer and used in accordance with the terms of the Agreement would not otherwise infringe any third-party intellectual property rights.
 - d) **Exclusive Remedy.** This Section provides the exclusive remedy for any intellectual property infringement claims or damages against NEOGOV.
15. **Limitations of Liability.**
- a) **EXCLUSION OF DAMAGES.** TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, IN NO EVENT WILL EITHER PARTY BE LIABLE UNDER OR IN CONNECTION WITH THIS AGREEMENT OR ITS SUBJECT MATTER UNDER ANY LEGAL OR EQUITABLE THEORY, INCLUDING BREACH OF CONTRACT, TORT (INCLUDING NEGLIGENCE), STRICT LIABILITY, AND OTHERWISE, FOR ANY: (a) LOSS OF PRODUCTION, USE, BUSINESS, REVENUE, OR PROFIT OR DIMINUTION IN VALUE; (b) IMPAIRMENT, INABILITY TO USE OR LOSS, INTERRUPTION OR DELAY OF THE SERVICES; (c) LOSS, DAMAGE, CORRUPTION OR RECOVERY OF DATA, OR BREACH OF DATA OR SYSTEM SECURITY; (d) COST OF REPLACEMENT GOODS OR SERVICES; (e) LOSS OF GOODWILL, LOSS OF BUSINESS OPPORTUNITY OR PROFIT, OR LOSS OF REPUTATION; OR (f) CONSEQUENTIAL, INCIDENTAL, INDIRECT, EXEMPLARY, SPECIAL, ENHANCED, OR PUNITIVE DAMAGES, REGARDLESS OF WHETHER SUCH PERSONS WERE ADVISED OF THE POSSIBILITY OF SUCH LOSSES OR DAMAGES OR SUCH LOSSES OR DAMAGES WERE OTHERWISE FORESEEABLE, AND NOTWITHSTANDING THE FAILURE OF ANY AGREED OR OTHER REMEDY OF ITS ESSENTIAL PURPOSE.

- b) CAP ON MONETARY LIABILITY. WITHOUT LIMITATION OF THE PREVIOUS SECTION, EXCEPT FOR DAMAGES ARISING OUT OF LIABILITY WHICH CANNOT BE LAWFULLY EXCLUDED OR LIMITED, CUSTOMER'S OBLIGATIONS TO MAKE PAYMENT UNDER THIS AGREEMENT, OR LIABILITY FOR INFRINGEMENT OR MISAPPROPRIATION OF NEOGOV INTELLECTUAL PROPERTY RIGHTS, THE TOTAL LIABILITY OF EITHER PARTY FOR ANY AND ALL CLAIMS AGAINST THE OTHER PARTY UNDER THIS AGREEMENT, WHETHER ARISING UNDER OR RELATED TO BREACH OF CONTRACT, TORT (INCLUDING NEGLIGENCE), STRICT LIABILITY, OR ANY OTHER LEGAL OR EQUITABLE THEORY, SHALL NOT EXCEED THE AMOUNT OF ALL PAYMENTS ACTUALLY RECEIVED BY NEOGOV FROM CUSTOMER DURING THE RELEVANT YEAR OF THIS AGREEMENT DURING WHICH THE CAUSE OF ACTION AROSE. THE FOREGOING LIMITATION OF LIABILITY IS CUMULATIVE WITH ALL PAYMENTS FOR CLAIMS OR DAMAGES IN CONNECTION WITH THIS AGREEMENT BEING AGGREGATED TO DETERMINE SATISFACTION OF THE LIMIT. THE EXISTENCE OF ONE OR MORE CLAIMS WILL NOT ENLARGE THE LIMIT. THE PARTIES ACKNOWLEDGE AND AGREE THAT THIS LIMITATION OF LIABILITY IS AN ESSENTIAL ELEMENT OF THE BASIS OF THE BARGAIN BETWEEN THE PARTIES AND SHALL APPLY NOTWITHSTANDING THE FAILURE OF THE ESSENTIAL PURPOSE OF ANY LIMITED REMEDY. EACH PARTY ACKNOWLEDGES THAT THIS LIMITATION OF LIABILITY REFLECTS AN INFORMED, VOLUNTARY ALLOCATION BETWEEN THE PARTIES OF THE RISKS (KNOWN AND UNKNOWN) THAT MAY EXIST IN CONNECTION WITH THIS AGREEMENT AND HAS BEEN TAKEN INTO ACCOUNT AND REFLECTED IN DETERMINING THE CONSIDERATION TO BE GIVEN BY EACH PARTY UNDER THIS AGREEMENT AND IN THE DECISION BY EACH PARTY TO ENTER INTO THIS AGREEMENT.

16. E-Signatures.

- a) E-Signature Provisioning & Consent. NEOGOV E-Forms and other electronically signed services ("E-Signatures") are provided by NEOGOV for two counterparties (generally a government employer (the "sending party") subscribing to NEOGOV Services and Personnel or Job Seekers) to electronically sign documents. If you use E-Signatures offered by NEOGOV, you agree to the statements set forth in this Section. Whenever you sign a document using E-Signatures you affirmatively consent to using electronic signatures via the E-Signatures and consent to conducting electronic business transactions. You also confirm that you are able to access the E-Signatures and the document you are signing electronically. When using E-Signatures for a document, your consent applies only to the matter(s) covered by that particular document.
- b) Right to Opt-Out of E-Signatures. You are not required to use E-Signatures or accept electronic documents provided thereby. Personnel and Job Seekers can choose to not use E-Signatures and may sign the document manually instead by notifying the sending party they are choosing to do so and by obtaining a non-electronic copy of the document. NEOGOV assumes no responsibility for providing non-electronic documents. In the event a non-sending party elects to sign the document manually, do not use E-Signatures to sign the document.
- c) Electronic Download. If you have signed a document electronically using E-Signatures and transmitted it back to the sending party, NEOGOV provides the opportunity to download and print a paper copy of the document at no charge. If you later withdrawn your consent to using E-Signatures, please notify the sending party and stop using E-Signatures. Note that the decision to stop using E-Signatures after you have already used it does not change the legality of the documents you have previously signed using an electronic signature.
- d) E-Signature Validity. PLEASE NOTE THAT NEOGOV'S STATEMENTS CONTAINED HEREIN OR ELSEWHERE CONCERNING THE VALIDITY OF ELECTRONIC DOCUMENTS AND/OR THE SIGNATURE LINES OF DOCUMENTS THAT ARE ELECTRONICALLY SIGNED ARE FOR INFORMATIONAL PURPOSES ONLY; THEY SHOULD NOT BE CONSTRUED AS LEGAL ADVICE. UNDER FEDERAL AND STATE LAWS GOVERNING ELECTRONIC SIGNATURES, ELECTRONIC SIGNATURES ON CERTAIN TYPES OF AGREEMENTS ARE NOT ENFORCEABLE. NEOGOV HEREBY DISCLAIMS ANY RESPONSIBILITY FOR ENSURING THAT DOCUMENTS ELECTRONICALLY SIGNED THROUGH E-SIGNATURE'S ARE VALID OR ENFORCEABLE UNDER THE LAWS OF THE UNITED STATES OF AMERICA, ANY PARTICULAR STATE, OR ANY OTHER LEGAL JURISDICTION. YOU SHOULD CONSULT WITH LEGAL COUNSEL CONCERNING THE VALIDITY OR ENFORCEABILITY OF ANY DOCUMENT YOU MAY SIGN ELECTRONICALLY USING NEOGOV'S E-SIGNATURE'S.

- 17. Text Message Communications. NEOGOV may offer Job Seekers and Personnel the opportunity to receive text messages regarding job application or hiring process reminders, applicant status updates, or other human resource related notices. Since these text message services depend on the functionality of third-party providers, there may

NEOGOV

be technical delays on the part of those providers. NEOGOV may make commercially reasonable efforts to provide alerts in a timely manner with accurate information, but cannot guarantee the delivery, timeliness, or accuracy of the content of any alert. NEOGOV shall not be liable for any delays, failure to deliver, or misdirected delivery of any alert; for any errors in the content of an alert; or for any actions taken or not taken by you or any third party in reliance on an alert. NEOGOV cannot vouch for the technical capabilities of any third parties to receive such text messages. NEOGOV MAKES NO WARRANTIES OR REPRESENTATIONS OF ANY KIND, EXPRESS, STATUTORY, OR IMPLIED AS TO: (i) THE AVAILABILITY OF TELECOMMUNICATION SERVICES; (ii) ANY LOSS, DAMAGE, OR OTHER SECURITY INTRUSION OF THE TELECOMMUNICATION SERVICES; AND (iii) ANY DISCLOSURE OF INFORMATION TO THIRD PARTIES OR FAILURE TO TRANSMIT ANY DATA, COMMUNICATIONS, OR SETTINGS CONNECTED WITH THE SERVICES.

18. Cooperative Agreement. As permitted by law, it is understood and agreed by Customer and NEOGOV that any (i) federal, state, local, tribal, or other municipal government (including all administrative agencies, departments, and offices thereof); (ii) any business enterprise in which a federal, state, local, tribal or other municipal entity has a full, majority, or other controlling interest; and/or (iii) any public school (including without limitation K-12 schools, colleges, universities, and vocational schools) (collectively referred to as the "New Entity") may purchase the Services specified herein in accordance with the terms and conditions of this Agreement. It is also understood and agreed that each New Entity will establish its own contract with NEOGOV, be invoiced therefrom and make its own payments to NEOGOV in accordance with the terms of the contract established between the New Entity and NEOGOV. With respect to any purchases by a New Entity pursuant to this Section, Customer: (i) shall not be construed as a dealer, re-marketer, representative, partner or agent of any type of NEOGOV, or such New Entity; (ii) shall not be obligated, liable or responsible for any order made by New Entities or any employee thereof under the agreement or for any payment required to be made with respect to such order; and (iii) shall not be obliged, liable or responsible for any failure by any New Entity to comply with procedures or requirements of applicable law or to obtain the due authorization and approval necessary to purchase under the agreement. Termination of this Agreement shall in no way limit NEOGOV from soliciting, entering into, or continuing a contractual relationship with any New Entity.
19. Publicity. Each party hereto may advertise, disclose, and publish its relationship with the other party under this Agreement.
20. Force Majeure. NEOGOV shall not be liable for any damages, costs, expenses or other consequences incurred by Customer or by any other person or entity as a result of delay in or inability to deliver any Services due to circumstances or events beyond NEOGOV's reasonable control, including, without limitation: (a) acts of God; (b) changes in or in the interpretation of any law, rule, regulation or ordinance; (c) strikes, lockouts or other labor problems; (d) transportation delays; (e) unavailability of supplies or materials; (f) fire or explosion; (g) riot, military action or usurped power; or (h) actions or failures to act on the part of a governmental authority.
21. Independent Contractor; Third Party Agreements. The relationship of the parties shall be deemed to be that of an independent contractor and nothing contained herein shall be deemed to constitute a partnership between or a joint venture by the parties hereto or constitute either party the employee or agent of the other. Customer acknowledges that nothing in this Agreement gives Customer the right to bind or commit NEOGOV to any agreements with any third parties. This Agreement is not for the benefit of any third party and shall not be deemed to give any right or remedy to any such party whether referred to herein or not.
22. Entire Agreement; Amendment. This Services Agreement and documents incorporated herein, the applicable Ordering Document, and Special Conditions (if any) constitute the entire agreement between the parties with respect to the subject matter hereof and supersede all prior or contemporaneous oral and written statements of any kind whatsoever made by the parties with respect to such subject matter. "Special Conditions" means individually negotiated variations, amendments and/or additions to this Service Agreement of which are either drafted, or incorporated by reference, into the Ordering Document. Any Customer proposal for additional or different terms, or Customer attempt to vary in any degree any of the terms of this Agreement is hereby objected to and rejected but such proposal shall not operate as a rejection of this Service Agreement and Ordering Document unless such variances are in the terms of the description, quantity, or price but shall be deemed a material alteration thereof, and this Service Agreement and the applicable Ordering Document shall be deemed accepted by the Customer without said additional or different terms. It is expressly agreed that the terms of this Agreement and any NEOGOV Ordering Document shall supersede the terms in any non-NEOGOV purchase order or other ordering document. Notwithstanding the foregoing, any conflict of terms shall be resolved by giving priority in accordance with the following order: 1) Special Conditions (if any), 2) NEOGOV Ordering Document, 3) the NEOGOV Services Agreement and incorporated documents, 4) Customer terms and conditions (if any). This Agreement supersedes the terms and conditions of any clickthrough agreement associated with the Services. This

NEOGOV

Agreement may not be modified or amended (and no rights hereunder may be waived) except through a written instrument signed by the party to be bound.

23. General. This Agreement shall be governed by and construed in accordance with the laws of Customer's State, without giving effect to conflict of law rules. If any provision of this Agreement is held to be illegal or unenforceable, such provision shall be limited or eliminated to the minimum extent necessary so that the remainder of this Agreement will continue in full force and effect. Provisions that survive termination or expiration are those relating to limitation of liability, payment, and others which by their nature are intended to survive. All notices or other communications required or permitted hereunder shall be in writing and shall be deemed to have been duly given either when personally delivered, one (1) business day following delivery by recognized overnight courier or electronic mail, or three (3) business days following deposit in the U.S. mail, registered or certified, postage prepaid, return receipt requested. All such communications shall be sent to (i) Customer at the address set forth in the Ordering Document and (ii) NEOGOV at 300 Continental Blvd., Suite 565, El Segundo, CA 90245. The waiver, express or implied, by either party of any breach of this Agreement by the other party will not waive any subsequent breach by such party of the same or a different kind. This Agreement may be executed in two or more counterparts, each of which will be deemed an original, but all of which taken together shall constitute one and the same instrument. Delivery of a copy of this Agreement bearing an original signature by facsimile transmission, by electronic mail or by any other electronic means will have the same effect as physical delivery of the paper document bearing the original signature. Each party represents and warrants to the other party that (i) it has full power and authority under all relevant laws and regulations and is duly authorized to enter into this Agreement; and (ii) to its knowledge, the execution, delivery and performance of this Agreement by such party does not conflict with any agreement, instrument or understanding, oral or written, to which it is a party or by which it may be bound, nor violate any law or regulation of any court, governmental body or administrative or other agency having jurisdiction over it. Customer may not assign this Agreement without the express written approval of NEOGOV and any attempt at assignment in violation of this Section shall be null and void. The parties intend this Agreement to be construed without regard to any presumption or rule requiring construction or interpretation against the party drafting an instrument or causing any instrument to be drafted. The exhibits, schedules, attachments, and appendices referred to herein are an integral part of this Agreement to the same extent as if they were set forth verbatim herein.

TITLE FOR AGENDA ITEM:

Resolution in the matter of considering vacating an unnamed alley within the Plat of Lummi Park on Lummi Island

SUMMARY STATEMENT OR LEGAL NOTICE LANGUAGE:

The attached resolution in the matter of considering vacating an unnamed alley within the Plat of Lummi Park on Lummi Island is submitted per RCW 36.87 and WCC 12-20. Adoption of this resolution will trigger the County Engineer to report on the proposed vacation at a future Council meeting. Once the County Engineer's report is submitted, the road vacation will be considered by Council under a separate resolution and a public hearing will need to be scheduled.

Re: In the Matter of Considering Vacating an unnamed alley within the Plat of Lummi Park on Lummi Island

The attached petition asks for the vacation of a portion of an unnamed alley within the Plat of Lummi Park on Lummi Island.

Recommended Action

The attached petition for vacation meets all statutory requirements. It is recommended that the County Council direct the County Engineer to investigate and report his findings to the County Council.

Please contact me at extension 6216 if you have any questions regarding this action.

INTRODUCTION DATE: _____

RESOLUTION NO. _____

IN THE MATTER OF CONSIDERING VACATING AN UNNAMED ALLEY WITHIN THE PLAT
OF LUMMI PARK ON LUMMI ISLAND

WHEREAS, on August 8, 2021; Patrick Timothy McEvoy and Marcia L. McEvoy, et. al. submitted a petition for the vacation of an unnamed alley within the plat of Lummi Park on Lummi Island (sometimes referred to as Baker Drive) lying within the unincorporated area of Whatcom County, accompanied by the penal sum of \$790.00, and,

WHEREAS, as described in RCW 36.87.010, when a county road or any part thereof is considered useless the Whatcom County Council may declare its intention to formally consider vacation, by resolution.

WHEREAS, without pre-judging the result of its future consideration of this matter, the Whatcom County Council has received sufficient information to warrant consideration of vacation of the right-of-way identified in the above-referenced petition and described more fully below;

NOW, THEREFORE, BE IT RESOLVED that it is the intention of the Whatcom County Council to consider vacation of the following described right of way:

That 15-foot right of way immediately west of and abutting Lot 7, Block 1, Lummi Park on Lummi Island according to the Plat thereof recorded in Volume 6 of Plats, Page 5, records of Whatcom County, Washington (which is unnamed but is sometimes referred to as Baker Drive).

Subject to and/or together with all easements, covenants, restrictions and/or agreements of record or otherwise, and further subject to Whatcom County retaining an easement in respect to the portion of right-of-way proposed for vacation, for the construction, repair, and maintenance of any and all public utilities and services now located on or in the portion that may be vacated.

AND BE IT FURTHER RESOLVED that the County Engineer investigate and report to the County Council on the matter of the proposed vacation so that the Council may set a public hearing on the matter.

BEFORE THE WHATCOM COUNTY COUNCIL

IN THE MATTER OF VACATION OF
THE COUNTY ROAD KNOWN AS

1) Unnamed Alleyway referred to as Baker Drive;
[REDACTED]

Petitioned for by:

Patrick Timothy McEvoy and Marcia L. McEvoy
et.al.

PETITION FOR VACATION
OF PLATTED ROAD

(RCW 58.17 AND 36.87)

Pursuant to Whatcom County Ordinance No. 1-72, dated February 14, 1972,* the undersigned and those signing attached petition, which bears signatures and property descriptions of five land owners residing in the vicinity of said road, request vacation of the county road hereinafter described, and agree with the statements below:

* (As subsequently amended and currently codified under WCC 12.20)

1. Petitioners are residents of Whatcom County and owners of real property in the vicinity of the road sought to be vacated.
2. The road sought to be vacated is legally described as follows:
The 15-foot right of way immediately west of and abutting Lot 7, Block 1, Lummi Park on Lummi Island, according to the Plat thereof recorded in Volume 6 of Plats, Page 5, Records of Whatcom County, Washington (which is unnamed but is sometimes referred to as Baker Drive); ~~the 50-foot right of way known as Snow View Drive immediately southeast of and abutting said Lot 7, Block 1, in said Plat.~~
3. The pertinent facts in support of this petition are:
See attached.
4. The road to be vacated is useless as a part of the County road system and the public will benefit by its vacation and abandonment.
5. Petitioners will pay all costs and expenses incurred by the Count in examination, report, notice and proceedings pertaining to this petition.
6. A bond in the penal sum of \$790.00, payable to Whatcom County Treasurer, accompanies this petition.
7. The application fee accompanies this petition.

WHEREFORE, petitioners request the County Road Engineer to report upon this petition, that a hearing take place on this report, and that an order be entered vacating and abandoning said road.

Signed this 8th day of August, 2021.

Patrick Timothy McEvoy

Marcia L. McEvoy

Page 1

WHEREFORE, petitioners request the County Road Engineer to report upon this petition, that a hearing take place on this report, and an order be entered vacating and abandoning said road. (NOTE: A minimum of five signatures is required by law; see statement near the beginning of page 1).

PETITIONERS' NAMES: Property owned by petitioner (part of sec. or name of plat, see (lot), TWP, (Blk) Range):

The following persons are the Petitioners and the owners of the real property immediately abutting the rights-of-way which are sought to be vacated, and who are agreeing to pay the costs of vacation, and who would receive title to the rights-of-way in question following vacation:

Patrick Timothy McEvoy and Marcia L. McEvoy, who are the owners of the following property located within Section 33, Township 38 North, Range 1 East of W.M.:

Lot 7, Block 1, Lummi Park on Lummi Island, Whatcom County, Washington, according to the Plat thereof, recorded in Volume 6 of Plats, Page 5, records of Whatcom County, Washington.

Situate in Whatcom County, Washington.

Assessor's Parcel Number ~~000109980001200000~~ PID 41150

3801333750070000

Marked as Property "A" on the Attached Exhibit A-1 (showing the immediate vicinity or the roads to be vacated) and Exhibit A-2 (showing the larger area and the properties of other owners supporting this Petition)

Separate pages containing the names, property descriptions, and signatures of other property owners within a mile, and who support vacation of the rights-of-way in question, are attached hereto and submitted herewith.

A map of the road proposed to be vacated and surrounding properties, with each of the above signed petitioners properties indicated thereon, shall be attached to this petition in order for it to be accepted in the County Council Office.

Page 2a

WHEREFORE, petitioners request the County Road Engineer to report upon this petition, that a hearing take place on this report, and an order be entered vacating and abandoning said road. (NOTE: A minimum of five signatures is required by law; see statement near the beginning of page 1).

PETITIONERS' NAMES: Property owned by petitioner (part of sec. or name of plat, see (lot), TWP, (Blk) Range):

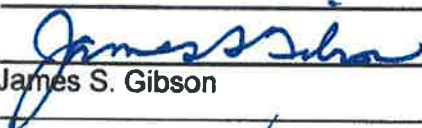

The following persons are the owners of the real property abutting and west of the 15-foot right-of-way which is sought to be vacated:

James S. Gibson and Jean E. Gibson; and
David Loeppky and Sharon Loeppky,

who are the owners of the property located within Section 33, Township 38 North, Range 1 East of W.M., delineated as Whatcom County Parcel Number 3801333580210000 / PID174854, which property is legally described on Exhibit B attached hereto and fully incorporated herein by this reference, and marked as Property "B" on the Attached Exhibit A-1 (showing the immediate vicinity of the roads to be vacated) and Exhibit A-2 (showing the larger area and the properties of other owners supporting this Petition).

Since the 15 feet immediately west of/abutting the 15 foot strip sought to be vacated was previously dedicated right of way which was vacated by official County proceedings in 1947, the undersigned property owners do not seek to receive title to any portion of the remaining unvacated 15-foot-strip.

However, the undersigned property owners DO SUPPORT the Petition for Vacation of Patrick Timothy McEvoy and Marcia L. McEvoy, in consideration of the previous vacation of the westerly 15 feet of-right-way as well as the McEvoy's agreement to pay the costs associated with this Petition for Vacation.

James S. Gibson

Jean E. Gibson

David Loeppky

Sharon Loeppky

(NOTE: There are no property owners other than the McEvoy's who own real property abutting Snow View Drive, the other right-of-way sought to be vacated)

A map of the road proposed to be vacated and surrounding properties, with each of the above signed petitioners properties indicated thereon, shall be attached to this petition in order for it to be accepted in the County Council Office.

Page 2b

WHEREFORE, petitioners request the County Road Engineer to report upon this petition, that a hearing take place on this report, and an order be entered vacating and abandoning said road. (NOTE: A minimum of five signatures is required by law; see statement near the beginning of page 1).

PETITIONERS' NAMES: Property owned by petitioner (part of sec. or name of plat, see (lot), TWP, (Blk) Range):

The following persons are the owners of real properties located within one (1) mile of the 15-foot right of way immediately west of and abutting Lot 7, Block 1, Lummi Park on Lummi Island, according to the Plat thereof recorded in Volume 6 of Plats, Page 5, Records of Whatcom County, Washington (which is unnamed but is sometimes referred to as Baker Drive); ~~AND the 50-foot right of way known as Snow View Drive immediately south of and abutting said Lot 7, Block 1 in said Plat, and who support the Petition for Vacation of the same made by Patrick Timothy McEvoy and Marcia L. McEvoy (who have agreed to pay the costs of vacation, and who would receive title to the rights-of-way in question following vacation):~~

ATTACHMENT TO PETITION FOR ROAD VACATION

The Petitioners request that the right-of-way (highlighted in yellow in Figure 1) which abuts Lot 7, Block 1, Lummi Park on Lummi Island, according to the Plat thereof recorded in Volume 6 of Plats, Page 5, be vacated: (Correct map)

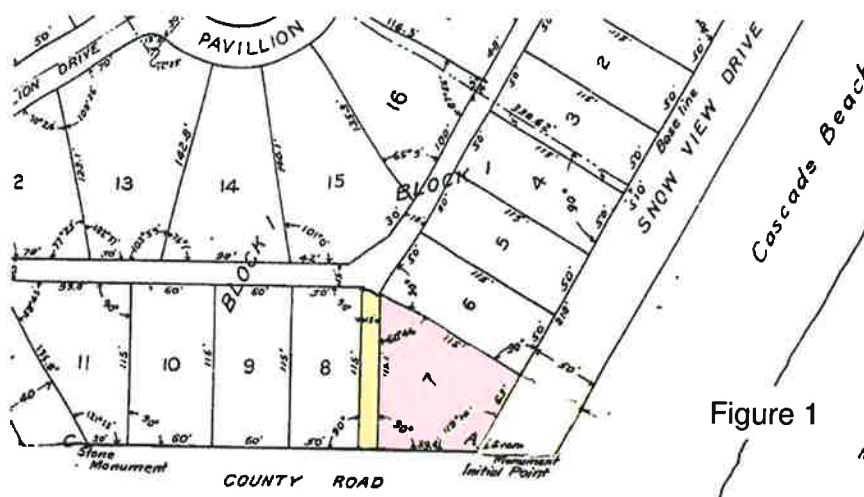

Figure 1

The plat of Lummi Park was recorded in 1910 and encompassed the entirety of Lummi Point in the northeasterly part of Lummi Island (Exhibit D-1). In 1918, the entire plat was vacated (under Commissioner's Record #22, attached as Exhibit D-2), EXCEPT Lot 7 of Block 1, and the street and alley on which Lot 7 immediately fronts/abuts.

The unnamed 15-foot alleyway located directly west of the said Lot 7 (sometimes referred to as a portion of Baker Drive as set forth below) is the right-of-way for which vacation is petitioned at this time.¹

In 1946, most of Block 1 of the 1910 Lummi Park plat was re-configured with the filing of the Lummi Point Plat under Volume 7 of Plats, Page 80 (Exhibit E-1). This plat dedicated 30-foot wide rights-of-way known as Cedar Road and Baker Drive, as shown in Figure 2. It also dedicated an additional 15 feet immediately west of the unvacated 15 feet abutting Lot 7, creating a public right-of-way totaling 30 feet in width running north from and perpendicular to Blizzard Road. It is not completely clear whether this segment was part of Baker Drive, but it has been referred to by that name.

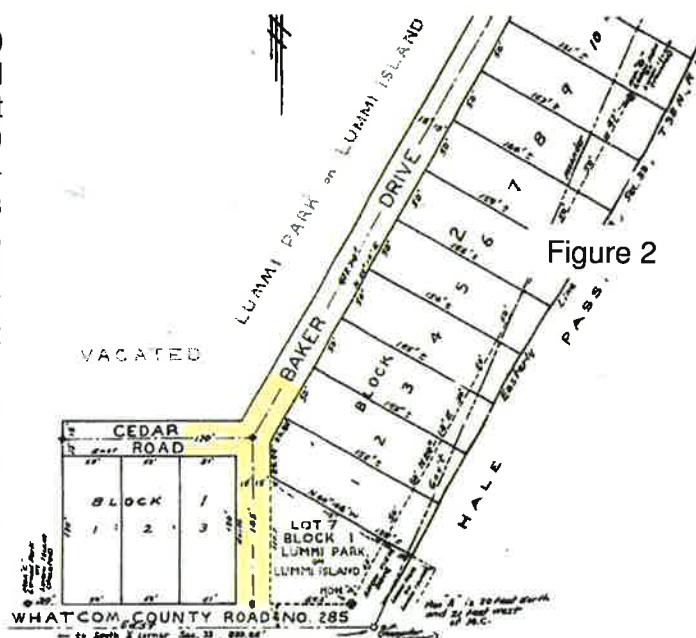

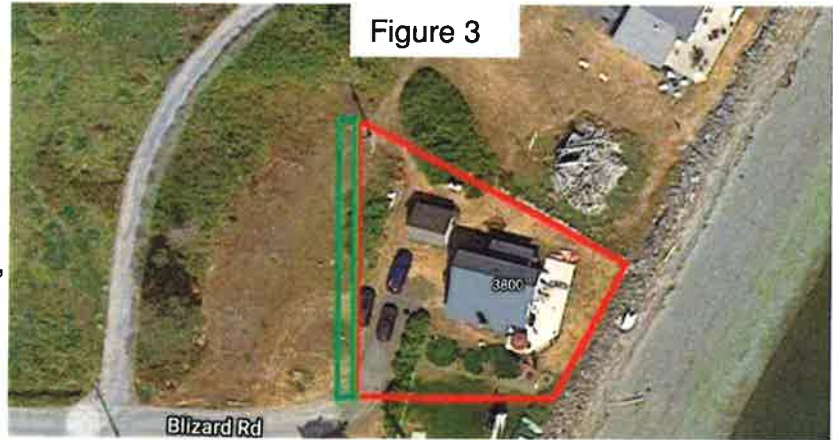

Figure 2

¹ The 50-foot wide street located directly southeast of Lot 7 and known as Snow View Drive is the only other portion of right-of-way which remains unvacated (and is not subject to this Petition for Vacation, pursuant to RCW 36.87.130).

In 1947 the *entire* Lummi Point Plat was vacated (under Volume 36, Page 253 of Commissioner proceedings, attached as Exhibit E-2), which vacated all of the additional right-of-way dedicated by the 1946 plat, so that only the original 15-foot alleyway immediately west of Lot 7 remained public.

The 15-foot alleyway has never been opened to or used by the public. There is a *private* road which connects to Blizzard Road and which is located considerably east of the dedicated 15-foot alleyway, as shown by aerial photos of the vicinity (see Figure 3).

The unvacated 15-foot alleyway serves no function or utility for Whatcom County or the public, particularly since the remainder of the right-of-way to which it would have connected (which were 15-foot wide alleys in the 1910 Plat and which were referred to as Cedar Road and Baker Drive in the 1946 Plat) were previously vacated. Further, all the properties that use the private road located far west of the dedicated strip are parties to a recorded easement agreement governing its use (recorded under Auditor's File No. 2019-400018, attached as Exhibit F).

NOTE: The mapping maintained by the Whatcom County Assessor and/or the County GIS system shows the two right-of-way segments as being a portion of Assessor's Parcel No. 3801333750370000/PID 41147, a non-contiguous parcel located north of the area in question. This mapping is incorrect, since these areas have remained, up until this point, unvacated public right-of-way and therefore cannot be part of any privately owned parcel. This County mapping also shows the westerly 15-foot wide previously vacated area as being part of PID 41147, which is again an error. While that 15-foot strip was properly vacated in 1947 and is now private property, it is *not* part of PID 41147, but rather is now a portion of APN 3801333580210000/PID 174854, as would attach by operation of law. There is a portion of vacated right-of-way which forms a discontinuous segment of PID 41147, but it is a much smaller area, as shown by the Record of Survey recorded under Auditor's File No. 2018-0102095 (Exhibit G).

DEDICATION.

KNOW ALL MEN BY THESE PRESENTS, that E.S. Hayes and Ethel K. Hayes, husband and wife, owners in fee simple of all the real estate described in the withinplat, hereby execute and file this plat, the same to be known as "LUMMI PARK". The real estate embraced in the within plat is located on LUMMI ISLAND, in the County of Whatcom, State of Washington, in Section Thirty-three, Township Thirty-eight (38) North; Range One (1) East, Willamette Meridian; in the eastern portion of lot Three (3) of aforesaid Section, and upon the tide lands adjacent thereto.

The initial point of the survey of this plat, is the Southeast Corner of Block One (1), upon this plat, and is marked by a Cross Cut in the top of a granite Stone set flush with the ground, said initial point being twenty (20) feet North and twenty-one (21) feet west of the Corner to fractional Sections Four, in Township Thirty-eight, North; Range One East, Willamette Meridian, on the shore at Hale's Passage.

The Base line of the Survey of this plat is a straight line extending from the Initial point of said plat Northeastly along the Northeast line of Snow View Drive a distance of five hundred ten (510) feet to a Cross Cut in the top of a granite stone set flush with the ground; Stone monuments similar to those above described are also set at points marked A, B & C, D, E, F.

All lots and blocks upon this plat are of such dimensions as are shown in figures upon the face of the plat.

The widths of Streets and Drives upon this plat are as follows: Wharf Street is forty (40) feet wide, Snow View Drive is fifty (50) feet wide, Pavilion Drive is thirty (30) feet wide, Opal Drive is thirty (30) feet wide, Cascade Vista is thirty (30) feet wide and Selkirk Vista is thirty (30) feet wide. The County Road on the South side of this plat extends North from the Section line a distance of twenty (20) feet.

Cascade Beach extends from the South line of this plat to the South line of Cascade Vista and is dedicated to the public forever to be used as a bathing beach, no buildings or structures of any kind will be allowed to be constructed upon this beach, and no piling will be allowed to be driven upon it.

The tract of land marked "Reserved for bath house" is hereby dedicated to the public forever to be used by bathers; the tract of land at the north end of Wharf Street marked "Reserved for Wharf" is to be used for Wharf purposes only, but is not dedicated to the public; the tract of land north of Cascade Vista marked "Public Play Ground" is hereby dedicated to the public forever as a public play ground.

All Streets, Drives, Vistas and all Alleys delineated hereon are hereby dedicated to the public forever as public highways.

All dotted lines upon this plat are shown as aids to future surveys within this plat.

Witness our hands and seals this 15th day of April A.D.1910.

Witnesses

VACATED
All of LUMMI PARK, except Lot 7 Blk. 1 and that part of street and alley upon which said lot immediately fronts and abuts. Order of Board of County Commissioners dated April 30, 1918.
See Commissioners Record #22

At 11:15 AM Tuesday THE 30th DAY OF April 19 18

BEFORE THE BOARD OF COUNTY COMMISSIONERS OF
WHATCOM COUNTY, WASHINGTON.

IN THE MATTER OF LATERALS 1, 7 & 8 OF DRAINAGE IMPROVEMENT DISTRICT NO. 7 OF WATSON COUNTY. ORDER FOR HEARING ON E. SINGLET'S REPORT.

Now, on this 30th day of April, 1918, is presented to said Board the final report of the County Engineer in this matter and it appearing from said report that said engineer has made a survey for said laterals to said Drainage Improvement District in accordance with instructions heretofore given him and in compliance with the provisions of law governing the same, and has submitted complete profiles and a plat of said Drainage Improvement District, together with the estimated cost of construction, a statement of expenses incurred in survey, general specifications and plans governing the manner and method of construction of ditches and structure and a schedule and estimate of all property that will be damaged, or damaged and benefited, properly arranged in columns as provided by law and has performed all other acts and reported the same, all as provided by law;

IT IS ORDERED that Tuesday, the 1st day of May, 1918, at 10 o'clock A.M. be and the same is hereby fixed as a date for a hearing on such report and the Clerk of this board is directed to give notice of said hearing by publication in three successive and weekly issues of the official newspaper of Whatcom County, Washington, at the times and in the manner provided by law.

IT IS ORDERED that said hearing take place in the Commissioners office at the Court House in Bellingham, Washington.

Said notice shall fix the time and place for said hearing and shall specify the territory to be included in the proposed improvement district, both by boundaries and also by Sections, or fractions thereof, such notice shall also designate with reasonable certainty the route and termini of the proposed improvement and shall state that the plat, report and schedule are in file in the office of the said Board of County Commissioners and shall show all property to be taken or damaged and the amount of damages proposed to be allowed therefor. The last publication of said notice shall be not less than seven or more than fourteen days before the date of said hearing.

Done in regular adjourned session of the Board this 30th day of April, 1916.

This being the time fixed for a hearing in the matter of a petition for the vacation of Lummi Point Plat, the hearing was duly held, and no objections being voiced, an order was signed as follows:

In the Matter of the Petition of)
Don Carson, et al, for Vacation of (ORDER VACATING COUNTY PLAT
Lummi Point Plat)

In the matter of the vacation of a County Plat petitioned for by Don Carson and others, the Board finds as follows:

First. That the petition therefor was filed on the 6th day of June, 1947, and that said petition was signed by at least ten freeholders of the County, residing in the vicinity of the said plat.

Second. That said petition was accompanied by a bond in the sum of \$100.00, which said bond was found to be good and sufficient, and was duly approved by the Chairman of the Board on the 6th day of June, 1947.

Third. That on the 8th day of June, 1947, the County Engineer was duly directed to examine said road and make a report in writing on the same.

Fourth. That on the 19th day of June, 1947, the County Engineer filed in the office of the Board his report in writing, as provided by law.

Fifth. That by an order duly passed by this Board on the 17th day of June, 1947, the 11th day of July, 1947, was set for hearing the report of the Engineer, and the consideration thereof, and that notice of the time and place where said hearing would be held was given by publication and posting as provided by law.

Sixth. That said report of the County Engineer shows: That in his opinion said plat should be vacated; that said plat is not now in use; that it will not be advisable to preserve the same for a general road system in the future; that the public will be benefited by its vacation, and

The Board having examined the report of the Engineer, and all other papers on file in the proceedings, and heard and considered all testimony and documentary evidence adduced for and against the vacation of the plat, and the Board being satisfied that the public will be benefited by its vacation,

3801333580210000/174854 and 3801333500090000/174855
("Parcel C;" See Exhibit F)
All situate in Whatcom County, Washington.

This Easement Agreement (Agreement) is entered this 25th day of March, 2019, by LIBBA'S LEGACY, L.L.C. (a Washington limited liability company that took title as LIBBA'S PARK, L.L.C.) as Grantor, and the

following Grantees: DAVID M. CUMMINS and SHARI A. CUMMINS, husband and wife; JANE DIEVENY-HINKLE; AARON D. HAKEMAN and SUSAN M. HAKEMAN, husband and wife; JAMES S. GIBSON and JEAN E. GIBSON, husband and wife; and DAVID LOEPPKY and SHARON LOEPPKY, husband and wife, based on the following facts:

A. Grantor is a Washington limited liability company with Uniform Business Identifier No. 602 603 991, and owns the real property described on Exhibit A (Parcel A). Grantor took title to Parcel A as "Libba's Park, L.L.C.", but its name has since changed to "Libba's Legacy, L.L.C."

B. Grantees : DAVID M. CUMMINS and SHARI A. CUMMINS, JANE DIEVENY-HINKLE, AARON D. HAKEMAN and SUSAN M. HAKEMAN, and JAMES S. GIBSON and JEAN E. GIBSON, are members of the Grantor LLC. The Grantees are also owners of the following real properties that are adjacent to or nearby Parcel A:

i) DAVID M. CUMMINS and SHARI A. CUMMINS own the property described on Exhibit B (Lot 8/9).

ii) JANE DIEVENY-HINKLE owns the property described on Exhibit C (Lot 6/7).

iii) AARON D. HAKEMAN and SUSAN M. HAKEMAN own the property described on Exhibit D (Lot 4/5).

iv) JAMES S. GIBSON, JEAN E. GIBSON, own the property described on Exhibit E (Lot 2/3).

v) JAMES S. GIBSON, JEAN E. GIBSON, DAVID LOEPPKY, and SHARON LOEPPKY own the property described on Exhibit F ("Parcel C").

C. Lots 2/3, 4/5, 6/7, and 8/9 (collectively, Lots 2 through 9) are all portions of a Plat dedicated May 29, 1946, known as "Lummi Point Plat," and recorded in Volume 7 of Plats, Page 80, records of Whatcom County, Washington, under Auditor's File No. 623791 (Plat). The Plat also dedicated a roadway known as "Baker Drive," which fronted Lots 2 through 9 and served as their platted northwesterly boundary. The Plat (including all lots and dedicated roadways) was vacated by order of the Board of Commissioners of Whatcom County on July 11, 1947, as commemorated in Volume 36 of Commissioners' Proceedings, on Pages 253 and 254.

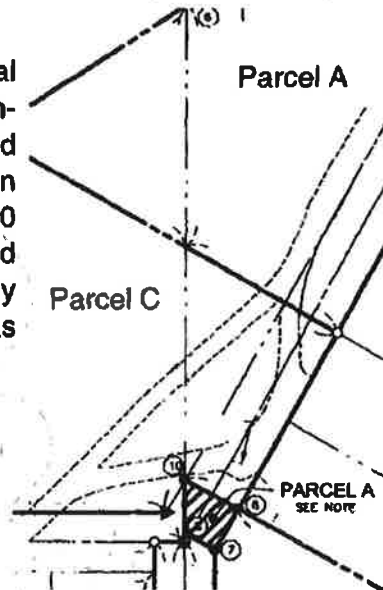

D. Notwithstanding the vacation of the Plat, the parcels comprised of Lots 2 through 9 were conveyed with reference to the lines in the Plat.

E. Pursuant to the provisions of Whatcom County Auditor's File No. 1351409, while vacated Baker Drive is part of the legal description of Parcel A, Lots 2 through 9 retain the right of access to and from the public road. That access is over and across an existing gravel road, which is only partially located within vacated Baker Drive. As shown by a survey of the properties, recorded under Whatcom County Auditor's File No. 2018-0102095 (Survey), portions of the existing gravel roadway (marked in the Survey and referred to herein as the "Gravel Drive"), which has provided access to Lots 2 through 9 for many decades, are located further northwest than the platted location of vacated Baker Drive.

F. The Gravel Drive has been observed as the occupational southeasterly boundary of Parcel A for many decades. The owners of Lots 2 through 9 have maintained and landscaped the areas located between the southeasterly boundary of vacated drive and the Gravel Drive that abut their respective parcels during that time period. There are also improvements located on Lots 6/7 and Lots 8/9 that encroach into vacated Baker Drive, as shown by the Survey.

G. The Survey also shows that the legal description for Parcel A includes a small, non-contiguous area (consisting of a portion of vacated Baker Drive located just northeast of its intersection with vacated Cedar Drive) lying approximately 100 feet southwest of the main portion of Parcel A and adjacent to Parcel C, and which has been historically used exclusively by and as a part of Parcel C, as follows (also see "Detail B" of Survey):

Non-Contiguous Area:

H. The parties wish to document the Grantees' continued rights to use the respective portions of Parcel A as set forth in this Agreement.

NOW, THEREFORE, in consideration of the mutual benefits received by the parties, the sufficiency of which is acknowledged, Grantor and Grantees agree as follows:

1. Lot 8/9 Easement. Grantor LIBBA'S LEGACY, L.L.C. hereby grants, conveys, and covenants to DAVID M. CUMMINS and SHARI A. CUMMINS, for the benefit of Lot 8/9, an exclusive easement for use upon, over and under that portion of Parcel A abutting Lot 8/9 and lying between the platted northwesterly boundary of Lot 8/9 and the southeasterly edge of the Gravel Drive, in its current location as depicted in the Survey recorded under Whatcom County Auditor's File No. 2018-0102095 (Lot 8/9 Easement).

2. Lot 6/7 Easement. Grantor LIBBA'S LEGACY, L.L.C. hereby grants, conveys, and covenants to JANE DIEVENY-HINKLE, for the benefit of Lot 6/7, an exclusive easement for use upon, over and under that portion of Parcel A abutting Lot 6/7 and lying between the platted northwesterly boundary of Lot 6/7 and the southeasterly edge of the Gravel Drive, in its current location as depicted in the Survey recorded under Whatcom County Auditor's File No. 2018-0102095 (Lot 6/7 Easement).

3. Lot 4/5 Easement. Grantor LIBBA'S LEGACY, L.L.C. hereby grants, conveys, and covenants to AARON D. HAKEMAN and SUSAN M. HAKEMAN, for the benefit of Lot 4/5, an exclusive easement for use upon, over and under a portion of Parcel A abutting Lot 4/5 and lying between the platted northwesterly boundary of Lot 4/5 and the southeasterly edge of the Gravel Drive, in its current location as depicted in the Survey recorded under Whatcom County Auditor's File No. 2018-0102095 (Lot 4/5 Easement).

4. Parcel C Easement. Grantor LIBBA'S LEGACY, L.L.C. hereby grants, conveys, and covenants to JAMES S. GIBSON, JEAN E. GIBSON, DAVID LOEPPKY, and SHARON LOEPPKY, for the benefit of Parcel C, an exclusive easement for use upon, over and under that portion of Parcel A, located within vacated Baker Drive per the vacated Lummi Point Plat as generally described in Recital D above and as depicted in "Detail B" of the Survey recorded under Whatcom County Auditor's File No. 2018-0102095, and legally described as follows (Parcel C Easement):

Beginning at the northernmost corner of Lot 1, Block 2, vacated Lummi Point Plat (recorded in Volume 7 of Plats, Page 80, records of Whatcom County); thence North 60°45'00" West, a distance of 30.55 feet, to the northwest line of vacated Baker Drive; thence South a distance of 27.36 feet; thence South 60°45'00" East a distance of 17.19 feet, more or less, to the Northwest line of said Lot 1, Block 2; thence northeasterly along said Northwest line of Lot 1 a distance of 23.87 feet, more or less, to the point of beginning.

This Parcel C Easement shall be for the exclusive use of Parcel C; provided, however, that the owner of Parcel C shall also have the right to grant and convey, to other properties, non-exclusive easements over and across the Parcel C Easement area.

5. Road Easement. Grantor LIBBA'S LEGACY, L.L.C. hereby grants, conveys, and covenants to DAVID M. CUMMINS and SHARI A. CUMMINS, JANE DIEVENY-HINKLE, AARON D. HAKEMAN and SUSAN M. HAKEMAN, and JAMES S. GIBSON and JEAN E. GIBSON for the benefit of Lots 8/9, Lots 6/7, Lots 4/5, and Lots 2/3 respectively, a non-exclusive easement for ingress, egress and utilities over and across Parcel A, in the location of the existing "Gravel Drive" as shown and depicted in the Survey recorded under Whatcom County Auditor's File No. 2018-0102095 (Road Easement). This Road Easement is granted in connection with and to give full force and effect to the right of access contained in Whatcom County Auditor's File No. 1351409. In the event the location of the existing roadway shifts or is relocated by the owner of Parcel A, Lots 2 through 9 will continue to enjoy a right of access and easement over, under and across the actual location of the roadway. The areas of the exclusive use Easements set forth in Paragraphs 1 through 4 shall not be expanded or reduced as a result of any such shifting or relocation, unless the expansion or reduction is approved by the owners of all parcels impacted by such expansion or reduction.

6. Duration and Exclusivity of Easement; Amendment; Covenant Running with the Land. The easements granted by this Agreement shall be perpetual. Lot 8/9, Lot 7/8, Lot 4/5, and Parcel C shall each have exclusive use of the easement benefitting that property, as set forth in Paragraphs 1, 2, 3, and 4 respectively.

This Agreement can only be amended by a written and notarized amendment signed by the owners of all properties burdened by or benefitted by this Agreement.

The rights and obligations contained in this Agreement shall be binding upon and inure to the benefit of all assignees, devisees, or transferees of the respective properties, and shall in all respects attach to the individual properties burdened and served by the respective easements.

7. Maintenance Obligations. The Grantor is not responsible for and has no liability to any of the Grantees associated with the location, design, construction, use, maintenance, repair or replacement of any improvements located in the easements described in Paragraphs 1 through 4 above.

Each owner of property benefitted by one of the easements set forth in Paragraphs 1 through 4 shall have sole responsibility to maintain the respective easements benefitting the specific parcel, including improvements within the easements, and shall maintain the easement area and improvements in a neat and orderly condition, kept in good repair and otherwise not left to become unsightly, decrepit, dangerous, or a nuisance. Nothing in this Agreement shall be construed to require any of the owners to contribute to the cost of maintaining improvements that do not benefit that owner's property.

The costs of maintaining the Road Easement shall be borne by the owner of Parcel A; provided, however, that Lot 8/9, Lot 7/8, Lot 4/5, and Lot 2/3 shall each contribute equitably towards the actual cost of maintenance, in an amount not to exceed \$100.00 annually for each of the four (4) parcels that benefit from the Road Easement. If not expended each year, the \$100.00 annual obligation may accumulate for a maximum of three (3) years to accommodate maintenance performed less than annually, so that the maintenance obligation of each of the four parcels shall not exceed an aggregate total of \$300.00 per parcel over a three-year calendar period. The costs of repairs caused by extraordinary circumstances of one or more property, such as utility installation or damage to the road by heavy equipment requiring repairs for reasons other than normal wear and tear, shall be paid by the owner that caused the damage or created the circumstances.

8. Indemnification. Each owner of property burdened or benefitted by this Agreement (Indemnifying Owner) shall indemnify the others with respect to any and all damages or claims relating to the Indemnifying Owner's (or the Indemnifying Owner's agents' or invitees') use of, or activities within, the Indemnifying Owner's property and the easement benefitting the same. This indemnification includes but is not limited to claims, legal proceedings or judgments, and attorney fees and legal costs, arising out of claims or proceedings for bodily injuries, deaths and emotional claims or property damages of any kind. In entering this Agreement, the parties further acknowledge that the easements contained in this Agreement address and resolve all discrepancies and issues of unwritten title that existed between Parcel A and Grantees' properties prior to entry of the Agreement, and agree that the boundaries between Grantees' properties and Parcel A reflected in the Survey are accurate, subject only to the rights of exclusive use created by this Agreement.

9. Incorporation of Survey. The Survey recorded under Whatcom County Auditor's File No. 2018-0102095 is fully incorporated and made a part of this Agreement.

10. No Third Party Beneficiaries or Public Dedication. This Agreement confers no rights or remedies on any third party, other than the parties to this Agreement and their successors and assigns. Nothing in this Agreement shall be considered a gift or dedication of any real property to the general public, or for any public use or purpose whatsoever.

11. Severability. Each provision of this Agreement shall be interpreted in a way that is valid under applicable law. If any provision is held invalid, the rest of the Agreement will remain in full effect.

12. Governing Law; Attorneys' Fees; Jurisdiction and Venue. This Agreement will be governed and interpreted by Washington law. If a dispute arises out of this Agreement, then the prevailing party will be entitled to actual attorney

fees and costs. Any lawsuit arising directly or indirectly out of this Agreement will be litigated in Whatcom County Superior Court.

IN WITNESS WHEREOF, the owners of all real property either burdened or benefitted by this Agreement have hereunto set their hand and seal on the day and year first above written.

Exhibit A

PARCEL A:

A TRACT OF LAND LYING WITHIN A PORTION OF PARTIALLY VACATED LUMMI PARK PLAT, ACCORDING TO THE PLAT THEREOF, RECORDED IN VOLUME 6 OF PLATS, PAGE 5, IN SECTION 33, TOWNSHIP 38 NORTH, RANGE 1 EAST OF W.M., AND FURTHER DESCRIBED AS FOLLOWS:
BEGINNING AT THE INTERSECTION OF THE NORTH LINE OF ROAD NO. 285 AND THE EAST LINE OF ROAD NO. 510;
THENCE EAST ALONG SAID NORTH LINE TO THE SOUTHWEST CORNER OF LOT 1, BLOCK 1, VACATED LUMMI POINT PLAT, AS RECORDED IN VOLUME 7 OF PLATS, PAGE 80;
THENCE NORTH 160 FEET;
THENCE EAST ALONG THE NORTH LINE OF CEDAR STREET IN SAID VACATED LUMMI POINT PLAT 161 FEET TO THE NORTHWEST LINE OF BAKER DRIVE IN SAID PLAT;
THENCE NORTHEASTERLY ALONG SAID NORTHWEST LINE 435.17 FEET;
THENCE SOUTH 57°47' WEST 768.59 FEET MORE OR LESS TO A POINT 150 FEET NORTH OF SOUTH LINE OF GOVERNMENT LOT 3 OF SAID SECTION;
THENCE WEST PARALLEL WITH SOUTH LINE OF THE EASTERLY LINE OF ROAD NO. 510;
THENCE SOUTHERLY ALONG SAID EASTERLY LINE TO BEGINNING;

TOGETHER WITH THAT PORTION OF VACATED BAKER STREET ABUTTING SAID PREMISES AS WOULD ATTACH BY OPERATION OF LAW,

ALSO LOT 11, BLOCK 1, VACATED LUMMI PARK PLAT, AS RECORDED IN VOLUME 6 OF PLATS, PAGE 5, ALSO BLOCK 1 OF VACATED LUMMI POINT PLAT, AS RECORDED IN VOLUME 7 OF PLATS, PAGE 80,

EXCEPT THAT PORTION THEREOF FURTHER DESCRIBED UNDER WHATCOM COUNTY AUDITOR'S FILE NO. 872908.

EXCEPT THAT PORTION OF GOVERNMENT LOT 3 AND THE VACATED LUMMI POINT PLAT ALL IN SAID SECTION 33, MORE PARTICULARLY DESCRIBED AS FOLLOWS:

COMMENCING AT THE SOUTHEAST CORNER OF LOT 15, BLOCK A, LUMMI BAY PLAT, AS RECORDED IN VOLUME 8 OF PLATS, PAGE 19, RECORDS OF WHATCOM COUNTY, WASHINGTON;

THENCE SOUTH 11°25'30" WEST ALONG THE SOUTH LINE OF SAID LOT 15 PROJECTED SOUTHWESTERLY, 14.16 FEET TO THE TRUE POINT OF BEGINNING;
THENCE NORTH 57°47'00" EAST, 52.33 FEET;
THENCE NORTH 29°14'00" EAST, 33.78 FEET;
THENCE SOUTH 60°46'00" EAST, 30.00 FEET TO THE NORTHWEST CORNER OF LOT 10, BLOCK 2 OF THE VACATED LUMMI POINT PLAT; THENCE SOUTH 29°14'00" WEST, ALONG THE NORTHWESTERLY LINE OF LOTS 10 AND 9 OF SAID BLOCK 2, 100.00 FEET TO THE SOUTHWEST CORNER OF SAID LOT 9;
THENCE NORTH 60°46'00" WEST, 30.00 FEET;
THENCE NORTH 36°57'12" WEST, 31.76 FEET;
THENCE NORTH 57°47'00" EAST, 8.48 FEET TO THE POINT OF BEGINNING.

Exhibit A, Continued

Parcel A legal description, continued:

AND EXCEPT THE SOUTHEAST 7.5 FEET OF VACATED BAKER DRIVE, LYING ADJACENT TO LOTS 6 AND 7, BLOCK 2, VACATED LUMMI POINT PLAT, WHATCOM COUNTY, WASHINGTON, ACCORDING TO THE PLAT THEREOF, RECORDED IN VOLUME 7 OF PLATS, PAGE 80, RECORDS OF WHATCOM COUNTY, WASHINGTON. AND EXCEPT THAT PORTION OF GOVERNMENT LOT 3 IN SAID SECTION 33, MORE PARTICULARLY DESCRIBED AS FOLLOWS:
BEGINNING AT THE MOST NORTHERLY CORNER OF LOT 3, BLOCK 2 OF VACATED LUMMI POINT PLAT, AS RECORDED IN VOLUME 7 OF PLATS, PAGE 80, RECORDS OF WHATCOM COUNTY, WASHINGTON;
THENCE NORTH 60°46'00" WEST, AT RIGHT ANGLES TO THE WESTERLY LINE OF SAID LOT 3, 86.48 FEET;
THENCE DUE SOUTH 114.49 FEET, SOUTH 60°46'00" WEST, 30.52 FEET TO THE SOUTHWESTERLY CORNER OF LOT 2, BLOCK 2 OF SAID LUMMI POINT PLAT;
THENCE NORTH 29°14'00" EAST, ALONG THE WESTERLY LINES OF LOTS 2 AND 3 OF SAID BLOCK 2, 100 FEET TO THE POINT OF BEGINNING.

TOGETHER WITH THAT PORTION OF GOVERNMENT LOT 3 IN SAID SECTION 33, MORE PARTICULARLY DESCRIBED AS FOLLOWS:
COMMENCING AT THE MOST NORTHERLY CORNER OF LOT 3, BLOCK 2 OF VACATED LUMMI POINT PLAT, AS RECORDED IN VOLUME 7 OF PLATS, PAGE 80, RECORDS OF WHATCOM COUNTY, WASHINGTON;
THENCE NORTH 60°46'00" WEST, AT RIGHT ANGLES TO THE WESTERLY LINE OF SAID LOT 3, 86.48 FEET TO THE TRUE POINT OF BEGINNING;
THENCE CONTINUING NORTH 60°46'00" WEST, 115.58 FEET TO A POINT ON THE SOUTHEASTERLY LINE OF BLOCK C OF LUMMI BAY PLAT AS RECORDED IN VOLUME 8 OF PLATS, PAGE 19, RECORDS OF WHATCOM COUNTY, WASHINGTON;
THENCE FOLLOWING SAID SOUTHEASTERLY LINE, NORTH 57°47'00" EAST, 119.21 FEET;
THENCE DUE SOUTH 120.00 FEET TO THE POINT OF BEGINNING.

SITUATE IN WHATCOM COUNTY, WASHINGTON.

Memorandum

November 22, 2021

To: The Honorable Satpal Sidhu, Whatcom County Executive
The Honorable Whatcom County Council

From: Matt Aamot, Senior Planner

Through: Mark Personius, Director

RE: Review & Evaluation (Buildable Lands) Program - Methodology

The Washington State legislature amended the Growth Management Act (GMA) in 1997 to include a "review and evaluation program," also known as the buildable lands program (RCW 36.70A.215). At that time, the review and evaluation program applied to six counties: Clark, King, Kitsap, Pierce, Snohomish, and Thurston. The State legislature amended the GMA in 2017 to add Whatcom County to the list of counties required to undertake a review and evaluation program ([ESSSB 5254](#)).

The review and evaluation program has several main components, which are summarized below:

- Determining whether a county and its cities are achieving urban densities within urban growth areas by comparing growth and development assumptions contained in the county and city comprehensive plans with actual growth and development that has occurred;
- Determining whether there is sufficient land that is suitable for development in the future; and
- Identifying reasonable measures, if necessary, to reduce the differences between growth assumptions contained in comprehensive plans and actual development patterns ([RCW 36.70A.215](#)).

The 2017 State legislation (ESSSB 5254) imposes new requirements that Whatcom County must address, in close coordination with the cities, by June 30, 2022.

The City/County Planner Group, with the assistance of a consultant, has developed a draft *Whatcom County Review and Evaluation Program Methodology* to implement the 2017 state amendments to the GMA. The Methodology addresses several main topics:

- ✓ State Requirements
- ✓ Data Collection
- ✓ Evaluation of Land Suitable for Development
- ✓ Buildable Lands Report format
- ✓ Reasonable Measures

The Public Participation Plan (April 2020) indicates that staff will brief the Council on the draft Methodology. However, since the Methodology is a technical document that will be adopted administratively by the County Planning Director, we are not asking for a Council motion.

The Cities and County are conducting analyses of buildable lands in accordance with the Methodology. The City/County Planner Group will issue a comprehensive Buildable Lands Report, summarizing the results of these analyses, in 2022. The Planning Commission will hold a public hearing on the Buildable Lands Report next year and make a recommendation to the County Council, who will take action to formally approve the Report.

Thank you for your assistance in this matter. We look forward to discussing it with you.

1. INTRODUCTION

Background and Purpose

The Review and Evaluation Program, which is also known as the Buildable Lands program, is part of Washington State’s Growth Management Act (GMA). The program requires that certain counties and cities review the growth and development that has occurred within their jurisdictions in the years since the last updates to their State mandated Comprehensive Plans. Past growth is compared with the growth and development assumptions, targets, and objectives that are contained in the current plans. Where actual growth diverges from growth and development assumptions adopted in the countywide planning policies or comprehensive plan, the State calls on the jurisdiction to implement “reasonable measures” in the next comprehensive plan update to maintain consistency with GMA requirements (RCW 36.70A.215(1)).

The GMA’s Buildable Lands program was established in 1997 and originally applied to all jurisdictions within six counties. The first major revision to the program was completed in 2017, in accordance with E2SSB 5254. As part of this revision, Whatcom County was added as the seventh Buildable Lands county. The County contracted with Community Attributes Inc. (CAI) to assist developing methods for completing its new Buildable Lands program. Whatcom County’s first Buildable Lands Report (BLR) will be due in June 2022. This report outlines recommended methods to be used by the County and cities in meeting state requirements for its Buildable Lands analysis and program.

Methods

The recommended methods in this report were informed by the following sources:

- **State Guidelines:** The Department of Commerce’s 2018 Buildable Lands Guidelines provided guidance on key program elements, including incorporating the 2017 updates to State law (RCW 36.70A.215).
- **Existing Land Capacity Analysis Methodology:** Whatcom County has a Land Capacity Analysis (LCA) Methodology that was used in the 2016 Comprehensive Plan updates. While the BLR and LCA have separate purposes, they have many analysis steps in common.
- **Key Issues Research:** CAI conducted research on topics with important implications for the buildable lands report, including local

regulations, infrastructure, housing affordability, and growth trends. This included reviewing relevant portions of the Revised Code of Washington and Washington Administrative Code. This information was compiled in a *Background Information and Key Issues Report* (CAI, June 2019).

- **Stakeholder Input:** CAI held interviews with representatives of each jurisdiction and several key community stakeholders. These interviews provided context on priorities for the methodology and staff capacity available to support the analysis. This information was compiled in a *Stakeholder Interview Summary* (CAI, May 2019). Additionally, stakeholders reviewed and provided comments on preliminary draft versions of this Methodology in 2021.
- **Technical Committee:** A technical committee with representatives of the County and each city met in 2019-2021 to discuss key elements of the program. The committee also reviewed all project deliverables.
- **Review of Other Counties:** CAI reviewed other Buildable Lands counties' methods and worked with the Technical Committee to select methods most appropriate for Whatcom County.
- **Public Hearing:** The Whatcom County Planning Commission held a public hearing on the draft Methodology on October 28, 2021. Notice of the hearing was published in the newspaper, posted on the County's website, sent to the County's e-mail list, and sent to stakeholders.

Organization of this Report

This report includes the following sections:

- **State Requirements:** Outlines the key requirements for a Buildable Lands program under state law and where Whatcom County's and the cities' approach to meeting the requirements is documented.
- **Data Collection:** A recommended approach to annually gathering all required and necessary data for the Buildable Lands Report.
- **Review and Evaluation of Land Suitable for Development:** Recommended analysis methods to complete the Buildable Lands evaluation.
- **Reports and Implementation:** Structure of the Buildable Lands Report and implementation steps, including reasonable measures. This section also references the methods for resolving disputes between jurisdictions.
- **Land Capacity Analysis:** Describes the relationship between Land Capacity Analysis and the Buildable Lands Report.
- **Definitions:** Defines important terms used in this report.

2. STATE REQUIREMENTS

2.1. Program Purpose

The Review and Evaluation Program, also referenced as the Buildable Lands Program, is intended to evaluate the performance of the current comprehensive plans and identify important issues to be addressed in the next plan updates. This purpose is described in *RCW 36.70A.215 (1)* as follows:

(a) Determine whether a county and its cities are achieving urban densities within urban growth areas by comparing growth and development assumptions, targets, and objectives contained in the countywide planning policies and the county and city comprehensive plans with actual growth and development that has occurred in the county and its cities; and

(b) Identify reasonable measures, other than adjusting urban growth areas, that will be taken to comply with the requirements of this chapter. Reasonable measures are those actions necessary to reduce the differences between growth and development assumptions and targets contained in the countywide planning policies and the county and city comprehensive plans with actual development patterns. The reasonable measures process in subsection (3) of this section shall be used as part of the next comprehensive plan update to reconcile inconsistencies.

2.2. Required Elements

State law allows for flexibility in individual county Buildable Lands methodologies, provided that major requirements are met and counties and cities document the rationale for their choices. This section describes the most critical requirements under state law, and identifies where Whatcom County's and the cities' approach to meeting each requirement can be found.

Countywide Planning Policies

Counties must adopt countywide planning policies to establish the Review and Evaluation, or Buildable Lands, Program (*RCW 36.70A.215(1)*). This is fulfilled by Whatcom County Countywide Planning Policy Q: *Review and Evaluation Program*.

Annual Data Collection

The program must provide for annual collection of data on “urban and rural land uses, development, zoning and development standards, environmental regulations including but not limited to critical areas, stormwater, shoreline, and tree retention requirements; and capital facilities to determine the quantity and type of land suitable for development, both for residential and employment-based activities” (*RCW 36.70A.215 (2)(a)*). The approach to

collecting and sharing data between the County and cities is outlined in this report in **Section 3**.

Review Achieved Densities

The evaluation must review densities achieved by development in the County and its cities since the adoption of the comprehensive plan or since the last buildable lands report. Achieved densities are compared to growth and development assumptions contained in the countywide planning policies and County and city comprehensive plans (*RCW 36.70A.215 (1)(a), 36.70A.215 (3)(d)*). Whatcom County's and the cities' approach to this analysis is outlined in this report in **Section 4.1**.

Evaluate Impact to Developable Land

Counties and cities must update the inventory of land available for development during the current 20-year planning period, and determine how much projected population and employment growth still remains to be accommodated during the current planning period. Counties and cities must also estimate how much land will be required to serve remaining projected population and employment growth, based on achieved development densities (see "Review Achieved Densities"). The updated developable land inventory is then compared to the land required to serve growth to determine if there is sufficient developable land to serve that growth (*RCW 36.70A.215(3)*). Whatcom County's and the cities' approach to this evaluation is described in **Sections 4.2-4.4**.

Methods to Resolve Disputes

Counties must provide for methods to resolve disputes between jurisdictions and to resolve inconsistencies in data collection and analysis (*RCW 36.70A.215 (2)(c)*). This is addressed in Whatcom Countywide Planning Policies Q.7 and R.

Reasonable Measures

In the event that there are inconsistencies between actual development patterns & growth and development assumptions & targets adopted in the countywide planning policies or comprehensive plan, the County and the cities must determine if reasonable measures are required to increase consistency. If necessary, reasonable measures must be adopted into the countywide planning policies, County and city comprehensive plans, and/or development regulations, as appropriate, during the next scheduled update (*RCW 36.70A.215 (2)(d)*). Whatcom County's and the cities' approach to reasonable measures is addressed in **Section 5.3**, and examples of reasonable measures that have been adopted in other jurisdictions is provided in **Appendix A**.

2.3. Relationship to Land Capacity Analysis

While only select Washington counties and cities are subject to the Buildable Lands requirements, all counties and cities that are required or choose to plan under the Growth Management Act must complete a Land Capacity Analysis (LCA) as part of any periodic Comprehensive Plan update (*RCW 36.70A.115*). The purpose of an LCA is to determine if there is sufficient capacity for development within Urban Growth Areas (UGAs) during the 20-year planning period in the next comprehensive plan update. The purpose of the BLR is to evaluate the growth and development assumptions adopted in the existing countywide planning policies and comprehensive plans and compare them against actual growth. The BLR also includes an estimate of land capacity in the remaining portion of the existing 20-year planning period.

The methods used for the BLR are similar to those used for the LCA, but the planning horizons are different. The existing comprehensive plan planning horizon (for the BLR) is through the year 2036. The next comprehensive plan horizon (for the LCA) will extend through the year 2045. Additionally, the BLR uses achieved densities to determine the amount of land needed for the remaining portion of the 20-year planning period in the most recently adopted comprehensive plans (*RCW 36.70A.215(3)(e)*). In contrast, the LCA may use assumed densities (*WAC 365-196-210(6)* and *WAC 365-196-300(2)* and (3)). This report addresses the relationship between the Buildable Lands Report and the Land Capacity Analysis in **Section 6**.

3. DATA COLLECTION

3.1. Review and Evaluation Period

For the first Buildable Lands Report due in June 2022, Whatcom County and the cities will assess data from the years following the adoption of the most recent comprehensive plan update, which was completed in 2016. The first Report will review development data from April 1, 2016 to March 31, 2021.

For subsequent Buildable Lands Reports, the Review and Evaluation Period will include the years since the adoption of the latest comprehensive plan or the previous Buildable Lands analysis (RCW 36.70A.215(3)(d)). Each report is due no later than three years prior to the deadline for the next comprehensive plan, resulting in an eight-year Buildable Lands cycle. For any year selected as a base or end point for study, Whatcom County and the cities have selected April 1 as the breaking point in order to align with the Washington State Office of Financial Management's (OFM) population estimates.

3.2. Study Area Boundaries

The Buildable Lands Analysis includes the portion of Whatcom County located west of the National Forest with a particular focus on UGAs, including land within city limits.

3.3. Annual Data

Data Collection and Evaluation Overview

Each Whatcom County jurisdiction will be responsible for collecting key data on development in their jurisdiction during the Review and Evaluation Period. These data will be inserted in Data Reporting Tools, which are spreadsheets intended to facilitate consistency across the jurisdictions. The Data Reporting Tools will be shared with Whatcom County, which will lead the evaluation. Whatcom County will also gather data for unincorporated UGAs and rural areas.

The County and the cities will work together to complete the evaluation. The County and cities will engage at key points to review work in progress. The County and cities may need to formalize arrangements for data sharing responsibilities through memorandums of understanding (MOUs), interlocal agreements, or other contracts. Alternatively, informal cooperative data sharing may continue without formal agreements, as in the past.

Types of Data to Collect

While the following types of data should be collected annually, data collection is only required to the extent necessary to determine compliance with RCW

36.70A.215 (including achieved densities and the remaining quantity and types of land available for development during the current planning period). On an annual basis, jurisdictions should collect following types of data:

1. **Development activity** and other land use changes, including:
 - Building permits and plats
 - Renovations, if adding capacity
 - New construction – new units, new industrial space, new commercial space, and quantities of land developed
 - Demolition data – units and space removed
 - Annexations
 - Changes to UGAs
 - Changes to the amount of land zoned for residential, commercial, and industrial development
2. Changes to **zoning and development standards** which could impact future land capacity
3. Changes to **environmental regulations** which could impact future land capacity
4. Changes to **planned capital facilities** which could impact future land capacity
5. **Adopted reasonable measures**

3.4. Data Reporting Tools

With the assistance of CAI, the County and cities have developed spreadsheet-based Data Reporting Tools for the jurisdictions to use to capture all required data between April 1, 2016 and March 31, 2021. Detailed guidance on how to use the tools is provided on the “Instructions” documents associated with the spreadsheets. Four separate Data Reporting Tools have been developed:

- City of Bellingham;
- Small Cities and UGAs (identical to City of Bellingham spreadsheet, except with fewer columns for data);
- Non-UGAs (simplified spreadsheet for rural and resource lands); and
- Countywide (addresses annexations, UGA expansions, and zoning map changes).

Each jurisdiction will fill out a Data Report Tool. The city data will be maintained separately from the unincorporated UGA data (relating to development in the UGA, but outside city limits). This is because urban

density development is anticipated within city limits, where public water and sewer are typically available. However, the cities in Whatcom County generally do not extend public water and sewer for new developments prior to annexation. Therefore, urban residential development will generally not occur in the unincorporated UGAs associated with cities until annexation (except on existing platted lots). In fact, the County zoning typically limits new subdivisions in UGAs to a density of one dwelling/ten acres in urban residential zoning districts until public water and sewer are available.

The City of Bellingham and the Small Cities/UGA tools include the following sections:

1. **Buildable Lands Summary:** UGA-level summary of new development during the Review and Evaluation Period and remaining growth to accommodate. Calculates achieved densities by city or UGA for comparison with planned densities in the comprehensive plan, which will be considered by each jurisdiction when evaluating compliance with RCW 36.70A.215(1)(a).
2. **Planned v. Achieved:** Comparison of planned and achieved densities by use and zoning designation, which will result in useful information that may be considered by local jurisdictions in their next comprehensive plan update.
3. **Land Development Summary:** Development totals by use and zoning designation in terms of land developed and built area developed (Commercial/industrial square footage and residential units).
4. **Land Development Detail:** Detailed calculations for net area developed, achieved densities, and portion of developable area devoted to rights-of-way and other infrastructure by use and zoning designation.
5. **Building Permit Data:** Information on building permits that received a final inspection (i.e. construction has been completed) by development type (single family, multifamily, commercial, industrial, or mixed use).
6. **Plat Data:** Information on short plat, long plat, and binding site plan activity by development type (single family, multifamily, commercial, industrial, or mixed use).
7. **Planned Densities:** Planned densities by use for relevant zoning designations to provide a comparison against achieved densities. If planned densities have not been adopted for a certain area, this field may be left blank (or “N/A” may be inserted).
8. **Planned Capital Facilities:** Planned future capital facilities.

9. **Regulatory Updates:** Information on regulatory changes with potential to impact future land capacity. The regulatory update information for the unincorporated portion of city UGAs will be based upon (reference) the changes to city regulations, since these unincorporated areas will primarily be developed with urban land uses when city water and sewer become available after annexation.
10. **Reasonable Measures:** Tracks any adopted reasonable measures.

4. REVIEW AND EVALUATION OF LAND SUITABLE FOR DEVELOPMENT

The GMA requires counties and cities to identify land suitable for development or redevelopment and determine whether there is sufficient suitable land to accommodate future growth (RCW 36.70A.215(3)). This section outlines necessary steps and recommended methods to complete a Buildable Lands analysis. The basic steps for cities and UGAs are as follows:

1. **Review Achieved Densities:** using the Data Reporting Tools, calculate the net residential and employment density of development that occurred during the review and evaluation period and compare to growth and development assumptions adopted in the countywide planning policies or comprehensive plans.
2. **Assemble Net Developable Land Inventory:** update the supply of vacant, partially used, and under-utilized land which will be available for development during the remainder of the current planning period.
3. **Estimate Population and Employment Capacity:** using the Suitable Land Tools, which are spreadsheets intended to facilitate consistency across the jurisdictions, determine the population and employment capacity of the current developable land inventory, based on achieved densities.
4. **Evaluate Land Capacity:** using the Suitable Land Tools, compare population and employment growth projections to current capacity determined in previous step and identify the potential capacity surplus or deficit.

If the analysis identifies deficits in land capacity, or if recent development has diverged from growth and developments assumptions adopted in the countywide planning policies or comprehensive plan, there is an additional requirement to determine if **reasonable measures** are required to improve consistency (See **Section 5.3**).

4.1. Review Assumptions and Achieved Densities

Several key components of the Buildable Lands analysis rely on calculating the achieved net density of new residential, commercial, and industrial development in cities and UGAs during the Review and Evaluation Period (2016-2021). Final calculations for these factors are expressed in terms of dwelling units per net acre for residential development, and floor area ratios (FARs) for commercial and industrial development.

Develop Population and Employment Assumptions

Calculating future population capacity requires assumptions about occupancy rates and average household size. Calculating future employment capacity requires assumptions about occupancy rates and building square feet per employee. These assumptions are used to translate built commercial and industrial building area into an estimate of the number of employees that can be accommodated in that area. Separate building square feet per employee assumptions should be developed for commercial and industrial land uses.

The City of Bellingham has an existing data sharing agreement with the Washington State Employment Security Department (ESD) that provides the City with access to countywide employment data. Additionally, the Assessor's Office has provided commercial and industrial square footage statistics by parcel. Using this information, the City of Bellingham conducted an analysis and issued a *Technical Memo Estimating Square Feet Per Job for Commercial and Industrial Lands in Whatcom County* (October 20, 2020), which produced the following estimates:

Exhibit 1.A. 2020 Whatcom County Sq Ft Per Job Summary by Individual Jurisdiction

Analysis Area	Record Count (tax parcels)	Adjusted Mean Commercial Sq Ft/Job	Adjusted Mean Industrial Sq Ft/Job	Adjusted Median Commercial Sq Ft/Job	Adjusted Median Industrial Sq Ft/Job
Bellingham UGA	1,116	583	974	436	661
Birch Bay UGA	21	992	884	952	884
Blaine UGA	98	587	1,099	531	739
Cherry Point UGA	9	205	1,779	205	1,689
Columbia Valley UGA *	2	-	-	-	-
Everson UGA	35	800	1,501	751	1,202
Ferndale UGA	186	580	1,129	498	825
Lynden UGA	164	721	1,037	531	807
Nooksack UGA	12	605	795	468	621
Sumas UGA	30	669	890	473	563

Rural Areas	228	691	1,039	500	717
All Whatcom County	1,901	616	1,036	462	717

** The terms stipulated in the data access contract by ESD restrict sharing statistics that may violate employer confidentiality. Specifically, the "3/80" rule must be adhered to. This rule states that any statistical summary category must have no fewer than three employers, and that no single employer can represent more than 80% of the jobs in a category. The summary categories for this analysis met these criteria with the exception of the individual breakout for the Columbia Valley UGA.*

Exhibit 1.B. 2020 Whatcom County Sq Ft Per Job Summary by Grouped Areas

Analysis Area	Record Count (tax parcels)	Adjusted Mean Commercial Sq Ft/Job	Adjusted Mean Industrial Sq Ft/Job	Adjusted Median Commercial Sq Ft/Job	Adjusted Median Industrial Sq Ft/Job
Bellingham UGA	1,116	583	974	436	661
Small City UGAs	525	652	1,097	531	795
Non-City UGAs *	32	899	1,513	772	1,326
Small City & Non-City UGAs	557	665	1,118	532	812
All UGA Areas	1,673	607	1,035	460	718
Rural Areas	228	691	1,039	500	717
All Whatcom County	4,131	616	1,036	462	717

** Non-city UGAs include Birch Bay, Cherry Point, and Columbia Valley.*

Data sources: 4th Quarter 2019 WA State Employment Security data and August 2020 W.C. Assessor's Bldg Details data. Note: building sq ft for Cherry Point UGA - BP and Philips 66 refineries and Intalco aluminum plant calculated from 2019 aerial imagery (missing from Bldg Details data).

The County and cities can use these statistics when developing employment density (square footage per employee) assumptions for commercial and industrial development.

Once employment density assumptions have been selected, the next step is to determine achieved densities.

Determine Achieved Densities

The purpose of this step is to determine the actual density of residential and employment development that occurred during the Review and Evaluation Period. Final calculations are expressed in terms of dwelling units per net acre for residential development and floor area ratios for commercial and industrial development. In **Section 4.3**, achieved net density data is used to convert developable land into future population and employment capacity for cities and UGAs.

Data Needed

- **Output from previous step:** Population and employment assumptions.
- All development activity in each UGA during the Review and Evaluation Period (gathered with Data Reporting Tool, described in **Section 3.4**).

Steps

1. Each jurisdiction is responsible for gathering data on its development activity, as described in **Section 3** of this report.
2. The County will gather updated Data Reporting Tools from all jurisdictions. The Data Reporting Tools employ the following steps to arrive at achieved densities:
 - 2.1. Jurisdictions input parcel- and plat-level data on individual developments that occurred during the Review and Evaluation Period. The following details are required for each permit or plat record in order to calculate achieved densities:
 - Zoning designation and jurisdiction
 - Development type (single family, multifamily, commercial, industrial, or mixed use)
 - Gross site area
 - Portions of sites to be removed from buildable area in cities and UGAs (critical areas, rights-of-way, other infrastructure, and other land for public purposes)
 - New residential units
 - Total building square footage for commercial, industrial, and mixed use development
 - Year built
 - 2.2. The tool calculates the net area on sites that have been developed in each zoning designation by use in cities and UGAs. This requires adding the gross area, in acres, and subtracting acreage dedicated to critical areas, rights-of-way, other infrastructure, and public purposes.
 - 2.3. The tool adds the amount of development (units for residential uses or floor area for commercial and industrial uses) in each zoning designation by use.

- 2.4. Finally, achieved densities by use are calculated for each zoning designation using the calculations shown in **Exhibit 2**. Achieved densities are also calculated for each UGA.

Exhibit 2. Basic Achieved Density Calculations by Development Type

Development Type	Achieved Density Calculation
Residential - Single Family and Multifamily	Units / Net Acre (cities and UGAs) Units / Gross Acre (non-UGAs)
Commercial and Industrial	Floor Area / Net Site Area (cities and UGAs) Floor Area / Gross Site Area (non-UGAs)

Note: For mixed-use development, the site area is apportioned between residential and commercial uses based on the share of building square footage dedicated to each use.

3. The tool also calculates the portion of land dedicated to rights-of-way and infrastructure in cities and UGAs, to be applied in **Section 4.2.**, “Deductions for Future Infrastructure”.

4.2. Assemble Net Developable Land Inventory

The Net Developable Land Inventory for UGAs (including land within city limits) and UGA Reserves consists of all land which, as of April 1, 2021, is considered vacant, partially used, or under-utilized and which is expected to be available for development and served by infrastructure during the current planning period. This process includes the following steps, described in detail in the following sections:

- **Compile Gross Developable Land Inventory:** Identify parcels zoned for residential and employment development which are considered vacant, partially used, or under-utilized.
- **Deduct Critical Areas and Other Areas with Reduced Development Potential:** Remove the parcels and portions of parcels which are impacted by critical areas or other issues that, it is assumed, will not be developable during the planning period.

- **Deduct Land for Future Public Uses:** Remove any land already planned for future capital facilities and quasi-public uses.
- **Infrastructure Gaps:** Determine if there are infrastructure gaps that would prevent urban density development on vacant, partially used, and/or under-utilized lands over the remainder of the planning period.
- **Deduct Land for Future Infrastructure:** Remove any land required for future infrastructure.
- **Local Jurisdiction Review:** Work with jurisdictions to review and adjust the developable land inventory.
- **Deduct Market Factor:** Apply a reasonable market factor to account for lands that are not likely to be available for development because of land owner preferences or other reasons not accounted in the previous deduction steps.
- **Calculate Net Developable Land:** The result once the market factor has been applied.

Compile Gross Developable Land Inventory

The purpose of this step is to identify all lands within UGAs, including lands within city limits, that are considered vacant, partially used, or under-utilized. These lands comprise the Gross Developable Land Inventory.

Data Needed

- GIS shapefile of Whatcom County Assessor's Office countywide parcel data. Shapefile must include the following attributes for each parcel:
 - Assessed improvement value
 - Assessed land value
 - GIS acreage per parcel
- GIS shapefiles from cities and the County including:
 - Boundaries for all UGAs and incorporated cities
 - Zoning for all jurisdictions (and city future zoning or land use designations for UGAs).
 - Critical areas deduction acreage per parcel
 - Dividing of split-zoned and split-jurisdiction parcels
- Compiled recent plat and permit activity data (gathered per **Section 3**).

Steps

1. Identify and remove parcels not classified for residential, commercial, or industrial uses.
2. Identify and remove parcels less than 2,400 square feet in size, unless specifically identified by the jurisdiction as developable land.
3. Identify and code parcels as vacant, partially used, or under-utilized. Use GIS processes and database queries to apply the definitional thresholds listed in **Exhibit 3**.

Exhibit 3. Criteria for Classifying Developable Land

Category	Parcel Zoning	Criteria for Classification
Vacant	All Residential, Commercial, Industrial	Improvement value less than \$10,000
Partially Used	Single Family	Parcel size greater than three (3) times minimum allowed under zoning. ¹ This may be lowered to between two (2) and three (3) times the minimum allowed under zoning at the discretion of the jurisdiction.
		Jurisdictions may propose to exclude parcels with current assessed improvement value > 93 rd percentile ² of jurisdiction improvement values if the parcel size is less than five acres
	Multifamily, Commercial, Industrial	Ratio between improvement value and land value less than 1.0 ³ Jurisdictions can identify existing development, such as gas stations or uses that preclude significant development on the site,

¹ This threshold accounts for parcels less than three times the minimum size that due to parcel configuration, location of existing development on the site, or other factors are not likely to be divided to their maximum potential.

² The option to exclude parcels with high improvement values is meant to account for large single family parcels with high-end homes that are unlikely to be subdivided. The 93rd percentile threshold was determined by analyzing the distribution of housing values in the County and selecting a reasonable value that could be applied across all jurisdictions.

³ The Department of Commerce's Buildable Lands Guidelines (2018) state ". . . When the value of the land is near or higher than the value of the improvement on the land, the property is generally going to be more favorable for redevelopment. . ." (p. 34).

Category	Parcel Zoning	Criteria for Classification
		as fully developed when the ratio of improvement value to land value is less than 1.0. If identified as fully developed, the parcel will be subtracted from the inventory.
Under-Utilized	Single Family	N/A
	Multifamily	Parcels occupied by nonconforming single-family residential uses
	Commercial and Industrial	Parcels occupied by nonconforming residential uses or other nonconforming uses.

4. Cross-reference parcels classified as vacant, partially used, or under-utilized with local permit and plat data. Identify any parcels with multifamily permits, commercial/industrial permits and binding site plans, and preliminary and final plats that have not yet been constructed. This includes master planned projects that have not been completely built out but have received approval, as determined by the applicable jurisdiction, for a certain number of dwelling units or commercial/industrial square footage. Only projects that have received preliminary approval will be included in this list. These parcels should be set aside and classified as “pending”, but not included in the gross developable land inventory. Pending capacity will be added to the final land capacity total in **Section 4.3**.
5. Make adjustments for mobile homes. The primary concern is that some mobile home parks may show up as vacant if the mobile home value is not captured in the Assessor’s improvement value data. Staff will use aerial imagery to truth check developable parcel designations in their respective jurisdictions against known areas with mobile home developments. If mischaracterized mobile home parks are identified, manually adjust the developable category designation in the land inventory database.
6. Partially used parcels in commercial and industrial zones may be split into fully developed and vacant portions for purposes of land capacity analysis.
7. Following this process, the remaining parcels classified as vacant, partially used, or under-utilized constitute the Gross Developable Land Inventory.

Deduct Critical Areas and Other Areas with Reduced Development Potential

In the next step of the process, subtract all critical areas and other lands with reduced development potential from the Gross Developable Land Inventory. Each city will be responsible for determining and making spatial deductions from the developable land supply within their city limits and the associated UGA (the County may provide assistance for those jurisdictions that do not have in-house GIS capabilities). The County will be responsible for determining and making spatial deductions from the developable land supply within non-city UGAs.

Data Needed

- **Output from previous step:** Shapefile of parcels in Gross Developable Land Inventory.
- Critical areas GIS data relating to wetlands, rivers, streams, steep slopes, geologically hazardous areas, floodplains.
- Local critical area and shoreline buffers, identifying areas to be removed from buildable capacity.
- Information relating to naturally occurring asbestos.

Steps

1. Each jurisdiction will include the following types of critical areas in the analysis:

Wetlands

The County and cities will use wetland inventories and buffers from their respective jurisdictions, as described below.

Streams and Rivers

The County and cities will use stream inventories and buffers from their respective jurisdictions, as described below.

Steep Slopes and Hazard Areas

The County and cities will subtract all areas with slopes greater than 35% or a percentage consistent with the jurisdiction's critical areas ordinance. Land impacted by alluvial fan hazard areas, where regulations restrict land division, will also be subtracted. For city UGAs, other hazard areas identified by the city may be subtracted. For non-city UGAs, other hazard areas identified by the County may be subtracted.

Floodplain

All land in the floodway will be removed from the inventory. All lands within 100-year floodplains of non-city UGAs will also be removed

from the inventory. All lands within floodplains of city UGAs will be removed from the inventory where regulations would prohibit or significantly limit development, as determined by the applicable City.

Naturally Occurring Asbestos

Land with documented naturally occurring asbestos will be removed from the inventory.

Other Undevelopable Areas

Deduct other areas, such as mitigations sites and old dump sites, that are not available or suited to development.

2. Deduct critical areas and other areas with reduced development potential for residential parcels. Critical area buffers will be deducted from the residential land supply unless the jurisdiction, based upon their knowledge of local codes and circumstances, determines that some of the buffers should be included in the residential land supply. For city UGAs, buffer distances will be based on city critical area regulations. For non-city UGAs, buffer distances will be based on County critical area regulations.
3. Deduct critical areas, critical area buffers, land use buffers and other areas with reduced development potential for commercial and industrial parcels. For city UGAs, buffer distances will be based on city critical area regulations. For non-city UGAs, buffer distances will be based on County critical area regulations.
4. The resulting selection of developable parcels unconstrained by these areas will be used as the land base to calculate deductions for future public uses, future infrastructure and market factors.

Deduct Land for Future Public Uses

Next, parcels that are intended for public uses should be deducted from the developable land totals, including schools, police and fire stations, recreation facilities and open space.

Data Needed

- **Output from previous step:** Shapefile of parcels in Gross Developable Land Inventory with critical areas removed.
- “Planned Capital Facilities” sections from Data Reporting Tools.
- Capital facilities plans for public facilities (water, sewer, stormwater, parks, schools) and public services (police, fire), particularly if they include plans for land usage and property acquisition.

Steps

1. Review “Planned Capital Facilities” from the jurisdiction’s capital facility plans and Data Reporting Tool. Remove parcels identified for future capital facilities from the inventory. This should include any property already owned by public entities and designated for future expansion as well as any known public uses in master planned areas.
2. Identify any additional acreage for future capital facility purposes that should be deducted from the inventory that is not yet associated with specific parcels. Deduct these acreage totals manually from the inventory if within a jurisdiction’s or special purpose district’s proposed or approved capital facilities plan.
3. If appropriate, analyze ownership information for parcels in the developable land inventory and exclude those owned by public entities that will not likely accommodate housing or employment. This step may not be necessary if future public use parcels were already excluded when the first residential, commercial, and industrial parcels were selected.
4. In order to account for other future quasi-public uses (e.g. community centers, daycare centers, churches, etc.) apply a five percent (5%) deduction on developable land. The deduction should be applied to the Developable Land Inventory after critical areas are removed but before any other deductions for infrastructure or market factors.
5. During the local jurisdiction review process, adjustments to the 5% other quasi-public uses deduction may be considered to account for local conditions and data availability.

Infrastructure Gaps

Assessment of land suitable for development must include identification of infrastructure gaps (including transportation, water, sewer, and stormwater) that could prevent assigned densities from being achieved. Local jurisdictions should be able to rely on adopted capital facility plans when completing their assessment of land suitable for development (*State Buildable Lands Guidelines*, 2018, p. 31).

Data Needed

- **Output from previous step:** Shapefile of parcels in Gross Developable Land Inventory with previous deductions.
- Capital facility plans.

Steps

1. Each jurisdiction will review capital facilities plans to determine whether developable land in the UGA will likely be served by existing or planned infrastructure (including transportation, water, sewer, and stormwater facilities) within the remaining portion of the planning period. In conducting this review, the jurisdiction will consider whether significant delays, funding lapses, or difficulties acquiring sufficient land for capital facilities will prevent the service provider from supplying planned capital facilities to developable land within the planning period.
2. If the jurisdiction determines that no infrastructure gaps exist because there likely will be adequate infrastructure to serve the developable land in the UGA within the planning period, this finding will be documented in the Buildable Lands Report.
3. If the jurisdiction determines that infrastructure gaps exist because there will not likely be adequate infrastructure to serve certain developable parcels in the UGA, the jurisdiction will:
 - a. Document the infrastructure gaps, including a map showing the area(s) with the infrastructure gaps. This documentation will be incorporated into the Buildable Lands Report.
 - b. Identify the capital facility plans that need to be updated to address the infrastructure gaps and the timeline for updating these capital facility plans; and
 - c. Identify areas already in capital facility plans that are waiting on developer infrastructure improvements and differentiate from gaps in publically provided infrastructure; and
 - d. Determine if the planned capacity of the land subject to infrastructure gaps should be reduced while the infrastructure gaps are being addressed. Determine, as appropriate, how much the planned capacity should be reduced for the remainder of the planning period (2021-2036).

Deduct Land for Future Infrastructure (Rights-of-Way and Other Development Requirements)

Deductions for future infrastructure, including rights-of-way (ROW) and other development requirements, will be based on the percentage of land dedicated to infrastructure in recent plats, permits, and developments. This percentage is calculated in the Data Reporting Tool, and is calculated after critical areas and land for future public uses are removed.

If there is insufficient data to calculate deduction for infrastructure, then standard deductions based on reasonable assumptions may be used.

Data Needed

- **Output from previous step:** Shapefile of parcels in Gross Developable Land Inventory with critical areas and future public uses removed.
- Results from recent development activity analysis – percentage of developable area (minus critical areas, associated open space and public uses) devoted to ROWs and other infrastructure.

Steps

1. Summarize acreage of developable land minus critical area and public use deductions by zoning designation for each UGA.
2. Analyze recent development activity to determine infrastructure percentage deduction factors by UGA (see **Section 4.1**).
3. Apply these deduction factors to the inventory of developable land unconstrained by critical areas to calculate the acreage deduction for infrastructure. The infrastructure deduction may be applied by UGA or by specific zoning designation depending on the quantity and quality of recent development activity data.

Local Jurisdiction Review

Local jurisdictions will review developable parcel designations and other deductions through communications and/or meetings, if necessary, between County and City staff. The number of communications and/or meetings will depend on the complexity of the jurisdiction's land supply issues.

Data Needed

- **Output from previous step:** Shapefile of parcels in Gross Developable Land Inventory with critical areas, future public uses, and future infrastructure removed.
- All other geospatial data used up to this point.

Steps

1. The County will prepare maps for each UGA showing vacant, partially used, and under-utilized parcels overlaid on aerial imagery. Some larger UGAs may need to be presented in multiple maps.
2. The maps, along with tabular parcel data underlying the maps will be sent to each city for review. If appropriate, County staff will meet with city staff to discuss issues such as any adjustments to developable land classification, critical areas, infrastructure deductions, public use deductions, assumed density assumptions, market factor assumptions, and other jurisdiction-specific assumptions described elsewhere in this methodology.

The range of additional issues that can be considered during the local jurisdiction review process include but are not limited to the following:

- Critical areas not identified through GIS analysis
- Known interest in development or redevelopment of particular parcels/areas
- Parking and outdoor storage associated with adjacent uses
- Other associated/related uses spanning multiple parcels
- Irregular parcel shapes making development unlikely

Deduct Market Factor

The market factor is a final deduction to account for lands assumed not to be available for development during the remainder of the planning period. It is expected that over the remaining 20-year planning period some lands will be kept off the market due to speculative holding, land banking, and personal use, among other reasons.

The market factor assumptions referenced below were used in the *Whatcom County Land Capacity Analysis Detailed Methodology* (2015). Whatcom County and the cities are undertaking additional analysis to develop more refined local market factors, as described in **Appendix B**. Market factors used by other buildable land counties in the past are set forth in the State's 2018 *Buildable Lands Guidelines* (p. 49).

Data Required

- **Output from previous step:** Shapefile of parcels in Gross Developable Land Inventory with critical areas, future public uses, and future infrastructure removed, as reviewed and approved by all jurisdictions.
- Market factor assumptions.

Steps

1. Summarize acreage in the Developable Land Inventory by zoning designation, by land use (residential and commercial/industrial) and developable land designation (vacant, partially used, and under-utilized). This acreage should represent developable land after critical areas, infrastructure, and public uses have been deducted.
2. The base market factors listed below are consistent with those used in the 2016 UGA Review LCA, and accepted practice elsewhere in western Washington. During the local jurisdiction review process, the base market factors may be adjusted to account for local conditions

and future plans. If market factors are adjusted, the final overall average market factor for a UGA should not exceed 25%, except where the jurisdiction has well-documented support for why a larger market factor is appropriate.

Start with the following default deduction factors to the developable acreage for each zoning designation:

- For vacant residential and commercial/industrial zones: 15% market factor
 - For partially used and under-utilized residential and commercial/industrial zones: 25% market factor
3. Use the “Analysis Method” steps in Appendix B (p. 74) to determine whether to use the default market factors or adjust these market factors.
 4. As a reference point, the overall average market factor for all developable land should be calculated for each UGA (total acres deducted based on market factor percentage divided by total acres in the Developable Land Inventory after critical areas, infrastructure, and public uses have been deducted).
 5. A market factor may be applied to master planned projects by the jurisdiction.

Calculate Net Developable Land

After applying the market factor, the final acreage totals by zoning designation and UGA represent the updated Net Developable Land Inventory – the land expected to be available to accommodate future population and employment over the remaining planning period.

4.3. Estimate Population and Employment Capacity

In this step, Net Developable Land Inventory is converted into population and employment capacity. The final product is an estimate of the number of people and employees that can be accommodated in each UGA on developable land. This process includes the following steps, described in detail in the following sections:

- **Determine Assumed Future Densities:** Use achieved densities (**Section 4.1**) as the baseline assumed densities for future development in the UGA over the remaining portion of the current 20-year planning period. If there is little or no data on achieved densities,

or the achieved densities are clearly not reflective of future development that is anticipated in the UGA then, based on a review of achieved densities in comparable areas and other analysis, develop assumptions for future development densities by UGA and land use.

- **Determine Population Capacity:** Apply residential density assumptions to the residential Net Developable Land Inventory to estimate current capacity for new residential development in UGAs and UGA Reserves.
- **Determine Employment Capacity:** Apply employment development density assumptions to the commercial and industrial Net Developable Land Inventory to estimate current capacity for new commercial and industrial development. Based on employee densities developed in **Section 4.1**, translate capacity for physical space into capacity for employees.

Determine Assumed Future Densities

The purpose of this step is to select appropriate assumed densities that are supported by analysis as being representative of how development might occur during the remainder of the planning period. Per *RCW 36.70A.215(3)(a)*, “zoned capacity of land alone is not a sufficient standard to deem land suitable for development or redevelopment within the 20-year period”.

RCW 36.70A.215(3) requires local jurisdictions to determine actual densities and use these densities to determine the amount of land needed for growth over the remaining portion of the 20-year planning period used in the most recently adopted comprehensive plan. For Whatcom County, the 20-year planning period in the adopted comprehensive plan extends through the year 2036. Achieved densities, as calculated in **Section 4.1**, serve as the basis for future densities and should be used for assumed future densities unless there is a justifiable reason why they are not appropriate. If there is insufficient data for a specific area, the jurisdiction may use achieved densities from comparable areas, as indicated below:

- Within city limits, the city will determine assumed densities;
- Within a city UGA, the city and County will collaboratively determine assumed densities; and
- Within a non-city UGA, the County will determine assumed densities.

If alternate future densities are used, the rationale for deviating from achieved densities must be clearly stated in the Buildable Lands Report (see *State Buildable Lands Guidelines*, 2018, p. 40).

Determine Population Capacity

This section describes how to derive future population growth capacity from the Net Developable Land Inventory in residential zones and the residential portion of mixed-used zones.

Data Needed

- The Net Developable Land Inventory of residential and the residential portion of mixed-use zones calculated under **Section 4.2**.
- Assumed future densities for residential and mixed-use zones.
- Whatcom County Assessor's Office data on numbers of dwelling units on partially used and under-utilized parcels.
- Parcels with pending residential capacity identified in **Section 4.2**.
- Data from the Washington State Office of Financial Management (OFM) and/or the US Census on occupancy rates and average household sizes.

Steps

Determine Total Dwelling Unit Capacity by Zoning Designation

1. Multiply residential acres from the Net Developable Land Inventory in each zoning designation by the assumed density (dwelling units/net acre) for each zoning designation. Only the residential portion of the mixed use acres will be included in this calculation. The result is the total dwelling unit capacity available in each zone before accounting for existing development on partially used and under-utilized parcels.
2. Remove existing units on partially used and under-utilized parcels by zoning designation from the totals from the previous step so that existing units are not counted as part of partially used or under-utilized parcel capacity.
3. In **Section 4.2**, parcels with pending developments were set aside. These parcels included preliminary or final plats, permits, and binding site plans for developments that have received preliminary approval but have not yet been constructed. Master planned projects that have not been completely built out but have received approval for a certain number of dwelling units are also included.

The estimated capacity in these developments is more accurate than calculated theoretical capacity. Summarize total dwelling units in these pending developments by zone. Add these units to subtotal dwelling units from Step 2. The output will be total dwelling units of capacity available in each zone.

Calculate Total Occupied Dwelling Unit Capacity by Zoning Designation

1. Select occupancy rate assumptions for each UGA by using data from OFM and/or the US Census.⁴
2. Multiply the total dwelling units of capacity in each zoning designation by selected occupancy rate assumptions. The output will be total potential occupied dwelling units in each zone.

Calculate Total Population Capacity by UGA

1. Select average household size assumptions for each UGA by using data from OFM and/or the US Census.
2. The local jurisdiction will categorize each zoning designation as either a single family zone or multifamily zone. The distinction between single family and multifamily zones is important because there are different occupancy rates and average household sizes for single family and multifamily development.
3. Multiply total occupied dwelling units in the single family and multifamily categories in each zone by average household size assumptions for these categories. Separately calculate the single family population capacity and the multifamily population capacity. Combine the single family and multifamily population capacities to obtain the total population capacity within each UGA.

Determine Employment Capacity

This section describes how capacity to accommodate future employment growth is derived from the Net Developable Land Inventory for commercial and industrial zones and the commercial portion of mixed-used zones.

Data Needed

- The Net Developable Land Inventory of commercial, industrial, and mixed-use zones (see **Section 4.2**).
- Assumed Floor Area Ratio (FAR) values for future development in commercial, industrial, and mixed-use zones.
- Assumed square feet per employee (FTE) for commercial or industrial space (employment density).
- Whatcom County Assessor's Office data for partially used and under-utilized parcels.

⁴ Seasonal housing is considered vacant according to Census definitions. These housing units are not included in the occupied housing unit category and are not folded into Census calculations of average household size.

- Parcels with pending commercial or industrial capacity identified in **Section 4.2.**

Steps

Determine Total Building Square Footage Capacity by Zone

1. Multiply commercial and industrial acres from the Net Developable Land Inventory in each zone (converted to square feet) by the assumed FAR for each zone. Only the commercial and industrial portions of the mixed use acres will be included in this calculation. The output will be the total building square footage capacity available in each zone before accounting for existing development on partially used and under-utilized parcels.
2. Summarize total existing commercial and industrial building square footage on partially used and under-utilized parcels by zone. Subtract this square footage from the totals from the previous step so that existing buildings are not counted as part of partially used or under-utilized parcel capacity.
3. In **Section 4.2**, parcels with pending developments were set aside. These parcels included commercial and industrial permits or binding site plans for developments that have received preliminary approval but have not yet been constructed. Master planned projects that have not been completely built out but have received approval for a certain amount of commercial/industrial square footage are also included. The estimated capacity in these developments is more accurate than calculated theoretical capacity. Summarize total commercial and industrial building square footage in these pending developments by zone. Add this square footage to the totals from Step 2. The output will be total commercial and industrial square footage capacity available in each zone.

Determine Total Occupied Square Footage by Zone

1. Multiply the total square footage capacity in each zone by a 95% occupancy rate assumption. The occupancy rate assumption can be adjusted based on current and accurate data provided by local jurisdictions (e.g. real estate market reports). The output will be total potential occupied commercial and industrial square footage in each zone.

Determine Total Employment Capacity by UGA

1. Aggregate the occupied commercial and industrial square footage capacity by zone into the two categories used in the future

employment allocation process: Commercial and Industrial. **Exhibit 3** in **Section 7** provides definitions for each category by North American Industry Classification System (NAICS) code.

2. Determine employment density (square footage of floor-space per employee) assumptions for future commercial and industrial development. Employment density will be based upon one of the following:
 - a. The employment density recommended by the local jurisdiction, provided that their recommendation is based upon achieved employment densities or other relevant data.
 - b. Employment densities derived from the City of Bellingham's *Technical Memo Estimating Square Feet Per Job for Commercial and Industrial Lands in Whatcom County* (October 20, 2020), which are shown in Exhibits 1.A and 1.B.
3. Divide the total occupied commercial and industrial square footage in each category by the employment density assumptions. The final output will be total employment capacity within each UGA.

4.4. Evaluate Land Capacity

The final step is to evaluate whether there is currently enough land capacity in UGAs to accommodate projected growth through the remainder of the current 20-year planning period (2021-2036). This includes the following steps:

- **Compare Population Capacity to Remaining Projected Growth:** Compare the population growth capacity estimated in **Section 4.3** to the remaining projected population growth. Identify any inconsistencies.
- **Compare Employment Capacity to Remaining Projected Growth:** Compare the employment growth capacity estimated in **Section 4.3** to remaining projected growth in employees. Identify any inconsistencies.

Compare Population Capacity to Remaining Projected Growth

This section describes how to determine if there is sufficient capacity in each UGA to accommodate remaining population growth in the current 20-year planning period.

Data Needed

- Population growth estimates by UGA from 2016-2021 calculated based upon building permits.
- Current 20-year population projections by UGA.
- Current population capacity by UGA, as calculated in **Section 4.3**.

Steps

1. Subtract the population growth estimates (2016-2021) by UGA from the current 20-year population growth projections to determine remaining growth to be accommodated in each UGA (2021-2036). The Data Reporting Tool performs this calculation.
2. Compare remaining projected population growth to be accommodated (from Data Reporting Tool) to current population growth capacity for each UGA. This calculation is accomplished in the Suitable Land Tool.
3. If remaining projected growth is greater than current capacity, determine if reasonable measures are required. This process is described in **Section 5.2**.

Compare Employment Capacity to Remaining Projected Growth

This section describes how to determine if there is sufficient capacity in each UGA to accommodate remaining employment growth in the current 20-year planning period.

Data Needed

- Employment growth estimates by UGA from 2016-2021 calculated based upon building permits.
- Current 20-year employment projections by UGA.
- Current employment capacity by UGA, as calculated in **Section 4.3**.

Steps

1. Subtract the employment growth estimates (2016-2021) by UGA from the current 20-year employment growth projection to determine remaining growth to be accommodated in each UGA (2021-2036). The Data Reporting Tool performs this calculation.
2. Compare remaining projected employment growth to be accommodated (from Data Reporting Tool) to current employment growth capacity for each UGA. This calculation is accomplished in the Suitable Land Tool.
3. If remaining projected growth is greater than current capacity, determine if reasonable measures are required. This process is described in **Section 5.2**.

5. REPORTS AND IMPLEMENTATION

5.1. Dispute Resolution Methods

Whatcom County's procedures for resolving disputes between jurisdictions are provided in Countywide Planning Policies Q.7 and R. These methods are intended to address resolving any dispute related to implementing the Countywide Planning Policies, including disputes related to data collection and analysis for the Buildable Lands Program.

5.2. Reasonable Measures

When Reasonable Measures are Required

The State's Buildable Lands Guidelines (2018) includes a section entitled "When Are Reasonable Measures Necessary?" This section states:

The RCW and the WAC do not provide specifics regarding when reasonable measures are required . . . RCW 36.70A.215(1)(b) describes reasonable measures as actions to reduce differences between planned and realized growth. This implies that an analysis to determine whether reasonable measures are needed is required when:

- *Planned densities are not being achieved;*
- *There is insufficient capacity to accommodate the remaining portion of the planning period; and/or*
- *Actual development patterns are inconsistent with growth and development assumptions in the county-wide planning policies and/or comprehensive plan (p. 43).*

If planned densities are not being achieved, there is not sufficient capacity to accommodate remaining projected population and/or employment growth, or development patterns are not occurring as planned, the County and relevant jurisdictions should work together to determine if reasonable measures are necessary to address the issue.

First, the County and cities should consider why the issue has occurred. This includes reviewing County and/or city development assumptions, targets, and objectives contained in the Countywide Planning Policies, County Comprehensive Plan, and/or city comprehensive plans (*RCW 36.70A.215(1)(b)*). There are cases where reasonable measures are not required, such as when an economic recession occurs during the evaluation period, or if planned infrastructure development will make up for identified shortfalls in the future (*State Buildable Lands Guidelines*, 2018, p. 42). The County and cities should work together to establish processes for

determining when reasonable measures are required. Ultimately, each jurisdiction will individually perform the analysis and determine whether reasonable measures are required.

If this analysis results in a decision that reasonable measures are necessary, the County and cities should work together to identify possible actions, other than expanding UGAs, to reduce the difference between planned and achieved growth. Where appropriate, discussion regarding such actions (possible reasonable measures) may be incorporated into the Buildable Lands Report. The reasons why reasonable measures were deemed necessary or not necessary, and the process used to make these decisions, should be clearly documented in the County and city resolutions/ordinances adopting the Buildable Lands Report.

Selecting Reasonable Measures

Reasonable measures should, if necessary, be selected by the jurisdiction based on the nature of the inconsistency that has occurred. The measures should be reasonably likely to increase consistency during the succeeding review and evaluation period.

Adopting Reasonable Measures

Reasonable measures must be adopted, as applicable, into individual County and city comprehensive plans and implementing regulations.

Tracking Performance

Jurisdictions should track the performance of adopted reasonable measures and share this information with the County as part of the data reporting process. The County and cities will collaborate to determine appropriate methods for tracking performance, and document results in future Buildable Lands Reports.

5.3. Buildable Lands Report Structure

The Buildable Lands Report should include the following content:

- **Executive Summary:** High level overview of remaining projected growth to be accommodated and results from analysis.
- **Introduction:** Introduction to the document's purpose and content, with background on regulatory framework and local process.
- **Policy Framework:** Overview of Countywide Planning Policies, population allocations, and employment allocations.

- **Methods:** Overview of the analysis process and major assumptions, with reference to this Methodology for full detail.
- **Countywide Findings:** Summarize population & employment growth, development activity, planned and achieved densities, and land suitable for development.
- **Jurisdictional Profiles:** Provide detailed information relating to achieved densities, assumed densities, land supply, and land capacity for the 10 UGAs.
- **Infrastructure Gaps:** Each jurisdiction will document any infrastructure gaps in the UGA, including a map showing the area(s) with the infrastructure gaps. If there are infrastructure gaps, the jurisdiction will:
 - Identify the capital facility plans that need to be updated to address the infrastructure gaps and the timeline for updating these capital facility plans; and
 - Identify areas already in capital facility plans that are waiting on developer infrastructure improvements and differentiate from gaps in publically provided infrastructure; and
 - Determine if the planned capacity of the land subject to infrastructure gaps should be reduced while the infrastructure gaps are being addressed.
 - Determine, as appropriate, how much the planned capacity should be reduced for the remainder of the planning period (2021-2036).
- **Development Regulations:** Each jurisdiction will evaluate development regulations adopted in the review period (2016-2021) that could prevent assigned densities from being achieved or impact the quantity of land suitable for development in the remainder of the 20-year planning period (2021-2036).
- **Reasonable Measures:** If necessary, this section should identify potential reasonable measures that may be taken based on findings from this report. The County and city resolutions/ordinances adopting the BLR will document each respective jurisdiction's determination of whether or not reasonable measures are required. Reasonable measures, if required, must be adopted by the jurisdiction by the June 2025 deadline for adopting comprehensive plan and development regulation updates (RCW 36.70A.215(2)(d)). In future Buildable Lands Reports, this section should also report on the performance of any measures implemented previously.

6. LAND CAPACITY ANALYSIS

6.1. Relationship Between BLR and LCA

The Buildable Lands Report (BLR) **looks back** to compare adopted development assumptions against actual development, and based on a review of the achieved densities and the amount of development that has taken place, determines if there is still sufficient capacity to accommodate growth through the remainder of the current planning period (through the year 2036). This analysis is performed between comprehensive plan updates, and is intended to evaluate the performance of the current comprehensive plans and surface any capacity issues that may need to be addressed in the next comprehensive plan updates.

The Land Capacity Analysis (LCA) **looks forward** to determine if there is sufficient capacity to accommodate new 20-year growth projections (through the year 2045) in advance of the next comprehensive plan updates. Under state law, the LCA is used to inform updates of County and city comprehensive land use plans and development regulations required by *RCW 36.70A.130(1)* and the review of Urban Growth Areas required by *RCW 36.70A.130(3)*.

While the BLR and LCA serve different statutory purposes and use different planning horizons, the methods and data sources required are very similar.

7. DEFINITIONS

Land Use Categories

Mixed-use: Developments incorporating both residential and non-residential uses.

Residential: Includes single-family and multifamily development.

Commercial: Includes the commercial and retail uses listed in **Exhibit 3** below.

Industrial: Includes the industrial uses listed in **Exhibit 3** below.

Exhibit 3. Suggested Industry Classifications for Employment Allocation Process

Commercial	Industrial
Accommodations (NAICS 721)	Construction (NAICS 23)
Administrative and Support and Waste Management and Remediation Services (NAICS 56)	Manufacturing (NAICS 31-33)
Arts, Entertainment, and Recreation (NAICS 71)	Transportation and Warehousing (NAICS 48-49)
Educational Services (NAICS 61)	Utilities (NAICS 22)
Finance and Insurance (NAICS 52)	
Information (NAICS 51)	
Healthcare and Social Assistance (NAICS 62)	
Management of Companies and Enterprises (NAICS 55)	
Other Services (NAICS 81)	
Professional, Scientific, and Technical Services (NAICS 54)	
Public Administration (NAICS 92)	
Real Estate and Rental and Leasing (NAICS 53)	
Food Service and Drinking Places (NAICS 722)	
Retail Trade (NAICS 44-45)	

Note: NAICS stands for North American Industry Classification System.

Development Status Categories

Vacant: Property with little or no building improvements (see **Exhibit 3** for detailed criteria).

Under-Utilized: Property zoned for a more intensive use than that which currently occupies it, such as a single-family home on commercially zoned land (see **Exhibit 3** for detailed criteria).

Partially Used: Property occupied by a use consistent with zoning but containing enough land to be further subdivided or developed without need of rezoning, such as a single-family home on a very large lot (see **Exhibit 3** for detailed criteria).

Fully Developed: Property that is assumed to have no further development capacity during the current planning period.

Other Terms

Achieved Density: Density of residential development (dwelling units per net acre for UGAs) and commercial/industrial development (net FAR for UGAs) achieved during the Review and Evaluation Period.

Assumed Density: Assumption of residential density (dwelling units per net acre) and commercial/industrial development (net FAR) expected on developable land over the remainder of the 20-year planning period.

Average Household Size: The average number of people per occupied housing unit (this is the same definition used by the U.S. Census).

City UGA: Land within a city and the associated unincorporated UGA.

Data Reporting Tool: Spreadsheet jurisdictions use to report development data required for the Buildable Lands analysis, calculate growth to be accommodated in the remaining portion of the 20-year planning period, and calculate achieved densities. Described in **Section 3.4**.

Developable Parcels or Developable Land: All parcels that are classified as vacant, partially used, or under-utilized.

Employment Density: The average amount of floor-space required to accommodate an employee. For the purposes of this study, expressed as square feet per employee.

Floor Area Ratio (FAR): Total building square footage divided by lot square footage.

Gross Developable Land Inventory: Total area of developable parcels before deductions for critical areas, infrastructure, public uses, and market factors are taken.

Market Factor: The estimated portion of developable land which will not be available for development or redevelopment during the current 20-year planning period. The market factor recognizes that not all developable land will be put to its maximum use because of owner preference, cost, stability, quality, and location.

Net Density: The density of development, expressed as either residential units per acre or commercial/industrial floor area ratio, calculated based on Net Developable Land Inventory.

Net Developable Land Inventory: Total area of developable parcels after deductions for critical areas, infrastructure, public uses, and market factors are taken into account.

Net Plat Area: Total area of plats after deductions for critical areas, infrastructure, and public uses are taken into account.

Net Site Area: Total area of commercial, industrial and multifamily development sites after deductions for critical areas, infrastructure, and public uses are taken into account. Site area will sometimes not be equal to parcel area (e.g. when multiple buildings are on one parcel).

Non-City UGAs: The Birch Bay, Columbia Valley, and Cherry Point UGAs.

Review and Evaluation Period: The period of time during which development activity will be reviewed for the Buildable Lands Report.

Suitable Land Tool: Spreadsheet jurisdictions use to determine the population and employment capacity of the current developable land inventory and compare this capacity to population and employment growth projections.

Unincorporated UGA: Any UGA or portion of a UGA that is not within city limits. Unincorporated UGAs are under the County's jurisdiction, but may be annexed by the adjacent city or incorporate in the future.

APPENDIX A. POTENTIAL REASONABLE MEASURES

The following table compiles examples of actual reasonable measures that have been utilized in other Buildable Lands counties and were referenced in the 2018 *Washington State Buildable Lands Guidelines*. This list is intended to provide context and does not represent every possible appropriate reasonable measure. Individual jurisdictions will determine what reasonable measure(s) to apply, depending on the specific circumstances of the jurisdiction and the issues it is experiencing.

Exhibit 1. Examples of Reasonable Measures Used in Buildable Lands Counties

Reasonable Measure	Explanation
Create Annexation Plans	In an Annexation Plan, cities identify outlying areas that are likely to be eligible for annexation. The Plan identifies probable timing of annexation, needed urban services, effects of annexation on current service providers, and other likely impacts of annexation.
Encourage Transportation- Efficient Land Use	Review and amend comprehensive plans to encourage patterns of land development that encourage pedestrian, bike, and transit travel. This policy is typically implemented at the development review level.
Environmental Review and Mitigation Built into the Sub area Planning Process	Building environmental review and mitigation into the sub area planning process can address key land use concerns at a broader geographic scale, streamlining review and approval of individual developments.
Urban Growth Area Management Agreements	Urban Growth Area Management Agreements define lead responsibility for planning, zoning, and urban service extension within these areas. The agreements exist between various government jurisdictions and specify jurisdiction over land use decisions, infrastructure provision, and other elements of urban growth.
Capital Facilities Investments	Give priority to capital facility projects (e.g., regional storm water facilities and sanitary sewers) that most support urban growth at urban densities. Provide urban services to help reduce sprawl development and maintain the edge of the urban growth boundary.

Economic Development Strategy	Include strategy for sustainable economic development in local comprehensive plan. This strategy could include: downtown revitalization program; incentives for development that meet local goals; transit and transportation system upgrades; enhancement of the natural resource base; an industrial needs assessment.
Phasing/tiering Urban Growth	Incorporate strategies in comprehensive plans and capital facilities plans to phase urban growth as a way to provide for orderly development and encourage infill ahead of “urban fringe” development.
Downtown Revitalization	Develop a strategy to encourage downtown vitality. Include techniques such as promoting mixed residential and commercial uses, reuse of existing buildings rather than tearing down and rebuilding, and alternative urban landscaping and infrastructure that encourage pedestrian use.
Multifamily Housing and Tax Credits	Provide tax incentives (e.g., property tax exemption program) for multiple-unit housing for targeted areas in urban centers.
Transfer/ Purchase of Development Rights	Develop a program to encourage the purchase or transfer of development authority in order to increase urban densities and decrease non-urban densities within UGAs.
Implement a program to identify and redevelop vacant and abandoned buildings	Many buildings sit vacant for years before the market facilitates redevelopment. This policy encourages demolition and would clear sites, making them more attractive to developers and would facilitate redevelopment.
Creative use of Impact Fees	Adjust impact fees so that lower fees are required in the UGAs than in rural areas, while still contributing to the cost of development within the urban area.
Develop or strengthen local brownfields programs	Local jurisdictions provide policies or incentives to encourage the redevelopment of underused industrial sites, known as brownfields. Incentives for redevelopment of brownfields such as expedited permitting, reduced fees or targeted public investments can be implemented through local zoning ordinances.

Require Adequate Public Facilities	Local jurisdictions require developers to provide adequate levels of public services, such as roads, sewer, water, drainage, schools, and parks, as a condition of development. (Requirement by Growth Management Act)
Promote Vertical Growth	Allow modifications to the building height restrictions in the Urban Growth Areas.
Accessory Dwelling Units	Accessory dwelling units provide another housing option by allowing a second residential unit on a tax lot.
Clustering	Clustering allows developers to increase density on portions of a site, while preserving other areas of the site. Clustering is a tool most commonly used to preserve natural areas or avoid natural hazards during development. Clustering can also be used in conjunction with increased density to preserve the aesthetic of less dense development while increasing actual density. It uses characteristics of the site and adjacent uses as a primary consideration in determining building footprints, access, etc.
Duplexes, Town homes, and Condominiums	Permit duplexes, town homes, and condominiums in both mixed-use and residential districts of UGAs.
Density Bonuses	Some communities allow bonus densities in certain areas as an incentive for achieving other community values such as affordable housing, mixed-use developments, infill, rehabilitating existing structures and open space preservation.
Higher Allowable Densities	Where appropriate (and supported by companion planning techniques), allow more housing units per acre.
Industrial Zones	Limit non-industrial uses in industrial zones. For example, require that any commercial use be sized to primarily serve the industrial needs in the zone. Preclude residential use unless it is accessory to the industrial use.

Minimum Density Requirements	Zoning ordinances can establish minimum and maximum densities in each zone to ensure that development occurs as envisioned for the community.
Mixed Use	Allow residential and commercial development to occur in many of the same buildings and areas within UGAs.
Small Lot/Cottage Housing	Allow or require small lots (5,000 square feet or less) for single-family neighborhoods within UGAs.
Allow Small Residential Lots	Allow a range of single-family lot sizes ranging from 3,600 to 9,600 square feet.
Transit- Oriented Development	Encourage convenient, safe and attractive transit-oriented development; including the possibility of reduced off street parking that could encourage more efficient use of urban lands.
Urban Centers and Urban Villages	Use urban centers and urban villages to encourage mixed uses, higher densities, inter- connected neighborhoods, and a variety of housing types that can serve different income levels.
Lot Size Averaging	This technique is similar to clustering. If the zoning ordinance establishes a minimum lot size, the land use designation is calculated based on the average size of all lots proposed for development, within the range required for urban density. Development proposals may create a range of lot sizes both larger and smaller provided the average lot size is within the range consistent with the designation.
Allow Co-Housing	Co-housing communities balance the traditional advantages of home ownership with the benefits of shared common facilities and connections with neighbors.
Encourage Infill and Redevelopment	This policy seeks to maximize use of lands that are fully developed or underdeveloped by making use of existing infrastructure and by identifying and implementing policies that improve market opportunities and reduce impediments to development in areas suitable for infill or redevelopment.

Mandate Maximum Lot Sizes	This policy places an upper bound on lot size and a lower bound on density in single-family zones. For example, a residential zone with a 6,000 sq. ft. minimum lot size might have an 8,000 sq. ft. maximum lot size yielding an effective net density range between 5.4 and 7.3 dwelling units per net acre.
Enact inclusionary zoning ordinance for new housing developments	Inclusionary zoning requires developers to provide a certain amount of affordable housing in developments over a certain size. It is applied during the development review process.
Zone areas by performance or building type, not by use	A local jurisdiction can alter its zoning code so that zones define the physical aspects of allowed buildings, not the uses in those buildings. This zoning approach recognizes that many land uses are compatible and locate in similar building types.
Develop Manufactured Housing	Adopt standards to ensure compatibility between manufactured housing and surrounding housing design standards.
Specific Development Plans	Work with landowners, developers, and neighbors to develop a detailed site plan for development of an area. Allow streamlined approval for projects consistent with the plan. This policy results in a plan for a specific geographic area that is adopted as a supplement or amendment to the jurisdiction's comprehensive plan.
Encourage developers to reduce off-street surface parking	This policy provides incentives to developers to reduce the amount of off-street surface parking through shared parking arrangements, multi-level parking, use of alternative transportation modes, particularly in areas with urban-level transit service.
Implement a process to expedite plan & permit approval in UGAs	Streamlined permitting processes provide incentives to developers. This policy would be implemented at the development review phase.
Narrow Streets / Reduce Street Width	Encourage or require street widths that are the minimum necessary to ensure that transportation and affordable housing goals can be achieved.

Concentrate critical services near homes, jobs, transit	This policy would require critical facilities and services (e.g., fire, police, hospital) be located in areas that are accessible by all people. For example, a hospital could not be located at the urban fringe in a business park.
Urban Amenities for Increased Densities	Identify and provide amenities that will attract urban development in UGAs and enhance the quality of life for urban residents and businesses.
Locate civic buildings in existing communities rather than in Greenfield areas	Local governments, like private builders, are tempted to build on greenfield sites because it is less expensive and easier. However, local governments can “lead by example” by making public investments in desired areas, or redeveloping target sites.
Urban Holding Zones	Use low intensity zoning in certain areas adjacent to or within the UGA where municipal services will not be available within the near future. (For example: Urban Reserve)
Mandate Low Densities in Rural Resource Lands	This policy is intended to limit development in rural areas by mandating large lot sizes. It can also be used to preserve lands targeted for future urban area expansion. Low-density urban development in fringe areas can have negative impacts of future densities and can increase the need for and cost of roads and other infrastructure.
Impose Restrictions on Physically Developable Land	The local jurisdiction places restrictions on the type of development that can occur on vacant land. Restrictions can vary in strictness, from no development to limited development. This policy is implemented through city limit or UGA boundaries.

Allow for alternative sanitary sewer systems in unincorporated UGAs	To ensure urban-level sewer or equivalent wastewater service in all UGAs for the 20-year planning horizon. New proposed policies would allow for alternative systems such as package plants, membrane systems and community drainfields in areas where other sewer provision is not financially feasible, provide significant benefit to aquifer recharge and would enable Kitsap County to monitor and maintain those facilities to ensure their long-term effectiveness.
Remove pre-planning allowances in UGAs	Development regulations have allowed subdivisions to “shadow plat” and show how urban densities can be achieved in the future and how sanitary sewer can be accommodated to serve all lots when fully developed. In the meantime, portions of the “shadow plat” can be developed with on-site septic systems.
Provide for regional stormwater facilities in unincorporated UGAs	To increase development feasibility on small and/or development constrained parcels. New policy would allow for funding and construction of regional stormwater treatment facilities in areas where individual on-site treatment facilities are not financially feasible.
Strengthen and amend policies to promote low impact development	Policies support clustered development with surface water features that allow for minimal site disturbance. This could allow for innovative infrastructure resulting in more efficient use of developable land.
Consolidated comprehensive plan land use designations	Will make it easier to rezone urban parcels in the future without the additional time and expense of a comprehensive plan amendment process.
SEPA Categorical Exemptions for Mixed Use and Infill Development & Increased Thresholds for SEPA Categorical Exemptions	To streamline the development review process and encourage more efficient development within existing UGA boundaries.

APPENDIX B. MARKET FACTOR WHITE PAPER

INTRODUCTION

Background and Purpose

Each county planning under Washington’s Growth Management Act must, in conjunction with the cities, estimate the capacity of its cities and urban growth areas (UGAs) to accommodate projected population and employment growth over a 20-year period. One major consideration to avoid overestimating capacity is to estimate how much developable land will not actually be available for development due to owner preferences, market support, and other circumstances. This adjustment is referred to as the “Market Factor”, and the use of a “reasonable” land market supply factor is a required component of a Review and Evaluation (“Buildable Lands”) Program under state law (*RCW 36.70A.215 (3)(b)(ii)*).

Whatcom County and the cities are now required to develop a Buildable Lands Program, including methods for a market factor. In addition, 2017 legislation introduced new considerations for developing a market factor for all Buildable Lands counties (*E2SSB 5254*). While local jurisdictions have been given broad guidance on how to interpret these considerations, they are granted discretion in how they approach their own analysis. The purpose of this white paper is to provide Whatcom County and the cities with recommendations for analysis to develop market factors that meet legal requirements, are consistent with best practices, and can be accomplished with local resources.

Methods

The recommendations in this report were informed by the following sources:

- Review of Growth Management Act, Washington Administrative Code, and the Department of Commerce’s 2018 *Review & Evaluation Program Buildable Lands Guidelines* (hereinafter “*Buildable Lands Guidelines*”).
- Review of methods used in other Washington Buildable Lands counties.
- Review of applicable data availability in Whatcom County.
- Interviews with staff from the Washington State Department of Commerce and other buildable land counties.

Organization of this Report

This report includes the following sections:

- I. **Statutory Requirements and State Guidelines:** Outlines legal requirements for the market factor under state law and potential approaches in the State's *Buildable Lands Guidelines*.
- II. **Comparative Approaches:** Describes how other Buildable Lands counties have developed market factors.
- III. **Approach to New Market Factor Considerations:** Discusses considerations in establishing market factors. Also clarifies which considerations will be addressed through other components of the Buildable Lands Methodology, as opposed to the market factor itself.
- IV. **Local Data Availability:** Identifies data sources required for common analysis methods and reviews coverage for Whatcom County.
- V. **Recommended Analysis Methods:** Recommends approach to the market factor, including overview of required resources.

I. STATUTORY REQUIREMENTS AND STATE GUIDELINES

The Review and Evaluation Program, also known as the Buildable Lands Program, was established in 1997 as an amendment to the Growth Management Act (RCW 36.70A.215; WAC 365-196-315). In 2017, the Washington Legislature approved the first major revision to the Buildable Lands Program with the passage of E2SSB 5254. To assist local governments in meeting the requirements of the Review and Evaluation Program, the State's *Buildable Lands Guidelines* were completed in 2018.

The Review and Evaluation Program calculations are intended to determine if a county and its cities are achieving urban densities and the amount of land needed to accommodate growth projections over the remaining portion of the current 20-year planning period. These calculations include a variety of population, employment, and development-related data. One component of this analysis, the Market Supply Factor, estimates the portion of developable land within an urban growth area that is likely to remain unavailable over a 20-year planning period and which should, therefore, be deducted from the final calculation of land area suitable for development and redevelopment. Documenting this calculation in buildable land analysis enables a community to avoid overestimating capacity by considering the unique local conditions that may impact buildable land capacity. The market factor is applied after deductions for critical areas, public uses, and infrastructure.

GMA Guidance on Buildable Lands and the Use of a Market Supply Factor (RCW 36.70A.215; WAC 365-196-315)

The Market Supply Factor adjustment to Buildable Lands has two primary references in the Revised Code of Washington (RCW) and two in Washington Administrative Code (WAC) specifically guiding UGA planning.

1. **RCW 36.70A.215(3)(b)(ii).** "Use of a reasonable land market supply factor when evaluating land suitable to accommodate new development or redevelopment of land for residential development and employment activities. The reasonable market supply factor identifies reductions in the amount of land suitable for development and redevelopment. . ."
2. **RCW 36.70A.110(2).** "...An urban growth area determination may include a reasonable land market supply factor and shall permit a range of urban densities and uses. In determining this market factor, cities and counties may consider local circumstances. Cities and counties have discretion in their comprehensive plans to make many choices about accommodating growth. . ."
3. **WAC 365-196-310(2)(e).** "The urban growth area may not exceed the areas necessary to accommodate the growth management planning

projections, plus a reasonable land market supply factor, or market factor. In determining this market factor, counties and cities may consider local circumstances. Cities and counties have discretion in their comprehensive plans to make many choices about accommodating growth. . .”

4. **WAC 365-196-310(4)(b)(ii)(F).** “The land capacity analysis may also include a reasonable land market supply factor, also referred to as the ‘market factor.’ The purpose of the market factor is to account for the estimated percentage of developable acres contained within an urban growth area that, due to fluctuating market forces, is likely to remain undeveloped over the course of the twenty-year planning period. The market factor recognizes that not all developable land will be put to its maximum use because of owner preference, cost, stability, quality, and location. If establishing a market factor, counties and cities should establish an explicit market factor for the purposes of establishing the amount of needed land capacity. Counties and cities may consider local circumstances in determining an appropriate market factor. Counties and cities may also use a number derived from general information if local study data is not available.”

The state statute and administrative code authorize use of a market supply factor in calculating buildable land. The State’s *Buildable Lands Guidelines* (2018) also say:

1. **Market Supply Factors are appropriate and can be distinct for both new development and redevelopment.** Market Supply Factor is, in effect, a valid consideration for vacant, partially utilized or under-utilized land in UGAs (such as already-developed properties that are identified as appropriate for higher-intensity redevelopment).
2. **Distinct Market Supply Factors are appropriate for employment land and activities.** Market Supply Factor reductions can and should also be made for commercial and industrial land, which typically have different, more income-oriented ownership intent than residential property ownership.
3. **Market Supply Factors can and should be distinct for different counties and cities.** Statute does not intend for there to be uniformity in Market Supply Factor determination by counties and cities statewide. Variation and distinct differences to reflect unique local conditions are expected and protected.
4. **Market Supply Factors can and should be distinct for Urban Growth Areas.** UGA Market Supply Factors should reflect fluctuating market forces that leave different parcels undeveloped for twenty years. More specifically, UGA Market Supply Factors should reflect owner preference, cost, stability, quality, and location as

determinants of unavailability for development that may likely differ from parts of cities and counties that have long been developed.

5. **Urban growth area Market Supply Factors can be based on generally available information**, including Market Supply Factor methodology from other cities and counties, instead of purely local data. Jurisdictions may study local UGA Market Supply Factor determinants or study and potentially utilize UGA Market Supply Factor determination information and methodology from elsewhere in Washington (p. 48).

Senate Bill (E2SSB) 5254: Elaboration on Market Supply Factor

E2SSB-5254 recognized that, while the market supply factors used by buildable lands communities were consistent with past practices, there were likely data collection improvements that could enhance accuracy. RCW 36.70A.217 required the State Department of Commerce to analyze and provide recommendations on the following considerations when developing their guidelines for local governments:

1. Infrastructure costs, including but not limited to transportation, water, sewer, stormwater, and the cost to provide new or upgraded infrastructure if required to serve development.
2. Cost of development.
3. Timelines to permit and develop land.
4. Market availability of land.
5. The nexus between proposed densities, economic conditions needed to achieve those densities, and the impact to housing affordability for home ownership and rental housing.
6. Market demand when evaluating if land is suitable for development or redevelopment.

State Buildable Lands Guidelines

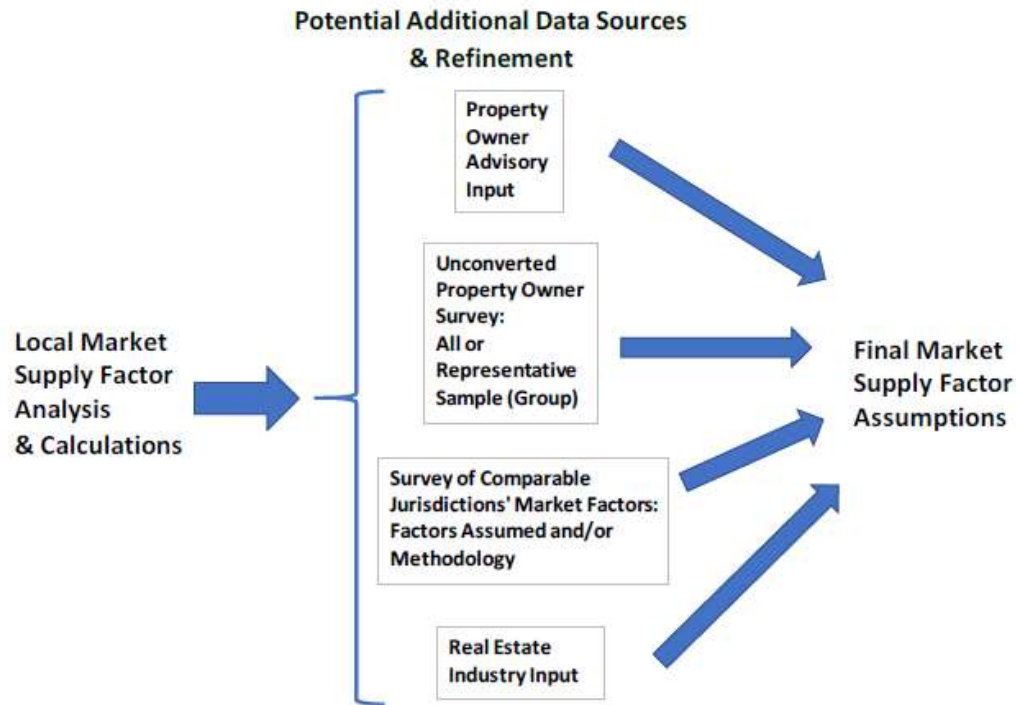

The State's *Buildable Lands Guidelines* document (2018) provides direction on how to incorporate these considerations into the market supply factor (pp. 52-58). In addition, the *Buildable Lands Guidelines* provide ideas and examples of how jurisdictions should "show their work" when addressing these various issues and offers sample hypothetical "analysis & calculations" approaches to calculating the Market Supply Factor (pp. 59-60).

Many data sources are appropriate to help shape robust Market Supply Factor assumptions. In addition to the hypothetical approaches listed in the *Guidelines*, other sources of information that may prove useful include

property owner input, property owner surveys, comparable jurisdictions' Market Supply Factor methodologies and findings, and input from real estate industry experts. Jurisdictions may identify other sources of information or considerations, so long as they document clear rationale for their use.

Exhibit 1 provides a general example of how data and other inputs can inform the final market factor. The three sections of this chart are explained in greater detail in the following text.

Exhibit 1. State Guidance on Market Factor Process

Source: *State Buildable Lands Guidelines* (2018, p. 61).

Local Market Supply Factor Analysis and Calculations

The *Buildable Lands Guidelines* provide three potential initial analyses for market factors. All three analyses would be performed on parcels in the geographic area and development type subject to a unique market factor.

Option 1: Improvement Value to Total Value

Divide each parcel's total assessed value by the assessed value of its improvements. It is assumed that properties with existing higher value improvements are less likely to convert/re-develop than other properties.

This approach is most useful for residential development. It is least useful for industrial development, where low improvement values are not always correlated with a lack of economic activity. This approach addresses

partially-used and under-utilized parcels, but does not address vacant parcels.

Option 2: Properties Without Transaction Activity

Identify how many parcels in the group have no recorded transactions for a specific period of time. The percentage of non-transacting parcels can be used to inform the market factor selection process.

This approach is useful because it may reflect both owners' willingness to sell and market appetite for land. It also provides objective evidence to weigh against property owner surveys. For this approach to be useful, the time period being studied should be similar to the conditions expected in the future. This approach is also dependent on the quality of property sale data. Additionally, this approach does not address existing land owners' willingness to develop their own properties in the 20-year planning period.

Option 3. Converted Properties

Calculate the percentage of properties that were developed or re-developed in a specific period of time. Use the percentage that did not have any activity to inform the market factor selection process.

This approach assesses development appetite and inherently reflects financial viability and market support. In addition, this approach can be used to assess how development responds to providing new infrastructure, or how a lack of infrastructure impacts development activity. This approach is dependent on having the ability to capture current and historic data for specific parcels, or having reliable historic development data (e.g. permit or Assessor's data).

Potential Additional Data Sources and Refinement

These initial analyses may be considered along with additional data and analysis. Several examples of additional data sources are provided in the *State Buildable Lands Guidelines*, detailed below.

Property Owner Advisory Input

Jurisdictions can identify property owners who own significant buildable lands and reach out to discuss their plans. Property owners' input can directly inform capacity assumptions for their parcels.

Property Owner Survey

Several counties have surveyed vacant and redevelopable property owners to understand their openness to development on their property. This approach is detailed further in **Section V**.

Survey of Comparable Jurisdictions

Jurisdictions may borrow market factors and methods from jurisdictions with similar conditions, provided they document the reasons why they believe the borrowed factors and/or methods are applicable.

Real Estate Industry Input

Experts on the local real estate market can provide additional insight on specific development barriers. This insight can inform the market in general (for example, providing guidance on development types that are not yet supported), and provide feedback on specific parcels (reviewing maps of buildable properties and identifying parcels with known significant issues).

Final Market Supply Factor Assumptions

The final market factors selected should be refined based on the evidence provided by completed analyses. There is no set minimum or maximum standard for analysis required to prepare a market factor. Counties and cities must simply use their best judgement in determining what will be useful in their case and document their rationale. The market factor should be derived with data and other documented evidence.

II. COMPARATIVE APPROACHES

As of May 2021, some of the other Buildable Lands counties have developed market factors and some counties are still in the process of formulating market factors to address RCW 36.70A.215 and the updated 2018 State *Buildable Lands Guidelines*. Thurston County was the first county to complete analysis to support revising its market factor. King, Pierce, and Snohomish have also completed their market factor assumptions. Clark and Kitsap have analysis and work in progress to support market factor assumptions.

Each jurisdiction has a unique approach to their market factors. King County's approach allows each city to select one or more applicable market factors and has identified a range of market factors for distinct product (development) types by different regional geographies. Pierce County reviewed their market factor assumptions and continue to use individual market factors for each jurisdiction. Snohomish County has updated their market factors based on observed market factors and has provided updated residential market factors for both South-West UGA (SWUGA) and non-SWUGA areas. Clark County's analysis confirmed the continued use of a 10% market factor for vacant land and 30% for underutilized land. A property owner survey in Thurston County has resulted in a recommended approach that developed separate market factors for partially developed and vacant residential parcels that vary based on the parcel's zoned development potential.

Exhibit 2. Recommended Market Factors by County

Buildable Lands County	Residential Market Supply Factors				Commercial / Industrial Market Supply Factors			
	Unincorporated UGA		Cities (Range)		Unincorporated UGA		Cities (Range)	
	Vacant	Underutilized	Vacant	Underutilized	Vacant	Underutilized	Vacant	Underutilized
Clark	10%	30%	0-10%	0-30%	20%	50%	0-10%	0-10%
King - Non-Seattle	0-30%	0-30%	1-50%	1-50%	10-35%	10-35%	1-50%	1-50%
King - Seattle	0-50%	0-50%	0-50%	0-50%	3-50%	3-50%	3-50%	3-50%
Kitsap	5-50%	5-50%	5-50%	5-50%	5-50%	5-50%	5-50%	5-50%
Pierce	15%	40%	0-50%	0-50%	20%	50%	0-50%	0-50%
Snohomish - SWUGA	6-11%	10-20%	6-11%	10-20%	15%	30%	15%	30%
Snohomish - Non-SWUGA	12-14%	16-23%	12-14%	16-23%	15%	30%	15%	30%
Thurston	10-20%	10-40%	10-20%	10-40%	10-20%	10-40%	10-20%	10-40%

Sources: Clark County, 2021; King County, 2021; Washington State Department of Commerce, 2021; Snohomish County, 2021; Thurston County, 2021; Kitsap County, 2021; Pierce County, 2021; Community Attributes Inc., 2021. Notes: King County Unincorporated UGA figures in this table are derived from and dependent on the cities with which Potential Annexation Areas (UGAs) are affiliated; residential Unincorporated UGA factors are higher for the highest density zones, while non-residential Unincorporated UGA factors are lower for industrial zones. Regional geography types include Core City, High Capacity Transit, Cities and Towns, and Metropolitan, with low to high market factor ranges for each. The market factor selected from the range for Thurston County depends on the current development status of a parcel, including whether the capacity type is One Unit, Short Plan, Long Plat, or Mixed Use.

King County

In a change from previous methods utilized to inform their 2014 Buildable Lands Report, King County has articulated new guidance for its jurisdictions regarding selection of market factors. Going forward, cities will have the flexibility to select one or more market factors that are applicable to them. For example, some smaller cities may choose a single residential market factor, while a larger city might select multiple market factors to reflect the zones in their city. Based upon consultant analysis, King County has identified a range of low, medium, and high market factors (**Exhibit 3**) for distinct product types by different regional geographies. In order to select within this range, each city must review their specific attributes, assumptions and market conditions and consider whether a higher or lower market factor is appropriate for that given product type.

Exhibit 3. Recommended King County Market Factor Ranges by Product

City Typology	Product Typology			
	Residential		Non-Residential	
Market Factor Alignment	Multifamily/ Mixed-Res	Single Family	Commercial (Office/Retail/Mixed)	Industrial
Core City				
Low	5%-10%	1%-14%	1%-10%	1%-15%
Medium	11%-20%	15%-20%	11%-20%	16%-35%
High	21%-35%	21%-30%	21%-50%	36%-50%
High-Capacity Transit				
Low	5%-10%	1%-9%	1%-14%	1%-19%
Medium	11%-15%	10%-20%	15%-25%	20%-30%
High	16%-30%	21%-35%	26%-50%	31%-50%
Cities and Towns				
Low	10%-24%	1%-10%	1%-10%	1%-15%
Medium	25%-35%	11%-40%	11%-20%	16%-35%
High	36%-50%	41%-50%	21%-50%	36%-50%
Metropolitan				
Low	5%-10%	1%-14%	1%-10%	1%-15%

Source: King County, 2021.

In addition to the ranges above, cities will be provided with “adjustment templates” to further adjust within the given ranges or deviate from them altogether to account for known conditions that impact the development of and availability of land in their jurisdiction. Some of these conditions include:

- Assumption for Vacant versus Redevelopable Lands
- Market Trends
- Single Family Up-zoned Areas
- Restrictive Covenants in Planned Communities
- Fragmented Ownership and Parcel Size
- Access to Transit

Additionally, a separate set of ranges has been developed specifically for Seattle (**Exhibit 4**). These ranges reflect a bit more neighborhood detail, but they are based on the same sources of information.

Exhibit 4. Recommended City of Seattle Market Factor Ranges by Product

	Residential				
	Multifamily/ Mixed-Res	Single Family Attached	Single Family Detached	Commercial (Office/Retail/Mixed)	Industrial
City of Seattle					
Low	4% - 11%	0% - 13%	0% - 9%	5% - 24%	3% - 14%
Medium	12% - 20%	14% - 38%	10% - 26%	25% - 35%	15% - 21%
High	21% - 29%	39% - 50%	27% - 43%	36% - 50%	22% - 27%

Source: King County, 2021.

These recommendations comprise the second phase of a recent analysis to update King County's market factor methodology. The first phase of analysis stratified cities by market characteristics. In the second phase, the County focused on refining the stratified groupings and adding neighborhood types within cities, such as downtowns and mixed-use nodes. The analysis also examined how the supply of land has been absorbed since 2000. That rate or share of land supply absorption has suggested new market factors. King County staff analyzed data sources, including the land supply from older buildable lands and assessor data, resulting in a suggested category and market factor ranges for each type of zone, neighborhood, and city.

Pierce County

Pierce County continues to use the methodology outlined in a 2014 Buildable Lands Report to comply with reporting requirements. The report does not detail the considerations that were addressed in the analysis for the market factor used for the County or its cities. The specific market factors used varied greatly by jurisdiction and land use but were generally higher for underutilized lands than for vacant lands.

In reviewing the new *Buildable Lands Guidelines* as of October 2020, Pierce County found that its existing deduction is adequate but needs more explicit documentation on how it addresses market factor. The County also found the previous methodology may not fully address infrastructure gaps. As such, staff have identified properties that are farther than 300 feet from sewers and intend to apply a further deduction to the portion of parcels according to that distance. Staff have also coordinated with cities and towns to identify other areas with cost-prohibitive infrastructure deficiencies, and they intend to include those parcels in the portion of parcels with further deduction as well.

Snohomish County

The Snohomish County Buildable Lands Reports completed in 2002, 2007, and 2012 assumed market availability factor reductions of 15% for vacant land and 30% for partially used and redevelopable land. These assumptions were based on property owner surveys completed in 1993 (City of Marysville) and 2005 (Snohomish County). In 2019, consultants worked with County staff to update these figures based upon an analysis of sample areas representing different types of markets or geographies. A resulting 2020 technical supplement recommends updated market factors, including assigning different market factors for the South-West UGA (SWUGA) and non-SWUGA lands (**Exhibit 5**). Snohomish County selected market factors ranging between 6% and 14% for vacant single family land uses, and between 10% and 23% for underutilized single family land uses. Snohomish County will likely maintain the market factors documented in the 2012 Buildable Lands Report for vacant and underutilized land in other land use and zoning categories including other multifamily residential, mixed use, commercial and industrial. Data was not available to develop updated market factors for multifamily residential, mixed use, commercial, and industrial land uses, thus the previously established market factors will continue to be used for these land use and zoning categories in both SWUGA and non-SWUGA areas.

Exhibit 5. Recommended Snohomish County Market Availability Reduction Factors (MARFs)

Land Use and Zones		Previous MARF	Observed MARF 2001-2019	
			SWUGA	Non-SWUGA
Urban Low Density Residential Areas	Vacant	15%	6%	12%
Single Family Zoning (SFL)	Underutilized	30%	10%	16%
Urban Medium Density Residential Areas	Vacant	15%	11%	14%
Mix of Single Family & Low Density Multi-Family Zoning (SFM)	Underutilized	30%	20%	23%
All Other Land Uses	Vacant	15%	N/A	N/A
All other Multi-Family Zoning, Commercial and Industrial Zoning	Underutilized	30%	N/A	N/A

Source: Snohomish County, 2021.

Note: Underutilized includes both partially-used and redevelopable parcels. The South-West UGA encompasses nine incorporated cities and their respective municipal UGAs (MUGAs); other cities and MUGAs located outside this area are termed “non-SWUGA”.

Recommendations for the updated market factor approach were based on a sample area approach to analyzing development activity across the past 20-years. Sample areas selected represent different types of markets or geographies where development has been focused during the analysis timeframe. Analysis used a 2001 parcel extract of properties identified with additional capacity in the 2002 Buildable Lands Report without development or development proposals as of 2019. The analysis of these parcels in selected sample areas provided observed market factors from 2002-2018 for the Bothell MUGA (located within the larger SWUGA) and the Stanwood/Cedarhome UGA located in the Non-SWUGA area of the County. For single family residential uses, the analysis of the Bothell / SWUGA sample area, for example, found reduced market factors compared to the 2012 assumptions, 6% compared to 15% assumed for vacant land and 10% compared to 30% assumed for underutilized land. Analysis of the Stanwood/Cedarhome in the Non-SWUGA area also found reduced observed market factors compared to assumptions, 12% compared to 15% assumed for vacant land and 16% compared to 30% assumed for underutilized land. In summary, Snohomish County found that analysis of past development suggested that the market factors for certain types of development in Snohomish County, that were informed by land owner surveys and set before the development occurred, were higher than those actually observed.

Snohomish County also hoped to analyze observed market factors for different development types with a sample area approach. However, data

required for the analysis was not available for an analysis of multifamily or mixed-use development types. The June 2020 Technical Supplement recommends future monitoring of market factors for different development types.

Clark County

As of May 2021, Clark County is still in the process of updating its market factors in accordance with the new *Buildable Lands Guidelines*. The updates to methodology are ongoing and the County has not finalized market factor assumptions, however, County representatives have indicated that, at minimum, Clark County will maintain existing market factors of 10% for vacant land and 30% for underutilized land.

Prior analysis compared vacant and underutilized residential land in 2019 and 1996 within the 1996 UGA boundary. The resulting assumptions used in the 2014 Buildable Lands Report were that 90% of vacant land will develop and 70% of underutilized land will develop.

Clark County has been conducting analyses to review these assumptions, as documented in an August 28, 2020 memo addressing Updates to Employment Land Classifications, Redevelopment, Mixed Use, Market Factor, and Infrastructure Set-Aside Topics. In summer of 2020, a consultant team analyzed observed data within a sample location covering 600 acres that have seen a high rate of growth since 2007. Analysis compared the 2007 Vacant Buildable Lands Model baseline to current development, providing a 13-year range to assess observed market factors. Results of the analysis supported a recommendation to continue using current assumptions that 90% of vacant land will develop and 70% of underutilized land will develop (e.g. market factors of 10% and 30% respectively).

The sample area analysis did find evidence for higher deductions for critical areas. The previous methodology assumed that 50% of critical areas will develop and the market factor is applied to the 50% reduced critical area. Analysis in 2020 recommends that the deductions for critical areas should be 62.5% for Residential-Urban Low and 58.8% for Residential Urban-High zones. The recommendations also indicate that the additional market factor of 90% or 70% should not be applied to the critical area deduction.

Thurston County

In 2019, Thurston County conducted a property owner survey to develop updated residential market factors. The survey was mailed to all owners of developable parcels. It was also mailed to owners of parcels on the margins of being considered partially-developed to help test the County's assumptions. Based on these survey results, Thurston County developed separate market

factors for partially developed and vacant residential parcels that vary based on the parcel's zoned development potential. The more a lot can be subdivided based on zoning, the lower the market factor assumption. A separate market factor was also developed for mixed use residential parcels (**Exhibit 6**).

Exhibit 6. Thurston County Market Factors, 2019

Market Factor by Current Development Status		
Capacity Type	Partially Developed	Vacant
One Unit (Cannot be subdivided further)	40%	20%
Short Plat	30%	15%
Long Plat	20%	10%
Mixed Use	10%	10%

Source: Thurston Regional Planning Council, 2019

The County received responses from 25% of mailed surveys and used the results to develop its market factors. The survey was modeled closely after Snohomish County's past survey, which was completed over the phone. Thurston County found that using multiple time periods to estimate when development could occur was confusing for some respondents to the written survey. A large portion of respondents did not provide answers for every time period, so more interpretation was required. For future mailed surveys, Thurston County indicated that simply asking if the property may be available for development within 20 years could allow for greater consistency in responses.

Key findings from the survey included:

- **Significant variation by UGA.** The share of respondents stating that development was "very unlikely" ranged from 14% to 84% by UGA, with an average of 30%. Bucoda, the UGA on the high end of this range, has significant flood hazards which impact this number. Grand Mound was another outlier at 61%, but the summary report did not suggest a potential explanation.
- **Vacant land owners are more open to development compared to partially developed land owners.** 28% of owners of a vacant lot which could accommodate one unit stated that development was very unlikely, compared to 41% of partially developed lots which could only accommodate one unit.
- **The difference between vacant and partially developed property owners' preferences decreases as zoned**

redevelopment potential increases. Owners of both vacant and partially developed land were more open to redevelopment if their property could be subdivided into more lots. Similarly, openness to development across all properties increases as zoned capacity increases.

- **When the property owner currently lives on the parcel, they are much less likely to be open to development.** 41% of property owners living on the parcel in question stated that development was very unlikely compared to 11% of property owners living elsewhere.
- **Permitting, impact, and utility hookup fees cited as development barriers.** 28% of respondents cited fees as barriers toward developing their property.

Kitsap County

Kitsap County is currently working with local jurisdictions and a consultant on a new Buildable Lands Report. The report will examine market factors and several other options in a framework to reflect geographical, product, and market typologies in the County. Kitsap County is still working through market factor-specific guidance with its consultant team and anticipates completion of guidance for the residential and employment land capacity analysis will continue through early summer 2021. However, Kitsap County has released preliminary figures as of May 2021 that are currently under review. Based upon consultant analysis, Kitsap has identified a range of market factors (**Exhibit 7**) for distinct product types by different regional geographies. In order to select within this range, each city must review their specific attributes, assumptions and market conditions and consider whether a higher or lower market factor is appropriate for that given product type. Market factor ranges run from 5% minimum up to 50% maximum for residential and non-residential typologies. Ranges for each type and geography were determined by the consultants and County based on a projection of what percentage of planned capacity will be absorbed over the coming years.

Exhibit 7. Kitsap County Preliminary Market Factors, May 2021

Geography		Product Typology			
		Residential		Non-Residential	
Market Factor Range		Multifamily/ Mixed-Res	Single Family	Commercial (Office/Retail/Mixed)	Industrial
Bremerton	City, UGAs	Medium (20% - 35%)	High (35% - 50%)	Medium (20% - 35%)	High (35% - 50%)
Bainbridge	City	Low (5% - 20%)	Low (5% - 20%)	Medium (20% - 35%)	Medium (20% - 35%)
Central Kitsap	UGA	High (35% - 50%)	Medium (20% - 35%)	Medium (20% - 35%)	Low (5% - 20%)
Silverdale	UGA	Medium (20% - 35%)	Medium (20% - 35%)	Medium (20% - 35%)	High (35% - 50%)
Kingston	UGA	High (35% - 50%)	Medium (20% - 35%)	Medium (20% - 35%)	Low (5% - 20%)
Port Orchard	City, UGAs	High (35% - 50%)	Medium (20% - 35%)	High (35% - 50%)	Medium (20% - 35%)
Poulsbo	City, UTA	Low (5% - 20%)	Low (5% - 20%)	Low (5% - 20%)	Low (5% - 20%)

Source: Kitsap County, 2021

Kitsap County has developed a methodology that, like King County's, is partially based on PSRC's regional geography typologies; each city and UGA in the County has been categorized as one of these geographies in order to help inform selection from a range of market factors: Metropolitan Cities (Bremerton and its UGA), Core Cities (Silverdale), High-Capacity Transit Communities (Bainbridge, Poulsbo & UGA, Kingston, and Port Orchard & UGA), and Cities and Towns (none).

Kitsap County's preliminary methodology consists of four steps:

- (a) **Assign product types to each zone within each geography.** In this step, the County and Cities identify the predominant product type in each zone of the City/UGA where capacity exists. Product types corresponding to zoning include single-family residential, multifamily residential, commercial, and industrial uses.
- (b) **Establish market indicators for each city and product type.** This step consisted of an historic analysis of develop patterns and actual, measure market factors for various Kitsap cities and product types versus planned capacities. Market factors were estimated based on percentages of real estate absorption by product over that time period. Ranges and segmentation were determined:
 - (i) Lower boundary: 5% To account for the unmeasurable variables.
 - (ii) Upper boundary: 50%: Upper bound for potential market factors.

- (iii) **Range Segmentation:** This analysis separates the ranges into three segments evenly distributed within the upper and lower bounds (low/medium/high).

(c) **Establish Market Factor Ranges for each geography, and product type.** In this step, cities select from a range of market factors organized by product type.

(d) **Refine and Adjust.** Finally, cities refine and adjust local conditions and based on local analysis. A range for each product-type by each Regional Geography is provided in Step C. In order to select within this range, each city (or UGA) must review their specific attributes, assumptions and market conditions and consider whether a higher or lower Market Factor is appropriate for that given product type (and therefore, applicable zone within the City or UGA). It is important to note that additional factors may need to be considered to account for unique circumstances influencing the market availability of land in any given jurisdiction. Such factors may include:

- (i) Vacant versus underutilized lands
- (ii) Market Trends
- (iii) Single family uses in recently up-zoned areas
- (iv) Restrictive Covenants in planned communities
- (v) Parcel size and assemblage challenges
- (vi) Transit accessibility
- (vii) Infrastructure limitations
- (viii) Areas designated as Growth Centers

III. APPROACH TO NEW MARKET FACTOR CONSIDERATIONS

This section reviews each market factor consideration set forth in RCW 36.70A.217, shown in italics below, along with information from the State *Buildable Lands Guidelines*, and how Whatcom County and the cities might approach these issues. Several considerations for the market factor may be addressed in other ways through the Buildable Lands Methodology itself (e.g. through reasonable measures).

RCW 36.70A.217 Requirements

1. *Infrastructure costs, including but not limited to transportation, water, sewer, stormwater, and the cost to provide new or upgraded infrastructure if required to serve development*

Whatcom County's Buildable Lands Methodology utilizes achieved densities (where available) to estimate future capacity in the buildable lands analysis. Achieved densities should reflect market support for development, including in areas where new or upgraded infrastructure are required.

There may be cases where there is insufficient data on achieved densities to assess future capacity. In these cases, the County and cities should assess potential reasons why development has not occurred, including infrastructure costs and the inability to connect to public water and sewer (e.g. property in a city UGA prior to annexation).

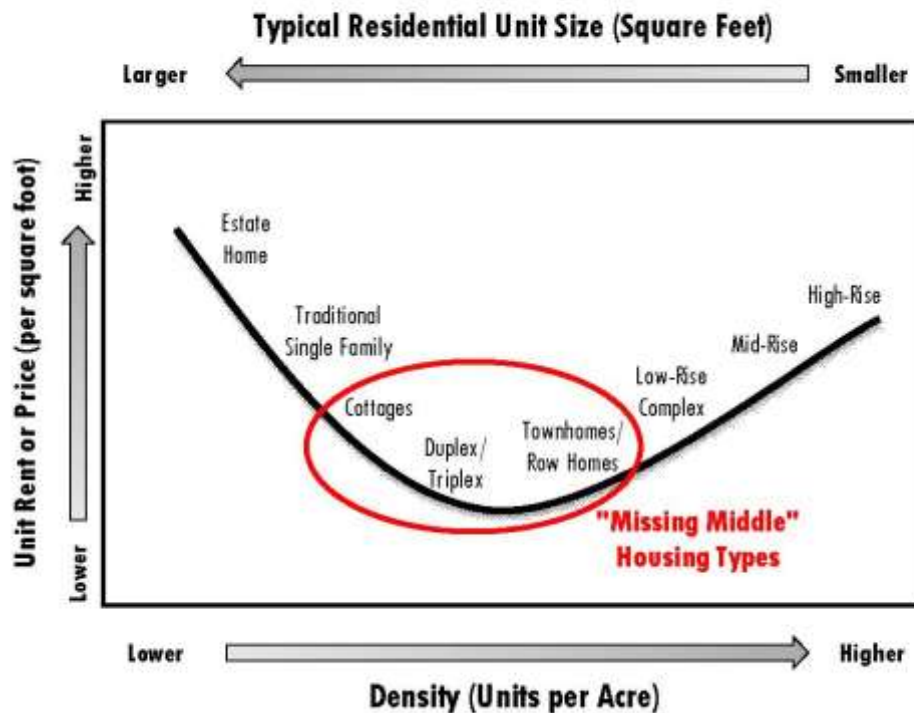

The jurisdictions should also address how to identify areas which will have limited development potential until certain infrastructure improvements are complete. This could include considering the timing of future capital improvement projects and using this to evaluate the phasing of development capacity in certain areas. It should be noted that the Review and Evaluation Program Methodology addresses "infrastructure gaps" separately from market factor in accordance with RCW 36.70A.215(3)(b). While "gaps" in publicly provided infrastructure are treated separately, market factors are still the appropriate mechanism to account for owner/developer considerations related to on-site infrastructure costs and related delays or limitations to development.

2. Cost of development

It is assumed that, generally, the impact of development cost is reflected in achieved densities. The State Department of Commerce's *Housing Memorandum: Issues Affecting Housing Availability and Affordability* (June 2019) indicates that "... Typically most affordable housing unit types will tend to be moderate-density units such as cottages, duplexes, triplexes, and rowhouses or townhouses. ..." (p. 87). The State's *Housing Memorandum* also contains the following graphic generally illustrating housing cost dynamics.

Exhibit 8. Housing Type Spectrum: Relationships between Housing Types, Prices & Rent, Housing Unit Size, & Housing Density

Housing Type Spectrum: Relationships between Housing Types, Price & Rent, Housing Unit Size, & Housing Density

Source: State Department of Commerce's *Housing Memorandum: Issues Affecting Housing Availability and Affordability* (June 2019, p. 85)

Provided there is sufficient data, it is assumed that achieved densities generally reflect construction types that are supported by the market.

However, there are cases where development costs can delay or prevent development and impact the land supply during the planning period. Such cases include:

- **Large Planned Developments.** Large planned developments may have extended buildout periods. Developers may choose to delay portions of such developments that require internal infrastructure investments until earlier phases have been sold and more capital is available.
- **Private Share of Public Infrastructure.** Private infrastructure contributions, including impact fees, increase the cost of development and can limit feasibility in communities with weaker demand for real estate. At the same time, impact fees help provide certainty to new development that adequate infrastructure will be developed. Further, improved infrastructure should increase the property's value over time.
- **Condominium Liability Costs.** In recent decades, condominium developers in Washington State typically incurred higher liability insurance costs compared to other types of development due to the Washington Condominium Act. These insurance costs did not vary widely with the price level. As a result, this was considered one of the most significant reasons why there was a lack of condominium development in Washington, and why the condominiums that have been built are mostly high end. Senate Bill 5334, passed in 2019, has increased the standard for warrantable defects and protects condo association board members from personal liability. This legislation may resolve market barriers to condominium development, but it is still early to assess its full impact. Further, this issue is not likely significant for the market factor in Whatcom County. There is currently strong investor demand for rented apartments and other types of housing. As a result, condominium liability may not impact overall housing unit production if local economics still support other types of housing development. This dynamic could impact the local housing tenure composition, which could diverge from planning assumptions and community needs.
- **Land Development “Inefficiencies”.** Local land use regulations, such as tree retention requirements and subdivision limitations on partially developed parcels, can impact the development capacity of a property. Limiting development capacity will in turn limit the financial return possible on the property.

Many of these factors will have a case-by-case impact on specific parcels, rather than being broadly applicable in a market factor. The impact of development costs could be incorporated into jurisdictions' review of their buildable land inventory.

3. *Timelines to permit and develop land*

Development timelines should impact assumptions about when future land capacity will be “unlocked” by new infrastructure. When new infrastructure investments will make development more feasible, the analysis should apply a reasonable lag time to reflect when units will be developed. Master planned developments may have a higher market factor to account for build-out that would occur beyond the 20-year planning period.

Regarding timelines to permit and develop land, the State’s *Buildable Lands Guidelines* (2018) indicate:

This issue is suggested by E2SSB 5254 as potentially requiring Market Supply Factor derivation guidance. However, upon review, for the most part, the issue was found not to have a direct influence on property owner decision to sell or (re)develop land during a 20-year planning period. The issue is, however, potentially significant for discussion of reasonable measures, determining what adjustments might need to be made by the planning agency.

The sole exception would likely be extended timelines for developing large master-planned communities. Over a twenty-year period, several economic cycles may occur that can either accelerate build-out pace or slow it. Therefore, even though a master-planned community development plan includes all portions of future build-out, market forces, financial markets, and both private and public infrastructure costs may deem portions of such a project to not feasibly be built within 20 years. Market Supply Factor deduction for build-out of such projects beyond 20 years would be appropriate (p. 56).

4. *Market availability of land*

One component of market availability is owners’ willingness to sell. The State’s *Buildable Lands Guidelines* suggest that the following methods may be considered in evaluating the market availability of land:

- Property owner surveys;
- Property owner interviews;
- Advisory committee input;
- Real Estate – Residential and Commercial/Industrial expert input (brokerages, appraisers, etc.); and/or

- Review of County Assessor data to identify property ownership patterns and sales activity (p. 56).

5. *The nexus between proposed densities, economic conditions needed to achieve those densities, and the impact to housing affordability for home ownership and rental housing*

The State's *Buildable Lands Guidelines* (2018) address this issue by indicating:

Although cited in E2SSB 5254 as an issue to study as it may affect Market Supply Factor guidance, this issue was determined to be more appropriate to consideration of Reasonable Measures for dealing with inconsistencies between planned capacity at varying densities and the extent to which such planned capacity may not be economically delivered. The issue is far less of a direct influence on property owner willingness to sell land for development or redevelopment (p. 58).

Suggested reasonable measures from the State's *Buildable Lands Guidelines* address housing affordability in a variety of ways. Jurisdictions required to adopt and implement reasonable measures will consider these measures.

6. *Market demand when evaluating if land is suitable for development or redevelopment*

The State's *Buildable Lands Guidelines* (2018) address market demand by indicating:

. . . this issue was determined to be more appropriate to consideration of Reasonable Measures for dealing with inconsistencies between planned capacity at varying densities and the extent to which such planned capacity may not be economically delivered due to appropriate market demand. The issue is far less of a direct influence on property owner willingness and legal/financial decision-making to sell land for development or redevelopment (p. 58).

IV. LOCAL DATA AVAILABILITY

Geospatial Parcel Data

In April 2021, Whatcom County GIS updated its database for parcels in UGAs classified as vacant, partially used, and underutilized (referred to as “developable parcels”, when combined).

The parcel data includes the following key attributes for analysis:

- Assessor’s parcel # and address
- Owner and owner’s mailing address
- Zoning designation
- Current use
- Existing single-family and multi-family housing units
- Existing commercial and industrial building square feet
- Assessed value of land and improvements
- Jurisdiction

Property Sale Data

The Whatcom County Assessor’s office has a robust database of property sales. The system was converted to a computerized system in 2010, and the data quality is best following that year. The database includes many attributes, but has several important limitations:

- Parcels change over time (e.g. by land divisions), and sale records may be attached to multiple parcels. When new parcels are created, data on previous sales related to old parcels is not transferred to the new parcel.
- The database is better oriented towards providing up-to-date information rather than looking backward.
- The Assessor’s office does not always have the most up-to-date or most detailed data on current property uses. Land use codes in the system are tied to those prescribed by statute and the department of revenue for property taxes.
- It is important to consider the timing of the assessment relative to construction dates. When the assessment takes place before a structure is built, the assessed value of that property may be reflecting its previous use or vacant state.

As a result of all these limitations, data cleaning is a major consideration for any analysis involving the Assessor's property sale data. However, the Assessor's data available are extensive and include the following attributes:

- Assessor's parcel # and address
- Zoning designation
- Sale year
- Value of land and improvements at sale year and current year
- Sale price
- Deed type
- Land use code at sale year and current year
- Seller & Buyer names

Real Estate Market Reports

Data on rents and sale prices for some of Whatcom County's cities is available from commercial sources including Whatcom Prospector, CoStar, Redfin, and Zillow. However, these sources have limited coverage for cities other than Bellingham. Continued partnership with local real estate experts is likely the best strategy for understanding Whatcom County's other communities in more detail.

V. ANALYSIS METHODS

Each jurisdiction will use the following approach to develop the market factors for vacant, partially-used, and under-utilized property in cities and UGAs:

1. Start with the default market factors in the *Whatcom County Review and Evaluation Program Methodology* (15% for vacant land and 25% for partially used and under-utilized land).
2. *Analyze Properties Without Transaction History* – Utilize State *Buildable Lands Guidelines* “Example # 2” (pp. 59-60) to inform the market factor discussion.
3. *Analyze Converted/Developed Properties* – Utilize State *Buildable Lands Guidelines* “Example # 3” (p. 60) to inform the market factor discussion.
4. *Conduct a Property Owner Survey* –Mail out a cover letter with an associated questionnaire to inform the market factor discussion.
5. *Interview Selected Land Owners* – Some cities and/or UGAs have property owners that own relatively large blocks of developable land. The jurisdictions have discretion to reach out to these property owners to inform the process.
6. Consider other relevant information, if deemed appropriate, in setting market factors. Any such factors will be clearly documented by the jurisdiction.
7. Determine whether to use the default market factors or adjust these factors based upon a review of steps 2-6 above. The final overall average market factor for a UGA should not exceed 25%, except where the jurisdiction has well-documented support for why a larger market factor is appropriate.

A 20-year time frame will be used for the analyses, as the planning period is 20-years.

Property Owner Survey

The property owner survey is useful in assessing owners' willingness to sell or develop their land. It does not assess the market's appetite to purchase and develop this land. Analytical Examples # 2 and # 3, as detailed in the State *Buildable Lands Guidelines* (and p. 8 of this document), could help provide additional data specific to market support. The portion of survey respondents indicating that their parcel is unlikely or very unlikely to develop in the 20-year period may be used, along with other data, to inform development of the market factor.

The County and cities, with the assistance of Pacific Market Research, surveyed owners of developable parcels to understand if their properties are likely to contribute to land capacity during the 20-year planning period. The following survey methods were used.

Survey

Data Required

- Identified developable properties (vacant, underutilized, and partially-used)
- Property owner mailing addresses for identified properties

Survey Methods

The survey was distributed to owners of vacant, partially-used, and underutilized property in cities and UGAs in the following zoning or future comprehensive plan land use designations:

- Single Family Residential
- Multifamily Residential
- Commercial/Industrial

The survey was sent to all owners of vacant, partially used, and underutilized land in cities and UGAs except for vacant single family residential lots that cannot be further subdivided (i.e. parcel size is less than two times the minimum lot size). It is assumed that vacant single family lots, such as those in a subdivision, would have a low market factor because they are likely to develop within the 20-year planning period.

The vendor, Pacific Market Research, mailed the cover letter and survey to identified participants in May/June 2020.

Cover Letter

The cover letter to property owners is attached.

Survey Questions

The survey questions are attached.

Compiling Survey Results

A total of 4,855 surveys were sent out to land owners. An online survey would have avoided transcription labor, but presents challenges to ensure the parcel in question is recorded accurately and to avoid duplicate responses per parcel. Therefore, the vendor mailed the survey and compiled the results. The survey response rate is shown in **Exhibit 9**.

Exhibit 9. Property Owner Survey Response Rate, 2020

Completed Surveys Returned	Total Mailed	Returned Undeliverable	Total Delivered	Response Rate
1,715	4,855	112	4,743	36%

Survey responses were compiled in two reports.

- The first report, entitled *Whatcom County Property Owners Survey* (September 2020), compiled overall results and individual UGA results for how likely or unlikely property is to develop over the next 20 years. It also summarizes the reasons why property is likely or unlikely to develop over a 20-year period.
- The second report is a spreadsheet entitled *Whatcom County Property Owners Survey Data and Codebook* (September 2020). This spreadsheet provides more detail relating to the reasons that property is likely or unlikely to develop over the next 20 years. These reasons were either checked by the property owner from a menu of potential reasons provided on the survey or written in by the property owner. This report “codes” the checked responses and the written responses so they could be grouped and counted with other similar responses (in the first report, cited above). It also provides verbatim written responses to survey questions.

To help facilitate data entry, the Assessor’s parcel number, address, and other relevant information was included on the survey and the property owner letter. This allowed matching results to specific parcels.

Analyzing Survey Results

Survey results were cross-tabulated, with analysis specific to the following topic areas:

- Total respondents
- Development Status Category (Vacant, partially-used, or under-utilized)
- Land Use Category (Commercial/Industrial, Single Family, Multifamily)
- Property location (Specific UGA)
- Unlikely and Very Unlikely to Develop
- Likely and Very Likely to Develop
- Unsure respondents

Exhibit 10 provides the overall survey results, aggregating all 1,715 responses from property owners within the 10 UGAs. This data and similar results compiled by individual UGA are included in the report entitled *Whatcom County Property Owners Survey* (September 2020). When interpreting this information, it is important to keep in mind that vacant single family residential lots that cannot be further subdivided (i.e. parcel size is less than two times the minimum lot size) were not included in the

survey. It was assumed that vacant single family lots, such as those in a subdivision, would have a low market factor because they are likely to develop within the 20-year planning period. For purposes of the buildable lands analysis, the City/County Planner Group is using a 5% to 10% market factor, selected at the discretion of the individual jurisdiction, for vacant single family residential lots that cannot be subdivided further.

Exhibit 10. Whatcom County Property Owner Survey – Overall Results

	Likelihood of Development in the Next 20 Years			
	Unlikely/Very Unlikely	Unsure/NA	Likely/Very Likely	Total Responses
All Respondents-Total	655	143	917	1715
	38.2%	8.3%	53.5%	100.0%
Single Family All	371	72	436	879
	42.2%	8.2%	49.6%	100.0%
Vacant	98	28	223	349
	28.1%	8.0%	63.9%	100.0%
Partially Used	273	44	213	530
	51.5%	8.3%	40.2%	100.0%
Multifamily All	111	21	142	274
	40.5%	7.7%	51.8%	100.0%
Vacant	45	10	65	120
	37.5%	8.3%	54.2%	100.0%
Partially Used	9	3	17	29
	31.0%	10.3%	58.6%	100.0%
Underutilized	57	8	60	125
	45.6%	6.4%	48.0%	100.0%
Commercial/ Industrial All	173	50	339	562
	30.8%	8.9%	60.3%	100.0%
Vacant	76	19	202	297
	25.6%	6.4%	68.0%	100.0%
Partially Used	24	3	22	49
	49.0%	6.1%	44.9%	100.0%
Underutilized	73	28	115	216
	33.8%	13.0%	53.2%	100.0%

An analysis was conducted blending the “unlikely/very unlikely” results for vacant single family lots from the survey (that can be further subdivided) with an assumed 5% market factor for the vacant single family residential lots that cannot be further subdivided (October 14, 2020 e-mail). The County sent out the following to the City/County Group (October 15, 2020 e-mail):

- A spreadsheet using the blended analysis method with a 5% deduction (market factor) for vacant single family land that cannot be divided further; and
- A spreadsheet using the blended analysis method with a 10% deduction (market factor) for vacant single family land that cannot be divided further

Using a 5% market factor for vacant single family land that is not subdividable, the blended overall market factor for vacant single family land would be 18.4% (countywide). Using a 10% market factor for vacant single family land that is not subdividable, the blended overall market factor for vacant single family land would be 18.8% (countywide). These countywide figures may be considered by individual jurisdictions as they select market factors for vacant single family land in their communities.

Direct Outreach with Property Owners

In several UGAs, significant shares of developable parcels are held by a small number of property owners. The County and cities identified property owners whose development decisions will have an outsize impact on UGAs' growth potential. The consultant, Community Attributes, reached out to these property owners to discuss the property owner's development plans. The results of these conversations, which are documented in a memo entitled "Findings From Landowner Interviews" (Community Attributes, February 3, 2021) may alter other assumptions for the development potential of those properties.

Setting the Market Factors

The seven steps in the Analysis Method (p. 74) will be used to develop market factors. Separate market factors should be developed for each UGA, land use category and development status (e.g. vacant and partially-used/under-utilized).

Dear Whatcom County Property Owner,

Whatcom County and the cities are working together to estimate where new population and employment growth is likely to occur during the next 20 years. To support that work, the County and the cities are trying to determine the capability and likelihood of the county's existing land supply (undeveloped or partially developed) to accommodate additional growth. This information will help the County and cities better plan for future growth.

As part of this process, county and city planners would like to learn about property owner preferences. On the other side of this letter is a short survey asking how likely you believe your property (indicated at the top of this page) is to develop over the next 20 years and related questions. *Your responses will be combined with responses from other property owners. They will not be used by the County or cities for any specific zoning or project decisions concerning your property, and will not be used by the County Assessor to determine your property valuation or taxes.*

Please return the survey in the enclosed postage-paid envelope within the next two weeks. If you own more than one parcel, you may receive an additional survey for each property. Please return each survey with your responses for each individual property. Your responses will be used to improve estimates of when and where growth is likely to occur.

For more information, please visit <http://whatcomcounty.us/3052/Review-Evaluation-Program-Buildable-Land>. County and city planner contact information is available on this website. If you have any questions about the survey, please contact the County or city planner for your jurisdiction.

Sincerely,

A handwritten signature in dark ink, appearing to read "M Personius", is written over a horizontal line.

Mark Personius
Whatcom County Planning & Development Services Director

1. In your estimation, how likely is it that this property will be available for new development within the next 20 years?
- ☐ Very likely
 - ☐ Likely
 - ☐ Unlikely
 - ☐ Very unlikely
 - ☐ Unsure (Please explain):

2. If applicable, what reasons make it "unlikely" or "very unlikely" that this property will be available for new development? (Check all that may apply)
- ☐ I do not want to sell the property
 - ☐ There is no room on this property for additional development
 - ☐ Property values are too low or financing is not available
 - ☐ Fees, such as impact fees or sewer hookup fees, are too high
 - ☐ Development and infrastructure costs are too high
 - ☐ The property lacks sewer, septic, water, or other utilities
 - ☐ There is no access to the property (it lacks a driveway or right-of-way)
 - ☐ Environmental constraints, such as wetlands or steep slopes, limit development
 - ☐ An easement or covenant restricts development
 - ☐ I value the privacy and open space the property provides
 - ☐ Other (please describe):

3. If applicable, what reasons make it "likely" or "very likely" that this property will be available for new development?
- ☐ I plan to sell the property to a developer
 - ☐ Developers or realtors have expressed interest in the property
 - ☐ I plan to sell the property for retirement
 - ☐ I plan to divide and distribute property to heirs
 - ☐ I would like to build a rental unit
 - ☐ I would like to build additional housing
 - ☐ I would like to develop commercial or industrial uses
 - ☐ Other (please describe):

4. Please describe any thoughts you have about developing this property over the next 20 years:
-

APPENDIX C. GIS DATA

Bellingham

Countywide tax parcel boundaries are maintained by Whatcom County Assessor and City of Bellingham. Accuracy codes for linework are assigned for all of Bellingham and its unincorporated UGA – about 63% of linework is “high” accuracy or +/- 1 foot, about 25% is “medium-high” or +/- 5 feet, about 6% is “medium-low” or +/- 10 feet, the remaining 6% is either “low” or “unknown” accuracy. Zoning boundaries are primarily tied to parcel boundaries and reflect their accuracy levels. For Bellingham, utility infrastructure layers (water, sewer, storm) mains and connected facilities are mapped with GPS and are generally accurate to better than 1-foot accuracy. All mapped wetland delineations are digitized from wetland consultant reports or records of survey. Wetland recon surveys are of varying accuracy and typically relate to specific year’s aerial imagery. Accuracy can vary +/- 1 foot to +/- 10 feet with respect to imagery. Just as important for wetland data is the age of the survey – as time passes drainage patterns change. Generally wetland delineations and recon surveys that are 10+ years old should be treated as approximate boundaries at best (Federal NWI wetland data which is 40+ years old and originated with 1:24,000 scale mapping will not be used by Bellingham for Buildable Lands or Land Capacity Analysis work going forward. Slope delineations are based on 2013 LiDAR terrain data which is vertically accurate to +/- 5cm in non-forested areas and +/- 14cm in forested areas. Shoreline and stream data for Bellingham are based on Aerial, LiDAR, and storm utility data and are generally accurate to +/- 3 feet.

Small Cities and Whatcom County

GIS data for zoning is considered accurate across the jurisdictions. The utility infrastructure and environmental layers for the small cities and Whatcom County are of varying levels of accuracy.

Critical area regulations are based on site-specific analysis, often conducted when an application is submitted. GIS wetland layers have a variety of sources with varying degrees of accuracy. Under the Methodology, jurisdictions would identify and map infrastructure gaps.

Project Summary: Proposed amendments to the Whatcom County Code Title 20 (Zoning) to provide additional affordable housing options by allowing and regulating tiny homes and allowing duplexes in planned unit developments.

Location: Countywide.

Attachments

- Draft Ordinance
- Exhibit A – Proposed Amendments

II. Background

The Council has expressed interest in increasing affordable housing options, in particular by amending the Whatcom County Code to allow for the siting of tiny homes within mobile home or RV parks or on individual lots, as newly authorized under amendments to RCW 58.17.040 via ESSB 5383. Staff is also proposing amendments to the Planned Unit Development (PUD) code to allow and encourage duplexes in urban growth areas. Both are intended to provide additional affordable housing options for Whatcom County citizens.

Tiny Homes

What are Tiny Homes?

To decipher how best to develop the regulatory structure to allow tiny homes, staff first identified the key characteristics of the various types of tiny homes to compare with our existing types of analogous residential units. Broadly, but in more detail in Table 1, these characteristics have to do with what type of state or federal license or certification they can obtain, whether or not they're self-contained¹, and whether they have chassis and axles/wheels, all of which have to do with whether they are intended or can be used for long-term (residential) or short-term (recreational) use. There are other differences, like how much insulation they have or whether they have basic sanitary facilities such as toilets, showers, and sinks, but these are built into the certification/licensing standards and the characteristics we've used seem to suffice for classification.

¹ Meaning do they have tanks to hold water and sewage and have batteries for power, or do they need to be connected to utilities to operate?

Based on this analysis, we have identified four types of tiny homes, each corresponding to one of our existing unit types. The two that are intended for long-term residential use are:

- *Site-Built Tiny Homes* are built on-site, are not self-contained, are intended for long-term use, and meet the International Residential Code (IRC) standards. They are analogous to standard site-built homes, except that they're smaller (< 400 sq. ft.).
- *Manufactured Tiny Homes* are built off-site (generally at a manufacturing plant) with a chassis, axles, and wheels and transported to their final location (though the wheels may be removed) where the unit is placed on a permanent foundation. They are not self-contained, are intended for long-term use, and would have to meet the IRC standards *or* be HUD certified *and* be L&I certified as a permanent dwelling unit. They are analogous to standard mobile (or manufactured) homes, except that they're smaller.

The other types of tiny homes that are getting a lot of interest are Tiny Homes on Wheels (or THOWs, and yes, a real acronym). These tend to be homemade but, because of their construction standards, they are only intended and can only be certified for short-term recreational use or occupancy. But even among them, based on key characteristics, there are two different types. We're designating them:

- *Type 1 Tiny Homes on Wheels* have a chassis, axles, and wheels and are intended for trailering. They are *not* self-contained so must be hooked up to utilities. They do not meet the IRC standards nor are they certified by HUD for long-term residential use, but can be certified by L&I for short-term recreational use. And they must be licensed by the state Department of Licensing for transport on the highways. They are analogous to park model trailers.
- *Type 2 Tiny Homes on Wheels* are similar to Type 1 THOWs, but *are* self-contained, meaning they have tanks to hold water and sewage and have batteries for power so that they don't always need to be connected to utilities. They do not meet the IRC standards nor can they be certified by HUD for long-term residential use, but can be certified by L&I for short-term recreational use. And they must be licensed by the state Department of Licensing for transport on the highways. They are analogous to recreational vehicles (RVs).

Regarding building permit requirements, please note that the Council already adopted the newest International Residential Code, including Appendix Q, which contains the building code rules for tiny homes.

We would also like to point out that staff met several times with some tiny home proponents who proposed a third type of THOW. This type wouldn't meet IRC or HUD standards, but would be based on standards we specifically adopt in our code. These standards, they claimed, would be based on ANSI standards (what L&I uses to certify RVs) plus some additional standards (they referred to them as ANSI++) and our Building Official would have to certify them for use in Whatcom County. However, this approach would create significant jurisdictional regulatory inconsistencies since such units wouldn't be able to be used in any other jurisdiction (including the cities in Whatcom County) as they would only be "certified" for use in unincorporated Whatcom County under our own unique standards.

These proponents were also asking that these types of THOWs be able to be used for guest lodging for longer than 120 days², which is our standard "temporary recreational occupancy" time limit under existing code. Extending temporary recreational occupancy would essentially make these THOW's

² For all Temporary Recreational Occupancies – On individual lots, the maximum length of stay of any recreational vehicle on a lot may not exceed a total of 120 days per calendar year; provided, that no accessory guest RV shall remain on the subject lot for more than 14 consecutive days nor more than 30 days total per calendar year.

permanent accessory dwelling units and raise potential GMA challenges and cause greater impacts that come with such increased densities, especially in rural areas.

Council should also be aware that staff tried very hard to figure out a way to allow “tiny home villages” (including those allowing site built tiny homes) in rural areas. However, GMA rural density restrictions significantly limit the potential for such “villages” in rural areas—meaning they would have to meet the underlying rural low density zoning just like any other subdivision. Our conclusion was that such tiny home villages are more likely to be created in cities or UGAs (which allow higher urban densities) and then only when adequate utilities are available, which our cities generally won’t extend until the property is annexed. But we do have existing (nonconforming at least in terms of density) mobile home and RV parks, so allowing the appropriate type of tiny homes within them at least furthers the affordable housing goal.

Allowing Duplexes in Planned Unit Developments

Another amendment proposed as a way to increase affordable housing options is to allow duplexes in certain zones when a project is developed as a Planned Unit Development (PUD) (WCC Chapter 20.85). PUDs:

- Allow certain uses beyond those allowed in the underlying zone when a project is developed as a planned neighborhood community;
- Can only be developed within Urban Growth Areas and have to be at least two acres in size (except under certain conditions listed in WCC 20.85.020);
- Have additional standards for buffering, open space, circulation, access, parking, storage, and utilities;
- Allow for increased densities (WCC 20.85.108);
- Allow a relaxation of dimensional standards (WCC 20.85.109); and,
- Can only be approved by Council.

Currently PUDs allow single-family and multi-family residential uses, but not duplexes. To rectify this incongruity and help promote affordable housing, staff is proposing amendments to WCC 20.85.050.

Table 1. Defining characteristics of the various types of "homes"

Characteristic	Site-Built Home	Site-Built Tiny Home	Manufactured (Mobile) Home	Manufactured Tiny Home	Park Model Trailer	Type 1 Tiny Home on Wheels	Recreational Vehicle	Type 2 Tiny Home on Wheels
Meets IRC standards for permanent dwelling unit	Yes	Yes	Yes	Yes	No	No	No	No
OR Is HUD certified	No	No	Yes	Yes	No	No	No	No
Is L&I certified for Use ³	No	No	Yes, as a permanent dwelling unit	Yes, as a permanent dwelling unit	Yes, for recreational use	Yes, for recreational use	Yes, for recreational use	Yes, for recreational use
Is DOL licensed	No	No	No	No	No	No	Yes	Yes
Is intended/ licensed for long-term or short-term residential use	long-term	long-term	long-term	long-term	short-term	short-term	short-term	short-term
Is self-contained (wastewater, water, power) (if not, must be connected to utilities)	No	No	No	No	No	No	Yes	Yes
Has chassis and axles/wheels	No	No	Yes when manufactured, but wheels removed once sited	Yes when manufactured, but wheels removed once sited	Yes, when manufactured, but wheels removed once sited	Yes, when manufactured, but wheels removed once sited	Yes	Yes

³ Certified as a (long-term) permanent dwelling unit or for (short-term) recreational use, as noted.

III. Amendments

The proposed amendments are found in Exhibit A. Please refer to that attachment; explanations are provided therein. Here is an overview, though.

Proposed Tiny Home Regulatory Structure

Based on the characteristics shown in Table 1 each of the four types of tiny homes corresponds or is analogous to a type of (either long- or short-term) residence that the County already regulates. Thus, to simplify or streamline the means to regulate these units, we can just define each of these types of tiny homes as one of our existing types and they would be regulated under existing regulations for that type.

So staff is proposing to add definitions for each of the types: “Tiny Homes,” with subcategories for “site-built tiny homes” and “manufactured tiny homes”; and “Tiny Homes on Wheels,” with subcategories for “Type 1 THOWs” and “Type 2 THOWs” (see Exhibit A, §20.97.435.03 & §20.97.435.04). Then we’re proposing to amend the definitions for “Mobile Home” to include “Manufactured Tiny Homes” (Exhibit A, §20.97.250), “Recreational Vehicle” to include “Type 2 THOWs” (Exhibit A, §20.97.335), and “Park Model Trailer” to include “Type 1 THOWs” (Exhibit A, §20.97.292) (plus some grammatical edits).

With these definitional amendments, each of these tiny home types would then be allowed wherever their existing corresponding standard type is allowed under existing code:

- Site-built tiny homes would generally be allowed wherever and under whatever circumstances and standards standard site-built homes are allowed (either as a primary use or an accessory dwelling unit (ADU);
- Manufactured tiny homes would generally be allowed wherever and under whatever circumstances and standards standard mobile (or manufactured) homes are allowed (as a primary use, an ADU, or in a mobile home park);
- Type 1 THOWs would generally be allowed wherever and under whatever circumstances and standards park model trailers are allowed (as temporary guest lodging or in an RV park in a space designated for park models, meaning they have utility hookups); and,
- Type 2 THOWs would generally be allowed wherever and under whatever circumstances and standards recreational vehicles are allowed (as temporary guest lodging or in an RV park).

Table 2 more specifically identifies in which zones the various tiny home types would be allowed, as what type of use, and what permit would be required. These are identical to where we currently allow their existing counterpart (single-family residences, mobile homes, park model trailers, and recreational vehicles). Do note, however, that for simplicity’s sake there may be additional standards or requirements in some zones not shown in the table, but they’d be the same as for their counterparts.

Apart from these definitional amendments, staff is also proposing to clarify our Mobile Home and RV Park Standards. First, we’re proposing to separate the two into distinct sections. We’re also identifying the process by which such a park can be permitted (binding site plan or condominium), and that CC&R’s must be submitted and approved (so that we can ensure long-term maintenance and operations are dealt with properly). Apart from that, we’re keeping the rules that applied to both in both, but putting the rules that only apply to one type of park in their respective sections. (See Exhibit A, §20.80.950 and §20.80.955.)

Under the proposed regulations, one could develop a mobile home park for mobile homes, manufactured tiny homes, or a mix of the two; and an RV park for RV’s, Type 2 THOWs, or a mix of the two. Mobile home parks are allowed as a conditional use in the Resort Commercial (RC), Urban

Residential Mixed (UR-MX), and Urban Residential – Medium Density (URM) Districts. Recreational vehicle (RV) parks are allowed as a conditional use in the Resort Commercial (RC), Tourist Commercial (TC), and Point Roberts Special Districts.

Table 3 shows how many mobile home and RV parks currently exist in the County. In total there are 39 mobile home parks and 7 RV parks, containing 2,858 spaces, 1,881 of which can be used for park models or Type 1 THOWS.

Duplexes in Planned Unit Developments

While most of the changes to WCC 20.85.053 shown in Exhibit A are just cleaning up grammar, the two that are policy changes are where “duplexes” has been added to subsections (1) and (2).

IV. Comprehensive Plan Evaluation

The proposed amendments to the regulations (WCC Title 20) have been developed using the guidance of the Comprehensive Plan so as to remain consistent. Particularly relevant are:

Goal 3C:	Create opportunity for a broad range of housing types and encourage mixed affordability.
Policy 3C-1:	Support lot clustering, varied lot sizes, small-scale multi-family dwellings, accessory housing, especially accessory dwelling units (ADUs) in single-family zoning, and reductions in infrastructure requirements for subdivisions as incentives for development of housing obtainable by purchasers with the greatest possible mix of needs and household incomes.
Policy 3C-3:	Support development of manufactured and mobile home parks and establish design criteria that will enable them to fit into the surrounding community.
Goal 3E:	Provide for future housing needs by responding to changing household demographics.
Policy 3E-1:	Review and revise existing regulations to identify inhibitions to housing for the varying preferences of those needing housing. Focus on population segments with particular needs such as temporary, transitional, or emergency housing.
Goal 3F:	Provide incentives to create affordable housing.
Policy 3F-3:	Support innovative housing ideas including co-housing (essentially a micro-community with some centralized facilities), elder cottages (housing units for healthy but aging family members), accessory dwelling units (ADUs) in single family zoning of all jurisdictions, including cottage designs available at planning department front desk, and shared living residences or group quarters in UGAs, and educate the public about them.

Table 2. Zoning Districts where Tiny Homes would be allowed (and by what Permit⁴) under the proposed rules

Zoning District	Tiny Home Type			
	Site-Built Tiny Homes	Manufactured Tiny Homes	Type 1 Tiny Homes on Wheels	Type 2 Tiny Homes on Wheels

V. Draft Findings of Fact and Reasons for Action

Staff recommends the Council adopt the following findings of fact and reasons for action:

1. The County Council has expressed interest in increasing affordable housing options, in particular by amending the Whatcom County Code to allow for the siting of tiny homes.
2. Additionally, Planning and Development Services (PDS) has identified that in addition to allowing single- and multi-family dwellings in Planned Unit Developments, allowing duplexes would also increase affordable housing options.
3. PDS submitted an application (PLN2021-00012) to make amendments to Whatcom County's zoning regulations (WCC Title 20) to provide these affordable housing options.
4. A determination of non-significance (DNS) was issued under the State Environmental Policy Act (SEPA) on May 20, 2021.
5. Notice of the subject amendments was submitted to the Washington State Department of Commerce on May 20, 2021, for their 60-day review.
6. On June 24, 2021, the Planning Commission held a duly noticed public hearing to consider testimony on the proposed amendments.
7. The County Council held a duly noticed public hearing on the proposed amendments on October 29, 2021, and reviewed and considered the Planning Commission recommendation, staff recommendations, and public comments on the proposed amendments.
8. The amendments are consistent with the Growth Management Act, Whatcom County Comprehensive Plan, and other applicable requirements.
9. The proposed amendments reflect current local circumstances and promote the general public health, safety, morals and welfare.

VI. Proposed Conclusions

1. The amendments are in the public interest.
2. The amendments are consistent with the Whatcom County Comprehensive Plan.

VII. Recommendations

1. Planning and Development Services recommends that the Council adopts the proposed regulations shown in Exhibit A.
2. The Planning Commission voted 7-0 to recommend approval of the proposed amendments to the County Council.

PROPOSED BY: _____
INTRODUCTION DATE: _____

ORDINANCE NO. _____

ADOPTING AMENDMENTS TO WHATCOM COUNTY CODE TITLE 20 ZONING TO PROVIDE ADDITIONAL AFFORDABLE HOUSING OPTIONS, INCLUDING ALLOWING AND REGULATING TINY HOMES AND ALLOWING DUPLEXES IN PLANNED UNIT DEVELOPMENTS

WHEREAS, The County Council is interested in increasing affordable housing options, in particular by amending the Whatcom County Code to allow for the siting of tiny homes.

WHEREAS, Planning and Development Services (PDS) has identified that in addition to allowing single- and multi-family dwellings in Planned Unit Developments, allowing duplexes would also increase affordable housing options; and,

WHEREAS, The Whatcom County Council reviewed and considered Planning Commission recommendations, staff recommendations, and public comments on the proposed amendments; and

WHEREAS, The County Council hereby adopts the following findings of fact:

FINDINGS OF FACT

1. The County Council has expressed interest in increasing affordable housing options, in particular by amending the Whatcom County Code to allow for the siting of tiny homes.
2. Additionally, Planning and Development Services (PDS) has identified that in addition to allowing single- and multi-family dwellings in Planned Unit Developments, allowing duplexes would also increase affordable housing options.
3. PDS submitted an application (PLN2021-00012) to make amendments to Whatcom County's zoning regulations (WCC Title 20) to provide these affordable housing options.
4. A determination of non-significance (DNS) was issued under the State Environmental Policy Act (SEPA) on May 20, 2021.
5. Notice of the subject amendments was submitted to the Washington State Department of Commerce on May 20, 2021, for their 60-day review.
6. On June 24, 2021, the Planning Commission held a duly noticed public hearing to consider testimony on the proposed amendments.
7. The County Council held a duly noticed public hearing on the proposed amendments on October 23, 2021, and reviewed and considered the Planning Commission recommendation, staff recommendations, and public comments on the proposed amendments.
8. The amendments are consistent with the Growth Management Act, Whatcom County Comprehensive Plan, and other applicable requirements.
9. The proposed amendments reflect current local circumstances and promote the general public health, safety, morals and welfare.

CONCLUSIONS

1. The amendments to the development regulations are in the public interest.

2. The amendments are consistent with the Whatcom County Comprehensive Plan.

NOW, THEREFORE, BE IT ORDAINED by the Whatcom County Council that:

Section 1. Amendments to the Whatcom County Code are hereby adopted as shown in Exhibit A.

Section 2. Staff is authorized to work with Code Publishing to correct and update any cross-references made ineffective by these amendments.

ADOPTED this _____ day of _____, 2021.

Exhibit A: Proposed Amendments to the Whatcom County Code to Allow and Regulate Tiny Homes & to Allow Duplexes in Planned Unit Developments

Regarding Tiny Homes:

TITLE 20 ZONING

Chapter 20.80 Supplementary Requirements

20.80.950 Mobile Home (including Manufactured Tiny Home) and Recreational Vehicle Park Standards.

All mobile home ~~and recreational vehicle~~ parks shall meet the following standards:

- (1) Mobile home parks shall be developed through either a Binding Site Plan pursuant to WCC Title 21 (Land Division) or by condominium pursuant to Chapter 64.34 RCW (Condominium Act). In either case:
 - (a) An organization or individual with proper funding to maintain common facilities and operate the parks shall be provided.
 - ~~(a)~~(b) A declaration of covenants addressing and ensuring long-term compliance with the appropriate requirements herein shall be submitted for review and approval.
 - (c) Each rental or lease space shall be numbered on the site plan and the number shall be prominently displayed on the site.
- (2) Where not specified by the applicable zoning district, mobile home parks shall have:
 - (a) A maximum density of ~~seven~~ 7 lease spaces per acre when public water and sewer are provided;
 - (b) A maximum density of ~~three~~ 3 lease spaces per acre when public water and sewer are not provided;
 - (c) A minimum parcel size of ~~two~~ 2 acres.
- ~~(3) Where not specified by the applicable zoning district, recreational vehicle parks shall have:~~
 - ~~(a) A maximum density of 15 lease spaces per acre when public water and sewer are provided;~~
 - ~~(b) A maximum density of seven lease spaces per acre when public water and sewer are not provided;~~
 - ~~(c) A minimum parcel size of two acres.~~
- ~~(4)~~(3) Mobile home parks shall provide storage area for boats, recreational vehicles, and other large items. Recreational vehicle parks may provide such storage areas. Said storage areas shall be screened consistent with these standards.
- ~~(5)~~(4) Recreational vehicles set up for occupancy shall be at least 10 feet from each other and any structures on the property. Whether or not intended for occupancy, they shall be at least 10 feet from all structures not on the same property. Within a mobile home park, no mobile home, other major structure, or outdoor storage shall be located closer than 20 feet to the perimeter of the site.

Comment [CES1]: Mobile home and RV park standards have been separated into 2 sections, with the appropriate existing & new rules placed into each

Comment [CES2]: A requirement of ESSB 5383 for tiny home parks (and it should be for mobile home parks).

~~(6)~~(5) Along the edges of mobile home parks, walls or vegetative screening shall be provided where needed to protect residents from undesirable views, lighting, noise, or other off-site influences, or to protect occupants of adjoining property from potentially adverse influences within the mobile home park. In particular, extensive off-street parking areas and service areas for loading and unloading other than passenger vehicles, and for storage and collection of trash and garbage, shall be screened.

~~(7)~~ A 30-foot landscaped buffer area or screening composed of suitable native vegetation shall be placed around all common storage areas and at all perimeters of any recreational vehicle park. The purpose of said buffer is to protect on a year-round basis the adjacent property or roadways from unsightliness, visual distraction and/or noise impacts. The buffer area may be reduced where it can be demonstrated that alternative screening can adequately accomplish the purposes stated in this subsection. Perimeter buffers shall be supplemented by a fence or other device where trespass is a potential problem. No structures, development or other activities shall occur within any buffer areas; provided, that trails may be located within those buffer areas which are at least 50 feet in width.

~~(8)~~(6) There shall be landscaping developed consistent with WCC 20.80.300 ([Landscaping](#)) within open areas of ~~the mobile home park and recreational vehicle~~ parks not otherwise used for park purposes. Such open areas and landscaping shall be continually and properly maintained.

~~(9)~~(7) Mobile homes ~~and recreational vehicle~~ parks shall keep ~~40% percent~~ of the site free of buildings, structures, parking areas, and other impervious surfaces.

~~(10) An organization or individual with proper funding to maintain common facilities and operate the parks shall be provided.~~

~~(11)~~(8) On-site recreational amenities with at least one substantial facility serving the users of a park or identified area shall be provided. Such substantial facilities may include tennis courts, children's play areas with equipment, or a swimming pool. The type and size of facility shall be appropriate to the type and amount of clientele being served.

~~(12) Maximum length of stay in recreational vehicle parks shall not exceed 180 days for any one-year time period.~~

~~(13)~~(9) Interior roads within mobile home ~~and recreational vehicle~~ parks shall be private, unless the County Engineer determines that the development of public roads is necessary.

~~(14)~~(10) For each mobile home space there shall be provided and maintained at least two parking spaces conforming ~~with to zoning ordinance~~ the requirements of WCC 20.80.500, et seq. (Off-Street Parking and Loading Requirements). In addition to occupant parking, guest and service parking shall be provided within the boundaries of the park at a ratio of one parking space for each two mobile home spaces.

~~(15)~~(11) There shall be a minimum of 10 feet of separation maintained between all mobile homes on the site. Accessory structures may be located no closer than 10 feet to any mobile home or five feet to other accessory structures.

~~(12)~~ Each rental space shall be numbered on the site plan and the number shall be prominently displayed on the site. All mobile home parks shall comply with WCC Chapter 24.04 (Recreational Vehicle Park and Subdivision Rules) regarding utility provision. Utility (wastewater, water, electricity) hook-ups shall be provided for each rentable or leasable space.

Comment [CES3]: Moved above

20.80.955 Recreational Vehicle (including Tiny Homes on Wheels) Park Standards.

All recreational vehicle parks shall meet the following standards:

- (1) Recreational vehicle parks shall be developed through either a Binding Site Plan pursuant to WCC Title 21 (Land Division) or by condominium pursuant to Chapter 64.34 RCW (Condominium Act). In either case:
 - (a) An organization or individual with proper funding to maintain common facilities and operate the parks shall be provided.
 - (b) A declaration of covenants addressing and ensuring long-term compliance with the appropriate requirements herein shall be submitted for review and approval.
 - (c) Each rental or lease space shall be numbered on the site plan and the number shall be prominently displayed on the site.
- (2) Where not specified by the applicable zoning district, recreational vehicle parks shall have:
 - (a) A maximum density of 15 lease spaces per acre when public water and sewer are provided;
 - (b) A maximum density of 7 lease spaces per acre when public water and sewer are not provided;
 - (c) A minimum parcel size of 2 acres.
- (3) Recreational vehicles set up for occupancy shall be at least 10 feet from each other and any structures on the property. Whether or not intended for occupancy, they shall be at least 10 feet from all structures not on the same property.
- (4) A 30-foot landscaped buffer area or screening composed of suitable native vegetation shall be placed around all common storage areas and at all perimeters of any recreational vehicle park. The purpose of said buffer is to protect on a year-round basis the adjacent property or roadways from unsightliness, visual distraction, and/or noise impacts. The buffer area may be reduced where it can be demonstrated that alternative screening can adequately accomplish the purposes stated in this subsection. Perimeter buffers shall be supplemented by a fence or other device where trespass is a potential problem. No structures, development, or other activities shall occur within any buffer areas; provided, that trails that are at least 5 feet in width may be located within those buffer areas.
- (5) There shall be landscaping developed consistent with WCC 20.80.300 (Landscaping) within open areas of recreational vehicle parks not otherwise used for park purposes. Such open areas and landscaping shall be continually and properly maintained.
- (6) Recreational vehicle parks shall keep 40% of the site free of buildings, structures, parking areas, and other impervious surfaces.
- (7) On-site recreational amenities with at least one substantial facility serving the users of a park or identified area shall be provided. Such substantial facilities may include tennis courts, children's play areas with equipment, or a swimming pool. The type and size of facility shall be appropriate to the type and amount of clientele being served.
- (8) Maximum length of stay in recreational vehicle parks shall not exceed 180 days for any one-year time period.
- (9) Interior roads within recreational vehicle parks shall be private, unless the County Engineer determines that the development of public roads is necessary.
- (10) All recreational vehicle parks shall comply with WCC Chapter 24.04 (Recreational Vehicle Park and Subdivision Rules) regarding utility provision. Utility (wastewater, water, electricity) hook-ups shall be provided for each rentable or leasable space designated for park model trailers and Type 1

Comment [CES4]: A requirement of ESSB 5383 for tiny home parks.

Comment [CES5]: Moved from 20.97.340 (definition of RV Park), as these are regulations, not definitions.

Comment [CES6]: A requirement of ESSB 5383 for tiny home parks.

THOWs. Spaces designated solely for self-contained recreational vehicles may use communal facilities.

Chapter 20.97 Definitions

20.97.250 Mobile Home (a.k.a, Manufactured Home).

"Mobile home" means a dwelling unit designed for long-term human habitation by one family and having complete living facilities; constructed and fabricated into a complete unit at a factory and capable of being transported to a location of use on its own chassis and wheels; identified by a model number and serial number by its manufacturer; and designed primarily for placement on an impermanent footing. This includes manufactured tiny homes (see "Tiny Home.") A unit ~~which that~~ was originally built as a mobile home but ~~which~~ has substantially lost its mobility ~~through by~~ being placed on a permanent footing, the tongue and axle removed, skirting is installed, and ~~which that~~ wholly meets state standards for such units, shall not be considered to be a mobile home and shall be treated as a single-family dwelling for the purpose of this ~~ordinance code only when it is fixed to a permanent footing and tongue and axle have been removed and skirting installed.~~

20.97.255 Mobile Home Park.

"Mobile home park" means any parcel or adjacent parcels of land in the same ownership ~~which that~~ is ~~utilized~~ used for occupancy by more than two mobile homes. This term shall not be construed to mean campgrounds, recreational vehicle parks, or tourist facilities for camping.

20.97.292 Park Model Trailer.

"Park model trailer" means a trailer designed to provide seasonal or temporary living quarters; ~~which are not self-contained and thus may need to be used with~~ temporarily connected ~~edions~~ to utilities ~~necessary~~ for operation of installed fixtures and appliances; ~~it~~ has a gross trailer area not exceeding 400 square feet; ~~or and~~ is approved by the state as a park model trailer. This includes Type 1 THOWs (see "Tiny Home on Wheels").

20.97.335 Recreational Vehicle.

"Recreational vehicle" means a motor vehicle; or portable structure capable of being transported on ~~the~~ highways by a motor vehicle; ~~that is~~ designed and intended for casual or short-term human occupancy for travel, recreational, and vacation uses without a permanent foundation; identified by a model number (RV), serial number, and vehicle registration number; and equipped with limited water storage and other self-contained living facilities. For the purposes of these regulations, the term "recreational vehicle" shall include self-contained campers, motor-homes, Type 2 Tiny Home on Wheels, and travel trailers, ~~and but~~ shall not include park model trailers or Type 1 Tiny Home on Wheels, as they are not self-contained units.

20.97.340 Recreational Vehicle Park.

"Recreational vehicle park" means a parcel of private land in which three or more contiguous sites are primarily for occupancy by recreational vehicles for travel, recreation, or vacation uses. ~~For~~ Within

mobile home parks, only spaces that are designated and/or are used for recreational vehicles shall constitute a recreational vehicle park. ~~Recreational vehicles set up for occupancy shall be at least 10 feet from each other and any structures on the property. Whether or not intended for occupancy, they shall be at least 10 feet from all structures not on the same property.~~ For the purposes of these regulations, the term “recreational vehicle park” shall include camping clubs.

Comment [CES7]: These are regulations, not definitions, and have been moved to 20.80.955.

20.97.435.03 Tiny Home.

A tiny home is a dwelling unit that is 400 square feet or less in floor area (excluding sleeping lofts). For the purposes of this code there are two types of tiny homes, as described below. For Tiny homes on Wheels see WCC 20.97.435.04.

Comment [CM8]: This portion matches the definition in appendix Q in the IRC. The size is also consistent with the definition of a park model in WAC 296-150P-00200.

1. *Site-Built Tiny Home.* A tiny home built on-site on a permanent foundation that meets the minimum requirements of the International Residential Code (IRC), including provisions of Appendix Q, and is reviewed and inspected by Whatcom County. For the purposes of this code they are equivalent to and are permissible under the same rules as any standard single-family dwelling.
2. *Manufactured Tiny Home.* A factory-built tiny home bearing a certification tag from the Washington State Department of Labor and Industries (L&I) or other approved third party inspection agency stating it is approved for use as a single-family residence per the current edition of the International Residential Code (IRC) or Housing and Urban Development (HUD) requirements. Manufactured tiny homes usually have wheels and a chassis when they come out of the factory, and typically have the wheels removed prior to placing it on its manufacturer-approved foundation. For the purposes of this code they are equivalent to and are permissible under the same rules as any standard mobile home.

20.97.435.04 Tiny Home on Wheels (THOWs)

A Tiny Home on Wheels is a portable structure licensed to be transported on the highways by a motor vehicle; designed and intended for casual or short-term human occupancy for travel, recreational, vacation and other temporary uses without a permanent foundation; in a space of 400 square feet or less in floor area (excluding sleeping lofts). For the purposes of this code there are two types of tiny homes on wheels, as described below.

1. *“Type 1 THOW”* is a THOW that is not self-contained, and thus needs to be temporarily connected to utilities necessary for operation of installed fixtures and appliances. For the purposes of this code they are equivalent to and are permissible under the same rules as for Park Model Trailers.
2. *“Type 2 THOW”* is a THOW that is self-contained and may use communal utility services (water, wastewater). For the purposes of this code they are equivalent to and are permissible under the same rules as for Recreational Vehicles (RVs).

Regarding Duplexes in Urban Zones via Planned Unit Developments:

Title 20 ZONING

Chapter 20.85 Planned Unit Developments (PUD)

20.85.050 Permitted Uses.

.051 Uses ~~outright permitted-allowed~~ in a planned unit development shall include those permitted, accessory, and conditional uses allowed in the underlying zone district(s), ~~as well as and~~ such other uses as provided in WCC 20.85.052 ~~to through~~ 20.85.055. For areas located within a Water Resource Protection Overlay District, the more restrictive use provisions of Chapter 20.71 WCC shall apply.

.052 In addition to the uses allowed in the underlying zone, the following uses shall be allowed outright ~~where when~~ they are only serving the planned unit development and ~~where~~ all other applicable standards are met:

- (1) Community buildings;
- (2) Indoor recreation facilities, including athletic clubs or fitness centers, racquetball courts, swimming pools, tennis courts, or other similar uses;
- (3) Outdoor recreation facilities, including swimming pools, tennis courts, recreational trails, or similar use; and
- (4) Recreational vehicle storage areas.

.053 ~~Even though they may not be allowed in the underlying zone(s).~~ A planned unit development may also authorize add the following additional land uses ~~activities, as follows;~~ provided the criteria of WCC 20.85.054 are met:

- (1) ~~For In~~ the Urban Residential and Rural zones, duplexes and multifamily dwellings consistent with the density requirements of the underlying zone, except as that may be modified by the provisions of WCC 20.85.108 (Density Increases). The number of units attached may be greater than would otherwise be allowed by the underlying zoning.
- (2) ~~In For~~ the Urban Residential and Urban Residential Medium zones, duplexes and those uses allowed in the Neighborhood Commercial zone ~~are may~~ also be permitted. In addition, both resort- and non-resort-oriented transient accommodations, such as inns or hotels, may be permitted; provided, that:
 - (a) The total number of sleeping units shall not exceed 50%-percent of the total number of dwelling units that would be allowed on the property by the underlying zone regulations;
 - (b) Each sleeping unit shall count as one dwelling unit for the purpose of determining the total number of dwelling and sleeping units, in combination, permitted on the property;
 - (c) It can be demonstrated that the overall development will not generate more traffic than conventional residential development at the density allowed in the zone.
- (3) ~~In For~~ the General Commercial zone, those uses allowed in the Urban Residential Medium zone are ~~appropriate~~ allowed.
- (4) ~~In For~~ the Resort Commercial zone:

Comment [CES9]: Policy change

Comment [CES10]: Policy change

- (a) Multiple single-family dwellings per lot are permitted if developed as condominiums under state law; and
- (b) Single-family attached dwellings (at a base gross density of ~~seven-7~~ units/acre); ~~and~~.
- (5) ~~In For~~ the Light Impact Industrial zone, those uses allowed in the Urban Residential Medium, Neighborhood Commercial, ~~and/or~~ General Commercial zones are ~~appropriate~~ allowed.

.054 In order ~~to expand for those additional~~ uses listed ~~allowed~~ in WCC 20.85.053 to be authorized, the applicant ~~shall~~ must demonstrate:

- (1) That the primary land use activity of the planned unit development ~~shall be those uses~~ is one allowed by the underlying zone district;
- (2) That the ~~expanded~~ additional uses will benefit and serve the residents or employees of the proposed planned unit development; and
- (3) That all other applicable approval criteria and standards are met.

.055 Where a proposed development is located in two or more zone districts, the uses allowed in the applicable districts may be located on any portion of the site; provided, that all applicable standards are met.

.056 For purposes of determining appropriate standards, the requirements of the zone district allowing the use would apply. If the use is allowed by two or more districts, the lesser standards would apply.

TITLE FOR AGENDA ITEM:

Discussion of an ordinance granting Zayo Group, LLC, a franchise for the provision of telecommunications services

SUMMARY STATEMENT OR LEGAL NOTICE LANGUAGE:

RCW 36.55.040, Whatcom County Charter Section 9.30, and Whatcom County Code 12.24 allow the granting of franchises to public and private utility companies for use of County rights-of-way. This is a new franchise allowing for the use and presence in County rights-of-way to allow for the provision of telecommunications services.

RE: Franchise for Zayo Group, LLC

DATE: November 19, 2021

▪ **Requested Action**

Adopt an ordinance that grants a franchise to Zayo Group, LLC allowing it to use and be present in County Rights of Way for the installation, maintenance, operation, repair, modification, replacement, and/or removal of telecommunication facilities, together with equipment and appurtenances thereto, for the provision of telecommunication services within and through Whatcom County per the terms of the franchise agreement, under RCW 36.55 and § 9.30 of the Home Rule Charter.

▪ **Background and Purpose**

Zayo Group, LLC has applied for a new franchise agreement for the purposes of utilizing County rights of way to provide telecommunications services.

Please contact Chris Quinn at extension 5729 if you have any questions or concerns regarding the terms of this agreement.

PROPOSED BY: Executive
INTRODUCTION DATE: _____

ORDINANCE NO. _____

**GRANTING ZAYO GROUP, LLC, A NON-EXCLUSIVE FRANCHISE FOR THE PROVISION OF
TELECOMMUNICATIONS SERVICES**

WHEREAS, Zayo Group, LLC, a Delaware limited liability company, with an address of 1821 30th Street, Unit A, Boulder, CO 80301 ("Grantee") has applied to Whatcom County ("County") for a non-exclusive franchise for the right of entry, use, and occupation of those public Rights-of-Way within the County, expressly to install, construct, erect, operate, maintain, repair, relocate and remove Grantee Facilities in, on, upon, along and/or across those Rights-of-Way for purposes of offering and providing Telecommunications Services utilizing said Grantee Facilities ("Grantee Services"); and

WHEREAS, RCW 36.55.010, Whatcom County Charter Section 9.30, and Whatcom County Code Chapter 12.24 address the requirements pertaining to the granting of franchises by the County; and

WHEREAS, said application has come on regularly to be heard by the County Council on the ____ day of _____, 2021, and notice of this hearing has been duly published on the ____ day of _____, 2021, and the ____ day of _____, 2021, in the Bellingham Herald, a daily newspaper published in Whatcom County having county-wide circulation; and

WHEREAS, from information presented at such public hearing, and from facts and circumstances developed or discovered through independent study and investigation, the County Council now deems it appropriate and in the best interest of the County and its inhabitants that a franchise be granted to Grantee.

NOW, THEREFORE, BE IT ORDAINED by the Whatcom County Council that a non-exclusive franchise set forth in the language herein below, Sections 1 through 24, is hereby granted to Zayo Group, LLC for a period of ten (10) years in order that it may, subject to the terms of this ordinance and other pertinent requirements of law, install, construct, erect, operate, maintain, repair, relocate and remove Grantee Facilities in, on, upon, along and/or across those Rights-of-Way for purposes of offering and providing Telecommunications Services utilizing said Grantee Facilities

Section 1. Grant of Franchise Right to Use Franchise Area.

A. Subject to the terms and conditions stated herein, County hereby grants to Grantee a franchise as set forth in this Ordinance (this "Franchise"), including permission to enter, use and occupy those Rights-of-Way within unincorporated Whatcom County as now or hereafter constituted (the "Franchise Area").

B. Grantee is authorized, subject to other applicable requirements of law, to install, remove, construct, erect, operate, maintain, relocate and repair the facilities necessary or convenient for Grantee Services and all appurtenances thereto (collectively, "Grantee Facilities") in, along, under, and across the Franchise Area.

C. This Franchise does not authorize the use of the Franchise Area for any facilities or services other than Grantee Facilities and Grantee Services as provided herein, and it extends no right or privilege relative to any facilities or services of any type, including Grantee Facilities and Grantee Services, on private property within County. This Franchise does not authorize the Grantee to provide "cable services" (as such term is defined in federal law), and if Grantee or anyone using Grantee Facilities desires to offer "cable services" in the future, a further agreement with the County will be required prior to providing such service.

D. This Franchise is non-exclusive and does not prohibit County from entering into other agreements, including other franchises, impacting the Franchise Area, unless County determines that entering into such agreements interferes with Grantee's rights set forth herein.

E. Except as explicitly set forth herein, this Franchise does not waive any rights that County has or may hereafter acquire with respect to the Franchise Area or any other County roads, Rights-of-Way, property, or any portions thereof. This Franchise shall be subject to the power of eminent domain, and in any proceeding under eminent domain, Grantee acknowledges its use of the Franchise Area shall have no value.

F. County reserves the right to change, regrade, relocate, abandon, or vacate any Right-of-Way within the Franchise Area. If, at any time during the term of this Franchise, County vacates any portion of the Franchise Area containing Grantee Facilities, County shall reserve an easement for public utilities within that vacated portion within which Grantee may continue to operate any existing Grantee Facilities under the terms of this Franchise for the remaining period set forth under Section 3.

G. Grantee agrees that its use of Franchise Area shall at all times be subordinate and subject to County's and the public's need for municipal infrastructure, travel, and access to the Franchise Area, except as may be otherwise required by law.

Section 2. Notices.

A. Written notices to the parties shall be sent by certified mail to the following addresses, unless a different address shall be designated in writing and delivered to the other party.

County: County Executive
Whatcom County Courthouse
311 Grand Ave., Suite 108
Bellingham, WA 98225

Boulder, CO 80301

Emergencies:
Network Operations Center & Repair
Phone: (888) 404 9296
E-mail: zayoncc@zayo.com

B. Any changes to the Grantee's information shall be sent to County's Public Works Director referencing the title of this agreement.

C. The Grantee's voice number, (888) 404 9296 (Operations Center), shall be staffed at least during normal business hours, at least from 8:00 a.m. to 5:00 p.m., Pacific Time Zone.

In all cases, "normal business hours" must also include some evening hours at least one night per week and/or some weekend hours.

Section 3. Term of Franchise.

A. This Franchise shall run for a period of ten (10) years from the date of execution specified in Section 5.

B. If the parties fail to formally renew this Franchise prior to the expiration of its term or any extension thereof, the obligations and privileges of this Franchise shall nonetheless

continue in full force and effect until renewed or otherwise terminated by either party through written notice to that effect.

Section 4. Definitions.

For the purpose of this Franchise:

“Affiliate” means, with respect to any Person, any other Person controlling, controlled by or under common control with such Person. For purposes of this definition, the term “control” (including the correlative meanings of the terms “controlled by” and “under common control with”), as used with respect to any Person, means the possession, directly or indirectly, of the power to direct, or cause the direction of, the management policies of such Person, whether through the ownership of voting securities, by contract or otherwise.

“Emergency” means a condition of imminent danger to the health, safety and welfare of persons or property located within County including, without limitation, damage to persons or property from natural consequences, such as storms, earthquakes, riots, acts of terrorism or wars.

“Grantee Facilities” means such poles, antenna, wires, cables, conductors, ducts, conduits, vaults, manholes, pedestals, amplifiers, appliances, attachments, and other related wireline and wireless property or equipment as may be necessary or appurtenant to Grantee’s telecommunications system.

“Franchise Area” means those public Rights-of-Way located within the unincorporated area of the County.

“Grantee Services” means Telecommunications Services and services ancillary thereto provided by Grantee to its customers.

“Gross Revenues” means all revenues received by Grantee from the operation of the Grantee Facilities within the Rights-of-Way, including, but not limited to all rents, payments, fees and other amounts actually collected from any third party and received by Grantee and allocable to the period within the Term pursuant to any other agreement for telecommunications services provided with respect to Grantee Facilities, but exclusive of:

1. any payments, reimbursements or pass-throughs from the third party to Grantee:
 - a. for utility charges, taxes and other pass-through expenses, or
 - b. in connection with Maintenance work performed or equipment installed by Grantee;
2. site acquisition, construction management or supervision fees related to the installation of the Grantee Facilities; and
3. contributions of capital by any third party to reimburse Grantee in whole or in part for the installation of the Grantee Facilities.

“Maintenance” or “Maintain” means examining, testing, inspecting, repairing, maintaining and replacing the existing Grantee Facilities or any part thereof, including as required and necessary for safe operation.

“Person” means any individual, sole proprietorship, partnership, association, corporation or other form of organization authorized to do business in the State of Washington, and includes any natural person.

“Relocation” means permanent movement of Grantee Facilities required by County, and not temporary or incidental movement of such facilities, or other revisions Grantee would accomplish and charge to third parties without regard to municipal request.

“Right-of-Way” (pluralized as “Rights-of-Way”) means the surface and the space above and below streets, roadways, highways, avenues, courts, lanes, alleys, sidewalks, easements, rights-of-way and similar public properties and in the Franchise Area.

“State” means the State of Washington.

“Telecommunications Service” has the same meaning as “Telecommunications service” as defined under 47 U.S.C. § 153 (2012).

Section 5. Acceptance of Franchise.

A. This Franchise, and any rights granted hereunder, shall not become effective for any purpose unless and until Grantee files with the Whatcom County Council the Statement of Acceptance, attached hereto as Exhibit A (the “Franchise Acceptance”). The date that the Franchise Acceptance is filed with the County Council shall be the effective date of this Franchise.

B. Should Grantee fail to file the Franchise Acceptance with the County Council within 30 days after the effective date of this ordinance, then the County shall have the right to declare, by ordinance, Grantee’s forfeiture of all rights hereunder and to declare this Franchise terminated and of no further force or effect thereafter. The County shall retain this right to terminate the Franchise until such time as Grantee files the Franchise Acceptance pursuant to the terms herein.

Section 6. Construction and Maintenance.

A. Grantee shall apply for, obtain, and comply with the terms of all permits required under Whatcom County Code 12.16, 12.24, 12.27, 12.28, 12.30, 20.13 and any other pertinent provisions of law as may now or hereafter apply, for any work done on, or to install Grantee Facilities. Grantee shall comply with all applicable County, State, and federal codes, rules, regulations, and orders in undertaking such work, which shall be done in a thorough and proficient manner consistent with the standards of the telecommunications industry.

Modifications shall not be subject to additional approval hereunder (except such permitting as is required by applicable law) to the extent that: (i) such modification to Grantee Facilities involves only substitution of internal components, and does not result in any change to the external appearance, dimensions, or weight of Grantee Facilities, as approved by County; or (ii) such modification involves replacement of Grantee Facility with a facility that is the same, or smaller in weight and dimensions as the approved Facility. Grantee will notify County of any such modification within fifteen (15) days after modification is made.

B. Grantee agrees to use commercially reasonable efforts to coordinate its activities with County and all other affected utilities located within the Franchise Area.

C. County expressly reserves the right to prescribe in a reasonable manner how and where Grantee Facilities shall be installed within the Franchise Area and may from time to time, pursuant to the applicable sections of this Franchise, direct in writing the removal, Relocation and/or replacement thereof as required by the public interest and safety at the expense of Grantee. Such public interest shall not extend to the accommodation of private development. Grantee shall have no less than 60 days following receipt of such written direction to complete the removal, Relocation, and/or replacement of Grantee Facilities, provided that Grantee shall have such extended period of 30 days as may be required beyond the initial 60 days if Grantee commences removal, Relocation, and/or replacement of Grantee Facilities within the initial 60 day period and thereafter continuously and diligently pursues such required performance to completion.

D. Upon prior written approval of County and in accordance with County ordinances, Grantee shall have the authority, but not the obligation, to reasonably trim trees upon and overhanging streets, Rights-of-Way and places in the Franchise Area so as to prevent the branches of such trees from coming in physical contact with Grantee Facilities. Grantee shall be responsible for debris removal from such activities. If such debris is not removed within twenty-four (24) hours of completion of the trimming, County may, at its sole discretion, remove such debris and charge Grantee for the cost thereof. This section does not in any instance grant automatic authority to clear vegetation for purposes of providing a clear path for radio signals. Any such general vegetation clearing will require a land clearing permit.

E. Consistent with Sections 12.16, 12.24, 12.27, 12.28, and 12.30 of the Whatcom County Code, in case of any disturbance of any road, pavement, sidewalk, driveway or other surfacing, the Grantee shall, at its own cost and expense and in a manner approved by the County, replace and restore all paving, sidewalk, driveway, landscaping or surface, promptly and in as good condition as before said work was commenced and in accordance with standards for such work set by the County and the County Code. If Grantee fails, neglects or refuses to make restorations as required under this Section, then the County may do such work or cause it to be done, and the cost thereof to the County shall be paid by Grantee.

F. Grantee shall maintain all above-ground improvements that it places on County Rights-of-Way pursuant to this franchise. In order to avoid interference with the County's

ability to maintain its roads and associated Rights-of-Way, Grantee shall provide a clear zone of five feet on all sides of such improvements. For these purposes, "clear zone" means an area that is mowed or otherwise maintained so that the Grantee Facilities are readily visible to County maintenance operations. The foregoing obligations shall not apply to above-ground, pole-mounted antenna but shall apply to any poles or other structures at ground level erected or managed by Grantee hereunder. If Grantee fails to comply with this provision, and by its failure property is damaged, then Grantee shall be responsible for all damages caused thereby.

G. Grantee shall maintain a minimum underground horizontal separation of five (5) feet from County water facilities and ten (10) feet from above-ground County water facilities; provided, that for development of new areas, County, together with Grantee and other utility purveyors or authorized users of Rights-of-Way, will develop and follow the Public Works Director's determination of a consensus for guidelines and procedures for determining specific utility locations, subject additionally to this Franchise.

H. Before any work is performed under this Franchise which may affect any existing monuments or markers of any nature relating to subdivisions, plats, roads and all other surveys, the Grantee shall reference all such monuments and markers. The reference points shall be so located that they will not be disturbed during the Grantee's operations under this Franchise. The method of referencing these monuments or other points to be referenced shall be approved by the County Engineer. The replacement of all such monuments or other points to be referenced shall be approved by the County Engineer. The replacement of all such monuments or markers disturbed during construction shall be made as expeditiously as conditions permit, and as directed by the County Engineer. The cost of monuments or other markers lost, destroyed or disturbed, and the expense of replacement by approved monuments shall be borne by the Grantee. A complete set of reference notes for monuments and other ties shall be filed with the County Engineer's Office.

Section 7. Repair and Emergency Work.

In the event of an Emergency, Grantee may commence such repair and Emergency response work as required under the circumstances, provided that Grantee shall notify the County Public Works Director in writing as promptly as possible, before such repair or Emergency work commences, or as soon thereafter as possible, if advance notice is not practical. County may act, at any time, without prior written notice in the case of Emergency, but shall notify Grantee in writing as promptly as possible under the circumstances.

Section 8. Damages to County and Third-Party Property.

Grantee agrees that should any of its actions under this Franchise materially impair or damage any County property, survey monument, or property owned by a third-party, Grantee will restore, at its own cost and expense, said property to a safe condition. Such repair work shall be performed and completed to the reasonable satisfaction of the County Engineer.

Section 9. Location Preference.

Any structure, equipment, appurtenance or tangible property of a utility, other than Grantee's, which was installed, constructed, completed or in place prior in time to Grantee's application for a permit to construct Grantee Facilities under this Franchise shall have preference as to positioning and location with respect to Grantee Facilities. However, to the extent that Grantee Facilities are completed and installed prior to another utility's submittal of a permit for new or additional structures, equipment, appurtenances or tangible property, then Grantee Facilities shall have priority. These rules governing preference shall continue in the event of the necessity of relocating or changing the grade of any County road or Right-of-Way. A relocating utility shall not necessitate the relocation of another utility that otherwise would not require Relocation. This Section shall not apply to any County facilities or utilities that may in the future require the Relocation of Grantee Facilities. Such Relocations shall be governed by Section 11.

Section 10. Grantee Information.

A. Grantee agrees to supply, at no cost to County, any information reasonably requested by the Director of Public Works to coordinate municipal functions with Grantee's activities and fulfill any municipal obligations under State law. Said information shall include, at a minimum, as-built drawings of Grantee Facilities, installation inventory, and maps and plans showing the location of existing or planned facilities within County. Said information may be requested either in hard copy and/or electronic format, if reasonably possible in a format compatible with County's database system, as now or hereinafter existing, including County's Geographic Information Service (GIS) data base. Grantee shall use commercially reasonable efforts to keep the Public Works Director informed of its long-range plans for coordination with County's long-range plans.

B. The parties understand that Washington law limits the ability of County to shield from public disclosure any information given to County. Accordingly, the County will endeavor in good faith to provide Grantee reasonable notice of any request for public disclosure of information of Grantee to allow Grantee to take such actions as Grantee may determine and at Grantee's sole cost and expense to prevent or limit such disclosure. Grantee shall indemnify and hold harmless County for any loss or liability for costs and for attorneys' fees because of non-disclosures requested by Grantee under Washington's open public records law, provided reasonable notice and opportunity to defend was given to Grantee or Grantee is made aware of a pending request or claim.

Section 11. Relocation of Grantee Facilities.

A. Except as otherwise so required by law, Grantee agrees to Relocate, remove, or reroute Grantee Facilities as reasonably ordered by the County Engineer at no expense or liability to County, the time frame for which shall be reasonably determined by the County Engineer and which shall in no event be less than sixty (60) days following the date of written

notice of such order, provided that Grantee shall have such extended period of 30 days as may be required beyond the initial 60 days if Grantee commences removal, Relocation, and/or replacement of Grantee Facilities within the initial 60 day period and thereafter continuously and diligently pursues such required performance to completion. Any determination to require the Relocation of Grantee Facilities shall be made in a reasonable, competitively neutral, uniform and non-discriminatory manner. Any County funds used to reimburse costs incurred by any Person in connection with any relocation shall be allocated in a reasonable, uniform and non-discriminatory manner. Pursuant to the provisions of Section 14, Grantee agrees to protect and save harmless County from any customer or third-party claims for service interruption or other losses in connection with any such change, Relocation, abandonment, or vacation of public property.

If Grantee fails, neglects or refuses to remove or relocate Grantee Facilities as directed by the County; or in emergencies or where public health and safety or property is endangered, the County may do such work or cause it to be done, and the cost thereof to the County shall be paid by Grantee. If Grantee fails, neglects or refuses to remove or relocate Grantee Facilities as directed by another franchisee or utility with authority to so direct Grantee, that franchisee or utility may do such work or cause it to be done, and if Grantee would have been liable for the cost of performing such work, the cost thereof to the party performing the work or having the work performed shall be paid by Grantee.

B. If a readjustment or Relocation of Grantee Facilities is necessitated by a request to Grantee from a Person other than County, that party shall agree to reimburse Grantee's costs prior to Grantee having any obligation to readjust or relocate Grantee Facilities and agree to pay Grantee the actual costs thereof.

C. Grantee and the County acknowledge and commit to fully comply with their respective obligations, as the same may arise from time to time, under Chapter 19.122 RCW (Underground Utilities Locator Statute) or any other law applicable to determining the location of utility facilities. Thus, before commencing any work within the Franchise Area, Grantee shall comply with the One Number Locator provisions of RCW Chapter 19.122 to identify existing utility infrastructure.

D. Design locate marks will be placed in the same three (3) day time frame as construction locate marks.

Section 12. Abandonment and or Removal of Grantee Facilities.

A. Within one hundred and eighty (180) days of Grantee's permanent cessation of use of Grantee Facilities, or any portion thereof, Grantee shall, at County's discretion, either abandon in place or remove the affected facilities.

B. The parties expressly agree that this Section shall survive the expiration, revocation or termination of this Franchise.

Section 13. Undergrounding.

A. The parties agree that this Franchise does not limit County's authority under federal law, State law, or local ordinance, to require the undergrounding of utilities.

B. Whenever County requires the undergrounding of aerial utilities in the Franchise Area, Grantee shall underground Grantee Facilities in the manner specified by the County Engineer to the extent practical and recognizing that wireless antenna cannot be undergrounded, with payment therefor consistent with the provisions of RCW 36.88.410 et ff. Where other utilities are present and involved in the undergrounding project, Grantee shall be required to pay only its fair share of common costs borne by all utilities, in addition to the costs specifically attributable to the undergrounding of Grantee Facilities. Common costs shall include necessary costs for common trenching and utility vaults. Fair share shall be determined in comparison to the total number and size of all other utility facilities being undergrounded.

Section 14. Indemnification and Hold Harmless.

A. Grantee shall defend, indemnify and hold the County and its officers, officials, agents, employees, and volunteers harmless from any and all claims, demands, suits, actions, costs and expenses, including but not limited to attorney's fees, made against it by any third party on account of injury or damage to the person or property of another, but only to the extent such injury or damage is caused by the negligence or breach of Grantee, its agents, servants or employees of this Franchise; provided, however, that in the event any such claim or demand be presented to or filed with the County, the County shall promptly notify Grantee thereof, and Grantee shall have the right, at its election and at its sole cost and expense, to settle and compromise such claim or demand; provided further, that in the event any suit or action is begun against the County based upon any such claim or demand, the County shall likewise promptly notify Grantee thereof, and Grantee shall have the right, at its election and its sole cost and expense, to settle and compromise such suit or action, or defend the same at its sole cost and expense, by attorneys of its own election. Notwithstanding the foregoing, if damages to another or others result from concurrent negligence of Grantee and the County, Grantee and the County shall each be responsible for and this indemnification provision shall be operative so that each party bears the proportionate share attributable to its own negligence. In case judgment which is not appealed shall be rendered against the County in such suit or action, County shall fully satisfy said judgment within ninety (90) days after said suit or action shall have finally been determined. Upon County's failure to satisfy said judgment within ninety (90) days, the Grantee may elect to terminate this Franchise pursuant to the terms of Section 19 herein. The provision for reimbursement of the County shall survive the termination of this Franchise.

B. County shall defend, indemnify and hold Grantee harmless from any liability arising out of or in connection with any damage or loss to Grantee Facilities caused by the

willful misconduct or gross negligence of County, except to the extent any such damage or loss is directly caused by the negligence of Grantee, or its agents.

C. Grantee acknowledges that neither County nor any other public agency with responsibility for firefighting, Emergency rescue, public safety or similar duties within County has the capability to provide trench, close trench or confined space rescue. Grantee, and its agents, assigns, successors, or contractors, shall make such arrangements as Grantee deems fit for the provision of such services. Grantee shall hold County harmless from any liability arising out of or in connection with any damage or loss to Grantee for County's failure or inability to provide such services, and, pursuant to the terms of Section 14(A), Grantee shall indemnify County against any and all third-party costs, claims, injuries, damages, losses, suits, or liabilities based on County's failure or inability to provide such services.

D. Acceptance by County of any work performed by Grantee shall not be grounds for avoidance of this section.

E. EXCEPT FOR A PARTY'S INDEMNIFICATION OBLIGATIONS SET FORTH HEREIN AND EXCEPT FOR CLAIMS ARISING FROM A PARTY'S INTENTIONAL MISCONDUCT (INCLUDING EMPLOYEE CONDUCT), IN NO EVENT SHALL EITHER PARTY BE LIABLE TO THE OTHER PARTY FOR ANY INDIRECT, INCIDENTAL, SPECIAL, PUNITIVE OR CONSEQUENTIAL DAMAGES WHATSOEVER, ARISING OUT OF, OR IN CONNECTION WITH, THIS AGREEMENT, INCLUDING BUT NOT LIMITED TO, LOST PROFITS, LOST REVENUE, LOSS OF GOODWILL, LOSS OF ANTICIPATED SAVINGS, LOSS OF DATA, INCURRED OR SUFFERED BY EITHER PARTY.

Section 15. Insurance.

A. Grantee shall procure and maintain for the duration of this Franchise, insurance against claims for injuries to persons or damage to property which may arise from or in connection with the performance of the work hereunder by Grantee, its agents, representatives, or employees in the amounts and types set forth below:

1. Automobile Liability insurance covering all owned, non-owned, hired, and leased vehicles with a minimum combined single limit for bodily injury and property damage of \$2,000,000 per accident.

2. Commercial General Liability insurance with limits no less than \$2,000,000 each occurrence, \$3,000,000 general aggregate and a \$2,000,000 products-completed operations aggregate limit. Coverage shall cover liability arising from premises, operations, independent contractors, products-completed operations, stop gap liability, and personal injury and advertising injury and liability assumed under an insured contract. County shall be named as an additional insured under Grantee's Commercial General Liability insurance policy with respect to the work performed under this Franchise.

3. Workers' Compensation coverage as required by the Industrial Insurance laws of the State of Washington.

B. Grantee's insurance coverage shall be primary and non-contributory insurance as respects County. Any insurance, self-insurance, or insurance pool coverage maintained by County shall be in excess of Grantee's insurance and shall not contribute to or with it to satisfying any claim or judgment covered hereunder. Grantee's insurance shall also waive any rights of subrogation against the County and its agents as it pertains to the scope of this agreement.

C. Grantee shall furnish County with certificates of the foregoing insurance coverage with a copy of amendatory endorsements, including but not necessarily limited to the additional insured endorsement.

D. Grantee shall have the right to self-insure any or all of the above-required insurance. Any such self-insurance is subject to approval by County, and in the event such approval is not obtained, Grantee shall carry such coverage as is herein provided.

E. Grantee's maintenance of insurance as required by this Franchise shall not be construed to limit the liability of Grantee to the coverage provided by such insurance, or otherwise limit County's recourse to any remedy to which County is otherwise entitled at law or in equity.

Section 16. Performance Security.

Grantee shall provide County with a surety bond in the amount of Fifty Thousand Dollars (\$50,000) running or renewable for the term of this Franchise, in a form and substance reasonably acceptable to County. In the event Grantee shall fail to substantially comply with any one or more of the provisions of this Franchise following notice and a reasonable opportunity to cure, then there shall be recovered jointly and severally from the principal and any surety of such surety bond any damages suffered by County as a result thereof, including but not limited to staff time, material and equipment costs, compensation or indemnification of third parties, and the cost of removal or abandonment of facilities hereinabove described. Grantee specifically agrees that its failure to comply with the terms of Section 19 shall constitute damage to County in the monetary amount set forth therein. Such a financial guarantee shall not be construed to limit Grantee's liability to the guarantee amount, or otherwise limit County's recourse to any remedy to which County is otherwise entitled at law or in equity.

Section 17. Successors and Assignees.

A. All the provisions, conditions, regulations and requirements herein contained shall be binding upon the successors, assigns of, and independent contractors of Grantee, and all rights and privileges, as well as all obligations and liabilities of Grantee shall inure to its

successors, assignees and contractors equally as if they were specifically mentioned herein wherever Grantee is mentioned.

B. This Franchise shall not be leased, assigned or otherwise alienated, except to an Affiliate of Grantee, without the express consent of County by ordinance, which approval shall not be unreasonably withheld, conditioned, or delayed. Approval shall not be required for mortgaging purposes or if a transfer of interest is from Grantee to (i) another person or entity controlling, controlled by, or under common control with Grantee or (ii) another person or entity purchasing all or substantially all of the assets or stock of Grantee. Within 30 days of the lease, assignment, or other alienation of this Franchise for which prior County approval is not hereunder required, Grantee shall provide reasonable notice to County, including all information with respect to the assignee or transferee that is reasonably required by County of an applicant for a Franchise.

C. To the extent County's approval is required under Section 17(B), Grantee and any proposed assignee or transferee shall provide and certify the following to County not less than sixty (60) days prior to the proposed date of transfer: (a) complete information setting forth the nature, term and conditions of the proposed assignment or transfer; (b) all information reasonably required by County of an applicant for a Franchise with respect to the proposed assignee or transferee; and, (c) an application fee which shall be reasonably set by County, plus any other costs actually and reasonably incurred by County in processing and investigating the proposed assignment or transfer.

D. Prior to County's consideration of a request by Grantee to consent to a Franchise assignment or transfer pursuant to subpart C hereto, the proposed assignee or transferee shall file with County a written promise to unconditionally accept all terms of this Franchise, effective upon such transfer or assignment of this Franchise. County is under no obligation to undertake any investigation of the transferor's state of compliance and failure of County to insist on full compliance prior to transfer does not waive any right to insist on full compliance thereafter.

E. Notwithstanding the forgoing or anything to the contrary in this Ordinance, Grantee may provide capacity across Grantee Facilities to a third party without the consent required under this Section, so long as Grantee retains control over and remains solely responsible for, such communications facilities. The use of Grantee Facilities by third parties (including, but not limited to, leases of dark fiber) that involves no additional attachment and no expanded occupation of the right-of-way is not considered a sublicense to a third party subject to the provisions of this Section.

Section 18. Dispute Resolution.

A. In the event of a dispute between County and Grantee arising by reason of this Franchise, the dispute shall first be referred to the operational officers or representatives designated by Grantor and Grantee to have oversight over the administration of this Franchise.

The officers or representatives shall meet within thirty (30) calendar days of either party's request for a meeting, whichever request is first, and the parties shall make a good faith effort to achieve a resolution of the dispute.

B. If the parties fail to achieve a resolution of the dispute in this manner, either party may then pursue any available judicial remedies. This Franchise shall be governed by and construed in accordance with the laws of the State of Washington. In the event any suit, arbitration, or other proceeding is instituted to enforce any term of this Franchise, the parties specifically understand and agree that venue shall be exclusively in Whatcom County, Washington.

Section 19. Enforcement and Remedies.

A. If Grantee shall materially violate or fail to comply with any of the provisions of this Franchise, or should it fail to heed or comply with any notice given to Grantee under the provisions of this Franchise, County shall provide Grantee with written notice specifying with reasonable particularity of the nature of any such material breach and Grantee shall undertake all commercially reasonable efforts to cure such material breach within thirty (30) days of receipt of notification. If County reasonably determines the material breach cannot be cured within (30) thirty days, County shall specify a longer cure period, and condition the extension of time on Grantee's submittal of a plan to cure the breach within the specified period, commencement of work within the original thirty (30) day cure period, and diligent prosecution of the work to completion. If the material breach is not cured within the specified time, or Grantee does not comply with the specified conditions, County may, at its discretion, either (1) revoke this Franchise with no further notification, or (2) claim damages of One Thousand Dollars (\$1,000.00), or actual damages if demonstrably greater, against the financial guarantee set forth in Section 16.

B. Should County reasonably determine that Grantee is acting beyond the scope of permission granted herein for Grantee Facilities and Grantee Services, then, following the expiration of the cure period specified in subpart A of this Section, County reserves the right to cancel this Franchise and require Grantee to apply for, obtain, and comply with all applicable County permits, franchises, or other County permissions for such actions, and if Grantee's actions are not allowed under applicable federal and state or County laws, to compel Grantee to cease such actions.

Section 20. Compliance with Laws and Regulations.

A. This Franchise is subject to, and Grantee shall comply with all applicable Federal and State or County laws, regulations and policies, including all applicable elements of County's comprehensive plan, in conformance with federal laws and regulations, affecting performance under this Franchise. Furthermore, notwithstanding any other terms hereof to the contrary, Grantee shall be subject to the police power of County to adopt and enforce general ordinances

necessary to protect the safety and welfare of the general public in relation to the rights granted in the Franchise Area.

Section 21. Amendments.

A. The parties shall amend this Franchise as reasonably required to accommodate, ensure compliance with, and/or conform to any existing or hereafter enacted, amended, or adopted federal, state, or local statute, ordinance, or regulation, or County ordinance enacted pursuant thereto, or any binding judicial or governmental agency interpretations thereof (including, but not limited to, actions by the Federal Communications Commission or its successor agency) that govern any aspect of the rights or obligations of the parties under this Franchise. In the event that a party seeks such amendment, that party may provide the other party with written notice identifying and setting forth the full text of the desired amendment, and the reason(s) for it. A representative of Grantee and a representative of County, each who have authority to bind their respective parties, shall meet, in person or telephonically if travel is impractical for either party, no later than thirty (30) days following such written notice. During such meeting, the parties shall in good faith negotiate and execute an amendment to the Franchise to provide for the necessary change, and shall do so within 90 calendar days following such written notice. If the parties do not reach agreement as to the terms of the amendment within 90 days of commencing negotiations, the parties promptly shall mutually agree upon a third-party, neutral arbiter, who shall determine the terms of any such amendment after each party presents to the arbiter their proposed amendment language.

B. Any other amendments to this Franchise must be in writing and executed by authorized representatives of the County and the Grantee.

Section 22. Consideration.

A. As consideration for this Franchise, Grantee commits to pay a County franchise fee of five percent (5%) on Gross Revenues.

B. Grantee's franchise fee payments to the County shall be computed quarterly for the preceding calendar quarter, with quarters ending March 31, June 30, September 30 and December 31. Each quarterly payment shall be due and payable no later than forty-five (45) days after said dates. Payments shall be made to the Whatcom County Treasurer, Whatcom County Courthouse, Suite 104, 311 Grand Avenue, Bellingham, WA 98225, unless otherwise specified by the County in writing.

C. No acceptance of any payment shall be construed as an accord by the County that the amount paid is in fact the correct amount, nor shall any acceptance of payments be construed as a release of any claim the County may have for further or additional sums payable or for the performance of any other obligation of Grantee.

D. Each payment shall be accompanied by a written report to the County verified by an authorized representative of Grantee, containing an accurate statement in summarized

form, as well as in reasonable detail, of Grantee's Gross Revenues and the computation of the payment amount. Grantee shall, no later than sixty (60) days after the end of each calendar year, furnish to the County a statement of gross revenues and all payments, deductions and computations for the year just ended. Such statement shall be reviewed and approved by an authorized representative of Grantee prior to submission to the County.

E. During the term of this Agreement, and for a period of one (1) year thereafter, the County may retain (on a non-contingent fee basis) an independent auditor to conduct a reasonable review and audit of Grantee's relevant records to confirm the performance of payment obligations under this Agreement upon thirty (30) days prior written notice. Each party shall provide a list of two (2) auditors, one (of the four) of whom thereafter must be mutually agreed to by the parties. Such audit shall: (a) be subject to Grantee's reasonable security and confidentiality requirements; (b) occur no more than once per year and not during the first or last three (3) weeks of a calendar quarter; and (c) transpire during Grantee's normal business hours. If the audit shows an underpayment to the County for any period of time, then Grantee shall, within thirty (30) days after completion of such audit, pay such underpaid amounts to the County. If the audit shows an overpayment to the County for any period of time, then the County shall, within thirty (30) days after completion of such audit or by deduction from the next scheduled quarterly payment owed by Grantee, pay such overpaid amounts to Grantee. Any underpayment will also include interest at the maximum allowed rate provided under State law, calculated from the date of the underpayment or overpayment. All expenses associated with such audit shall be paid by the County unless the audit reveals an underpayment of more than ten percent (10%) in payments required hereunder in which case Grantee shall reimburse the County for the reasonable costs of such audit, not to exceed Five Thousand Dollars (\$5,000).

F. Any claim arising as a result of such an audit against Grantee must be made in writing within sixty (60) days of the County's completion of the audit. All information reviewed by the County or its auditor pursuant to any audit shall be deemed to be "Confidential Information" subject to the terms of Section 10 herein and shall be treated as such by the County in accordance with applicable law.

G. No more than once per year, Grantee agrees to meet with a representative of the County upon written request to review Grantee's methodology of record-keeping, financial reporting, the computing of franchise fee obligations and other procedures, the understanding of which the County reasonably deems necessary for reviewing reports and records that are relevant to the enforcement of this Agreement.

H. In the event any payment is not received within forty-five (45) days from the end of the calendar quarter, Grantee shall pay, in addition to the payment or sum due, interest on the amount due at the maximum allowed rate as provided under State law from the date the payment was due until the date the County receives the payment.

I. If this Agreement terminates for any reason, the Grantee shall file with the County, within sixty (60) calendar days of the date of the termination, a financial statement showing the gross revenues received by the Grantee since the end of the previous fiscal year. Within thirty (30) days of the filing of the certified statement with the County, Grantee shall pay any unpaid amounts as indicated. If the Grantee fails to satisfy its remaining financial obligations as required in this Agreement, the County may do so by utilizing the funds available in any security provided by the Grantee.

Section 23. Consequential Damages Limitation.

Notwithstanding any other provision of this Franchise, in no event shall either party be liable for any special, incidental, indirect, punitive, reliance, consequential or similar damages.

Section 24. Severability.

If any portion of this Franchise is deemed invalid, the remainder portions shall remain in effect.

Section 25. Titles.

The section titles used herein are for reference only and should not be used for the purpose of interpreting this Franchise.

ADOPTED this _____ day of _____ 2021.

TITLE FOR AGENDA ITEM:

Discussion and periodic update of the Shoreline Management Program

SUMMARY STATEMENT OR LEGAL NOTICE LANGUAGE:

7.13.2021: Overview of the periodic update of Whatcom County's Shoreline Management Program (SMP), which includes amendments to the Whatcom County Comprehensive Plan (shoreline and other policies), WCC Titles 23 (shoreline regulations) and 22 (permitting procedures), WCC Chapter 16.16 (critical areas regulations), and the official Shoreline Map. Additionally, the project addresses Council's docketed items 1) PLN2019-00011, a directive to amend the Comp Plan and codes to allow the seasonal extraction of sand and gravel from dry upland areas under certain conditions (but has been found to be unnecessary); and 2) PLN2018-00010, the addition of a Sustainable Salmon Harvest Goal policy to the Comp Plan.

9.14.2021: Discussion of proposed Comp Plan policy amendments pertaining to the SMP Periodic Update and docket item #PLN2018-00010 regarding a Sustainable Salmon Harvest Goal policy.

9.28.2021: Discussion of proposed amendments to Title 22 (Land Use & Development, Exhibit E) and the Shoreline Management Program Map (Exhibit G).

10.12.2021: Discussion of proposed amendments to Title 23 (Shoreline Management Program)

10.26.2021: Discussion of proposed amendments to WCC Chapter 16.16 (Critical Areas)

11.9.2021: Discussion of No Net Loss, Restoration Plan, and Department of Ecology Required and Recommended Changes

12.7.2021: Discussion of memo from PDS staff

Attachments: SMP Memo (dated 11.24.2021)

Memorandum

DATE: November 24, 2021
TO: The Honorable County Council
FROM: Cliff Strong, Senior Planner
THROUGH: Mark Personius, Director
RE: Continued Review of Shoreline Management Program (SMP) Periodic Update 2020

Tonight's Goal

On November 23rd the Council held a public hearing on the SMP Update and made three amendments. Based on legal counsel's recommendation, the amended exhibits were introduced that night with the Council's amendments and a second public hearing was scheduled for tonight (12/7/21) to allow the public an opportunity to comment on those amendments. Upon completion of the public hearing, staff requests that Council adopt the resolution approving the SMP Update and authorizing Planning and Development Services to forward it to the Department of Ecology for final review and approval. Once that is done staff will return in early 2022 with an ordinance for Council to adopt, effecting the amendments.

Council's Amendments

Council made three amendments to the Planning Commission's recommendation. These are:

1. **Amend Exhibit F (WCC Ch. 16.16) §16.16.612 (Exceptions to Regulation), subsection (A)(1)(d) (pg. 66) to read:**

"Do not score 6 or more points for habitat function..." (Changing what was shown as "5" to "6.")

Staff Comment: Staff supports this amendment.

In July 2018 the Washington Department of Ecology (DOE) modified the habitat score ranges and recommended buffer widths in their wetland buffer tables in the DOE guidance, with some minor text changes to ensure consistency. Through this SMP update staff proposed to amend §16.16.630, Table 1, and §16.16.612 to reflect this guidance. The revised habitat function scores and buffer widths in Table 1 comes from guidance updated in 2018. The revised language of §16.16.612 is from their *Wetland Guidance for CAO Updates, Western Washington Version, 2016*. However, staff was unaware and just this past week found out that Ecology also updated their language in the 2016 guidance through an addendum issued in 2018. Though the majority of the language remained the same, the one change was to change the "5" to a "6," meant to reflect their newer habitat function scores in determining which wetlands might be exempt from regulation.

The 2016 guidance can be found at <https://apps.ecology.wa.gov/publications/documents/1606001.pdf> and the 2018 errata sheet can be found at <https://apps.ecology.wa.gov/publications/parts/1606001part1.pdf> for those wishing to compare.

2. **Amend Exhibit F (WCC Ch. 16.16) §16.16.900 (Definitions), definition of "Qualified professional" or "qualified consultant," subsection (1) (pg. 128) to read:**

"Is listed on a roster of qualified professionals or qualified consultants prepared by the Director and made available to the public."

Staff Comment: Staff supports this amendment as the list is already made publicly available.

3. Amend Exhibit F (WCC Ch. 16.16) §16.16.900 (Definitions), definition of “Qualified professional” or “qualified consultant,” subsection (7) (pg. 128) to read:

“Anyone who’s professional license is currently revoked or has had two (2) or more reports denied by the Hearing Examiner within a 12-month period does not meet the definition of a qualified professional or qualified consultant.”

Staff Comment: Staff recommends that Council revert the language of subsection (7) to its existing language to read:

“Anyone who has had their professional licensure or certification revoked for violations of the provisions of their profession does not meet the definition of a qualified professional or qualified consultant.”

Though at the 11/23/21 hearing staff indicated they were satisfied with the language as amended by Council, upon further consultation with legal counsel and other staff following the meeting, PDS has reconsidered our recommendation. The Hearing Examiner has no role in approving or denying critical area assessment reports: That role is solely the Director’s pursuant to 16.16.250 (Critical Areas Review Process) and 16.16.255 (Critical Areas Assessment Reports). Additionally, it is unlikely that any one consultant would be before the Hearing Examiner in any 12-month period, as most projects are decided upon administratively, so this rule would rarely be usable. And as a note, all decisions of the Director are appealable to the Hearing Examiner pursuant to WCC 22.05.160, though the Hearing Examiner would only rule on whether code was interpreted correctly, not on whether a report is sufficient or meets professional standards.

As for process, legal counsel agrees that Council can revert the language by motion on 12/7 without a need for an additional hearing since this is existing language and a hearing was held on 11/23 (as well as tonight).

Additional Staff Recommendations

At your 11/23 meeting staff recommended two additional edits, though in reviewing the Action Summary for that meeting we don’t see that they were included in the motion to introduce.

4. Amend Exhibit D (WCC Title 23), §23.60.190, by deleting subsection 17, definition of “short-term rental.”

5. Amend Exhibit D (WCC Title 23), §23.60.030 to replace the term “short-term rental” with “vacation rental.”

Staff Comment: Staff recommends both of these amendments. In trying to include Council’s previous action in Resolution 2016-039 we inadvertently used the wrong terms. The Council approved definition of “vacation rental unit” from that resolution is already included §23.60.220(1).

Whatcom County Planning & Development Services Staff Report

Proposed Amendments to WCC Title 20 (Zoning) Regulating the Production, Processing, and Retail Sales of Recreational Marijuana in Whatcom County and Repeal of Ordinance No. 2021-066 (Marijuana Moratorium)

I. File Information

File #: PLN2021-00009

File Name: Marijuana Regulations

Project Summary: Proposed amendments to WCC Title 20 (Zoning) regulating the production, processing, and retail sales of recreational marijuana in Whatcom County.

Applicant: Whatcom County Planning and Development Services (PDS)

Location: Countywide.

Recommendations:

- Planning Commission – Approve
- Planning and Development Services – Approve

Attachments:

- Draft Ordinance
- Exhibit A – Proposed Amendments

II. Background

On November 6, 2012, Initiative 502 was passed by the voters of the State of Washington, amending Chapter 69.50 RCW and providing the regulatory framework for marijuana producers, processors, and retailers to become licensed by the Washington State Liquor Control Board (“WSLCB”).

On November 16, 2013, the WSLCB adopted final marijuana licensing rules as codified in Chapter 314-55 WAC. During the period between November 18, 2013 and December 20, 2013, the WSLCB accepted marijuana license applications for marijuana production, processing and retail facilities. Whatcom County began receiving notifications of proposed marijuana facilities from the WSLCB in mid-December, 2013, and the WSLCB anticipated issuing marijuana producer, processor, and retail licenses to qualified applicants starting in late February or March, 2014.

On January 16, 2014, the Washington State Attorney General issued an opinion stating that Initiative 502 does not preempt counties from banning or placing additional regulatory requirements on marijuana related businesses within their jurisdictions.

During the licensing application window between November 18, 2013, and December 20, 2013, the WSLCB accepted approximately 228 recreational marijuana producer, processor and/or retail license applications for unincorporated Whatcom County. Whatcom County soon after began receiving notifications from the WSLCB of those applicants and applied to locations. The Prosecuting Attorney and

PDS had at the time implemented a zoning interpretation policy, which stated that PDS would regulate marijuana proposed uses, as allowed by Initiative 502 in the same way as any other commodity that is grown, processed, or sold in Whatcom County. However, it became evident that many of those proposed locations could conflict with other surrounding uses.

On February 11, 2014, the Whatcom County Council adopted Ordinance 2014-011, an emergency ordinance imposing a moratorium on the acceptance of all building and/or land use applications that pertain to marijuana producers, processors, retailers and medical marijuana collective gardens.

On March 31, 2015, the Whatcom County Council adopted Ordinance 2015-006, which contains the current County zoning regulations for recreational marijuana type uses. The regulations allowed for the production (as a permitted use) and processing (as an administrative approval use) of marijuana in the Rural, Rural Forestry, Agriculture, Rural Industrial and Manufacturing, Light Impact Industrial, and Heavy Impact Industrial districts, subject to a proposed facility meeting several stated use standards. Such standards include odor controls (for indoor grows), lighting, traffic and parking control measures, as well as setbacks of 1,000 feet from community centers and 300 feet from residences not located on the same property.

When Whatcom County's regulations were first adopted, the County Council chose to treat marijuana production like any other agricultural endeavor, as most of the applicants were small businesses. However, as no new state licenses are being issued it seems that more recently larger operators (with more capital) are buying up the earlier licenses and expanding operations or changing locations.

Earlier this year both the Commission and the Council received numerous complaints from citizens neighboring certain of the marijuana production and processing facilities. Issues raised included odor, lighting, and excessive water usage. As of 4/27/2021, there were 2 licensed (only) producers, 4 licensed (only) processors, 29 licensed (combo) producers/processors, and 12 licensed retailers of marijuana in unincorporated Whatcom County (see attached map, which also indicates how many are in each zoning district). (For a comparison of the numbers of producers in other counties, see Figure 1, below.) It should be noted that the majority of complaints arise from only a couple of Whatcom County producers; the majority of the operations are complying with the regulations and not causing problems.

Based on those citizen complaints, the Planning Commission recommended, and the Council adopted, an interim 6-month moratorium on accepting applications for outdoor marijuana production and/or processing facilities (Ord. 2021-018, 4/6/21). On April 20th the Council expanded that moratorium to further clarify that "outdoors" for purposes of the moratorium includes production on open land; in non-rigid greenhouses (i.e., hoop houses); in greenhouses with rigid walls, a roof, and doors; and similar type greenhouse structures (Ord 2021-023). That moratorium would have expired on November 7, 2021. However, on October 26, 2021, the Council extended that moratorium for another six months.

The Council also placed on the County's annual docket PLN2021-00009, directing Planning and Development Services (PDS) to:

"Review and revised Whatcom County Code relating to marijuana growing and processing in rural areas. Consider impacts of marijuana growing and processing facilities in rural areas, and evaluate growing and processing facilities as an agricultural or non-agricultural use. Consider compatibility with GMA and County Comprehensive Plan."

Thus, the Planning Commission held two public workshops and with staff assistance developed the proposed amendments to the County's recreational marijuana land use regulations discussed below. On October 14th they held a public hearing and voted 5-2-0 to approve the amendments shown in Exhibit A.

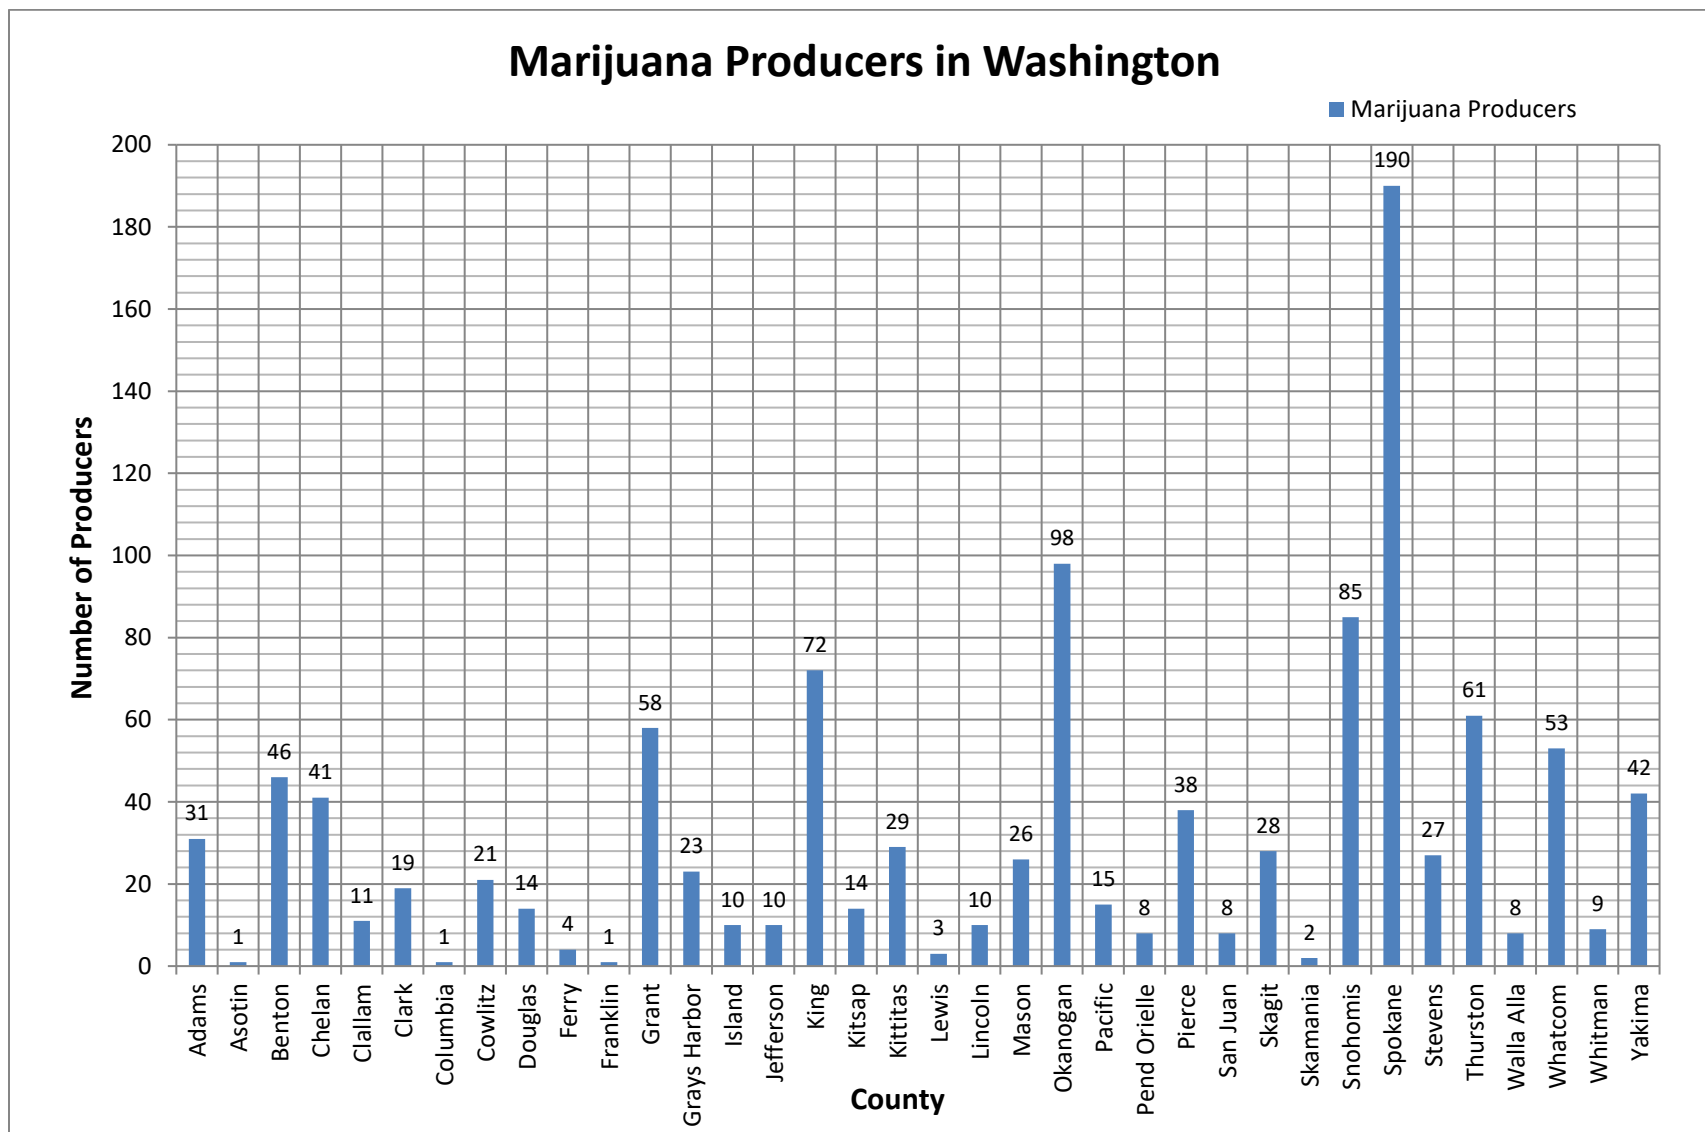

Figure 1. Number of marijuana producers in WA State counties (LCB data, Aug 2021).

III. Proposed Amendments

The proposed amendments are found in Exhibit A. Please refer to that attachment; explanations are provided therein. Tables 1 and 2

Table 1. Summary of Existing Marijuana Rules

	Zone Requirements						Supplemental Requirements (Applies in all zones)											
Type	Zone	Permit Type	Distance req't	Lot Size	Accessory Use	Odor	Odor	Lighting	Traffic	Parking	Character	Max. Employees						
Production	R	ADM	Not w/in 1,000' of a community center or 300' of an offsite residence	If land is < 4.5 ac then facility limited to 2,000 sf			For indoor production only, must install ventilation, can't emit odors beyond walls, or bother neighbors	Must be controlled away from adjoining properties and roads	Can't be more than what's expected in the zone	Must provide off-street parking	Must be compatible with area's character	N/A						
	RF	P																
	A	P																
	RIM	P			For indoor production only, must install ventilation, can't emit odors beyond walls, or bother neighbors													
	LII	P																
	HII	P																
Processing	R	ADM	Not w/in 1,000' of a community center or 300' of an offsite residence ¹	If land is < 4.5 ac then facility limited to 2,000 sf ²	Must be accessory to production	For indoor processing only, must install ventilation, can't emit odors beyond walls, or bother neighbors	For indoor processing only, must install ventilation, can't emit odors beyond walls, or bother neighbors	Must be controlled away from adjoining properties and roads	Can't be more than what's expected in the zone	Must provide off-street parking		10						
	RF	P	Not w/in 300' of an offsite residence ¹									10						
	A	P	Not w/in 1,000' of a community center ¹									20						
	RIM	P										10						
	LII	P										10						
	HII	P										10						
	Retail	STC	P		Limited to 2,500 sf													
		NC	P

GC		P																

Table 2, below, also provide summaries of the existing and proposed regulations, respectively. Following, however, is a list of proposed policy changes.

“Marijuana Production Facilities” Definition (§20.97.227)

The terms “outdoor” and “indoor” production facilities are being relabeled as Type 1 and Type 2 Marijuana Production Facilities. The reason is that the difference between outdoor and indoor in terms of structure type is confusing, given that greenhouses and other such structures are a little of both. What seems to really matter—in terms of how many grow cycles one can obtain, and thus how often flowering marijuana produces the objectionable odor—is whether artificial lighting is used to aid in the growth cycle, as that extends growing and flowering cycles to several. Testimony from producers indicated that without artificial lighting a producer can only obtain one growth cycle here in Whatcom County.

One proviso is that producers have commented that even if they are small scale and don’t use artificial lighting for most production they still need at least one small structure (a.k.a, “headhouse” or “mother room”) in which they can overwinter¹ the plants. So the proposed definition of a Type 1 facility allows one small structure with artificial lighting for overwintering plants.

Locations for Type 1 (“Outdoor”) vs. Type 2 (“Indoor”) Production

The Planning Commission was averse to prohibiting outdoor production entirely, in particular because it uses less energy and is less costly for small start-ups. But they did want to limit the size of outdoor production in the zones that typically have more residential uses (i.e., Rural and Agriculture) as one way to reduce odor impacts (most odor complaints have arisen around the larger (Tier 3) hybrid² facilities in the Rural district).

Thus, the draft regulations propose to:

- a) Allow Type 1 facilities only in the Rural and Agricultural districts and limit the area of production facilities to a maximum of 1 and 2 acres, respectively, (§20.80.690(2)(a)); and
- b) Allow Type 2 facilities only in the Rural (with a facility size limit of 1 acre) and industrial (RIM, LII, & HII) districts (with no facility size limit).

(Note: Lot coverage standards for each district also place a limit on the total square footage of structures on a lot commensurate with the lot size.)

Use and Permit Requirements

As a way to further reduce externalities the Commission wanted to require permits that have more public process. Thus, rather than being a Permitted use in most zones as they are currently, the following is proposed:

- In the Rural and Agriculture districts Type 1 production and processing should be an Administrative Approval Use (requiring public notice, written comments, and decision by staff);
- In the Rural district Type 2 production should be a Conditional Use (requiring public notice and a public hearing and decision by the Hearing Examiner).

¹ According to one knowledgeable producer overwintering plants is part, but only part, of the purpose of the headhouse. Their primary purposes are 1) the preservation of genetics and 2) the propagation of new plants.

² Moving plants between and using both artificial and natural lighting (or indoor and outdoor) so as to achieve more growing cycles.

- In the Rural Industrial and Manufacturing, Light Impact Industrial, and Heavy Impact Industrial districts Type 1 production should not be allowed (as these zones are intended for industrial type development and higher wage job creation) but Type 2 production and processing should be allowed as a Permitted Use.
- Additionally, neither marijuana production nor processing should be allowed in the Rural Forestry district, as this zone is intended to protect such lands for forest production and forestry jobs. Currently there are no production or processing facilities located in this district.

Lighting

One of the other externalities from outdoor grow operations people have complained about is the excessive lighting coming from grow lights in transparent and semi-transparent structures (i.e., green- and hoop-houses). Additionally, growing seasons can be extended to up to 3-4 cycles by using artificial lighting, extending the odiferous periods significantly.

For outdoor fixtures (security lights, etc.), lighting impacts can be mitigated by requiring the installation and use of down-shielding. For facilities using artificial lighting in their growth cycles, lighting impacts can be mitigated by requiring the installation and use of blackout shades. Such language has been included in the draft amendments (§20.80.690(3)(a)).

Odor

Odor from Type 2 (“indoor”) production can be controlled through the installation and use of ventilation and odor control systems, and such language has been included in the draft amendments (§20.80.690(3)(g)(ii)). And though language has been included stating that odor from any production facility cannot be detectable at or beyond the property boundaries at a level that causes a public nuisance (§20.80.690(3)(g)(i)), odor from Type 1 facilities cannot be controlled the same as with Type 2 production facilities. However, it is understood that Type 1 production can generally only obtain one growth cycle, so the time and duration of odors from these facilities should be limited. Additionally, it can be significantly reduced in time and duration through the other regulations the Commission recommends, as discussed herein.

Limit on Number of LCB Licenses per Lot

As a way of preventing multiple businesses from operating on the same lot or from one business buying additional LCB licenses and stacking multiple licenses to create larger scale, more intensive operations, the Commission proposes to limit operations to one production and/or processing license(s) per lot in the more residential districts. Thus, such language has been included in the draft regulations for the Rural and Agriculture districts. (§20.80.690(2)(d))

Setbacks/Separation Requirements

Currently production in the Rural, Rural Forestry, and Agriculture districts requires a 1,000’ separation (measured from property lines) from community centers³ and a 300’ setback (measured from

³ Defined in Title 20 as “land and/or building(s) owned by a public agency or private nonprofit entity used for social, civic, educational, religious, or recreational purposes, which serves mainly the community where located; including but not limited to community halls and centers, grange halls, senior citizen centers, teen centers, youth clubs, field houses, and churches. The facilities are available for occasional public meetings. They may also have the minimal kitchen facilities required for occasional banquets. Private clubs as defined in this title are not included.”

structures) from existing off-site residences⁴. For processing the same rule applies in the Rural district, but only the 300' setback from residences applies in the Rural Forestry district, and the 1,000' setback from community centers in the Agricultural district. The Commission expressed no interest in modifying the existing setback and separation requirements so the existing ones have been carried over into the proposed amendments. (§20.80.690(2)(b))

But additionally, based on public comments the Commission received, the draft amendments would require a 1,000 foot separation between production facilities so that one particular neighborhood doesn't all end up with several. (§20.80.690(2)(c))

Processing Facilities that Use Hazardous Materials

The Commission agreed that processing facilities that use hazardous materials should only be allowed in the industrial districts. Such language has been included in the draft amendments (§20.80.690(2)(f)). Currently there are no such facilities in the rural districts, as adequate fire flow is necessary and can't be obtained without major investment. Thus, this change shouldn't affect any existing processors.

Nonconforming Rules

The Commission agreed that production and processing facilities made nonconforming by revisions to the marijuana regulations should be able to continue (as are all nonconforming uses under the County code), but not be able to expand (by any significant amount) or change to another nonconforming use. Thus such language has been included (§20.80.690(1)(e)).

IV. Comprehensive Plan Evaluation

The proposed amendments to WCC Title 20 (Zoning) have been developed using the guidance of the Comprehensive Plan so as to remain consistent. Though there are no policies regarding marijuana production or processing, the following support the proposed amendments:

Policy 2DD-2: Protect the character of the rural area through the County's development regulations.

(Supports limiting the size, location, and types of marijuana production facilities in the rural areas so as to reduce externalities)

Policy 2FF-2: Support resource-based industries that require only rural services, conserve the natural resource land base, and help maintain the rural character and lifestyle of the community.
Assure adequate facilities, mitigation and buffers through development regulations.

(Supports eliminating marijuana production and processing facilities as an allowed use in the Rural Forestry district.)

V. Draft Findings of Fact and Reasons for Action

Staff recommends the Planning Commission adopt the following findings of fact and reasons for action:

1. The County Council placed on the County's annual docket PLN2021-00009, directing Planning and Development Services (PDS) to: "Review and revised Whatcom County Code relating to marijuana growing and processing in rural areas. Consider impacts of marijuana growing and processing

⁴ This 300' setback was taken from our manure lagoon regulations (WCC 20.80.225(2)) as a way to reduce odor impacts.

facilities in rural areas, and evaluate growing and processing facilities as an agricultural or non-agricultural use. Consider compatibility with GMA and County Comprehensive Plan.”

2. Whatcom County Planning and Development Services (PDS) submitted an application (PLN2021-00009) to revise the County’s recreational marijuana production, processing, and retail sales zoning regulations.
3. A determination of non-significance (DNS) was issued under the State Environmental Policy Act (SEPA) on September 29, 2021.
4. Notice of the subject amendments was submitted to the Washington State Department of Commerce on September 13, 2021, for their 60-day review.
5. On October 14, 2021, the Planning Commission held a duly noticed public hearing to consider testimony on the proposed draft amendments.
6. The County Council held a duly noticed public hearing on the proposed amendments on X , 2021.
7. The amendments are consistent with the Growth Management Act, Whatcom County Comprehensive Plan, Chapter 314-55 WAC, and other applicable requirements.
8. The proposed amendments reflect current local circumstances and promote the general public health, safety, morals and welfare.
9. Once this ordinance is adopted and effective there is no longer a need for the interim moratorium imposed by Ordinance No. 2021-066.

VI. Proposed Conclusions

1. The amendments are in the public interest.
2. The amendments are consistent with the Whatcom County Comprehensive Plan.

VII. Recommendation

At their October 14, 2021, meeting the Planning Commission voted 5-2-0 to approve the draft findings of fact and the amendments shown in Exhibit A.

Planning and Development Services recommends that the County Council approve the draft ordinance with amendments to the Whatcom County Code as shown in Exhibit A.

Table 1. Summary of Existing Marijuana Rules

	Zone Requirements						Supplemental Requirements (Applies in all zones)											
Type	Zone	Permit Type	Distance req't	Lot Size	Accessory Use	Odor	Odor	Lighting	Traffic	Parking	Character	Max. Employees						
Production	R	ADM	Not w/in 1,000' of a community center or 300' of an offsite residence ⁵	If land is < 4.5 ac then facility limited to 2,000 sf ⁶			For indoor production only, must install ventilation, can't emit odors beyond walls, or bother neighbors	Must be controlled away from adjoining properties and roads	Can't be more than what's expected in the zone	Must provide off-street parking	Must be compatible with area's character	N/A						
	RF	P																
	A	P																
	RIM	P			For indoor production only, must install ventilation, can't emit odors beyond walls, or bother neighbors													
	LII	P																
	HII	P																
Processing	R	ADM	Not w/in 1,000' of a community center or 300' of an offsite residence ¹	If land is < 4.5 ac then facility limited to 2,000 sf ²	Must be accessory to production	For indoor processing only, must install ventilation, can't emit odors beyond walls, or bother neighbors	For indoor processing only, must install ventilation, can't emit odors beyond walls, or bother neighbors	Must be controlled away from adjoining properties and roads	Can't be more than what's expected in the zone	Must provide off-street parking		10						
	RF	P	Not w/in 300' of an offsite residence ¹									10						
	A	P	Not w/in 1,000' of a community center ¹									20						
	RIM	P										10						
	LII	P										10						
	HII	P										10						
	Retail	STC	P		Limited to 2,500 sf													
		NC	P															
RGC		P																
GC		P																

⁵ May be waived when all adjacent property owners agree.

⁶ Note that a Tier 1 production license allows up to 10,000 sf of grow area, so this rule essentially prohibits production on smaller lots.

Table 2. Summary of Proposed Marijuana Rules

Type	Zone Requirements			Supplemental Requirements										
	Zone	Facility/Permit Type	Lot Coverage ¹	Facility Size Restrictions	Separation of Facilities	Accessory Use	Separation	# of Licenses	Hazardous Materials	Screening	Odor	Lighting	Noise	Other
Production	R	Type 1 – ADM	No structure or combination of structures shall occupy or cover more than 5,000 square feet or 20%, whichever is greater, of the total lot area, not to exceed 25,000 square feet. (§20.36.450)	For parcels < 4.5 ac production or processing facilities limited to 2,000 sf	Not w/in 1,000' of another production facility		Not w/in 1,000' of a community center or 300' of an offsite residence ²	1 production and/or 1 processing license per lot	N/A	Consistent with WCC 20.80.345 (Buffer Plantings).	Must install engineered odor control system; no VOCs shall be emitted that is detectable at or beyond the property boundaries	Light fixtures shall be designed and down-shielded away from adjoining properties, critical areas, shorelines, and public roads. Indoor lights must use blackout shades. All structures using artificial lighting for aiding in the growth cycle of plants shall install and employ mechanisms (e.g., blackout shades) that prevent light from escaping production structures	Shall comply with WCC 20.80.620 (Noise), and have a mechanical engineer design the noise control system	Must also comply with security, water, waste disposal, and parking standards
		Type 2 – CUP		For parcels ≥ 4.5 ac production facility limited to 1 ac										
	AG	Type 1 – ADM	No structure or combination of structures, including accessory buildings, shall occupy or cover more than 25% of the total area of the subject parcel... (§20.40.450)	For parcels < 4.5 ac production facility limited to 2,000 sf	For parcels ≥ 4.5 ac production facility limited to 2 ac		Also limited by lot coverage restrictions							
	RIM	Type 2 – P	In a rural community designation, combined floor area of all buildings shall not exceed that of a use of the same type that existed on a lot in that same rural community designation on July 1, 1990. (§20.69.451)	In a rural business designation, building or structural coverage of a lot shall not exceed 50% of the total area. (§20.69.452)										
	LII	Type 2 – P	The maximum building coverage shall not exceed 60% of the lot size. (§20.66.450)											
	HII (ADM)	Type 2 – P	The maximum building or structural coverage shall not exceed 60% of the lot size. (§20.68.450)											
Processing	R	ADM	Same as for production, above	For parcels < 4.5 ac processing & production area limited to 2,000 sf		Must be accessory to production	Not w/in 1,000' of a community center or 300' of an offsite residence ²	1 production and/or 1 processing license per lot	Not allowed					
	AG	ADM							Allowed, but with standards					
	RIM	P												
	LII	P												
	HII	P												
Retail	STC	P		Limited to 2,500 sf										
	NC	P												
	RGC	P												
	GC	P												

¹ Though not a specific marijuana facility regulation, these rules apply to all hard surfaces, including structures and would limit the size of structures commensurate with the lot size.

ORDINANCE NO. _____

**ADOPTING AMENDMENTS TO WCC TITLE 20 (ZONING) REGULATING THE PRODUCTION, PROCESSING,
AND RETAIL SALES OF RECREATIONAL MARIJUANA IN WHATCOM COUNTY AND REPEALING
ORDINANCE NO. 2021-066**

WHEREAS, on November 6, 2012, Initiative 502 was passed by the voters of the State of Washington, amending Chapter 69.50 RCW and providing the regulatory framework for cannabis producers, processors, and retailers to become licensed by the Washington State Liquor and Cannabis Board ("WSLCB"); and,

WHEREAS, on November 16, 2013, the WSLCB adopted final cannabis licensing rules as codified in Chapter 314-55 WAC. During the period between November 18, 2013 and December 18, 2013, the WSLCB accepted cannabis license applications for cannabis production, processing and retail facilities. Whatcom County began receiving notifications of proposed cannabis facilities from the WSLCB in mid-December 2013, and the WSLCB began issuing cannabis producer, processor, and retail licenses to qualified applicants in March of 2014; and,

WHEREAS, on January 16, 2014, the Washington State Attorney General issued an opinion stating that Initiative 502 does not preempt counties from banning or placing additional regulatory requirements on cannabis related businesses within their jurisdictions; and,

WHEREAS, the Prosecuting Attorney and Planning and Development Services (PDS) had at the time implemented a zoning interpretation policy, which stated that PDS would regulate cannabis proposed uses as allowed by Initiative 502 in the same way as any other commodity that is grown, processed, or sold in Whatcom County, it became evident that many of those proposed locations could conflict with other surrounding uses; and,

WHEREAS, on February 11, 2014, the Whatcom County Council adopted Ordinance 2014-011, an emergency ordinance imposing a moratorium on the acceptance of all building and/or land use applications that pertain to cannabis producers, processors, retailers and medical cannabis collective gardens; and,

WHEREAS, the County developed and implemented several sets of interim regulations during that time, though none were deemed appropriate by the Council as permanent regulations; and,

WHEREAS, on March 31, 2015, the Whatcom County Council adopted Ordinance 2015-006, which contains the current County zoning regulations for recreational cannabis type uses, treating cannabis similar to other agricultural products; and,

WHEREAS, Whatcom County Code (WCC) 20.97.227 defines marijuana production as a facility licensed by the state Liquor and Cannabis Board to produce, harvest, trim, dry, cure, and package marijuana, and sell marijuana at wholesale to state-licensed marijuana processors and other state licensed marijuana producers; and,

WHEREAS, WCC 20.97.227 states marijuana production may take place either indoors within a fully enclosed secured facility or a greenhouse with rigid walls, a roof and doors, or outdoors in non-rigid

greenhouses, other structures or an expanse of open or cleared ground fully enclosed by a physical barrier; and,

WHEREAS, Ordinance 2015-006 allows for the production and processing of cannabis in the Rural (administrative uses), Rural Forestry (permitted uses) and Agriculture zone districts (permitted uses), subject to a proposed facility meeting several stated use standards. Such standards include odor controls (for indoor grows only), lighting, traffic and parking control measures, as well as setbacks of 1,000 feet from community centers and 300 feet from residences not located on the same property. The ordinance also allowed for the production and processing of marijuana in the Rural Industrial and Manufacturing, Light Impact Industrial, and Heavy Impact Industrial districts as permitted uses, subject to odor control measures (for indoor grows); and,

WHEREAS, the WSLCB is no longer issuing new licenses, existing licenses throughout Washington State can be transferred and Whatcom County was notified by the WSLCB of approximately 30 recreational marijuana production and/or processing renewal licenses last year (2020) within unincorporated Whatcom County; and,

WHEREAS, while earlier licensees were small, local producers, their licenses now appear to be being transferred to larger operators with more capital who are buying up the earlier licenses and expanding and/or changing operations and/or locations; and,

WHEREAS, prior to adoption of the first moratorium on issuing new permits for certain marijuana production facilities, the Council, Executive, Planning Commission, and PDS received complaints from residents adjacent to existing and proposed cannabis facilities regarding excessive odor, lighting, and potential water usage, suggesting that the County's cannabis regulations may not be sufficient; and,

WHEREAS, on March 23, 2021, the County Council adopted the 2021 Docket, a component of the PDS work plan, including item PLN2021-00009, to "Review and revise Whatcom County Code relating to marijuana growing and processing in rural areas. Consider impacts of marijuana growing and processing facilities in rural areas, and evaluate growing and processing facilities as an agricultural or non-agricultural use. Consider compatibility with GMA and County Comprehensive Plan." However, due to the pandemic, the Planning Commission and County Council have backlogs of other issues to address, and PDS will need time to work with the community to properly develop and process any potential regulatory amendments; and,

WHEREAS, on April 20, 2021, the County Council adopted Ordinance No. 2021-023, imposing a six-month interim moratorium prohibiting the filing, acceptance, or processing of new applications for permits or authorizations for recreational marijuana production and/or processing facilities which are proposed to operate outdoors or in greenhouses; and,

WHEREAS, on October 26, 2021, through the adoption of Ordinance No. 2021-066, the Council extended that moratorium for an additional 6 months; and

WHEREAS, once this ordinance is adopted and effective there is no longer a need for the interim moratorium imposed by Ordinance No. 2021-066;

WHEREAS, pursuant to the Washington State Constitution, the general police powers granted to counties empower and authorize Whatcom County to adopt land use controls to provide for the regulation of land uses within the County and to provide that such uses shall be consistent with applicable law; and,

FINDINGS OF FACT

1. The County Council placed on the County's annual docket PLN2021-00009, directing Planning and Development Services (PDS) to: "Review and revised Whatcom County Code relating to marijuana growing and processing in rural areas. Consider impacts of marijuana growing and processing facilities in rural areas, and evaluate growing and processing facilities as an agricultural or non-agricultural use. Consider compatibility with GMA and County Comprehensive Plan."
2. Whatcom County Planning and Development Services (PDS) submitted an application (PLN2021-00009) to revise the County's recreational marijuana production, processing, and retail sales zoning regulations.
3. A determination of non-significance (DNS) was issued under the State Environmental Policy Act (SEPA) on September 29, 2021.
4. Notice of the subject amendments was submitted to the Washington State Department of Commerce on September 13, 2021, for their 60-day review.
5. On October 14, 2021, the Planning Commission held a duly noticed public hearing to consider testimony on the proposed draft amendments.
6. The County Council held a duly noticed public hearing on the proposed amendments on November 23, 2021.
7. The amendments are consistent with the Growth Management Act, Whatcom County Comprehensive Plan, Chapter 314-55 WAC, and other applicable requirements.
8. The proposed amendments reflect current local circumstances and promote the general public health, safety, morals and welfare.

CONCLUSIONS

1. The amendments to the development regulations are the public interest.
2. The amendments are consistent with the Whatcom County Comprehensive Plan.

NOW, THEREFORE, BE IT ORDAINED by the Whatcom County Council that:

Section 1. Amendments to the Whatcom County Code are hereby adopted as shown in Exhibit A.

Section 2. Ordinance No. 2021-066 is hereby repealed in its entirety upon the effective date of this ordinance.

ADOPTED this _____ day of _____, 2021.

WHATCOM COUNTY COUNCIL
WHATCOM COUNTY, WASHINGTON

Exhibit A – Proposed Marijuana Code Amendments

WCC Title 20 Zoning

Chapter 20.36 RURAL (R) DISTRICT

20.36.130 Administrative approval uses.

The following uses are permitted subject to administrative approval pursuant to WCC 22.05.028.

...

.137 Type 1 Marijuana Production Facilities, subject to WCC 20.80.690y; provided, that in addition to the criteria found in WCC 20.80.690 through 20.80.694:

- (1) The facility shall not be located within 1,000 feet of a community center. The distance shall be measured as the shortest straight line distance from the property line of the proposed building/business location to the property line of the community center. The zoning administrator may waive this spacing requirement from community centers if the authorized representatives of all existing community centers within 1,000 feet provide a notarized written agreement as provided by the department consenting to the facility.
- (2) The facility shall not be located within 300 feet of any existing residential unit not located on the same parcel as the facility. The distance shall be measured as the shortest straight line distance from the closest point of a single family dwelling (structure) to any structure or fence used for the production of marijuana. The zoning administrator may waive this spacing requirement from residential units if the owners of all existing residential units within 300 feet provide a notarized written agreement as provided by the department consenting to the facility.
- (3) On parcels smaller than four and one-half acres the facility shall not exceed a total of 2,000 square feet, except where the facility is contained within a building that existed on the effective date of the ordinance codified in this section.

.138 Marijuana Processing Facilities, subject to WCC 20.80.690.y; provided, that in addition to the criteria found in WCC 20.80.690 through 20.80.694 and WCC 22.05.028:

- (1) The facility is accessory to the on-site production of marijuana.
- (2) The facility shall not be located within 300 feet of any existing residential unit not located on the same parcel as the facility. The distance shall be measured as the shortest straight line distance from the closest point of a single family dwelling (structure) to any structure or fence used for the processing of marijuana. The zoning administrator may waive this spacing requirement if the owners of all existing residential units within 300 feet provide a notarized written agreement as provided by the department consenting to the facility.
- (3) On parcels smaller than four and one-half acres the total area used for marijuana processing and production shall not exceed 2,000 square feet, except where the facility is contained within a building that existed on the effective date of the ordinance codified in this section.

20.36.150 Conditional uses.

...

.160 Type 2 Marijuana Production Facilities, subject to WCC 20.80.690.

...

Chapter 20.40 AGRICULTURE (AG) DISTRICT

20.40.050 Permitted uses.

Unless otherwise provided herein, permitted, accessory, and conditional uses shall be administered pursuant to the applicable provisions of WCC Chapter 20.80 WCC (Supplementary Requirements), and Chapter 22.05 WCC (Project Permit Procedures), Chapter 16.08 (the Whatcom County SEPA) Ordinance, Title 21 (Land Division Regulations), the Whatcom County Subdivision Ordinance and Title 23 the Whatcom County (Shoreline Management Program). The following are permitted uses:

...

~~.059~~ Marijuana production facility; provided, that in addition to the criteria found in WCC 20.80.690 through 20.80.694:

- ~~(1) The facility shall not be located within 1,000 feet of a community center. The distance shall be measured as the shortest straight line distance from the property line of the proposed building/business location to the property line of the community center. The zoning administrator may waive this spacing requirement from community centers if the authorized representatives of all existing community centers within 1,000 feet provide a notarized written agreement as provided by the department consenting to the facility and the waiver is approved through an administrative approval process per WCC 22.05.028.~~
- ~~(2) The facility shall not be located within 300 feet of any existing residential unit not located on the same parcel as the facility. The distance shall be measured as the shortest straight line distance from the closest point of a single family dwelling (structure) to any structure or fence used for the production of marijuana. The zoning administrator may waive this spacing requirement from residential units if the owners of all existing residential units within 300 feet provide a notarized written agreement as provided by the department consenting to the facility, and the waiver is approved through an administrative approval process per WCC 22.05.028.~~

...

20.40.100 Accessory uses.

...

~~.115~~ Marijuana Processing Facility, WCC 20.80.690 through 20.80.694:

- ~~(1) The facility is accessory to the on-site production of marijuana.~~
- ~~(2) The facility shall not be located within 300 feet of any existing residential unit not located on the same parcel as the facility. The distance shall be measured as the shortest straight line distance from the closest point of a single family dwelling (structure) to any structure or fence used for the processing of marijuana. The zoning administrator may waive this spacing requirement if the owners of all existing residential units within 300 feet provide a notarized written agreement as provided by the department consenting to the facility, and the waiver is approved through an administrative approval process per WCC 22.05.028.~~

20.40.130 Administrative approval uses.

...

.140 Type 1 Marijuana Production Facilities, subject to WCC 20.80.690.

.141 Marijuana Processing Facilities, subject to WCC 20.80.690.

...

Chapter 20.42 RURAL FORESTRY (RF) DISTRICT

20.42.050 Permitted uses.

Unless otherwise provided herein, permitted, accessory, and conditional uses shall be administered pursuant to the applicable provisions of WCC Chapter 20.80 WCC (Supplementary Requirements), and Chapter 22.05 WCC (Project Permit Procedures), the Whatcom County Chapter 16.08 (SEPA) Ordinance, Title 21 (Land Division Regulations) the Whatcom County Subdivision Ordinance, and Title 23 the Whatcom County (Shoreline Management Program).

...

~~.070 Marijuana production facility; provided, that in addition to the criteria found in WCC 20.80.690 through 20.80.694:~~

- ~~(1) The facility shall not be located within 1,000 feet of a community center. The distance shall be measured as the shortest straight line distance from the property line of the proposed building/business location to the property line of the community center. The zoning administrator may waive this spacing requirement from community centers if the authorized representatives of all existing community centers within 1,000 feet provide a notarized written agreement as provided by the department consenting to the facility and the waiver is approved through an administrative approval process per WCC 22.05.028.~~
- ~~(2) The facility shall not be located within 300 feet of any existing residential unit not located on the same parcel as the facility. The distance shall be measured as the shortest straight line distance from the closest point of a single family dwelling (structure) to any structure or fence used for the production of marijuana. The zoning administrator may waive this spacing requirement from residential units if the owners of all existing residential units within 300 feet provide a notarized written agreement as provided by the department consenting to the facility, and the waiver is approved through an administrative approval process per WCC 22.05.028.~~

...

20.42.100 Accessory uses.

...

~~.106 Marijuana processing facility; provided, that in addition to the criteria found in WCC 20.80.690 through 20.80.694:~~

- ~~(1) The facility is accessory to the on-site production of marijuana.~~
- ~~(2) The facility shall not be located within 300 feet of any existing residential unit not located on the same parcel as the facility. The distance shall be measured as the shortest straight line distance from the closest point of a single family dwelling (structure) to any structure or fence used for the processing of marijuana. The zoning administrator may waive this spacing requirement if the~~

owners of all existing residential units within 300 feet provide a notarized written agreement as provided by the department consenting to the facility, and the waiver is approved through an administrative approval process per WCC 22.05.028.

...

Chapter 20.69 RURAL INDUSTRIAL AND MANUFACTURING (RIM) DISTRICT

20.69.050 Permitted uses.

The following permitted uses shall be allowed subject to an evaluation by the Director zoning administrator pursuant to the provisions of this chapter and WCC Chapter 20.80 (Supplementary Requirements) WCC. In a rural community designation, nonresidential uses listed below are permitted if a use of the same type existed in that same rural community designation on July 1, 1990, per WCC 20.80.100(1). In a rural business designation all uses listed below are permitted.

.051 Manufacturing/fabrication type uses.

...

(17) Type 2 M marijuana production facilities, subject to WCC 20.80.690.

(18) Marijuana processing facilities, subject to WCC 20.80.690.

...

20.69.700 Performance standards.

20.69.704 Odor, dust, dirt, and smoke.

(1) Except as specified in subsection (2), No odor, dust, dirt, or smoke shall be emitted that is detectable at or beyond the property line, for the use concerned, in such a concentration or of such duration as to cause a public nuisance, or threaten health or safety, or to unreasonably infringe upon the use and enjoyment of property beyond the boundaries of the district.

(2) For marijuana production or processing facilities, odor shall be regulated pursuant to WCC 20.80.690(3)(g).

20.69.708 Marijuana odor.

~~For indoor facilities no odor or smoke shall be emitted that is detectable at or beyond the walls of the facility, in such a concentration or of such duration as to cause a public nuisance, or threaten health or safety, or to unreasonably infringe upon the use and enjoyment of neighboring use. The applicant shall install an exhaust system that is designed and constructed to capture sources of contaminants to prevent spreading of contaminants or odors to other occupied parts of the building or surrounding area. The system must be designed by a licensed Washington State professional engineer.~~

Comment [CES1]: Now covered by 20.80.690(3)(g).

Chapter 20.66 LIGHT IMPACT INDUSTRIAL (LI) DISTRICT

20.66.050 Permitted uses.

Unless otherwise provided herein, permitted and accessory uses shall be administered pursuant to the applicable provisions of WCC Chapter 20.80 ~~WCC~~ (Supplementary Requirements), Chapter 22.05 ~~WCC~~ (Project Permit Procedures), Chapter 16.08 (the Whatcom County SEPA) Ordinance, Title 21 (Land

Division Regulations), the Whatcom County Subdivision Ordinance and Title 23 the Whatcom County (Shoreline Management Program).

...

.087 Type 2 Marijuana Production or Processing Facilities, subject to WCC 20.80.690.

.088 Marijuana Processing Facilities, subject to WCC 20.80.690.

...

20.66.700 Performance standards.

...

20.66.704 Odors.

(1) Except as specified in subsection (2), No odor, dust, dirt, or smoke shall be emitted that is detectable at or beyond the property line, for the use concerned, in such a concentration or of such duration as to cause a public nuisance, or threaten health or safety, or to unreasonably infringe upon the use and enjoyment of property beyond the boundaries of the district.

(2) For marijuana production or processing facilities, odor shall be regulated pursuant to WCC 20.80.690(3)(g).

20.66.709 Marijuana odor.

~~For indoor facilities no odor or smoke shall be emitted that is detectable at or beyond the walls of the facility, in such a concentration or of such duration as to cause a public nuisance, or threaten health or safety, or to unreasonably infringe upon the use and enjoyment of neighboring use. The applicant shall install an exhaust system that is designed and constructed to capture sources of contaminants to prevent spreading of contaminants or odors to other occupied parts of the building or surrounding area. The system must be designed by a licensed Washington State professional engineer.~~

Comment [CES2]: Now covered by 20.80.690(3)(g).

Chapter 20.68 HEAVY IMPACT INDUSTRIAL (HII) DISTRICT

20.68.050 Permitted uses.

Unless otherwise provided herein, permitted and accessory uses shall be administered pursuant to the applicable provisions of WCC Chapter 20.80-WCC, (Supplementary Requirements), and Chapter 22.05 WCC, (Project Permit Procedures), Chapter 16.08 (the Whatcom County SEPA) Ordinance, Title 21 (Land Division Regulations), the Whatcom County Subdivision Ordinance and Title 23 the Whatcom County (Shoreline Management Program). The purpose of the SIC numbers listed within this chapter is to adopt by reference other activities similar in nature to the use identified herein. (Policies of the subarea Comprehensive Plan may preclude certain permitted uses to occur in particular subareas. Please refer to the policies of the applicable subarea plan to determine the appropriateness of a land use activity listed below.)

...

.066 Type 2 Marijuana Production or Processing Facilities, subject to WCC 20.80.690.

.067 Marijuana processing facilities, subject to WCC 20.80.690.

...

20.68.700 Performance standards.

...

- (1) Except as specified in subsection (2), ~~no~~ odor, dust, dirt, or smoke shall be emitted that is detectable at or beyond the property line, for the use concerned, in such a concentration or of such duration as to cause a public nuisance, or threaten health or safety, or to unreasonably infringe upon the use and enjoyment of property beyond the boundaries of the district.
- (2) For marijuana production or processing facilities, odor shall be regulated pursuant to WCC 20.80.690(3)(g).

...

~~20.68.709 Marijuana odor.~~

~~For indoor facilities no odor or smoke shall be emitted that is detectable at or beyond the walls of the facility, in such a concentration or of such duration as to cause a public nuisance, or threaten health or safety, or to unreasonably infringe upon the use and enjoyment of neighboring use. The applicant shall install an exhaust system that is designed and constructed to capture sources of contaminants to prevent spreading of contaminants or odors to other occupied parts of the building or surrounding area. The system must be designed by a licensed Washington State professional engineer.~~

Comment [CES3]: Now covered by 20.80.690(3)(g).

20.80 SUPPLEMENTARY REQUIREMENTS

~~20.80.690 Marijuana production and processing.~~

~~20.80.691 Marijuana state license required.~~

~~Prior to commencing operations, a marijuana producer, processor, or retailer shall obtain approval as a state-licensed marijuana producer, processor, or retailer under Chapter 69.50 RCW, as amended, and Chapter 314-55 WAC, as amended.~~

Comment [CES4]: Now covered by 20.80.690(1)(a).

~~20.80.692 Application for county development permits—Timing.~~

~~Applicants for marijuana production, processing, or retailing may apply for county development permits at any time. Applicants who wish to apply for county permits, or commence construction of facilities for producing, processing, or retailing of marijuana under Chapter 69.50 RCW, prior to obtaining approval as a state-licensed marijuana producer, processor or retailer do so at their own risk. Final occupancy of the building will not be granted until a state Liquor and Cannabis Board license has been approved.~~

Comment [CES5]: Now covered by 20.80.690(1)(a).

~~20.80.693 Production.~~

- (1) ~~For indoor facilities no odor or smoke shall be emitted that is detectable at or beyond the walls of the facility, in such a concentration or of such duration as to cause a public nuisance, or threaten health or safety, or to unreasonably infringe upon the use and enjoyment of neighboring use. The applicant shall install an exhaust system that is designed and constructed to capture sources of contaminants to prevent spreading of contaminants or odors to other occupied parts of the building or surrounding area. The system must be designed by a licensed Washington State professional engineer.~~
- (2) ~~Any lights used to illuminate the facility shall be so arranged as to direct the light away from the adjoining property and the public road.~~

Comment [CES6]: Now covered by 20.80.690(3)(g).

Comment [CES7]: Now covered by 20.80.690(3)(a).

- (3) No traffic shall be generated by such a facility in greater volume than would normally be expected in the applicable zoning district and appropriate for the road classification which serves the property.
- (4) Any need for parking generated by the conduct of such a facility shall meet the off-street parking requirements as specified in this title. At least one additional space shall be provided for each nonresident on-site employee.
- (5) The proposed use shall be compatible with the general appearance and character of the surrounding area. The zoning administrator at his or her discretion may require landscape screening pursuant to the requirements of WCC 20.80.345.

Comment [CES8]: Staff believes we don't need this. Firstly, there's no way to judge what "greater volume than would normally be expected." Secondly, no production facility, with normally only a few employees and no customers coming to the site, would create an inordinate amount of traffic.

Comment [CES9]: Now covered by 20.80.690(3)(d).

Comment [CES10]: Now covered by 20.80.690(3)(b).

20.80.694 Processing.

- (1) The facility employs no more than 10 permanent employees, except that in the Agriculture and Rural Forestry Zones the facility may employ no more than 20 employees.
- (2) For indoor facilities no odor or smoke shall be emitted that is detectable at or beyond the walls of the facility, in such a concentration or of such duration as to cause a public nuisance, or threaten health or safety, or to unreasonably infringe upon the use and enjoyment of neighboring use. The applicant shall install an exhaust system that is designed and constructed to capture sources of contaminants to prevent spreading of contaminants or odors to other occupied parts of the building or surrounding area. The system must be designed by a licensed Washington State professional engineer.
- (3) Any lights used to illuminate the facility shall be so arranged as to direct the light away from the adjoining property and the public road.
- (4) No traffic shall be generated by such a facility in greater volume than would normally be expected in the applicable zoning district and appropriate for the road classification which serves the property.
- (5) Any need for parking generated by the conduct of such a facility shall meet the off-street parking requirements as specified in this title. At least one additional space shall be provided for each nonresident on-site employee.

Comment [CES11]: Not needed. Was originally included when we were treating marijuana as an agricultural product, and this mimics the language for ag processing

Comment [CES12]: Now covered by 20.80.690(3)(g).

Comment [CES13]: Now covered by 20.80.690(3)(a).

Comment [CES14]: Staff believes we don't need this. Firstly, there's no way to judge what "greater volume than would normally be expected." Secondly, no production facility, with normally only a few employees and no customers coming to the site, would create an inordinate amount of traffic.

Comment [CES15]: Now covered by 20.80.690(3)(h).

20.80.690 Marijuana – Production and Processing Facilities.

- (1) **General.** Marijuana production or processing facilities shall comply with RCW Title 69, Chapter 314-55 WAC, and the following general standards:
- The WSLCB must approve a marijuana license for the subject property prior to issuance of the County's certificate of occupancy for buildings proposed for marijuana production or processing. Any permitting or construction work done prior to receiving said license is done so at the applicant's own risk.
 - Consistent with WAC 314-55-015, marijuana production and processing shall not take place in a residence or other location where law enforcement access, without notice or cause, is limited.
 - Marijuana production and processing are not allowed as home occupations or cottage industries.
 - Marijuana production and processing operations may not be located in critical areas or their buffers (WCC Chapter 16.16, Critical Areas) or in the shoreline jurisdiction (WCC Title 23).
 - Nonconforming Uses.** This section applies to those marijuana facilities legally existing as of INSERT DATE OF ADOPTION OF THESE RULES that, due to noncompliance with these standards,

Comment [CES16]: Note to Cliff: Fill in upon adoption

become nonconforming. Legally existing facilities that meet these standards are not considered nonconforming and may continue the use or they may expand with the proper permits.

(i) Continuation of Nonconforming Uses. Any legally existing marijuana production or processing facility that becomes nonconforming may continue operations as a nonconforming use within the terms of their permit(s) even when those facilities do not meet the standards of this section, pursuant to WCC 20.83.010.

(ii) Expansion of Nonconforming Uses. Similarly, expansion may be allowed pursuant to WCC 20.83.020, EXCEPT that:

A. Expansion of nonconforming Type 2 marijuana production facilities is prohibited; and,

B. Any other expansion shall be limited to 10% (in area) unless the standards of this section are met.

(iii) Change to Another Nonconforming Use. WCC 20.83.040 shall not apply: Nonconforming marijuana production or processing facilities shall not be able to change to another nonconforming use.

(2) District Specific Standards.

a. Facility Size –

(i) In the Rural district, production or processing facilities on parcels smaller than 4.5 acres shall not exceed a total of 2,000 square feet. On lots of 4.5 acres or greater production and processing facilities shall not exceed 1 acre.

(ii) In the Agriculture district, production and processing facilities on parcels smaller than 4.5 acres shall not exceed a total of 2,000 square feet. On lots of 4.5 acres or greater processing and production facilities shall not exceed 2 acres.

b. Separation of Uses – In the Rural and Agriculture districts, no facility shall be located within 1,000 feet of a **community center** or within 300 feet of any residential dwelling unit not located on the same parcel as the facility and existing at the time of application. Said distance shall be measured as the shortest straight line distance from property lines (for community centers) or structures (for residences).

c. Separation of Facilities – In the Rural and Agriculture districts, no marijuana production facilities shall be located within 1,000 feet of each other. Said distance shall be measured as the shortest straight line distance from such facilities.

d. Limit on Number of Licenses per Lot. In the Rural and Agriculture districts, only one Washington State Liquor and Cannabis Board (WSLCB) marijuana production license may be used per legal lot (though may be combined with one processing license).

e. Accessory Use Only. In the Rural and Agriculture districts, processing facilities are only allowed as an accessory use to a production facility.

f. Hazardous Materials – Marijuana processing using hazardous or flammable solvents or gases is allowed only in the LII, HII, or RIM districts. Producers and processors that will use chemicals, industrial solvents, or other noxious or hazardous substances shall comply with all federal, state, and County safety, fire, structural, storage, and disposal standards. They shall describe the proposed use of hazardous substances, methods, equipment, solvents, gases, and mediums identified in WAC 314-55-104 on permit applications and site plans.

Comment [CES17]: Defined in T-20 as, "Community center" means land and/or building(s) owned by a public agency or private nonprofit entity used for social, civic, educational, religious, or recreational purposes, which serves mainly the community where located; including but not limited to community halls and centers, grange halls, senior citizen centers, teen centers, youth clubs, field houses, and churches. The facilities are available for occasional public meetings. They may also have the minimal kitchen facilities required for occasional banquets. Private clubs as defined in this title are not included."

(3) Facility Design Standards.

- a. Lighting – For both Type 1 and 2 production facilities:
 - (i) Outdoor fixtures illuminating production or processing operations shall be designed and down-shielded to direct light away from adjoining properties, critical areas, shorelines, and public roads.
 - (ii) All structures using artificial lighting for aiding in the growth cycle of plants shall install and employ mechanisms (e.g., blackout shades) that prevent light from escaping production structures.
- b. Screening – Marijuana production and processing facilities shall be landscaped and screened consistent with WCC 20.80.300, et seq. (Landscaping). Screening shall be located outside of the state's required security fence to provide a visual barrier.
- c. Security – Producers and processors shall install the security requirements of WAC 314-55-083 prior to issuance of the County's certificate of occupancy for a marijuana operation.
- d. Parking – Such facilities shall meet the off-street parking requirements of WCC 20.80.500, et seq. (Off-street Parking and Loading Requirements).
- e. Water and Waste Disposal – Permit applications shall include documentation of compliance with the water system requirements and waste disposal regulations of WCC Title 24 (Health Code) and WAC 314-55-097.
- f. Noise – Producers and processors required to install odor control system per subsection (g) shall comply with WCC 20.80.620 (Noise). Fan noise from operations shall be minimized. A mechanical engineer licensed in the state of Washington shall design the noise control system, to be approved by the Building Official, using standard industry practices such as installing fans with components listed by Underwriters Laboratories (UL) and a combination of the following techniques and components:
 - (i) Short and straight line vent runs;
 - (ii) Silencers and insulated vents, vent sleeves and mufflers;
 - (iii) Acoustic ducting;
 - (iv) Fan speed controllers;
 - (v) Soundproofing boxes;
 - (vi) Sound-muffling casing;
 - (vii) Padded foam cushions under the fans;
 - (viii) Intelligent programming motors and controllers; and
 - (ix) Hanging fans hung from bungee cords from hooks in ceiling.
- g. Odor –
 - (i) All Production and Processing – No odor, terpenes, or other similar volatile organic compounds (VOCs) shall be emitted that is detectable at or beyond the property boundaries of the facility in such a concentration or of such duration as to cause a public nuisance or threaten health or safety.
 - (ii) Type 2 Production – Type 2 producers shall minimize odors emitted by using best management practices and technology, and all air must go through an odor control system before being vented outdoors. A mechanical engineer licensed in the state of Washington shall design the odor control system using guidance from the National Air

Filtration Association and approved by the Building Official. The odor control plan must incorporate a combination of the following site design practices, tools, or other newly improved technologies to mitigate odors:

- A. Use of filters on exhaust air prior to dispersal;
- B. Placement of operations after consideration of predominant wind directions;
- C. Installation of additional vegetative buffers around grow areas;
- D. Reduction of passive odor escapes by tightening and sealing structures;
- E. Use of negative pressure techniques and air locks to reduce odors from escaping when doors open;
- F. Use of chillers that move water around the structure and leave air in place instead of air conditioning;
- G. Installation of carbon filter scrubbers to heating, ventilation, and air conditioning systems;
- H. Installation of dry vapor systems;
- I. Installation of ionizers;
- J. Use of mini-vapor screens on the interior, and Vapomatic and vapor screens on the exterior of structures;
- K. Installation of a piping system on perimeter fencing that neutralizes malodorous molecules;
- L. Installation of a gas phase filtration system; and/or,
- M. Installation of a fog system to disperse mixed water- and odor-neutralizing chemicals.

h. *Building Permits Required* – Building permits shall be required for any structures used in Marijuana Production Facilities.

20.80.691 Marijuana – Retail Sales Facilities.

Marijuana retail sales facilities shall comply with RCW Title 69, WAC Chapter 314-55, and the following.

1. The WSLCB must approve a marijuana retail sales license for the subject property prior to issuance of the County's certificate of occupancy for buildings proposed for marijuana retail sales. Any permitting or construction work done prior to receiving said license is done so at the applicant's own risk.
2. Consistent with WAC 314-55-015, marijuana retail sales shall not take place in a residence or other location where law enforcement access, without notice or cause, is limited. Marijuana retail sales are not allowed as home occupations or cottage industries.
3. Retail sales facilities shall install the security requirements of WAC 314-55-083 prior to issuance of the County's certificate of occupancy for a marijuana operation.
4. Such facilities shall meet the off-street parking requirements of WCC 20.80.500, et seq. (Off-street Parking and Loading Requirements).

Chapter 20.97 DEFINITIONS

20.97.010 Agriculture.

"Agriculture" means the use of land for farming, horticulture, floriculture, viticulture, and the necessary accessory uses for packing, treating or storing the produce; ~~provided, however, that, though~~ the operation of any such accessory uses shall be secondary to that of normal agricultural activities. However, the production of marijuana is not considered agriculture.

20.97.010.1 Agricultural Processing.

"Agricultural processing" means the transformation, either chemically or physically, of raw agricultural goods including but not limited to washing, grading, sizing, drying, extracting, icing, producing ornamental agricultural products, sorting, cutting, pressing, bagging, freezing, canning, packaging, milling, crushing, fermenting, aging, pasteurizing, preserving, storage, bottling, but excluding slaughtering of livestock. Agricultural processing includes those process steps associated with product preparation and processing. Storage, warehousing, and distributing products in conjunction with the agricultural processing activity occurring on that site shall be allowed. However, the processing of marijuana is not considered agricultural processing.

20.97.225 Marijuana, ~~marihuana or cannabis.~~

"Marijuana," (a.k.a., "marihuana" or "cannabis") means all parts of the plant cannabis, whether growing or not, with a THC concentration greater than 0.3 percent on a dry weight basis; the seeds thereof; the resin extracted from any part of the plant; and every compound, manufacture, salt, derivative, mixture, or preparation of the plant, its seeds, or resin. The term does not include the mature stalks of the plant, fiber produced from the stalks, oil or cake made from the seeds of the plant, any other compound, manufacture, salt, derivative, mixture, or preparation of the mature stalks (except the resin extracted therefrom), fiber, oil, or cake, or the sterilized seed of the plant which is incapable of germination.

20.97.226 Marijuana processing facility.

"Marijuana processing facility" means a facility licensed by the state Liquor and Cannabis Board to process marijuana into useable marijuana, marijuana concentrates, and marijuana-infused products; ~~and~~ package and label useable marijuana and marijuana-infused products for sale in retail outlets; ~~and~~ sell useable marijuana and marijuana-infused products at wholesale to marijuana retailers. A marijuana processing facility shall include any structure that is associated with the processing of marijuana.

20.97.227 Marijuana production facility.

"Marijuana production facility" means a facility licensed by the state Liquor and Cannabis Board to produce, harvest, trim, dry, cure, ~~and package marijuana,~~ and sell marijuana at wholesale to state-licensed marijuana processors and other state-licensed marijuana producers. A marijuana producer may also produce and sell marijuana plants, seed, and plant tissue culture to other state-licensed marijuana producers. The area of a marijuana production facility includes all the area enclosed within a structure or fence that is required by the state Liquor and Cannabis Board for the production of marijuana. Where limitations on size are imposed pursuant to §20.80.690, the "facility" shall include all structures related

to the production or processing of marijuana and any ground in which marijuana is grown. For the purposes of this code, Whatcom

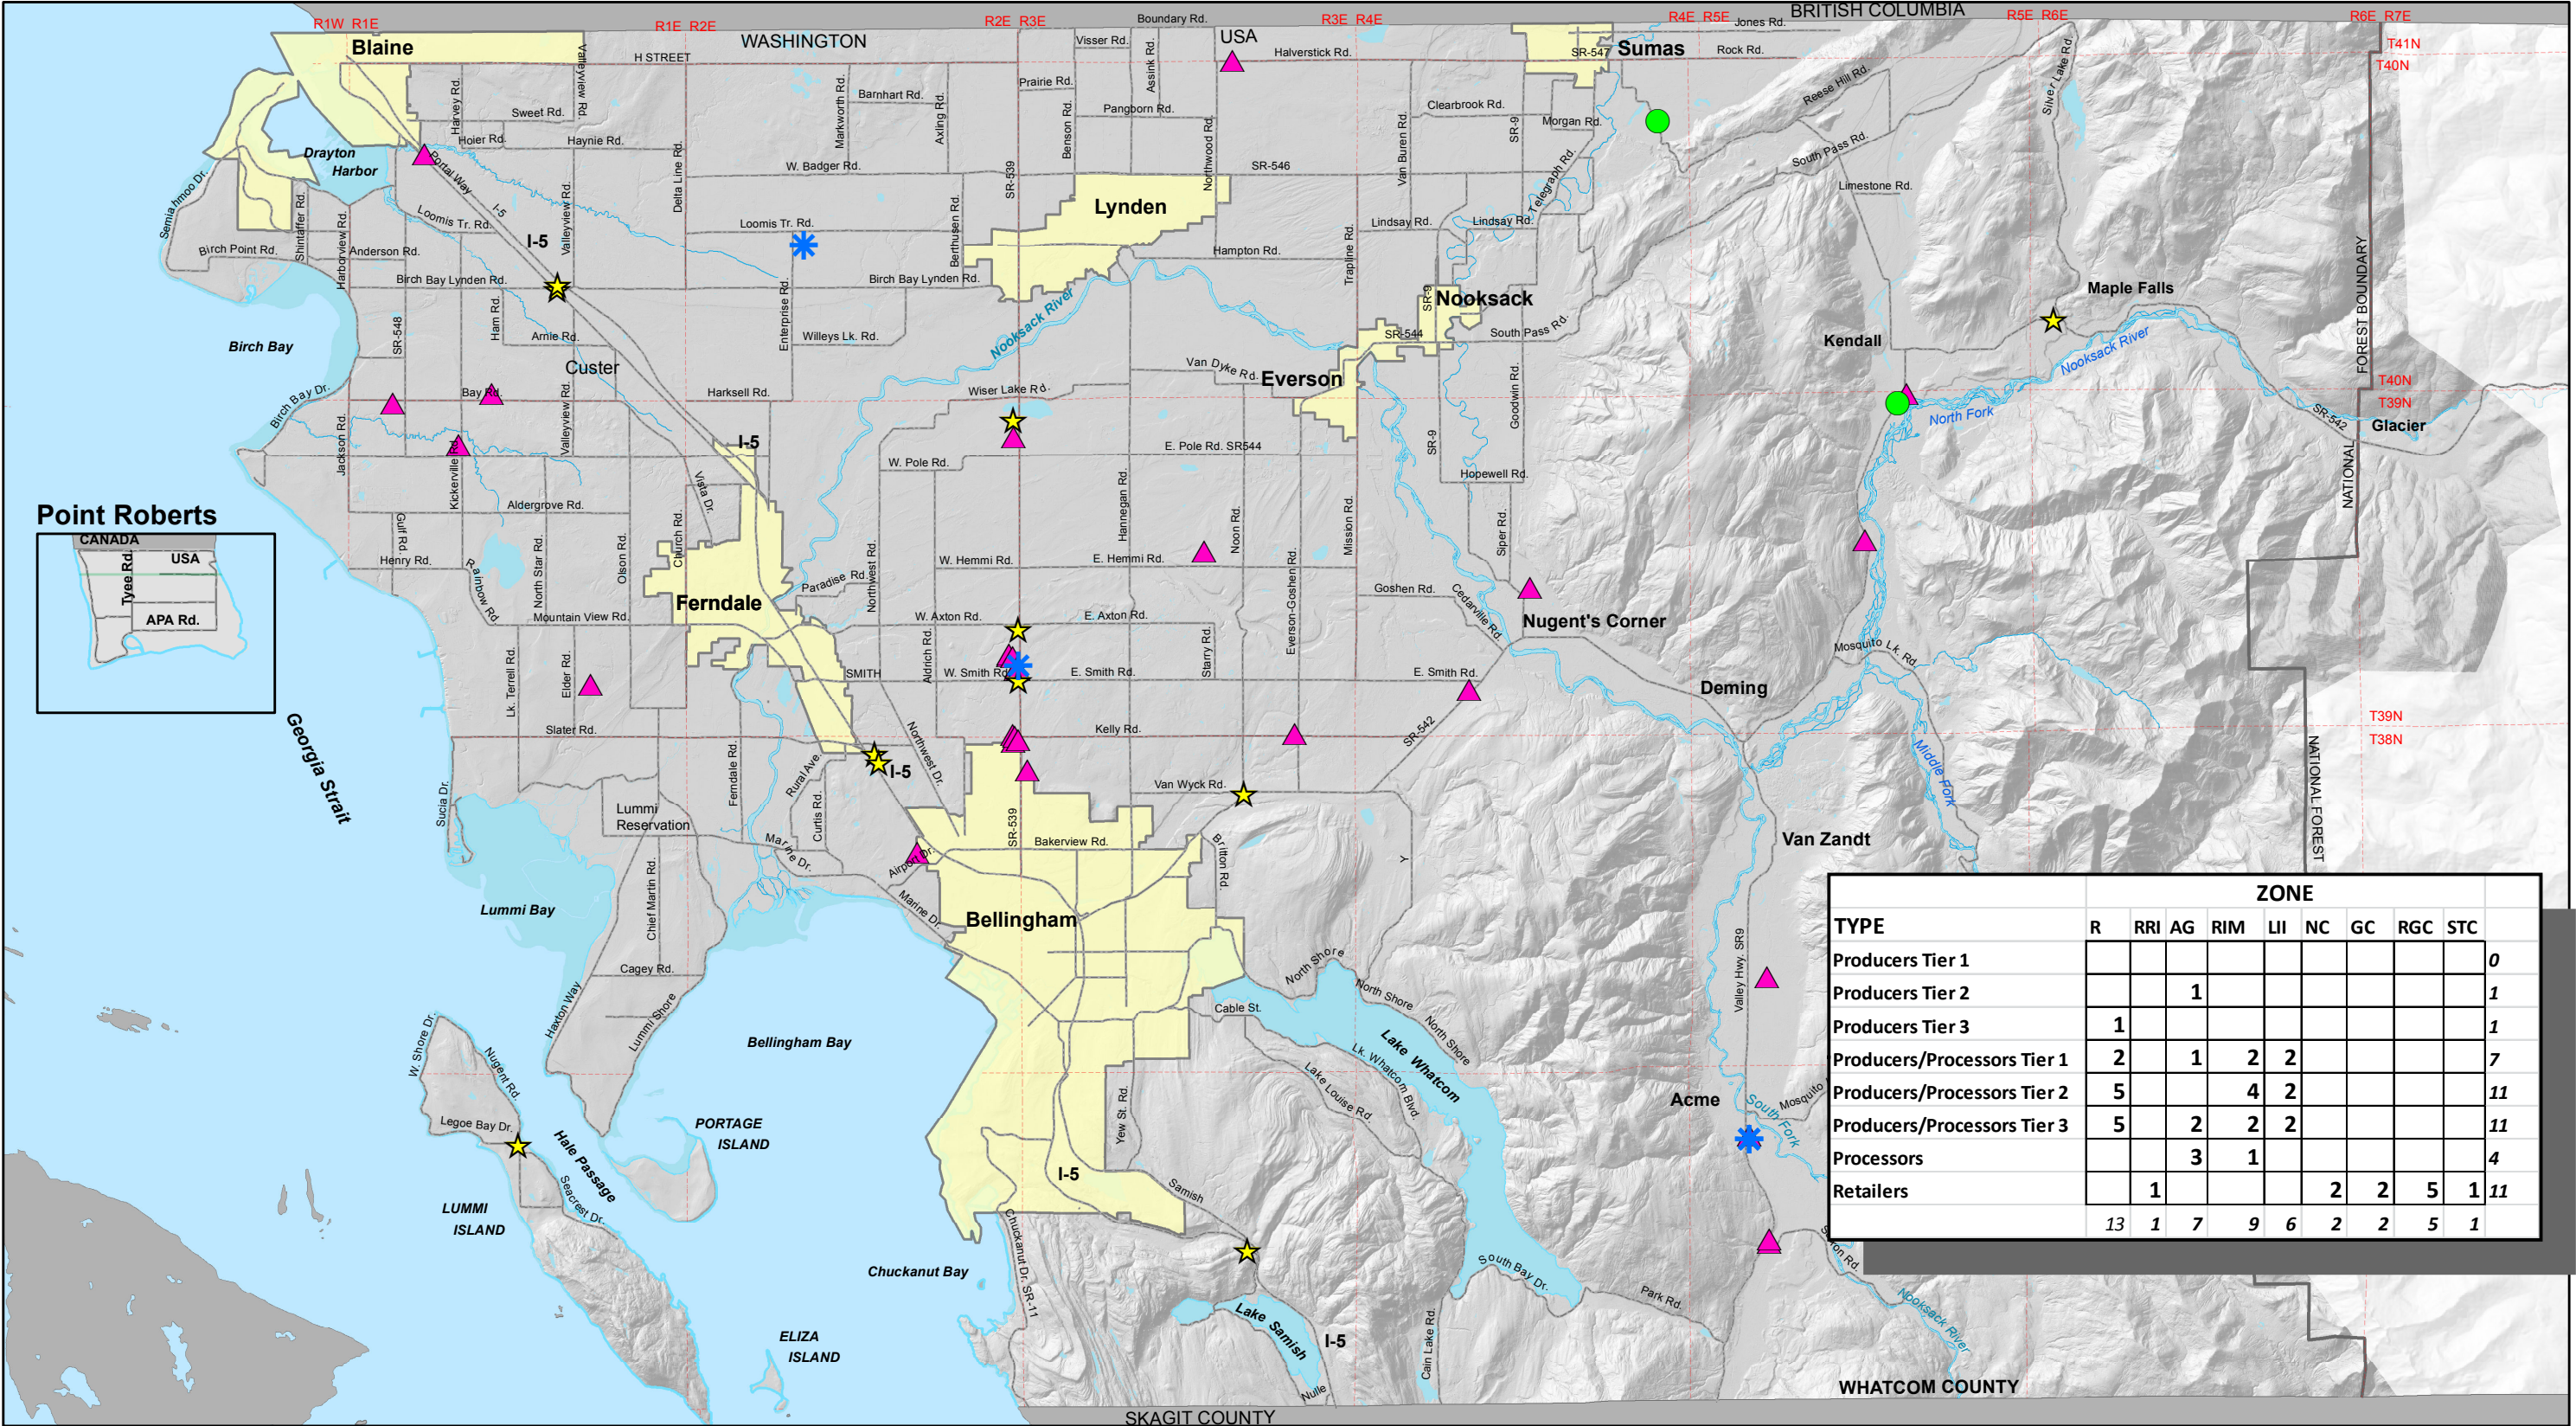

- A. "Type 1 Marijuana ~~Outdoor~~ Production Facilities" shall mean production ~~may~~ takes place outdoors, including in an expanse of open or cleared ground, or in ~~nonrigid greenhouses, other structures that have no artificial lighting for aiding in the growth cycle, or an expanse of open or cleared ground fully enclosed by a physical barrier.~~ except that Type 1 facilities may allocate up to 10% of the total square footage of their allowed facility area to genetic preservation and plant propagation in a designated indoor area with artificial lighting. This area must be clearly identified and described in the permit the application, and is subject to all the supplemental requirements of a Type II Facility; however, no flowering plants are permitted in this area at any time.
- B. "~~Indoor~~ Type 2 Marijuana ~~P~~roduction Facilities" shall mean production facilities that use artificial lighting for aiding in the growth cycle ~~within a fully enclosed secure indoor facility or greenhouse with rigid walls, a roof, and doors.~~

20.97.228 Marijuana retail facility.

"Marijuana retail facility" means a facility licensed by the state Liquor and Cannabis Board to sell useable marijuana and marijuana-infused products in a retail outlet. A marijuana retail facility shall include any building or portion thereof that is associated with the sale of marijuana.

COUNCILMEMBERS

Rud Browne
Barry Buchanan
Tyler Byrd
Todd Donovan
Ben Elenbaas
Carol Frazey
Kathy Kershner

CLERK OF THE COUNCIL

Dana Brown-Davis, C.M.C.

Call To Order

Council Chair Barry Buchanan called the meeting to order at 12:02 p.m. in a virtual meeting.

Roll Call

Present: 7 - Rud Browne, Barry Buchanan, Tyler Byrd, Todd Donovan, Carol Frazey, Ben Elenbaas, and Kathy Kershner

Absent: None

Announcements**Special Order of Business**

1. [AB2021-700](#) Ordinance (emergency) amending the 2021 Whatcom County Budget, request no. 19, in the amount of \$250,000 to cover emergency response costs related to countywide flooding

The following people reported on misinformation regarding Sumas that circulated overnight and the current status of the flood situation in the county:

- Satpal Sidhu, County Executive
- John Gargett, Division of Emergency Management
- Jon Hutchings, Public Works Department Director

They answered whether there is a phone number for people to call who would like to donate heavy equipment or help farmers with things like feeding cattle.

Donovan moved and Browne seconded that the Ordinance be adopted.

Councilmembers and the speakers discussed whether \$250,000 will be enough, how high this flood was compared to others in the last 100 years, the fact that the Flood Control Zone District has budget authority for emergency response and this is in addition to that, the fact that this money is just the lead-in to the recovery effort, a perception in the community and on social media that the County is not doing all that it could to respond to the flood event, whether the County could help with funds for non-profits who are out there helping people, whether the County has reached out to the State or the National Guard to help coordinate, whether the Council should put out communication to help raise money for the community, public perception about government's response to the crisis, whether a page could be set up on the County's website listing the things that the County is doing

for the flood response, whether a Mine-Resistant Ambush-Protected (MRAP) vehicle has been used for rescue, and whether Councilmembers should share on social media what good things the County is doing.

Councilmembers voted on the ordinance (See vote and ordinance number below at the end of the discussion) and the Ordinance was adopted.

Councilmembers and the speakers discussed how to best get information to the public, directing people to organizations who are already helping, encouraging people to sign up for County email lists and alerts, and donations that have already come in.

Donovan's motion that the Ordinance be ADOPTED carried by the following vote:

Aye: 7 - Browne, Buchanan, Byrd, Donovan, Frazey, Elenbaas, and Kershner

Nay: 0

Absent: 0

Enactment No: ORD 2021-071

Items Added by Revision

There were no agenda items added by revision.

TITLE FOR AGENDA ITEM:

Resolution approving the Shoreline Management Program Periodic Update 2020

SUMMARY STATEMENT OR LEGAL NOTICE LANGUAGE:

Consideration of a resolution approving the periodic update of Whatcom County's Shoreline Management Program, which includes amendments to the Whatcom County Comprehensive Plan (shoreline and other policies), WCC Titles 23 (shoreline regulations) and 22 (permitting procedures), WCC Chapter 16.16 (critical areas regulations), and the official Shoreline Map. Additionally, the project addresses Council's docketed items 1) PLN2019-00011, a directive to amend the CompPlan and codes to allow the seasonal extraction of sand and gravel from dry upland areas under certain conditions (but has been found to be unnecessary); and 2) PLN2018-00010, the addition of a Sustainable Salmon Harvest Goal policy to the CompPlan.

Memorandum

DATE: November 24, 2021
TO: The Honorable County Council
FROM: Cliff Strong, Senior Planner
THROUGH: Mark Personius, Director
RE: Continued Review of Shoreline Management Program (SMP) Periodic Update 2020

Tonight's Goal

On November 23rd the Council held a public hearing on the SMP Update and made three amendments. Based on legal counsel's recommendation, the amended exhibits were introduced that night with the Council's amendments and a second public hearing was scheduled for tonight (12/7/21) to allow the public an opportunity to comment on those amendments. Upon completion of the public hearing, staff requests that Council adopt the resolution approving the SMP Update and authorizing Planning and Development Services to forward it to the Department of Ecology for final review and approval. Once that is done staff will return in early 2022 with an ordinance for Council to adopt, effecting the amendments.

Council's Amendments

Council made three amendments to the Planning Commission's recommendation. These are:

1. **Amend Exhibit F (WCC Ch. 16.16) §16.16.612 (Exceptions to Regulation), subsection (A)(1)(d) (pg. 66) to read:**

"Do not score 6 or more points for habitat function..." (Changing what was shown as "5" to "6.")

Staff Comment: Staff supports this amendment.

In July 2018 the Washington Department of Ecology (DOE) modified the habitat score ranges and recommended buffer widths in their wetland buffer tables in the DOE guidance, with some minor text changes to ensure consistency. Through this SMP update staff proposed to amend §16.16.630, Table 1, and §16.16.612 to reflect this guidance. The revised habitat function scores and buffer widths in Table 1 comes from guidance updated in 2018. The revised language of §16.16.612 is from their *Wetland Guidance for CAO Updates, Western Washington Version, 2016*. However, staff was unaware and just this past week found out that Ecology also updated their language in the 2016 guidance through an addendum issued in 2018. Though the majority of the language remained the same, the one change was to change the "5" to a "6," meant to reflect their newer habitat function scores in determining which wetlands might be exempt from regulation.

The 2016 guidance can be found at <https://apps.ecology.wa.gov/publications/documents/1606001.pdf> and the 2018 errata sheet can be found at <https://apps.ecology.wa.gov/publications/parts/1606001part1.pdf> for those wishing to compare.

2. **Amend Exhibit F (WCC Ch. 16.16) §16.16.900 (Definitions), definition of "Qualified professional" or "qualified consultant," subsection (1) (pg. 128) to read:**

"Is listed on a roster of qualified professionals or qualified consultants prepared by the Director and made available to the public."

Staff Comment: Staff supports this amendment as the list is already made publicly available.

3. Amend Exhibit F (WCC Ch. 16.16) §16.16.900 (Definitions), definition of “Qualified professional” or “qualified consultant,” subsection (7) (pg. 128) to read:

“Anyone who’s professional license is currently revoked or has had two (2) or more reports denied by the Hearing Examiner within a 12-month period does not meet the definition of a qualified professional or qualified consultant.”

Staff Comment: Staff recommends that Council revert the language of subsection (7) to its existing language to read:

“Anyone who has had their professional licensure or certification revoked for violations of the provisions of their profession does not meet the definition of a qualified professional or qualified consultant.”

Though at the 11/23/21 hearing staff indicated they were satisfied with the language as amended by Council, upon further consultation with legal counsel and other staff following the meeting, PDS has reconsidered our recommendation. The Hearing Examiner has no role in approving or denying critical area assessment reports: That role is solely the Director’s pursuant to 16.16.250 (Critical Areas Review Process) and 16.16.255 (Critical Areas Assessment Reports). Additionally, it is unlikely that any one consultant would be before the Hearing Examiner in any 12-month period, as most projects are decided upon administratively, so this rule would rarely be usable. And as a note, all decisions of the Director are appealable to the Hearing Examiner pursuant to WCC 22.05.160, though the Hearing Examiner would only rule on whether code was interpreted correctly, not on whether a report is sufficient or meets professional standards.

As for process, legal counsel agrees that Council can revert the language by motion on 12/7 without a need for an additional hearing since this is existing language and a hearing was held on 11/23 (as well as tonight).

Additional Staff Recommendations

At your 11/23 meeting staff recommended two additional edits, though in reviewing the Action Summary for that meeting we don’t see that they were included in the motion to introduce.

4. Amend Exhibit D (WCC Title 23), §23.60.190, by deleting subsection 17, definition of “short-term rental.”

5. Amend Exhibit D (WCC Title 23), §23.60.030 to replace the term “short-term rental” with “vacation rental.”

Staff Comment: Staff recommends both of these amendments. In trying to include Council’s previous action in Resolution 2016-039 we inadvertently used the wrong terms. The Council approved definition of “vacation rental unit” from that resolution is already included §23.60.220(1).

Whatcom County Planning & Development Services Staff Report

Shoreline Management Program Periodic Update 2020

I. File Information

File #: PLN2020-00006, PLN2019-00011, & PLN2018-00010

File Name: Shoreline Management Program Periodic Update 2020

Applicant: Whatcom County Planning and Development Services (PDS)

Project Summary: Periodic update of Whatcom County's Shoreline Management Program, which includes amendments to the Whatcom County Comprehensive Plan (shoreline and other policies), WCC Titles 23 (shoreline regulations) and 22 (permitting procedures), WCC Chapter 16.16 (critical areas regulations), and the official Shoreline Map. A list of proposed amendments, and how the draft addresses them, is attached. Additionally, the project addresses Council's docketed items 1) PLN2019-00011, a directive to amend the CompPlan and codes to allow the seasonal extraction of sand and gravel from dry upland areas under certain conditions (but has been found to be unnecessary); and 2) PLN2018-00010, the addition of a Sustainable Salmon Harvest Goal policy to the CompPlan.

Location: Countywide.

Staff Recommendation: Approve.

II. Background

Whatcom County (County) is undertaking a periodic review of its Shoreline Management Program (SMP), as required by the Washington State Shoreline Management Act, RCW 90.58.080(4). The Shoreline Management Act (SMA) requires each SMP be reviewed, and revised if needed, on an eight-year schedule established by the state Legislature. The review ensures the SMP stays current with changes in laws and rules, remains consistent with other County plans and regulations, and is responsive to changed circumstances, new information and improved data.

The County adopted its current SMP in 2007 (Ordinance No. 2007-017; approved by Ecology in 2008) through a comprehensive update process, which included an inventory and characterization of shoreline land use and ecological conditions (otherwise known as the "baseline condition"), a shoreline restoration plan, and an evaluation of cumulative impacts to ensure implementation of the SMP would result in no net loss of shoreline ecological functions.

Since then, the Council has amended the SMP numerous times, though those amendments were fairly minor in nature, addressing specific issues. The SMP was most recently amended in 2019 to adopt by reference the 2017 Critical Areas Ordinance (CAO).

Periodic Update Requirements

The primary requirement of the periodic update process is to ensure that the SMP remains consistent with updates to the legislative requirements of the SMA. The Washington State Department of Ecology

(DOE) provides a list of legislative amendments which have taken effect between 2007 and 2017 as a Periodic Review Checklist.

The periodic update also provides an opportunity to review the SMP for consistency with the County's Comprehensive Plan and development regulations, including critical areas regulations. The County's SMP regulates critical areas in the shoreline jurisdiction by adopting by reference as part of the SMP the County's CAO as adopted in 2017 (Ordinance No. 2017-077) and codified in Chapter 16.16 of the WCC.

The County's Comprehensive Plan and other development regulations were also reviewed for consistency with the SMP, and amendments are being proposed to maintain consistency.

The periodic review process also represents an opportunity to revise and improve the overall functionality, clarity, and usability of the SMP for both the public and County staff. This includes clarifying permit processes and requirements and improving the overall organization and clarity of the documents. The majority of amendments shown in the documents are to achieve this goal.

Note that this periodic update is not required to: re-evaluate the ecological baseline that was established as part of the 2007 comprehensive update; extensively assess no net loss criteria other than to ensure that proposed amendments do not result in degradation of the baseline condition; or change shoreline jurisdiction or environment designations, unless deemed appropriate and necessary. And doing so was not included in the scope or budget for this update, so staff has not undertaken any amendments that would require such actions. A link to those 2007 documents can be found below under "Attachments."

Project Scope

In starting this project, staff compiled ideas for amendments from various sources (see Public Outreach, below) and compiled them into a list that the Planning Commission and Council reviewed and adopted as the "Scoping Document." This set the "bookends" for what staff would work on (and by corollary, what we would not work on). It contains a list of 22 topic areas, with 68 specific issues to address. A link to that document can be found below under "Attachments."

Staff understands that through the review process other ideas may arise, but if they are big issues that need a lot of work to accomplish, we will not be able to take them on and meet our update deadline of June 30th or stay within budget.

Public Outreach

The County has provided multiple opportunities for public participation throughout the process using a variety of communication tools to inform the public and encourage participation. This included our SMP Update website (<http://www.co.whatcom.wa.us/3097/Shoreline-Master-Program-Periodic-Update>), a list-serve, news releases, public notices, open houses, and public work sessions with the Planning Commission and County Council.

The early months of the project were used to gather input and outline the extent of the review; three public open houses were held in different parts of the County to illicit amendment ideas¹. Both the Planning Commission and the County Council then reviewed and adopted a final scope of potential amendments based on input from staff, the public, local jurisdictions, tribes, and other stakeholders.

Based on that scope, County staff and consultants drafted amendments. These draft amendments were issued for a 30-day public review period from August 18 – September 18, 2020, before the Planning

¹ Note: Though we had planned on holding three additional open houses to present the draft to the public, due to the COVID-19 pandemic we had to cancel those and rely on electronic review.

Commission's work sessions. Prior to the Planning Commission's hearing the revised amendments were reissued for another 30-day public review period, from March 12 – April 12, 2021.

Planning Commission Review

Between October 2020 and April 2021 the Planning Commission held nine public work sessions to review the draft amendments. After a second 30-day public review period they then held a joint Planning Commission/Department of Ecology public hearing on April 22, 2021.

County Council/Department of Ecology Review

Staff expects that the Council will hold multiple work sessions and an additional public hearing prior to adoption. By state law, the SMP update was supposed to be adopted by June 30, 2020; however, as a DOE grant recipient (and in part due to the pandemic) our official deadline is now June 30, 2021. Staff anticipates that Council will provisionally adopt the update via resolution forwarding it to DOE for their final review and approval. After we receive DOE's approval, Council will then need to adopt an ordinance adopting and effecting the update. If the anticipated schedule is kept, the revised SMP should become effective sometime this Fall.

III. Amendments

The proposed amendments are found in Exhibits A through G. Please refer to those attachments; explanations are provided therein. Following, however, is a list of proposed policy changes.

Scoped Amendments

This is the list of items Council directed staff to address, and how we did. Topic #s refer to the topic number assigned in the Scoping Report.

Topic #1, Consistency with State law (required amendments)

- a) **Revise language to cite updated substantial development cost threshold or to rely solely on reference to WAC 173-27-040 for exemptions to substantial development permitting.**

Every five years the Office of Financial Management (OFM) recalculates the dollar threshold for projects qualifying as exempt from having to obtain a substantial development permit. Thus, in §22.07.020(B)(1) (Exhibit E), we have updated the dollar amount to the most recent (2017) OFM calculation of \$7,047. Additionally, we have revised the definition of “substantial development” in §23.60.190 to better meet the state definition (Exhibit D).

- b) **Revise the definition of “development” to clarify that development does not include dismantling or removing structures.**

The definition of “development” has been updated to meet DOE guidelines (Exhibit D, §23.60.040(6)).

- c) **Add reference to statutory exceptions to local review to the SMP. Revise or remove existing references to remedial actions and projects certified pursuant to RCW 80.50 to clarify their status as exceptions to local review under the SMA.**

The requisite language has been added (and revised) to §22.07.010(G) (Exhibit E) to clarify the referenced project types’ status as exceptions to local review under the SMA, and deleted from (old) §23.50.060 (Exhibit D).

- d) **Revise language to include a shoreline permit exemption for retrofitting existing structures to comply with the ADA or to rely solely on reference to WAC 173-27-040 for exemptions to substantial development permitting.**

The requisite language has been added as §22.07.020(B)(17) (Exhibit E).

- e) **Revise language in the SMP to cite the updated cost thresholds for dock construction or to rely solely on reference to WAC 173-27-040 for exemptions to substantial development permitting.**

§22.07.020(B)(8) has been revised to meet the statutory requirements (Exhibit E) and the cost threshold has been deleted from the definition of “substantial development” in §23.60.190 (Exhibit D).

- f) **Revise the SMP aquaculture provisions for consistency with WAC 173-26-241(3)(b).**

§23.40.050, in particular subsections (D)(1) and (G), has been revised to be consistent with WAC 173-26-241(3)(b) regarding commercial geoduck farming. (Exhibit D)

- g) Revise the SMP to clarify that the effective date of SMP amendments is 14 days from notice of final approval by Ecology.**

Both §23.05.090 (Effective Date) and §23.10.030(C)(2) (Administrative Duties) have been updated to clarify that the effective date of SMP amendments is 14 days from notice of final approval by Ecology (Exhibit D).

- h) Review the SMP for consistency with 2003 SMP Guidelines and make any necessary changes.**

Numerous amendments are proposed to make our SMP consistent with the SMP Guidelines; too many to list here. However, prior to submitting to DOE for approval, staff will complete the SMP checklist for their use.

Topic #2, Consistency with State law

- a) Revise the SMP for consistency with Ecology's updated permit filing procedures.**

The requirements for filing permits with DOE have been updated in §22.07.060 (Filing Shoreline Permits with the Department of Ecology) (Exhibit E).

- b) Revise language to clarify that forest practices that involve only timber cutting are not SMA "developments" and do not require Shoreline Substantial Development Permits.**

§23.40.110 (Forest Practices), subsection (A)(3) has been added to clarify that forest practices that involve only timber cutting are not SMA "developments" and do not require Shoreline Substantial Development Permits. (Exhibit D)

- c) Revise language in §23.50.040 to clarify that the SMA does not apply to lands under exclusive federal jurisdiction.**

Subsection (E)(1) has been added to §23.10.020 (Applicability, which used to be §23.50.040) to clarify that the SMA does not apply to lands under exclusive federal jurisdiction. (Exhibit D)

- d) Update definitions to include distinct definitions for "nonconforming use," "nonconforming structure," and "nonconforming development" in accordance with WAC 173-27-080.**

The definitions of "nonconforming lot" (§23.60.140(5)) and "nonconforming use" (§23.60.140(7)) have been amended, and a new definition of "nonconforming structure" (§23.60.140(6)) has been added, to conform to WAC 173-27-080. (Exhibit D)

- e) Define special procedures for WSDOT projects per WAC 173-27-125.**

Subsection (1)(c) has been added to §22.05.130 (Permit Review Time Frames) to define special procedures for WSDOT projects. (Exhibit E)

- f) Incorporate a reference to WAC 173-27-215 for criteria and procedures for instances in which a shoreline restoration project creates a shift in OHWM.**

A reference to WAC 173-27-215 for criteria and procedures for instances in which a shoreline restoration project creates a shift in OHWM has been added as §23.40.180(A)(3) (Restoration and Enhancement) (Exhibit D).

- g) Revise definition of "Floodway" for complete consistency with Ecology's recommended language.**

The definition of "floodway" has been amended to be consistent with DOE's recommended language. (§23.60.060(21), (Exhibit D))

h) Update the list and maps of streams and lakes that are in shoreline jurisdiction as necessary.

The list of waters that are in the shoreline jurisdiction has been revised in §23.20.010(B) (Shoreline Jurisdiction), using the language from the WAC 90.58.030 (2)(d). (Exhibit D)

i) Revise the SMP to include the required provisions in WAC 90.58.140(12).

§23.40.080 (Dredging and Dredge Material Disposal), subsection (B)(4)(b) has been added to clarify that dredge material disposal at an open water disposal site approved through the Dredged Material Management Program (RCW 79.105.500) is allowed and shall not require a shoreline permit. (Exhibit D)

Topic #3, Consistency with WCC Ch. 16.16 (Critical Areas)

a) Ensure Council changes in Ch. 16.16 regarding standards for view preservation are reflected in the SMP.

§16.16.235(5) (Activities Allowed with Notification) of the critical areas regulations (Exhibit F) allows for view corridors to be created and maintained (though certain restrictions apply). Subsection (L) has been added to §23.30.030 (Views and Aesthetics) (Exhibit D) that acknowledges and cross-references this allowance (except for in the Natural shoreline environment).

Topic #4, Consistency with Land Use procedures (Title 22)

a) Update SMP to align with recently adopted Title 22 permit procedures.

In keeping with placing all land use permitting procedures in one place (Title 22) started a couple of years ago, all shoreline permitting procedures in Title 23 (Exhibit D) are being moved to Title 22 (Exhibit E). Where processes overlap with PDS's other project permit types, we refer to and rely on (slightly modified) existing language (Ch. 22.05). However, shoreline permits also have requirements unique to them, so have supplemented the processing rules with a new Ch. 22.07 (Additional Requirements for Shoreline Permits and Exemptions).

Topic #5, Consistency with Shoreline Management Act (RCW 90.58) and 2003 SMP Update Guidelines (WAC 173-26)

a) Clarify permit review no net loss analysis

The primary regulations ensuring no net loss are:

- §23.10.040(A) (Code Interpretation) requires that the regulations be interpreted to allow development only when a proposal is "designed, constructed, and/or mitigated to provide no net loss of or a net lift to ecological functions and ecosystem wide processes." (Exhibit D)
- §23.30.010(B) (Ecological Protection) requires that "any unavoidable impacts shall be mitigated to meet no net loss of ecological function and ecosystem-wide processes." (Exhibit D)
- §23.60.140(4) (Definition) defines what no net loss means. (Exhibit D)
- §16.16.250(2) (Critical Areas Review Process) requires that applicants demonstrate no net loss to the Director's satisfaction in order to approve a critical areas review (and thus, a project permit). (Exhibit F)
- §16.16.260(C) General Mitigation Requirements allows for alternative mitigation options in order to provide the greatest ecological benefit... to achieve no net loss of ecological functions. (Exhibit F)
- §16.16.260(G) requires that mitigation plans demonstrate no net loss. (Exhibit F)

However, the term is also used in numerous other sections as a reminder of this requirement.

b) Clarify development mitigation requirements.

The mitigation standards have been clarified in the following sections as described:

- §16.16.260 (General Mitigation Requirements):
 - Subsection (B) now contains text describing what information the Director may use in determining the extent and type of mitigation required. This text had been found repeated in various Articles of Ch. 16.16, so we've moved it to the overall mitigation section.
 - Subsection (C) is a new policy that will allow for off-site mitigation when it's better for the environment. In the past several years of processing permits, staff has found that the best overall solution is not necessarily "on-site and in-kind" mitigation, since sometimes there's not enough room, or that the mitigation is in a place that can't be guaranteed to remain after the initial 5-year monitoring period. Under this new policy, though the preference is still for "on-site and in-kind" (subsection (1)), off-site and in-kind mitigation may be allowed when the applicant demonstrates that greater biological and/or hydrological functions and values will be achieved (subsection (2), or on-site and out-of-kind mitigation may be allowed when the applicant demonstrates an ecological uplift of biological and/or hydrological functions and values will be achieved (subsection (3). Subsections (4) and (5) also point to our already existing use of Alternative Mitigation Plans and Mitigation Banking.
 - Like subsection (B), subsections (D) and (E) have been moved from the more specific critical areas rules (habitat conservation areas) to the more general so as to apply more broadly.
 - Subsection (G)(3) has been moved from §23.30.010 (Ecological Protection). This text puts the burden on the applicant "demonstrate that all reasonable efforts have been taken to provide sufficient mitigation such that the activity does not have significant adverse impacts and results in no net loss of shoreline and critical area ecological functions." Since WCC Ch. 16.16 (Critical Areas) is considered a part of the Shoreline Management Program, staff thought it more fitting that all the rules for mitigation plans be in one place.
- §16.16.680 (Wetlands – Mitigation Standards)
 - Certain sections that we moved to §16.16.260 (General Mitigation Requirements) have been deleted, since the general now covers the specific.
 - To account for temporal loss of functions, in subsection (C) staff is proposing to amend the wetland buffer² mitigation ratio from a standard 1:1 (subsection (C)(1)) to a range of ratios depending on when the mitigation is implemented (subsection (4)) (including at a double ratio for those who don't initially get permits (subsection (c)) and the mitigation is provided long after the impact. This section now mimics the HCA mitigation standards (§16.16.760(E)(3)).
- §16.16.740 (Habitat Conservation Area Buffers). Apart from the clarifying amendments, staff is proposing to modify:
 - Subsection (B) (Habitat Conservation Areas Buffer Widths), which includes Table 4. The mitigation schema in Table 4 moves us from an older system of classifying water types and

² Note that the ratios for *wetland* mitigation (Table 2, which are from DOE guidance) are not proposed for amendment.

buffer widths to the newer WDFW water-typing system. Though we had already adopted this newer system in identifying surface waters of the state (16.16.710(C)((1)(a)), we had not followed through on using that nomenclature for the various types' buffer widths (the table didn't match the text). Table 4 corrects this. The buffer widths themselves are the same except for Type S – Freshwater. It is currently 150 feet, but staff is proposing to increase it to 200 feet, which is the federal court's recommended width based on *National Wildlife Federation v. FEMA* (Federal District Court Case No. 2:11cv-02044-rsm; NMFS Doc. #2006-00472).

- §16.16.760 (Habitat Conservation Areas – Mitigation Standards)
 - Certain sections that we moved to §16.16.260 (General Mitigation Requirements) have been deleted, since the general now covers the specific.
 - We have added subsection (D) as a reminder to applications that the Army Corps of Engineer Regional General Permit 6 for inland marine waters may apply to their project(s). RGP-6 is a permit issued by the Corps that authorizes the construction of new residential in- and overwater structures in inland marine waters of Washington State while meeting the Endangered Species Act, though it has conditions on the construction.
 - Like with wetland buffer mitigation, we have added subsection (E)(3), doubling the mitigation ratio for those who don't initially get permits (subsection (c)) and the mitigation is provided long after the impact.
- §16.16.640 (Wetland Buffer Modification) and §16.16.745 (Habitat Conservation Area Buffer Modification). In Articles 6 (Wetlands) and 7 (Habitat Conservation Areas) staff is proposing to combine their respective buffer modification rules into one section for each Article, each covering the types of buffer modifications allowed (increase, averaging, reduction, and variance). For wetlands, we have also modified some of the text to be consistent with DOE guidance (Wetlands in Washington State, Volume 2, Appendix 8C, updated 2018).

c) Align appeal procedures with State statutes.

Subsection (3) has been added to §22.05.160 (Appeals) to align the County's shoreline permit appeals process with the state statutes. (Exhibit E)

d) Shoreline permit review (Exemption, Substantial, Conditional Use, or Variance) should reflect State statutes and level of review required.

The rules for shoreline permit review have been updated to meet state standards in Ch. 22.07. (Exhibit E)

e) Align Use standards with State statutes.

Staff is proposing numerous amendments throughout Ch. 23.40 (Shoreline Use and Modification Regulations) that we believe better aligns them with State statutes, in most cases using the language from the WAC. Furthermore, in the existing code Table 23.100.010 is fairly meager and many uses allowed or prohibited are included only in the text of the various use and modification categories, making it difficult to find them all. We have updated that table as Table 1 Shoreline Use by Environment Designation and moved all allowances and prohibitions from the text to the table, hopefully making it easier to see what one can or can't do in the various environment designations.

f) Incorporate improved permit streamlining for priority salmon recovery projects

§22.07.020 (Exemptions from Shoreline Substantial Development Permits) subsection (B)(16) already exempts projects whose primary purpose is to improve fish or wildlife habitat or fish passage. (Exhibit E)

Topic #6, Climate Change/Sea Level Rise

a) Develop and/or strengthen policies regarding climate change/sea level rise, including the incorporation and use of new data (as it becomes available), to review and revise, if warranted, shoreline use regulations.

Chapter 10 of the CompPlan (Exhibit A) already contains a section on Climate Change (starting on page 10-8), including Goal 10D and Policies 10D-1 through 10D-10. However, these are aimed at how the County should respond overall and are not specific to the shoreline itself.

There is no requirement to address climate change or sea level rise in the state statutes, including the Shoreline Management Act (SMA). Nonetheless, Council's direction through the Scoping Document was to:

"Develop and/or strengthen policies regarding climate change/sea level rise (CC/SLR), including the incorporation and use of new data (as it becomes available), to review and revise, if warranted, shoreline use regulations."

The direction did not address regulations. But based on Council's direction staff has developed seven new policies specific to our management of the shoreline in light of anticipated impacts due to climate change (Exhibit B, C/P Ch. 11, Policies 11AA-1 – 11AA-7), including proposed Policy 11AA-5, which reads:

"Whatcom County should periodically assess the best available sea level rise projections and incorporate them into future program updates, as relevant"

This policy specifically addresses *"the incorporation and use of new data (as it becomes available), to review and revise, if warranted, shoreline use regulations."*

We understand that some folks would like to see more directive policies³, as well as actual regulations⁴; however, before adopting (and then implementing) something along those lines, we'd need to know the details of likely sea level rise (location, elevation, magnitude, etc.). As we mentioned when the Commission and Council were scoping this project, staff anticipates this year the completion of the CoSMoS model, on which the City of Bellingham and Whatcom County Public Works are working, which should provide the Best Available Science to Whatcom County. The Department of Ecology has also advised us that any such regulations should be built on data, which is what PS-CoSMoS will be providing. Furthermore, once the data is available, we should perform vulnerability and risk assessments to see what kind and where the problems might be, and update our shoreline inventory and characterizations. Without such science, we would be open to challenges. The policies being introduced would set us up for developing regulations once this model is completed.

It should also be noted that in reviewing development proposals, Planning and Development Services already requires structures to be built above the anticipated flood/sea level rise stage through the County's critical area (i.e., geohazard/tsunami) and flood regulations.

3 See Exhibit H, Public Comments FW/WEC01, FW/WEC02, WCPW07, WCPW08, RES03, RFW02, RFW03, RFW04, RFW11, RFW17, P6605, DK01, AC01, & PR03.

4 See Exhibit H, Public Comments FW/WEC12, FW/WEC21, WCPW08, WCPW09, WCPW10, & RES03.

Topic #7, Definitions

a) Add definitions for common words with a specific meaning in the SMP.

In Ch. 23.600 (Exhibit D) we added many definitions of words that were undefined, amended others to meet current standards and/or to be consistent amongst Titles, and deleted those words already defined elsewhere but added the sentence to §23.60.005, “Any words not defined herein shall be defined pursuant to WWC Chapter 16.16 (Critical Areas) or Titles 20 (Zoning) or 22 (Land Use and Development), or their common meanings when not defined in code.”

b) Add definitions for regional, local, and accessory utilities. Ensure consistency with Zoning.

Said definitions have been added to §23.60.210(6). (Exhibit D)

c) Define a single use dock and joint use dock.

“Shared moorage” was already defined in §23.60.190. Additionally, definitions of all moorage types have been added to §23.60.130(17) “Moorage Structure.” (Exhibit D)

Topic #8, Habitat

a) Reference WDFW and DNR’s Shore Friendly Program

Staff has amended C/P Policy 11I-2 (Exhibit B) to reference this program as an example of “voluntary and incentive-based public and private programs.”

b) Consider strengthening ecological connectivity and wildlife corridor requirements.

§23.40.030 (General Shoreline Use and Modification Regulations), subsection J (which is existing language moved from elsewhere), already requires that buildings, fencing, walls, hedges, and similar features shall be designed, located, and constructed in a manner that does not preclude or significantly interfere with wildlife movement to or from important habitat areas.

Apart from all the existing rules about maintaining connectivity in WCC Ch. 16.16 (Critical Areas) (Exhibit F), new rules to strengthen ecological connectivity and wildlife corridor requirements in that document include:

- In §16.16.225 (General Regulations), new subsection (C) has been added, requiring development proposals to maintain ecological connectivity and habitat corridors;
- In §16.16.255 (Critical Areas Assessment Reports) new subsection(C)(3) has been added, strengthening the requirement that connectivity be addressed in assessment reports;
- In §16.16.640 (Wetland Buffer Modification), subsection (A) allows the Director to increase wetland buffers to protect wetland functions and provide connectivity to other wetland and habitat areas;
- In §16.16.745 (Habitat Conservation Area Buffer Modification) subsection (A)(2) allows the Director to increase wetland buffers to protect wetland functions and provide connectivity when a Type S or F waterbody is (among other things) located within 300 feet of another Type S or F water body, a fish and wildlife HCA, or A Category I, II or III wetland;

c) Consider ways to improve protections for salmon and forage fish habitat.

Policy 11LL-4 in C/P Ch. 11 (Exhibit B) is proposed to be amended in support of this task by adding additional critical saltwater habitats to the list of where moorage structures ought to be avoided.

And while the protection of fish and wildlife habitat is already required throughout various sections of Title 23 (Exhibit D), additional language has been added in:

- §23.30.040 (Vegetation Management) has been amended to strengthen and better tie the protection and/or revegetation of native shoreline vegetation to the protection of salmon and forage fish habitat.
- In §23.40.060 (Marinas and Launch Ramps) (Exhibit D), subsection (E)(8) has been added to the standards requiring that boat launches be designed to minimize impacts to critical saltwater habitats.
- In §23.40.140 (Mining):
 - Subsection (A)(3) now states that “Preference shall be given to mining proposals that result in the creation, restoration, or enhancement of habitat for priority species.”
 - Subsection (A)(6) has been added to prohibit “motorized or gravity siphon aquatic mining or discharge of effluent from such activity to any waters of the state that has been designated under the endangered species act as critical habitat, or would impact critical habitat for salmon, steelhead, or bull trout” pursuant to RCW 90.48.615.
 - Subsection (B)(1) has been added for consistency with WAC 173-26-241(3)(h), prohibiting mining waterward of the ordinary high-water mark of a river if it would cause a net loss of ecological functions of the shoreline.
- In §23.40.150 (Moorage Structures):
 - Subsections (A)(6) and (7) (moved from the existing Boating Facilities section) prohibits moorage structures in certain shoreline habitats.
 - Subsections (B) & (C), having to do with construction and locational standards for moorage structures have been amended and augmented to meet current state and federal habitat protection requirements and guidance.
- In §23.40.190 (Shoreline Stabilization), subsection (A)(10) has been amended to prohibit hard shoreline stabilization in jurisdictional shoreline streams on estuarine shores, in wetlands, and in salmon spawning areas, except for the purpose of fish or wildlife habitat enhancement or restoration.
- In §23.40.220 (Utilities), subsection (B)(5)(a) has been added, require that hydropower facilities shall be located, designed, and operated to minimize impacts to fish and wildlife resources.

Similarly, while the protection of fish and wildlife habitat is already required throughout various sections of WCC 16.16 (Critical Areas) (Exhibit F), in §16.16.255 (Critical Areas Assessment Reports) new subsection (C)(3) has been added, strengthening the requirement that impacts to salmon and forage fish habitat be address in assessment reports to improve protections for salmon and forage fish.

d) Clarify functional disconnect standards for protection of Fish & Wildlife Habitat Conservation Areas

The term “functional disconnect,” which many people have interpreted differently and is not widely used anymore, has been eliminated in §16.16.630(B) (Wetland Buffers) and §16.16.740 (Habitat Conservation Area Buffers), which now say, “Buffers shall not include areas of an existing, legally established substantially developed surface.”

Topic #9, Layout and Structure of the SMP

a) Reorganize the SMP, putting the background information, discussions, and goals and policies into the Comprehensive Plan as a chapter

One of the biggest changes was to reorganize the SMP to shorten it and make it easier to use. One of the ways we’re doing this is to move the SMP policies into the Comprehensive Plan. The SMP was already adopted by reference as part of the CompPlan; it just wasn’t contained in it. However, in

modern code construction, code normally doesn't contain policies (or appendices) as our current Title 23 does. Staff is proposing to create a new Chapter 11 of the CompPlan entitled "Shorelines" (Exhibit B). We have moved all the SMP policies from Title 23 (Exhibit D) as well as related policies from Chapter 10, Environment (Exhibit A), to this chapter, putting all the shoreline policies into one place. Thus, the amendments to Chapter 10 are mostly showing the deletion of policies that are moving to Chapter 11.

Most of the changes shown in C/P Ch. 11 (Exhibit B) are also in support of this effort. We have moved everything from Title 23 that appeared to be policy (rather than regulation) into this chapter. We've also put it in the same format as other chapters of the CompPlan, struck redundancies, and corrected grammar and tenses. There are, however a few proposed new policies and/or amendments that we discuss below.

Another major organizational change is to move all permitting regulations to WCC Title 22 (Exhibit E). Title 22 was created a few years ago to eventually contain all of the County's procedures for land use permitting and code administration. However, moving sections to this Title is continuing to occur as we progress through various code amendments (e.g., the annual code scrub, upcoming code enforcement amendments, this SMP update, etc.).

Similarly, since WCC Chapter 16.16 (Exhibit F, Critical Areas) is adopted as part of the SMP, they are to be read together, and where there are redundancies between Ch. 16.16 and Title 23, we are proposing to delete those redundancies in Title 23 (Exhibit D).

b) Simplify the language as much as possible and remove redundancies

See response to 18.a.

Topic #10, Nonconforming

a) Ensure consistency with Zoning, CAO, and SMP regarding nonconforming uses and structures.

Staff has rewritten Chapter 23.50 (Nonconforming Uses, Structures, and Lots) to conform to the latest DOE guidance addressing nonconforming uses, development, and lots as separate issues. Additionally, definitions for each term have been added to §23.60.140. (Exhibit D)

In §16.16.275 (Nonconforming Uses, Structures, and Lots) (Exhibit F) two amendments are proposed to align this chapter with Title 20 (Zoning) and Title 23 (SMP):

- In subsection (B), the time within which an intentionally abandoned *nonagricultural* nonconforming use or structure may maintain its nonconforming status is changed from 5 years to 12 months, the same timeframe in Title 20 (Zoning).
- In subsection (E), a new (1) is being added, stating that "intentional demolition or removal is not a casualty," as in Title 23 (SMP).

b) Add standards for nonconforming structures to meet current construction standards.

In §23.50.020 (Nonconforming Structures) (Exhibit D):

- (A)(4) now allows legal nonconforming non-overwater structures to be maintained, repaired, renovated, or remodeled to the extent that nonconformance with the standards and regulations of this program is not increased, *provided that a nonconforming structure that is moved any distance must be brought into conformance with this program and the Act.*
- (A)(5) allows overwater nonconforming structures to be maintained or repaired to the extent that nonconformance with the standards and regulations of this program is not increased; *provided that when replacement is the common method of repair, the replaced components shall meet the construction and materials standards of §23.40.150 (Moorage Structures).*

c) Address nonconforming expansion dimensional standards.

§23.50.010 (Nonconforming Uses), subsection (B) now clearly states that the expansion, alteration, and/or intensification of a nonconforming use is prohibited, and §23.50.020 (Nonconforming Structures), subsections (E) & (F) clearly address when and how expansion of nonconforming structures are handled. (Exhibit D)

d) Clarify administratively approved single-family dimensional standards.

To §23.50.020 (Nonconforming Structures), subsection (F), we have added clear standards as to how to address the enlargement or expansion of nonconforming single-family structures. (Exhibit D)

Topic #11, Overwater Structures

a) Add dimensional standards for overall square footage.

§23.40.150 (Moorage Structures) has been completely revamped to meet current state and federal standards. To meet this scoped recommendation, thorough design and dimensional standards, including for overall square footage, have been added to subsection (B) (Exhibit D).

b) Add shared moorage standards.

Dimensional standards for shared moorage have been added to §23.40.150 (Moorage Structures), subsection (B). Subsection (D) prioritizes shared moorage over individual use structures. And subsection (F) provides additional standards for shared moorage. (Exhibit D)

Topic #12, Permitting

a) Consider simplifying utility repair and maintenance permitting.

In §16.16.235 (Activities Allowed with Notification), though subsection (B)(2) already allows maintenance and repair of infrastructure (including utilities), it has been amended to be clearer by adding the term “utility corridors.” Additionally, a new subsection (B)(3) has been added regarding utility installation.

b) Add a reference to the Swift Creek Sediment Management Action Plan so as to clarify permitting procedures for actions necessitated by this plan.

To §23.10.020 (Applicability) we have added subsection (H), which lists what activities the SMP does not apply to. Subsection (H)(1) applies to “Activities undertaken to comply with a United States Environmental Protection Agency Superfund-related order, or a Washington Department of Ecology order pursuant to the Model Toxics Control Act (such as the Swift Creek Sediment Management Action Plan), or a Department of Homeland Security order that specifically preempts local regulations in the findings of the order.”

c) Single-Family Residential Development on Constrained Lots

Staff is proposing to redefine what and how **reasonable use exceptions and variances** are used and who decides them. Our Hearing Examiner has questioned our current schema, in particular why he isn’t the final decision maker, as the current code allows an administrative determination to be made *after* a quasi-judicial decision, and in the hierarchy of permitting, applicants should have to exhaust any administrative remedies before seeking a quasi-judicial decision. Staff is proposing that reasonable use exceptions be the last method of altering standards to allow reasonable economic use of constrained property, and that they be decided upon by the Hearing Examiner (see 16.16.270 Reasonable Use Exceptions). Under the proposed schema we would use (in hierarchical order):

- **Administrative Reduction/Average** – Staff would have the ability to administratively reduce or average a buffer by 25% if the impacts can be fully mitigated, though avoidance and minimization criteria are applied. This allows for flexibility in project design and road alignments. If this doesn't work, then...
- **Administrative Variance** – Staff would have the ability to administratively grant an administrative variance⁵ to reduce a buffer by 25-50% if the impacts can be fully mitigated and the variance criteria are met. If this doesn't work, then...
- **Hearing Examiner Variance** – The Hearing Examiner would have the ability to grant a variance from *any* dimensional standard by any degree if the impacts can be fully mitigated and the variance criteria are met. If this doesn't work, then...
- **Hearing Examiner Reasonable Use Exception** – The Hearing Examiner would have the ability to grant a Reasonable Use Exception to allow up to 2,500 square feet of impacts, and the homeowner would only have to mitigate what can actually fit on the property (which conceivably could be none).

In this schema, the degree to which one can vary standards while providing the least amount of mitigation moves up a level at each step, with the Hearing Examiner making the tougher decisions through a quasi-judicial process. This would return the reasonable use exception to truly the last effort of avoiding a taking.

However, to counter the additional time and cost of this process, staff is also proposing to create a new category of variances, called minor variances (16.16.273 Variances). They would be limited to variances for a 25% to 50% reduction of critical area buffers (when mitigated and they meet certain criteria) but would address most of the instances that reasonable use exceptions are currently applied for. We believe that overall, these changes would significantly reduce the number of cases having to go to the Hearing Examiner and cost less to the citizens of Whatcom County overall.

Note, too, that under the reasonable use rules, the Planning Commission is proposing to amend the maximum impact area to a range of "10% of the lot area or 2,500 square feet⁶, whichever is greater; provided that in no instance shall it exceed 4,000 square feet." Since the property would not need to fully mitigate, a smaller footprint is warranted. This returns the reasonable use exception to truly the last effort of avoiding a taking.

Topic #13, Public Access

a) Clarify standards for construction in the aquatic designation (work occurring in the water).

This issue had to do with what materials are allowed for structures built in contact with water (e.g., moorage structures). The list of such materials (untreated wood, concrete, approved plastic composites, or steel) are already found in §23.30.020(D) (Water Quality and Quantity), §23.40.125(E)(1)(e) (Cherry Point Management Area), §23.40.150(C)(2) (Moorage Structures), §23.40.210(B)(8) (Transportation), & §23.50.020(D) (Nonconforming Structures), with no distinction between galvanized or non-galvanized steel, as had been scoped. However, state law and guidance makes no such distinction, so the list has been unaltered. (Exhibit D)

⁵ This mechanism was created by Council in 2020 and is found in WCC 22.05.024 (Variances).

⁶ What it was prior to the 2017 Critical Areas update.

b) Add ADA standards consistent with federal statutes.

In §23.40.020 (Shoreline Bulk Provisions), subsection (G) (Uses Allowed in Buffers and Setbacks) (6), we have added language that allows stairs and walkways to exceed standard width requirements to meet ADA requirements. (Exhibit D)

In both §16.16.620 (Wetlands – Use and Modification) subsection (H) and §16.16.720 (Habitat Conservation Areas – Use and Modification) subsection (G)(1), text has been added to allow trails to exceed standard width requirements to meet ADA requirements. (Exhibit F)

c) Consider revising dimensions for stairs and walkways located within the shoreline or critical area buffers to accommodate public trails.

In §23.40.160 (Recreation), subsection (A)(6) has been added, directing applicants to WCC Chapter 16.16 (Critical Areas), which contains the standards for trails in critical areas (including the shoreline setback (i.e., HCA buffer). (Exhibit D)

In §16.16.325 (Landslide Hazard Areas – Use and Modification), a new subsection (A)(3) has been added to allow trails (meeting certain conditions) in landslide hazard areas. (Exhibit F)

In §16.16.620 (Wetlands – Use and Modification), subsection (H) (Recreation) has been amended to allow public trails to include viewing platforms, and to be closer than the outer 25 percent of the buffer “when necessary to provide wetland educational opportunities or for public health and safety,” and to be wider than the standard widths when necessary to meet ADA requirements. Corresponding amendments have also been made to 16.16.720(G)(1) (Habitat Conservation Areas – Use and Modification) (Exhibit F).

d) Consider amending trail location standards to allow trails to be located closer than in the outer 50% of a critical area buffer.

In §23.40.020 (Shoreline Bulk Provisions), subsection (G) (Uses Allowed in Buffers and Setbacks), we have added subsection (11) that allows passive recreation facilities that are part of a non-motorized trail system or environmental education program, including walkways, wildlife viewing structures, or public education trails in the shoreline buffer. (Exhibit D)

In §16.16.620 (Wetlands – Use and Modification), subsection (H) (Recreation) has been amended to allow public trails to include viewing platforms, and to be closer than the outer 25% of the buffer “when necessary to provide wetland educational opportunities or for public health and safety,” and to be wider than the standard widths when necessary to meet ADA requirements. Corresponding amendments have also been made to 16.16.720(G)(1) (Habitat Conservation Areas – Use and Modification) (Exhibit F).

Topic #14, Shoreline Designations

a) Consider changing the shoreline designation for certain, more urban parks to an urban designation.

It turned out that changing shoreline (environment) designations on certain properties would have entailed updating the 2007 shoreline inventory and characterization reports, which was beyond the scope of this periodic update.

Topic #15, Shoreline Jurisdiction and Environment Designation Map

a) **Revise the Shoreline Jurisdiction and Environment Designation map to conform to the latest FEMA FIRM maps**

The Shoreline map has been updated to include all areas of the FEMA floodway and floodplain. This primarily widened the Resource designation on the Nooksack from Ferndale to Lynden and portions of the South Fork of the Nooksack though narrowed it in some areas. Floodway and Floodplain are differentiated in the database. It should be noted that the actual shoreline jurisdiction has not changed, as that is set by state law and our code (§23.20.010), but the map now more accurately displays the jurisdiction.

A few other changes have been made as well. These include:

- UGA and City boundaries have been updated.
- On the Lummi Nation, parcels that have been put under Tribal jurisdiction since the last update were updated with the “Tribal” shoreline designation.
- Designations were adjusted, where necessary, to match the updated and spatially corrected parcel boundaries. This was just a housekeeping task and no designations were changed.
- Shoreline designation breaks (thick black bars) have been removed from the map as they made it difficult to read.
- The complex of beaver ponds north and south of H Street Road between Sunrise and Markwork Roads (NE of Lynden) were added to the Conservancy designation. These ponds have grown in size and now surpass the 20-acre threshold for being a Water of the State. Since these ponds were identified and characterized in the 2007 Characterization report, we did not need to update that report; the data is still valid.
- At the request of the owners of APN 390302-428076-0000, 390302-485039-0000, and 390302-440200-0000 we have removed the Resource environment designation from a mining pond located to the NW of the intersection of E. Pole X Everson-Goshen Roads, just southeast of Everson. This designation was applied during the last SMP update, but has been determined to have been an error. Though it is a waterbody greater than 20 acres, it is a mineral extraction pond and DOE guidance is that such ponds do not qualify as a Water of the State until mineral extraction is complete and the restoration plan is realized. Once that happens, it automatically is designated as Conservancy under state law and our SMP. The County would then have 3 years to amend the map and finalize its designation.

Topic #16, Shoreline Modifications

a) **Review for consistency with the 2SHB 1579 regarding HPAs, and with State guidelines regarding prioritizing living shorelines over hardscape solutions.**

In §23.40.010 (Shoreline Use and Modification), Table 1 (Shoreline Use by Environment Designation), the various types of stabilization have been broken out into their respective types. Bioengineering Approaches & other Soft-Shore Measures are shown as permissible, while hardscape solutions are either prohibited or require a Conditional Use Permit, and then allowed only when necessary for shoreline restoration or to support a water-dependent use that cannot be located elsewhere. Then throughout §23.40.190 (Shoreline Stabilization) language has been added to prioritize soft- over

hardscape stabilization measures, in particular in subsection (A)(5), where an order of preference has been established. (Exhibit D)

b) Consider allowing interpretive, wayfinding, safety, and park identification signs, based on park standards.

In §23.40.020 (Shoreline Bulk Provisions), subsection (G) (Uses Allowed in Buffers and Setbacks) (10) (Signs) we have added language that allows interpretive, wayfinding, and park identification signs on publicly owned park properties. (Exhibit D)

Topic #17, Shoreline Uses

a) Revise as necessary any SMP policies or regulations pertaining to the Cherry Point area as directed by Council.

In 2018 the Council started a process of amending the policies and regulations related to fossil fuel facilities in the Cherry Point Management Area. The Council hired consultants specifically for this task and it is principally being administered under a separate process. Their amendments affecting C/P Ch. 2 (Land Use), WCC Ch. 16.08 (SEPA), WCC Title 20 (Zoning), and WCC Title 22 (Land Use & Development) have already been reviewed by the Commission. None of the Council's amendments to C/P Ch. 2, WCC Ch. 16.08, or WCC Title 20 affects the documents the Planning Commission reviewed as part of this SMP Update.

Their amendments to Title 22, however, have been incorporated into Exhibit E, and are being shown as new as they are not yet adopted. We have also incorporated the Commission's recommended changes to this specific language, also flagged by comments in the document.

Their amendments also affect WCC Title 23 (Exhibit D) and (by way of this update) C/P Ch. 11 (Exhibit B). As we are proposing to do with the rest of the SMP policies, we're moving the Cherry Point Management Area policies from Title 23 to C/P Ch. 11 (Exhibit B). As such, they're not shown as new policies (i.e., no underline) in Exhibit B, but Council's proposed amendments to them are being shown in strikeout/underline. Other changes to Title 23 regarding this topic are flagged as Council-proposed language in §23.40.125 (Cherry Point Management Area). (Exhibit D)

b) Revise as necessary any SMP policies or regulations pertaining to sand and gravel extraction as directed by Council.

In 2019 the County Council placed the following proposal (PLN2019-00011) on the docket:

Amend the Whatcom County Comprehensive Plan and Whatcom County Code to allow the seasonal extraction of sand and gravel from dry upland areas located within the 1,000 year meander zone of the Nooksack River, provided that such extraction has no negative impact on salmon spawning habitat. The intent is to (a) reduce the conversion of land currently used for farming, forestry and wildlife habitat into gravel pits, and (b) safely remove some of the significant sediment load that enters the Nooksack River every year in an effort to reduce flooding and the need to build higher flood prevention berms along the river as the climate continues to change.

To carry out this directive we have tried to mimic the language of the WAC, eliminating language that is not required but adding (or retaining) required language. (§23.40.140 (Mining), Exhibit D)

This matter was forwarded to the Surface Mining Advisory Committee (SMAC) for their advice. At their June 26, 2019, meeting the SMAC reviewed this matter and found that no changes were necessary to

the SMP code in order to allow for extraction of sand and gravel from dry upland areas located within shoreline jurisdiction and/or the FEMA 100-year floodplain. Furthermore, it was confirmed that the lack of recent sand and gravel extraction within the Nooksack River shoreline jurisdiction/FEMA floodplain/floodway is primarily a function of the time and costs for studies associated with permitting and review at the state and federal level, compared to the economic return on investment.

At the federal level, the Endangered Species Act (ESA) is the primary law affecting this activity. It requires that any activities be done in such a manner as to not cause a “take” of any listed species, which also means protecting their habitat from impacts. At the state level, the Shoreline Management Act requires that there be no net loss of shoreline ecological functions and processes. As one can imagine, either of these requirements would make it difficult to make it easier to extract sand and gravel.

c) Ensure internal consistency with allowed uses in the code and the Use Table.

In the existing code, the allowances/permit type required for some uses are specified in Table 1 and others are sprinkled about the text, making it difficult to find whether something is allowed or not. So throughout Ch. 23.40 (Shoreline Use and Modification Regulations) we have removed any use allowances found in the text and expanded the table to include these (as well as other uses that hadn’t been specified). Thus, almost all rules about whether something’s allowed or not, and with what type of permit, are found in Table 1. There were also several footnotes that modified the table. We have replaced these footnotes with just one, telling the reader to look to the text for certain uses in certain environment designations, as there remain a few specific provisions in the text, typically stating that certain uses have caveats in certain environment designations. In short, we believe we have made things easier to find, and the text and the table should be internally consistent now.

d) Modify the accessory structure height standards.

In §23.40.020 Shoreline Bulk Provisions, subsection (E) (Height), two new subsections have been added. Subsection (4) would allow equipment necessary for the functions of water-dependent uses or the servicing of vessels to extend above the applicable maximum height limit provided in Table 1, provided that such structures shall be designed to minimize view obstruction. Subsection (5) would allow residential accessory structures that are not waterward of the primary structure to be built to the maximum height for the environment designation.

e) Add standards for retaining walls.

In §23.40.020 (Shoreline Bulk Provisions), subsection (G) (Uses Allowed in Buffers and Setbacks), we have added subsection (8) to allow retaining walls or similar slope stabilization structures, when associated with an approved shoreline use or development; and in (9) have clarified that retaining walls can exceed the standard 4-foot height limit for fences, walls, and hedges. (Exhibit D)

f) Update Memorandum of Understanding with Department of Archaeology and Historic Preservation.

Through this update process, staff was not able to actually update the MOU with DAHP, as that will take some time and involve many others. But based on the language in it, we are proposing some new policies to the cultural resources sections of both the Overall SMP Goals and Objectives (Exhibit B, page 11-9) and the General Policies (page 11-27) sections (see policies 11G-3, 11G-4, & 11X-9).

We are also proposing to revise the regulations in §23.30.050 (Cultural Resources) (Exhibit D). The existing regulations are full of rules about how reports are supposed to be done and what they need to contain. However, Department of Archaeologic and Historic Preservation (DAHP) now has standard

practices outlined in their guidance, and we are proposing to remove all of our extraneous rules and just refer to DAHP's standards; this cuts down on the amount of text considerably and ensures that practices and reports follow state standards. The proposed text has been collaboratively developed with us, DAHP, and the Lummi Nation Tribal Historic Preservation Office (LNTHPO).

That said, there are three policy issues posed by the revised text:

- Subsection (A)(1) reads:

Upon receipt of an application for a permit, exemption, or other approval for a proposed project, the County shall determine whether the project lies within 500 feet of a site known to *or could* contain a cultural resource based on the Washington State Department of Archaeology & Historic Preservation's (DAHP) Inventory of Cultural Resources.

Currently, our regulations require applicants to prepare a cultural resources report (and adhere to any recommendations therein) if their project lies within 500 feet of a site known to contain a cultural resource based on the Washington State Department of Archaeology & Historic Preservation's (DAHP) Inventory of Cultural Resources. The LNTHPO has proposed that we insert the phrase "or could" in this sentence. They would like to be consulted on all projects within the shoreline, not just ones within 500 ft of a previously recorded site, as they believe they may have additional information regarding an area that is not included in the State's inventory. They would like an opportunity to review and comment on the report no matter what may be found. However, this would expand the scope beyond what we regulate now.

- Subsection (A)(4) reads:

Based upon consultation with DAHP and the affected Tribe(s), the Director may approve the report *with tribal concurrence* or reject or request revision of the conclusions reached and/or management recommendations when the assessment is inaccurate or does not fully address the cultural resource management concerns involved.

The LNTHPO recommends that we include the phrase "with tribal concurrence." This would mean that the Tribe would have to agree with a report before PDS could approve it.

Staff believes that requiring their concurrence runs contrary to the GMA's permitting requirements of expeditious review and issuance, as it could hold up projects while we're awaiting their concurrence. A simple fix may be to set a time limit for how long they have to respond.

- Subsection (A)(5) reads:

If the cultural resource report identifies the presence of a cultural resource, any permit issued shall be conditioned on meeting the approved report's management recommendations. *If no cultural resources are found, then the permit may be issued without conditions regarding cultural resources.*

The LNTHPO commented that an Inadvertent Discovery Plan (IDP) should be required regardless of whether cultural resources are found, as there are times when additional requirements are necessary (e.g., when there is a site documented just outside of the project area, monitoring may be recommended). However, this does go beyond what we do now and so raise it as a policy issue.

g) Clarify Forest Practice standards.

§23.40.110 (Forest Practices) has been updated to reflect the WAC provisions for Forest Practices in shorelines. (Exhibit D)

Additionally, the current Ch. 16.16 (Critical Areas) does not have guidance for Conversion Option Harvest Plans as allowed by WAC 222. For other permits this would allow for a limited removal of trees, while retaining larger trees to help with managing a riparian buffer. When development alters a functioning forested system some level of continued forest management is required (see 16.16.720(V)). To alleviate this issue, staff is proposing to add to 16.16.720 (Habitat Conservation Areas – Use and Modification) subsection (P). The section sets performance standards for removing timber in Habitat Conservation Areas (e.g., riparian areas) and would allow timber harvesting to occur within buffers while still retaining the HCA's functions. These standards vary by water type, and are tied to existing buffer conditions. This amendment is aimed at closing a loophole wherein applicants remove trees before applying for a development permit, which is when the CAO becomes applicable (except for Class IV Conversions, forest practices are not reviewable under the CAO).

h) Add temporary use standards.

This was a task staff had proposed, thinking we might be able to develop a temporary use permit for short-term uses. However, we could not find a good example from other jurisdictions, nor is there any guidance from Ecology. Thus, we determined it is probably best to review such uses at the time of a request for a temporary easement, temporary use permit, etc.

i) Clarify utility standards for regional, local, and accessory.

Under the existing code, the only categories for utilities are local or regional transmission lines, which has led some people to believe that utility installation, repair, or maintenance to single-family homes (accessory utilities) needs the same level of permitting and scrutiny as a power substation or regional transmission line.

In the proposed amendments to §23.40.010 (Shoreline Use and Modification), Table 1 (Shoreline Use by Environment Designation), utilities have been broken out into three categories: accessory, local, and regional. Each are now distinctly defined in §23.60.210(6), and have distinct permitting paths, depending on what environment designation they are located, making it clear that running an electrical line (or something similar) to a house is outright permitted.

Additionally, in §23.40.220 (Utilities) we have moved all the utility requirements that had been spread throughout in various sections into one, cohesive section.

j) Add standards for live-aboard vessels in marinas.

In §23.40.060 (Marinas and Launch Ramps) standards for live-aboard vessels have been added as subsection (F) (Exhibit D). Staff is also proposing to add Policy 11DD-13 to CompPlan Ch. 11 (Exhibit B) to support the proposed addition of standards to Title 23.

Topic #18, Shoreline Setbacks/ Riparian Management

a) Update vegetation conservation standards to prefer limbing over removal.

§23.30.030 (Views and Aesthetics) (Exhibit D), subsection (M) now points to the regulations in §16.16.235(B)(5) (Activities Allowed with Notification) (Exhibit F).

§16.16.235(B)(5) (Activities Allowed with Notification) has been updated to stress limbing over removal of trees to provide view corridors (Exhibit F).

b) Provide incentives to enhance Fish and Wildlife Habitat Conservation Areas (FWHCA).

This was another task staff had scoped. We had hoped to create an incentive for new single-family residential development to maintain and/or improve shoreline vegetation by allowing those who do so to have a reduced shoreline buffer. Unfortunately, we could not figure out a way of doing this without impacting existing homeowners' views. Furthermore, it would have required an update to the inventory and characterization background documents, which was not included in the scope or budget of the project.

Additionally, given that the shoreline is defined and regulated as a Habitat Conservation Area, theoretically we should not allow uses (other than water-oriented uses and single-family residences which are SMA 'preferred uses') within the shoreline, as they would necessitate vegetation clearing. However, we know that folks that have waterfront property want and expect to have access (for swimming, boating, relaxation, etc.) and recreational amenities near the shore (e.g., fire pits, kayak sheds, etc.), so we have added to 16.16.720 (Habitat Conservation Areas – Use and Modification) subsection (G)(4), which sets limits on how much of the shoreline can be cleared of vegetation for such uses and requires mitigation to offset the impacts so as to achieve No Net Loss.

c) Clarify setback standards for protection of views to and from the water.

To protect views of the shoreline from existing structures when new development is proposed, §23.30.030 (Views and Aesthetics) (Exhibit D), new subsection (B) now allows setbacks to be modified pursuant to WCC 23.400.020(D) (Shoreline Bulk Provisions, Setbacks, Common-Line Setback for Single-Family Residences). That section (incorporated from former Appendix F) allows for setbacks to be reduced or increased, depending on how existing homes are situated, to provide the greatest view opportunities for both the existing and new development (though when reduced, mitigation (i.e., planting of the shoreline setback) may be required).

To minimize impacts to views from the water, §23.30.030 (Views and Aesthetics) (Exhibit D), new subsection (C) also now allows the Director to require the planting of vegetation to mitigate the impacts.

Furthermore, §23.30.030 (Views and Aesthetics) (Exhibit D), new subsection (L) precludes new uses or development from substantially obscuring shoreline views within shoreline view areas or from existing residences on adjacent property.

Topic #19, Water Quality

a) Include language/policies about the importance of Lake Whatcom as the source of drinking water for most of the County and the water quality improvement plan (TMDL).

After reviewing the existing CompPlan, staff believes that it already addresses this issue sufficiently. In Chapter 10, under *Water Resources* (Exhibit A, page 10-11), subsection *Lake Whatcom Watershed Management* (pages 10-22 – 10-25) there are four pages of text describing Lake Whatcom's importance as a source of drinking water and the efforts the County (and City of Bellingham) are under taking to protect it. Under Goal 10-J alone there are 14 specific policies (Policies 10J-1 - 10J-14) regarding protecting Lake Whatcom, and there are numerous other, more generic goals and policies that deal with water quality protection more generically.

Topic #20, Wetland Buffers

a) PDS will conduct a parallel process, convening a group of local wetland consultants, to consider revisions to the CAO regulations regarding wetland habitat function score break

points, buffer widths, reduction, averaging to meet DOE guidelines, and having buffers based on habitat performance instead of static/standard buffers. If they complete this work in time, it can be incorporated into this update; otherwise it can follow.

In July 2018 the Washington Department of Ecology (DOE) modified the habitat score ranges and recommended buffer widths in their wetland buffer tables in the DOE guidance, with some minor text changes to ensure consistency. Some citizens, local environmental consulting firms, and the Building Industry Association of Whatcom County then requested that we amend our code to meet this new guidance, and it was docketed as PLN2019-00008.

The project was brought before the Planning Commission on March 14, 2019. But there was confusion as to what we actually *had* to do at that time and what impacts it would have on development. DOE had informed staff that, while we didn't need to amend our code at that point (having just updated Ch. 16.16 (Critical Areas) (Exhibit F) that they would review our code for consistency with their guidance when Ch. 16.16 was opened for amendment again, noting that that would occur during the 2020 SMP Periodic Update.

So at the Commission's request, staff worked with the local wetlands consultants to review the issue and try to determine what effects it might have. Three consulting firms⁷ provided analyses based on data from projects they had worked on. From these analyses, it appears that many of Whatcom County's lower quality wetlands (e.g., small Category IV wetlands in agricultural fields) would end up with smaller buffers, but that our higher quality wetlands (Categories II and III) would end up with larger buffers. (But even this is speculation, as ATSI noted that the comparison results are not statistically significant.⁸) Thus, farmers may benefit but developers/ builders may suffer, as many of our lower quality wetlands are those found in agriculture fields, while our higher quality wetlands are typically found in non-agriculture rural areas.

Nonetheless, given the Department of Ecology's statements that they'll be monitoring the SMP Update to ensure that we meet their latest guidance (which is based on Best Available Science), and given that Comprehensive Plan Policy 10M-2 directs the County to "Develop and adopt criteria to identify and evaluate wetland functions that meet the Best Available Science standard and that are consistent with state and federal guidelines," staff is proposing to amend §16.16.630 (Wetland Buffers) Table 1 (Standard Wetland Buffer Widths) to meet DOE guidance. As indicated, these changes would lessen buffers on lower quality wetlands, and increase them on higher quality ones.

Topic #21, Marine Resource Lands

a) Consider adding a Marine Resource Lands policy section as developed by the Marine Resources Committee

When the Council amended the CompPlan in 2016 they included a new section entitled "Marine Resource Lands" that contained one goal and one policy that directed staff to assist in developing the section more thoroughly:

⁷ NW Ecological Services, NW Wetlands Consulting, and Aqua-Terr Systems, Inc.

⁸ Paired sample t-tests were conducted to compare the proposed buffer results with categories of the wetlands impacted.

Goal 8T: Conserve and enhance Whatcom County's marine land base for the long-term and sustainable production of commercial and recreational economic activities.

Policy 8T-1: Whatcom County will work with committees including but not limited to the Marine Resource Committee, the Shellfish Protection Advisory Committee, and other local marine land experts to create a new section of this chapter to support Goal 8T to be docketed and processed for consideration no later than 2017.

The project was docketed as (PLN2017-00005), and staff worked with these groups to help develop some language, goals, and policies for this section, which is shown as Exhibit C (C/P Ch. 8). However, there was mixed recommendations from the groups who reviewed the language.

- The **Marine Resources Committee** reviewed the proposal at their June 7, 2018, meeting, and after adding Policy 8V-4 (addressing educational efforts and programs) they recommended that the County Council adopt the proposed language.
- The **Birch Bay Watershed and Aquatic Resources Management Committee** (BBWARM) reviewed the proposal at their June 20, 2018, meeting. They recommended that the Council *not* adopt the proposed language. They felt that the new Marine Resource Lands section of the CompPlan was already covered by the existing Shoreline Management Program and that including it would add unnecessary complication/duplication. They recommended that the Council postpone any action on the Marine Resource Lands amendment until the SMP update commenced.
- The **Portage/Drayton Shellfish Protection Districts** reviewed the proposal at their July 25, 2018, meeting. However, they did not have a quorum and could not act.
- The **Planning Commission** held a workshop on June 14 and a public hearing on June 28, 2018. They recommended that the Council *not* adopt the Marine Resource Lands proposal. There was concern amongst some of the Commissioners that regulations adopted subsequent to these policies could affect farmers, even though staff explained that it was not our nor CM Weimer's intent to address agricultural runoff. They also thought it would be better to consider this during our SMP update, perhaps incorporating some of the goals and policies into that rather than having a separate section.

When staff brought the project forward to Council's Planning & Development Committee for review they decided to consider it with the (then) upcoming SMP update.

Topic #22, No Net Loss

a) Prepare a No Net Loss technical memo

On September 10, 2019, staff presented to the Council's Natural Resources Committee an overview of how No Net Loss is achieved.

No net loss incorporates the following concepts:

- The existing condition or baseline of shoreline ecological functions, documented in the 2007 documented in the shoreline inventory and characterization, should not deteriorate due to permitted development.
- Shoreline functions may improve through shoreline restoration.
- New adverse impacts to the shoreline environment that result from planned development should be avoided.

- When this is not possible, impacts should be minimized through mitigation sequencing.
- Mitigation for development projects alone cannot prevent all cumulative on-going impacts and shoreline violations, so restoration is also needed.

Based on past practice, current science tells us that most, if not all, shoreline development produces some impact to ecological functions. However, the recognition that future development will occur is basic to the no net loss standard. The challenge is in maintaining shoreline ecological functions while allowing appropriate new development and ensuring adequate land for preferred shoreline uses and public access. With due diligence, local governments can properly locate and design development projects and require conditions to avoid or minimize impacts.

In 2007 Whatcom County underwent a comprehensive update of its Shoreline Management Program (SMP). At that time the County prepared an Inventory and Characterization Report (Vol. I), a Scientific Literature Review (Vol. II), a Restoration Plan (Vol. III), and a Cumulative Effects Analysis (Vol. IV), all of which were approved by County Council and the Department of Ecology. These documents formed the basis for developing the County's Shoreline Management Program and determining that it would achieve no net loss of ecological functions when implemented.

Whatcom County is now undergoing a periodic update. For such an update the County is not required to re-do all these documents except to augment them if something changes that might negatively affect the shoreline's ecological functions. For the most part there are few significant policy changes in this update; most of the proposed amendments are an effort to reorganize the SMP so as to make it easier to use and understand.

There are a few policy changes, though, and the No Net Loss Statement, prepared by The Watershed Company as an addendum to the 2007 Cumulative Effects Analysis, addresses these (Exhibit I). The conclusion is that each of these amendments works to strengthen the shoreline ecological protections provided by the SMP.

b) Shoreline Restoration Plan Addendum

Simply stated, the no net loss standard is designed to halt the introduction of new impacts to shoreline ecological functions resulting from new development by requiring mitigation. However, over all, protection, restoration, and mitigation are needed to achieve no net loss. Restoration is the only mechanism by which we can improve shoreline functions and ecosystem-wide processes over time. Local governments must achieve this standard through both the SMP planning process and by appropriately regulating individual developments as they are proposed in the future.

The concept of no net loss of shoreline ecological functions is rooted in the Act and in the goals, policies, and governing principles of the state's shoreline guidelines. These principles suggest that no net loss is achieved primarily through regulatory approaches and that restoration occurs mainly via goals, policies, and voluntary or incentive-based mechanisms. It is also important to note that more than simply preventing further loss of ecological functions, master program provisions must also "...achieve overall improvements in shoreline ecological functions over time when compared to the status upon adoption of the master program."

The mandate to improve functions over time provides the basis for restoration planning and creates a distinction between mitigation and restoration. As mentioned, applicants for shoreline permits must fully mitigate new impacts caused by their proposed development. However, applicants are not required to restore past permitted ecosystem damages as a condition of permit approval. Permit applicants will not be required to implement the restoration measures identified in the plan as mitigation for project

impacts, but they may elect to implement elements of this plan as mitigation for shoreline development if appropriate. And they may be required to mitigate for recurring impacts.

SMP updates: Achieving no net loss of ecological function

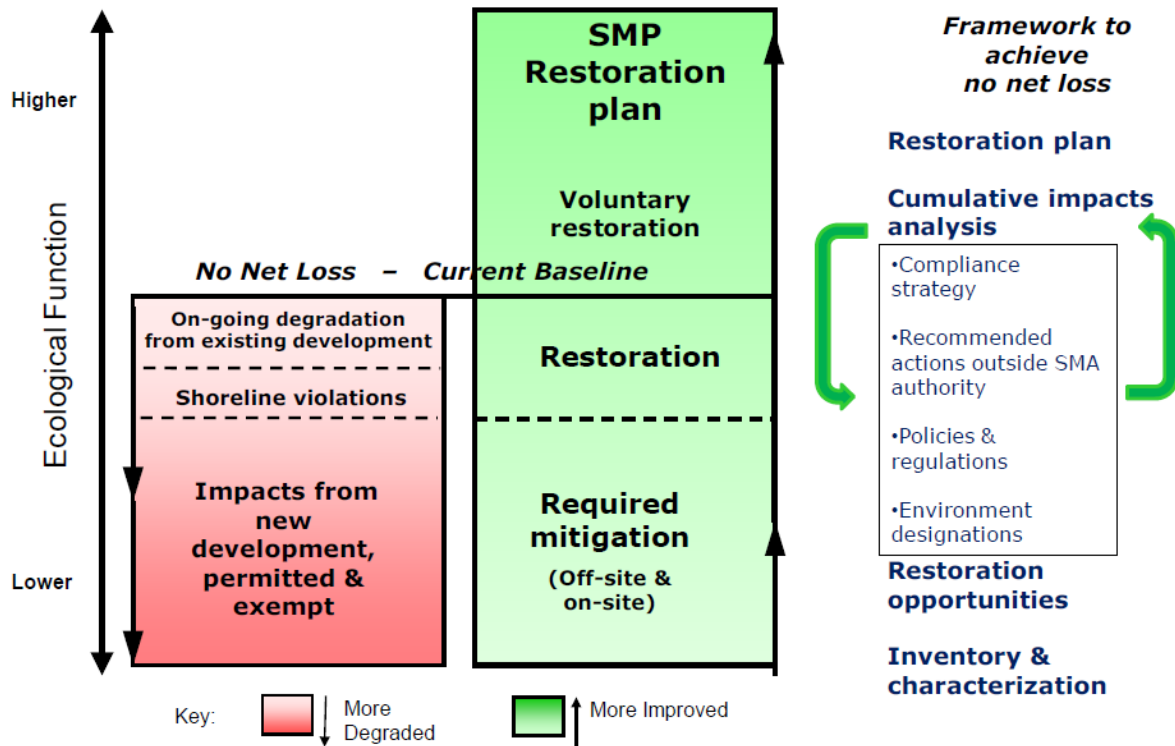

Figure 4-1: During the SMP update process, local governments should use existing shoreline conditions as the baseline for measuring no net loss of shoreline ecological functions.

Exhibit J is an addendum to the 2007 Shoreline Restoration Plan. It references projects listed in the Shoreline Restoration Plan containing enhancement and restoration project proposals and updates them based on information received by the County, agencies, tribes, and stakeholder organizations. It also lists several projects that were not included in that Plan, but nonetheless have been undertaken and completed, and that improve shoreline ecological functions.

It is important to note that to continue to achieve NNL over time the County should continue to fund and implement the projects listed in the restoration plan.

Other Amendments

Sustainable Salmon Harvest Goal

There is a new Policy 10L-19 proposed to be added to Chapter 10 regarding a sustainable salmon harvest goal (Exhibit A, page 11-47). Adding this policy is not a part of the SMP Update per se, and in fact was not part of the scope. Rather, it is a policy the Council expressed in interest in adding in support of the fisheries co-manager's Sustainable Salmon Harvest Goal. Adding such a policy was placed on the docket by Council in 2018 (#PLN2018-00010). Rather than process its addition as a separate CompPlan amendment, staff is proposing to add it while we're already amending the CompPlan for the SMP

Update. We should note, however, that through the Salmon Recovery Staff Team the fisheries co-managers (WDFW, Lummi Nation, and Nooksack Tribe) are reviewing this draft language and may propose some additional amendment(s) to it. If so, we will inform the Planning Commission later in your review.

Short-Term Rentals

Though already approved by Council via Resolution 2016-039 and by the Department of Ecology, Council's actions on short-term rentals has not been finalized by ordinance. Thus, staff has included in the draft Title 23 those amendments on short-term rentals already approved. Please note that there are similar amendments to Title 20 that Council has not acted on, and these would need to be followed up shortly after the SMP amendments are approved.

UGA Wetlands

In 16.16.225 (General Regulations) staff is proposing to add subsection (B)(7), which would allow "alteration of Type III or IV wetlands that have a habitat area score of less than 6 when associated with an approved commercial development within an Urban Growth Area" when impacts are mitigated. This would allow the alteration of certain wetlands in Urban Growth Areas (UGAs) (in particular, Birch Bay) so as to encourage development of commercially zoned property. Commercial development in Birch Bay is challenging because so much of the remaining commercially zoned property contains small, isolated wetlands. Yet under the Growth Management Act we're supposed to encourage development within UGAs so that development doesn't sprawl to less developed areas of the County.

IV. Comprehensive Plan Evaluation

The proposed amendments to the regulations (WCC Titles 22 and 23 and Ch. 16.16) have been developed using the guidance of the Comprehensive Plan so as to remain consistent. Generally, the specific guiding goals and policies would be listed here so as to inform the Council of consistency; however, that would just be a relisting of each, as every goal and policy of Comprehensive Plan Chapter 11 is relevant. Those goals and policies may be reviewed in Exhibit B. Suffice it to say that staff finds no inconsistencies.

V. Draft Findings of Fact and Reasons for Action

Staff recommends the Council adopts the following findings of fact and reasons for action:

1. The Shoreline Management Act (SMA) requires Whatcom County to develop and administer a Shoreline Master Program (SMP); and
2. Whatcom County is subject to the requirements of the Washington State Growth Management Act (GMA), RCW 36.70A.480 'Shorelines of the State.'
3. On February 27, 2007 (Ordinance # 2007-017), Whatcom County adopted a comprehensive update to the SMP as required by law. This comprehensive SMP update review included but was not limited to assessment of ecological functions, baseline conditions, and SMP environmental designations. This local adoption was approved by the Washington State Department of Ecology (Ecology); and
4. The Washington State Shoreline Management Act (SMA), RCW 90.58.080 (4)(a)(ii), mandates Whatcom County shall periodically review its SMP every 8-years. This periodic update is due June 30, 2021. The purpose of this periodic review is to update the local SMP to reflect changes to state

law and associated rules and guidance, ensure internal consistency with the Whatcom County Comprehensive Plan and associated development regulations, as well as provide an opportunity to improve usability and predictability of the SMP; and

5. The GMA, RCW 36.70A.130(1), also mandates that Whatcom County's Comprehensive Plan and development regulations are subject to continuing review and evaluation; and
6. The review process is intended to bring the SMP into compliance with requirements of the act or state rules that have been added or changed since the last SMP amendment, ensure the SMP remains consistent with amended comprehensive plans and regulations, and incorporate amendments deemed necessary to reflect changed circumstances, new information, or improved data; and
7. Whatcom County Planning and Development Services (PDS) submitted an application (PLN2020-00006) to make various amendments to Whatcom County's Shoreline Management Program; and,
8. On May 21, 2019, and in accordance with WAC 173-26-090(3)(a), Whatcom County developed a public participation program for this periodic review in to inform, involve and encourage participation of interested persons and private entities, tribes, and applicable agencies having interests and responsibilities relating to shorelines, which was submitted to Ecology; and
9. Whatcom County has followed its adopted public participation program, including:
 - a. A dedicated project webpage;
 - b. Legal notices published in the official newspaper of record for Whatcom County;
 - c. Electronic announcements and notifications to:
 - Subscribers of relevant lists in the Kitsap County Electronic Notification System;
 - Relevant County advisory groups; and
 - Relevant local, state and federal agencies, and community groups;
 - Federally recognized tribes with usual and accustomed areas in Whatcom County and relevant tribal organizations;
 - d. Three public open houses;
 - e. Meetings with citizen advisory groups and various interested parties;
 - f. Two 30-day public review periods of the amendments, one prior to the Planning Commission review workshops (August – September 2020) and a joint public comment period with the Department of Ecology prior to their joint public hearing (March – April 2021).
 - g. Eleven public workshops and a joint public hearing with the Planning Commission and Department of Ecology; and
 - h. Ten public workshops and a public hearing with the County Council.
10. Whatcom County used Ecology's checklist of legislative and rule amendments to review amendments to chapter 90.58 RCW and department guidelines that have occurred since the master program was last amended, and determine if local amendments are needed to maintain compliance in accordance with WAC 173-26-090(3)(b)(i); and
11. With the assistance of a consultant and development of a consistency analysis, Whatcom County PDS proposed amendments to the Whatcom County Comprehensive Plan (Chapters 8 (Resource Lands), 10 (Environment), and 11 (Shorelines)) and WCC Titles 22 (Land Use & Development) and 23 (Shoreline Management Regulations), and WCC Chapter 16.16 (Critical Areas).

12. Following review and approval by the Whatcom County Council, a public participation plan, consistency analysis, and scoping document was developed to aid in developing the draft amendments.
13. Whatcom County reviewed changes to the comprehensive plan and development regulations to determine if the shoreline master program policies and regulations remain consistent with them in accordance with WAC 173-26-090(3)(b)(ii); and
14. Whatcom County considered whether to incorporate any amendments needed to reflect changed circumstances, new information or improved data in accordance with WAC 173-26-090(3)(b)(iii); and
15. The Whatcom County Planning Commission and County Council held public hearings on July 25 and August 7, 2019 (respectively) to receive testimony on topics the public believed should be addressed during the periodic review; and
16. The Whatcom County Planning Commission completed a review of staff recommendations and prepared initial amendments; and
17. Whatcom County consulted with the Department of Ecology early and often during the drafting of the amendments. Whatcom County worked collaboratively with the Department of Ecology to address local interests while ensuring proposed amendments are consistent with the policy of RCW 90.58.020 and applicable guidelines in accordance with WAC 173-26-104; and
18. A State Environmental Policy Act (SEPA) environmental checklist was prepared and the Whatcom County SEPA responsible official issued and circulated a copy of the checklist and a Determination of Non-Significance (DNS) on February 18, 2021; and
19. Whatcom County conducted a formal joint public comment period with the Department of Ecology in compliance with requirements of WAC 173-26-104; and
20. Whatcom County published a legal notice in the Bellingham Herald on April 17, 2021, for a public hearing on the proposed staff recommendations, including a statement that the hearings were intended to address the periodic review in accordance with WAC 173-26-090(3)(c)(ii); and
21. The Planning Commission took public testimony on the proposed staff recommendations at a public hearing on April 22, 2021; and
22. The Planning Commission reviewed the public testimony and written comments on the proposed SMP revisions, and suggested revisions to the proposed amendments; and
23. The Planning Commission recommended approval of the proposed amendments and forwarded it to the County Council for review and adoption on May 13, 2021; and
24. Notice of the subject amendments was submitted to the Washington State Department of Commerce on March 12, 2021, for their 60-day review in accordance with WAC 173-26-100(5); and
25. The Council held six public workshops to review the Planning Commission's recommendations; and
26. A Council Public Hearing Notice was posted in the Bellingham Herald on November 14, 2021; and

27. The Council received public testimony at the public hearing of November 23, 2021, and reviewed said public testimony and written comments at a study session on December 7, 2021; and
28. After considering all public comments and evidence, the Council determined that the proposed amendments comply with all applicable laws and rules; and
29. As evidenced by the recommendation of the Surface Mining Advisory Committee, Title 23 already meets Council's intent to allow sand and gravel extraction within shoreline jurisdiction under certain circumstances as described in PLN2019-00011 and thus no amendments are proposed to achieve this; and,
30. RCW 36.32.120(7) provides that the county legislative authorities shall make and enforce, by appropriate resolutions or ordinances, all such police and sanitary regulations as are not in conflict with state law; and
31. The amendments are consistent with the Shoreline Management Act, Growth Management Act, Whatcom County Comprehensive Plan, and other applicable requirements.
32. The proposed amendments reflect current local circumstances and promote the general public health, safety, morals and welfare.
33. This completes the County's required process for periodic review in accordance with RCW 90.58.080(4) and applicable state guidelines (WAC 173-26).

VI. Proposed Conclusions

1. The amendments are in the public interest.
2. The amendments are consistent with the Whatcom County Comprehensive Plan.

VII. Recommendation

Planning and Development Services recommends that the County Council approve the draft resolution included in your packet, which would approve the proposed amendments to Whatcom County's Shoreline Management Program and authorize staff to forward them to the Department of Ecology for final review and approval.

RESOLUTION NO. _____

**A WHATCOM COUNTY RESOLUTION, DECLARING THE COUNCIL'S APPROVAL AND INTENTION TO
ADOPT THE OCTOBER 29, 2021, AMENDMENTS TO WHATCOM COUNTY CODE, TITLE 23 - SHORELINE
MANAGEMENT PROGRAM;**

WHEREAS, the Shoreline Management Act (SMA) requires Whatcom County to develop and administer a Shoreline Master Program (SMP); and

WHEREAS, Whatcom County is subject to the requirements of the Washington State Growth Management Act (GMA), RCW 36.70A.480 'Shorelines of the State.'

WHEREAS, on February 27, 2007 (Ordinance # 2007-017), Whatcom County adopted a comprehensive update to the SMP as required by law. This comprehensive SMP update review included but was not limited to assessment of ecological functions, baseline conditions, and SMP environmental designations. This local adoption was approved by the Washington State Department of Ecology (Ecology); and

WHEREAS, the Washington State Shoreline Management Act (SMA), RCW 90.58.080 (4)(a)(ii), mandates Whatcom County shall periodically review its SMP every 8-years. This periodic update is due June 30, 2021. The purpose of this periodic review is to update the local SMP to reflect changes to state law and associated rules and guidance, ensure internal consistency with the Whatcom County Comprehensive Plan and associated development regulations, as well as provide an opportunity to improve usability and predictability of the SMP; and

WHEREAS, the GMA, RCW 36.70A.130(1), also mandates that Whatcom County's Comprehensive Plan and development regulations are subject to continuing review and evaluation; and

WHEREAS, the review process is intended to bring the SMP into compliance with requirements of the act or state rules that have been added or changed since the last SMP amendment, ensure the SMP remains consistent with amended comprehensive plans and regulations, and incorporate amendments deemed necessary to reflect changed circumstances, new information, or improved data; and

WHEREAS, Whatcom County Planning and Development Services (PDS) submitted an application (PLN2020-00006) to make various amendments to Whatcom County's Shoreline Management Program; and,

WHEREAS, on May 21, 2019, and in accordance with WAC 173-26-090(3)(a), Whatcom County developed a public participation program for this periodic review in to inform, involve and encourage participation of interested persons and private entities, tribes, and applicable agencies having interests and responsibilities relating to shorelines, which was submitted to Ecology; and

WHEREAS, Whatcom County has followed its adopted public participation program, including:

- a. A dedicated project webpage;
- b. Legal notices published in the official newspaper of record for Whatcom County;

- c. Electronic announcements and notifications to:
 - Subscribers of relevant lists in the Kitsap County Electronic Notification System;
 - Relevant County advisory groups; and
 - Relevant local, state and federal agencies, and community groups;
 - Federally recognized tribes with usual and accustomed areas in Whatcom County and relevant tribal organizations;
- d. Three public open houses;
- e. Meetings with citizen advisory groups and various interested parties;
- f. Two 30-day public review periods of the amendments, one prior to the Planning Commission review workshops (August – September 2020) and a joint public comment period with the Department of Ecology prior to their joint public hearing (March – April 2021).
- g. Eleven public workshops and a joint public hearing with the Planning Commission and Department of Ecology; and
- h. Ten public workshops and a public hearing with the County Council.

WHEREAS, Whatcom County used Ecology’s checklist of legislative and rule amendments to review amendments to chapter 90.58 RCW and department guidelines that have occurred since the master program was last amended, and determine if local amendments are needed to maintain compliance in accordance with WAC 173-26-090(3)(b)(i); and

WHEREAS, with the assistance of a consultant and development of a consistency analysis, Whatcom County PDS proposed amendments to the Whatcom County Comprehensive Plan (Chapters 8 (Resource Lands), 10 (Environment), and 11 (Shorelines)) and WCC Titles 22 (Land Use & Development) and 23 (Shoreline Management Regulations), and WCC Chapter 16.16 (Critical Areas).

WHEREAS, following review and approval by the Whatcom County Council, a public participation plan, consistency analysis, and scoping document was developed to aid in developing the draft amendments.

WHEREAS, Whatcom County reviewed changes to the comprehensive plan and development regulations to determine if the shoreline master program policies and regulations remain consistent with them in accordance with WAC 173-26-090(3)(b)(ii); and

WHEREAS, Whatcom County considered whether to incorporate any amendments needed to reflect changed circumstances, new information or improved data in accordance with WAC 173-26-090(3)(b)(iii); and

WHEREAS, the Whatcom County Planning Commission and County Council held public hearings on July 25 and August 7, 2019 (respectively) to receive testimony on topics the public believed should be addressed during the periodic review; and

WHEREAS, the Whatcom County Planning Commission completed a review of staff recommendations and prepared initial amendments; and

WHEREAS, Whatcom County consulted with the Department of Ecology early and often during the drafting of the amendments. Whatcom County worked collaboratively with the Department of Ecology to address local interests while ensuring proposed amendments are consistent with the policy of RCW 90.58.020 and applicable guidelines in accordance with WAC 173-26-104; and

WHEREAS, a State Environmental Policy Act (SEPA) environmental checklist was prepared and the Whatcom County SEPA responsible official issued and circulated a copy of the checklist and a Determination of Non-Significance (DNS) on February 18, 2021; and

WHEREAS, Whatcom County conducted a formal joint public comment period with the Department of Ecology in compliance with requirements of WAC 173-26-104; and

WHEREAS, Whatcom County published a legal notice in the Bellingham Herald on April 17, 2021, for a public hearing on the proposed staff recommendations, including a statement that the hearings were intended to address the periodic review in accordance with WAC 173-26-090(3)(c)(ii); and

WHEREAS, the Planning Commission took public testimony on the proposed staff recommendations at a public hearing on April 22, 2021; and

WHEREAS, the Planning Commission reviewed the public testimony and written comments on the proposed SMP revisions, and suggested revisions to the proposed amendments; and

WHEREAS, the Planning Commission recommended approval of the proposed amendments and forwarded it to the County Council for review and adoption on May 13, 2021; and

WHEREAS, Notice of the subject amendments was submitted to the Washington State Department of Commerce on March 12, 2021, for their 60-day review in accordance with WAC 173-26-100(5); and

WHEREAS, the Council held six public workshops to review the Planning Commission's recommendations; and,

WHEREAS, a Council Public Hearing Notice was posted in the Bellingham Herald on November 14, 2021; and

WHEREAS, the Council received public testimony at the public hearing of November 23, 2021, and reviewed said public testimony and written comments at a study session on December 7, 2021; and

WHEREAS, after considering all public comments and evidence, the Council determined that the proposed amendments comply with all applicable laws and rules; and

WHEREAS, as evidenced by the recommendation of the Surface Mining Advisory Committee, Title 23 already meets Council's intent to allow sand and gravel extraction within shoreline jurisdiction under certain circumstances as described in PLN2019-00011 and thus no amendments are proposed to achieve this; and,

WHEREAS, RCW 36.32.120(7) provides that the county legislative authorities shall make and enforce, by appropriate resolutions or ordinances, all such police and sanitary regulations as are not in conflict with state law; and

WHEREAS, the amendments are consistent with the Shoreline Management Act, Growth Management Act, Whatcom County Comprehensive Plan, and other applicable requirements.

WHEREAS, the proposed amendments reflect current local circumstances and promote the general public health, safety, morals and welfare.

WHEREAS, this completes the County's required process for periodic review in accordance with RCW 90.58.080(4) and applicable state guidelines (WAC 173-26).

NOW, THEREFORE, BE IT RESOLVED BY THE WHATCOM COUNTY COUNCIL:

Section 1. Review and Evaluation. The Council hereby finds that the review and evaluation required by RCW 90.58.080(4) has occurred, as described in the recitals above.

Section 2. Revisions. That the Whatcom County Comprehensive Plan, Chapters 8 (Exhibit C), 10 (Exhibit A), and 11 (Exhibit B); Whatcom County Code Titles 22 (Exhibit E) and 23 (Exhibit D) and Chapter 16.16 (Exhibit F); the Official Shoreline Map (Exhibit G); Whatcom County's No Net Loss Analysis (Exhibit I); and Whatcom County's Shoreline Restoration Plan (Exhibit J) are hereby amended to read as set forth in the noted exhibits, which are attached to this resolution and incorporated herein by this reference. The remaining portions of the County's SMP shall remain unchanged.

Section 3. Approval. The Council hereby approves the October 29, 2011, versions of the above referenced SMP revisions and finds the amended SMP consistent with the requirements of RCW 90.58 and WAC 173-26, as they apply to these amendments, with the understanding that in accordance with RCW 90.58.190(3), and if Ecology adopts the amendments, the Whatcom County Council intends to adopt (and codify), by ordinance, the subject shoreline master program amendments.

Section 4. Submission to Department of Ecology. The Director of Planning and Development Services is directed to submit the SMP and associated documents to the Department of Ecology for their review and approval prior to formal adoption. If/Once approved by the Department of Ecology no further action is necessary for compliance with RCW 90.58.080(4) for the periodic review update due on June 30, 2021.

Chapter Ten Environment

Introduction

Each person in Whatcom County has a fundamental right to a healthful and safe environment in which to live and grow. With this right comes a responsibility to contribute to the protection and enhancement of our natural environment. Consequently, an important goal of the Whatcom County Comprehensive Plan is to protect or enhance the county's environmental quality. This means that, individually and collectively, we have the obligation to protect these resources for our children and their children. Essential to this is the establishment of safe development practices and patterns that do not significantly disrupt ecosystems and that ensure the continuation of ample amounts of clean water, natural areas, farmlands, forest lands, and fish and wildlife habitat.

Chapter Organization

This chapter is composed of an introduction and four sections organized by topic heading. The first section, entitled "General Environmental Management," addresses general environmental goals and policies. The remaining three sections deal with Natural Hazards, Water Resources, and Ecosystems. Together, the sections of this chapter provide the direction necessary to ensure and promote long-term sustainability of the environment in Whatcom County.

Purpose

Whatcom County's natural environment, with its seasonally abundant supply of water, its beauty, and its other natural resources, has attracted people to our community for generations. This setting is important to our sense of well-being, to our health, to our economic well-being, and to our future. Sustaining these assets in the face of increasingly intense human activity becomes more difficult each year. The challenge of protecting this environment while accommodating growth requires maintaining guidelines for development so that growth does not ultimately overrun the very assets that brought most of us here. The purpose of this chapter is to create such guidelines.

GMA Goals and Countywide Planning Policies

GMA Planning Goal 10, "Environment" (RCW 36.70A.020(10)), provides the directive for much of this chapter. It requires Whatcom County to "protect the environment and enhance the state's high quality of life, including air and water quality, and the availability of water." In addition, some of the goals and policies of this chapter support Planning Goal 9, "Open Space and Recreation" (RCW 36.70A.020(9)), which directs the county to "conserve fish and wildlife habitat."

Relative to environmental protection, Whatcom County's Countywide Planning Policies (CWPP) give the most attention to water issues. They state, "The quality of life and economic health of Whatcom County communities depend on the maintenance of a safe and reliable water supply. All jurisdictions and water

1 purveyors should cooperate to ensure the protection and quality of the area's water
2 resources." Specific policies address water, promoting inter-jurisdictional
3 cooperation in conserving, protecting, and managing the water resource, and in
4 reducing water pollution (CWPP Policies N.1 – 6). The CWPPs also support
5 protecting wildlife habitat and corridors, natural drainage features, and "other
6 environmental, cultural and scenic resources."

7 **GMA Requirements**

8 The GMA requires Whatcom County to identify and manage critical areas in such a
9 manner as to prevent destruction of the resource base and reduce potential losses
10 to property and human life. The GMA has identified Critical Areas to include the
11 following areas and ecosystems:

- 12 • Wetlands
- 13 • Critical Aquifer Recharge Areas
- 14 • Fish and wildlife habitat conservation areas
- 15 • Frequently flooded areas
- 16 • Geologically hazardous areas

17 **Environmental Setting**

18 Whatcom County bedrock geology can be divided into five bedrock geologic
19 provinces. From east to west these provinces are the Methow terrain, the Cascade
20 Crystalline Core, the Northwest Cascades System, the Fraser Lowland, and the San
21 Juan Island system. Tectonic activity over the past 15 million years has created the
22 present North Cascades and the formation of Mount Baker, a 10,000-foot high
23 composite volcano.

24 The mountains of Whatcom County, as well as the streams, lakes, valleys, hills, and
25 shoreline features are the result of millions of years of geologic events. Over 2.5
26 million years ago, during the Ice Ages, glacial ice invaded the Puget Sound lowlands
27 from the north at least four times, with the last major glacial event, the Fraser
28 Glaciation, ending approximately 12,000 years ago. A minor advance of glacial ice,
29 the Sumas Advance, ended approximately 10,000 years ago. The ice formed from
30 the accumulation of snow in the British Columbia Coast Range and interior of British
31 Columbia. Numerous glaciers are still present within the mountains of Whatcom
32 County, and some of these mountain glaciers formerly extended far down the
33 mountain valleys of the County. The underlying bedrock was deeply eroded during
34 these glacial events creating very steep mountainsides, and in some areas,
35 particularly in northwestern Whatcom County, a thick sequence of glacial related
36 sediments was deposited. The glacial ice was approximately 6,000 feet thick in the
37 vicinity of Bellingham.

38 Two main glacial advances are the most important to our area, the Salmon Springs
39 glaciation and the later Vashon glaciation. Each time the massive glacier advanced,
40 it dammed up the Puget lowlands to form a huge lake. As the floating ice melted,
41 sand, gravel, clay and occasional boulders would melt out of the ice and fall to the
42 sea floor. This deposit, the Bellingham Drift, covers the ground surface over a large
43 area of western Whatcom County. Each time the Ice Age glacier advanced, it also
44 compacted underlying sediments with its great weight. It created a concrete-like

1 material called "till" (also known as "hardpan") beneath it. Because the Bellingham
2 Drift consists primarily of clay and silt, it is relatively impermeable; water tends to
3 accumulate on the ground surface. Wetlands are common on the Bellingham Drift.

4 On the bottom of the lake, "rock flour", the finely ground remains of rocks
5 pulverized by glacial action, settled out. These deposits became the familiar "blue
6 clays" of the Puget lowland. The milky color of the Nooksack River is due to the
7 same kind of rock flour, created by glacial activity on the slopes of Mount Baker.

8 Additionally, each time the glacier retreated, water from the melting ice deposited
9 thick layers of sand and gravel known as "outwash." The outwash areas are
10 typically where we find our most productive aquifers, since these loose sands and
11 gravel are porous and drain rapidly. While these areas absorb rainwater for our
12 later use from wells, they are also vulnerable to contamination. An example of this
13 phenomenon is found in the outwash sands and gravels resulting from the Sumas
14 Advance. Large meltwater streams and rivers flowed from this glacier depositing
15 the Sumas Outwash sands and gravels. The Sumas Outwash sands and gravels
16 make up the best non-floodplain farmland in the County and some of the highest
17 quality construction gravel deposits. Abandoned outwash channels were formerly
18 used as sources of peat.

19 Each of these glacial sediments, lake bed deposits, till and outwash is present in
20 various places and in varied combinations in Whatcom County. These sediments
21 provide both the formations that hold the groundwater for many of the area's wells,
22 and the parent material for most of the different soils.

23 Out of these long physical processes a complex natural ecology has emerged that
24 supports a diversity of wildlife. Many of our lakes, rivers, and streams support fish
25 including, but not limited to, native species such as the five pacific salmon
26 (Chinook, Coho, Sockeye, Chum, Pink) as well as Steelhead, Rainbow Trout,
27 Cutthroat (coastal and resident), Bull Trout, and Dolly Varden. Every year salmon
28 return to spawn in the streams and rivers of Whatcom County. Whatcom County is
29 located within the Pacific Migratory Flyway and serves as a stopover and critical
30 habitat area for many migratory birds. Bufflehead and goldeneye ducks winter here.
31 Additionally, numerous bird species including scoters, snow geese, trumpeter
32 swans, canvasbacks, cormorants, grebes, loons, and other migrating waterfowl
33 pass through every spring and fall as they travel between their breeding grounds in
34 Alaska and Canada and their wintering grounds in California and Mexico. Mallards,
35 Canada geese, great blue herons, and numerous songbirds live in the county
36 year-round. Maintaining these unique resources is a high priority for both present
37 and future county residents. Whatcom County is home to a distinct subspecies of
38 the Great Blue Heron, which has the third largest colony in the Puget Sound area.
39 The wetlands, fields, streams, and nearshore habitat in the county support many
40 birds of special concern, such as the bald eagle (protected under the Bald and
41 Golden Eagle Protection Act), the pileated woodpecker (candidate for State
42 threatened list), and the peregrine falcon (ESA candidate species). The National
43 Audubon Society has designated Semiahmoo, Drayton Harbor, and Birch Bay as
44 "Important Bird Areas."

1 Environmental Management

2 Introduction

3 General environmental goals and policies are intended to provide guidance for
4 environmental management that will promote environmental protection and good
5 stewardship practices through a balance of public education and involvement;
6 incentives, acquisition, and voluntary programs; land use planning and regulations;
7 environmental monitoring; and intergovernmental cooperation. These goals and
8 policies are also intended to provide guidance to County government as it assists its
9 citizens in maintaining a balance between individual property rights, economic
10 development, and environmental protection.

11 Background Summary

12 Development in the last 100 years has had a significant impact on the natural
13 environment in Whatcom County. At the turn of the 20th century, some areas
14 surrounding Lynden, Sumas, and Ferndale were logged, drained, and converted to
15 agricultural land and other types of development. In the intervening years, many of
16 the remaining forests were logged, many streams re-routed and channelized, and
17 much of the native vegetation removed and replaced with a wide variety of
18 introduced vegetative types. Roads now crisscross most areas, with homes, farms,
19 businesses, and industries scattered throughout the county.

20 Issue, Goals, and Policies

21 There are designated lands in Whatcom County that can still accommodate
22 development. Whatcom County also has areas that are sensitive to human activity,
23 including wetlands, streams, lakes, and marine shorelines, and lands that can pose
24 a hazard to the community, including floodplains and unstable slopes. In these
25 areas development must be carefully planned or limited to maintain environmental
26 quality and public safety. This can be done through the creation and
27 implementation of goals and policies that seek to reduce hazards and prevent
28 adverse environmental impacts.

29 Community and Environmental Protection

30 The elements of the natural environment: water, air, soil, plants, and animals; are
31 interconnected and interdependent, functioning as one dynamic ecosystem.
32 Environmental resources within this ecosystem are extensive and, in some cases,
33 irreplaceable. They provide important beneficial uses to the community such as: the
34 supply of clean drinking water; management of stormwater run-off and flood
35 hazard management; support for a wide variety of fish and wildlife; fresh air; and a
36 sense of place in which residents invest, enjoy, and expect.

37 Some of these same resources result in serious environmental constraints or pose a
38 hazard to development and a danger to the community. Flooding in the Nooksack
39 River is frequent and impacts much of the valley floor. There are numerous
40 wetlands and hydric soils throughout the lowlands that provide critical wetland
41 functions and are generally unsuitable for development. The steep gradient and

- 1 geologic structure of the mountain ranges in conjunction with heavy annual
2 precipitation can contribute to slope instability and flood-prone drainage basins.
- 3 Much of the environmental degradation and destruction to property occurs as a
4 result of a lack of information or understanding rather than willful action.
5 Ecosystems are subtle and complex. Too often both their benefits and hazards are
6 not readily apparent to the community. Additionally, baseline information is not
7 always available to help identify the real costs or hazards of building in Whatcom
8 County. There is a need for further research and education.
- 9 **Goal 10A: Protect natural resources and systems, life, and property**
10 **from potential hazards.**
- 11 Policy 10A-1: Support good stewardship of Whatcom County lands, and apply
12 this principle to the management of public lands.
- 13 Policy 10A-2: Protect the environment through a comprehensive program that
14 includes voluntary activity, education, incentives, regulation,
15 enforcement, restoration, monitoring, acquisition, mitigation,
16 and intergovernmental coordination.
- 17 Policy 10A-3: Continue to identify, designate, and protect Critical Areas and
18 other important environmental features.
- 19 Policy 10A-4: Manage designated Critical Areas as needed, to minimize or
20 protect against environmental degradation and reduce the
21 potential for losses to property and human life.
- 22 Policy 10A-5: Actively pursue voluntary, cooperative, and mutually beneficial
23 efforts aimed at advancing county environmental goals.
- 24 Policy 10A-6: Aim to meet or exceed national, state, and regional air quality
25 standards. Work with the Northwest Clean Air Agency to ensure
26 compliance with applicable air quality standards.
- 27 Policy 10A-7: Using Best Available Science, support efforts to educate and
28 inform the public as to the benefits of a healthy and viable
29 environment, ecologically fragile areas, and their economic and
30 social value.
- 31 Policy 10A-8: Lead and/or coordinate efforts with property owners, citizen
32 groups, and governmental and non-governmental agencies in
33 furthering Whatcom County's environmental goals and policies.
- 34 Policy 10A-9: Cooperate with state and federal agencies and neighboring
35 jurisdictions to identify and protect threatened and endangered
36 fish and wildlife species and their habitats.
- 37 Policy 10A-10: Support acquisition, conservation easements, open space, and
38 other such programs to protect high-value natural areas as
39 identified through the GMA planning process, the Natural
40 Heritage Plan, the state Priority Habitats and Species (PHS)
41 program, the Lake Whatcom Management Program, and other
42 sources.

1 Policy 10A-11: Designate high-value open space and natural areas for
2 acquisition, conservation easements, open space, and other
3 such programs to protect these natural areas upon request or
4 consent of the property owner.

5 Policy 10A-12: Broadly inform the people of Whatcom County of the locations
6 of potential development constraints associated with natural
7 conditions. Information should include known natural hazards
8 and an assessment of the potential danger to both the property
9 owner and the public.

10 Administration and Regulation

11 There are currently a multitude of regulations and administrative processes at the
12 federal, state and local level that, together, have become excessive and difficult to
13 understand. Conflicting regulations and complicated administrative processes can
14 create undue hardship on community members and result in reduced levels of
15 environmental protection.

16 **Goal 10B: Simplify and harmonize regulations relating to the**
17 **identification, delineation, and protection of**
18 **environmental features.**

19 Policy: 10B-1: Develop, as a significant component of a comprehensive
20 environmental management program, non-regulatory measures
21 that include voluntary activity, education, incentives,
22 restoration, acquisition, advanced mitigation (i.e., mitigation
23 done in advance of impacts), and intergovernmental
24 coordination.

25 Policy 10B-2: Provide incentives for good stewardship of the land through the
26 use of non-regulatory and innovative land use management
27 techniques.

28 Policy 10B-3: Support education as an important tool in developing public
29 appreciation for the value of ecosystems and provide the public
30 with informational materials and presentations relating to
31 natural system functions, regulations, and issues.

32 Policy 10B-4: Promote cooperation and coordination among involved
33 government agencies when multiple agencies have jurisdiction
34 over aspects of a single project.

35 Policy 10B-5: Process the environmental review of building and development
36 permit applications within an established timeframe that is
37 predictable and expeditious.

38 Policy 10B-6: Provide clear, timely, appropriate, and understandable direction
39 to citizens, developers, and property owners.

40 Policy 10B-7: Ensure regulations are as simple and easy to understand as
41 possible and maintain effective inspection, compliance, and
42 enforcement measures as necessary.

1 ~~Policy 10B-8: Recognize the policies of the Whatcom County Shoreline~~
2 ~~Management Program as constituting a "Shoreline Element" of~~
3 ~~this plan. The shoreline program regulations and policies shall~~
4 ~~be considered to be consistent with this plan.~~

Comment [CES1]: No longer needed, as a new Chapter 11, Shorelines, has been created.

5 **The Environment and Property Rights**

6 Prior to the 1970s, growth in Whatcom County was relatively slow and received
7 little management. As a result, private property owners were left to their own
8 resources as they determined how best to use their land. However, as increasing
9 numbers of people moved to this area and settled, a greater demand was placed on
10 Whatcom County's natural resources.

11 The problems that arise from this situation have caused many to realize what one
12 person does with his/her property may have an impact on the larger environmental
13 system that sustains us as a community and on the rights of other property
14 owners.

15 Land use decisions can no longer be considered exclusively private matters. We are
16 aware public actions impact every private citizen in Whatcom County and private
17 actions may have public consequences as well. To that end, the law must protect
18 the public good from detrimental private actions. Nevertheless, the right of the
19 individual to use his or her property, within the bounds permitted by law, is a value
20 supported by law and the community and must be recognized when making land
21 use decisions in Whatcom County.

22 **Goal 10C:** **In implementing environmental policies, provide for**
23 **protection of private property rights, economic**
24 **opportunities, and plan appropriately for growth.**

25 Policy 10C-1: Actively pursue voluntary and cooperative efforts that advance
26 Whatcom County's goals in a mutually beneficial manner.

27 Policy 10C-2: When adopting new environmental protection programs,
28 consider multiple economic parameters including development
29 objectives, impacts, and the economic benefits of the natural
30 environment as both a resource and an amenity.

31 Policy 10C-3: Emphasize an approach to environmental protection by
32 encouraging the use of conservation easements, open space
33 taxation, land acquisition, purchase/voluntary, workable transfer
34 of development rights, and other mechanisms that assist
35 affected property owners.

36 Policy 10C-4: Avoid standards and procedures likely to require compensation
37 to property owners or invalidation of such rules.

38 **Climate Change**

39 Climate change is a global phenomenon that has the potential for significant local
40 impacts to natural resources, ecosystem functions, as well as human health,
41 infrastructure, and the economy. In Washington State, the Climate Impacts Group
42 (CIG), a consortium of scientists at the University of Washington, has done the

1 most extensive analysis of potential local climate change impacts in the Pacific
2 Northwest. Based on a range of climate change model projections, as well as peer-
3 reviewed scientific publications, the CIG concludes that during the next 20-40 years
4 the Pacific Northwest climate may change significantly. See *Climate Change*
5 *Impacts and Adaptation in Washington State: Technical Summaries for Decision*
6 *Makers, Climate Impacts Group, University of Washington, December 2013.* The
7 CIG confirms that global climate models project mid-21st century temperatures in
8 the Pacific Northwest higher than the natural range of temperature observed in the
9 20th century. The CIG reports that as a result of likely climate change, causing
10 slightly higher average annual temperature, impacts to the Pacific Northwest will
11 likely affect a broad spectrum of the natural environment, but most notably
12 changes to water resources, including:

- 13 • More precipitation falls as rain rather than snowfall in the Cascades due to an
14 increased snow-line elevation;
- 15 • Decreased (winter) mountain snowpack and earlier (spring) snowmelt;
- 16 • Higher winter streamflow in rivers that depend on snowmelt;
- 17 • Higher winter streamflow in rain-fed river basins resulting in scouring floods
18 that negatively affect salmon populations if winter precipitation and rain-on-
19 snow events increases in the future as projected;
- 20 • Earlier peak (spring) streamflow in rivers that depend on snowmelt;
- 21 • Lower summer streamflow in rivers and streams; and,
- 22 • Decreased water in summer for irrigation, fish, human consumption and
23 recreational use (more drought-like conditions).

24 Climate change impacts are likely to include longer-term shifts in forest types and
25 species, potentially increasing wildfire risk and greater exposure to insects and
26 disease. Nearshore and riverine fisheries may be subjected to increased stress due
27 to even lower average summer stream flows (and higher summer stream
28 temperatures) and increased acidity in Puget Sound. Agricultural sector concerns
29 include the cost of climate adaptation, development of more climate-resilient
30 technologies, and management and availability of adequate water supplies.
31 Susceptibility to natural hazards is also expected to intensify due to climate change,
32 including increased landslides, erosion, and coastal and riverine flooding due to
33 more winter rainfall, and potential rising sea levels.

34 In 2007, Whatcom County completed a Climate Protection and Energy Conservation
35 Action Plan that laid out specific actions and targets for reducing greenhouse gas
36 emissions and increasing energy conservation efforts in response to potential
37 climate change.

38 In addition many insurance industry experts are now factoring in the costs of
39 climate change into insurance premiums as the increase in the frequency and
40 severity of extreme weather events around the world results in a corresponding
41 increase in claims costs.

42 Local government, residents and businesses must anticipate that as the climate
43 changes, more frequent and severe damage to private and public infrastructure will

1 occur. Maintenance costs and insurance premiums can be expected to increase
2 accordingly.

3 **Goal 10D:** **Strengthen the sustainability of Whatcom County's**
4 **economy, natural environment, and built communities by**
5 **responding and adapting to the impacts of climate**
6 **change.**

7 Policy 10D-1: Whatcom County's natural resource-based economic sectors,
8 ecosystems, water resources, infrastructure, emergency
9 management, and public health all face climate change related
10 risks in the future. The County should consider potential long-
11 range climate change implications into its on-going functional
12 planning and implementation actions. The County should:

- 13 1. Study the resilience of its natural and built environments to
14 the potential impacts of climate change;
- 15 2. Identify the relative vulnerability of these sectors to climate
16 change; and,
- 17 3. Examine the adaptive capacity of these sectors to cope with
18 or mitigate climate change and take advantage of any
19 beneficial opportunities.

20 Policy 10D-2: Develop strategies that encourage a diversified and sustainable
21 economy that is resilient to the impacts of climate change.

22 Policy 10D-3: Promote the efficient use, conservation, and protection of water
23 resources.

24 Policy 10D-4: Pursue strategies to reduce the vehicle miles traveled (VMT) in
25 the county by encouraging expanded availability and use of
26 public transportation, carpooling, and non-vehicular modes of
27 transportation.

28 Policy 10D-5: Establish land use patterns that minimize transportation-related
29 greenhouse gas emissions and encourage preservation of
30 natural resource lands and the protection of water resources.

31 Policy 10D-6: Convene a climate impact advisory committee by 2017. The
32 advisory committee should consist of (but not be limited to)
33 experts in energy efficiency and carbon emission reduction,
34 representatives from Whatcom County, and interested
35 community members. The committee will be tasked with:

- 36 • Evaluating Whatcom County's compliance with meeting
37 targets set forth in the 2007 Climate Plan;
- 38 • Establishing new targets that meet or exceed state and
39 federal climate impact goals;
- 40 • Updating the Climate Plan, at minimum every five years, or
41 as needed to meet targets;
- 42 • Recommending updates to the Whatcom County

- 1 Comprehensive Plan in accordance with meeting Whatcom
2 County's emission reduction goals;
- 3 • Ensuring that Whatcom County government facilities and
4 operations are designed to meet or exceed goals and
5 standards resolved in the current Climate Protection and
6 Energy Conservation Action Plan; and
 - 7 • Recommend updates to Whatcom County land use policies
8 and development regulations to support renewable energy
9 development goals.
- 10 Policy 10D-7: Encourage sustainability by developing strategies and practices
11 to increase the use of renewable, net-neutral carbon energy in
12 Whatcom County facilities and County vehicles, with a goal of
13 net zero man-made carbon emission by 2050.
- 14 Policy 10D-8: Encourage sustainability by developing strategies and practices
15 to reduce landfill waste from Whatcom County government
16 facilities to near zero.
- 17 Policy 10D-9: Identify responsible parties and agencies and encourage them
18 to identify and properly seal and/or burn methane that is
19 escaping into the atmosphere from wells.
- 20 Policy 10D-10: Create updates to Whatcom County land use policies and
21 development regulations to support renewable energy
22 development goals.
- 23 Policy 10D-11: Protect ecological functions and ecosystem-wide processes of
24 Marine Resource Lands and critical areas in anticipation of
25 climate change impacts, including sea level rise.

Comment [P/C2]: Suggested by Re-
Sources, Futurewise, & WEC.
P/C approved 8-0-0 (1 absence).

26 **Natural Hazards**

27 **Introduction**

28 The location, climate, and geology of Whatcom County combine to create many
29 natural hazards to people and their developments. Earthquakes, volcanoes,
30 landslides, and flooding are some of the major natural hazards found in our region.
31 Additionally, old mines are scattered around the county that could be dangerous to
32 the community. Natural Hazards goals and policies are intended to provide
33 guidance to county government as it assists its citizens in effectively managing
34 natural hazards in a manner that minimizes the danger to each member of this
35 community, while continuing to provide for economic opportunities.

36 **Background Summary**

37 Natural Hazards include the following (**Map 10-4**):

38 **Landslide Hazards** – The geologically recent retreat of glaciers from the Whatcom
39 County landscape, succeed by contemporaneous geomorphic processes of erosion,
40 sediment transport, deposition, isostatic rebound and tectonic uplift, has left many

1 hillsides over-steepened and susceptible to naturally occurring and human-
2 triggered slope failure and erosion. Several large, well-known landslides are
3 presently active in Whatcom County, such as the Swift Creek Slide on Sumas
4 Mountain. In addition, numerous large-scale, pre-historic slope failure deposits
5 have been mapped by past workers and are readily identified in more recently
6 available LiDar imagery. Various slope failure processes contribute to the mosaic of
7 landslide hazards present in the county and the potential exists for a multitude of
8 impacts ranging from periodic small- to large-scale rockfall and slides, massive
9 debris slides and avalanches, destructive debris flows, and deep-seated earthflows,
10 slumps and slides. These landslide processes act on large- and small-scale, and
11 though much less catastrophic in nature, smaller landslides occur more frequently
12 and pose a continual hazard to County residents and infrastructure. Certain types of
13 geologic conditions and formations commonly cause landslides, namely the
14 Chuckanut Formation and the Darrington Phyllite, but are also frequently observed
15 in unconsolidated glacial sediments, in the presence of day-lighting groundwater
16 seams and springs, on slopes in excess of 35 percent, along coastal bluffs, and in
17 areas of fluvial erosion.

18 **Alluvial Fan Hazards** – Alluvial fan hazards areas exist where steep mountain
19 streams flow onto floodplains or into lakes and deposit debris and sediment.
20 Because these streams are steep and flow in confined canyons, they can carry more
21 sediment and debris than a similar-sized stream flowing over flat land. During a
22 large storm, streams on alluvial fans can create catastrophic flooding and debris
23 floods, such as were experienced in 1983 in the Lake Whatcom area. During this
24 storm event, the Sudden Valley development on Lake Whatcom incurred significant
25 damage to property from flooding and debris flows on the Austin Creek alluvial fan.

26 **Flood Hazards** – Heavy winter rains and a transient snowpack combined with the
27 steep and sometimes unstable slopes of Whatcom County's foothills create
28 conditions ideal for flooding and debris flows along many of our rivers and streams.
29 The Nooksack River floodplain alone covers 38,000 acres in Whatcom County. In
30 1989 and 1990, the Nooksack River overflowed and flooded lowland Whatcom
31 County causing millions of dollars of damage. During some extreme floods, the
32 Nooksack River overflows near Everson and adversely impacts residents along
33 Johnson Creek in Sumas, and in the Abbotsford area of British Columbia. It is
34 projected that climate change will increase flood risk, due to increased sea level
35 and changes in rainfall patterns. Significant damage may result from such floods. In
36 1991, Whatcom County formed a countywide Flood Control Zone District to address
37 the major flooding issues in the county.

38 **Volcanic Hazards** – The presence of Mt. Baker is an asset to our region. Its
39 10,778-foot peak is one of the dominant features of Whatcom County's landscape.
40 However, Mt. Baker is also considered one of the most active volcanoes in the
41 Cascade Range, and of the six major volcanoes in the range, Mt. Baker is
42 considered by geologists to be very hazardous during and after an eruption.
43 Pyroclastic flows, ash flows, and especially volcanic mudflows, also known as
44 lahars, are believed to be the greatest dangers to human life and development in
45 Whatcom County. Geologic evidence indicates that an eruption on Mt. Baker caused

1 a major lahar about 6,600 years ago that inundated the Middle Fork Nooksack
2 Valley from its headwaters downstream past the confluence with the North Fork at
3 Welcome. The same lahar is now known to have been over 300 feet deep in the
4 upper reaches of the Middle Fork and extended as far west as Nugent's Corner. A
5 major lahar along the Nooksack would divert the river from its channel and cause
6 mass flooding. Fortunately, volcanic eruptions are infrequent with periods of
7 hundreds and thousands of years between events, but this infrequency also makes
8 forecasting a volcanic eruption extremely difficult. However, a major eruption of Mt.
9 Baker would pose a serious threat to human life and property. The deeply
10 weathered nature of the rocks forming Mt. Baker may also fail, triggering a
11 mudflow that would travel rapidly down the stream channels ringing the volcano
12 and result in damage similar to that from a volcanic eruption trigger. Mapping over
13 the past decade of other Cascade volcanoes has demonstrated massive mudflows
14 extending from the volcanoes to Puget Sound, and from Mount Rainier and Glacier
15 Peak.

16 **Earthquake Hazards** – Whatcom County lies within the influence of the
17 convergent plate margin between the Pacific and North American Plate termed the
18 Cascadia Subduction Zone. Regionally-extensive and damaging earthquakes,
19 termed mega-thrusts, are possible when stress generated between the subducting
20 Pacific Plate and over-riding North American Plate is released. A mega-thrust
21 earthquake is capable of generating an earthquake of magnitude 9, or greater, and
22 research has indicated an approximate recurrence interval of 500-600 years.
23 Associated with the stresses generated at the convergent plate margin are shallow,
24 crustal faults that are mapped throughout Whatcom County. Earthquake activity on
25 these fault systems is much more frequent than that observed at the Cascadia
26 Subduction Zone, and the Deming area is considered one of the most seismically
27 active areas in Washington. Recent research has shown these crustal faults are
28 capable of generating a magnitude 7 earthquake with an average recurrence
29 interval of 30 to 50 years. While all buildings are susceptible to damage from
30 seismic-shaking, structures built on peat soils, large areas of non-structural fill, or
31 liquefiable soils are prone to more severe shaking during an earthquake. If the
32 shaking is strong enough, or of sufficient duration, structures may collapse or
33 become damaged due to building fatigue, ground settlement/liquefaction, and/or
34 lateral spreading. In addition to seismic hazards posed by the Cascadia Subduction
35 Zone, a significant mega-thrust earthquake has the potential to generate a large
36 and destructive tsunami that has the potential to affect most low-bank areas of the
37 County.

38 **Mine Hazards** – Mine hazard areas are sites of abandoned underground mine
39 shafts, adits, and mine tailings. Coal mining was a major industry in Whatcom
40 County in the early part of the 20th century, and several major mines were
41 developed in various parts of the county. All of the formerly active mines are now
42 no longer worked and are abandoned. For the most part these mine locations are
43 known and mapped, such as the extensive coal mines under the northern part of
44 the City of Bellingham and in the Blue Canyon area of South Lake Whatcom.

1 **Issues, Goals, and Policies**

2 **Landslides** – Siting human development on or adjacent to known landslide hazard
3 areas can create health and safety risks. The risks can be elevated due to extreme
4 weather events and earthquakes, but may also occur with little or no warning. In
5 the case of the Swift Creek Landslide, the release of asbestos-laden sediment poses
6 an additional risk to public health. Development activity can de-stabilize naturally
7 unstable slopes and impact ecosystems. However, predicting the exact timing,
8 location, or extent of a damaging landslide is difficult, and in particular areas of the
9 county landslide hazards are not possible to completely mitigate or avoid. In some
10 circumstances, the development of upland properties may place downslope
11 neighbors and ecosystems at risk from rockfall or landslides. A similar relationship
12 holds true for development at the toe of a potentially unstable slope. In either
13 event, development in proximity to landslide hazards must proceed in consideration
14 of potential impacts in order to ensure life safety and preserve and protect public
15 and private infrastructure.

16 **Alluvial Fans** – Because alluvial fan areas are associated with streams, are
17 generally gently sloping and elevated above the adjacent floodplain, and are
18 located at the base of mountains, they have historically been popular places to
19 develop. However, once every 10-25 years, a large storm event occurs in our area
20 and streams flood homes and developments, causing damage to property,
21 ecosystems, and sometimes loss of lives.

22 **Flooding** – Floodwaters from the Nooksack River can damage homes, agricultural
23 areas, businesses, and industries in the small cities situated along the river; fish
24 and wildlife habitat and other ecosystems; and disrupt transportation and utility
25 corridors. Storm tides can flood homes and roads along low, exposed marine
26 shorelines in the Birch Bay, Sandy Point, Point Roberts, and Gooseberry Point
27 areas. Homes along Lake Whatcom, Lake Samish, and Cain/Reed Lakes have also
28 been impacted by flooding during extreme storm events. Property and public safety
29 are also impacted by rapid channel morphology events.

30 **Volcanos** – A volcanic eruption or mudflow at Mount Baker could potentially
31 severely affect river flow on the Nooksack River or Baker River and cause severe
32 property damage near the volcanoes or along lahar routes. A lahar is an extremely
33 rare and unpredictable occurrence. Evacuation routes should be planned and made
34 public. Development should be regulated according to the Critical Areas Ordinance.

35 **Earthquakes** – A major earthquake may likely and significantly affect Whatcom
36 County. If the shaking is strong enough, buildings may collapse, roads could be
37 damaged, and/or communications, power, and utilities could be severely disrupted,
38 mud and rock slides could occur on unstable slopes, and local sea levels may
39 change as shorelines assume altered post-quake elevations.

40 **Mines** – Some abandoned mine areas may pose a risk of ground subsidence from
41 the collapse of abandoned mine shafts. Air and water pollution may also be hazards
42 associated with abandoned mine tailings and trapped toxic gases. Development on
43 or near mine hazards could be adversely impacted.

1 **Gas wells** – Several exploratory oil & gas wells have been drilled around the
2 county over the last 70+years. Some of these present potential environmental
3 hazards due to ongoing leakage of gas.

4 **Old Landfills** – There are known abandoned landfills in the County and possibly
5 some that are unknown. There are also several sites around the County that
6 contain large numbers of abandoned vehicles and other debris. As with most
7 landfills these locations pose some degree of risk of hazardous substances leaking
8 into local aquifers.

9 **Balanced Management** – A central issue common to all development in natural
10 hazard areas is the need for Whatcom County to balance the responsibility of local
11 government to protect the public interest and provide for a safe and healthy
12 environment while safeguarding the rights of private property owners.

13 **Economic Impact** – Damage to private and public property resulting from the
14 siting of human development in areas of natural hazards is significant to the people
15 of Whatcom County. The 1990 Nooksack River floods caused over \$20 million
16 dollars in damage to roads, bridges, buildings, and farmland. Disaster relief efforts
17 are expensive and dangerous to conduct during an emergency. Public efforts to
18 reduce hazards, such as the establishment of the Flood Control Zone District, are
19 also expensive.

20 **Goal 10E:** **Minimize potential loss of life, damage to property, the**
21 **expenditure of public funds, and degradation of**
22 **ecosystems resulting from development in hazardous**
23 **areas such as floodplains, landslide-prone areas, seismic**
24 **hazards areas, volcanic impact areas, abandoned mine**
25 **and exploratory gas well locations, potentially dangerous**
26 **alluvial fans, and other known natural hazards by**
27 **advocating the use of land acquisition, open space**
28 **taxation, conservation easements, growth planning,**
29 **regulations, and other options to discourage or minimize**
30 **development, or prohibit inappropriate development in**
31 **such areas.**

32 Policy 10E-1: Avoid or minimize public investments for future infrastructure
33 development on known natural hazard areas.

34 Policy 10E-2: Use Best Available Science and data to research and investigate
35 the nature and extent of known natural hazards in the county
36 and make this information available to the general public and
37 policy makers in an accessible and understandable form.

38 Policy 10E-3: Broadly inform the people of Whatcom County of the locations
39 of known natural hazards, and the potential for adverse impacts
40 of such natural hazards to the health, safety, and welfare of
41 people and their properties.

42 Policy 10E-4: Establish acceptable levels of public risk for development in
43 known natural hazard areas based upon the nature of the
44 natural hazard and levels of public risk, and maintain regulatory

1		criteria for approving, disapproving, conditioning, or mitigating
2		development activity.
3	Policy 10E-5:	Prohibit the siting of critical public facilities in known natural
4		hazard areas unless the siting of the facility can be shown to
5		have a public benefit that outweighs the risk of siting in the
6		particular hazard area.
7	Policy 10E-6:	Maintain a comprehensive program of regulatory and non-
8		regulatory mechanisms to achieve Natural Hazard goals and
9		policies. This program should include such mechanisms as
10		education, tax incentives, zoning, land use regulations,
11		conservation easements, purchase of development rights,
12		transfer of development rights, and public acquisition.
13	Policy 10E-7:	Be consistent with the Natural Hazard goals and policies and
14		consider the locations of Natural Hazard Areas when establishing
15		or changing zoning patterns and densities.
16	Policy 10E-8:	To address the causes of flooding and avoid expensive and
17		maintenance-intensive bank protection measures, the County
18		should prioritize its floodplain property acquisition program.
19	Policy 10E-9:	Discourage new development in the floodplain.
20	Policy 10E-10:	Require applicants for development permits located in natural
21		hazard areas to provide development plans designed to
22		minimize the potential to exacerbate the natural hazard as well
23		as the risk of damage to property or threats to human health
24		and safety. In natural hazard areas where engineering solutions
25		cannot be designed to withstand the forces expected to occur
26		under the design event of a particular natural hazard, or off-site
27		adverse impacts to adjacent properties or ecosystems cannot be
28		adequately mitigated, Whatcom County may deny development
29		permits intended for permanent or seasonal human habitation
30		as described in the Critical Areas Ordinance.
31	Policy 10E-11:	Consider conducting a public process with affected citizens,
32		technical experts, and decision-makers to establish
33		recommended levels of public risk for each of the identified
34		natural hazards. In developing recommended levels of public
35		risk for natural hazards, consider the appropriate variables
36		affecting developments in hazardous areas. These variables may
37		include:
38		• Specific types of risk associated with the particular hazard
39		area;
40		• The gradation of hazards associated with a particular geo-
41		hazard;
42		• Level of detail necessary to map hazard areas;

- Different levels of risk associated with different ownership classes (e.g. public ownership versus private ownership);
- Different levels of risk associated with different types of land uses; and,
- Mitigation measures related to specific adverse impacts of development in hazard areas.

Once a set of risk levels has been identified, propose these risk levels for adoption of legislation by the County Council as the level to which future development must be designed.

Policy 10E-12: Consider establishing acceptable levels of public risk for use in approving and conditioning development activity in known natural hazard areas. The established level of risk may be expressed as the potential hazard posed as determined by scientific and historical methods applicable to each specific natural hazard.

Policy 10E-13: Review the findings and recommendations of alluvial fan hazard evaluations and make appropriate recommendations for land use and zoning regulations to the County Council to assist in reducing the hazards posed on these fans. Whatcom County has completed or nearly completed alluvial fan evaluations of Canyon Creek, Jones Creek, and Glacier-Gallop Creeks.

Policy 10E-14: Review the findings and recommendations of the Comprehensive Flood Hazard Management Plan (CFHMP) and make appropriate recommendations for land use and zoning regulations to the County Council to assist in the implementation of the CFHMP.

Policy 10-15E: Identify known locations of abandoned wells that could produce methane and/or other hazardous substances and where immediate danger of methane and hazardous substance leaking exists, condition development approvals on affected parcels to mitigate those impacts.

Water Resources

Introduction

Water resources refer to the numerous surface waters such as lakes, streams, wetlands; groundwater; estuaries; and marine waterbodies within Whatcom County (**Map 10-1**). These waterbodies are often integrally linked through the complex network referred to as the water cycle. The water cycle describes the series of transformations that occur in the circulation of water from the atmosphere onto the surface and into the subsurface regions of the earth, and then back from the surface to the atmosphere. Water resources of Whatcom County provide: natural beauty; recreation; habitat for fish and wildlife; water for drinking, agriculture, and industry; and other benefits essential to the quality of life and economic health of

1 the community. The quality of life and economic health of our county's communities
2 depend on the maintenance of a safe and reliable water supply. Decisions affecting
3 any element of the water environment must be based on consideration of the
4 effects on other elements.

5 **Background Summary**

6 Whatcom County has 16 major freshwater lakes, 3,012 miles of rivers and streams,
7 over 37,000 acres of wetlands, 134 miles of marine shoreline, and aquifers
8 containing an undetermined amount of groundwater. These water resources serve
9 multiple uses, including providing a source of drinking water for the people of
10 Whatcom County. Surface water sources such as Lake Whatcom, the Nooksack
11 River, and Lake Samish provide water to more than half the county residents, with
12 the remainder relying on groundwater, either from individual wells or from about
13 300 public water systems. Agriculture relies on both ground and surface water for a
14 variety of uses, including irrigation and drinking water for livestock. Businesses and
15 industries may also require water, sometimes in substantial quantities, from non-
16 potable and potable supplies. Water is also essential to meet many of what are
17 referred to as "instream" uses, such as recreation, shellfish growing and harvesting,
18 fish and wildlife habitat, aesthetics, and other uses and benefits.

19 Groundwater is contained in aquifers, which are subterranean layers of porous rock
20 or soil. Most of the surficial aquifers in Whatcom County are replenished by
21 rainwater. Aquifers are often integrally linked with surface water systems and are
22 essential for meeting instream and out-of-stream water needs such as for drinking
23 water, agriculture, industry, and other uses.

24 Rainfall that runs into drainage courses such as ditches, streams, wetlands, rivers,
25 lakes, and the Strait of Georgia supports local surface and marine waters. Natural
26 drainage systems have many important functions, including storing excess water
27 flow, purifying surface water, recharging groundwater, conveying water, and
28 supporting important biological activities. As more areas in Whatcom County are
29 being urbanized, natural water resource systems are being replaced with built
30 systems, leading to permanent changes in hydrology.

31 Whatcom County government has a major role in helping to maintain these benefits
32 through its many responsibilities and programs, particularly in the areas of health,
33 safety, land use, and development. The intent of the following goals and policies is
34 to provide guidance to Whatcom County government as it assists its citizens in
35 effectively managing our water resources in a manner that ensures that the
36 benefits of those resources are maintained far into the future. The water resource
37 section focuses primarily on groundwater and surface water management. Surface
38 water management relates generally to watershed protection and stormwater/
39 drainage systems. However, some policy direction may indirectly be provided for
40 areas such as wetlands, estuaries, streams, and marine waterbodies within the
41 Water Resource section. Some of these areas are covered in more detail in other
42 sections within the Environment Chapter.

1 **Whatcom County Water Resource Programs**

2 Whatcom County has and/or participates in numerous water resource programs
3 aimed at protecting and enhancing water quality and quantity, including:

- 4 • WRIA 1 Watershed Management Project;
- 5 • Lake Whatcom Watershed Management;
- 6 • Groundwater Protection & Management;
- 7 • Flood Hazard Management; and,
- 8 • Stormwater Management.

9 **WRIA 1 Watershed Management Project**

10 The WRIA 1 Watershed Management Project is the result of the 1998 Washington
11 State Watershed Management Act, which required all participating local
12 governments to address water quantity, with the option of addressing water
13 quality, instream flows, and fish habitat. The WRIA 1 Watershed Management
14 Project has brought together citizens, local governments, tribes, and state and
15 federal agencies to address these issues.

16 The framework for watershed management in the state is based on geographic
17 areas known as Water Resource Inventory Areas (WRIAs). WRIA 1 includes the
18 Nooksack River basin and several adjoining smaller watersheds, such as the coastal
19 drainages of Dakota and California Creeks, as well as Lake Whatcom.

20 Watershed planning in WRIA 1 started in 1998 with the signing of a Memorandum
21 of Agreement (MOA) between the *Initiating Governments*. In the WRIA 1 the
22 Initiating Governments are Whatcom County, City of Bellingham, Public Utility
23 District No. 1, Lummi Nation, and Nooksack Tribe (the latter joining slightly later
24 through a Letter of Agreement). The role of the Initiating Governments was to
25 review a recommended Watershed Plan and take it to their governments' councils
26 for adoption.

27 *Historical Organization (1999-2016)*

28 *WRIA 1 Joint Board*

29 In 1999, an Interlocal Agreement further formalized the government-to-
30 government relationship essential to the tribes' participation in the process by
31 creating a *Joint Board*. The Joint Board is comprised of the Initiating Governments,
32 including the mayor of the City of Bellingham, executive for Whatcom County,
33 manager of Public Utility District No. 1, and designated policy representatives of
34 Lummi Nation and Nooksack Tribe. The Board manages the project's administrative
35 functions such as contracts and budgets. Members of the Joint Board also sit on the
36 Joint Policy Boards.

37 *WRIA 1 Joint Policy Boards*

38 The WRIA 1 Joint Policy Boards are comprised of members of the WRIA 1 Joint
39 Board and Salmon Recovery Board. This organizational level interacts with federal,
40 state, and regional organizations at a policy-level to coordinate the implementation

1 and management of the WRIA 1 Watershed Management Plan – Phase 1, the WRIA
2 1 Salmonid Recovery Plan and other related activities.

3 *Local Integrating Organization (LIO)*

4 The Whatcom Local Integrating Organization (LIO) is a function of the WRIA 1
5 Watershed Joint Board and WRIA 1 Salmon Recovery Board (Joint Policy Boards).
6 Local integrating organizations are designated by the Puget Sound Partnership. The
7 two WRIA 1 Boards accepted the function of the Whatcom LIO in October 2010
8 under the integrated program structure, and was officially recognized by the Puget
9 Sound Partnership's Leadership Council in November 2010. The purpose of the
10 Whatcom LIO is to coordinate implementation of Puget Sound Action Agenda
11 priorities that are consistent with or complement local priorities. One of its functions
12 is to provide a local update to the Action Agenda for Puget Sound. Local updates
13 are intended to identify local priorities in the form of near-term actions (NTAs),
14 which are priority actions with measurable outcomes that can be implemented in
15 the next two years and that align with strategies in the Action Agenda for Puget
16 Sound.

17 *WRIA 1 Planning Unit*

18 The Initiating Governments established the Planning Unit to ensure representation
19 of a broad range of water resource interests. The Planning Unit's role is to
20 recommend actions for a Watershed Plan and to contribute knowledge, interests,
21 technical expertise, and other resources to its development. The Planning Unit is
22 made up of representatives from the Initiating Governments, other governments,
23 and various caucuses. There are 16 total caucuses on the WRIA 1 Planning Unit.

24 *Organizational Update (2016)*

25 Through an interlocal agreement entered into in 2016, the Watershed Management
26 Project Joint Board and the WRIA 1 Salmon Recovery Board were dissolved and the
27 duties and functions of those boards were assumed by the new WRIA 1 Watershed
28 Management Board, consisting of one representative from the Lummi Nation, the
29 Nooksack Tribe, the Washington State Department of Fish and Wildlife, Whatcom
30 County, Whatcom County PUD No. 1, and the cities of Bellingham, Blaine, Everson,
31 Ferndale, Lynden, Nooksack, and Sumas.

32 The primary functions of the WRIA 1 Watershed Management Board are to:

- 33 • Facilitate implementation and adaptive management of the WRIA 1
34 Watershed Management Plan-Phase 1 as currently constituted or
35 subsequently amended;
- 36 • Coordinate the implementation and adaptive management of the WRIA 1
37 Salmonid Recovery Plan and associated implementation documents,
- 38 • Serve as the WRIA 1 Salmon Recovery Lead Entity pursuant to RCW 77.85,
- 39 • Coordinate participation in Puget Sound salmon recovery efforts,
- 40 • Coordinate the development, implementation and adaptive management of
41 WRIA 1 watershed chapters of recovery plans for ESA listed salmonids and
42 other salmonid species as warranted;

- Coordinate planning, implementation, monitoring and adaptive management of ecosystem recovery actions in WRIA 1 consistent with agreed local goals and objectives,
- Serve as the WRIA 1 Local Integrating Organization and a partner in the Puget Sound Partnership in representing WRIA 1 goals and priorities; and
- Participate in other related activities as agreed to by the Board.

The roles of the Local Integrating Organization and Planning Unit did not change.

2005 WRIA 1 Watershed Management Plan – Phase 1

The 2005 WRIA 1 Watershed Management Plan was approved in 2005 by the Joint Administrative Board, Planning Unit (by consensus), and the County Council. Pursuant to subsequent state requirements, a WRIA 1 Watershed Detailed Implementation Plan was approved by the Joint Administrative Board, Planning Unit, and County Council in 2007. It provides a roadmap for addressing water quantity, water quality, instream flow, and fish habitat challenges. The goals of the WRIA 1 Watershed Management Project are: water of sufficient quantity and quality to meet the needs of current and future human generations; restoration of salmon, steelhead, and trout populations to healthy harvestable levels; and the improvement of habitats on which fish and shellfish rely. These goals are addressed more specifically below:

- **Water Quantity** – To assess water supply and use, and develop strategies to meet current and future needs. The strategies should retain or provide adequate amounts of water to protect and restore fish habitat, provide water for future out-of-stream-uses, and ensure adequate water supplies are available for agriculture, energy production, and population and economic growth under the requirements of the state's Growth Management Act.
- **Water Quality** – To ensure the quality of our water is sufficient for current and future uses, including restoring and protecting water quality to meet the needs of salmon and shellfish, recreational uses, cultural uses, protection of wildlife, providing affordable and safe domestic water supplies, and other beneficial uses. The initial objectives of the water quality management strategy will be to meet the water quality standards.
- **Instream Flow** – To supply water in sufficient quantities to restore salmon, steelhead, and trout populations to healthy and harvestable levels and improve habitats on which fish rely.
- **Fish Habitat** – To protect or enhance fish habitat in the management area and to restore salmon, steelhead, and trout populations to healthy and harvestable levels and improve habitats on which fish rely.

In 2010, the WRIA 1 Joint Board adopted a work plan, budget, and financing strategy, called the Lower Nooksack Strategy, to advance a negotiated settlement of Tribal and state instream flow water rights on the mainstem of the Nooksack River, while maximizing the economic and environmental benefits of out-of-stream water use in the Lower Nooksack sub-basin. The Joint Board adopted the Lower Nooksack Strategy consistent with WRIA 1 Watershed Management Plan priorities.

- 1 Lower Nooksack Strategy Objectives:
- 2 • Develop and implement a process for negotiating settlement of water rights
3 on the Mainstem Nooksack River.
 - 4 • Update and verify the Lower Nooksack River sub-basin water budget and
5 develop a groundwater model.
 - 6 • Determine out-of-stream water user needs:
 - 7 ○ Public water system needs determined by updated the Whatcom County
8 Coordinated Water System Plan (CWSP).
 - 9 ○ Other out-of-stream user needs (e.g., agriculture, private domestic wells,
10 industrial, etc.) determined through a regional water supply planning
11 process.
 - 12 • Continue and, if appropriate, enhance targeted streamflow and water quality
13 sampling.
 - 14 • Advance work on tools that foster water resource allocations consistent with
15 long-term economic and environmental land-use goals for implementation in
16 five years.

17 Streamflow Restoration Act (ESSB 6091)

18 The Streamflow Restoration Act (ESSB 6091), enacted by the Washington State
19 Legislature on January 18, 2018 and effective on January 19, 2018, directs the
20 Department of Ecology to work with the initiation governments (i.e., the WRIA 1
21 Watershed Management Board), in collaboration with the planning unit established
22 pursuant to chapter 90.82 RCW, on updating the WRIA 1 Watershed Management
23 Plan for approval by the Whatcom County Council by February 1, 2019.

24 The Act requires that the updated plan include recommendations for projects and
25 actions that will measure, protect, and enhance instream resources and improve
26 watershed functions that support the recovery of threatened and endangered
27 salmonids. Such recommendations may include, but are not limited to, acquiring
28 senior water rights, water conservation, water reuse, stream gaging, groundwater
29 monitoring, and developing natural and constructed infrastructure, which includes,
30 but is not limited to, such projects as floodplain restoration, off-channel storage,
31 and aquifer recharge. Qualifying projects must be specifically designed to enhance
32 streamflows and not result in negative impacts to ecological functions or critical
33 habitat.

34 At a minimum, the watershed plan must include those actions determined to be
35 necessary to offset potential impacts to instream flows associated with permit-
36 exempt domestic water use. The highest priority recommendations must include
37 replacing the quantity of consumptive water use during the same time as the
38 impact and in the same basin or tributary. Lower priority projects include projects
39 not in the same basin or tributary and projects that replace consumptive water
40 supply impacts only during critical flow periods. The watershed plan may include
41 projects that protect or improve instream resources without replacing the
42 consumptive quantity of water where such projects are in addition to those actions

1 determined to be necessary to offset potential consumptive impacts to instream
2 flows associated with permit-exempt domestic water use.

3 Until the updated watershed plan is approved and rules are adopted by the
4 Department of Ecology, the County, in issuing building permits under RCW
5 19.27.097(1)(c) or approving subdivisions under chapter 58.17 RCW in WRIA 1, will
6 comply with all of the specific requirements of ESSB 6091.

7 **Lake Whatcom Watershed Management**

8 Lake Whatcom is a large multi-purpose reservoir that is the source of drinking
9 water for the City of Bellingham, Lake Whatcom Water and Sewer District, several
10 other smaller water districts/associations, and about 250 homes that draw water
11 directly from the lake. The lake provides water to about half the population of
12 Whatcom County.

13 Lake Whatcom is a multiple use lake and watershed. In addition to providing water
14 for drinking, commercial, and industrial uses, the lake is used for boating,
15 swimming, and fishing. The majority of the watershed is forested, mainly
16 surrounding the large southernmost portion of the lake. Other land uses include
17 residential development (approximately 5,300 homes are located within the
18 watershed), limited agriculture and commercial development, parks, and other
19 public facilities. The on-going management challenge is trying to determine the
20 extent to which these practices can occur while maintaining safe, clean drinking
21 water. The challenge is further complicated by possible requirements related to the
22 Endangered Species Act, tribal water rights, and the potential impact these issues
23 may have on how the City's diversion from the Nooksack River is operated.

24 The watershed contains four developed areas: the City of Bellingham, which
25 straddles the upper portion of the northern-most basin of the lake; Geneva, which
26 is immediately south and east of Bellingham's city limits and is part of the city's
27 urban growth area; Hillsdale, which is immediately north and east of Bellingham's
28 city limits and is also part of the city's urban growth areas; and the Sudden Valley
29 Rural Community. In addition, it includes a variety of other zones, including
30 resource, rural, and residential rural zones. Outside the Bellingham City limits,
31 approximately 70% of the watershed is in Forestry zoning and more than 75% of
32 the current land use is forestry.

33 Water and sewer service are provided by the Lake Whatcom Water and Sewer
34 District. Capacity problems in the district's sewer line, which serves Geneva and
35 Sudden Valley, have caused overflows into the lake in the past. An aggressive
36 program to preclude stormwater infiltration has reduced the overflow problems to a
37 large extent. In addition, the district has a contractually limited flow capacity to
38 Bellingham. The Lake Louise Road sewage interceptor was constructed in January
39 2003 to carry waste water from Sudden Valley and Geneva and serves as a
40 complement to the Lake Whatcom Boulevard trunk line. The interceptor was
41 designed to service full build-out of Sudden Valley and Geneva.

42 The City of Bellingham and Lake Whatcom Water and Sewer District are responsible
43 for ensuring drinking water standards are met for their customers. To date water
44 supplies have consistently met standards. The ability to continue to economically

1 meet drinking water standards requires maintaining source water that requires
2 minimal treatment. For this reason the City of Bellingham maintains an on-going
3 source water-monitoring program. Other agencies including Western Washington
4 University, Department of Natural Resources, Department of Fish and Wildlife,
5 Department of Ecology, Lake Whatcom Water and Sewer District, and Whatcom
6 County, have also conducted monitoring, studies, and/or evaluations of the lake
7 and watershed.

8 Studies on Lake Whatcom conducted over a number of years indicate water quality
9 in the lake has declined. In 1998, the Washington State Department of Ecology
10 listed Lake Whatcom as an impaired water body and placed Lake Whatcom on the
11 Federal Clean Water Act 303(d) list because of low oxygen levels in the Lake and
12 high bacteria levels in streams that flow into the Lake. The 303(d) listing requires
13 the establishment of a Total Maximum Daily Loads (TMDLs). The Department of
14 Ecology issued the "Lake Whatcom Watershed Total Phosphorus and Bacteria Total
15 Maximum Daily Loads: Volume 1, Water Quality Study Findings" in 2008. This study
16 documented Lake Whatcom is impaired for dissolved oxygen due to phosphorus
17 loading and that streams flowing into Lake Whatcom do not meet fecal coliform
18 bacteria standards. Loading capacities for total phosphorus and bacteria reduction
19 targets were set forth in this document. In 2013 The Department of Ecology issued
20 a draft "Lake Whatcom Watershed Total Phosphorus and Bacteria Total Maximum
21 Daily Loads: Volume 2, Water Quality Improvement Report and Implementation
22 Strategy." This report identifies how much phosphorus can be discharged to the
23 Lake and identifies how the bacteria load should be allocated between the County
24 and City of Bellingham, in order to meet water quality standards.

25 A significant cause of declining oxygen levels has been from residential
26 development in the watershed. Past development permitted by the City of
27 Bellingham and Whatcom County has led to increased phosphorus loading into the
28 lake, which stimulates algae growth. Bacteria that consume the dying algae deplete
29 the dissolved oxygen, leading to lower oxygen levels in the lake. Past poorly
30 managed forest practices may have led to significant increases in phosphorus
31 loading to the lake.

32 Whatcom County has taken a number of actions to reduce phosphorus and
33 otherwise address Lake Whatcom water quality. These include rezoning land to
34 allow less development in the watershed, adoption of the Lake Whatcom
35 Comprehensive Stormwater Management Plan, revising stormwater management
36 standards for private development to significantly reduce potential phosphorus
37 runoff, construction of stormwater capital improvement projects and adoption of
38 regulations that restrict the application of commercial fertilizers.

39 In 2014, approximately 8,800 acres of forest lands around Lake Whatcom were
40 transferred to Whatcom County from the Washington Department of Natural
41 Resources through reconveyance. These lands will provide passive recreation
42 opportunities with hiking and biking trails connecting various communities,
43 neighborhoods, and parks throughout the watershed. Under County ownership, the
44 forests will be allowed to mature to an older growth environment benefiting the
45 watershed and helping to stabilize steep slopes that surround the lake.

1 In 2004, the Department of Natural Resources (DNR) Board on Natural Resources
2 adopted the Lake Whatcom Landscape Plan. This plan provides additional
3 protections on remaining state managed lands within the Lake Whatcom watershed.
4 The plan provides additional protections on streams and potentially unstable slopes
5 not normally included in forest practices in Washington State.

6 Lake Whatcom Watershed Management Program

7 A variety of agencies, organizations, and individuals play a role in managing and
8 protecting Lake Whatcom. In an effort to coordinate efforts of these various
9 players, in 1990, the City of Bellingham, Whatcom County, and Water District 10
10 (now known as the Lake Whatcom Water and Sewer District) began meeting to
11 develop a joint management strategy for the Lake Whatcom watershed.

12 In November/December 1992, a joint resolution was passed by the Bellingham City
13 Council, Whatcom County Council, and the Lake Whatcom Water and Sewer District
14 (formerly Water District 10) Commissioners, which reaffirmed this position with six
15 general goal statements and a set of specific goal statements in various categories.
16 The specific goal statements for urbanization were the following:

- 17 • Prevent water quality degradation associated with development within the
18 watershed.
- 19 • Review and recommend changes in zoning and development potential that
20 are compatible with a drinking-water reservoir environment.
- 21 • In addition to zoning, identify and promote other actions to minimize
22 potential for increased development in the watershed (i.e. land trust,
23 development rights, cost incentives, etc.).
- 24 • Develop specific standards which reduce the impacts of urbanization, such as
25 minimal lot clearing; clustered development to reduce infrastructure;
26 collection and treatment of stormwater before entering the lake.
- 27 • Develop appropriate interlocal agreements with governing agencies to
28 prohibit the potential for additional development once an agreed upon level is
29 set.

30 The joint resolution included goals for watershed management that extended
31 beyond urbanization. Goals were included for stormwater management, on-site
32 waste systems, conservation, forest management, spill response, hazardous
33 materials transport and handling, data/information management, education/public
34 involvement, and other topics. A joint strategy was approved for developing specific
35 plans to meet the adopted goals. Eight high priority goals were selected first and
36 plans have been completed and jointly adopted for each of the goals.

37 In 1998, the City, County, and District 10 formalized their joint commitment to
38 protect and manage the lake through the joint adoption of an interlocal agreement
39 and allocation of funding toward protection and management efforts in the
40 watershed. A five-year program plan was developed for ten program areas. Specific
41 priority was placed on activities related to watershed ownership, stormwater
42 management, and urbanization/land development.

1 The resulting Lake Whatcom Management Program guides actions to protect Lake
2 Whatcom as a long-term supply of drinking water for the City of Bellingham and
3 portions of Whatcom County. The program emphasizes protection over treatment in
4 managing Lake Whatcom and its watershed. The structure of the Lake Whatcom
5 Management Program includes legislative bodies, a management team, an
6 interjurisdictional coordinating team, agency staff, and advisory committees.

7 The Lake Whatcom Watershed Management Program website
8 (<http://www.lakewhatcom.whatcomcounty.org/resources>) contains the management
9 plans, reports, and work programs, as well as the jurisdictions' pertinent
10 regulations and brochures on the different programs aimed at the various efforts to
11 improve water quality.

12 Sudden Valley

13 Sudden Valley is a community within the Lake Whatcom Watershed. It was
14 established in the early 1970s as a recreation/resort area but over the last thirty
15 years has developed into a significant residential area.

16 Since 1985, Sudden Valley has mandated the use of appropriate stormwater best
17 management practices through standards for individual stormwater detention for all
18 new construction. Any new building permits on existing lots must be able to
19 demonstrate that stormwater detention is included in the plan as a precondition to
20 issuance of a permit. Sudden Valley is also subject to additional regulatory
21 protections that apply to the Lake Whatcom Watershed under the Water Resource
22 Protection Overlay District, Stormwater Special District, and Water Resource Special
23 Management Area requirements. Under the provisions of these special districts,
24 potential impacts from impervious surfaces, stormwater runoff, and clearing
25 activities are required to be addressed either on-site or through a community-wide
26 process.

27 **Groundwater Protection & Management**

28 Groundwater is contained in aquifers, which are subterranean layers of porous rock
29 or soil. Most aquifers are replenished by rainwater, though some may contain water
30 trapped during glacial periods. Aquifers are often integrally linked with surface
31 water systems and are essential for meeting instream and out-of-stream water
32 needs, such as for drinking water, agriculture, and industry. Whatcom County
33 residents rely heavily on groundwater for drinking water, agriculture, and
34 commercial and industrial needs. Groundwater also plays an important role in
35 maintaining stream flows.

36 Many studies have been conducted related to groundwater quality in Whatcom
37 County documenting water quality issues, such as exceedances of standards for
38 nitrate, ethylene dibromide (EDB) and 1,2-dichloropropane (1,2-D), pesticides, iron
39 and other agricultural-related contaminants, particularly in the northern portion of
40 the County. In general, groundwater in Whatcom County is very vulnerable to
41 contamination because much of the County's groundwater lies within a shallow
42 unconfined aquifer. Activities that occur on the surface of the ground directly affect
43 groundwater quality. Shallow wells that draw water from unconfined water table
44 aquifers are at highest risk.

1 Whatcom County's Critical Areas Regulations protect Critical Aquifer Recharge Areas
2 (CARAs) during the development process, by precluding certain uses in CARAs
3 and/or requiring certain precautions be taken in handling certain chemicals.

4 **Flood Hazard Management**

5 A comprehensive approach to flood hazard management planning provides a better
6 understanding of the river and floodplain system. It also ensures flooding and
7 channel morphology problems are not simply transferred to another location within
8 the basin, but are addressed in a comprehensive, basinwide manner. This approach
9 directs future flood hazard management expenditures in the most efficient and cost
10 effective manner.

11 Whatcom County Public Works coordinates with the Flood Control Zone District
12 Advisory Committee (FCZDAC) to identify and characterize flooding problems and
13 provide recommendations for achieving consistent, long-term flood hazard
14 reduction strategies. Some activities typically involved in developing a
15 Comprehensive Flood Hazard Management Plan (CFHMP) include data collection,
16 hydraulic modeling, alternatives analysis, floodplain mapping, and meander limit
17 identification. In addition to the technical components in comprehensive flood
18 planning, extensive coordination with the public and other agencies is required
19 throughout the planning process.

20 Other County flood management programs include:

21 **Early Flood Warning** –Work with the United States Geological Survey (USGS)
22 to maintain a network of early flood warning stations to help citizens prepare and
23 take appropriate measures to protect lives and property from flood damages.

24 **Flood Hazard Reduction Program** – Implement projects to reduce future
25 flood damages and public expenditures to repair damaged areas. Examples include
26 construction of setback levees and overflow spillways, and designation of overflow
27 corridors in overbank areas. Two alluvial fan studies have been completed for Jones
28 Creek and Canyon Creek. For Jones Creek, review of potential mitigation measures
29 and concept design of a preferred approach has also been completed.

30 **Comprehensive Flood Hazard Management Planning** – Identify flooding
31 problems and provide recommendations for achieving long-term flood hazard
32 reduction strategies. The Lower Nooksack River Comprehensive Flood Hazard
33 Management Plan was adopted in 1999. Implementation of the plan is ongoing.

34 **Preparedness and Response** – Plan for and implement a coordinated
35 response during flood events to ensure public safety and minimize flood damages.

36 **National Flood Insurance Program** – Participate in the Congress-initiated
37 National Flood Insurance Program (NFIP) of 1968, to make affordable flood
38 insurance available to citizens of communities that adopt approved flood
39 management regulations.

40 **Repair and Maintenance Program** – Address problem areas with rivers,
41 streams, and coastlines of Whatcom County, and mitigate future flood damages in a
42 proactive and cost-effective manner.

1 **Technical Assistance** – Provide technical assistance regarding drainage and
2 flood issues to private citizens and businesses located along the many waterbodies
3 within Whatcom County.

4 **Organization**

5 Flood Control Zone District (FCZD)

6 Following the severe floods of 1989 and 1990, in 1992 Whatcom County created
7 the countywide Flood Control Zone District (FCZD), including both incorporated and
8 unincorporated areas of the County. The FCZD is a quasi-municipal corporation that
9 is a separate legal entity from Whatcom County government. Even though this legal
10 separation exists, the Whatcom County Council and the County Executive (Board of
11 Supervisors) and the Public Works Department (staff) perform the governance and
12 administrative support for the district.

13 The primary purpose of the FCZD is flood hazard management. Revenue generated
14 to for this purpose is accomplished in two ways: (1) a county-wide uniformly
15 applied tax; and, (2) supplemental revenue generated within localized Diking
16 Districts and Sub-Flood Districts where specific local project activity is planned.

17 While the primary purpose of the FCZD is flood hazard management, the district is
18 allowed to address a wide variety of water resource issues. Due to this ability,
19 revenue generated by the district is currently used to finance additional water
20 supply and water quality related improvement projects.

21 **Pertinent Documents**

22 Lower Nooksack River Comprehensive Flood Hazard Management Plan (CFHMP)

23 In 1999, the county adopted the Lower Nooksack River Comprehensive Flood
24 Hazard Management Plan (CFHMP). The CFHMP identifies projects, programs, and
25 other recommendations aimed at reducing future flood damages along the Lower
26 Nooksack River.

27 Critical Areas Regulations (WCC 16.16)

28 Whatcom County's Critical Areas Regulations aim to protect people and property in
29 Frequently Flooded Area (FFAs) by requiring development in these areas conforms
30 to WCC Title 17, Flood Damage Prevention.

31 **Stormwater Management**

32 Stormwater runoff occurs when precipitation from rain or snowmelt flows over the
33 land surface. The addition of roads, driveways, parking lots, rooftops, and other
34 surfaces that prevent water from soaking into the ground greatly increases the
35 runoff volume created during storms. This runoff is swiftly carried to our local
36 streams, lakes, wetlands and rivers and can cause flooding and erosion.
37 Stormwater runoff also picks up and carries with it many different pollutants that
38 are found on paved surfaces, such as sediment, nitrogen, phosphorus, bacteria, oil
39 and grease, trash, pesticides, and metals.

1 **County Stormwater Management Programs**

2 National Pollutant Discharge and Elimination System (NPDES) Phase II Permit

3 Stormwater runoff picks up pollutants as it travels over our developed landscapes
4 and is a major source of water quality problems. In 1987, the Federal Clean Water
5 Act was amended to address stormwater pollution. As a result, the United States
6 Environmental Protection Agency (EPA) created the National Pollutant Discharge
7 Elimination System (NPDES) to address stormwater runoff. States are required to
8 administer permits to local jurisdictions to regulate runoff as part of the NPDES
9 Program. The Permit is referred to as the "NPDES Phase II Permit" or "Phase II
10 Municipal Stormwater Permit".

11 In February of 2007, the Washington State Department of Ecology issued Whatcom
12 County's Phase II Municipal Stormwater Permit. This permit regulates discharges
13 from Small Municipal Separate Storm Sewers, and is part of the National Pollutant
14 Discharge and Elimination System (NPDES) and State Waste Discharge General
15 Permit. It sets forth requirements of municipalities to address stormwater runoff in
16 areas determined to have population densities reaching urban standards. Whatcom
17 County is required to implement various stormwater management strategies to
18 comply with this State permit.

19 The current Permit boundary covers approximately 15,000 acres and generally
20 includes the following areas (Figure 1):

- 21 • Bellingham Urban Growth Area
- 22 • Sudden Valley
- 23 • Portions of the Hillsdale and Emerald Lake area
- 24 • Portions along North Shore Drive on Lake Whatcom and Lake Whatcom
25 Boulevard
- 26 • Ferndale Urban Growth Area
- 27 • Portions along Chuckanut Drive and Chuckanut Bay
- 28 • Birch Bay Urban Growth Area

29 Additionally, though not within the NPDES permit area, the County has made the
30 entire Lake Whatcom watershed is subject to the illicit discharge detection and
31 elimination requirements of the Permit through ordinance and agreement with the
32 Department of Ecology.

33 Jurisdictions are allowed to discharge runoff into waterbodies of the State (such as
34 rivers, lakes, and streams) as long as they implement programs that protect water
35 quality by reducing pollutants to the maximum extent possible through
36 requirements of the NPDES Phase II Permit. Those requirements are reported and
37 submitted to the Department of Ecology through the Stormwater Management
38 Program (SWMP) and the Annual Compliance Report.

39 The Western Washington Phase II Municipal Stormwater Permit is required by the
40 State of Washington Water Pollution Control Law Chapter 90.48 RCW, and the
41 Federal Water Pollution Control Act Title 33 United States Code (Clean Water Act).
42 The Permit is administered by the Washington State Department of Ecology.

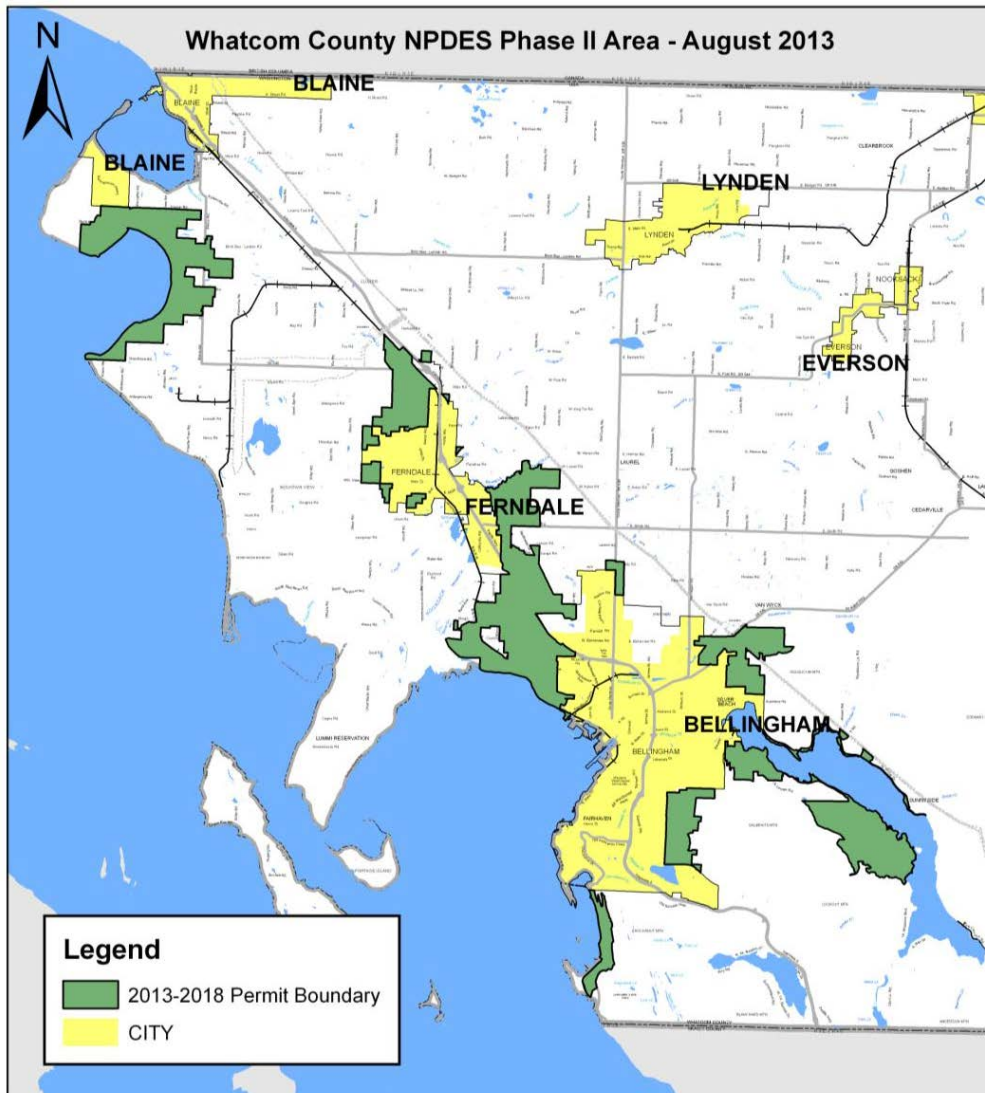

Figure 1. NPDES Phase II Boundaries

Pollution Identification and Correction (PIC) Program

Clean water supports healthy drinking water, safe recreational uses, quality water for irrigation and livestock, healthy fish, and shellfish that are safe to consume. Currently, many streams in Whatcom County do not meet water quality standards for fecal coliform bacteria. Fecal coliform bacteria are found in the intestinal tract of warm-blooded animals and when found in streams are an indicator of human or animal waste in the water. The higher the bacteria level, the greater the public health risk to people drinking water, wading, fishing, or consuming shellfish. The

1 Pollution Identification and Correction (PIC) Program was created to help implement
2 community solutions to clean water.

3 **Pollution** – The key potential sources of bacteria that have been identified in
4 Whatcom County coastal drainages are (1) **animal waste** from agricultural
5 operations, domestic pets, waterfowl, and wildlife, and (2) **human sewage** from
6 failing on-site sewage systems (OSS), leaking sewers, or cross-connections.

7 **Identification** – Whatcom County coordinates a routine water quality
8 monitoring program at approximately 90 stations in watersheds that discharge to
9 marine waters. Samples are collected on at least a monthly basis and analyzed for
10 fecal coliform bacteria. Results are evaluated annually to identify focus areas with
11 the largest bacteria problems. Within the focus areas, stream segments are
12 monitored and potential bacteria sources are identified.

13 **Correction** – Technical and financial resources are offered to landowners to
14 identify and implement solutions on their property. Residents can help improve the
15 community's water quality by inspecting and maintaining septic systems and by
16 fencing animals out of streams, ditches and swales. By actively managing pastures,
17 creating protected heavy use areas, and covering manure storage areas, residents
18 can prevent manure-contaminated mud from polluting surface water. Planting
19 shrubs and trees along stream banks and picking up after dogs also contributes to
20 better water quality.

21 **Issues, Goals, and Policies**

22 **Watershed Planning and Management**

23 **Goal 10F:** **Protect and enhance water quantity and quality and**
24 **promote sustainable and efficient use of water resources.**

25 Policy 10F-1: Maintain as a high priority the protection of water quality and
26 quantity.

27 Policy 10F-2: Actively participate in and support efforts to coordinate local,
28 federal, tribal, and state agencies to achieve integration and/or
29 consistency between the various levels of environmental
30 regulations relating to the County.

31 Policy 10F-3: Work cooperatively with Federal, State, and local jurisdictions,
32 Tribal governments, municipal corporations, and the public to
33 implement the goals and policies of the Comprehensive Plan as
34 well as state water resources and water quality laws.

35 Policy 10F-4: Participate in the coordination of all local water and land
36 management efforts, plans, and data to ensure adequate
37 oversight of water quantity and quality issues.

38 Policy 10F-5: Manage water resources for multiple instream and out-of-
39 stream beneficial uses, including instream flows set by the State
40 Department of Ecology.

41 Policy 10F-6: Actively promote and participate in education, research, and
42 information opportunities that improve our understanding of the

1 county's complex water resource systems. New information
2 should be considered in the development and evaluation of
3 management actions.

4 Policy 10F-7: Pursue the most effective methods for protecting water quantity
5 and quality, through both regulatory (e.g. zoning, enforcement,
6 fines) and non-regulatory approaches (education, incentives,
7 and technical/financial assistance). Emphasis shall be placed on
8 non-regulatory approaches where possible and effective.

9 Policy 10F-8: Track the development of policies and regulations at the local,
10 state, and federal level. Provide input to those regulations and
11 policies as necessary to ensure that the interests of Whatcom
12 County are considered.

13 Policy 10F-9: In conjunction with all jurisdictions, develop and adopt
14 programs to protect water quality and quantity within
15 watersheds, aquifers, and marine waterbodies that cross
16 jurisdictional boundaries.

17 Policy 10F-10: Promote awareness and participation in management and
18 protection efforts by individual citizens and the community as a
19 whole.

20 Policy 10F-11 Pursuant to ESSB 6091, Whatcom County will work through the
21 **Planning Unit and** WRIA 1 Watershed Management Board and its
22 established processes to update the WRIA 1 Watershed
23 Management Plan, consistent with ESSB 6091, for approval by
24 the Whatcom County Council by February 1, 2019. The updated
25 plan shall include recommendations for projects and actions that
26 will measure, protect, and enhance instream resources and
27 improve watershed functions that support the recovery of
28 threatened and endangered salmonids.

29 At a minimum, the watershed plan must include those actions
30 determined to be necessary to offset potential impacts to
31 instream flows associated with permit-exempt domestic water
32 use. The highest priority recommendations must include
33 replacing the quantity of consumptive water use during the
34 same time as the impact and in the same basin or tributary.
35 Lower priority projects include projects not in the same basin or
36 tributary and projects that replace consumptive water supply
37 impacts only during critical flow periods. The watershed plan
38 may include projects that protect or improve instream resources
39 without replacing the consumptive quantity of water where such
40 projects are in addition to those actions determined to be
41 necessary to offset potential consumptive impacts to instream
42 flows associated with permit-exempt domestic water use.

43 Watershed plan recommendations may include, but are not
44 limited to, acquiring senior water rights, water conservation,
45 water reuse, stream gaging, groundwater monitoring, and

1 developing natural and constructed infrastructure, which
2 includes, but is not limited to, such projects as floodplain
3 restoration, off-channel storage, and aquifer recharge.
4 Qualifying projects must be specifically designed to enhance
5 streamflows and not result in negative impacts to ecological
6 functions or critical habitat.

7 Until the updated watershed plan is approved and rules are
8 adopted, the County, in issuing building permits under RCW
9 19.27.097(1)(c) or approving subdivisions under chapter 58.17
10 RCW in WRIA 1 will comply with all of the specific requirements
11 of ESSB 6091.

12 **Surface Water and Groundwater**

13 **Goal 10G:** **Protect and enhance Whatcom County's surface water**
14 **and groundwater quality and quantity for current and**
15 **future generations.**

16 Policy 10G-1: Manage surface water systems on a watershed basis.

17 Policy 10-2G: Coordinate efforts to bring all water users in Whatcom County
18 into compliance with state and federal water laws in a way that
19 enhances stream flows, water quality, and fish and wildlife
20 habitat while advocating for adequate water for existing
21 agriculture.

22 Policy 10G-3: In conjunction with the public and appropriate local, state,
23 Tribal, and federal jurisdictions, define, identify, and develop
24 management strategies for watershed basins and subbasins that
25 may require special protection. These areas may include
26 aquifers, critical aquifer recharge areas as defined under the
27 Growth Management Act, Groundwater Management Areas,
28 wellhead protection areas, and high priority watersheds such as
29 those specified under WAC 400 (Local Planning and
30 Management of Non-point Source Pollution), WRIA Watershed
31 Management Planning, and under legislative policy direction
32 (e.g. Nooksack Basin, Lake Whatcom, Lake Samish and Drayton
33 Harbor).

34 Policy 10G-4: Management efforts should consider both water quality and
35 quantity. Water quality efforts should help reduce the likelihood
36 that potential contaminant sources will pollute water supplies.
37 Water quantity efforts should include consideration and
38 protection of recharge areas and potential effects on stream
39 flow.

40 Policy 10G-5: Support the implementation of local and state Watershed
41 Management Plans, the Lower Nooksack Strategy, the Lake
42 Whatcom Management Program, NPDES Phase II Permitting,
43 and the WRIA Watershed Management Projects.

- 1 Policy 10G-6: Pursue the adoption and implementation of ground and/or
2 surface water management plans and their integration into local
3 comprehensive plans. Designate the Lake Whatcom and Lake
4 Samish Watersheds as high priorities in this effort.
- 5 Policy 10G-7: Oppose the use of hydraulic fracturing in oil and gas wells (also
6 known as “fracking”) to avoid the potential degradation of water
7 quality in aquifers and other groundwater.
- 8 Policy 10G-8: Monitor, prevent, and reduce the establishment of invasive
9 species in Whatcom County waterbodies.
- 10 Policy 10G-9: Identify and/or update wellhead protection areas and critical
11 aquifer recharge areas and incorporate into the Critical Areas
12 Ordinance. This information should be available to the public.

13 **Stormwater and Drainage**

14 **Goal 10H: Protect water resources and natural drainage systems by**
15 **controlling the quality and quantity of stormwater runoff.**

- 16 Policy 10H-1: Manage stormwater runoff to minimize surface water quality and
17 quantity impacts and downstream impacts on channel
18 morphology, property owners, and aquatic species and habitats.
- 19 Policy 10H-2: Maintain or enhance, when appropriate, natural drainage
20 systems and natural water storage sites in order to better
21 protect water quality, moderate water quantity, minimize
22 environmental degradation, and reduce public costs.
- 23 Policy 10H-3: Limit the alteration of natural drainage systems and natural
24 water storage sites without mitigating measures. Such
25 measures should not degrade water quality or fish and wildlife
26 habitat and should not increase hazards to the community.
- 27 Policy 10H-4: Support the use by resource industries—such as agriculture,
28 forestry, and mineral resource extraction—of management
29 practices that minimize erosion and sedimentation, and
30 significantly reduce pollutants.
- 31 Policy 10H-5: Evaluate the role of watersheds in the maintenance of water
32 quality and quantity and determine what cumulative impacts
33 development activity may have on watershed hydrology.
- 34 Policy 10H-6: Develop specific stormwater management programs for each
35 drainage basin within the county's jurisdiction that may be
36 impacted by urban levels of development. Recognize the Lake
37 Whatcom Watershed, Lake Samish, and Drayton Harbor as high
38 priorities in this effort. Coordinate efforts with the Lake
39 Whatcom Policy Group, the various shellfish protection districts,
40 and other watershed management entities.

1	Policy 10H-7:	Establish, as a high priority, a stormwater maintenance program
2		that ensures that stormwater systems are adequately
3		maintained and function at or near design capacity.
4	Policy 10H-8:	Strongly incentivize the use of low impact development
5		strategies. Minimize the amount of impervious surface whenever
6		practicable by using natural engineering design methods such as
7		the use of open, grassed, street swales and rain gardens instead
8		of curbs and gutters. Where feasible, encourage alternate
9		surfacing options and other techniques associated with low
10		impact development (see Glossary).
11	Policy 10H-9:	Develop and administer stormwater management standards as
12		required by the NPDES Phase II Permit.
13	Policy 10H-10:	Develop and administer regulations and incentives such that
14		there is no net loss of ecological functions and values of
15		regulated wetlands and fish and wildlife habitats.
16	Policy 10H-11:	Place a high priority on integrating impervious surface reduction
17		incentives into policies, regulations, and standards.
18	Policy 10H-12:	Develop and implement comprehensive stormwater
19		management programs and strategies designed to address
20		runoff from all private and public developments and facilities
21		within regulated and sensitive watersheds.
22		1. Implement the Western Washington Phase II Municipal
23		Stormwater Permit as part of the National Pollutant
24		Discharge Elimination System (NPDES) Program. Incorporate
25		watershed considerations into the development of a
26		comprehensive stormwater management strategy for
27		designated areas.
28		2. Review Stormwater Special Districts Standards, Watershed
29		Protection Districts, and other related codes that address
30		runoff treatment from potentially polluting surfaces for their
31		applicability to other sensitive watersheds with the Technical
32		Advisory Committee and other appropriate agencies.
33		Coordinate efforts for ongoing monitoring and evaluation
34		within the sensitive watersheds and NPDES areas.
35		3. Amend subdivision, zoning, and other land use regulations
36		and design standards to encourage that land use activities
37		minimize the amount of impervious surface.
38		4. Identify and implement a long-term funding source to
39		provide for water resource protection services, including non-
40		point source identification and enforcement of applicable
41		county regulations.
42		5. Focus on the Lake Whatcom watershed as a high priority in
43		developing a stormwater management program. Develop a

stormwater management plan that achieves a uniform level of protection throughout the Lake Whatcom watershed. Ensure coordination and communication with the public and affected jurisdictions, such as the Lake Whatcom Water and Sewer District, the Sudden Valley Community Association, and the City of Bellingham.

6. Ensure existing stormwater standards are adequately enforced within Stormwater Special Districts, Watershed Protection Districts, and the NPDES areas.
7. Prioritize stormwater polluting areas and develop retrofits for areas most likely to impact sensitive waters.

Water Conservation

Goal 10-I: Support water conservation, reclamation, reuse measures, and education as a means to ensure sufficient water supplies in the future.

Policy 10I-1: Support and assist water users in the development of cost-effective means of improving efficiency of water use.

Policy 10I-2: Support efforts to establish and protect sustainable water supplies to meet existing and future demands for water in the county.

Policy 10I-3: Develop and implement plans to comply with the Department of Ecology's instream flow and water management rules and water resources management programs.

Policy 10I-4: Coordinate local water and land management efforts, plans, and data to ensure adequate oversight of water quality and quantity issues.

Policy 10I-5: Quantify water use to promote conservation.

Policy 10I-6: Use water use data to encourage conservation and maintain availability of water for agriculture and instream flow.

Policy 10I-7: Encourage the Department of Ecology to provide flexibility in the application of the water relinquishment rule simultaneous with establishing a water bank/water exchange program in Whatcom County in cooperation with stakeholders.

Lake Whatcom Watershed

Goal 10-J: Prioritize the Lake Whatcom watershed as an area in which to minimize development, repair existing stormwater problems (specifically for phosphorus), and ensure forestry practices do not negatively impact water quality. Provide sufficient funding and support to be successful.

1	Policy 10J-1:	Work with property owners to find acceptable development
2		solutions at lower overall densities than the present zoning
3		allows.
4	Policy 10J-2:	Develop and implement the fair and equitable funding
5		mechanisms called for in the 2008 Lake Whatcom
6		Comprehensive Stormwater Plan to support lake water quality
7		protections by 2018.
8	Policy 10J-3:	Recognize that all users of Lake Whatcom water have an
9		interest in the resource and should share in the cost of its
10		protection.
11	Policy 10J-4:	Work cooperatively with the City of Bellingham, the Lake
12		Whatcom Water and Sewer District, and applicable associations
13		and organizations to identify, review, and, as appropriate,
14		recommend changes to existing monitoring programs to better
15		improve lake water quality.
16	Policy 10J-5:	Evaluate and pursue, as appropriate, the use of incentives to
17		encourage voluntary lot consolidation, transfer or purchase of
18		development rights, current use taxation, and participation in
19		open space conservation programs.
20	Policy 10J-6:	Do not allow density bonuses within the Lake Whatcom
21		Watershed.
22	Policy 10J-7:	Work cooperatively with the City of Bellingham and the Lake
23		Whatcom Water and Sewer District to develop and track
24		benchmarks to determine: the effectiveness of management
25		options; when goals have been achieved; and/or when
26		additional actions are necessary.
27	Policy 10J-8:	Continue to develop and refine structural and non-structural
28		best management practices (BMPs), both voluntary and
29		required, to minimize development impacts within the Lake
30		Whatcom watershed.
31	Policy 10J-9:	Work to keep publicly-owned forest lands within the Lake
32		Whatcom watershed in public ownership, and support managing
33		forestry on these lands in a manner that minimizes sediment
34		and phosphorus yields from streams, and is consistent with Best
35		Available Science (BAS) data, in order to protect and enhance
36		water quality.
37	Policy 10J-10:	Encourage the location of public services, such as schools,
38		libraries, parks/open space, and post offices within Sudden
39		Valley in an attempt to reduce the vehicle miles traveled within
40		the watershed.
41	Policy 10J-11:	Continue to work with Bellingham and Lake Whatcom Water and
42		Sewer District to protect and manage the Lake Whatcom
43		watershed in accordance with the 1998 jointly adopted interlocal

1 agreement. Focus on continued implementation of the 5-Year
2 Work Plans of the Lake Whatcom Management Program. In
3 addition, work with the affected jurisdictions and secure funding
4 for programs that protect and enhance water quality.

5 Policy 10J-12: Review and modify (as needed) the current development review
6 process for projects in the Lake Whatcom Watershed to ensure
7 coordination with other jurisdictions to streamline regulations
8 that improve and protect water quality.

9 Policy 10J-13: The existence of sewer lines in the Rural and Rural Forestry
10 comprehensive plan designations will not be used to justify
11 rezoning property in the Lake Whatcom watershed to allow
12 higher density land uses.

13 Policy 10J-14: Existing Urban Growth Areas shall not be ~~designated or~~
14 expanded nor new Urban Growth Areas designated within the
15 Lake Whatcom Watershed, and rezones that allow greater
16 residential densities will not be allowed.

Comment [P/C3]: P/C struck

17 Ecosystems

18 Introduction

19 Ecological systems, or ecosystems, refer to the natural systems that have
20 developed within the geologic and geographic setting of Whatcom County.
21 Whatcom County contains a significant number of distinct ecosystem types, with
22 associated fish, wildlife, and plant species, as well as many other living organisms.
23 This biodiversity has evolved and adapted according to the specific physical and
24 climatic conditions of the county (Map 10-2, Map 10-3). Ecosystem goals and
25 policies are intended to provide guidance to county government as it assists people
26 to manage and protect these ecosystems. Additionally they ensure other benefits
27 are maintained far into the future.

28 Background Summary

29 Whatcom County provides a wide variety of natural habitats that support and
30 shelter a diverse array of fish and wildlife species. The county's wildlife is
31 particularly varied and abundant when compared to many other areas of
32 Washington State. There are a number of factors that have contributed to this:
33 abundant water resources, rich soils, mild climate conditions, and a moderate
34 degree of urbanization are among the most important. Among the habitats of
35 importance to fish and wildlife are the following:

- 36 • wetlands, lakes, and streams;
- 37 • nearshore, intertidal, estuarine habitats, and marine habitats including,
38 but not limited to, kelp and eelgrass beds;
- 39 • riparian areas and other travel corridors;
- 40 • snags and downed logs;
- 41 • forested habitats in a variety of successional stages;

- caves, cliffs, rocky balds, and talus slopes;
- grasslands and cultivated fields; and,
- thickets and fence rows.

Aquatic habitats include rivers, streams, ponds, lakes, and their riparian borders. Together, these habitats are essential to Whatcom County's fish and wildlife. Twenty-six species of fish—including twelve economically important stocks of salmon and trout—inhabit fresh water in Whatcom County for all or part of their life cycles. Healthy flowing streams and rivers, as well as off-channel wetland habitats, are essential to the survival of the majority of these fish. Wetland ponds, especially beaver ponds, provide optimal habitats for rearing and over-wintering of young fish, particularly Coho salmon and cutthroat trout juveniles.

Most wildlife species regularly use aquatic and riparian habitats for breeding, feeding, shelter, and migratory activities. Of this large grouping, over half are dependent upon wetland habitats at some point in their life cycles, and would decline or disappear in the absence of wetlands. Wetlands also contain unique vegetative communities that harbor many species of rare and unusual plants.

Fish and Wildlife Populations and Habitat

Optimum habitat for Pacific Northwest salmon and other fish is one that resembles the riparian landscape of pre-settlement times: braided streams wandering freely through nearly continuous forest; trees overhanging and partly fallen into streams; stream beds with abundant logs, step waterfalls, pools, and cutbanks; and vegetated marine and estuarine communities. In most cases, it is not realistic to return to that state. However, measures can be taken to retain or regain those features that provide the minimum requirements of a viable fishery.

The best habitat for native wildlife includes native plants, which are more closely matched to local soils, climate, and wildlife. They provide the right kinds of food, shelter, and diversity needed by wildlife. Native plants frequently need less watering, spraying, pruning, fertilizing, or other maintenance than do exotic or imported plants. Loss of native vegetation through conversion to ornamental vegetation and non-native species can result in loss of wildlife habitat, increased competition to native wildlife from introduced species, such as starlings, and increased maintenance needs. Loss of native vegetation also can occur through invasions of non-native species, such as the spread of *Spartina*, which can drastically displace important native eelgrass and mudflat communities.

Salmon Recovery Program

The decline of salmonids throughout Washington and the Pacific Northwest over the past century is well established. Since 1991, numerous evolutionarily significant units (ESUs) of Pacific salmonids have been listed as endangered or threatened under the Endangered Species Act (ESA), including those of chinook, coho, chum, sockeye, and steelhead. Decline in wild salmonid abundances have been attributed to widespread loss and degradation of habitat, due to hydropower, residential and urban development, agriculture, forestry, and fishing and hatchery production.

1 In the Nooksack basin, abundances of several salmonid stocks have diminished
2 substantially from historical levels. The declines in local salmonid stocks, especially
3 Chinook salmon, have had profound economic, cultural, and social impacts on the
4 greater WRIA 1 community. Direct impacts include reduced jobs and income for
5 commercial fisherman, severe curtailment of tribal and subsistence catch, and loss
6 of tourism associated with recreational fishing. In addition, ESA listings impose
7 constraints on the activities of local and tribal governments, businesses, the
8 agricultural community, and citizens, who must seek to avoid or minimize take of
9 listed species. Nonetheless, salmon remain an integral part of the natural and social
10 landscape of Whatcom County and the Nooksack River Watershed. Recent
11 watershed recovery planning and restoration efforts by federal, state, local, and
12 tribal governments, non-profit organizations, businesses, and private citizens
13 demonstrate a commitment to salmon recovery in WRIA 1.

14 The WRIA 1 Salmon Recovery Program is a multi-government planning effort with a
15 WRIA-wide scope to address salmon recovery and protection of ESA and non-ESA
16 listed salmonids.

17 WRIA 1 Salmon Recovery Strategy

18 The ultimate goal for salmon recovery in WRIA 1 is to recover self-sustaining
19 salmonid runs to harvestable levels through the restoration of healthy rivers and
20 natural stream, river, estuarine, and nearshore marine processes; careful use of
21 hatcheries; and responsible harvest, with the active participation and support of
22 local landowners, businesses, and the larger community. The purpose of the *WRIA*
23 *1 Salmonid Recovery Plan* is to identify the actions necessary to recover WRIA 1
24 salmonid populations, especially listed species, and to outline the framework for
25 implementation of recommended actions that have been agreed to by local, state,
26 tribal, and federal governments and stakeholders in WRIA 1. In the near term, the
27 objectives are to:

- 28 1. Focus and prioritize salmon recovery efforts to maximize benefit to the
29 two Nooksack early chinook populations;
- 30 2. Address late-timed Chinook through adaptive management, focusing in
31 the near-term on identifying hatchery versus naturally-produced
32 population components;
- 33 3. Facilitate recovery of WRIA 1 bull trout and steelhead by implementing
34 actions with mutual benefit to early chinook, bull trout, and steelhead, by
35 removing fish passage barriers in presumed bull trout and steelhead
36 spawning and rearing habitats in the upper Nooksack River watershed;
37 and
- 38 4. Address other salmonid populations by (a) protecting and restoring WRIA
39 1 salmonid habitats and habitat-forming processes through regulatory and
40 incentive based programs; and (b) encouraging and supporting voluntary
41 actions that benefit other WRIA 1 salmonid populations without diverting
42 attention from early chinook recovery.

43 Focusing efforts on early chinook is consistent with regional salmon recovery,
44 current abundance and productivity for the two populations is very low and

1 recovery of both populations is critical to delisting and recovery of the Puget Sound
2 Evolutionarily Significant Unit (ESU) for Chinook salmon.

3 *Salmon Recovery Board (SRB)*

4 WRIA 1 Salmon Recovery Board membership includes the County Executive,
5 Bellingham Mayor, Mayors of the Small Cities of Whatcom County, the regional
6 director of the Washington Department of Fish and Wildlife, and policy
7 representatives from Lummi Nation and Nooksack Indian Tribe.

8 The WRIA 1 Salmonid Recovery Plan (2005), a chapter of the Puget Sound Salmon
9 Recovery Plan, guides restoration in the Nooksack River and adjacent watersheds.
10 This plan was developed in partnership with Nooksack Tribe, Lummi Nation,
11 Washington Department of Fish and Wildlife, Bellingham, Whatcom County
12 Government, and the small cities of Whatcom County. Chinook salmon populations
13 (listed as threatened with extinction under the Federal Endangered Species Act) are
14 prioritized, yet the plan also provides the template for recovery of threatened
15 steelhead and bull trout and the other salmon and trout populations native to
16 Whatcom County.

17 The salmon plan was developed in parallel with the WRIA 1 Watershed Management
18 Plan. Salmon habitat is intricately linked to watershed management; salmon
19 recovery will be most successful when fish habitat objectives are carefully
20 coordinated with watershed management objectives. Integrating salmon recovery
21 with flood hazard management and restoring fish passage under County roads are
22 two primary areas of focus.

23 **Marine Resources Management**

24 Marine habitats include all saltwater bodies and their shorelines, kelp and macro
25 algae beds, eelgrass meadows, salt marshes, beaches, and mudflats. These
26 habitats play a vital role in the health of the local environment, as well as of the
27 broader Puget Sound region. They provide spawning, rearing, and feeding grounds
28 for a wide variety of marine life, as well as refuge for juvenile and adult fish, birds,
29 and shellfish. The vegetation on back-shore marshes and within estuaries buffers
30 adjacent upland areas by absorbing wave energy and slowing erosion.

31 Symptoms of ecosystem stress include: declining stocks of salmon, bottomfish, and
32 forage fish; closures of recreational and commercial shellfish beds; degradation and
33 losses of eelgrass beds, kelp forests, and other marine habitats; and dwindling
34 populations of seabirds and marine mammals.

35 The Northwest Straits Marine Conservation Initiative was authorized by Congress in
36 1998. The Initiative established the Northwest Straits Commission and Marine
37 Resources Committees (MRCs) in seven western Washington counties, including
38 Whatcom County. The MRCs' main purpose is to guide local communities, using up-
39 to-date information and scientific expertise, to achieve the important goals of
40 resource conservation and habitat protection within the Northwest Straits. The
41 Whatcom County MRC acts as an advisory committee to the Whatcom County
42 Council.

1 Shellfish Recovery

2 Many of the marine waterbodies in Whatcom County support natural and cultured
3 bivalve shellfish, including oysters and many species of clams. The warm, nutrient-
4 rich tide flats in and around Lummi, Portage, and Birch Bays; Drayton Harbor; and
5 Eliza and Lummi Islands represent unique water resources in this regard.
6 Commercial shellfish growers, recreational clam and oyster harvesters, and Native
7 Americans have used this resource for many years. It is an important part of our
8 community's heritage.

9 Our ability to grow and harvest shellfish that is safe for human consumption is
10 directly linked to surface water quality and the influence it has on marine waters.
11 The primary measure of water quality for shellfish harvesting is bacterial
12 contamination. There are many potential sources of fecal bacteria, such as
13 municipal sewage treatment plants, on-site sewage systems, boat waste, farm
14 animals, pets, and wildlife. Since 1995, valuable shellfish beds in Portage Bay and
15 Drayton Harbor have been downgraded (harvest prohibited) due to non-point
16 pollution impacting recreational, tribal, and commercial harvesting. In 2014,
17 Portage Bay was identified as a threatened Shellfish Growing Area by the
18 Washington Department of Health. (Washington Department of Health, 2014)

19 *Shellfish Protection Advisory Boards*

20 Whatcom County has three Shellfish Protection District Advisory Committees, one
21 for each of the Shellfish Protection Districts: Birch Bay, Drayton Harbor, and
22 Portage Bay. Each advises the County Council on proposed actions and operations
23 relating to the restoration of water quality in their respective watersheds.

24 *Shellfish Recovery Plans*

25 Shellfish Recovery Plans have been created for each of three districts. The plans
26 outline the primary sources of bacteria and actions to improve water quality:

- 27 • Drayton Harbor Shellfish Recovery Plan (2007)
- 28 • Portage Bay Shellfish Recovery Plan (2014), Portage Bay Initial Closure
29 Response Strategy (1998)
- 30 • Birch Bay Initial Closure Response Strategy (2009)

31 *Pertinent Documents*

- 32 • Whatcom Marine Resources Committee 2011 - 2015 Strategic Plan (2010)

33 This document outlines the MRC's mission, vision, values, goals, objectives, and
34 strategies for achieving them.

35 **Shoreline Management Program**

36 ~~The State Legislature passed the Washington State Shoreline Management Act~~
37 ~~(SMA) in June 1971. The SMA was overwhelmingly passed by public initiative in~~
38 ~~1972. Under the SMA, each county and city was required to prepare a shoreline~~
39 ~~"master program" in accordance with the shoreline guidelines issued by the State~~
40 ~~Department of Ecology in 1972.~~

41 ~~The Whatcom County Shoreline Management Program (SMP), WCC Title 23, is the~~
42 ~~document that implements the goals and policies of the SMA at the local level. It~~
43 ~~was adopted in 1976 in accordance with RCW 90.58. The goals and policies of the~~

Comment [CES4]: Moved to Ch. 11.

1 ~~Whatcom County Shoreline Management Program also constitute the shoreline~~
2 ~~component of the Whatcom County Comprehensive Plan.~~

3 ~~Under the provisions of the SMA, all development along shorelines of the state is~~
4 ~~required to comply with the provisions of local shoreline master programs. The~~
5 ~~Whatcom County Shoreline Management Program works with other chapters of the~~
6 ~~Whatcom County Code to protect and preserve saltwater and freshwater shorelines~~
7 ~~throughout the county by managing natural resources and directing development~~
8 ~~and land use suitable for the shoreline environment.~~

9 ~~The Whatcom County Shoreline Management Program jurisdiction includes:-~~

- 10 ~~• More than 130 miles of marine shoreline;~~
- 11 ~~• More than 60 miles of lake shoreline;~~
- 12 ~~• More than 220 miles of stream channels; and,~~
- 13 ~~• All wetlands and floodways associated with the above shorelines, together~~
14 ~~with all upland areas within 200 feet of the Ordinary High Water Mark~~
15 ~~(OHWM).~~

16 ~~Whatcom County and the Washington State Department of Ecology (DOE) share~~
17 ~~joint authority and responsibility for the Whatcom County SMP. Whatcom County~~
18 ~~Planning and Development Services is the primary agency responsible for~~
19 ~~implementation of the Whatcom County Shoreline Management Program.~~

20 **Issues, Goals, and Policies**

21 **General – Ecosystems**

22 Development and urbanization of the land base have and may continue to result in
23 the degradation and reduction of ecosystem functions. Wetlands and estuaries
24 continue to be lost incrementally. Streams and their adjacent riparian habitat are
25 affected by land clearing, ditching, erosion, and road building. Lakeshore
26 development degrades the foreshore environment for waterfowl and other species,
27 as well as negatively affecting water quality. It is estimated that Washington has
28 also lost approximately one-third of its historic eelgrass beds from a variety of
29 causes, including dredging, shading, and filling. Large-diameter snags and downed
30 logs, an essential feature for dozens of wildlife species, are lost during clearing or
31 intensive forest management. Forested habitats are lost to a number of
32 development processes including urbanization, agriculture, increased rural/
33 suburban housing density, and timber harvesting. The delicate environment of cliffs
34 and caves may be affected by housing development, mining, and other activities.
35 Conversely, grasslands, thickets, fields, and fence rows are habitats largely
36 provided and enhanced by human activities, and are thus fairly abundant and
37 stable within the developing county. The existence of farms, in particular, has
38 contributed to an abundance of these more open, pastoral habitats.

39 Many stream systems in Whatcom County have been altered by agriculture,
40 forestry, development, and flood control practices, contributing to low stream flows,
41 fisheries loss, water pollution, sedimentation and other problems. These impacts
42 can directly affect the fisheries resources by depositing silt and debris into
43 spawning beds, by removing trees that shade and cool the water, bank armoring,

1 interfering with the recruitment and establishment of large woody debris (LWD), by
2 obstructing fish passage with culverts and roads, by altering natural channels
3 through filling, bank hardening, and channelizing. In addition, the physical
4 processes that create functional habitats for fish life stages are altered by
5 increasing flows through stormwater runoff or consuming water volume for other
6 out-of-stream uses.

7 Finally, a healthy and functioning ecosystem, including forests, wetlands, fish,
8 wildlife, and native plants they harbor, is an identified resource. A healthy
9 ecosystem supports diverse and abundant wildlife, fish, and plant populations, and
10 is necessary. The gathering of fish, game, and other natural resources forms a
11 central aspect of many cultures in Whatcom County. The mere presence of these
12 natural resources constitutes a community amenity that is a substantial part of our
13 local economic base.

14 **Goal 10K: Protect and enhance ecosystems, which provide**
15 **economic, ecological, aesthetic, and cultural benefit.**

16 Policy 10K-1: Define and identify species, habitats, and habitat features
17 important to a balanced and sustainable web of life, biodiversity,
18 and especially important to fish, native plants, and wildlife.
19 Create, and regularly update an Ecosystem Report.

20 Policy 10K-2: Develop and adopt programs that protect habitats essential to
21 the conservation of species that have been identified as
22 endangered, threatened, or sensitive by the state or federal
23 government as well as habitats identified as necessary in the
24 Ecosystem Report. These programs should maintain and
25 encourage restoration of habitat conditions for listed species of
26 concern, as well as habitats identified as having significant
27 biodiversity, connectivity, and other important features and
28 functions.

29 Policy 10K-3: Develop incentives for protection of environmentally fragile
30 areas or critical plant and wildlife habitats as well as habitats
31 that provide connectivity (corridors).

32 Policy 10K-4: Where feasible, incorporate fish and wildlife habitats into public
33 capital improvement projects.

34 Policy 10K-5: Provide measures to mitigate negative water quality and
35 quantity impacts from both public and private alterations of
36 natural drainage systems.

37 Policy 10K-6: Consider sensitive fish, shellfish, and wildlife species and their
38 habitats when establishing zoning densities and patterns.

39 Policy 10K-7: Promote voluntary fish and wildlife habitat enhancement
40 projects through educational and incentive programs, such as
41 purchase of development rights or habitat conservation
42 easements. These projects, which can be done by individuals,
43 organizations, and businesses, will buffer and expand fish,
44 plant, and wildlife habitat.

- 1 Policy 10K-8: Give careful consideration to the siting of industrial, commercial,
2 residential, and other land use designations when located near
3 important marine, terrestrial, or other critical habitats.
- 4 Policy 10K-9: Protect, retain, and enhance the beneficial uses and functions of
5 streams and rivers. Define and identify the beneficial uses and
6 functions of streams and rivers, including wildlife and fisheries
7 habitat, water quality, open space, aesthetics, and recreation.
- 8 Policy 10K-10: Protect and enhance ecosystem functions when flood hazard
9 management measures are used.
- 10 Policy 10K-11: Regulate the operation of river gravel extraction activities in
11 such a manner so as to provide long-term protection of fish and
12 wildlife habitat and water quality.
- 13 Policy 10K-12: Ensure design and development of residential and industrial
14 development minimizes disturbance to rivers, streams, and
15 functioning riparian areas.
- 16 Policy 10K-13: Evaluate the full value of the fishery; including its cultural and
17 economic value; in land use decisions that may impact that
18 fishery. Unavoidable impacts to an individual habitat or fishery
19 shall be mitigated.
- 20 Policy 10K-14: Continue to consider the value of wildlife populations for which
21 habitat conservation areas have been identified in PDS's wildlife
22 habitat mapping, their associated habitats, and connectivity in
23 land use planning that may impact them. This is not intended to
24 require landowners to pay for any additional studies.
- 25 Policy 10K-15: Mitigation to Habitat Conservation Areas should be tracked and
26 monitored to ensure no net loss to natural area.
- 27 Policy 10K-16: Monitor Habitat Conservation Areas to obtain a baseline of
28 current conditions and to ensure no net loss and avoidance of
29 cumulative impacts.

30 **Fish and Wildlife Populations and Habitat**

- 31 **Goal 10L:** **Protect and enhance ecosystems that support native fish**
32 **and wildlife populations and habitat.**
- 33 Policy 10L-1: Strongly discourage any activity that might cause significant
34 degradation of the fishery resource or habitat.
- 35 Policy 10L-2: Support the protection and enhancement of significant fish
36 spawning and rearing habitat, food resources, refugia (shelter),
37 and travel passages.
- 38 Policy 10L-3: Establish non-regulatory mechanisms and incentives for
39 development that accommodates the habitat needs of fish and
40 wildlife and encourages good stewardship practices.

1	Policy 10L-4:	Support protection and enhancement of fish and wildlife habitat
2		through site design in new development.
3	Policy 10L-5:	Native vegetation and soils on streambanks and shorelines
4		should be disturbed as little as possible. In situations where re-
5		vegetation is necessary to restore streambank or shoreline
6		stability and provide shading, site-specific native plants should
7		be used. Retention of vegetated riparian areas on all lake and
8		marine shorelines shall also be encouraged.
9	Policy 10L-6:	Discourage shoreline armoring. Instead, encourage natural or
10		bio-engineering solutions such as planting native vegetation,
11		engineered log jams/LWD, and beach nourishment along
12		eroding banks to address stream and shoreline bank erosion
13		problems. Riparian buffers should be replanted with suitable
14		native vegetation as a part of all bank stabilization projects.
15	Policy 10L-7:	Encourage native vegetation and soil retention and plantings
16		that provide or maintain the beneficial uses and functions of
17		streams, rivers, lakes, and marine shorelines.
18	Policy 10L-8:	Maintain and encourage restoration of habitat functions for
19		threatened and endangered fish species.
20	Policy 10L-9:	Use Best Available Science to inform the creation of regulations
21		to mitigate adverse impacts of development adjacent to rivers,
22		streams, and marine shorelines.
23	Policy 10L-10:	Encourage landowners to voluntarily protect surface water
24		quality with filter strips or other appropriate water cleansing
25		mechanisms installed between lawns, landscaping, livestock
26		pens, or agricultural fields and waterbodies.
27	Policy 10L-11:	Formulate and implement a comprehensive, landscape-based,
28		environmental management program to protect fish and wildlife.
29		The program should include the following:
30		1. Formulate an administrative approach to the review of
31		development and planning proposals that consider natural
32		system policies;
33		2. Investigate and develop programs for acquisition and
34		restoration of important fish and wildlife habitat areas;
35		3. Develop and enter into cooperative agreements with State
36		and Federal agencies and neighboring jurisdictions to identify
37		and protect ecosystems;
38		4. Identify and map important habitat corridors and
39		connectivity throughout the county; and,
40		5. Support the development of educational materials which list,
41		describe, and characterize the appropriate use of native
42		vegetation to enhance ecosystem functions in Whatcom
43		County.

- 1 Policy 10L-12: Consider establishing formal meander limits for the Nooksack
2 River, precluding additional development within this zone, and
3 promote the River and Flood property acquisition program
4 within these areas.
- 5 Policy 10L-13: Diligently work to prevent and/or reduce the establishment
6 and/or spread of invasive species.
- 7 Policy 10L-14: Actively participate in and support WRIA 1 Salmon Recovery
8 efforts to return self-sustaining salmonid runs to harvestable
9 levels through: the restoration of healthy rivers, marine
10 shorelines, and natural processes; the careful use of hatcheries;
11 and responsible harvest.
- 12 Policy 10L-15: Participate in protection and improvement of biodiversity.
- 13 Policy 10L-16: Consider establishing important habitat areas as sending
14 areas after creating a voluntary, workable transfer of
15 development rights (TDR) program.
- 16 Policy 10L-17: Mitigation of wetlands should be reviewed and tracked over time
17 to ensure no net loss of wetland function.
- 18 Policy 10L-18: A baseline of wetland identification and function should be made
19 to track and prevent net loss and avoid cumulative impacts.
- 20 Policy 10L-19: The County will support the work of the Fisheries Co-managers
21 (Lummi Nation, Nooksack Tribe, and the State Department of
22 Fish and Wildlife) and stakeholders to establish a sustainable
23 salmon harvest goal for the Nooksack Basin.

24 Wetlands

25 Wetlands are crucial environmental features in Whatcom County. Wetlands provide
26 invaluable functions in aquifer recharge, groundwater storage, floodwater
27 detention, pollutant removal and purification of water supplies, as well as provision
28 of fish and wildlife habitat. Loss of wetlands has been due to many factors,
29 including urbanization, agricultural development, and drainage projects.

30 A plethora of complex and often confusing laws govern the definition, delineation,
31 and protection of wetlands. These laws originate at national, state, and county
32 levels. Land managers and private citizens often experience difficulty in
33 interpreting, synthesizing, and applying wetland regulations. In general, however,
34 state regulations must comply with federal standards and local regulations must
35 comply with both federal and state standards.

36 Goal 10M: Conserve and enhance regulated wetlands.

- 37 Policy 10M-1: Recognize natural wetlands such as swamps, bogs, saltwater
38 marshes, and ponds for their value in cleaning water, reducing
39 flood damage, providing valuable habitat for plants, fish and
40 wildlife, and as sites for groundwater recharge.

Comment [P/C5]: This proposed amendment is not part of the SMP Update. Rather, it is a policy the Council expressed in interest in adding in support of the fisheries co-manager's Sustainable Salmon Harvest Goal. Adding such a policy was placed on the docket by Council in 2018 (#PLN2018-00010).

1	Policy 10M-2:	Develop and adopt criteria to identify and evaluate wetland
2		functions that meet the Best Available Science standard and
3		that are consistent with state and federal guidelines.
4	Policy 10M-3:	Biological functions of wetlands are complex and interwoven.
5		Evaluate the full range of potential and immediate economic
6		impacts in land use decisions relating to wetlands, including
7		fisheries, wildlife, recreation, farmlands, sustainable resources,
8		air and water quality, flood hazard management, real estate,
9		cultural attributes, and other uses.
10	Policy 10M-4:	Encourage land development to avoid wetland impacts. Impacts
11		to regulated wetlands should be contingent upon full mitigation
12		measures that equitably compensate for wetlands impacts, on a
13		case-by-case basis. Approved mitigation measures shall include
14		resources for long-term monitoring and adaptive management
15		of mitigation outcomes to assure effectiveness. Strongly
16		discourage alteration of land that results in the degradation of
17		type 1 and 2 wetlands.
18	Policy 10M-5:	Property rights and public services are essential components of
19		our political and economic system. Where such rights and public
20		services are significantly compromised by the goal of wetland
21		preservation, adverse wetland impacts may be permitted
22		through standardized mitigation. This may include avoidance,
23		impact minimization, restoration, enhancement, creation, or off-
24		site compensation for loss of wetland functions in accordance
25		with mitigation sequencing.
26	Policy 10M-6:	Recognize beneficial wetland uses, functions, and values.
27		Support protection of fish and wildlife habitat, water quality,
28		plant diversity, flood attenuation and low-flow contribution, and
29		water storage through planning, acquisition, incentive programs,
30		and mitigation.
31	Policy 10M-7:	Development applications should be assessed on a case-by-case
32		basis so that marginal wetlands are not preserved at the
33		expense of upland areas with higher habitat value.
34	Marine Habitat	
35	Goal 10N:	Protect and enhance marine ecosystems and resources in
36		Whatcom County.
37	Policy 10N-1:	Support the Whatcom County Marine Resources Committee in
38		its pursuit of the Northwest Straits Commission benchmarks as
39		follows:
40		▪ Broad county participation in MRCs;
41		▪ A net gain in high-value habitat and ecosystem functions;
42		▪ A net reduction in shellfish bed closures;

1		▪ Measurable increases in factors supporting bottomfish recovery;
2		
3		▪ Population increases in other key indicator species;
4		▪ Coordination of scientific data;
5		▪ Successful public education and outreach efforts; and,
6		▪ The establishment of a regional system of Marine Protected Areas (MPA's).
7		
8	Policy 10N-2:	Promote naturalized shoreline buffers and restoration of riparian vegetation.
9		
10	Goal 10P:	Protect and enhance shellfish habitat in commercial and recreational areas to ensure a productive resource base for long-term use.
11		
12		
13	Policy 10P-1:	Identify and designate marine shellfish habitat for commercial and recreational uses.
14		
15	Policy 10P-2:	Restore degraded waters within the drainage basins of shellfish growing areas to a level that allows/supports shellfish harvesting by work with the Department of Ecology, Tribes, Department of Health, Department of Fish and Wildlife, and affected property owners to improve water quality.
16		
17		
18		
19		
20	Policy 10P-3:	Protect shellfish resources by means of pollution prevention and enforcement when necessary. This should include surface and groundwater monitoring for early detection of pollution to minimize the damage and cost of resource restoration.
21		
22		
23		
24	Policy 10P-4:	Improve knowledge of the importance of protecting, preserving, and improving the quality of shellfish habitat within the County. Seek out valuable partnerships that will raise awareness, provide education, and enhance shellfish habitat.
25		
26		
27		
28	Policy 10P-5:	Develop Low Impact Development standards in shellfish habitat areas.
29		
30	Policy 10P-6:	Identify and encourage the use of stormwater treatment systems and Best Management Practices to reduce fecal coliform bacteria levels in stormwater discharging directly into shellfish habitat areas.
31		
32		
33		
34	Policy 10P-7:	Solicit input from the Shellfish Protection District advisory committees and appropriate state, federal, and tribal agencies when considering updates to the Comprehensive Plan that relate to shellfish protection.
35		
36		
37		
38	Policy 10P-8:	Identify and restore functions, selected through best available landscape-based science, of key wetland areas.
39		
40	Policy 10P-9:	Modify county roadside ditch maintenance procedures to protect water quality.
41		

- 1 Policy 10P-10: Continue to partner with jurisdictions in British Columbia to
2 minimize impacts on water quality, including what affects
3 shellfish habitat.
- 4 Policy 10P-11: Work within the structure of County programs such as the WRIA
5 Watershed Management Planning process to achieve
6 improvements in land use Best Management Practices that will
7 positively affect change in marine water quality.
- 8 Policy 10P-12: Continue to develop programs that identify potential pollution
9 sources and ensure timely and science-based approaches are
10 used in response to problems as they arise.
- 11 Policy 10P-13: Develop educational tools and opportunities to raise public
12 awareness of marine issues and to inform them of how they can
13 have a positive impact by helping preserve these marine
14 resources.
- 15 Policy 10P-14: Identify areas (such as wetlands and the nearshore
16 environment) that are important to shellfish habitat
17 preservation. Also identify river and stream processes that
18 adversely impact shellfish habitat. Use this information when
19 making land use management and preservation decisions.
- 20 Policy 10P-15: Create a tracking mechanism to document progress made
21 toward improving downgraded shellfish areas. This information
22 will be useful not only in supporting an upgrade when water
23 quality shows improvement, but also in preventing degradation
24 in currently approved shellfish areas.
- 25 Policy 10P-16: Work with the County Shellfish Advisory Committees, Marine
26 Resources Committee, Salmon Recovery Fund Board, WRIA
27 Watershed Management Board, and other local, state, federal,
28 and tribal agencies to address issues associated with shellfish,
29 shellfish area closures, and shellfish habitat.
- 30 Policy 10P-17: Consider establishing the Drayton Harbor Watershed as a
31 sending area when considering a transfer of development rights
32 (TDR) program in.
- 33 Policy 10P-18 Support the Department of Health's On-Site Sewage System
34 (OSS) Program as a means to lower degradation of our
35 waterways.

36 **Other Marine and Marine Dependent Organisms and Systems**

37 Our Marine system supports not only local, critical, and global fisheries resources,
38 but also a myriad of interdependent organisms, the importance of which we lack
39 the capacity to fully grasp. The Marine ecosystem is a complex web of life that is
40 increasingly affected by anthropogenic impacts. Toxics, hormones, heavy metals,
41 and other harmful substances flushed into nearshore and marine environments with
42 stormwater have been shown to have deleterious cumulative impacts on a range of
43 aquatic and marine dependent organisms. Whatcom County will take steps to halt

1 the practice of treating its streams and rivers as a storm sewer and the marine
2 system as a water treatment facility.

3 Policy 10P-19: Promote Best Management Practices, land use, and stormwater
4 policies that result in a minimal release of harmful chemicals
5 and metallic substances into surface water and the marine
6 environment.

Chapter Eleven Shorelines

Introduction

The State Legislature passed the Washington State Shoreline Management Act (SMA) in June 1971. The SMA was overwhelmingly passed by public initiative in 1972. Under the SMA, each county and city was required to prepare a shoreline "master program" in accordance with the shoreline guidelines issued by the State Department of Ecology in 1972.

The Whatcom County Shoreline Management Program (SMP), ~~WCC Title 23~~, is the set of policies and regulations document that implements the goals and policies of the SMA at the local level. It was first adopted in 1976 in accordance with RCW 90.58. The goals and policies of the Whatcom County ~~Shoreline Management Program SMP~~ also constitute the shoreline component of the Whatcom County Comprehensive Plan.

The Whatcom County Shoreline Management Program jurisdiction includes:

- More than 130 miles of marine shoreline;
- More than 60 miles of lake shoreline;
- More than 220 miles of stream channels; and,
- All wetlands and floodways associated with the above shorelines, together with all upland areas within 200-feet of the Ordinary High Water Mark (OHWM).

Whatcom County and the Washington State Department of Ecology (DOE) share joint authority and responsibility for the Whatcom County SMP. Whatcom County Planning and Development Services is the primary agency responsible for its implementation of the ~~Whatcom County Shoreline Management Program~~.

Chapter Organization

This chapter is composed of an introduction and five sections organized by topic heading. The first section, entitled "Overall SMP Goals and Objectives," addresses general shoreline goals and objectives. The next provides the purposes, designation criteria, and policies for the County's various shoreline area designations. The third section contains the County's policies for Shorelines of Statewide Significance. The fourth section provides the general policies that apply to all area designations. And the fifth section provides the policies specific to the type of use proposed. Together with the regulations of WCC Title 23, the sections of this chapter provide the direction necessary to ensure and promote long-term sustainability of the shorelines in Whatcom County.

Purpose

This chapter together with WCC Title 23 comprises Whatcom County's Shoreline Management Program. This chapter contains the SMP's goals, objectives, and policies, while its regulations are found in WCC Title 23. All development proposed

Comment [CES1]: The P/C reviewed this version at their 11.12/20 mtg but didn't quite finish with it. Does include some of their changes.

Moved to tentatively approve for public hearing at their 12/10/20 mtg. Passed 8-0-1

Comment [CES2]: Much of text was moved from either C/P Ch. 10 or Title 23, and is not shown as being new. Proposed amendments to the existing text are shown as strikeout/underline.

1 within jurisdictional shorelines must be consistent with both the policies of this
2 chapter and the regulations of WCC Title 23.

3 The Shoreline Management Act (SMA) was developed and adopted to protect “the
4 most valuable and fragile of [the state’s] natural resources from the “inherent harm
5 in uncoordinated and piecemeal development of the state’s shorelines” (quotes
6 from RCW 90.58.020). The SMA in Chapter 90.58 RCW contains three distinct but
7 related priorities:

8 1. The promotion of shoreline uses that are both water-oriented and
9 appropriate for the broader environmental context. Developments such as
10 single family residences, recreational areas, and water-dependent businesses
11 such as marinas are considered priority uses provided they are constructed in
12 a manner “consistent with control of pollution and prevention of damage to
13 the environment” (quote from RCW 90.58.020).

14 2. The SMA requires local governments to take an active role in protecting the
15 shoreline ecology: the water, the land, the vegetation and the wildlife. The
16 state guidelines are explicit: “Local master programs shall include regulations
17 and mitigation standards ensuring that each permitted development will not
18 cause a net loss of ecological functions of the shoreline.” (WAC 173-26-
19 186(8)(b)(i).)

20 3. The SMA also promotes public access to the shoreline by requiring protection
21 of existing public access features and requiring certain types of new
22 development to include public access.

23 The SMP regulations (WCC Title 23) apply to individual projects, and impacts of
24 shoreline development are evaluated on a project-by-project basis. However, the
25 SMP goals and policies, shoreline designations, regulations, and the restoration plan
26 are comprehensively structured to achieve no net loss of shoreline ecological
27 functions as a whole in Whatcom County.

28 **GMA Goals and Countywide Planning Policies**

29 First adopted in 1990, The Growth Management Act (GMA) is a series of state
30 statutes that requires fast-growing cities and counties to develop a comprehensive
31 plan to manage their population growth. It is primarily codified under Chapter
32 36.70A RCW, although it has been amended and added to in several other parts of
33 the RCW. Under RCW 36.70A.020, the GMA established a series of 13 goals that
34 should act as the basis of all comprehensive plans. In 2003, the legislature added
35 the goals and policies of the Shoreline Management Act as the fourteenth GMA goal
36 (RCW 36.70A.480). The shoreline goals may be found at RCW 90.58.020.

37 As of this time, there are no Countywide Planning Policies that address
38 development in the shoreline.

39 **~~GMA-SMA~~ Requirements**

40 Under the provisions of the SMA, all development along shorelines of the state is
41 required to comply with the provisions of local shoreline master programs. The
42 Whatcom County ~~Shoreline Management Program~~SMP works with other chapters of

the Whatcom County Code to protect and preserve saltwater and freshwater shorelines throughout the county by managing natural resources and directing development and land use suitable for the shoreline environment.

~~23.10.030~~ Governing Principles

Comment [CES3]: These principles have been moved from 23.10.030.

The following principles, along with the policy statements of RCW 90.58.020 and the principles of Chapter 173-26 WAC, establish basic concepts that underpin the goals, policies, and regulations of the SMP Shoreline Management Plan (SMP) ~~this program~~:

- A. Any inconsistencies between the SMP ~~this program~~ and the Shoreline Management Act (SMA) ~~Act~~ must be resolved in accordance with the SMA ~~Act~~.
- B. The policies of the SMP ~~this program~~ may be achieved by diverse means, one of which is regulation. Other means, authorized by the SMA ~~Act~~, include, but are not limited to: acquisition of lands and/or easements by purchase or gift, incentive programs, and implementation of capital facility and/or nonstructural programs.
- C. Protecting the shoreline environment is an essential statewide policy goal, consistent with other policy goals. Permitted and/or exempt development, actions taken prior to the SMA ~~Act~~'s adoption, and/or unregulated activities can impair shoreline ecological processes and functions. The SMP ~~this program~~ protects shoreline ecology from such impairments in the following ways:
 1. By using a process that identifies, inventories, and ensures meaningful understanding of current and potential ecological functions provided by shorelines.
 2. By including policies and regulations that require mitigation of **significant** adverse impacts in a manner that ensures no net loss of shoreline ecological functions. The required mitigation shall include avoidance, minimization, and compensation of impacts in accordance with the policies and regulations for mitigation sequencing in WCC 23-~~90.030~~ and the Whatcom County Critical Areas Ordinance (CAO, Chapter 16.16 WCC). The SMP ~~this program~~ and any future amendment thereto shall ensure no net loss of shoreline ecological functions and processes on a programmatic basis in accordance with the baseline functions present as of the date of adoption of the comprehensive SMP update ~~this program~~, February 27, 2007.
 3. By including policies and regulations to address cumulative impacts, including ensuring that the cumulative effect of exempt development will not cause a net loss of shoreline ecological functions, and by fairly allocating the burden of addressing such impacts among development opportunities.
 4. By including regulations and regulatory incentives designed to protect shoreline ecological functions, and restore impaired ecological functions where such opportunities have been identified, consistent with the

Comment [MD4]: Deleting "significant," as there is no such threshold under SMA.

Shoreline Management Program Restoration Plan developed by Whatcom County.

D. Regulation of private property to implement ~~SMP program~~ goals such as public access and protection of ecological functions and processes must be consistent with all relevant constitutional and other legal limitations. These include, but are not limited to, civil rights guaranteed by the U.S. and state Constitutions, ~~recent-pertinent~~ federal and state case law, and state statutes, such as RCW 34.05.328 and 43.21C.060 and Chapter 82.02 RCW.

E. Regulatory or administrative actions ~~contained herein~~ must be implemented consistent with the public trust doctrine and other applicable legal principles as appropriate and must not unconstitutionally infringe on private property rights or result in an unconstitutional taking of private property.

F. The regulatory provisions of ~~the SMPthis program~~ are limited to jurisdictional shorelines~~shorelines of the state~~, whereas the planning functions of ~~the SMPthis program~~ may extend beyond the designated shoreline boundaries.

G. The policies and regulations established by the ~~SMP program~~ must be integrated and coordinated with those policies and rules of the ~~Whatcom County Comprehensive Plan~~ and development regulations adopted under the ~~Growth Management Act (GMA)~~ and RCW 34.05.328.

H. Consistent with the policy and use preferences of RCW 90.58.020, Whatcom County should balance the various policy goals of ~~the SMPthis program~~ giving consideration to other relevant local, state, and federal regulatory and non-regulatory programs.

Chapter 23.20 Overall SMPShoreline Management Program Goals and Objectives

23.20.005 Generally.

This ~~section~~chapter describes ~~contains~~ overall ~~program~~SMP goals and objectives. They provide the ~~comprehensive~~ foundation and framework upon which the shoreline area designations, policies, regulations, and administrative procedures are based.

The general policies and regulations (in a later section of this chapter and in Chapter Title 23.90 WCC, respectively) and the specific use policies and regulations (in a later section of this chapter and in WCC Chapter Title 23.100 WCC, respectively) are the means by which these goals and objectives are implemented.

Comment [MD5]: Moved all policy content from Chapter 23.20. This section reviewed and coordinated with Title 23 updates.

1 **~~23.20.010 Adoption:~~**

2 In addition to the policy adopted in WCC 23.10.020(C), the following goals and
3 objectives relating to the program elements specified in RCW 90.58.100(2) are
4 hereby adopted. They provide the comprehensive foundation and framework upon
5 which the shoreline area designations, policies, regulations, and administrative
6 procedures are based.

Comment [MD6]: Moved up.

7 **~~23.20.020 Economic Development:~~**

8 The economic development element provides for the location and design of
9 industries, transportation facilities, port facilities, tourist facilities, commerce, and
10 other developments that are particularly dependent upon a shoreline location
11 and/or use of the shorelines of the state.

12 **Goal 11A:** **~~Goal. To create and maintain an economic environment~~**
13 **~~that can coexist harmoniously with the natural and~~**
14 **~~human environment.~~**

15 **~~B.~~** Objectives:

16 **11A-1:** Encourage economic development that has minimal adverse
17 effects and mitigates unavoidable impacts upon shoreline
18 ecological functions and processes and the built environment.

19 **11A-2:** Encourage shoreline development that has a positive effect upon
20 economic and social activities of value to the region.

21 **11A-3:** Encourage new water-dependent, water-related, and water-
22 enjoyment economic development in priority order.

23 **11A-4:** Encourage economic development that is consistent with the
24 adopted Comprehensive Economic Development Strategy
25 (CEDS) for Whatcom County.

26 **11A-5:** Implement economic development policies contained in other
27 chapters of the Whatcom County Comprehensive Plan in
28 shoreline areas consistent with this chapter, WCC Title 23
29 program and the SMA Act.

30 **11A-6:** Encourage new economic development to locate in areas that
31 are already developed with similar uses.

32 **11A-7:** Discourage expansion of existing development that is
33 incompatible with the Comprehensive Plan ~~this program~~, WCC
34 Title 23, or the character of the local area, or the Whatcom
35 County Comprehensive Plan.

36 **~~23.20.030 Public Access:~~**

37 The public access element provides for public access to publicly ~~owned~~ or privately
38 owned shoreline areas where the public is granted a right of use or access.

39 **Goal 11B:A:** **~~Goal. To increase the general public's ability of the~~**
40 **~~general public to reach, touch, and enjoy the water's~~**

edge, to travel on the waters of the state, and/or to view the water and the shoreline from adjacent locations; provided, that private rights, ~~the~~ public safety, and shoreline ecological functions and processes are protected consistent with the U.S. and state Constitutions, state case law, and state statutes.

B. Objectives:-

11B-1: Locate, design, manage, and maintain public access in a manner that protects shoreline ecological functions and processes and the public health and safety.

11B-2: Design and manage public access in a manner that ensures compatibility with water-dependent uses.

11B-3: Where appropriate, acquire access to publicly owned tidelands and shorelands. Encourage cooperation among the County, landowners, developers, and other agencies and organizations to enhance and increase public access to shorelines as specific opportunities arise.

11B-4: Provide and protect visual access to shorelines and tidelands.

11B-5: Require physical or visual access to shorelines as a condition of approval for shoreline development activities commensurate with the impacts of such development and the corresponding benefit to the public, ~~and~~ consistent with constitutional limitations.

11B-6: Develop and manage public access to prevent adverse impacts to adjacent private shoreline properties and developments.

~~23-20-040~~ Recreation:-

The recreation element provides for the preservation and expansion of water-oriented recreational opportunities that facilitate the public's ability to enjoy the physical and aesthetic qualities of the shoreline through parks, public access to tidelands and beaches, bicycle and pedestrian paths, viewpoints, and other recreational amenities.

~~Goal 11C:A-~~ ~~Goal To p~~ Provide opportunities and space for diverse forms of water-oriented recreation.

B. Objectives:-

11C-1: Locate, develop, manage, and maintain recreation areas in a manner that protects shoreline ecological functions and processes.

11C-2: Provide a balanced choice of water-oriented public recreational opportunities regionally. Ensure that shoreline recreation facilities serve projected County growth in accordance with the level of service standards established in the ~~Whatcom County~~ Comprehensive Plan and related goals and policies; ~~the~~

1		Comprehensive Park and Recreation Open Space Plan, the
2		Whatcom County Bicycle Plan, and the Natural Heritage Plan.
3	<u>11C-3:</u>	Acquire additional recreation areas and public access areas with
4		a high recreation value prior to demand to assure that sufficient
5		shoreline recreation opportunities are available to serve future
6		recreational needs.
7	<u>11C-4:</u>	Encourage cooperation among public agencies, nonprofit
8		groups, and private landowners, and developers to increase and
9		diversify recreational opportunities through a variety of means
10		including incorporating water-oriented recreational opportunities
11		into mixed use developments and other innovative techniques.
12	<u>11C-5:</u>	Recognize and protect the interest of all people of the state by
13		providing increased recreational opportunities within shorelines
14		of statewide significance and associated shorelands.
15	<u>11C-6:</u>	Encourage private and public investment in recreation facilities.
16	<u>11C-7:</u>	Locate, design, and operate recreational development in a
17		manner that minimizes adverse effects on adjacent properties
18		as well as other social, recreational, or economic activities.
19	23-20-050-Transportation and Essential Public Facilities-	
20	The transportation and essential public facilities element provides for the general	
21	location and extent of existing and proposed public thoroughfares, transportation	
22	routes, terminals, and other public utilities and facilities.	
23	<u>Goal 11D:A:</u>	Goal. To provide transportation systems and essential
24		public facilities in shoreline areas without adverse effects
25		on existing shoreline use and development or shoreline
26		ecological functions and/or processes.
27	<u>B.</u>	Objectives:
28	<u>11D-1:</u>	Locate, develop, manage, and maintain transportation systems
29		and essential public facilities in a manner that protects shoreline
30		ecological functions and processes. Minimize and mitigate
31		unavoidable impacts.
32	<u>11D-2:</u>	Locate and design transportation systems and essential public
33		facilities to be harmonious with the existing and future economic
34		and social needs of the community.
35	<u>11D-3:</u>	Discourage the development of non-water-dependent
36		transportation systems and essential public facilities unless no
37		feasible alternatives exist. Devote roads within the shoreline
38		jurisdiction to low volume local access routes and shoreline
39		public access where feasible.
40	<u>11D-4:</u>	When appropriate, require adequate appropriate compensation
41		where transportation systems and essential public facilities
42		reduce the benefits people derive from their property.

1		<u>11D-5:</u>	Provide for alternate modes of travel, encourage freedom of
2			choice among travel modes, and provide multiple use
3			transportation corridors where compatible in association with
4			shoreline transportation development.
5		<u>11D-6:</u>	Require transportation system and essential public facility
6			development in shoreline areas to protect and enhance physical
7			and visual shoreline public access.
8		23-20-060 Shoreline uUse:	
9			The shoreline use element considers <u>prioritizes</u> the use and development of
10			shorelines and adjacent land areas for housing, business, industry, transportation,
11			agriculture, forestry, natural resources, recreation, education, public institutions,
12			utilities, and other categories of public and private land use with respect to the
13			<u>type</u> , general distribution, location, and extent of such uses and developments.
14		<u>Goal 11E:A:</u>	Goal. To pPreserve and develop shorelines in a manner
15			that allows for an orderly balance of uses.
16		B.	Objectives:-
17		<u>11E-1:</u>	Give preference to water-dependent and single-family
18			residential uses that are consistent with preservation of
19			shoreline ecological functions and processes. Give secondary
20			preference to water-related and water-enjoyment uses. Allow
21			non-water-oriented uses only when substantial public benefit is
22			provided with respect to the goals of the <u>SMAAct</u> for public
23			access and ecological restoration.
24		<u>11E-2:</u>	Designate and maintain appropriate areas for protecting and
25			restoring shoreline ecological functions and processes to control
26			pollution and prevent damage to the shoreline environment
27			and/or public health.
28		<u>11E-3:</u>	Ensure shoreline uses are consistent with the Whatcom County
29			Comprehensive Plan.
30		<u>11E-4:</u>	Balance the location, design, and management of shoreline uses
31			throughout the County to prevent a net loss of shoreline
32			ecological functions and processes over time.
33		<u>11E-5:</u>	Encourage mixed use developments that include and support
34			water-oriented uses and provide a substantial public benefit
35			consistent with the public access and ecological restoration
36			goals and policies of the <u>SMAAct</u> .
37		<u>11E-6:</u>	Encourage shoreline uses and development that enhance
38			shoreline ecological functions and/or processes or employ
39			innovative features that further the purposes of <u>the SMP</u>
40			this <u>program</u> .
41		<u>11E-7:</u>	Encourage shoreline uses and development that enhance and/or
42			increase public access to the shoreline.

1	23-20-070 Conservation-	
2	The shoreline conservation element provides for the protection of natural resources,	
3	and shoreline ecological functions and processes. Resources to be conserved and	
4	protected include, but are not limited to, wetlands; riparian, nearshore, and aquatic	
5	habitats; priority fish and wildlife habitats and species; floodplains; feeder bluffs	
6	and other geological features; cultural and historic resources; as well as scenic	
7	vistas and aesthetics.	
8	<u>Goal 11F:A-</u>	Goal. To cConserve shoreline resources and important
9		shoreline features, and protect shoreline ecological
10		functions and the processes that sustain them to the
11		maximum extent practicable.
12	B. _____	Objectives:-
13	<u>11F-1:</u>	Develop <u>Maintain</u> regulations and mitigation standards that
14		ensure new shoreline developments prevent a net loss of
15		shoreline ecological functions and processes. Implement such
16		regulations and standards in a manner consistent with all
17		relevant constitutional and other legal limitations on the
18		regulation of private property.
19	<u>11F-2:</u>	Protect critical areas in accordance with the policies and
20		regulations in the County's critical areas regulations (WCC
21		Chapter 16.16), as adopted by reference in the SMP.
22	<u>11F-3:</u>	Manage renewable natural resources on a sustained yield basis.
23		Extract nonrenewable natural resources in a manner that
24		maintains the quality of other resources and shoreline ecological
25		functions and processes.
26	<u>11F-4:</u>	Prioritize protection and/or conservation of shoreline areas that
27		are ecologically intact and minimally developed or degraded.
28	23-20-080 Archaeological, historical and Cultural Resources	
29	The archaeological-historical-cultural <u>resource</u> element provides for protection,	
30	preservation and/or restoration of buildings, sites, and areas having archaeological,	
31	historical, cultural, or scientific value or significance. <u>"Cultural resource" refers to</u>	
32	<u>any archaeological, historic, cemetery, or other cultural sites or artifacts; as well as</u>	
33	<u>those traditional food, medicine, fibers, and objects that sustain the religious,</u>	
34	<u>ceremonial, and social activities of affected Native American tribes that may be</u>	
35	<u>regulated under state or federal laws administered by the Washington State</u>	
36	<u>Department of Archaeologic and Historic Preservation (DAHP).</u>	
37	<u>Goal 11G:A-</u>	Goal. Protect shoreline features of historic, cultural,
38		archeological, or scientific value or significance to
39		prevent damage or destruction through coordination and
40		consultation with the appropriate local, state and federal
41		authorities, including affected Indian tribes.
42	B. _____	Objectives:-

Comment [CES7]: DAHP definition.

- 1 | 11G-1: Protect cultural resources sites in collaboration with appropriate
2 | tribal, state, federal, and local governments.
- 3 | 11G-2 Engage in and encourage public agencies and private parties to
4 | cooperate in the identification, protection and management of
5 | cultural resources.
- 6 | 11G-3: Consult with the Washington State Department of Archaeology
7 | and Historic Preservation (DAHP) and affected Native American
8 | tribes when developing local policies and regulations for
9 | identifying, protecting, and preserving cultural resources.
- 10 | 11G-4: Where appropriate, restore unique resources that have cultural,
11 | archaeological, historic, educational, or scientific value or
12 | significance to further enhance the value of the shorelines.
- 13 | 11G-5: Where appropriate, provide access to cultural resources in a
14 | manner that is culturally sensitive and does not degrade the
15 | resource or impact the quality of the environment; make access
16 | to such sites available to parties of interest; provided, that
17 | access to such sites must be designed and managed in a
18 | manner that gives maximum protection to the resource.
- 19 | 11G-3: Provide opportunities for education related to archaeological,
20 | historical, and cultural features where appropriate and
21 | incorporated into public and private programs and development.

Comment [CES8]: New proposed policies consistent with our MOU with DAHP and Lummi Nation.

22 | ~~23-20-090~~ Views and ~~A~~aesthetics:

23 | This element provides for preservation and/or protection of scenic vistas, views of
24 | the water, and other aesthetic qualities of shorelines for public enjoyment.

25 | Goal 11H:A: ~~Goal. To a~~Assure that the public's ability and opportunity
26 | to enjoy shoreline views and aesthetics is protected.

27 | ~~B.~~ Objectives:

28 | 11H-1: Identify and protect areas with scenic vistas and areas where
29 | the shoreline has high aesthetic value.

30 | 11H-2: Design development to minimize adverse impacts on views from
31 | public property or views enjoyed by a substantial number of
32 | residences.

33 | ~~23-20-100~~ Restoration and ~~e~~Enhancement:

34 | This element provides for the timely restoration and enhancement of ecologically
35 | impaired areas in a manner that achieves a net gain in shoreline ecological
36 | functions and processes above baseline conditions set as of the date of adoption of
37 | the comprehensive SMP update, February 27, 2007 ~~as of the adoption of this~~
38 | ~~program.~~

39 | Goal 11I:A: ~~Goal. To r~~Reestablish, rehabilitate and/or otherwise
40 | improve impaired shoreline ecological functions and/or
41 | processes through voluntary and incentive-based public

and private programs and actions that are consistent with the Shoreline Management Program Restoration Plan ~~(County Resolution 2007-011)~~ and other approved restoration plans.

B. Objectives:-

11I-1: Encourage and facilitate cooperative restoration and enhancement programs between local, state, and federal public agencies, tribes, nonprofit organizations, and landowners to address shorelines with impaired ecological functions and/or processes.

11I-2: Restore and enhance shoreline ecological functions, and processes, ~~and as well as shoreline features~~ through voluntary and incentive-based public and private programs, such as the Shore Friendly Program developed by the Washington State Department of Fish and Wildlife, Washington State Department of Natural Resources, and the Environmental Protection Agency.

11I-3: Target restoration and enhancement towards improving habitat requirements of priority and/or locally important wildlife species.

11I-4: Ensure restoration and enhancement is consistent with and, where practicable, prioritized based on the biological recovery goals for early Chinook and bull trout populations and other species and/or populations for which a recovery plan is available.

11I-5: Integrate restoration and enhancement with other parallel natural resource management efforts such as the WRIA 1 Salmonid Recovery Plan, Drayton Harbor and Portage Bay Shellfish Protection District Plans, WRIA 1 Watershed Management Plan, ~~Whatcom County Comprehensive Plan,~~ and the Puget Sound Salmon Recovery Draft Plan.

Chapter 23.30 Shoreline Jurisdiction and Area Environment Designations

~~23.30.022 Shoreline area designations.~~

~~A.~~ A set of 10 shoreline area designations has been developed as a part of the SMP~~this program~~. The purpose of the shoreline area designations is to provide a systematic, rational, and equitable basis upon which to guide and regulate development within specific shoreline reaches.

~~B.~~ Shoreline area designations have been determined after consideration of:

1. The ecological functions and processes that characterize the shoreline, together with the degree of human alteration; ~~and~~

Comment [AP9]: Draft revision per Scoping Document, Item #8a, Reference WDFW and DNR's Shore Friendly Program.

Comment [MD10]: Moved some content from Chapter 23.30. Section reviewed and coordinated with Title 23 updates.

2. Existing development patterns together with WCC Title 20, Zoning designations, the ~~County~~ Comprehensive Plan designations, and other officially adopted plans; ~~and~~
3. Federal and tribal ownership status; ~~and~~
4. The goals of Whatcom County citizens for their shorelines; ~~and~~
5. Pursuant to RCW 90.58.100(4), in designating state-owned shorelines, consideration has been given to public demand for wilderness beaches, ecological study areas, and other recreational activities; ~~and~~
6. Other state policies in the ~~SMA~~ Act and the ~~SMP~~ Shoreline Master Program Guidelines (RCW 90.58.020 and Chapter 173-26 WAC, respectively).

~~23.30.030 Urban Shoreline Area~~

~~23.30.031 Urban shoreline area — Purpose~~

The purpose of the urban shoreline area is to provide for intensive development of water-oriented commercial, transportation, and industrial uses and accommodate mixed use developments such as those consisting of urban density residential, commercial, and industrial uses, while protecting existing shoreline ecological functions and processes and restoring shoreline ecological functions and/or processes in areas that have been previously degraded.

~~23.30.032 Urban shoreline area — Designation Criteria~~

The urban shoreline area is applied to shoreline areas zoned commercial, industrial, and urban density residential within urban growth areas and ~~limited~~ industrial or commercial areas in Limited Areas of More Intense Rural Development (LAMIRDs), if they:

- A. Are currently characterized by high intensity development and/or uses; are designated by the Comprehensive Plan for high intensity uses or intensive uses related to commerce, transportation or navigation; or are suitable and planned for high intensity mixed use; and
- B. Do not contain limitations to urban use such as geologic hazards, and have adequate utilities and access; and
- C. Do not provide important ecological functions that would be significantly compromised by high intensity residential, commercial, or industrial use.

~~23.30.033 Urban shoreline area — Policies~~

Development within urban shoreline areas shall be consistent with the following policies:

- ~~Policy 11J-1:A-~~ New urban character development should be directed toward already developed or developing areas where compatible.
- ~~Policy 11J-2:B-~~ First priority should be given to water-dependent uses. Second priority should be given to water-related and then water-enjoyment uses. Non-water-oriented uses should not be allowed

except as part of mixed use developments. Non-water-oriented uses may also be allowed in limited situations where they do not conflict with or limit opportunities for water-oriented uses or on sites where there is no direct access to the shoreline, or where the needs of existing and future water-dependent uses are met.

~~23.30.040~~ Urban Resort Shoreline Area

~~23.30.041~~ Urban resort shoreline area — Purpose

The purpose of the urban resort shoreline area is to provide for intensive residential and commercial uses geared to the needs of tourists and day visitors while protecting existing shoreline ecological functions and processes. Emphasis is on hotels, motels, shops, restaurants, commercial rental campgrounds, rental cabins, and shoreline-related recreation facilities.

~~23.30.042~~ Urban resort shoreline area — Designation Criteria

The urban resort shoreline area is applied to shoreline areas identified in the Comprehensive Plan as suitable for resort commercial development with substantial features that might reasonably attract resort development compatible with other development in the area, and which have existing and/or planned infrastructure sufficient to support such development.

~~23.30.043~~ Urban resort shoreline area — Policies

Development within urban resort shoreline areas shall be consistent with the following policies:

Policy 11K-1:A- Scale and design of resort development should assure compatibility with allowed uses of adjacent shoreline areas and shoreline ecological functions and processes.

Policy 11K-2:B- Buildings over 35 feet in height may be permitted if additional open space, view areas, public access and/or other amenities are provided.

~~23.30.050~~ Urban Conservancy Shoreline Area

~~23.30.051~~ Urban conservancy shoreline area — Purpose

The purpose of the urban conservancy shoreline area is to protect shoreline ecological functions and processes in urban growth areas and Limited Areas of More Intense Rural Development (LAMIRDS) that are not designated for high intensity residential use and are not generally suitable for water-dependent uses. The primary management goal is to preserve shoreline ecological functions and processes by avoiding forms of development that would be incompatible with existing functions and processes, as well as identify and focus restoration efforts in areas where benefits to overall functions and processes can be realized. This policy should be furthered by maintaining most of the area's natural character.

Comment [CES11]: Copied from Conservancy Shoreline Area, as these two are similar though intended for different areas with different levels of existing development.

1 | **~~23.30.052 Urban conservancy shoreline area~~ — Designation Criteria**

2 | The urban conservancy shoreline area is applied to shoreline areas inside urban
3 | growth areas where any of the following characteristics apply:

- 4 | A. They support or retain important shoreline ecological functions and/or
5 | processes, even though partially developed.
- 6 | B. They have the potential for development at an intensity and character that is
7 | compatible with preserving and restoring ecological functions. They are
8 | generally not designated for high intensity residential use, commercial use,
9 | or industrial use.
- 10 | C. They are characterized by critical areas or ~~indicate~~ the presence of other
11 | valuable or sensitive ecological resources.

12 | **~~23.30.053 Urban conservancy shoreline area~~ — Policies**

13 | Development within urban conservancy shoreline areas shall be consistent with the
14 | following policies:

- 15 | Policy 11L-1:~~A-~~ Primary permitted uses should consist of low intensity
16 | residential uses or other low intensity uses that preserve the
17 | natural character of the area or promote preservation of open
18 | space and critical areas.
- 19 | Policy 11L-2:~~B-~~ Moderate to high intensity residential use may be permitted if
20 | the proposed uses and design result in substantial open space,
21 | public access and/or restoration of shoreline ecological functions
22 | and/or processes, and if compatible with surrounding uses.
- 23 | Policy 11L-3:~~C-~~ Public access and public recreation facilities are a preferred use
24 | if they will not cause substantial ecological impacts and when
25 | restoration of ecological functions is incorporated.
- 26 | Policy 11L-4:~~D-~~ Low intensity commercial uses may be permitted if the specific
27 | uses and design result in substantial open space, public access,
28 | and/or restoration of ecological functions, and if compatible with
29 | surrounding uses.

30 | **~~23.30.060 Shoreline Residential Area~~**

31 | **~~23.30.061 Shoreline residential area~~ — Purpose**

32 | The shoreline residential shoreline area accommodates residential development and
33 | accessory structures that are consistent with this chapter.

34 | **~~23.30.062 Shoreline residential area~~ — Designation Criteria**

35 | The shoreline residential shoreline area is applied to shorelines if they have been
36 | predominantly developed with single-family or multifamily residential uses or are
37 | planned and platted for residential development. The designation is generally
38 | applied to residential densities of greater than one unit per acre.

~~23.30.063 Shoreline residential area—Policies~~

Development within shoreline residential shoreline areas shall be consistent with the following policies:

Policy 11M-1:A- The scale and density of new uses and development should be compatible with, and protect or enhance, the existing residential character of the area while sustaining shoreline ecological functions and processes.

Policy 11M-2:B- Public or private outdoor recreation facilities should be encouraged if compatible with the character of the area. Preferred uses include water-dependent and water-enjoyment recreation facilities that provide opportunities for substantial numbers of people to access and enjoy the shoreline.

Policy 11M-3:C- Commercial development should be limited to water-oriented uses. Non-water-oriented commercial uses may be permitted as part of mixed use developments where the primary use is residential; provided, that such uses ~~should~~ provide a substantial benefit with respect to the goals and policies of ~~the SMP~~ this program, such as providing public access or restoring degraded shorelines.

~~23.30.070 Rural Shoreline Area~~

~~23.30.071 Rural shoreline area—Purpose~~

The purpose of the rural shoreline area is to protect shoreline ecological functions in areas having a rural character characterized by open space and low density development including, but not limited to: residences, agriculture, forestry, and outdoor recreation. Uses should be compatible with the physical capabilities and limitations, natural resources, and shoreline ecological functions and processes of the area.

~~23.30.072 Rural shoreline area—Designation Criteria~~

The rural shoreline area is applied to shoreline areas outside urban growth areas, particularly areas designated as Rural in the ~~Whatcom County~~ Comprehensive Plan, and includes areas:

- A. Where the shoreline currently accommodates residential uses outside urban growth areas and is characterized by low density development, pasture, agriculture, woodlots, home occupations, and cottage industries. The distribution of rural land use is adjacent to agricultural, forestry, and urban land uses and often provides a transition between urban areas and commercial agriculture and forestry uses. Natural vegetative cover and topography have been altered in many rural areas, but substantial ecological functions, and/or the potential for restoration of ecological functions, are present.
- B. That are now used or potentially usable for a mix of agriculture, forestry, and residential use.

- 1 C. Where residential development is or should be of low density, because of
2 | limitations by physical features, infrastructure, the presence of critical areas,
3 and/or lack of utilities or access.
- 4 D. That have high recreational value or unique historic or cultural resources.
- 5 E. Where low intensity outdoor recreation use or development would be
6 appropriate and compatible with other uses and the physical environment.
- 7 F. Where the shoreline has been developed with low intensity water-dependent
8 uses.

9 | ~~23.30.073 Rural shoreline area~~ — Policies

10 Development within rural shoreline areas shall be consistent with the following
11 policies:

12 | Policy 11N-1:A- Uses in rural areas should protect or enhance the rural character
13 of the shoreline and sustain the shoreline ecological functions
14 and processes by limiting building density and height, and
15 providing effective setbacks, buffers, and open space.

16 | Policy 11N-2:B- Residential development consistent with the rural character of
17 the area is permitted, provided it includes measures to protect
18 ecological functions and processes. Related uses consistent with
19 the rural character of the area are permitted.

20 | Policy 11N-3:C- Public or private outdoor recreation facilities should be
21 encouraged if compatible with the rural character of the area
22 and developed in a manner that maintains shoreline ecological
23 functions and processes. Preferred uses include water-oriented
24 recreation facilities that do not deplete shoreline resources over
25 time, such as boating facilities, angling, wildlife viewing trails,
26 and swimming beaches.

27 | Policy 11N-4:D- Industrial or commercial development should be limited to,
28 water-oriented commercial and industrial uses in the limited
29 locations where such uses have been established or at sites in
30 rural communities that possess appropriate shoreline conditions
31 and services sufficient to support such developments. Non-
32 water-dependent uses should only be allowed when they
33 provide a substantial benefit with respect to the goals and
34 policies of the SMP~~this program~~, such as providing public access
35 and/or restoring degraded shorelines.

36 | Policy 11N-5:E- Agriculture and forestry consistent with rural character and the
37 maintenance of shoreline ecological functions and processes
38 should be encouraged.

1 | ~~23.30.080 Resource Shoreline Area~~

2 | ~~23.30.081 Resource shoreline area — Purpose~~

3 | The purpose of the resource shoreline area is to protect shoreline ecological
4 | functions and processes in areas designated in the ~~Whatcom County~~
5 | Comprehensive Plan as agriculture—resource—lands, rural forestry, commercial
6 | forestry, and mineral resource lands and to protect the economic base of those
7 | lands and limit incompatible uses.

8 | ~~23.30.082 Resource shoreline area — Designation Criteria~~

9 | The resource shoreline area is applied to shoreline areas designated as agriculture,
10 | rural forestry, commercial forestry, and mineral resource lands in the ~~Whatcom~~
11 | ~~County~~ Comprehensive Plan and includes areas where the shoreline currently
12 | accommodates ongoing resource management, where natural vegetation cover has
13 | been altered but substantial ecological functions, or the potential for restoring
14 | ecological functions, are present.

15 | ~~23.30.083 Resource shoreline area — Policies~~

16 | Development within resource shoreline areas shall be consistent with the following
17 | policies:

18 | Policy 110-1:A- Uses in resource areas should protect the economic base of
19 | those lands, limit incompatible uses, and sustain the shoreline
20 | area ecological processes and functions by limiting uses and
21 | intensity. Residential use is generally limited to one dwelling per
22 | existing parcel. The dwelling may be located within the shoreline
23 | jurisdiction; only where no other building site is feasible on the
24 | parcel.

25 | Policy 110-2:B- Public or private outdoor recreation facilities should be
26 | permitted if they do not displace designated resource lands and
27 | if they are developed in a manner that maintains shoreline
28 | ecological functions. Preferred uses include water-dependent
29 | and water-enjoyment recreation facilities.

30 | Policy 110-3:C- Industrial or commercial use and development should be limited
31 | to uses that serve resource uses. Such uses may be located
32 | within the shoreline only if they are water-dependent, water-
33 | related, or if no other feasible location exists within the
34 | contiguous property.

35 | ~~23.30.090 Conservancy Shoreline Area~~

36 | ~~23.30.091 Conservancy shoreline area — Purpose~~

37 | The purpose of the conservancy shoreline area is to retain shoreline ecological
38 | functions in areas outside of urban growth areas and LAMIRDs where important
39 | ecological processes have not been substantially degraded by human activities.
40 | ~~Conservancy areas are designated outside of urban growth areas. The primary~~

Comment [CES12]: Clarification, as per the SMA, Conservancy is only to be applied outside of urban areas.

1 management goal is to preserve shoreline ecological functions and processes by
2 avoiding forms of development that would be incompatible with existing functions
3 and processes, as well as identify and focus restoration efforts in areas where
4 benefits to overall functions and processes can be realized. This policy should be
5 furthered by keeping overall intensity of development or use low, and by
6 maintaining most of the area's natural character.

7 ~~23.30.092 Conservancy shoreline area~~ — Designation Criteria

8 The conservancy shoreline area is applied to shoreline areas outside urban growth
9 areas and LAMIRDs that include areas:

- 10 A. Where development activities and uses are buffered from and do not
11 substantially degrade ecological processes and functions.
- 12 B. Where ecological functions are more intact than in areas designated rural or
13 resource.
- 14 C. Of outstanding scenic quality or other aesthetic qualities of high value to the
15 region, which would likely be diminished unless development is strictly
16 controlled.
- 17 D. Containing critical areas or other sensitive natural or cultural features that
18 require more than normal restrictions on development and use.
- 19 E. Having the potential to influence ecological processes in a manner that will
20 produce ecosystem-wide benefits upon restoration.
- 21 F. That contain valuable or sensitive natural or cultural features that preclude
22 more than a low overall density of residents, recreation use, structures, or
23 livestock, as well as extensive alterations to topography or other features.
- 24 G. Have recreational value to the region that would likely be diminished unless
25 development is strictly controlled.

26 ~~23.30.093 Conservancy shoreline area~~ — Policies

27 Development within conservancy shoreline areas shall be consistent with the
28 following policies:

29 Policy 11P-1:A- Natural ecological processes should be protected and renewable
30 resources managed so that ecological functions and the
31 resource base are maintained. Nonrenewable resources should
32 only be consumed in a manner compatible with conservation of
33 other resources and other appropriate uses.

34 Policy 11P-2:B- Permitted uses should be limited to those compatible with each
35 other and with conservation of shoreline ecological processes
36 and resources.

37 Policy 11P-3:C- Shorelines should be protected from ~~harmful~~ concentrations of
38 people, livestock, buildings, or structures that would adversely
39 impact shoreline ecological functions and processes.

Comment [AP13]: Revised for clarity and usability.

1 | Policy 11P-4:D- Opportunities for ecological restoration should be pursued,
2 prioritizing those areas with the greatest potential to restore
3 ecosystem-wide processes and functions.

4 | Policy 11P-5:E- Outstanding recreational or scenic values should be protected
5 from incompatible development.

6 | **~~23.30.100~~ Natural Shoreline Area**

7 | **~~23.30.101~~ Natural shoreline area—Purpose**

8 The purpose of the natural shoreline area is to ensure long-term preservation of
9 ecologically intact shorelines inside or outside urban growth areas ~~that are~~
10 ~~ecologically intact~~.

11 | **~~23.30.102~~ Natural shoreline area—Designation Criteria**

12 The natural shoreline area is applied to shoreline areas where any of the following
13 characteristics apply:

14 A. The majority of natural ecological shoreline functions and/or processes are
15 retained, often evidenced by the shoreline configuration and the presence of
16 native vegetation. Generally, but not necessarily, they include ecologically
17 intact shorelines that are free of structural shoreline modifications,
18 structures, and intensive human uses.

19 B. Forested areas that generally include native vegetation with diverse plant
20 communities, multiple canopy layers, and the presence of large woody debris
21 available for recruitment to adjacent water bodies.

22 C. Valuable functions are provided for the larger aquatic and terrestrial
23 environments, which could be lost or significantly reduced by human
24 development.

25 D. Ecosystems or geologic types that are of particular scientific and educational
26 interest are represented.

27 E. Largely undisturbed areas of wetlands, estuaries, unstable bluffs, coastal
28 dunes, and spits are present.

29 F. New development, extractive uses, or physical modifications cannot be
30 supported without significant adverse impacts to ecological functions and/or
31 processes or risk to human safety.

32 | **~~23.30.103~~ Natural shoreline area—Policies**

33 Development within natural shoreline areas shall be consistent with the following
34 policies:

35 | Policy 11Q-1:A- Preservation of the area's ecological functions, natural features
36 and overall character must receive priority over any other
37 potential use. Uses should not degrade shoreline ecological
38 functions or processes or the natural character of the shoreline
39 area. New development or significant vegetation removal that

would reduce the capability of the shoreline to perform a full range of ecological functions or processes should not be permitted.

Policy 11Q-2:B-

Private and/or public enjoyment of natural shoreline areas should be encouraged and facilitated through low intensity recreational, scientific, historical, cultural, and educational research uses; provided, that no significant ecological impact on the area will result.

Policy 11Q-3:C-

Agricultural and forestry uses of a very low intensity nature may be consistent with the natural shoreline area when such use is subject to appropriate limitations or conditions to assure that the use does not expand or alter practices in a manner inconsistent with the purpose of the designation.

Policy 11Q-4:D-

The following uses should not be permitted in the natural shoreline area:

1. Commercial uses.
2. Industrial uses.
3. Non-water-oriented recreation.
4. Roads, utility corridors, and parking areas that can be located outside of natural shoreline areas.

~~23.30.110 Aquatic Shoreline Area~~

~~23.30.111 Aquatic shoreline area—Purpose~~

The purpose of the aquatic shoreline area is to protect, restore, and manage the characteristics and resources of the areas waterward of the ordinary high water mark.

~~23.30.112 Aquatic shoreline area—Designation Criteria~~

The aquatic shoreline area is defined as the area waterward of the ordinary high water mark of all streams, rivers, lakes, and marine water-bodies; ~~and lakes,~~ constituting shorelines of the state together with their underlying lands and their water column.

~~23.30.113 Aquatic shoreline area—Policies~~

Development within aquatic shoreline areas shall be consistent with the following policies:

Policy 11R-1:A-

New over-water structures should only be permitted for water-dependent uses, public access, or ecological restoration. The size of new over-water structures should be limited to the minimum necessary to support the structure's intended use. In order to reduce the impacts of shoreline development and increase effective use of water resources, multiple use of over-water facilities should be encouraged.

- 1 | ~~Policy 11R-2:B-~~ All developments and uses on navigable waters or their beds
2 should be located and designed to minimize interference with
3 surface navigation, to consider impacts to public views, and to
4 allow for the safe, unobstructed passage of fish and wildlife,
5 particularly those species dependent on migration.
- 6 | ~~Policy 11R-3:C-~~ Uses that adversely impact the ecological functions of critical
7 saltwater and freshwater habitats should not be permitted
8 except where necessary to achieve the objectives of RCW
9 90.58.020, and then only when all potential impacts are
10 mitigated as necessary to assure maintenance of shoreline
11 ecological functions and processes.
- 12 | ~~Policy 11R-4:D-~~ Shoreline uses and modifications should be designed and
13 managed to prevent degradation of water quality and alteration
14 of natural conditions.

15 | ~~23.30.120~~ Cherry Point Management Area

16 | Purpose

17 | Washington State natural resource agencies and Whatcom County have identified
18 certain portions of the Cherry Point management area as providing herring
19 spawning habitat and other key habitat characteristics that warrant special
20 consideration due to their importance to regional fisheries and other elements of
21 the aquatic environment. The purpose of the Cherry Point management area is to
22 provide a regulatory framework that recognizes and balances the special port,
23 industrial, and natural resource needs associated with the development of this
24 marine resource.

Comment [P/C14]: Moved from Use & Modification section, CPMA, Policies 11TT-1 & 2, to fit the layout of other sections where in purpose is located in the Shoreline Environments section.

25 | Designation Criteria

26 | The Cherry Point Management Area is a geographic area lying between the eastern
27 property boundary of Tax Lots 2.27 and 2.28 within the SE 1/4 of Section 11,
28 Township 39 North, Range 1 West, as it existed on June 18, 1987, and the southern
29 boundary of Section 32, Township 39 North, Range 1 East, extending waterward a
30 distance of 5,000 feet and extending landward for 200 feet as measured on a
31 horizontal plane from the OHWM. This area shall have the Cherry Point
32 Management Area shoreline environment designation.

Comment [CES15]: Copied from original definition of the CPMA in Title 23

33 | Policies

34 | The policies applicable to the Cherry Point Management Area are found in the
35 Shoreline Use and Modifications Policies section of this chapter; applicable
36 regulations and standards, etc., applicable to the Cherry Point management area
37 are found in WCC Title 23.400.170, except as otherwise specified therein.

38 | Shorelines of Statewide Significance

Comment [MD16]: Moved some content from Chapter 23.40. Section reviewed and coordinated with Title 23 updates.

39 | ~~23.40.010~~ Adoption of policy:

40 | In accordance with RCW 90.58.020, the following management and administrative
41 | policies are hereby adopted for all shorelines of statewide significance in
42 | unincorporated Whatcom County, as defined in RCW 90.58.030(2)(e) and identified

1 | in WCC ~~23.06040-020~~. Consistent with the policy contained in RCW 90.58.020,
2 | preference shall be given to the uses that are consistent with the statewide interest
3 | in such shorelines. In the following order or preference, these are uses that:

Comment [CES17]: The language of WAC 173-26-181 recognizes an order of preference

- 4 | A. Recognize and protect the statewide interest over local interest.
- 5 | B. Preserve the natural character of the shoreline.
- 6 | C. Result in long-term over short-term benefit.
- 7 | D. Protect the resources and ecology of the shoreline.
- 8 | E. Increase public access to publicly owned areas of the shoreline.
- 9 | F. Increase recreational opportunities for the public in the shoreline.
- 10 | G. Provide for any other element as defined in RCW 90.58.100 deemed
- 11 | appropriate or necessary.

12 | Uses that are not consistent with these policies should not be permitted on
13 | shorelines of statewide significance.

14 | ~~23.40.030 Policies for Shorelines of Statewide Significance~~

15 | The statewide interest should be recognized and protected over the local interest in
16 | shorelines of statewide significance. To ensure that statewide interests are
17 | protected over local interests, the County shall review all development proposals
18 | within shorelines of statewide significance for consistency with RCW 90.58.030 and
19 | the following policies:

20 | Policy 11-1:A. Redevelopment of shorelines should be encouraged where it
21 | restores or enhances shoreline ecological functions and
22 | processes impaired by prior development activities.

23 | Policy 11S-2:B- The Washington Departments of Fish and Wildlife and Ecology,
24 | the Lummi Nation, the Nooksack Tribe, and other resources
25 | agencies should be consulted for development proposals that
26 | could affect anadromous fisheries.

27 | Policy 11S-3:C- Where commercial timber cutting takes place pursuant to WCC
28 | ~~23.40.11023-90.110~~ and RCW 90.58.150, reforestation should
29 | take place as soon as possible.

30 | Policy 11S-4:D- Activities that use shoreline resources on a sustained yield or
31 | non-consuming basis and that are compatible with other
32 | appropriate uses should be given priority over uses not meeting
33 | these criteria.

34 | Policy 11S-5:E- The range of options for shoreline use should be preserved to
35 | the maximum possible extent for succeeding generations.
36 | Development that consumes valuable, scarce, sensitive, or
37 | irreplaceable natural resources should be protected to the
38 | maximum extent feasible and should not be permitted if
39 | alternative sites are available.

- 1 | ~~Policy 11S-6:F-~~ Potential short-term economic gains or convenience should be
2 | measured against potential long-term and/or costly impairment
3 | of natural features.
- 4 | ~~Policy 11S-7:G-~~ Protection or enhancement of aesthetic values should be
5 | actively promoted in design review of new or expanding
6 | development.
- 7 | ~~Policy 11S-8:H-~~ Resources and ecological systems of shorelines of statewide
8 | significance should be protected. Shorelands and submerged
9 | lands should be protected to accommodate current and
10 | projected demand for economic resources of statewide
11 | importance, such as commercial shellfish beds.
- 12 | ~~I. Those limited shorelines containing unique, scarce and/or~~
13 | ~~sensitive resources should be protected to the maximum extent~~
14 | ~~feasible.~~
- 15 | ~~Policy 11S-9:J-~~ Erosion and sedimentation from development sites should be
16 | controlled to minimize adverse impacts on ecosystem processes.
17 | If site conditions preclude effective erosion and sediment
18 | control, excavations, land clearing, or other activities likely to
19 | result in significant erosion should be severely limited.
- 20 | ~~Policy 11S-10:K-~~ Public access development in extremely sensitive areas should
21 | be restricted or prohibited. All forms of recreation or access
22 | development should be designed to protect the resource base
23 | upon which such uses in general depend.
- 24 | ~~Policy 11S-11:L-~~ Public and private developments should be encouraged to
25 | provide trails, viewpoints, water access points and shoreline-
26 | related recreation opportunities whenever possible. Such
27 | development is recognized as a high priority use.
- 28 | ~~Policy 11S-12:M-~~ Development not requiring a ~~waterside or~~ shoreline location
29 | should be located inland so that lawful public enjoyment of
30 | shorelines is ~~enhanced~~ preserved.
- 31 | ~~Policy 11S-13:N-~~ Lodging and related facilities should be located inland and
32 | provide for appropriate means of access to the shoreline.
- 33 | **~~Chapter 23.90 General Policies and Regulations~~**
- 34 | The following general policies apply to all use and development activities on
35 | shorelines.
- 36 | **~~23.90.020 Land Use~~**
- 37 | ~~The following land use policies delineate the use preferences of the Act and this~~
38 | ~~program and are intended to support the goals and objectives of the program.~~
- 39 | ~~A. Policies.~~
- 40 | ~~Policy 11T-1:~~ Single-family residences should be given preference for location
41 | on shorelines in those limited instances when an alteration of

Comment [AP18]: Incorporated into Policy 11X-5 above to avoid redundancy.

Comment [MD19]: Moved most policy content from Chapter 23.90. Section reviewed and coordinated with Title 23 updates.

the shorelines is authorized (RCW 90.58.020). ~~Single-family residences occupied prior to January 1, 1992, and their appurtenant structures should be protected against damage or loss caused by shoreline erosion; provided, that measures to protect single-family residences should be designed to minimize harm to the shoreline environment. However, After that date, all new single-family residences permitted after January 1, 1992, and their appurtenant structures should be built in a manner so as to not need protective structures.~~

Comment [CES20]: Moved to Shoreline Stabilization section at P/C's request, as it's a separate concept from the 1st sentence.

Policy 11T-2:

Shoreline uses that are water-dependent or water-related should be given preference (RCW 90.58.020). Such uses should be located, designed, and maintained in a manner that minimizes adverse impacts to shoreline ecological functions and/or processes. Non-water-oriented development may be allowed; provided, that existing water-dependent uses are not displaced and the future supply of sites for water-dependent or water-related uses is not compromised.

Policy 11T-3:

Adequate space should be reserved on shorelines to meet the current and projected demand for water-dependent uses, in conjunction with areas provided in cities, towns and areas under tribal jurisdiction.

~~23-90-030~~ **Ecological Protection and Critical Areas**

A. ~~_____~~ Policies:

Policy 11U-1:

Shoreline use and development should be carried out in a manner that prevents or mitigates adverse impacts so that the resulting ecological condition does not become worse than the current condition. This means assuring no net loss of ecological functions and processes and protecting critical areas designated in WCC Chapter 16.16, in a manner consistent with all relevant constitutional and other legal limitations on the regulation of private property. Permitted uses shall be designed and conducted to minimize, insofar as practical, any resultant damage to the ecology and environment (RCW 90.58.020). Shoreline ecological functions that should be protected include, but are not limited to, fish and wildlife habitat, food chain support, and water temperature maintenance. Shoreline processes that should be protected include, but are not limited to, water flow; littoral drift; erosion and accretion; infiltration; ground water recharge and discharge; sediment delivery, transport, and storage; large woody debris recruitment; organic matter input; nutrient and pathogen removal; and stream channel formation/maintenance.

Policy 11U-2:

In assessing the potential for net loss of ecological functions or processes, project-specific and cumulative impacts should be considered.

1 | Policy 11U-3: Development standards for density, frontage, setbacks,
2 | impervious surface, shoreline stabilization, vegetation
3 | conservation, buffers, critical areas, and water quality should
4 | protect existing shoreline ecological functions and processes.
5 | During permit review, the administrator should consider the
6 | expected impacts associated with proposed shoreline
7 | development when assessing compliance with this policy.

8 | **~~23.90.040~~ Water Quality and Quantity**

9 | A. ~~Policies.~~

10 | Policy 11V-1: The location, construction, operation, and maintenance of all
11 | shoreline uses and developments should maintain ~~or enhance~~
12 | the quantity and maintain or enhance the quality of surface and
13 | ground-water over the long term.

14 | Policy 11V-2: Shoreline use and development should minimize the need for
15 | chemical fertilizers, pesticides, or other similar chemical
16 | treatments to prevent contamination of surface and ground
17 | water and/or soils, and adverse effects on shoreline ecological
18 | functions and values.

19 | Policy 11V-3: Appropriate buffers along all wetlands, streams, lakes, and
20 | marine water bodies should be provided and maintained in a
21 | manner that avoids the need for chemical treatment.

22 | **~~23.90.050~~ Views and Aesthetics**

23 | A. ~~Policies.~~

24 | Policy 11W-1: Shoreline use and development activities should be designed
25 | and operated to minimize obstructions of the public's visual
26 | access to the water and shoreline.

27 | Policy 11W-2: Shoreline use and development should not significantly detract
28 | from shoreline scenic and aesthetic qualities that are derived
29 | from natural or cultural features, such as shoreforms, vegetative
30 | cover and historic sites/structures.

31 | Policy 11W-3: Aesthetic objectives should be implemented through regulations
32 | and criteria for site planning, maximum height, setbacks, siting
33 | of buildings and accessories, screening, vegetation
34 | conservation, architectural standards, sign control regulations,
35 | appropriate development siting, designation of view corridors,
36 | and maintenance of natural vegetative buffers.

37 | Policy 11W-4: To protect shoreline ecological functions and aesthetics,
38 | vegetation conservation should be preferred over the creation or
39 | maintenance of views from shoreline properties. Clearing,
40 | thinning, and/or limbing for limited view corridors should only
41 | be allowed where it does not adversely impact ecological and/or
42 | aesthetic values, and/or slope stability. ~~Vegetation conservation~~

Comment [CES21]: Development shouldn't enhance the quantity of surface water. We're not supposed to *increase* stormwater runoff.

1 should be preferred over the creation or maintenance of views
2 from property on the shoreline to protect shoreline ecological
3 functions and aesthetics.

4 **~~23.90.060~~ Vegetation Conservation**

5 **~~A. Policies:~~**

6 Policy 11X-1: Where new developments and/or uses are proposed, native
7 shoreline vegetation should be conserved to maintain shoreline
8 ecological functions and/or processes and mitigate the direct,
9 indirect and/or cumulative impacts of shoreline development,
10 wherever feasible.

11 ~~Important functions of shoreline vegetation include, but are not limited to:~~

12 ~~Providing shade necessary to maintain water temperatures~~
13 ~~required by salmonids, forage fish, and other aquatic biota.~~

14 ~~Regulating microclimate in riparian and nearshore areas.~~

15 ~~Providing organic inputs necessary for aquatic life, including~~
16 ~~providing food in the form of various insects and other benthic~~
17 ~~macroinvertebrates.~~

18 ~~Stabilizing banks, minimizing erosion and sedimentation, and~~
19 ~~reducing the occurrence/severity of landslides.~~

20 ~~Reducing fine sediment input into the aquatic environment by~~
21 ~~minimizing erosion, aiding infiltration, and retaining runoff.~~

22 ~~Improving water quality through filtration and vegetative uptake~~
23 ~~of nutrients and pollutants.~~

24 ~~Providing a source of large woody debris to moderate flows,~~
25 ~~create hydraulic roughness, form pools, and increase aquatic~~
26 ~~diversity for salmonids and other species.~~

27 ~~Providing habitat for wildlife, including connectivity for travel~~
28 ~~and migration corridors.~~

Comment [MD22]: Importance of veg has been established; don't need to repeat in a policy.

29 **~~23.90.070~~ Archaeological, Historic and Cultural Resources**

30 The following policies apply to cultural resources that are (a) listed on the national,
31 state, or local registers of historic places; (b) recorded by the Washington State
32 Department of Archaeology and Historic Preservation (DAHP), a Native American
33 tribe, and/or a local jurisdiction; or (c) undiscovered, inadvertently uncovered , or
34 yet unrecorded.

35 Archaeological sites located in (as well as outside of) shoreline jurisdiction are
36 subject to RCW Chapter 27.44 (Indian graves and records) and RCW Chapter 27.53
37 (Archaeological sites and records). Shoreline uses or development that may impact
38 such sites shall comply with WAC Chapter 25-48 as well as the provisions of this
39 Shoreline Master Program.

1 Pursuant to RCW 27.53.070, information and documents pertaining to the location
2 of archaeological sites or resources are confidential and not considered public
3 records that require disclosure.

4 A. Policies:

5 Policy 11X-1: The County should work with tribal, state, federal, and local
6 governments as appropriate to maintain an inventory of all
7 known significant ~~local historic, cultural and archaeological sites~~
8 resources in observance of applicable state and federal laws
9 protecting such information from general public disclosure. As
10 appropriate, such sites should be protected, preserved and/or
11 restored for study, education, and/or public enjoyment to the
12 maximum possible extent.

13 Policy 11X-2: Site development plans should incorporate provisions for
14 ~~historic, cultural and archaeological site~~resource preservation,
15 restoration, and education with open space or recreation areas
16 whenever compatible and possible.

17 ~~3. Cooperation among involved private and public parties is~~
18 ~~encouraged to achieve the archaeological, historical and cultural~~
19 ~~element goals and objectives of this program.~~

20 Policy 11X-3:4- Owners of property containing ~~identified historic, cultural or~~
21 ~~archaeological sites~~resources are encouraged to make
22 development plans known well in advance of application, so that
23 appropriate agencies such as the Lummi Nation, Nooksack
24 Tribe, Washington State Department of Archaeology and Historic
25 Preservation, and others may have ~~ample~~ adequate time to
26 assess the site and make arrangements to preserve ~~historic,~~
27 ~~cultural and archaeological~~ values as applicable.

28 Policy 11X-4:5- Private and public owners of historic sites should be encouraged
29 to provide public access and educational opportunities in a
30 manner consistent with long-term protection of both historic
31 values and shoreline ecological functions.

32 Policy 11X-5:6- ~~Historic, cultural, and archaeological site~~ Development on sites
33 containing cultural resources should be planned and carried out
34 so as to prevent impacts to the resource. Impacts to
35 neighboring properties and other shore uses should be limited to
36 temporary or reasonable levels.

37 Policy 11X-6:7- If development is proposed adjacent to an identified ~~historic,~~
38 ~~cultural or archaeological site~~resource, then the proposed
39 development should be designed and operated so as to be
40 compatible with continued protection of ~~the historic, cultural or~~
41 ~~archaeological~~ that siteresource.

42 Policy 11X-7:8- The cultural resource provisions of this program are consistent
43 with Chapters 27.44 and 27.53 RCW and WAC 25-48-060. In

Comment [AP23]: This is captured in policies #1 and #4 (revised to #3).

accordance with state law, all applicants are subject to these requirements.

Policy 11X-8: The County shall consult with DAHP and affected Native American tribes as appropriate in implementing the cultural archaeological, and historic resources goals, objectives, policies, and regulations of this ~~program-SMP~~.

Policy 11X-9: In reviewing development proposals, the County shall take, or cause project applicants to take, all required actions to:

1. Minimize the risk of disturbing cultural resources within Whatcom County shorelines.
2. Due to the limited and irreplaceable nature of the resource(s), prevent the destruction of or damage to any site having historic, cultural, scientific, or educational value as identified by the appropriate authorities, including affected Tribes and the DAHP.
3. Consult with professional archaeologists, DAHP, and affected Tribes before permitting or otherwise approving the use or development of shoreline areas containing cultural resources. This consultation shall be accomplished through the regulations and procedures provided in WCC Title 23.
4. Consult with DAHP and affected Tribes and coordinate with project archaeologists to establish site- and project-specific procedures for protection and management of cultural resources.
5. Make informed specific land use decisions based upon information provided by DAHP and Tribes.
6. Ensure the use of the best available information, technology, and techniques in identifying, protecting, preserving, and restoring cultural resources.

Comment [CES24]: New policy based on language of our MOU with DAHP and Lummi Nation.

~~23.90.080~~ Public Access

~~A.~~ Policies:

Policy 11Y-1: Use and development that provide an opportunity for substantial numbers of ~~the~~ people to enjoy the shorelines of the state are a preferred use.

Policy 11Y-2: Physical or visual access to shorelines should be incorporated in all new development when the development would either generate a demand for one or more forms of such access, and/or would impair existing legal access opportunities or rights. ~~Public health and safety concerns should also be adequately addressed and maintenance of shoreline ecological functions and/or processes should be assured.~~ As required by the governing principles, all such conditions should be consistent

Comment [MD25]: Addressed in #6 below.

with all relevant constitutional and other legal limitations on regulation of private property.

Policy 11Y-3:

Public access should be provided for water-oriented uses and non-water-dependent uses and developments that increase public use of the shorelines and public aquatic lands, or that would impair existing, legal access opportunities.

Policy 11Y-4:

Non-water-related uses or activities located on the shoreline should provide public access as a public benefit.

Policy 11Y-5:

Public access area and/or facility requirements should be commensurate with the scale and character of the development and should be reasonable, effective, and fair to all affected parties including but not limited to the land-owner and the public.

Policy 11Y-6:

Public access design should provide for public safety and minimize potential impacts to private property, individual privacy, and shoreline ecological functions and processes.

Policy 11Y-7:

Shoreline development by public entities, such as local governments, port districts, state agencies, and public utility districts, should provide public access measures as part of each development project, unless such access is shown to be incompatible due to reasons of safety, security, or impact to the shoreline.

~~23.90.090~~ **Site Planning**

A. ~~Policies.~~

Policy 11Z-1:

Development and use should be designed in a manner that directs land alteration to the least sensitive portions of the site to maximize vegetation conservation; minimize impervious surfaces and runoff; protect riparian, nearshore and wetland habitats; protect wildlife and habitats; protect archaeological, historic, and cultural resources; and preserve aesthetic values. This may be accomplished by minimizing the project footprint, the use of clustering, and other appropriate design approaches.

Policy 11Z-2:

To maintain shoreline ecological functions and processes, ~~How~~ impact and sustainable development practices such as rain gardens, and pervious surfacing methods including, but not limited to, porous paving blocks, porous concrete, and other similar materials, should be incorporated in developments where site conditions allow ~~to maintain shoreline ecological functions and processes.~~ Topographic modification, vegetation clearing, use of impervious surfaces, and alteration of natural drainage or other features should be limited to the minimum necessary to accommodate approved uses and development. An engineering

geologist should be consulted prior to using infiltration practices on shore bluffs.

Policy 11Z-3:

Accessory development or use that does not require a shoreline location should be located outside of shoreline jurisdiction unless such development is required to serve approved water-oriented uses and/or developments. When sited within shorelines jurisdiction, uses and/or developments such as parking, service buildings or areas, access roads, utilities, signs, and storage of materials should be located inland away from the land/water interface and landward of water-oriented developments and/or other approved uses.

Policy 11Z-4:

Development should be located, designed, and managed so that impacts on shoreline or upland uses are minimized through bulk and scale restrictions, setbacks, buffers, and control of proximity impacts such as noise or light and glare.

Policy 11Z-5:

Shoreline uses should not deprive other uses of reasonable access to navigable waters. Public recreation activities such as fishing, clam digging, swimming, boating, ~~and~~ wading, and other water-related recreation should be preserved and enhanced. The rights of treaty tribes to resources within their usual and accustomed areas should be accommodated.

Climate Change/Sea Level Rise

Policy 11AA-1: Coordinate with Tribal, Federal, State, and local agencies to address issues related to climate change and sea level rise as related to shoreline management.

Policy 11AA-2: Whatcom County should plan and prepare for the likely impacts of climate change on County-owned facilities, infrastructure, and natural resources and ensure that projects for major maintenance or replacement of utilities, roads, and other public infrastructure consider the impacts of sea-level rise in the location, design, and operation of the projects.

Policy 11AA-3: Whatcom County should strive to increase resident and business resiliency to the anticipated impacts of climate change by implementing land use regulations based on best available science, such as sea level rise, changes in rainfall patterns, changes in flood volumes and frequencies, and changes in average and extreme temperatures.

Policy 11AA-4: Habitat protection and restoration projects in shoreline jurisdiction should consider implications of sea-level rise and other climate change impacts to promote resiliency of habitats and species. Those that promote climate change and sea-level rise resiliency should be considered priority actions.

Comment [CES26]: New policies based on Scoping Document Topic #6a, *Develop and/or strengthen policies regarding climate change/sea level rise, including the incorporation and use of new data (as it becomes available), to review and revise, if warranted, shoreline use regulations.*

Policy 11AA-5: Whatcom County should monitor the impacts of climate change on Whatcom County's shorelands, the shoreline master program's ability to adapt to sea level rise and other aspects of climate change at least every periodic update, and revise the shoreline master program as needed. Whatcom County should periodically assess the best available sea level rise projections and other science related to climate change within shoreline jurisdiction and incorporate them into future program updates, as relevant.

Comment [P/C27]: P/C approved 9-0-0

Policy 11AA-6: Public infrastructure—such as transportation systems, utilities, flood hazard control, and instream structures—and essential public facilities in shoreline areas should be built in a manner that accounts for increased sea level rise and storm surge, and the flooding that may accompany it.

Policy 11AA-7: Whatcom County should evaluate opportunities to protect shoreline investments and infrastructure from the impacts of climate change, as necessary and feasible. Specifically, the County should maintain shoreline protection and erosion control by:

- Facilitating the installation and maintenance of native vegetation along appropriate areas of shoreline;
- Revisiting development policies with the objective of providing additional shoreline buffer area between developed areas and the shoreline; and
- Only consider structural shoreline stabilization structures when alternative options are unavailable.

Chapter 23.100—Shoreline Use and Modification Policies and Regulations

The following shoreline use and modification policies apply to specific development activities on shorelines.

23.100.020—Shoreline Bulk Provisions – Buffers, Setbacks, Height, Open Space and Impervious Surface Coverage

Policy 11BB-1: ~~A. Policies.~~ Standards for density, setbacks, height, and other provisions should ensure no net loss of shoreline ecological functions and/or processes and preserve the existing character of the shoreline consistent with the purpose of the shoreline area designation.

23.100.030—Agriculture

~~A. Policies.~~

Policy 11BB-1: ~~This program~~ The SMP recognizes the importance of agriculture in Whatcom County and supports its continued economic viability. ~~The SMP~~ This program It allows for ongoing agricultural

1 activities and should protect agricultural lands from conflicting
2 uses such as intensive or unrelated residential, industrial, or
3 commercial uses, while also maintaining shoreline ecological
4 functions and processes.

5 | Policy 11BB-2: Agricultural uses and development in support of agricultural
6 uses should be conducted in such a manner as to assure no net
7 loss of shoreline ecological functions and processes and avoid
8 substantial adverse impacts on other shoreline resources and
9 values.

10 | Policy 11BB-3: Conversion of agricultural uses to other uses should comply with
11 all policies and regulations for nonagricultural uses.

12 ~~23.100.040~~ Aquaculture

13 A. ~~_____~~ Policies.

14 | Policy 11CC-1: Aquaculture is a water-dependent use and, when consistent with
15 control of pollution, ~~and~~ avoidance of adverse impacts to the
16 environment, and preservation of habitat for resident native
17 species, is a preferred use of the shoreline (WAC 173-26-
18 241(3)(b)).

19 | Policy 11CC-2: Potential locations for aquaculture activities are relatively
20 restricted because of specific requirements related to water
21 quality, temperature, oxygen content, currents, adjacent land
22 use, wind protection, commercial navigation, and salinity. The
23 technology associated with some forms of aquaculture is still
24 experimental and in formative states. Therefore, some latitude
25 should be given when implementing the policies of this
26 subsection and the regulations in of this section, WCC
27 ChapterTitle 23.100-WCC; provided, that potential impacts on
28 existing uses and shoreline ecological functions and processes
29 should be given due consideration.

30 | Policy 11CC-3: Preference should be given to those forms of aquaculture that
31 involve lesser environmental and visual impacts and lesser
32 impacts to native plant and animal species. In general, projects
33 that require ~~no structures, submerged, structures or intertidal,~~
34 ~~or no~~ structures are preferred over those that involve
35 substantial floating structures. Projects that involve little or no
36 substrate modification are preferred over those that involve
37 substantial modification. Projects that involve little or no
38 supplemental food sources, pesticides, herbicides, or antibiotic
39 application are preferred over those that involve such practices.

40 | ~~Policy 11-4: Community restoration projects associated with aquaculture~~
41 ~~should be reviewed and permitted in a timely manner.~~

42 | Policy 11CC-54: Aquaculture activities should be designed, located and operated
43 in a manner that supports long-term beneficial use of the

Comment [AP28]: Don't need, as *all* projects should be reviewed and permitted in a timely manner. Furthermore, we don't really know what a "community restoration project associated with aquaculture" is.

shoreline and protects and maintains shoreline ecological functions and processes. Aquaculture should not be permitted where it would result in a net loss of shoreline ecological functions; adversely affect the quality or extent of habitat for native species, including eelgrass, kelp, and other macroalgae; adversely impact other habitat conservation areas; or interfere with navigation or other water-dependent uses.

Policy 11CC-65: Aquaculture that involves significant risk of cumulative adverse effects on water quality, sediment quality, benthic and pelagic organisms, and/or wild fish populations through potential contribution of antibiotic resistant bacteria, or escapement of nonnative species, or other adverse effects on ESA-listed species should not be permitted.

Policy 11CC-76: The County should actively seek substantive comment on any shoreline permit application for aquaculture from all appropriate federal, state, and local agencies; the Lummi Nation, Nooksack Tribe, and other affected tribes; and the general public regarding potential adverse impacts. Comments of nearby residents or property owners directly affected by a proposal should be considered and evaluated, especially in regard to use compatibility and aesthetics.

Policy 11CC-87: The rights of treaty tribes to aquatic resources within their usual and accustomed areas should be addressed through the permit review process. Direct coordination between the applicant/proponent and the tribe should be encouraged.

Policy 11CC-98: Consideration should be given to both the potential beneficial impacts and potential adverse impacts that aquaculture development might have on the physical environment; on other existing and approved land and water uses, including navigation; and on the aesthetic qualities of a project area.

Policy 11CC-109: Legally established aquaculture enterprises, including authorized experimental projects, should be protected from incompatible uses that may seek to locate nearby. Use or developments that have a high probability of damaging or destroying an existing aquaculture operation may be denied.

Policy 11CC-110: Experimental aquaculture projects in water-bodies should be limited in scale and should be approved for a limited period of time. Experimental aquaculture means an aquaculture activity that uses methods or technologies that are unprecedented or unproven in the state of Washington.

~~23.100.050 Boating Facilities — Marinas and Launch Ramps~~

~~Boating facilities, including marinas and launch ramp development, are subject to the following policies. Docks, moorage structures serving four or fewer single-~~

1 ~~family residences~~ users are only subject to the policies in Moorage Structures—
2 ~~Docks, Piers, and Mooring Buoys.~~

3 ~~A. Policies.~~

4 Policy 11DD-1: Boating facilities, including marinas and launch ramps, are
5 water-dependent uses and should be given priority for shoreline
6 location. Boating facilities should also contribute to public access
7 and enjoyment of waters of the state. Shorelines particularly
8 suitable for marinas and launch ramps are limited, and should
9 be identified and reserved to prevent irreversible commitment
10 for other uses having less stringent site requirements.

11 Policy 11DD-2: Regional needs for marina and boat launch facilities should be
12 carefully considered in reviewing new proposals as well as in
13 allocating shorelines for such development. Such facilities
14 should be coordinated with park and recreation plans and,
15 where feasible, collocated with port or other compatible water-
16 dependent uses. Review of such facilities should be coordinated
17 with recreation providers, including cities, adjacent counties,
18 port districts, the Whatcom County Parks and Recreation
19 department, the Washington State Parks and Recreation
20 Commission, and the Washington State Department of Natural
21 Resources to avoid unnecessary duplication and to efficiently
22 provide recreational resources while minimizing adverse impacts
23 to shoreline ecological functions and processes.

24 Policy 11DD-3: Upland boat storage is preferred over new in-water moorage.
25 Mooring buoys are preferred over docks and piers. Boating
26 facilities that minimize the amount of shoreline modification are
27 preferred.

28 Policy 11DD-4: Boating facilities should provide physical and visual public
29 shoreline access and provide for multiple uses, including water-
30 related use, to the extent compatible with shoreline ecological
31 functions and processes and adjacent shoreline use.

32 Policy 11DD-5: Accessory uses at marinas or launch ramps should be limited to
33 water-oriented uses, or uses that provide physical or visual
34 shoreline access for substantial numbers of the general public.

35 Policy 11DD-6: New or expanding boating facilities including marinas, launch
36 ramps, and accessory uses should only be sited where suitable
37 environmental conditions are present and should avoid critical
38 saltwater habitat including kelp beds, and eelgrass beds, and
39 spawning and holding areas for forage fish (such as herring, surf
40 smelt and sandlance); subsistence, commercial, and
41 recreational shellfish beds; mudflats, intertidal habitats with
42 vascular plants; and areas with which priority species have a
43 primary association.

- 1 | Policy 11DD-7: Boating facilities should be located and designed to avoid
2 adverse effects upon coastal, riverine, and nearshore processes
3 such as erosion, littoral or riparian transport, and accretion, and
4 should, where feasible, enhance degraded, scarce, and/or
5 valuable shore features including accretion shoreforms.
- 6 | Policy 11DD-8: Launch ramps are preferred over marinas on accretion shores
7 because associated impacts are often reversible and such
8 structures will not normally interfere with littoral drift and
9 accretion unless offshore defense structures or dredging are also
10 required.
- 11 | Policy 11DD-9: Nonregulatory methods to protect, enhance, and restore
12 shoreline ecological functions and processes and other shoreline
13 resources should be encouraged during the design,
14 development, and operation of boating facilities. Nonregulatory
15 methods may include public facility and resource planning,
16 education, voluntary protection and enhancement projects, or
17 incentive programs.
- 18 | Policy 11DD-10: Boating facilities should be located, designed, and operated so
19 that other appropriate water-dependent uses are not adversely
20 affected.
- 21 | Policy 11DD-11: Location and design of boating facilities should not unduly
22 obstruct navigable waters and should avoid adverse effects to
23 recreational opportunities such as fishing, shellfish gathering,
24 pleasure boating, commercial aquaculture, swimming, beach
25 walking, picnicking, and shoreline viewing.
- 26 | Policy 11DD-12: Boating facilities should be located, designed, constructed, and
27 maintained, and operated to avoid adverse proximity impacts
28 such as noise, light and glare; aesthetic impacts to adjacent
29 land uses; and impacts to public visual access to the shoreline.
- 30 | Policy 11DD-13: Live-aboards should be regulated so as to prevent adverse
31 impacts to public health and safety.
- 32 | **~~23.100.060 Commercial Use~~**
- 33 | ~~Commercial development in shoreline areas shall be subject to the policies and~~
34 ~~regulations of this section and Chapter 23.90 WCC.~~
- 35 | ~~A. Policies:~~
- 36 | Policy 11EE-1: In securing shoreline locations for commercial uses, preference
37 should be given first to water-dependent commercial uses, then
38 to water-related and water-enjoyment commercial uses.
- 39 | Policy 11EE-2: Restoration of impaired shoreline ecological functions and
40 processes should be encouraged as part of commercial
41 development.

Comment [CES29]: New policy added to support regulating live-aboards, per #17, "Add standards for live-aboards in marinas."

1		<u>Policy 11EE-3:</u>	Commercial development should ensure visual compatibility with
2			adjacent noncommercial properties.
3		<u>Policy 11EE-4:</u>	Commercial uses located in the shoreline should provide public
4			access in accordance with constitutional or other legal
5			limitations unless such improvements are demonstrated to be
6			infeasible or present hazards to life and property.
7			
7		23.100.070 Dredging	
8		A. Policies:	
9		<u>Policy 11FF-1:</u>	Dredging should be permitted for water-dependent uses of
10			economic importance to the region and/or essential public
11			facilities only when necessary and when alternatives are
12			infeasible or less consistent with <u>the SMP</u> this program .
13		<u>Policy 11FF-2:</u>	Dredging to provide water-oriented recreation should not be
14			permitted.
15		<u>Policy 11FF-3:</u>	Minor dredging as part of ecological restoration or enhancement,
16			beach <u>enhancement</u> nourishment , public access, or public
17			recreation should be permitted if consistent with <u>the SMP</u> this
18			program .
19		<u>Policy 11FF-4:</u>	New development should be sited and designed to avoid or,
20			where avoidance is not possible, to minimize the need for new
21			maintenance dredging.
22		<u>Policy 11FF-5:</u>	Dredging of bottom materials for the primary purpose of
23			obtaining material for landfill, construction, or beach
24			<u>enhancement</u> nourishment should not be permitted.
25		<u>Policy 11FF-6:</u>	Spoil disposal on land away from the shoreline is generally
26			preferred over open water disposal.
27		<u>Policy 11FF-7:</u>	Long-term cooperative management programs that rely
28			primarily on natural processes, and involve <u>land</u> and
29			<u>owners</u> landowners and applicable local, state, and federal
30			agencies and tribes, should be pursued to prevent or minimize
31			conditions which make dredging necessary.
32		23.100.080 Flood Control Works	<u>Hazard Reduction and Instream Structures</u>
33		A. Policies:	
34		<u>Policy 11GG-1:</u>	Purpose and Need:
35		a.	New or expanding development or uses in the shoreline,
36			including subdivision of land, that would likely require structural
37			flood <u>hazard reduction control</u> control works within a stream, channel
38			migration zone, or floodway should not be allowed.
39		<u>Policy 11GG-2:</u>	Flood <u>hazard reduction control</u> control works and instream structures
40			should be planned and designed to be compatible with

appropriate multiple uses of stream resources over the long term, especially in shorelines of statewide significance.

~~Policy 11GG-3e-~~ Flood hazard reduction control-works should only be allowed in the shoreline if they are necessary to protect existing development and where nonstructural flood hazard reduction measures are infeasible.

~~Policy 11GG-4e-~~ Flood hazard reduction control-works to protect existing development should be permitted only when the primary use being protected is consistent with ~~the SMP~~this program, and the works can be developed in a manner that is compatible with multiple use of streams and associated resources for the long term, including shoreline ecological functions, fish and wildlife management, and recreation.

~~23-100-090~~ Forest Practices

~~A.~~ Policies:

~~Policy 11HH-1i-~~ Forest lands should be reserved for long-term forest management and such other uses as are compatible with the ~~dominant primary~~ use. Other more intensive and incompatible uses tending to impair the ~~dominant primary~~ use should be discouraged from locating on forest lands.

~~Policy 11HH-2i-~~ Forest practices should maintain high levels of water quality, as well as surface and ground-water movement patterns.

~~Policy 11HH-3i-~~ Forest practices should minimize damage to wetlands, fish and wildlife species, and habitats, especially aquatic habitats.

~~4.~~ Extreme caution must be observed whenever chemicals are to be used along shorelines; such use should be avoided altogether if possible.

Comment [MD30]: Addressed by existing policy #2 in Water Quality and Quantity.

~~Policy 11HH-4i-5-~~ Forest practices should maintain or improve the quality of soils and minimize erosion.

~~Policy 11HH-5i-6-~~ Where slopes are extremely steep or soils are subject to sliding, rapid erosion, or high water table, special practices should be employed to minimize damage to shoreland and water features, and adjacent properties.

~~23-100-100~~ Industrial and Port Development

The following policies apply to industrial and port development in shoreline areas.

~~A.~~ Policies:

~~Policy 11II-1i-~~ Shoreline sites particularly suitable for development such as deep-water harbors with access to adequate rail, highway, and utility systems should be reserved for water-dependent or water-related industrial and port development.

- 1 | Policy 11III-2: In order to provide adequate shoreline for future water-
2 | dependent and water-related uses, industrial or port
3 | development at deep-water sites should be limited to those uses
4 | that produce the greatest long-term economic base. Industrial
5 | and port development that is consistent with ~~this program~~ the
6 | SMP should be protected from encroachment or interference by
7 | incompatible uses with less stringent siting requirements, such
8 | as residential or commercial uses. Mixed use development,
9 | including non-water-dependent uses, should only be allowed
10 | when they include and support water-dependent uses.
- 11 | Policy 11III-3: Regional needs for port facilities should be carefully considered
12 | in reviewing new port proposals and in allocating shorelines for
13 | such development. Such reviews or allocations should be
14 | coordinated with port districts, adjacent counties and cities, and
15 | the state. Existing, officially designated State Harbor Areas
16 | should be used for new port development to the maximum
17 | extent whenever possible.
- 18 | Policy 11III-4: Multiple use of industrial and port facilities is encouraged to limit
19 | duplicative facilities and reduce adverse impacts. Multiple use
20 | should be implemented in the following manner:
- 21 | a. Cooperative use of piers, cargo handling, storage, parking
22 | and other accessory facilities among private or public entities
23 | should be required in industrial or port facilities whenever
24 | feasible. New facilities for water-dependent uses should be
25 | allowed only after assessment of the potential for shared use
26 | of existing facilities.
- 27 | b. Industrial and port developments should provide
28 | opportunities for physical and/or visual public shoreline
29 | access in accordance with the public access policies,
30 | including recreational use of undeveloped shorelines not
31 | needed for port or industry operations; provided, that such
32 | uses are safely compatible with facility operations.
- 33 | Policy 11III-5: Industrial and port development in the shoreline should be
34 | located and designed to avoid significant adverse impacts to
35 | other shoreline uses, resources, and values, including shoreline
36 | geomorphic processes, water quality, fish and wildlife habitat,
37 | commercial aquaculture, and the aquatic food chain.
- 38 | Policy 11III-6: Restoration of impaired shoreline ecological functions and
39 | processes should be encouraged as part of industrial and port
40 | development.

41 | ~~23.100.210~~ **Cherry Point Management Area**

42 | ~~A.~~ Policies:

43 | Policy 11TT-1: Purpose and Intent:

Comment [CES31]: These policies amended per Council's pending draft fossil fuel amendments.

a. ~~The purpose of the Cherry Point management area is to provide a regulatory framework that recognizes and balances the special port, industrial and natural resource needs associated with the development of this marine resource. This subsection and WCC 23.100.21040.125 (Cherry Point Management Area) identifies policies and regulations, respectively, for water-dependent industrial activities that apply in addition to specific other elements of the SMPthis program as referenced herein.~~

b. ~~Washington State natural resource agencies and Whatcom County have identified certain portions of the Cherry Point management area as providing herring spawning habitat and other key habitat characteristics that warrant special consideration due to their importance to regional fisheries and other elements of the aquatic environment.~~

Comment [CES32]: Moved to the Shoreline Environment Designations, CPMA section, as they address the purpose of this environment designation.

Policy 11JJ-1: Development of the Cherry Point major port/industrial urban growth area will accommodate uses that require marine access for marine cargo transfer, ~~including oil and other materials. For this reason, w~~

a. ~~Water-dependent terminal facilities are encouraged as the preferred use in the Cherry Point management area. Due to the environmental sensitivity of the area, it is the policy of Whatcom County to limit the number of piers to one pier, in addition to those in operation or approved as of January 1, 1998.~~

b. ~~Existing legal fossil fuel refineries should be allowed to continue and maintain their operations with limited expansions subject to environmental review, greenhouse gas emission mitigation, and conformance with the Shoreline Master Program and other applicable land use designation.~~

c. ~~It is the policy of Whatcom County to limit the number of industrial piers at Cherry Point to the existing three piers in operation or approved as of January 1, 1998, taking into account the need to:~~

- ~~• Act conservatively in land use matters at Cherry Point to prevent further harm to habitat important to the Cherry Point herring stock and Southern Resident Orcas;~~
- ~~• Optimally implement the Shoreline Master Program policy regarding shorelines of statewide significance per WCC 23.40;~~
- ~~• Encourage the continued County use of best available science;~~

- Support and remain consistent with the state Department of Natural Resources' withdrawal of Cherry Point tidelands and bedlands from the general leasing program and the species recovery goals of the Cherry Point Aquatic Reserve designation and Management Plan;
- Recognize federal actions upholding treaty rights;
- Protect traditional commercial and tribal fishing; and
- Prevent conflicts with vessel shipment operations of existing refineries that could lead to catastrophic oil or fuel spills.

~~e. Whatcom County should consider participation with local, state, and federal agencies, tribal governments and other stakeholders in the development of a plan to address integrated management of the uplands and public aquatic lands within the Cherry Point management area. The development of such a plan could provide a forum and process for addressing aquatic resources by all stakeholders. Elements of the plan could be adopted as future amendments to this program as appropriate.~~

Policy 11JJ-2: Whatcom County should ensure that shoreline development applicants demonstrate conformance consistency with the State of Washington Department of Natural Resources' Cherry Point Aquatic Reserve Management Plan.

~~All development that is to be located within the Cherry Point Management Area, as defined identified in WCC 23.20.020(E) Chapter 23.110 WCC, shall be subject to the policies in this subsection and the regulations found in WCC 23.40.125 23.100.210. Development that is to be located within the Cherry Point Management Area this section, and shall not be subject to: the General Policies of this chapter; the Shoreline Use and Modification Policies of this chapter, except for those in the Cherry Point Management Area subsection; policies and the regulations found in WCC Chapter 23.930 and WCC Chapter 23.40.23.100.010 through 23.100.160 except WCC 23.40.125, nor Chapter 23.90 WCC, unless otherwise referenced in this subsection. The policies and regulations found in this subsection are applicable only within the geographic boundaries of the Cherry Point management area and do not apply elsewhere in the County. In the event that the provisions of this subsection conflict with other applicable referenced provisions of the SMP this program, the policies and regulations that are most protective of shoreline resources shall prevail.~~

Policy 11JJ-2: Water-Dependent Industrial Development. Only water-dependent facilities that serve industrial facilities should be

Comment [P/C33]: P/C Motion to change.
Passes 7-0-1-1

Comment [P/C34]: P/C Motion to delete.
Passes 8-0-1. This policy makes no sense. Other than updating the references, staff has not changed it. It basically says that any development in the CPMA only has to comply with the policies in this section of Ch. 11 and the regulations of WCC 23.40.125, and specifically says such development doesn't have to comply with any other policies or regulations. But there are many other policies and regulations that should apply, such as ecological protection, cultural resources, vegetation management, moorage facilities, etc.

1 allowed in the Cherry Point management area. Industry within
2 the major port/industrial urban growth area, as designated in
3 the ~~County~~ Comprehensive Plan, which is not water-dependent
4 should locate away from shoreline jurisdiction.

5 | Policy 11JJ-3: Multiple Use Facilities. Facilities that allow for multiple use of
6 piers, cargo handling, storage, parking and other accessory
7 facilities are encouraged.

8 | Policy 11JJ-4: Public Access.

9 a. Where appropriate, industrial and port development within
10 the Cherry Point management area should provide public
11 beach and shoreline access in a manner that does not cause
12 interference with facility operations or present hazards to life
13 and property. This may be accomplished through individual
14 action or by joint, coordinated action with other developers
15 and landowners, for example, by setting aside a common
16 public access area.

17 b. Special emphasis should be given to providing public beach
18 and shoreline access for recreational opportunities including
19 but not limited to crabbing, small craft launching, surf
20 fishing, picnicking, clamming, and beach walking.

21 c. Public access within the Cherry Point management area
22 should be consistent with the Whatcom County Parks and
23 Recreation Open Space Plan.

24 | Policy 11JJ-5: Shoreline Ecological Functions and Processes. In recognition of
25 the diverse and vital ecological resources in the Cherry Point
26 management area, consideration of probable effects of all
27 development proposals on shoreline ecological functions and
28 processes should be assessed with the other long-term
29 statewide interests. New port development that requires dredge
30 and fill should not be permitted in the Cherry Point management
31 area due to potential adverse effects on ecological functions,
32 including fish and shellfish habitat and geohydraulic processes.

33 | Policy 11JJ-6: Aesthetics. All development should be designed to avoid or
34 minimize negative visual impacts on the scenic character of the
35 area and to ensure visual compatibility with adjacent
36 nonindustrial zoned properties.

37 | Policy 11JJ-7: Site Development. All development should be constructed and
38 operated in a manner that, while permitting water-dependent
39 uses, also protects shoreline resources, their ecological
40 functions and processes, and that incorporates the following:

41 a. Low impact development approaches to avoid or minimize
42 adverse impact to topography, vegetation, water quality, fish
43 and wildlife habitat, and other natural site conditions;

- b. Adequate temporary and permanent management measures to control erosion and sediment impacts during construction and operation; and
- c. Adequate stormwater management facilities.

~~23.100.110~~ Landfill and Excavation

~~A. Policies:~~

Policy 11KK-1: Landfill and excavation should only be permitted to the minimum extent necessary to accommodate an approved shoreline use or development and with assurance of no net loss of shoreline ecological functions and processes. Enhancement and voluntary restoration of landforms and habitat are encouraged.

Policy 11KK-2: Landfill in water-bodies, floodways, and/or wetlands should not be permitted for creation of new uplands, unless it is part of an approved ecological restoration activity. Landfill should be permitted in limited instances to restore uplands where recent erosion has rapidly reduced upland area, to build beaches and protective berms for shore stabilization or recreation, to restore or enhance degraded shoreline ecological functions and processes, or to moderately elevate low uplands to make such uplands more suitable for purposes consistent with the SMP~~this program~~.

Policy 11KK-3: Fill should not be allowed where shore stabilization works would be required to maintain the materials placed.

Policy 11KK-4: Landfills and excavation should be located and developed so that water quality, hydrology~~ie,~~ and runoff patterns are not altered.

Policy 11KK-5: The predicted economic benefits of landfills and excavation should be weighed against long-term cumulative impacts on ecological processes and functions.

~~23.100.120~~ Mining

~~A. Policies:~~

Policy 11LL-1: Mining should not be located on shorelines where unavoidable adverse impacts on other users or resources together equal or outweigh the benefits from mining.

Policy 11LL-2: Mining should not interfere with public recreation on the shoreline.

Policy 11LL-3: Mining should be located and operated so as to provide long-term protection of water quality, fish and wildlife, and fish and wildlife habitat.

- 1 | Policy 11LL-4: Mining, particularly surface or strip mining, should provide for
2 | timely restoration of disturbed areas to a biologically productive,
3 | semi-natural, or other useful condition through a reclamation
4 | process consistent with regulations administered by the
5 | Department of Natural Resources and other applicable county
6 | standards.
- 7 | Policy 11LL-5: Mining of marine and lake shores or accretional shoreforms,
8 | such as point bars, that have a high value for recreation or as
9 | fish or wildlife habitat should generally not be permitted.
- 10 | Policy 11LL-6: Mining should only be permitted on accretion point and channel
11 | bars where appropriate studies and detailed operation plans
12 | demonstrate that:
13 | a. Fish habitat, upland habitat and water quality will not be
14 | significantly impacted; and
15 | b. The operation will not adversely affect geohydraulic
16 | processes, channel alignment, nor increase bank erosion or
17 | flood damages.
- 18 | Policy 11LL-7: Mining operations should be located, designed, and managed so
19 | that other appropriate uses are not subjected to substantial or
20 | unnecessary adverse impacts from noise, dust, or other effects
21 | of the operation. The operator may be required to implement
22 | measures such as buffers, limited hours, or other mitigating
23 | measures for the purpose of minimizing adverse proximity
24 | impacts.
- 25 | **~~23-100-130 Moorage Structures —Docks, Piers and Mooring Buoys~~**
26 | ~~Moorage—including docks, piers and mooring buoys—~~ in shoreline areas are subject
27 | ~~to the following policies. Shared mMoorage structures serving with more than four~~
28 | ~~berthsusers and boat launching facilities are also subject to the policies in Boating~~
29 | ~~facilities—Marinas and Launch Ramps.~~
- 30 | **~~A.—Policies:~~**
- 31 | Policy 11MM-1: Moorage associated with a single-family residence is considered
32 | a water-dependent use; provided, that it is designed and used
33 | as a facility to access watercraft, and other moorage facilities
34 | are not available or feasible. Moorage for water-related and
35 | water-enjoyment uses or shared moorage for multifamily use
36 | should be allowed as part of a mixed use development or where
37 | it provides public access.
- 38 | Policy 11MM-2: New moorage, excluding docks accessory to single-family
39 | residences, should be permitted only when the applicant/
40 | proponent has demonstrated that a specific need exists to
41 | support the intended water-dependent or public access use.
- 42 | Policy 11MM-3: As an alternative to continued proliferation of individual private
43 | moorage, mooring buoys are preferred over docks or floats.

Shared moorage facilities are preferred over single-user moorage where feasible, especially where water use conflicts exist or are predictable. New subdivisions of more than two lots and new multifamily development of more than two dwelling units should provide shared moorage.

Policy 11MM-4:

Docks, piers and mooring buoys, including those accessory to single-family residences, should avoid locations where they will adversely impact shoreline ecological functions or processes, including currents and littoral drift, and critical saltwater habitat including kelp beds, eelgrass beds, spawning and holding areas for forage fish (such as herring, surf smelt and sandlance); subsistence, commercial and recreational shellfish beds; mudflats, intertidal habitats with vascular plants; and areas with which priority species have a primary association.

Comment [AP35]: Draft revision per Scoping Document, Item #8c, "Consider ways to improve protections for salmon and forage fish habitat,"

Policy 11MM-5:

Moorage should be spaced and oriented in a manner that minimizes hazards and obstructions to public navigation rights and corollary rights thereto such as, but not limited to, fishing, swimming, and pleasure boating, as well as private riparian rights of adjacent land-owners.

Policy 11MM-6:

Moorage should be restricted to the minimum size necessary to meet the needs of the proposed use. The length, width and heightsize of piers and docks should be no greater than that required for safety and practicality for the primary use.

Comment [AP36]: Simplify to "size" for consistency with updated approach to dock standards, which include an overall square footage requirement, rather than prescriptive dimensional standards.

Policy 11MM-7:

Pile supports are preferred over fills because piles do not displace water surface and intertidal or aquatic habitat and are removable and thus more flexible in terms of long-term use patterns. Floats may be less desirable than pile structures where aquatic habitat or littoral drift are significant.

Policy 11MM-8:

The use of buoys for small craft moorage is preferred over pile or float structures because of lesser long-term impact on shore features and users; moorage buoys should be placed as close to shore as possible to minimize obstruction to navigation.

Policy 11MM-9:

Shoreline resources and water quality should be protected from overuse by boaters living on vessels (live boards). Boaters living on vessels are restricted to established marinas with facilities to address waste handling and other sanitary services.

Policy 11MM-10:

Vessels should be restricted from extended mooring on waters of the state unless authorization is obtained from the DNR and impacts to navigation and public access are mitigated.

Policy 11MM-11:

Piers and docks should be constructed of materials that will not adversely affect water quality or aquatic plants and animals in the long term.

Policy 11MM-12:

New pier and dock development should be designed so as not to interfere with lawful public access to or use of shorelines.

Developers of new piers and shared moorage should be encouraged to provide physical or visual public access to shorelines whenever safe and compatible with the primary use and shore features.

~~23-100-140~~ Recreation

~~A. Policies:~~

Policy 11NN-1: Shoreline recreational development should be given priority for shoreline location to the extent that the use facilitates the public's ability to reach, touch, and enjoy the water's edge, to travel on the waters of the state, and to view the water and the shoreline. Where appropriate, such facilities should be dispersed along the shoreline in a manner that supports more frequent recreational access and aesthetic enjoyment of the shoreline for a substantial number of people.

Policy 11NN-2: Recreational developments should facilitate appropriate use of shoreline resources while conserving them. These resources include, but are not limited to: accretion shoreforms, wetlands, soils, ground-water, surface water, native plant and animal life, and shore processes.

~~3. Recreational development requiring extensive structures, utilities and roads and/or substantial modifications of topography or vegetation removal should not be located or expanded in areas where damage to persons, property, and/or shoreline functions and processes is likely to occur.~~

Comment [AP37]: Captured in policy #8 below.

Policy 11NN-3: Recreational developments and plans should provide the regional population a varied and balanced choice of recreation experiences in appropriate locations. Public agencies and private developers should coordinate their plans and activities to provide a wide variety of recreational opportunities without needlessly duplicating facilities.

Policy 11NN-4: Trail links between shoreline parks and public access points should be encouraged for walking, horseback or bicycle riding, and other non-motorized vehicle access where appropriate. The Whatcom County Comprehensive Park and Recreation Open Space Plan should be considered in design and approval of public trail systems.

Policy 11NN-5: Access to natural character recreational areas, including but not limited to beaches and fishing streams, should be a combination of linear shoreline trails or easements and small parking or access tracts to minimize user concentration on small portions of the shoreline.

Policy 11NN-6: Recreation facilities should incorporate public education regarding shoreline ecological functions and processes, the role

of human actions on the environment, and the importance of public involvement in shorelines management. Opportunities incorporating educational and interpretive information should be pursued in design and operation of recreation facilities and nature trails.

Policy 11NN-7:

Reasonable physical or visual public access to shorelines should be provided and integrated with recreational developments in accordance with WCC ~~23.90.080~~ 23.30.070 (Public Access).

Policy 11NN-8:

Recreation development should be located only where utility and road capability ~~is~~ are adequate, or may be provided without significant damage to shore features commensurate with the number and concentration of anticipated users.

Policy 11NN-9:

Cooperative efforts among public and private persons toward the acquisition and/or development of suitable recreation sites or facilities should be explored to assure long-term availability of sufficient public sites to meet local recreation needs.

~~23.100.150~~ **Residential**

~~A. Policies:~~

Policy 1100-1:

Single-family residences are designated in Chapter [90.58](#) RCW as a priority use in those limited instances when authorization is given for alterations of the natural condition of shorelines of the state.

Policy 1100-2:

New residential development is encouraged to cluster dwelling units together to reduce physical and visual impacts on shorelines and to reduce utility and road costs. Planned unit developments that include common open space and recreation facilities, or a variety of dwelling sizes and types, are encouraged at suitable locations as a preferable alternative to extensive single-lot subdivisions on shorelines. Planned unit developments (Chapter [20.85](#) WCC) may also include a limited number of neighborhood commercial business uses where consistent with the applicable zoning regulations.

Policy 1100-3:

Allowable density of new residential development should comply with applicable ~~Ce~~omprehensive ~~Plan~~ goals and policies, zoning restrictions, and shoreline area designation standards. The density ~~per acre~~ of development should be appropriate to local natural and cultural features.

Policy 1100-4:

Structures or development for uses accessory to residential use should preserve shoreline open space, be visually and physically compatible with adjacent cultural and shoreline features, be reasonable in size and purpose, and result in no net loss of shoreline ecological functions and processes.

- 1 | Policy 1100-5: Buildings greater than 35 feet above average grade level that
2 | will obstruct the views of a substantial number of residences on
3 | areas adjoining such shorelines are limited by the SMAAet
4 | (RCW 90.58.320) to those cases where the SMPthis program
5 | does not prohibit such development and then only when
6 | overriding considerations of the public interest will be served.
7 | The SMPThis program provides opportunities for buildings
8 | greater than 35 feet in height in limited areas where consistent
9 | with development objectives and the goals and polices of this
10 | chapterprogram.
- 11 | Policy 1100-6: New residential development should be planned and built in
12 | accordance with the policies and regulations in
13 | WCC 23.90.030and to minimize the need for shoreline
14 | stabilization and flood hazard reduction measures.
- 15 | Policy 1100-7: Measures to conserve native vegetation along shorelines should
16 | be required for all residential development. Vegetation
17 | conservation may include avoidance or minimization of clearing
18 | or grading, restoration of areas of native vegetation, and/or
19 | control of invasive or nonnative vegetation.
- 20 | Policy 1100-8: Whenever possible, nonregulatory methods to protect, enhance,
21 | and restore shoreline ecological functions and other shoreline
22 | resources should be encouraged for residential development.
23 | Such methods may include resource management planning, low
24 | impact development techniques, voluntary protection and
25 | enhancement projects, education, or incentive programs.
- 26 | Policy 1100-9: New multiunit residential development, including subdivision of
27 | land for more than four parcels, should provide substantial
28 | shore space—recreational opportunities for development
29 | residents and the public, unless public access is infeasible due to
30 | incompatible uses, safety, impacts to shoreline ecology, or legal
31 | limitations. Developments of four or fewer units should provide
32 | private access to the shore for those living in the development
33 | (non-public).
- 34 | Policy 1100-10: Development should provide open space corridors between
35 | structures, and along site boundaries, so as to provide space for
36 | outdoor recreation, preserve views, and minimize use conflicts.
- 37 | Policy 1100-11: Recreation-oriented residential development in the shoreline
38 | should be located only where substantial recreation
39 | opportunities are provided on site, and where nearby property
40 | owners and other appropriate uses will not be adversely
41 | affected.

Comment [MD38]: Deleted for brevity as already required.

Comment [CES39]: Amended, as all shoreline development is supposed to provide access, though it need not be public for small developments.

42 | ~~23.100.160~~ Restoration and Enhancement

43 | A. Policies.

- 1 | Policy 11PP-1: ~~The SMP~~This program recognizes the importance of restoration
2 of shoreline ecological functions and processes and encourages
3 cooperative restoration efforts and programs between local,
4 state, and federal public agencies, tribes, nonprofit
5 organizations, and landowners to address shorelines with
6 impaired ecological functions and/or processes.
- 7 | Policy 11PP-2: Restoration actions should restore shoreline ecological functions
8 and processes as well as shoreline features and should be
9 targeted towards meeting the needs of sensitive and/or locally
10 important plant, fish and wildlife species, ~~as well as the~~
11 biological recovery goals for early Chinook and bull trout
12 populations, and other salmonid species and populations.
- 13 | Policy 11PP-3: Restoration should be integrated with other parallel natural
14 resource management efforts such as the WRIA 1 Salmonid
15 Recovery Plan and the WRIA 1 Watershed Management Plan.
- 16 | Policy 11PP-4: Priority should be given to restoration actions that:
17 a. Create dynamic and sustainable ecosystems.
18 b. Restore connectivity between stream/river channels,
19 floodplains and hyporheic zones.
20 c. Restore natural channel-forming geomorphologic processes.
21 d. Mitigate peak flows and associated impacts caused by high
22 stormwater runoff volume.
23 e. Reduce sediment input to streams and rivers and associated
24 impacts.
25 f. Improve water quality.
26 g. Restore native vegetation and natural hydrologic functions of
27 degraded and former wetlands.
28 h. Replant native vegetation in riparian areas to restore
29 functions.
30 i. Restore nearshore ecosystem processes, such as sediment
31 transport and delivery and tidal currents that create and
32 sustain habitat.
33 j. Restore pocket estuaries that support salmon life histories,
34 including feeding and growth, refuge, osmoregulation, and
35 migration.
36 k. Address contamination along industrial shoreline regions.

37 | ~~23-100-170~~ **Shoreline Stabilization**

38 | ~~Shore stabilization in shoreline areas shall be subject to the policies and regulations~~
39 ~~of this section and Chapter 23.90 WCC.~~

40 | ~~A. Policies.~~

- 1 | Policy 11QQ-1: Alternatives to structures for shore protection should be used
2 whenever possible. Such alternatives may include no action
3 (allow the shoreline to retreat naturally), increased building
4 setbacks, building relocation, drainage controls, and
5 bioengineering, including vegetative stabilization, and beach
6 enhancement~~nourishment~~.
- 7 | Policy 11QQ-2: Single-family residences occupied prior to January 1, 1992, and
8 their appurtenant structures should be protected against
9 damage or loss caused by shoreline erosion; provided, that
10 measures to protect single-family residences should be designed
11 to minimize harm to the shoreline environment. After that date,
12 all new single-family residences and their appurtenant
13 structures should be built in a manner so as to not need
14 protective measures.
- 15 | Policy 11QQ-3: New or expanded structural shore stabilization for new primary
16 structures should be avoided. Instead, structures should be
17 located and designed to avoid the need for future shoreline
18 stabilization where feasible. Land subdivisions should be
19 designed to assure that future development of the created lots
20 will not require structural shore stabilization for reasonable
21 development to occur.
- 22 | Policy 11QQ-3: New or expanded structural shore stabilization should only be
23 permitted where demonstrated to be necessary to protect an
24 existing primary structure that is in danger of loss or substantial
25 damage, and where mitigation of impacts would not cause a net
26 loss of shoreline ecological functions and processes.
- 27 | Policy 11QQ-4: New or expanded structural shore stabilization for enhancement,
28 restoration, or hazardous substance remediation projects should
29 only be allowed when nonstructural measures, vegetation
30 planting, or on-site drainage improvements would be insufficient
31 to achieve enhancement, restoration, or remediation objectives.
- 32 | Policy 11QQ-5: Shore stabilization on streams should be located and designed
33 to fit the physical character and hydraulic energy potential of a
34 specific shoreline reach, which may differ substantially from
35 adjacent reaches.
- 36 | Policy 11QQ-6: Shore stabilization should not be permitted to unnecessarily
37 interfere with public access to public shorelines, nor with other
38 appropriate shoreline uses including, but not limited to,
39 navigation, seafood harvest, or ~~private~~ recreation.
- 40 | Policy 11QQ-7: Provisions for multiple use, restoration, and/or public shore
41 access should be incorporated into the location, design, and
42 maintenance of shore stabilization for public or quasi-public
43 developments whenever safely compatible with the primary
44 purpose. Shore stabilization on publicly owned shorelines should

Comment [CES40]: Moved from Policy 11T-1 as
it contained 2 different concepts.

not be allowed to decrease long-term public use of the shoreline.

Policy 11QQ-8:

Shore stabilization should be developed in a coordinated manner among affected property owners and public agencies for a whole drift sector (net shore-drift cell) or reach where feasible, particularly those that cross jurisdictional boundaries, to address ecological and geohydraulic processes, sediment conveyance and beach management issues. Where beach erosion threatens existing development, a comprehensive program for shoreline management should be established.

Policy 11QQ-9:

In addition to conformance with the regulations in ~~this section~~the SMP, nonregulatory methods to protect, enhance, and restore shoreline ecological functions and other shoreline resources should be encouraged for shore stabilization. Nonregulatory methods may include public facility and resource planning, technical assistance, education, voluntary enhancement and restoration projects, or other incentive programs.

Policy 11QQ-10:

Shore stabilization should be located, designed, and maintained to protect and maintain shoreline ecological functions, ongoing shore processes, and the integrity of shore features. Ongoing stream, lake, or marine processes and the probable effects of proposed shore stabilization on other properties and shore features should be considered. Shore stabilization should not be developed for the purpose of filling shorelines.

Policy 11QQ-11:

Failing, harmful, unnecessary, or ineffective structures should be removed, and shoreline ecological functions and processes should be restored using nonstructural methods or less harmful long-term stabilization measures.

Policy 11QQ-12:

Structural shoreline stabilization measures should only be used when more natural, flexible, sustainable nonstructural methods such as vegetative stabilization, beach enhancement ~~nourishment~~, and bioengineering have been determined infeasible. Alternatives for shoreline stabilization should be based on the following hierarchy of preference:

- a. No action (allow the shoreline to retreat naturally), increase building setbacks, and relocate structures.
- b. Flexible defense works constructed of natural materials including soft shore protection, bioengineering, including beach enhancement ~~nourishment~~, protective berms, or vegetative stabilization.
- c. Rigid works constructed of artificial materials such as riprap or concrete.

Materials used for construction of shoreline stabilization should be selected for long-term durability, ease of maintenance, compatibility with local shore features, including aesthetic values, and flexibility for future uses.

Policy 11QQ-13: Larger works such as jetties, breakwaters, weirs, or groin systems should be permitted only for water-dependent uses when the benefits to the region outweigh resource losses from such works, and only where mitigated to provide no net loss of shoreline ecological functions and processes.

Policy 11QQ-14: Alternative structures, including floating, portable or submerged breakwater structures, or several smaller discontinuous structures, should be considered where physical conditions make such alternatives with less impact feasible.

~~23.100.180~~ Signs

~~A.~~ Policies:

Policy 11RR-1: Whatcom County recognizes the constitutional right for property owners to communicate using signs on their property. These policies are intended to ensure that signage within shoreline areas is consistent with the purpose and intent of the ~~SMA Act~~ and the ~~SMP~~ ~~this program~~ by addressing impacts to ecological functions, public safety, and visual aesthetics.

Policy 11RR-2: Signs should be located, designed, and maintained to be visually compatible with local shoreline scenery as seen from both land and water, especially on shorelines of statewide significance.

Policy 11 RR-3: Sign location and design should not significantly impair shoreline views.

Policy 11 RR-4: As a preferable alternative to continued proliferation of single-purpose signs, communities, districts, and/or multiuse or multitenant commercial developments are encouraged to erect single, common use gateway signs to identify and give directions to local premises and public facilities.

Policy 11 RR-5: Signs of a commercial or industrial nature should be limited to those areas or premises to which the sign messages refer.

Policy 11 RR-6: Billboards and other off-premises signs are not water-dependent, they reduce public enjoyment of or access to shorelines, and they often lower values of nearby properties. ~~Such signs should not be located on shorelines.~~ Except for approved community gateway or directional signs, such signs should not be located on shorelines.

Policy 11 RR-7: Signs near scenic vistas and viewpoints should be restricted in number, location, and height so that enjoyment of these limited and scarce areas is not impaired.

1	<u>Policy 11 RR-8:</u>	Freestanding signs should be located to avoid blocking scenic
2		views and be located on the landward side of public
3		transportation routes, which generally parallel the shoreline.
4	<u>Policy 11 RR-9:</u>	To minimize negative visual impacts and obstructions to
5		shoreline access and use, low profile, on-premises wall signs are
6		strongly preferred over freestanding signs or off-premises wall
7		signs.
8	<u>Policy 11 RR-10:</u>	Signs should be designed mainly to identify the premises and
9		nature of enterprise without unduly distracting uninterested
10		passersby. Moving or flashing signs should be prohibited on
11		shorelines.
12	23.100.190Transportation	
13	A. Policies:	
14	<u>Policy 11SS-1:</u>	New public or private transportation facilities should be located
15		inland from the land/water interface, preferably out of the
16		shoreline, unless:
17		a. Perpendicular water crossings are required for access to
18		authorized uses consistent with <u>the SMP</u> this program ; or
19		b. Facilities are primarily oriented to pedestrian and non-
20		motorized use and provide an opportunity for a substantial
21		number of people to enjoy shoreline areas, and are
22		consistent with <u>the policies and regulations for ecological</u>
23		<u>protection in the General Policies section of this chapter and</u>
24		<u>in WCC 23.30.010 (Ecological Protection)</u> 23.90.030,
25		<u>respectively.</u>
26	<u>Policy 11SS-2:</u>	Transportation facilities should be located and designed to avoid
27		public recreation and public access areas and significant natural,
28		historic, archaeological, or cultural sites.
29	<u>Policy 11SS-3:</u>	Parking is not a preferred use in shorelines and should only be
30		allowed to support authorized uses where no feasible
31		alternatives exist.
32	<u>Policy 11SS-4:</u>	New or expanded public transportation facility route selection
33		and development should be coordinated with related local and
34		state government land use and circulation planning.
35	<u>Policy 11SS-5:</u>	Transportation system route planning, acquisition, and design in
36		the shoreline should provide space wherever possible for
37		compatible multiple uses such as utility lines, pedestrian shore
38		access or viewpoints, or recreational trails.
39	<u>Policy 11SS-6:</u>	Transportation system plans and transportation projects within
40		shorelines should provide safe trail space for non-motorized
41		traffic such as pedestrians, bicyclists, or equestrians. Space for
42		such uses should be required along roads on shorelines, where

appropriate, and should be considered when rights-of-way are being vacated or abandoned.

Policy 11SS-7: Public access should be provided to shorelines where safe and compatible with the primary and adjacent use, or should be replaced where transportation development substantially impairs lawful public access. Viewpoints, parking, trails, and similar improvements should be considered for transportation system projects in shoreline areas, especially where a need has been identified.

Policy 11SS-8: Public transportation routes, particularly arterial highways and railways, should be located, designed, and maintained to permit safe enjoyment of adjacent shore areas and properties by other appropriate uses such as recreation or residences. Vegetative screening or other buffering should be considered.

~~23.100.200~~ Utilities

~~A.~~ Policies:

Policy 11TT-1: New public or private utilities should be located inland from the land/water interface, preferably out of the shoreline jurisdiction, unless:

- a. Perpendicular water crossings are unavoidable; or
- b. Utilities are required for authorized shoreline uses consistent with the SMP ~~this program~~.

Policy 11TT-2: Utilities should be located and designed to avoid public recreation and public access areas and significant natural, historic, archaeological, or cultural resources.

Policy 11TT-3: Utilities should be located, designed, constructed, and operated to result in no net loss of shoreline ecological functions and processes with appropriate mitigation as provided in 23.30.010 (Ecological Protection) ~~WCC 23.90.030~~.

Policy 11TT-4: All utility development should be consistent ~~with~~ and coordinated with all local government and state planning, including comprehensive plans and single purpose plans to meet the needs of future populations in areas planned to accommodate growth. Site planning and rights-of-way for utility development should provide for compatible multiple uses such as shore access, trails, and recreation or other appropriate use whenever possible; utility right-of-way acquisition should also be coordinated with transportation and recreation planning.

Policy 11TT-5: Utilities should be located in existing rights-of-way and corridors whenever possible.

- 1 | Policy 11TT-6: Utilities serving new development should be located
2 | underground, wherever possible.
- 3 | Policy 11TT-7: Development of pipelines and cables on aquatic lands and
4 | tidelands, particularly those running roughly parallel to the
5 | shoreline, and development of facilities that may require
6 | periodic maintenance ~~which—that~~ would disrupt shoreline
7 | ecological functions should be discouraged except where no
8 | other feasible alternative exists. When permitted, provisions
9 | shall assure that the facilities do not result in a net loss of
10 | shoreline ecological functions or significant impacts to other
11 | shoreline resources and values.
- 12 | Policy 11TT-8: Given the different scales of regional, local, and accessory
13 | utilities and their potential impacts, the County may establish
14 | different regulations regarding each.

Comment [CES41]: New policy to allow for different regulations regarding the different types of utilities in support of Scope issue #7b, "Add definitions for regional, local, and accessory utilities."

Proposed Amendment to Chapter 8 of the Comprehensive Plan

Marine Resource Lands Working Group's Recommendation

Note: This text is shown as proposed to accomplish Scoping Report issue #21a: Consider adding a Marine Resource Lands policy section as developed by the Marine Resources Committee.

Chapter Eight Resource Lands

Marine Resource Lands

Introduction

Purpose

Marine resource lands, for the purpose of this plan, are defined as those marine areas waterward of the ordinary high water mark, together with their underlying lands and their water column, within the jurisdiction of the Whatcom County Shoreline Management Program (WCC Title 23). Marine resource lands have the physical conditions and habitat required to generate and maintain fisheries of all types, including the commercial and recreational harvest of finfish, shellfish, algae, and other invertebrates including but not limited to mollusks, crab, and shrimp, etc. This section is intended to guide Whatcom County in the conservation of functioning marine resource lands of long-term commercial, ecological, cultural, and recreational significance, and to ensure that all water-dependent, water-related, and water-enjoyment uses requiring use or access to marine resource lands thrive in the years to come.

GMA Requirements

Goal 8 of the GMA (RCW 36.70A.020) guides the County to ***"Maintain and enhance natural resource based industries, including productive timber, agricultural, and fisheries industries."*** While the GMA does not specifically require the designation of marine resource lands that support aquatic-based uses and industries, functioning marine resource lands are so intrinsically necessary for the creation and sustainability of historical fish and wildlife production that Whatcom County wishes to acknowledge them here.

Process

Per County Council direction, staff convened a working group comprised of members of the Marine Resource Committee, the Shellfish Protection Advisory Committee, and other local marine land experts. This working group developed a draft of this section of the Comprehensive Plan, as well as drafts of the goals and policies contained herein. The draft was then presented to the full membership of the Marine Resource Committee and Shellfish Protection Advisory Committees for review and recommendation to the County Planning Commission and Council.

Background Summary

The marine resource lands of Whatcom County have historically been one of the most important natural resources in the region. For thousands of years the shores of Whatcom County provided an important shellfish resource, sustaining our local tribes. More recently the tidelands of Drayton Harbor supported one of the earlier commercial oyster-farming businesses in the Salish Sea. The shore and nearshore lands of the County provided spawning, rearing, and forage areas for a diverse array of finfish and shellfish species which together formed an incredible food web for ancestral tribes and early commercial fisheries. The County's marine resource lands are located along the coastal areas bordering the Salish Sea fed by the rivers, streams, and lakes that drain the upland areas of western Whatcom County. Marine resource lands include more than 130 miles of marine shoreline.

Marine resource lands in the area of Cherry Point are designated in the Shoreline Management Program as the Cherry Point Management Area to support adjacent Heavy Impact Industrial (HII) zoned industrial uses that require deep water access, such as the two existing refineries and an aluminum smelter. The harbor area and waterways in Bellingham Bay are designated for preservation of commerce and navigation along the Bellingham shoreline. The tidelands of Drayton Harbor are designated to support a small commercial wharf, marinas, residential shoreline development, shellfish production, and natural areas.

The majority of marine resource lands in Whatcom County are owned by the State of Washington (managed by Department of Natural Resources [DNR]), the Lummi Nation, and the Port of Bellingham (via a Port Management Agreement with DNR). These include many of the tidelands and subtidal lands in the County. Marine resource landowners also include some private entities that were sold tidelands prior to 1971, and who manage their marine resource lands for a variety of uses, including recreational, commercial, and industrial.

Historically, marine resource lands have been managed for natural and farmed shellfish production and harvest, fishing, transportation, utility corridors (oil/gas/natural gas pipelines; sewer and stormwater outfall pipes; communication lines (phone/fiber optic); power (electric) lines, and commercial, recreational and subsistence/cultural fishing and food gathering. Historic uses also included commercial and industrial uses, marinas (Bellingham, Blaine), municipal garbage dumps, public parks, etc.

With a growing population, there is increasing interest in improving public access to marine resource lands through the addition of boat ramps and access points for motor, wind, and human-powered craft. Over the last 20 years the desire to harvest more diverse aquatic resources, particularly from tidelands, has driven a number of significant efforts to improve water quality as well as innovative culturing techniques such as intertidal geoduck seeding, nori farming, etc.

Conservation efforts have resulted in protection of several areas including the Cherry Point Aquatic Reserve and two areas withdrawn from leasing in Bellingham Bay. These areas are valuable due to their high productivity of aquatic life that contributes to the economy and greater ecosystem of Whatcom County. Twenty years of effort and millions of dollars in public investment have kept Drayton Harbor

85 a viable commercial and recreational shellfish growing area for future generations
86 to enjoy.

87 Marine resource lands provide a huge economic benefit to the County, and the
88 health of our stream, river, and estuarine environments and marine resource lands
89 are the foundation of a critical tribal and non-tribal finfish and shellfish industry. In
90 2006, non-tribal commercial fish landings from Washington fisheries totaled nearly
91 109.4 million pounds, generating \$65.1-million in ex-vessel value (i.e., the price
92 received by commercial fishers for fish). Whatcom County was the State's second-
93 largest commercial port area that year (after Grays Harbor County), with an ex-
94 vessel value of commercial fish landings of more than \$13.5-million, accounting for
95 nearly 21% of the total value of landings from Washington fisheries. Additionally,
96 the North Puget Sound Region—which the Washington Department of Fish and
97 Wildlife defines as including San Juan, Skagit, Snohomish and Whatcom counties—
98 is also the most popular location for recreational shellfishing in the State. In 2006,
99 the combined recreational shellfish catch in those four counties included more than
100 3.3-million pounds of Dungeness crab, 23,520 pounds of shrimp, 93,038 pounds of
101 clams, and more than 19,000 individual oysters.¹ In 2016, the marine trades
102 provided 6,033 jobs, or 7% of the County's workforce.²

103 Whatcom County marine shorelines continue to provide income to over 250 Lummi
104 Nation registered shellfish harvesters. Many other Lummi and Nooksack tribal
105 members depend on finfish and crab harvest for a substantial part of their yearly
106 family income. The Lummi Nation shellfish enterprise is highly productive and
107 provides clam, oyster, and geoduck seed to a large part of the northwest shellfish
108 industry. To the extent that the environmental health of these lands impacts the
109 ability of Tribal Nations to practice fish and wildlife harvests and conduct ceremonial
110 activities for their cultural, economic, and spiritual welfare, protection of these
111 lands is a Treaty trust resource supporting Treaty reserved rights to take fish.

112 Other direct and indirect benefits to the County are even more substantial given the
113 multiplier effect from marina-related boat works, electronics, fuel and supplies,
114 charter and whale watching businesses, the Alaska Ferry service, sporting goods,
115 kayaking, rowing, sailing, wind surfing, power boating, and all the sales, repair,
116 maintenance, and provisioning that goes with these type of activities. Whatcom
117 County's marine resource areas are not only an international destination for water-
118 dependent, water-related, and water-enjoyment activities, such as bird and wildlife
119 watching, sailing and cruising, fishing and gathering, but they are also a gateway to
120 the San Juan Islands, Gulf Islands, the greater Salish Sea environs, and
121 international waters. Whatcom County's marine resource lands are a renewable and
122 sustainable economic driver that will serve this region well into the future.

¹ Whatcom County, March 2015. *Whatcom County Comprehensive Economic Development Strategy*, prepared by the Whatcom Council of Governments.

² Center of Economic and Business Research, Western Washington University, July 2016. *Whatcom County Marine Trades Impacts*.

Issues, Goals, and Policies

The following goals and policies apply to marine resource lands and address the issues of conserving productive aquatic land and meeting the goals of the Growth Management Act.

Marine Resource Land Base

Tidelands, marine waters, major lakes, and navigable rivers were owned by the State of Washington at the time of statehood unless reserved for other uses such as federal facilities or Indian reservations. Between 1889 and 1971, the State sold many of its tidelands to railroads, timber companies, and shellfish growers as a way to finance the State. As a result, the State owns only about 30% of the tidelands. The bulk of tidelands and many shoreland areas are owned or managed by ports, industries, tribes, and private property owners. The State retains ownership of most all of the subtidal lands which were not sold.

Since their adoption, the marine resource land base in Washington State and in Whatcom County has largely been protected by the Washington State Shoreline Management Act, as well as Whatcom County's Shoreline Management Program (SMP), Critical Areas Ordinance, and other land use regulations such as stormwater, land disturbance, zoning, and other regulations.

Historically, shoreline modification, including filling, hardening, and diking of many natural shorelines has resulted in a significant reduction in acreage of functioning marine resource lands in many areas of the County. These modifications came as a result of transportation improvements (roads, railroads, barge landings, and ferry terminals), utilities (electrical, communications, sewer, stormwater, etc.), hydropower, water-dependent uses (marinas, fish processing, ship yards), non-water dependent uses (large industrial facilities), flood control efforts, residential development (including bulkheading, armoring,³ and docks), and parks.

The Washington State Legislature passed the State Shoreline Management Act (SMA) in June 1971. Under the SMA, each county and city is required to adopt and administer a local shoreline management plan to carry out the provisions of the Act. The Whatcom County Shoreline Management Program (SMP) is the document that implements the goals and policies of the SMA at the local level. The SMP was originally adopted by the County Council in May 1976 in accordance with the SMA and the shoreline guidelines issued by the Washington Department of Ecology. The SMP is implemented in coordination with other chapters of the Comprehensive Plan and the Whatcom County Code to protect and manage shorelines throughout the county. It is important to note that Whatcom County and Ecology share joint authority and responsibility for the administration and enforcement of the SMP. In addition, numerous other local, state and federal regulations, permits, and approvals apply to development or use in, on or above the County's marine resource lands. Some of the most common permits and approvals include:

³ Since adoption of the SMP, shoreline armoring, filling, and bulkheading is only allowed for the purpose of protecting existing structures.

Agency	Permit(s)
<u>Whatcom County</u>	<ul style="list-style-type: none"> • <u>Shoreline statement of exemption</u> • <u>Substantial development permit</u> • <u>Shoreline conditional use permit</u> • <u>Shoreline variance</u> • <u>State Environmental Policy Act (SEPA) determination</u>
<u>Washington Department of Ecology</u>	<ul style="list-style-type: none"> • <u>Clean Water Act Section 401 Water Quality Certification</u> • <u>Coastal Zone Management Consistency Determination</u>
<u>Washington Department of Fish and Wildlife</u>	<ul style="list-style-type: none"> • <u>Hydraulic project approval (HPA)</u>
<u>Washington Department of Natural Resources</u>	<ul style="list-style-type: none"> • <u>Aquatic use authorization</u> • <u>Aquatic lands lease agreements</u>
<u>U.S. Army Corps of Engineers</u>	<ul style="list-style-type: none"> • <u>Clean Water Act Section 404 Permit</u> • <u>Rivers and Harbors Act Section 10 Permit</u>

Goal 8T: Conserve and enhance Whatcom County's marine land base for the long-term and sustainable use and operation of water-dependent, water-related and water-enjoyment activities.

Policy 8T-1: Coordinate with public agencies, tribal governments, landowners, and private organizations to protect and maintain an appropriate, productive, and sustainable marine resource land base adequate to support marine-dependent commercial, industrial, recreational, and cultural needs.

Aquaculture, Fishing, and other Marine Resource Lands Activities

Goal 8U: Support measures to increase the viability and sustainability of Whatcom County's aquatic biodiversity and production.

Policy 8U-1: Help improve the efficiency, and effectiveness, and flexibility of environmental regulations affecting marine resource lands in order to support environmental protection and improve predictability.

Policy 8U-2: Consider developing a range of non-regulatory programs, options, and incentives that owners of marine resource lands can employ to meet or exceed County environmental goals.

Policy 8U-3: Support the efforts of people in Whatcom County to operate in a long-term, sustainable manner as part of a stable, broad-based economy.

Policy 8U-4: Work cooperatively with the Washington State Departments of Natural Resources, Ecology, and Fish and Wildlife to protect productive and appropriate use of State marine resource lands within Whatcom County.

Comment [P/C1]: P/C moved to amend; passed 8-0-1

191 Policy 8U-5 Continue cooperation and funding for a comprehensive Pollution
192 Identification and Correction (PIC) program as needed to reduce
193 bacterial pollution to levels that meet National Shellfish
194 Sanitation Program Growing waters criteria to allow reopening of
195 closed shellfish beds, and to maintain the operation of those
196 beds in a commercially viable manner.

197 **Reducing Land Use Impacts**

198 Different land owners have different goals for their property and employ different
199 practices when using it, whether it be for their business, home, recreation, or
200 personal enjoyment. But oft times, the practices one property owner employs can
201 have detrimental effects on another property owner's use or enjoyment of their
202 property, or the public when using public lands, which can lead to conflict amongst
203 users. One of the most cited is how poorly managed agriculture or failing septic
204 systems can cause bacterial pollution of rivers and streams, causing closure of
205 important shellfish production areas. Other adverse upstream inputs include, but
206 are not limited to, excess nutrients, heavy metals, and aromatic hydrocarbons. But
207 there have been other such actions as well, such as piers placed in fish habitat, use
208 of pesticides in shellfish farming, loading/unloading practices, etc. However, many
209 such users are employing new practices and technologies to alleviate such impacts,
210 yet the public many not be aware. Improved communication and education between
211 these groups would be beneficial for each to understand what the other is doing,
212 how their actions affect one another, and how they plan to avoid such impacts.

Comment [P/C2]: P/C moved to delete. Passed
8-0

213 **Goal 8V:** **Aim to reduce land use conflicts between Whatcom**
214 **County's Marine Resource Lands operations and upland**
215 **property owners.**

216 Policy 8V-1: Support improved communication and understanding between
217 aquatic land landowners and the public through such
218 mechanisms as community forums and educational programs.

219 Policy 8V-2: Work cooperatively with local, State, Federal and Tribal
220 agencies, adjacent upland property owners, and the general
221 public, as applicable, to address community concerns and land
222 use conflicts that may affect the productivity of marine resource
223 lands.

224 Policy 8V-3: Continue to implement land use, building, and transportation
225 planning policies, regulations, and practices that help minimize
226 adverse water quality inputs into waterbodies.

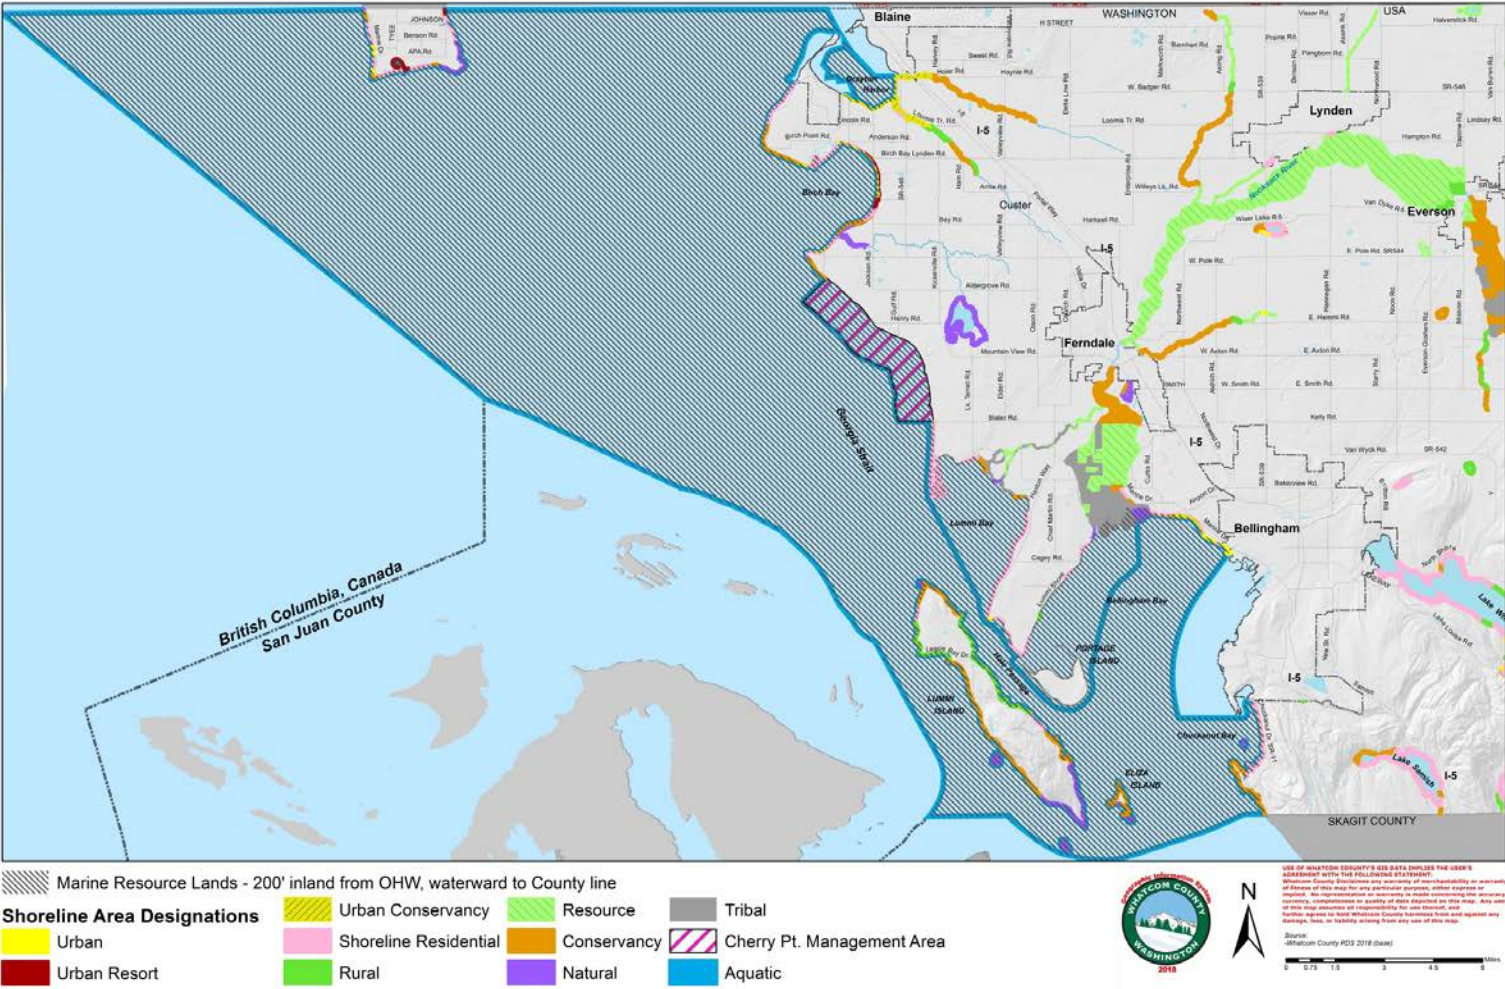

Comment [P/C3]: P/C moved to amend. Passes
8-0-1

227 Policy 8V-4 Support and participate in education efforts and programs that
228 emphasize the importance of and promote the benefits of
229 marine resource lands.

230 **Fish and Wildlife**

231 Land use practices on marine resource lands can impact tidelands and other shallow
232 and deepwater habitats that are important to a wide variety fish and wildlife.

233	Goal 8W:	<u>Ensure that operations associated with marine resource</u>
234		<u>lands strive to avoid adverse impacts to the survival and</u>
235		<u>habitat of aquatic species, particularly to threatened and</u>
236		<u>endangered fish and wildlife species and shellfish</u>
237		<u>resources.</u>
238	<u>Administration and Regulation</u>	
239		
240	Goal 8X:	<u>Recognize the Shoreline Management Program (WCC Title</u>
241		<u>23) and Zoning Code (WCC Title 20) as the primary</u>
242		<u>regulations used to implement this section.</u>
243	Policy 8X-1:	<u>Pursuant to RCW 36.70A.480 and Comprehensive Plan Policy</u>
244		<u>10B-8, the Whatcom County Shoreline Management Program is</u>
245		<u>an element of this Comprehensive Plan, and the goals and</u>
246		<u>policies therein are recognized as additional goals and policies of</u>
247		<u>this section.</u>
248	Policy 8X-2:	<u>Those coastal aquatic lands waterward of the ordinary high</u>
249		<u>water mark are hereby designated as Marine Resource Lands, as</u>
250		<u>shown on Map 8-5.</u>
251	Policy 8X-3	<u>Regulate land use on Marine Resource Lands within the County</u>
252		<u>through the Shoreline Management Program, Zoning Code, and</u>
253		<u>other appropriate means.</u>
254	Policy 8X-4	<u>When updating the Shoreline Management Program, consider</u>
255		<u>new or amended policies to further these goals.</u>
256

Chapter 23.10-05 Purpose and Intent General Provisions

~~23.1005.010~~ Authority.

Authority for enactment and administration of this program is the Shoreline Management Act of 1971, Chapter 90.58 RCW, also referred to herein as "the Act," and the Washington Administrative Code 173-27 and 173-26.

~~23.1005.020~~ Purpose and Intent.

As provided in the Whatcom County Comprehensive Plan, Chapter 11 (Shorelines), Whatcom County's shorelines provide valuable habitat for fish and wildlife, economic diversity, and recreational opportunities used by residents of all ages. Shorelines play an important role in enhancing the quality of life for our county's citizens. Therefore, the purpose of the master program is to guide the future development of the County's shorelines in a manner consistent with the Shoreline Management Act of 1971 (hereinafter referred to as the "Act"). The Act and this program, in conjunction with other County land use regulations, comprise the basic state and County law regulating use of shorelines in the county.

The purposes of this program are:

- A. To promote the public health, safety, and general welfare of the community by providing long range, comprehensive policies and effective, reasonable regulations for development and use of Whatcom County shorelines; and
- B. To manage shorelines in a positive, effective, and equitable manner; and
- C. To further assume and carry out the responsibilities established by the Act for Whatcom County, and to adopt and foster the following policy contained in RCW 90.58.020 for shorelines of the state:
- D. It is the policy of the State to provide for the management of the shorelines of the State by planning for and fostering all reasonable and appropriate uses. This policy is designed to insure the development of these shorelines in a manner which, while allowing for limited reduction of rights of the public in the navigable waters, will promote and enhance the public interest. This policy contemplates protecting against adverse effects to the public health, the land and its vegetation and wildlife, and the waters of the State and their aquatic life, while protecting generally public rights of navigation and corollary rights incidental thereto...

In the implementation of this policy the public's opportunity to enjoy the physical and aesthetic qualities of natural shorelines of the State shall be preserved to the greatest extent feasible consistent with the overall best interest of the State and the people generally. To this end uses shall be preferred which are consistent with control of pollution and prevention of damage to the natural environment or are unique to or dependent upon use of the State's shoreline. Alterations of the natural condition of the shorelines of the State, in those limited instances when authorized, shall be given priority for single family residences and their appurtenant structures, ports, shoreline recreational uses including but not limited to parks, marinas, piers, and other improvements facilitating public access to shorelines of the State, industrial and commercial developments which are particularly dependent on their location on or use of

1 the shorelines of the State and other development that will provide an opportunity for substantial
2 numbers of the people to enjoy the shorelines of the State...

3 Permitted uses in the shorelines of the State shall be designed and conducted in a manner to minimize,
4 insofar as practical, any resultant damage to the ecology and environment of the shoreline area and any
5 interference with the public's use of the water.

Comment [CES1]: Moved to CompPlan.

6 **23.10.030 Governing principles.**

Comment [MD2]: Moved to CompPlan.

7 The following principles along with the policy statements of RCW 90.58.020 establish basic concepts
8 that underpin the goals, policies and regulations of this program:

9 A. Any inconsistencies between this program and the Act must be resolved in accordance with the Act.

10 B. The policies of this program may be achieved by diverse means, one of which is regulation. Other
11 means, authorized by the Act, include but are not limited to: acquisition of lands and/or easements
12 by purchase or gift, incentive programs, and implementation of capital facility and/or nonstructural
13 programs.

14 C. Protecting the shoreline environment is an essential statewide policy goal, consistent with other
15 policy goals. Permitted and/or exempt development, actions taken prior to the Act's adoption,
16 and/or unregulated activities can impair shoreline ecological processes and functions. This program
17 protects shoreline ecology from such impairments in the following ways:

18 1. By using a process that identifies, inventories, and ensures meaningful understanding of current
19 and potential ecological functions provided by shorelines.

20 2. By including policies and regulations that require mitigation of significant adverse impacts in a
21 manner that ensures no net loss of shoreline ecological functions. The required mitigation shall
22 include avoidance, minimization, and compensation of impacts in accordance with the policies
23 and regulations for mitigation sequencing in WCC 23.90.030 and the Whatcom County critical
24 areas ordinance (Chapter 16.16 WCC). This program and any future amendment hereto shall
25 ensure no net loss of shoreline ecological functions and processes on a programmatic basis in
26 accordance with the baseline functions present as of the date of adoption of this program,
27 February 27, 2007.

28 3. By including policies and regulations to address cumulative impacts, including ensuring that the
29 cumulative effect of exempt development will not cause a net loss of shoreline ecological
30 functions, and by fairly allocating the burden of addressing such impacts among development
31 opportunities.

32 4. By including regulations and regulatory incentives designed to protect shoreline ecological
33 functions, and restore impaired ecological functions where such opportunities have been
34 identified, consistent with the Shoreline Management Program Restoration Plan developed by
35 Whatcom County.

36 D. Regulation of private property to implement program goals such as public access and protection of
37 ecological functions and processes must be consistent with all relevant constitutional and other
38 legal limitations. These include, but are not limited to, civil rights guaranteed by the U.S. and state

1 Constitutions, recent federal and state case law, and state statutes, such as RCW 34.05.328 and
2 43.21C.060 and Chapter 82.02 RCW.

3 ~~E. Regulatory or administrative actions contained herein must be implemented consistent with the~~
4 ~~public trust doctrine and other applicable legal principles as appropriate and must not~~
5 ~~unconstitutionally infringe on private property rights or result in an unconstitutional taking of~~
6 ~~private property.~~

7 ~~F. The regulatory provisions of this program are limited to shorelines of the state, whereas the~~
8 ~~planning functions of this program may extend beyond the designated shoreline boundaries.~~

9 ~~G. The policies and regulations established by the program must be integrated and coordinated with~~
10 ~~those policies and rules of the Whatcom County Comprehensive Plan and development regulations~~
11 ~~adopted under the Growth Management Act (GMA) and RCW 34.05.328.~~

12 ~~H. Consistent with the policy and use preferences of RCW 90.58.020, Whatcom County should balance~~
13 ~~the various policy goals of this program giving consideration to other relevant local, state, and~~
14 ~~federal regulatory and non-regulatory programs.~~

15 **23.10.04005.030 Title.**

16 This title, taken together with Chapter 11 (Shorelines) of the Whatcom County Comprehensive Plan,
17 shall be known and may be cited as "The Whatcom County Shoreline Management Program." Herein,
18 this title together with Chapter 11 of the Comprehensive Plan may be referred to as the "SMP" or the
19 "program."

20 **23.10.050 Short title.**

21 This title may be referred to herein as the "SMP," or the "program."

22 **23.10.06005.040 Relationship to the Comprehensive Plan and other Federal, State, and County Codes**
23 **and RegulationsReferences to plans, regulations or information sources.**

24 A. Consistent with RCW 36.70A.480, the goals and policies of this program approved under Chapter
25 90.58 RCW are included as Chapter 11 (Shorelines) of the County's Comprehensive Plan. All
26 regulatory elements of this program shall be considered a part of the County's development
27 regulations.

28 B. Uses, developments, and activities regulated by this program may be independently subject to the
29 Whatcom County Comprehensive Plan, the Whatcom County Code (WCC), the Washington State
30 Environmental Policy Act, and various other federal, state, and county laws.

31 C. Obtaining a shoreline permit or statement of exemption for a development or use does not excuse
32 the applicant/proponent from complying with any other local, tribal, state, regional, or federal
33 statutes or regulations applicable to such development or use. The responsibility for determining
34 applicable statutes and regulations and complying with the same rests with the applicant/proponent
35 or responsible person carrying out the use or development in question. The applicant must comply
36 with all applicable laws prior to commencing any uses, development, or activity.

37 D. Should a conflict occur between the provisions of this program or between this program and the
38 laws, regulations, codes, or rules promulgated by Whatcom County or any other authority having

jurisdiction within Whatcom County, the more restrictive requirements shall apply, except when constrained by federal or state law, or where specifically provided otherwise in this program.

E. Relationship to other County regulations.

1. Incorporation of the Whatcom County critical areas regulations, WCC Chapter 16.16, is addressed in WCC 23.05.065 (Critical Areas).

4-2. The permitting procedures necessary for implementing this program are found in WCC Chapter 22 (Land Use and Development).

2-a. In the case of development subject to the shoreline permit requirement of this program, the County Building Official shall not issue a building permit for such development until a shoreline permit has been granted; provided, that any permit issued by the Building Official for such development shall be subject to the same terms and conditions that apply to the shoreline permit. All shoreline permits shall be obtained prior to issuance of a building permit; provided, that any permit issued by the Building Official for such development shall be subject to the same terms and conditions that apply to the shoreline permit.

3-b. In the case of development subject to regulations of this program but exempt from the shoreline substantial development permit requirement, any Arequired statement of exemption shall be obtained prior to issuance of the building permit; provided, that for single-family residences, review for compliance with this Title may be completed as part of a building permit or non-shoreline permit. reviewed and signed off by the administrator may substitute for a written statement of exemption. A record of review documenting compliance with bulk and dimensional standards as well as policies and regulations of this program shall be included in the permit review. Conditions of approval for compliance with this Title shall be added to such permit. The conditions of approval shall be enforced with the provisions of this Title. Section 23.10.160 (Violations, Enforcement, and Penalties). The Building Official shall attach and enforce conditions to the building permit as required by applicable regulations of this program pursuant to RCW 90.58.140(1).

a-c. In the case of zoning conditional use permits and/or variances, Project permits are subject to consolidated review pursuant to Chapter 22.05 (Land Use and Development). Trequired by WCC Title 20 for development that is also within shorelines, the County-designated decision maker for such permits shall document compliance with bulk and dimensional standards as well as the policies and regulations of this program in consideration of recommendations from the administrator. The decision maker and shall attach conditions to such permits and variances approvals as required to make such development consistent with this program.

4. In the case of land divisions, such as short subdivisions, long plats, and planned unit developments that require County approval, the decision maker shall document compliance with bulk and dimensional standards as well as policies and regulations of this program and attach appropriate conditions and/or mitigating measures to such approvals to ensure the design, development activities and future use associated with such land division(s) are consistent with this program.

Formatted: Indent: Left: 0.5", Hanging: 0.25"

Comment [PDS3]: Simplified

Comment [PDS4]: Simplified.

Formatted: Indent: Left: 0.5", Hanging: 0.25"

Comment [CES5]: Don't need; subsection (c) amended to include all permits, including land division.

- 5-3. Other local ordinances that may be applicable to shoreline development or use include, but are not limited to:
- Building, plumbing, mechanical, and fire codes.
 - Boating and swimming, WCC Title 11.
 - On-site sewage system regulations, WCC Chapter 24.05.
 - Solid waste rules and regulations, WCC Chapter 24.06.
 - Zoning, WCC Title 20.
 - Land division regulations, WCC Title 21.
 - Development standards.

F. Relationship to other state, tribal, and federal regulations.

- Where this program makes reference to any RCW, WAC, or other state or federal law or regulation, the most recent amendment or current edition shall apply.
- This program shall be applied consistent with all federal, state, and local laws affecting tribal rights.
- The rights of treaty tribes to resources within their usual and accustomed areas shall be accommodated through the notification and comment provisions of the permit review process. Tribal treaty rights may be addressed through specific permit conditions. Direct coordination between tribes and the applicant/proponent is encouraged.
- Coastal Zone Management Act consistency reviews for sites within federal jurisdiction shall apply the shoreline environment designation criteria of Chapter 11 (Shorelines) of the Comprehensive Plan that most closely correspond to the project site in order to determine applicable program policies.
- ~~Obtaining a shoreline permit or statement of exemption for a development or use does not excuse the applicant/proponent from complying with any other local, tribal, state, regional, or federal statutes or regulations applicable to such development or use.~~
- ~~At the time of application or initial inquiry, the administrator shall inform the applicant/proponent of other such statutes and regulations relating to shoreline issues that may be applicable to the project to the extent that the administrator is aware of such statutes. However, the final responsibility for determining applicable statutes and regulations and complying with the same rests with the applicant/proponent or responsible person carrying out the use or development in question.~~
- ~~Stipulated Judgment No. 93-2-02447-6 between Governor's Point Development Company and Whatcom County, the state of Washington, and the Department of Ecology is incorporated by reference into Whatcom County's shoreline management program. A copy of the judgment is on file with the Whatcom County Planning and Development Services department.~~

23.1005.065 Critical Areas.

- A. The Whatcom County critical areas ordinance regulations (CAO), WCC Chapter 16.16 (Ordinance No. ~~X2017-077~~, dated ~~XDecember 5, 2017~~), ~~is~~ are hereby adopted in whole as a part of this program, except that the provisions of WCC 16.16.270 (Reasonable Use

Comment [RCE6]: Moved from 23.60.080 (Notice of Application)

Comment [CES7]: Covered elsewhere.

Comment [CES8]: No longer needed as it no longer applies.

Comment [CES9]: To do: Will need to update this to the ordinance and date of the CAO we're amending as part of this update.

Exceptions), 16.16.275 (Nonconforming Uses, Structures, and Lots), ~~and 16.16.285 (Penalties and Enforcement)~~ and as specifically excluded elsewhere within this Title shall not apply within shoreline jurisdiction. All references to the critical areas ordinance (CAO), WCC Chapter 16.16, are for this specific version.

~~except that the permit, nonconforming use, appeal and enforcement provisions of the critical areas ordinance (WCC 16.16.270 through 16.16.285) shall not apply within shoreline jurisdiction. All references to the critical areas ordinance (CAO), Chapter 16.16 WCC, are for this specific version.~~

B. The adopted provisions of WCC Chapter 16.16 (Critical Areas) shall apply to any use, alteration or development within shoreline jurisdiction whether or not a shoreline permit or statement of exemption is required.

~~Unless otherwise stated, no development shall be constructed, located, extended, modified, converted, or altered, or land divided, without full compliance with WCC Chapter 16.16 and this program.~~

~~23.1005.1240~~ Program Effects on Property Values.

A. As provided for in RCW 90.58.290, the restrictions imposed upon use of real property through implementation of policies and regulations of the Act and this program shall be duly considered by the County Assessor and the County Board of Equalization in establishing the fair market value of such properties.

B. Designation of private property as a natural or conservancy shoreline ~~area~~ environment pursuant to WCC Chapter 23.230 (Shoreline Jurisdiction and Area Environment Designations) shall qualify the property as meeting the definition of "open space land" under the Open Space Taxation Act of 1970, as amended (RCW 84.34.020(1)) and shall qualify such land for application for open space taxation in accordance with RCW 84.34.037 and WCC Chapter 3.28 (Open Space Land Classification).

~~23.1005.1350~~ Property Rights.

A. Regulation of private property to implement program goals, such as public access and protection of ecological functions and processes, must be consistent with all relevant constitutional and other legal limitations. These include, but are not limited to, the protections afforded by the federal and state constitutions, and federal, state, and local laws.

~~A.B. Decisions on shoreline permits and/or approvals shall recognize all relevant constitutional and other legal limitations on the regulation of private property. Findings~~ In issuing shoreline permits or statements of exemptions, the decision maker shall assure that conditions imposed relate to the governmental authority and responsibility to protect the public health, safety, and welfare, are consistent with the purposes of the Act, and are roughly proportional to the expected impact.

~~B.C.~~ This program does not alter existing law on access to or trespass on private property and does not give the general public any right to enter private property without the owner's permission.

~~C.D.~~ Consistent with Whatcom County's high standard of staff conduct, County staff shall observe all applicable federal, ~~and state, and County~~ laws regarding entry onto privately owned property.

Comment [DOE-Req10]: Required Change – Whatcom County is concurrently updating its CAO regulations along with this Shoreline Master Program (SMP) amendment. The final adopting ordinance is required in the provision once known.

The added language clarifies that this provision does not represent an exhaustive list of CAO provisions that do not apply within the context of the SMP. There are numerous other sections of the CAO that conflict with statutory and rule requirements related to shoreline permit processing such as 16.16.230 (Activities Allowed without Notification), 16.16.235 (Activities Allowed with Notification) and 16.16.275 (Variances). These sections contain language either requiring SMP review or excluding their applicability within shoreline jurisdiction.

1 **23.10.070 Liberal construction.**
2 As provided for in RCW 90.58.900, the Act is exempted from the rule of strict construction; the Act and
3 this program shall therefore be liberally construed to give full effect to the purposes, goals, objectives,
4 and policies for which the Act and this program were enacted and adopted, respectively.

Comment [CES11]: Moved to 23.10.040 Code Interpretation

5 **23.1005.080 Severability.**
6 The Act and this program adopted pursuant thereto, in conjunction with other applicable County land
7 use regulations, comprise the basic state and County law regulating use of shorelines in the county. In
8 the event provisions of this program conflict with other applicable County policies or regulations, the
9 more restrictive shall prevail. Should any section or provision of this program be declared invalid, such
10 decision shall not affect the validity of this program as a whole.

11 **23.1005.090 Effective Date.**
12 This program and all amendments thereto shall become effective 14 days from immediately upon final
13 approval and adoption by the Department of Ecology's written notice of final action.

Comment [AP12]: Updated per Periodic Review Checklist, Item 2010.a, and Scoping Document, Item #1g.

Chapter 23.20 Goals and Objectives

Comment [MD13]: All content in Chapter 23.20 moved to CompPlan.

23.20.005 Generally.

This chapter describes overall program goals and objectives. The general policies and regulations in Chapter 23.90 WCC and the specific use policies and regulations in Chapter 23.10 WCC are the means by which these goals and objectives are implemented.

23.20.010 Adoption.

In addition to the policy adopted in WCC 23.10.020(C), the following goals and objectives relating to the program elements specified in RCW 90.58.100(2) are hereby adopted. They provide the comprehensive foundation and framework upon which the shoreline area designations, policies, regulations, and administrative procedures are based.

23.20.020 Economic development.

The economic development element provides for the location and design of industries, transportation facilities, port facilities, tourist facilities, commerce and other developments that are particularly dependent upon a shoreline location and/or use of the shorelines of the state.

A. Goal. To create and maintain an economic environment that can coexist harmoniously with the natural and human environment.

B. Objectives.

1. Encourage economic development that has minimal adverse effects and mitigates unavoidable impacts upon shoreline ecological functions and processes and the built environment.
2. Encourage shoreline development that has a positive effect upon economic and social activities of value to the region.
3. Encourage new water dependent, water related, and water enjoyment economic development in priority order.
4. Encourage economic development that is consistent with the adopted Comprehensive Economic Development Strategy (CEDS) for Whatcom County.
5. Implement economic development policies contained in the Whatcom County Comprehensive Plan in shoreline areas consistent with this program and the Act.
6. Encourage new economic development to locate in areas that are already developed with similar uses.
7. Discourage expansion of existing development that is incompatible with this program, the character of the local area, or the Whatcom County Comprehensive Plan.

23.20.030 Public access.

The public access element provides for public access to publicly owned or privately owned shoreline areas where the public is granted a right of use or access.

A. Goal. To increase the ability of the general public to reach, touch, and enjoy the water's edge, to travel on the waters of the state, and/or to view the water and the shoreline from adjacent

locations; provided, that private rights, the public safety, and shoreline ecological functions and processes are protected consistent with the U.S. and state Constitutions, state case law, and state statutes.

~~B. Objectives.~~

- ~~1. Locate, design, manage and maintain public access in a manner that protects shoreline ecological functions and processes and the public health and safety.~~
- ~~2. Design and manage public access in a manner that ensures compatibility with water-dependent uses.~~
- ~~3. Where appropriate, acquire access to publicly owned tidelands and shorelands. Encourage cooperation among the county, landowners, developers, other agencies and organizations to enhance and increase public access to shorelines as specific opportunities arise.~~
- ~~4. Provide and protect visual access to shorelines and tidelands.~~
- ~~5. Require physical or visual access to shorelines as a condition of approval for shoreline development activities commensurate with the impacts of such development and the corresponding benefit to the public, and consistent with constitutional limitations.~~
- ~~6. Develop and manage public access to prevent adverse impacts to adjacent private shoreline properties and developments.~~

~~23.20.040 Recreation.~~

~~The recreation element provides for the preservation and expansion of water-oriented recreational opportunities that facilitate the public's ability to enjoy the physical and aesthetic qualities of the shoreline through parks, public access to tidelands and beaches, bicycle and pedestrian paths, viewpoints and other recreational amenities.~~

~~A. Goal. To provide opportunities and space for diverse forms of water-oriented recreation.~~

~~B. Objectives.~~

- ~~1. Locate, develop, manage, and maintain recreation areas in a manner that protects shoreline ecological functions and processes.~~
- ~~2. Provide a balanced choice of water-oriented public recreational opportunities regionally. Ensure that shoreline recreation facilities serve projected county growth in accordance with the level of service standards established in the Whatcom County Comprehensive Plan and related goals and policies; the Comprehensive Park and Recreation Open Space Plan; the Whatcom County Bicycle Plan; and the Natural Heritage Plan.~~
- ~~3. Acquire additional recreation areas and public access areas with a high recreation value prior to demand to assure that sufficient shoreline recreation opportunities are available to serve future recreational needs.~~
- ~~4. Encourage cooperation among public agencies, nonprofit groups, and private landowners and developers to increase and diversify recreational opportunities through a variety of means including incorporating water-oriented recreational opportunities into mixed use developments and other innovative techniques.~~

5. Recognize and protect the interest of all people of the state by providing increased recreational opportunities within shorelines of statewide significance and associated shorelands.
6. Encourage private and public investment in recreation facilities.
7. Locate, design, and operate recreational development in a manner that minimizes adverse effects on adjacent properties as well as other social, recreational, or economic activities.

23.20.050 Transportation and essential public facilities.

The transportation and essential public facilities element provides for the general location and extent of existing and proposed public thoroughfares, transportation routes, terminals, and other public utilities and facilities.

A. Goal. To provide transportation systems and essential public facilities in shoreline areas without adverse effects on existing shoreline use and development or shoreline ecological functions and/or processes.

B. Objectives:

1. Locate, develop, manage, and maintain transportation systems and essential public facilities in a manner that protects shoreline ecological functions and processes. Minimize and mitigate unavoidable impacts.
2. Locate and design transportation systems and essential public facilities to be harmonious with the existing and future economic and social needs of the community.
3. Discourage the development of non-water dependent transportation systems and essential public facilities unless no feasible alternatives exist. Devote roads within the shoreline jurisdiction to low volume local access routes and shoreline public access where feasible.
4. When appropriate, require adequate compensation where transportation systems and essential public facilities reduce the benefits people derive from their property.
5. Provide for alternate modes of travel, encourage freedom of choice among travel modes, and provide multiple use transportation corridors where compatible in association with shoreline transportation development.
6. Require transportation system and essential public facility development in shoreline areas to protect and enhance physical and visual shoreline public access.

23.20.060 Shoreline use.

The shoreline use element considers the use and development of shorelines and adjacent land areas for housing, business, industry, transportation, agriculture, forestry, natural resources, recreation, education, public institutions, utilities and other categories of public and private land use with respect to the general distribution, location and extent of such uses and developments.

A. Goal. To preserve and develop shorelines in a manner that allows for an orderly balance of uses.

B. Objectives:

1. Give preference to water dependent and single-family residential uses that are consistent with preservation of shoreline ecological functions and processes. Give secondary preference to water-related and water-enjoyment uses. Allow non-water-oriented uses only when substantial

public benefit is provided with respect to the goals of the Act for public access and ecological restoration.

2. Designate and maintain appropriate areas for protecting and restoring shoreline ecological functions and processes to control pollution and prevent damage to the shoreline environment and/or public health.
3. Ensure shoreline uses are consistent with the Whatcom County Comprehensive Plan.
4. Balance the location, design, and management of shoreline uses throughout the county to prevent a net loss of shoreline ecological functions and processes over time.
5. Encourage mixed use developments that include and support water oriented uses and provide a substantial public benefit consistent with the public access and ecological restoration goals and policies of the Act.
6. Encourage shoreline uses and development that enhance shoreline ecological functions and/or processes or employ innovative features that further the purposes of this program.
7. Encourage shoreline uses and development that enhance and/or increase public access to the shoreline.

~~23.20.070 Conservation.~~

The shoreline conservation element provides for the protection of natural resources, and shoreline ecological functions and processes. Resources to be conserved and protected include, but are not limited to, wetlands; riparian, nearshore, and aquatic habitats; priority fish and wildlife habitats and species; floodplains; feeder bluffs and other geological features; cultural and historic resources; as well as scenic vistas and aesthetics.

A. Goal. To conserve shoreline resources and important shoreline features, and protect shoreline ecological functions and the processes that sustain them to the maximum extent practicable.

~~B. Objectives.~~

1. Develop regulations and mitigation standards that ensure new shoreline developments prevent a net loss of shoreline ecological functions and processes. Implement such regulations and standards in a manner consistent with all relevant constitutional and other legal limitations on the regulation of private property.
2. Protect critical areas in accordance with the policies and regulations in Chapter 16.16 WCC.
3. Manage renewable natural resources on a sustained yield basis. Extract nonrenewable natural resources in a manner that maintains the quality of other resources and shoreline ecological functions and processes.
4. Prioritize protection and/or conservation of shoreline areas that are ecologically intact and minimally developed or degraded.

~~23.20.080 Archaeological, historical and cultural resources.~~

The archaeological historical cultural element provides for protection, preservation and/or restoration of buildings, sites, and areas having archaeological, historical, cultural, or scientific value or significance.

~~A.—Goal. Protect shoreline features of historic, cultural, archeological, or scientific value or significance to prevent damage or destruction through coordination and consultation with the appropriate local, state and federal authorities, including affected Indian tribes.~~

~~B.—Objectives.~~

- ~~1.—Protect sites in collaboration with appropriate tribal, state, federal and local governments. Encourage public agencies and private parties to cooperate in the identification, protection and management of cultural resources.~~
- ~~2.—Where appropriate, make access to such sites available to parties of interest; provided, that access to such sites must be designed and managed in a manner that gives maximum protection to the resource.~~
- ~~3.—Provide opportunities for education related to archaeological, historical and cultural features where appropriate and incorporated into public and private programs and development.~~

~~23.20.090 Views and aesthetics.~~

~~This element provides for preservation and/or protection of scenic vistas, views of the water, and other aesthetic qualities of shorelines for public enjoyment.~~

~~A.—Goal. To assure that the public's ability and opportunity to enjoy shoreline views and aesthetics is protected.~~

~~B.—Objectives.~~

- ~~1.—Identify and protect areas with scenic vistas and areas where the shoreline has high aesthetic value.~~
- ~~2.—Design development to minimize adverse impacts on views from public property or views enjoyed by a substantial number of residences.~~

~~23.20.100 Restoration and enhancement.~~

~~This element provides for the timely restoration and enhancement of ecologically impaired areas in a manner that achieves a net gain in shoreline ecological functions and processes above baseline conditions as of the adoption of this program.~~

~~A.—Goal. To reestablish, rehabilitate and/or otherwise improve impaired shoreline ecological functions and/or processes through voluntary and incentive-based public and private programs and actions that are consistent with the Shoreline Management Program Restoration Plan (County Resolution 2007-011) and other approved restoration plans.~~

~~B.—Objectives.~~

- ~~1.—Encourage and facilitate cooperative restoration and enhancement programs between local, state, and federal public agencies, tribes, nonprofit organizations, and landowners to address shorelines with impaired ecological functions and/or processes.~~
- ~~2.—Restore and enhance shoreline ecological functions and processes as well as shoreline features through voluntary and incentive-based public and private programs.~~
- ~~3.—Target restoration and enhancement towards improving habitat requirements of priority and/or locally important wildlife species.~~

4. ~~Ensure restoration and enhancement is consistent with and, where practicable, prioritized based on the biological recovery goals for early Chinook and bull trout populations and other species and/or populations for which a recovery plan is available.~~
5. ~~Integrate restoration and enhancement with other parallel natural resource management efforts such as the WRIA 1 Salmonid Recovery Plan, Drayton Harbor and Portage Bay Shellfish Protection District Plans, WRIA 1 Watershed Management Plan, Whatcom County Comprehensive Plan, and the Puget Sound Salmon Recovery Draft Plan.~~

Chapter 23.05-10 Administrative ProceduresProvisions

23.10.010 Authorization.

RCW 90.58.140(3) requires local governments to establish a program, consistent with the rules adopted by Ecology, for the administration and enforcement of shoreline development. Also, in accordance with RCW 90.58.050, which provides that this program is intended to establish a cooperative program between Whatcom County and the state. Whatcom County shall have the primary responsibility for administering the regulatory program, and Ecology shall act primarily in a supportive and review capacity, in accordance with RCW 90.58.050.

23.10.100-020 Application to persons and developmentApplicability.

A. Unless specifically exempted by statute, or as excluded below, this program shall apply to any person, as defined in WCC Chapter 23.110. This program shall apply to any proposed development, use, or activity development as defined in WCC Chapter 23.110. All development and use of shorelines of the state shall be carried out in a manner that is consistent with this program and the policy of the Act as required by RCW 90.58.140(1), whether or not a shoreline permit or statement of exemption is required for such development pursuant to Chapter 23.60 WCC, occurring within shoreline jurisdiction. Such development, use, or activity must conform to chapter 90.58 RCW, the Shoreline Management Act, and this master program whether or not a permit is required.

B. Unless otherwise stated, no development shall be constructed, located, extended, modified, converted, or altered, or land divided, without full compliance with this program, including WCC Chapter 16.16 (Critical Areas).

C. No substantial development as defined in WCC Chapter 23.110 shall be undertaken within shorelines by any person on shorelines without first obtaining a substantial development permit from Whatcom County; provided, that such a permit shall not be required for the exempt activities listed in WCC 22.07.020 (Exemptions from Shoreline Substantial Development Permits) 23.60.022.

D. All developments, uses and development activities on shorelines shall be subject to the policies of the Whatcom County Comprehensive Plan Chapter 11 (Shorelines) and regulations of this program in addition to any other applicable regulations of the Whatcom County Code, provided, that all use and development that is to be located within the Cherry Point Management Area, as defined in Chapter 23.90 WCC, shall be subject to the regulations found in WCC 23.40.210 only, and shall not be subject to the regulations found in this chapter and Chapter 23.40 WCC unless otherwise specified.

E. Application within Federal Reserves or Lands.

1. Areas and uses in those areas that are under exclusive federal jurisdiction as established through federal or state statutes are not subject to the jurisdiction of RCW Chapter 90.58 (SMA).
2. As recognized by RCW 90.58.350, nothing in this program shall affect any rights established by treaty to which the United States is a party.
3. The Act and this program, including the permit system, shall apply to all nonfederal developments and uses undertaken on federal lands and on lands subject to nonfederal

Comment [AP14]: Moved sections 23.10.100 – 150 here from 23.50.

Comment [DN15]: This text is required per WAC 173-26-191(2)(a)(iii)(A).

Comment [CES16]: Covered by 23.40.115 (CPMA)

Comment [AP17]: Moved from 23.30.010 – General Regulations

Comment [AP18]: Updated per Periodic Review Checklist, Item 2017.f, and Scoping Document, Item #2c.

Comment [CES19]: From WAC 90.58.350.

ownership, lease, or agreement, even though such lands may fall within the external boundaries of a federal ownership.

F. Direct federal agency activities affecting the uses or resources subject to the Act must be consistent to the maximum extent practicable with the enforceable provisions of the Act and with this master program as required by WAC 173-27-060.

G. This master program shall apply to all unincorporated urban lands until such time as a city meets the requirements of WAC 173-26-150 or 173-26-160 for pre-designation of urban growth areas (UGAs) or amends its master program as appropriate.

H. This program shall not apply to:

1. Activities undertaken to comply with a United States Environmental Protection Agency Superfund-related order, or a Washington Department of Ecology order pursuant to the Model Toxics Control Act (such as the Swift Creek Sediment Management Action Plan), or a Department of Homeland Security order that specifically preempts local regulations in the findings of the order.

2. Pursuant to RCW 90.58.045 regarding environmental excellence program agreements, notwithstanding any other provision of law, any legal requirement under the Shoreline Management Act, including any standard, limitation, rule, or order is superseded and replaced in accordance with the terms and provisions of an environmental excellence program agreement, entered into under chapter 43.21K RCW.

3. The holder of a certification from the governor pursuant to chapter 80.50 RCW shall not be required to obtain a permit under chapter 90.58 RCW.

I. Pursuant to RCW 90.58.140(12), a permit is not required in order to dispose of dredged materials at a disposal site approved through the cooperative planning process referenced in RCW 79.105.500, provided the dredged material disposal proponent obtains a valid site use authorization from the Dredged Material Management Program office within the Department of Natural Resources.

23.10.180-030 AdministrationAdministrative Duties.

A. The Director is hereby ~~vested with the authorized~~ authorized to:

1. Administer this program.
2. Determine if a public hearing should be held on a shoreline permit application by the Hearing Examiner pursuant to WCC Title 22 (Land Use and Development) ~~23.60.130~~.
3. Grant or deny statements of exemption.
4. Authorize, approve, or deny shoreline substantial development permits, except for those for which the Hearing Examiner or County Council is the designated decision maker.
5. Enforce the code pursuant to WCC 23.10.160 (Violations, Enforcement, and Penalties), including issuing a stop work orders pursuant to the procedure set forth in WAC 173-27-270 and this program, upon a person undertaking an activity on shorelines in violation of Chapter 90.58 RCW or this program; and seek remedies for alleged violations of this program's regulations, or of the provisions of the Act, or of conditions of approval for attached to a all project permits with

Comment [CES20]: Added per Periodic Review Checklist, Item 2017.c, and Scoping Document, Item #1c: Update to fully cover the exceptions in WAC 173-27-044 and -045 to satisfy required legislative amendment.

shoreline permit conditions of approval for consistency with this program issued by Whatcom County.

6. Decide whether or not a proposal is subject to the consolidated review process of Chapter WCC 22.05 (Land Use and Development) and determine what other permits are required to be included in the consolidated review.

7. Make field inspections as needed, and prepare or require reports on a shoreline permit or statement of exemption applications.

8. Make written recommendations to the County Council or Hearing Examiner as appropriate and, insofar as possible, assure that all relevant information, testimony, and questions regarding a specific matter are made available during their respective reviews of such matter.

9. Propose amendments to the Planning Commission deemed necessary to more effectively or equitably achieve the purposes and goals of this program.

10. Advise interested persons and prospective applicants/proponents as to the administrative procedures and related components of this program.

11. Collect fees as provided for in WCC Title 22 (Land Use and Development) 23.60.070; and.

12. Assure that proper notice is given to interested persons and the public through news media, posting, or mailing of notices as required by Title 22 (Land Use and Development).

13. Review administrative and management policies, regulations, plans, and ordinances relative to lands under County jurisdiction that are adjacent to shorelines so as to achieve a use policy on such lands that is consistent with the Act and this program.

14. Review and evaluate the records of project review actions in shoreline environments and report on the cumulative effects of authorized development of shoreline conditions. The Director shall coordinate such review with the Washington Department of Ecology, the Washington Department of Fish and Wildlife, the Lummi Nation and Nooksack Tribe, and other interested parties.

15. Make recommendations to the Planning Commission for open space tax designations pursuant to Chapter 84.34 RCW.

Comment [PDS21]: Not relevant to SMP

16. Develop administrative guidance materials related to the interpretations of principles and terms in this program as required to provide for consistent and equitable implementation of this program. Such administrative guidance documents shall be developed in consultation with the provided to Washington State Department of Ecology to ensure that any formal written interpretations are consistent with the purpose and intent of Chapter 90.58 RCW, the applicable guidelines, and the goals and objectives of this program.

B. The Whatcom County Planning Commission is hereby vested with the responsibility to periodically review the program as a major element of the County's planning and regulatory program, and make recommendations for amendments thereof to the County Council.

Comment [CES22]: Moved from 23.70.040

C. The Whatcom County Council is hereby vested with authority to:

1. Initiate an amendment to this program according to the procedures prescribed in WAC 173-26-100.

2. Adopt all amendments to this program, after consideration of the recommendation of the Planning Commission and pursuant to the procedural requirements of WCC Chapter 2.02; provided, that substantive amendments shall become effective 14 days from immediately upon adoption by the Department of Ecology's written notice of final action.
3. Make final County decisions or recommendations, as applicable, with regard to shoreline permit, shoreline variance, or shoreline conditional use applications that require County Council action on a consolidated review as provided by WCC Chapter 22.05.

Comment [CES23]: Moved from 23.70.050

~~23.05.010 Authority.~~

As described in adopted Whatcom County Ordinance 2008-034, the general administrative sections of Title 23 (Whatcom County Shoreline Management Program) are not part of this program. They are, however, included with the text of this title for consistency and ease of use. Department of Ecology will be notified of any changes to the administrative chapters listed below.

The use of separate local administrative and enforcement procedures is consistent with the 2003 Washington State Shoreline Master Program Guidelines (WAC 173-26-191(2)(a)(iii)(C)), Administrative provisions:

Local governments may include administrative, enforcement, and permit review procedures in the master program or the procedures may be defined by a local government ordinance separate from the master program. In either case, these procedures shall conform to the Shoreline Management Act, specifically RCW 90.58.140, 90.58.143, 90.58.210 and 90.58.220 and to chapter 173-27 WAC.

~~23.05.020 Purpose.~~

The purpose of the chapter is to allow Whatcom County to revise local administrative procedures (fees, application meetings, authority of administrator, etc.) without a formal state amendment process. These chapters must still be consistent and remain consistent with the related provisions in the Shoreline Management Act and state shoreline rules (WACs). In the event of a conflict, the state RCW or WAC, as amended, will prevail over the local ordinance.

~~23.05.030 Administrative procedures.~~

A. All applications for project permits covered by this title shall be reviewed and processed in accordance with Chapter 22.05 WCC, except as otherwise stated within this title.

B. The following administrative sections and chapters were adopted by the Whatcom County Administrative Procedures Ordinance 2008-034, and are separate from this title:

- WCC 23.60.050 — Minimum application requirements.
- WCC 23.60.060 — Pre-application conference.
- WCC 23.60.070 — Fees.
- WCC 23.60.080 — Notice of application.
- WCC 23.60.090 — Permit application review.
- WCC 23.60.100 — Consolidated permit review.

~~WCC 23.60.110 – State Environmental Policy Act (SEPA) compliance.~~

~~WCC 23.60.130 – Public hearings.~~

~~WCC 23.60.140 – Permit conditions.~~

~~WCC 23.60.150 – Notice of decision, reconsideration and appeal.~~

~~WCC 23.60.160 – Initiation of development.~~

~~WCC 23.60.180 – Rescission and modification.~~

~~WCC 23.60.190 – Expiration.~~

~~Chapter 23.70 WCC – Administration.~~

~~Chapter 23.80 WCC – Legal Provisions.~~

~~23.10.110 Relationship to other local regulations.~~

Comment [AP24]: Moved to WCC 23.10.060.

~~A. In the case of development subject to the shoreline permit requirement of this program, the county building official shall not issue a building permit for such development until a shoreline permit has been granted; provided, that any permit issued by the building official for such development shall be subject to the same terms and conditions that apply to the shoreline permit.~~

~~B. In the case of development subject to regulations of this program but exempt from the shoreline substantial development permit requirement, any required statement of exemption shall be obtained prior to issuance of the building permit; provided, that for single family residences, a building permit reviewed and signed off by the administrator may substitute for a written statement of exemption. A record of review documenting compliance with bulk and dimensional standards as well as policies and regulations of this program shall be included in the permit review. The building official shall attach and enforce conditions to the building permit as required by applicable regulations of this program pursuant to RCW 90.58.140(1).~~

~~C. In the case of zoning conditional use permits and/or variances required by WCC Title 20 for development that is also within shorelines, the county decision maker shall document compliance with bulk and dimensional standards as well as policies and regulations of this program in consideration of recommendations from the administrator. The decision maker shall attach conditions to such permits and variances as required to make such development consistent with this program.~~

~~D. In the case of land divisions, such as short subdivisions, long plats and planned unit developments that require county approval, the decision maker shall document compliance with bulk and dimensional standards as well as policies and regulations of this program and attach appropriate conditions and/or mitigating measures to such approvals to ensure the design, development activities and future use associated with such land division(s) are consistent with this program.~~

~~E. Other local ordinances that may be applicable to shoreline development or use include, but are not limited to:~~

~~1. Building, plumbing, mechanical, and fire codes.~~

~~2. Boating and swimming, WCC Title 11.~~

~~3. On-site sewage system regulations, Chapter 24.05 WCC.~~

~~4. Solid waste rules and regulations, Chapter 24.06 WCC.~~

5. ~~Zoning, WCC Title 20.~~

6. ~~Land division regulations, WCC Title 21.~~

7. ~~Development standards.~~

~~23.10.120 Relationship to other state and federal laws.~~

Comment [AP25]: Moved to 23.10.060.

A. ~~Obtaining a shoreline permit or statement of exemption for a development or use does not excuse the applicant/proponent from complying with any other local, tribal, state, regional or federal statutes or regulations applicable to such development or use.~~

B. ~~At the time of application or initial inquiry, the administrator shall inform the applicant/proponent of other such statutes and regulations relating to shoreline issues that may be applicable to the project to the extent that the administrator is aware of such statutes. However, tThe final responsibility for determining applicable statutes and regulations and complying with the same rests with the applicant/proponent or responsible person carrying out the use or development in question.~~

C. ~~Washington State statutes together with implementing regulations adopted pursuant thereto that may be applicable to shoreline development or use include, but are not limited to:~~

1. ~~Flood Control Zone Act, Chapter 86.16 RCW.~~

2. ~~Forest Practices Act, Chapter 76.09 RCW.~~

3. ~~Fish and Wildlife, RCW Title 77.~~

4. ~~Water Pollution Control Act, Chapter 90.48 RCW.~~

5. ~~Land Subdivision Act, Chapter 58.17 RCW.~~

6. ~~Surface Mining Act, Chapter 78.44 RCW.~~

7. ~~Washington Clean Air Act, Chapter 70.94 RCW.~~

8. ~~State Environmental Policy Act (SEPA), Chapter 43.21C RCW.~~

9. ~~Camping Resorts Act, Chapter 19.105 RCW.~~

10. ~~Water Resources Act of 1971, Chapter 90.54 RCW.~~

11. ~~Growth Management Act, Chapter 36.70A RCW.~~

12. ~~State Hydraulic Code, Chapter 77.55 RCW.~~

D. ~~Regional authority regulations authorized by state law that may be applicable to shoreline development or use include, but are not limited to:~~

1. ~~Northwest Clean Air Agency regulations.~~

2. ~~Puget Sound Water Quality Management Plan.~~

E. ~~Federal statutes together with implementing regulations adopted pursuant thereto that may be applicable to shoreline development or use include, but are not limited to:~~

1. ~~Rivers and Harbors Act of 1899.~~

2. ~~Fish and Wildlife Coordination Act of 1958.~~

3. ~~National Environmental Policy Act of 1969 (NEPA).~~

4. ~~Coastal Zone Management Act of 1972, as amended.~~

5. ~~Federal Water Pollution Control Act, as amended.~~

6. ~~Flood Insurance Act of 1968, as amended.~~

- 1 7. ~~Clean Air Act, as amended.~~
2 8. ~~Endangered Species Act (ESA).~~

3 ~~**23.10.1310 Application within federal reserves.**~~

- 4 A. ~~As recognized by RCW 90.58.350, the provisions of this program shall not apply to lands held in trust~~
5 ~~by the United States for Indian nations, tribes or individuals.~~

Comment [CES26]: Moved to 23.10.020,
Applicability

6 **23.10.040 Code Interpretation.**

- 7 A. The regulations of this Program shall be interpreted to allow the development, use, or activity as
8 described in the General Regulations and/or Specific Use Regulations only when the proposal is
9 designed, constructed, and/or mitigated to provide no net loss of or a net lift to ecological functions
10 and ecosystem wide processes.
11 B. The policies of Chapter 11 (Shorelines) of the Comprehensive Plan shall guide interpretation of the
12 regulations.
13 C. Conflict between the provisions of the this Program and the WACs implementing the Act must be
14 resolved in accordance with the WACs; provided that conflict between the provisions of the WACs
15 implementing the Act and the Act must be resolved in accordance with the Act.
16 D. In case of conflict between the provisions of this program and Whatcom County Code or the laws,
17 regulations, codes, or rules promulgated by any other authority having jurisdiction within Whatcom
18 County, the more restrictive requirements shall apply, except when constrained by federal or state
19 law.
20 E. As provided for in RCW 90.58.900, the Act is exempt from the rule of strict construction, and this
21 program, including these regulations, shall therefore be liberally construed to give full effect to the
22 purposes, goals, objectives, and policies of the Act for which this program was enacted and adopted,
23 respectively.
24 F. Within shoreline jurisdiction, the regulations of WCC Chapter 16.16 adopted pursuant to 23.05.065
25 (Critical Areas) shall be liberally construed together with the program to give full effect to the
26 objectives and purposes of the provisions of the program and Act.

27 **23.10.050 Shoreline Permits Required.**

- 28 A. To be authorized, all shoreline development, uses, or activities shall be done in a manner consistent
29 with this program and the Shoreline Management Act as required by RCW 90.58.140(1), regardless
30 of whether a shoreline permit, statement of exemption, shoreline variance, or shoreline conditional
31 use permit is required.
32 B. The applicable provisions of WCC Title 22 (Land Use and Development) shall govern the processing
33 of permits required under this Title. If any conflict should exist between Title 22 and this program,
34 the provisions of this program shall prevail.

35 **23.10.160 Violations, Enforcement, and Penalties.**

- 36 A. The Director, when necessary in consultation with the Department of Ecology, is authorized to
37 adopt such rules as are necessary and appropriate to carry out the provisions of the Shoreline
38 Management Act (RCW 90.58.200) and Chapter 173-27 WAC, Part II. The Act calls for a cooperative

1 program between local government and the state. It provides for a variety of means of
2 enforcement, including civil and criminal penalties, orders to cease and desist, orders to take
3 corrective action, and permit rescission.

4 B. In addition to the following provisions, this Title shall be enforced in accordance with WCC Chapter
5 20.94 (Enforcement and Penalties) and WAC 173-27-240 through 173-27-300 or their successors.

6 C. To achieve no net loss, if a development, use, or activity has occurred in violation of this program,
7 prompt restoration or mitigation of any adverse impacts shall be provided. The standard mitigation
8 ratio for the critical area or buffer impacts shall be doubled to address temporal loss when
9 appropriate. If this provision is not complied with, the County may restore or mitigate the site and
10 charge the responsible person for the full cost of such an activity. Additionally, any and all permits or
11 approvals issued by the County may be denied for that property for a period of up to six years.

12 D. Any responsible party that willfully refuses to complete a required restoration plan pursuant to this
13 section shall be guilty of a misdemeanor and, in addition to the requirement of subsection (C), shall
14 provide shoreline restoration equal to double the square footage of the impacted area.

15 E. Pursuant to WCC 22.05.150 (Permit Revocation), the County may revoke a permit if the applicant
16 violates the conditions or limitations set forth in the permit or exceeds the scope of the work set
17 forth in the permit.

18 **~~23.80.040~~ 23.10.170 Abatement.**

19 Structures or development on shorelines considered by the ~~administrator~~ Director to present a hazard
20 or other public nuisance to persons, properties, or natural features may be abated by the County under
21 the provisions of WCC Title 15 (Buildings & Construction) and WCC Chapter 22.15 (Code
22 Enforcement) ~~the applicable provisions of the Uniform Code for the Abatement of Dangerous Buildings,~~
23 ~~1997 Edition, or successor as adopted by Whatcom County,~~ or by other appropriate means.

24 **23.10.180 Financial Sureties.**

25 In approving any application or exemption for a shoreline development, the Director may require the
26 posting of a financial surety to ensure continued compliance with any conditions imposed, including the
27 construction of improvements, the adherence to County standards, and/or maintenance, repair or
28 replacement of such improvements. The financial surety shall be in a form acceptable to the County's
29 attorney. In the event a condition occurs warranting the use of financial surety, the Director may act
30 under such financial surety or may perform the work required at the County's expense, which expense
31 shall be a lien against the property, enforceable as would be a judgment thereon.

Comment [CES27]: Added. Though we use financial sureties to ensure performance, there was no authorizing language in the SMP.

32 **~~23.80.010~~ 23.10.190 Amendments.**

33 A. Amendments to the Shoreline Management Program—including both Comprehensive Plan policies
34 and Title 23 regulations—shall be processed pursuant to WCC Chapter 22.10 (Legislative Action
35 Procedures).

36 B. All regulatory elements of this Program shall be considered a part of the County's development
37 regulations. Certain non-regulatory elements of this master program, including but not limited to
38 the Shoreline Restoration Plan or administrative procedures (WCC Title 22), may be updated and
39 amended at any time without requiring a formal master program amendment. Future changes to

WCC Title 22 shall remain consistent with the Shoreline Management Act and associated rules, specifically RCW 90.58.140, 90.58.143, 90.58.210, 90.58.220 and Chapter 173-27 WAC.

C. After approval or disapproval of a program amendment by the Department of Ecology as provided in RCW 90.58.090, the County shall publish a notice that the program amendment has been approved or disapproved by the Department of Ecology. For the purposes of RCW 36.70A.290, the date of publication for the amendment of a program is the date the County publishes notice that the program amendment has been approved or disapproved by the Department of Ecology.

A-D. The Director shall submit an annual report to the County Council reviewing the effectiveness of the program in achieving its stated purpose, goals, and objectives. Such report may also include any proposed amendments deemed necessary to increase its effectiveness or equity. If said report contains proposed amendments, the Council may schedule a public hearing to consider such matter in accordance with the procedure described in subsection (A). Said report shall also include a determination of whether or not the goal of no net loss of shoreline ecological function is being achieved and provide recommendations for achieving and maintaining the goal.

Comment [DOE-Req28]: Required Change – This change clarifies that while administrative provisions can be codified within a local ordinance separate from the SMP, such changes shall remain consistent with the Shoreline Management Act (SMA) and applicable rules (See SMP Guidelines at WAC 173-26-191(2)(a)(iii)(C).

Chapter 23.230 Shoreline Jurisdiction and Area-Environment Designations

23.230.010 Shoreline Jurisdiction.

- A. The provisions of this program shall apply to all shorelines of the state in unincorporated Whatcom County, including all shorelines of statewide significance (~~Appendix D of this title~~) and all shorelands as defined in WCC Chapter 23.110 and collectively referred to herein as "shorelines." For the purposes of this program, jurisdictional shorelines are divided into segments or reaches. Each segment is assigned one or more shoreline ~~environmental~~ area designations pursuant to this chapter in order to provide for the management of use and development within shorelines.
- B. The shoreline master program jurisdiction applies to all shorelines of the state and their associated shorelands. This includes:
1. All marine waters;
 2. Rivers and streams with more than twenty cubic feet per second (cfs) mean annual flow;
 3. Lakes and reservoirs twenty acres and greater in area;
 4. Floodways and the entire 100-year contiguous floodplain areas landward two hundred feet from such floodways; and.
 5. All associated wetlands and river deltas associated with the streams, lakes, and tidal waters that are subject to the provisions of the Act;
 6. Shorelands adjacent to these waterbodies, typically within two hundred feet of the ordinary high water mark (OHWM);
 7. Buffers necessary to protect critical areas that are located within shoreline jurisdiction as described in this program.
 8. Associated estuarine wetlands: the jurisdictional boundary shall extend two hundred feet landward of the OHWM of the wetland.
 9. Associated palustrine wetlands that extend greater than two hundred feet landward of the OHWM of the shoreline: the jurisdictional boundary shall extend to the delineated edge OHWM of the wetland.
 10. Critical areas designated pursuant to Chapter 36.70A RCW and located within shoreline jurisdiction shall be subject to the regulations of this program.

23.20.020 ~~23.230.020~~ Official Shoreline Map.

- A. As part of this program, there is one official Whatcom County shoreline environment designations map, which shall be in the custody of the Planning and Development Services Department and available for public inspection during normal business hours and on the Whatcom County website. Unofficial copies of the official map or portions thereof may be included or distributed with copies of this program. Shoreline Area Designations. Shoreline area designations are delineated on a map, hereby incorporated as a part of this program (Appendix E of this title) that shall be known as the Official Shoreline Map. There shall be only one official copy of this map that shall reside in the custody of the Washington State Department of Ecology. Additional copies have been provided to

Comment [DOE-Req29]: Required Change – Whatcom County has removed the previously adopted "geomorphic floodplain" on the Official Shoreline Map to determine jurisdiction for the Nooksack and Sumas Rivers and has elected to set its jurisdiction as the extent of the 100-year floodplain recently remapped by FEMA. This change is necessary for consistency with the map change.

Comment [DOE-Req30]: Required Change – This change clarifies that while administrative provisions can be codified within a local ordinance separate from the SMP, such changes shall remain consistent with the Shoreline Management Act (SMA) and applicable rules (See SMP Guidelines at WAC 173-26-191(2)(a)(iii)(C).

Comment [DOE-Req31]: Required Change – Shoreline associated wetlands are not limited to palustrine wetlands for the purposes of determining shoreline jurisdiction. Also, the latera extent of wetlands is not always consistent with the OHWM of the primary waterbody. As such, these changes are necessary for consistency with the definition of "Shorelands" found in RCW 90.58.030(2)(f).

Comment [CES32]: From RCW 90.58.030(2)((f) and DOE SMP Handbook.

the Whatcom County auditor and the Whatcom County planning and development services department where they are available for public use.

B. The purpose of the official shoreline environment designations map is to depict graphically those areas of Whatcom County falling under the jurisdiction of this program, and the shoreline environment designations of those areas. ~~Shoreline Jurisdictional Limits. The purpose of the Official Shoreline Map is to identify shoreline area designations.~~ The map does not necessarily identify or depict the lateral extent of shoreline jurisdiction nor does it identify all associated wetlands. The lateral extent of the shoreline jurisdiction shall be determined on a case-by-case basis based on the location of the ordinary high water mark (OHWM), floodway, floodplain, and presence of associated wetlands; ~~provided, that, exclusive of associated wetlands, the map identifies the lateral extent of shoreline jurisdiction on the Sumas River and the Mainstem, North Fork, Middle Fork and South Fork of the Nooksack River.~~

C. Where questions arise regarding the precise boundaries of any shoreline designation, the Director will make the final determination following the guidance of 23.20.030 (Interpretation of Official Map Boundaries) and 23.20.040 (Mapping Errors). Appeals of such interpretations may be filed pursuant to WCC 22.05.160 (Appeals).

D. All shorelines waterward of the OHWM shall be designated aquatic, except that in the Cherry Point Management Area the aquatic designation shall start waterward of the CPMA boundary (see subsection E).

E. The Cherry Point Management Area is a geographic area lying between the eastern property boundary of Tax Lots 2.27 and 2.28 within the SE 1/4 of Section 11, Township 39 North, Range 1 West, as it existed on June 18, 1987, and the southern boundary of Section 32, Township 39 North, Range 1 East, extending waterward a distance of 5,000 feet and extending landward for 200 feet as measured on a horizontal plane from the OHWM. This area shall have the Cherry Point Management Area shoreline environment designation.

F. ~~Upland shoreline environment designations shall apply to shorelands, unless specifically stated to be applied to the aquatic designation by this program.~~

~~F.G.~~ Only one shoreline environment designation shall apply to a given shoreland area. In the case of designations running parallel to one another (as along the coast), designations shall be divided along an identified linear feature. Such linear features shall be clearly noted in the metadata associated with the Official Shoreline Map.

~~G.H.~~ All shorelines east of the Mount Baker National Forest western boundary are designated ~~natural~~ or conservancy unless there are federal projects on federal lands.

~~H.I.~~ All areas within shorelines that are not mapped and/or designated ~~and are not directly adjacent to other shoreline designated areas~~ are automatically assigned a conservancy designation. Within urban growth areas, such shorelines shall be automatically assigned an urban conservancy designation until such time that the shoreline environment can be re-designated through a formal amendment.

Comment [PDS33]: Should be based existing conditions

Comment [DOE-Req34]: Required Change – This change restores existing language and the Official Shoreline Map does not include the western portions of the county, and thus a Conservancy designation would be assigned as a default pursuant to the SMP Guidelines at WAC 173-26-211(2)(e).

Comment [DOE-Req35]: Required Change – This change restores existing language by removing a proviso that is not applicable to unmapped and/or designated shorelines per WAC 173-26-211(2)(e).

Comment [CES36]: Moved from “Interpretation of Map” section, below.

23.020.021-030 Interpretation of shoreline area designation boundariesOfficial Map Boundaries.

Where the exact location of an environment designation boundary line is uncertain, the official shoreline environment designations map will be used to determine the location of such line. When resorting to the shoreline environment designations map does not resolve the conflict, the following rules will apply:

1. Boundaries indicated as approximately following the center lines of streets, highways, alleys, or other roadways, or railroads shall be construed to follow the nearest right-of-way edge;
2. Boundaries indicated as approximately following lot, fractional section, or other subdivision lines shall be construed as following such subdivision lines;
3. Boundaries indicated as approximately following any lines of corporate limits or other local government jurisdictional lines shall be construed as following such lines;
4. Boundaries indicated as parallel to or extensions of features identified in subsections (1) through (3) of this section shall be so construed; and,
5. Boundaries between parallel environment designations along the shoreline shall be construed as the top of the bluff or vegetation line that distinguishes existing development from the critical area abutting the shoreline.

When not specifically indicated on the shoreline environment designations map, distances shall be determined by the scale of the map;

Where existing physical or cultural features are at variance with those shown on the shoreline environment designations map and cannot be determined with certainty by applying subsections (A)(1) through (6) of this section, the director shall determine the location or existence of such feature utilizing the provisions of WAC 173-27-211, the policies of RCW 90.58.020, and the corresponding master program provisions herein; and

If disagreement develops as to the exact location of a shoreline area designation boundary line, the Official Shoreline Map shall prevail.

If disagreement develops as to the exact location of a shoreline area designation boundary line, the following rules shall apply:

Boundaries indicated as approximately following lot, tract, or section lines shall be so construed.

Boundaries indicated as approximately following roads or railways shall be respectively construed to follow their centerlines.

Boundaries indicated as approximately parallel to or extensions of features indicated in subsection (B)(1) or (2) of this section shall be so construed.

Whenever existing physical features are inconsistent with boundaries on the Official Shoreline Map, the administrator shall interpret the boundaries. Appeals of such interpretations may be filed pursuant to WCC 23.60.150(H).

All shoreline area waterward of the OHWM shall be designated aquatic.

Upland shoreline area designations shall apply to shorelands.

Only one shoreline area designation shall apply to a given shoreland area. In the case of parallel designations, designations shall be divided along an identified linear feature. Such linear features shall be clearly noted in the metadata associated with the Official Shoreline Map.

All shorelines east of the Mount Baker National Forest western boundary are designated conservancy unless there are federal projects on federal lands.

All areas within shorelines that are not mapped and/or designated are automatically assigned a conservancy designation. Within urban growth areas, such shorelines shall be automatically assigned an urban conservancy designation until such time that the shoreline area can be re-designated through a formal amendment.

Comment [CES37]: Moved to 23.20.020 Official Map section

23.20.040 Mapping Errors

Some mapping errors may be adjusted prior to a master program amendment to assign the appropriate designation to that area by the following methods:

1. The common boundary descriptions and the criteria in RCW 90.58.030(2) and Chapter 173-22 WAC supersede the map when there are mapping error conflicts, other than those with a solution provided in this section.
~~In the event that a jurisdictional area, including associated wetlands, is not mapped, it will automatically be assigned a "resource," "conservancy," or "urban conservancy" designation depending on its location. If outside a UGA and adjacent to an existing "resource" designation, it shall be "resource," if adjacent to "conservancy" it shall be "conservancy. If outside or inside of a UGA or LAMIRD it shall be "urban conservancy." Such designation will apply until a master program amendment is approved that assigns the appropriate designation to the subject area.~~
2. In the event that a parcel was inadvertently assigned more than one designation, the more restrictive designation shall apply.
3. In the event that a parcel on the boundary between two designations appears to be a mapping error based on the criteria in this section, the County shall apply the most appropriate of the two designations, until such time as the map can be formally corrected consistent with WAC 173-26-100 and Section 22.500.105(I) (Shoreline Master Program Amendment).
4. In the event of an environment designation mapping error where the master program update or amendment record, including the public hearing process, is clear in terms of the correct environment designation to apply to a property, the County shall apply the environment designation approved through the master program update or amendment process and correct the map.
5. If the environment designation criteria were misapplied, but the update or amendment record, including the public hearing process, does not clearly show that a different designation was intended to be shown on the map, a master program amendment may be obtained consistent with WAC 173-26-100 and Section 22.500.105(I) (Shoreline Master Program Amendment). This process is intended to allow for reasonable corrections to the shoreline environment designation process. Such process shall include early consultation with the Department of Ecology and other agencies with jurisdiction, affected tribes, and appropriate public notification prior to local approval. Current designations are reflected in the shoreline environment designations map located pursuant to WCC Chapter 23.20 (Shoreline Jurisdiction and Environment Designations).

- 1 **23.020.022-050 Shoreline Area Environment Designations.**
- 2 A. A set of 10 shoreline area designations has been developed as a part of this program. The purpose
- 3 of the shoreline area designations is to provide a systematic, rational, and equitable basis upon
- 4 which to guide and regulate development within specific shoreline reaches.
- 5 B. Shoreline area designations have been determined after consideration of:
- 6 1. The ecological functions and processes that characterize the shoreline, together with the degree
- 7 of human alteration; and
- 8 2. Existing development patterns together with WCC Title 20, Zoning, designations, the County
- 9 Comprehensive Plan designations and other officially adopted plans; and
- 10 3. Federal and tribal ownership status; and
- 11 4. The goals of Whatcom County citizens for their shorelines; and
- 12 5. Pursuant to RCW 90.58.100(4), in designating state-owned shorelines, consideration has been
- 13 given to public demand for wilderness beaches, ecological study areas, and other recreational
- 14 activities; and
- 15 6. Other state policies in the Act and the Shoreline Master Program Guidelines (RCW 90.58.020
- 16 and Chapter 173-26 WAC, respectively).
- 17 A. Development, use and activities use within each designated shoreline area environment shall occur
- 18 consistent with the SMP this program, including but not limited to: the shoreline environment
- 19 designation purpose, designation criteria, and policies described found in Whatcom County
- 20 Comprehensive Plan Chapter 11 (Shorelines) below; the general policies and regulations contained in
- 21 Chapter 11 (Shorelines) and WCC Chapter 23.390 (General Regulations), and the use and
- 22 modification policies and regulations provided in Chapter 11 (Shorelines) and WCC Chapter 23.4100
- 23 (Shoreline Use and Modification Regulations), subject to the provisions of the Whatcom County
- 24 Zoning Code, WCC Title 20 (Zoning), and other applicable land use regulations where more
- 25 restrictive.
- 26 B. Shoreline environment designations in Whatcom County include the following:
- 27 1. Urban
- 28 2. Urban Resort
- 29 3. Urban Conservancy
- 30 4. Shoreline Residential
- 31 5. Rural
- 32 6. Resource
- 33 7. Conservancy
- 34 8. Natural
- 35 9. Aquatic
- 36 10. Cherry Point Management Area

Comment [MD38]: Moved to CompPlan.

Comment [CES39]: Policy Change. The existing SMP treats the SPMA as a sort of overlay designation. Based on Council's recent actions regarding this area, staff is proposing that it be given its own environment designation.

23.0020-060 Designation of Shorelines of Statewide Significance.

In accordance with the criteria of RCW 90.58.030(2)(e), the legislature designated the following shorelines of unincorporated Whatcom County, including the shorelands and associated wetlands as therein defined, as having statewide significance:

A. Lakes:

1. Lake Whatcom;
2. Ross Lake; and
3. Baker Lake.

B. Rivers:

1. Nooksack River: its Mainstem downstream to Bellingham Bay, its North Fork upstream to the mouth of Glacier Creek, and its South Fork upstream to the mouth of Hutchinson Creek.
2. Skagit River: upstream of the Whatcom-/Skagit County line to the point where the mean annual flow is measured at 1,000 feet per second or more, approximately, at the confluence of Newhalem Creek.

C. Marine:

1. Birch Bay from Birch Point to Point Whitehorn.
2. All other marine waters, water columns, and bedlands waterward of extreme low tide.

~~23.30.030 Urban shoreline area.~~

~~23.30.031 Urban shoreline area—Purpose.~~

~~The purpose of the urban shoreline area is to provide for intensive development of water-oriented commercial, transportation, and industrial uses and accommodate mixed-use developments such as those consisting of urban density residential, commercial and industrial uses, while protecting existing shoreline ecological functions and processes and restoring shoreline ecological functions and/or processes in areas that have been previously degraded.~~

~~23.30.032 Urban shoreline area—Designation criteria.~~

~~The urban shoreline area is applied to shoreline areas zoned commercial, industrial and urban density residential within urban growth areas and limited industrial or commercial areas of more intense rural development, if they:~~

- ~~A. Are currently characterized by high intensity development and/or uses; are designated by the Comprehensive Plan for high intensity uses or intensive uses related to commerce, transportation or navigation; or are suitable and planned for high intensity mixed use; and~~
- ~~B. Do not contain limitations to urban use such as geologic hazards, and have adequate utilities and access; and~~
- ~~C. Do not provide important ecological functions that would be significantly compromised by high intensity residential, commercial, or industrial use.~~

~~23.30.033 Urban shoreline area—Policies.~~

~~Development within urban shoreline areas shall be consistent with the following policies:~~

- ~~A. New urban character development should be directed toward already developed or developing areas where compatible.~~

Comment [CES40]: The remainder of this chapter has been moved to either the CompPlan (in the case of purpose statements, designation criteria, and policies) or the amended Table 2 (Shoreline Use Table) (in the case of use permissions) so as to make it easier to find all such regulations.

1 ~~B. First priority should be given to water-dependent uses. Second priority should be given to water-~~
2 ~~related and then water-enjoyment uses. Non-water-oriented uses should not be allowed except as~~
3 ~~part of mixed-use developments. Non-water-oriented uses may also be allowed in limited situations~~
4 ~~where they do not conflict with or limit opportunities for water-oriented uses or on sites where~~
5 ~~there is no direct access to the shoreline, or where the needs of existing and future water-~~
6 ~~dependent uses are met.~~

7 **~~23.30.034 Urban shoreline area—Permitted uses.~~**

8 The following uses may be permitted subject to the applicable policies and regulations of this program:

9 ~~A. Residential.~~

10 ~~B. Water-oriented commercial, industrial and/or port development.~~

11 ~~C. Water-oriented recreation.~~

12 ~~D. Agricultural.~~

13 **~~23.30.035 Urban shoreline area—Conditional uses.~~**

14 The following uses may be permitted as conditional uses subject to the applicable policies and
15 regulations of this program:

16 ~~A. Non-water-oriented commercial, industrial and/or port development, subject to the criteria in WCC~~
17 ~~23.100.050(B)(1)(d) and 23.100.070(B)(1)(c)(iv), respectively.~~

18 ~~B. Dams, diversions and tailrace structures for hydroelectric power generation.~~

19 ~~C. Institutional development and essential public facilities, where there is no feasible location outside~~
20 ~~the shoreline.~~

21 ~~D. Transportation facilities not serving a specific approved use, including roads, railways, and parking~~
22 ~~areas, provided there is no feasible location outside the shoreline.~~

23 ~~E. Regional utility development not serving adjacent uses such as sewage trunk lines, desalinization~~
24 ~~facilities, solid waste transfer and disposal sites, oil pipelines and gas pipelines other than local~~
25 ~~distribution, provided there is no feasible location outside the shoreline.~~

26 **~~23.30.036 Urban shoreline area—Prohibited uses.~~**

27 The following uses are prohibited:

28 ~~A. Forest practices.~~

29 ~~B. Surface mining.~~

30 **~~23.30.040 Urban resort shoreline area.~~**

31 **~~23.30.041 Urban resort shoreline area—Purpose.~~**

32 The purpose of the urban resort shoreline area is to provide for intensive residential and commercial
33 uses geared to the needs of tourists and day visitors while protecting existing shoreline ecological
34 functions and processes. Emphasis is on hotels, motels, shops, restaurants, commercial rental
35 campgrounds, rental cabins, and shoreline-related recreation facilities.

36 **~~23.30.042 Urban resort shoreline area—Designation criteria.~~**

37 The urban resort shoreline area is applied to shoreline areas identified in the Comprehensive Plan as
38 suitable for resort commercial development with substantial features that might reasonably attract

resort development compatible with other development in the area, and which have existing and/or planned infrastructure sufficient to support such development.

~~23.30.043 Urban resort shoreline area — Policies.~~

Development within urban resort shoreline areas shall be consistent with the following policies:

- ~~A. Scale and design of resort development should assure compatibility with allowed uses of adjacent shoreline areas and shoreline ecological functions and processes.~~
- ~~B. Buildings over 35 feet in height may be permitted if additional open space, view areas, public access and/or other amenities are provided.~~

~~23.30.044 Urban resort shoreline area — Permitted uses.~~

The following uses may be permitted subject to the applicable policies and regulations of this program:

- ~~A. Residential.~~
- ~~B. Water-oriented commercial.~~
- ~~C. Port development, limited to passenger terminals.~~
- ~~D. Water-oriented recreation.~~

~~23.30.045 Urban resort shoreline area — Conditional uses.~~

The following may be permitted as conditional uses subject to the applicable policies and regulations of this program:

- ~~A. Non-water-oriented commercial, subject to the criteria in WCC 23.100.050(B)(1)(d).~~
- ~~B. Institutional development and essential public facilities, where there is no feasible location outside the shoreline.~~
- ~~C. Transportation facilities not serving a specific approved use, including roads, railways, and parking areas, provided there is no feasible location outside the shoreline.~~
- ~~D. Regional utility development not serving adjacent uses such as sewage trunk lines, desalinization facilities, solid waste transfer and disposal sites, oil pipelines and gas pipelines other than local distribution, provided there is no feasible location outside the shoreline.~~

~~23.30.046 Urban resort shoreline area — Prohibited uses.~~

The following uses are prohibited:

- ~~A. Agricultural.~~
- ~~B. Forest practices.~~
- ~~C. Surface mining.~~
- ~~D. All other industrial and port development.~~

~~23.30.050 Urban conservancy shoreline area.~~

~~23.30.051 Urban conservancy shoreline area — Purpose.~~

The purpose of the urban conservancy shoreline area is to protect shoreline ecological functions and processes in urban growth areas and limited areas of more intense rural development that are not designated for high intensity residential use and are not generally suitable for water-dependent uses.

23.30.052 Urban conservancy shoreline area — Designation criteria.

The urban conservancy shoreline area is applied to shoreline areas inside urban growth areas where any of the following characteristics apply:

- A. They support or retain important shoreline ecological functions and/or processes, even though partially developed.
- B. They have the potential for development at an intensity and character that is compatible with preserving and restoring ecological functions. They are generally not designated for high intensity residential use, commercial use, or industrial use.
- C. They are characterized by critical areas or indicate the presence of other valuable or sensitive ecological resources.

23.30.053 Urban conservancy shoreline area — Policies.

Development within urban conservancy shoreline areas shall be consistent with the following policies:

- A. Primary permitted uses should consist of low intensity residential uses or other low intensity uses that preserve the natural character of the area or promote preservation of open space and critical areas.
- B. Moderate to high intensity residential use may be permitted if the proposed uses and design result in substantial open space, public access and/or restoration of shoreline ecological functions and/or processes, and if compatible with surrounding uses.
- C. Public access and public recreation facilities are a preferred use if they will not cause substantial ecological impacts and when restoration of ecological functions is incorporated.
- D. Low intensity commercial uses may be permitted if the specific uses and design result in substantial open space, public access and/or restoration of ecological functions and if compatible with surrounding uses.

23.30.054 Urban conservancy shoreline area — Permitted uses.

The following uses may be permitted subject to the applicable policies and regulations of this program:

- 1. Single family and duplex residential.
- 2. Agricultural.
- 3. Low intensity recreation; provided, that facilities do not require substantive alterations to topography, such as public forest preserves, wildlife reserves, natural systems education, and/or interpretive areas, trails, trailheads, with associated restroom facilities and parking areas for no more than 30 vehicles, and buildings for interpretive facilities not exceeding 4,000 square feet, subject to the criteria in WCC 23.100.100.

23.30.055 Urban conservancy shoreline area — Conditional uses.

The following may be permitted as conditional uses subject to the applicable policies and regulations of this program:

- A. All other residential development.
- B. Low intensity water-oriented commercial limited to resort, bed and breakfast, campgrounds and similar facilities subject to the criteria in WCC 23.100.050. Low intensity non-water-oriented

commercial limited to resort, bed and breakfast, campgrounds and similar facilities, subject to the criteria in WCC 23.100.050(B)(1)(d).

C. ~~Dams, diversions and tailrace structures for hydroelectric power generation.~~

D. ~~Institutional development and essential public facilities, where there is no feasible location outside the shoreline.~~

E. ~~Regional utility development not serving adjacent uses such as sewage trunk lines, desalinization facilities, solid waste transfer and disposal sites, oil pipelines and gas pipelines other than local distribution, provided there is no feasible location outside the shoreline.~~

F. ~~Sewage outfalls and treatment plants, over water communication or power lines, fuel pipelines, or other types of hazardous materials pipelines, provided there is no feasible location outside of the shoreline.~~

~~23.30.056 Urban conservancy shoreline area—Prohibited uses.~~

~~The following uses are prohibited:~~

A. ~~Forest practices.~~

B. ~~Surface mining.~~

C. ~~All other industrial and port development.~~

D. ~~Transportation facilities not serving a specific approved use.~~

~~23.30.060 Shoreline residential area.~~

~~23.30.061 Shoreline residential area—Purpose.~~

~~The shoreline residential shoreline area accommodates residential development and accessory structures that are consistent with this chapter.~~

~~23.30.062 Shoreline residential area—Designation criteria.~~

~~The shoreline residential shoreline area is applied to shorelines if they have been predominantly developed with single family or multifamily residential uses or are planned and platted for residential development. The designation is generally applied to residential densities of greater than one unit per acre.~~

~~23.30.063 Shoreline residential area—Policies.~~

~~Development within shoreline residential shoreline areas shall be consistent with the following policies:~~

A. ~~The scale and density of new uses and development should be compatible with, and protect or enhance, the existing residential character of the area while sustaining shoreline ecological functions and processes.~~

B. ~~Public or private outdoor recreation facilities should be encouraged if compatible with the character of the area. Preferred uses include water dependent and water enjoyment recreation facilities that provide opportunities for substantial numbers of people to access and enjoy the shoreline.~~

C. ~~Commercial development should be limited to water oriented uses. Non water oriented commercial uses may be permitted as part of mixed use developments where the primary use is residential; provided, that such uses should provide a substantial benefit with respect to the goals and policies of this program such as providing public access or restoring degraded shorelines.~~

~~23.30.064 Shoreline residential area — Permitted uses.~~

The following uses may be permitted subject to the applicable policies and regulations of this program:

- ~~A. Residential.~~
- ~~B. Water-oriented commercial.~~
- ~~C. Water-oriented recreation.~~
- ~~D. Agricultural.~~

~~23.30.065 Shoreline residential area — Conditional uses.~~

The following may be permitted as conditional uses subject to the applicable policies and regulations of this program:

- ~~A. Non-water-oriented commercial, subject to the criteria in WCC 23.100.050(B)(1)(d).~~
- ~~B. Dams, diversions and tailrace structures for hydroelectric power generation.~~
- ~~C. Institutional development and essential public facilities, where there is no feasible location outside the shoreline.~~
- ~~D. Transportation facilities not serving a specific approved use, including roads, railways, and parking areas, provided there is no feasible location outside the shoreline.~~
- ~~E. Regional utility development not serving adjacent uses such as sewage trunk lines, desalinization facilities, solid waste transfer and disposal sites, oil pipelines and gas pipelines other than local distribution, provided there is no feasible location outside the shoreline.~~

~~23.30.066 Shoreline residential area — Prohibited uses.~~

The following uses are prohibited:

- ~~A. Forest practices.~~
- ~~B. Surface mining.~~
- ~~C. All other industrial and port development.~~

~~23.30.070 Rural shoreline area.~~

~~23.30.071 Rural shoreline area — Purpose.~~

The purpose of the rural shoreline area is to protect shoreline ecological functions in areas having a rural character characterized by open space and low density development including, but not limited to: residences, agriculture, forestry and outdoor recreation. Uses should be compatible with the physical capabilities and limitations, natural resources and shoreline ecological functions and processes of the area.

~~23.30.072 Rural shoreline area — Designation criteria.~~

The rural shoreline area is applied to shoreline areas outside urban growth areas, particularly areas designated as rural in the Whatcom County Comprehensive Plan, and includes areas:

- ~~A. Where the shoreline currently accommodates residential uses outside urban growth areas and is characterized by low density development, pasture, agriculture, woodlots, home occupations, and cottage industries. The distribution of rural land use is adjacent to agricultural, forestry, and urban land uses and often provides a transition between urban areas and commercial agriculture and forestry uses. Natural vegetative cover and topography have been altered in many rural areas, but~~

substantial ecological functions, and/or the potential for restoration of ecological functions, are present.

~~B. That are now used or potentially usable for a mix of agriculture, forestry, and residential use.~~

~~C. Where residential development is or should be of low density, because of limitations by physical features, the presence of critical areas, and/or lack of utilities or access.~~

~~D. That have high recreational value or unique historic or cultural resources.~~

~~E. Where low intensity outdoor recreation use or development would be appropriate and compatible with other uses and the physical environment.~~

~~F. Where the shoreline has been developed with low intensity water dependent uses.~~

23.30.073 Rural shoreline area — Policies.

Development within rural shoreline areas shall be consistent with the following policies:

~~A. Uses in rural areas should protect or enhance the rural character of the shoreline and sustain the shoreline ecological functions and processes by limiting building density and height, and providing effective setbacks, buffers and open space.~~

~~B. Residential development consistent with the rural character of the area is permitted, provided it includes measures to protect ecological functions and processes. Related uses consistent with the rural character of the area are permitted.~~

~~C. Public or private outdoor recreation facilities should be encouraged if compatible with the rural character of the area and developed in a manner that maintains shoreline ecological functions and processes. Preferred uses include water oriented recreation facilities that do not deplete shoreline resources over time, such as boating facilities, angling, wildlife viewing trails, and swimming beaches.~~

~~D. Industrial or commercial development should be limited to, water oriented commercial and industrial uses in the limited locations where such uses have been established or at sites in rural communities that possess appropriate shoreline conditions and services sufficient to support such developments. Non water dependent uses should provide a substantial benefit with respect to the goals and policies of this program such as providing public access and/or restoring degraded shorelines.~~

~~E. Agriculture and forestry consistent with rural character and the maintenance of shoreline ecological functions and processes should be encouraged.~~

23.30.074 Rural shoreline area — Permitted uses.

The following uses may be permitted subject to the applicable policies and regulations of this program:

~~A. Residential.~~

~~B. Water oriented commercial.~~

~~C. Water oriented industrial and/or port development.~~

~~D. Water oriented recreation.~~

~~E. Agricultural and forest practices.~~

23.30.075 Rural shoreline area — Conditional uses.

The following uses may be permitted as conditional uses subject to the applicable policies and regulations of this program:

- A. ~~Non water oriented commercial, industrial and/or port development, subject to the criteria in WCC 23.100.050(B)(1)(d) and 23.100.070(B)(1)(c)(iv), respectively.~~
- B. ~~Dams, diversions and tailrace structures for hydroelectric power generation.~~
- C. ~~Institutional development and essential public facilities, where there is no feasible location outside the shoreline.~~
- D. ~~Transportation facilities not serving a specific approved use, including roads, railways, and parking areas, provided there is no feasible location outside the shoreline.~~
- E. ~~Regional utility development not serving adjacent uses such as sewage trunk lines, desalinization facilities, solid waste transfer and disposal sites, oil pipelines and gas pipelines other than local distribution, provided there is no feasible location outside the shoreline.~~
- F. ~~Surface mining.~~

23.30.080 Resource shoreline area.

23.30.081 Resource shoreline area — Purpose.

The purpose of the resource shoreline area is to protect shoreline ecological functions and processes in areas designated in the Whatcom County Comprehensive Plan as agriculture resource lands, rural forestry, commercial forestry and mineral resource lands and to protect the economic base of those lands and limit incompatible uses.

23.30.082 Resource shoreline area — Designation criteria.

The resource shoreline area is applied to shoreline areas designated as agriculture, rural forestry, commercial forestry and mineral resource lands in the Whatcom County Comprehensive Plan and includes areas where the shoreline currently accommodates ongoing resource management, where natural vegetation cover has been altered but substantial ecological functions, or the potential for restoring ecological functions, are present.

23.30.083 Resource shoreline area — Policies.

Development within resource shoreline areas shall be consistent with the following policies:

- A. ~~Uses in resource areas should protect the economic base of those lands, limit incompatible uses, and sustain the shoreline area ecological processes and functions by limiting uses and intensity. Residential use is generally limited to one dwelling per existing parcel. The dwelling may be located within the shoreline jurisdiction, only where no other building site is feasible on the parcel.~~
- B. ~~Public or private outdoor recreation facilities should be permitted if they do not displace designated resource lands and if they are developed in a manner that maintains shoreline ecological functions. Preferred uses include water dependent and water enjoyment recreation facilities.~~
- C. ~~Industrial or commercial use and development should be limited to uses that serve resource uses. Such uses may be located within the shoreline only if they are water dependent, water related or if no other feasible location exists within the contiguous property.~~

23.30.084 Resource shoreline area — Permitted uses.

The following uses may be permitted subject to the applicable policies and regulations of this program:

- A. Residential development limited to farm-related residences or one residence and one accessory dwelling unit per existing parcel, where there is no feasible location outside of the shoreline.
- B. Water-oriented commercial related to natural resource products predominantly produced on site.
- C. Water-oriented industrial facilities for processing, manufacturing, and storage of natural resource products.
- D. Low intensity water-oriented recreation, including public forest preserves, wildlife reserves, natural systems education, and/or interpretive areas, trails, trailheads, with associated restroom facilities and parking areas for no more than 30 vehicles, subject to the criteria in WCC 23.100.100.
- E. Agricultural and forest practices.

23.30.085 Resource shoreline area — Conditional uses.

The following uses may be permitted as conditional uses subject to the applicable policies and regulations of this program:

- A. Non-water-oriented commercial and industrial development related to natural resource products predominantly produced on site, subject to the criteria in WCC 23.100.050(B)(1)(d) and 23.100.070(B)(1)(c)(iv), respectively.
- B. Water-oriented industrial and port development other than those uses related to products predominantly produced on site.
- C. Dams, diversions and tailrace structures for hydroelectric power generation.
- D. Institutional development and essential public facilities, where there is no feasible location outside the shoreline.
- E. Transportation facilities not serving a specific approved use, including roads, railways, and parking areas, provided there is no feasible location outside the shoreline.
- F. Regional utility development not serving adjacent uses such as sewage trunk lines, desalinization facilities, solid waste transfer and disposal sites, oil pipelines and gas pipelines other than local distribution, provided there is no feasible location outside the shoreline.
- G. Surface mining.

23.30.086 Resource shoreline area — Prohibited uses.

The following uses are prohibited:

- A. All other commercial development.
- B. Other non-water-oriented industrial and port development.

23.30.090 Conservancy shoreline area.

23.30.091 Conservancy shoreline area — Purpose.

The purpose of the conservancy shoreline area is to retain shoreline ecological functions in areas where important ecological processes have not been substantially degraded by human activities. Conservancy areas are designated outside of urban growth areas. The primary management goal is to preserve shoreline ecological functions and processes by avoiding forms of development that would be incompatible with existing functions and processes, as well as identify and focus restoration efforts in

1 areas where benefits to overall functions and processes can be realized. This policy should be furthered
2 by keeping overall intensity of development or use low, and by maintaining most of the area's natural
3 character.

4 **~~23.30.092 Conservancy shoreline area—Designation criteria.~~**

5 The conservancy shoreline area is applied to shoreline areas outside urban growth areas that include
6 areas:

- 7 A. ~~Where development activities and uses are buffered from and do not substantially degrade~~
8 ~~ecological processes and functions.~~
- 9 B. ~~Where ecological functions are more intact than in areas designated rural or resource.~~
- 10 C. ~~Of outstanding scenic quality or other aesthetic qualities of high value to the region, which would~~
11 ~~likely be diminished unless development is strictly controlled.~~
- 12 D. ~~Containing critical areas or other sensitive natural or cultural features that require more than~~
13 ~~normal restrictions on development and use.~~
- 14 E. ~~Having the potential to influence ecological processes in a manner that will produce ecosystem-wide~~
15 ~~benefits upon restoration.~~
- 16 F. ~~That contain valuable or sensitive natural or cultural features that preclude more than a low overall~~
17 ~~density of residents, recreation use, structures, or livestock, as well as extensive alterations to~~
18 ~~topography or other features.~~
- 19 G. ~~Have recreational value to the region that would likely be diminished unless development is strictly~~
20 ~~controlled.~~

21 **~~23.30.093 Conservancy shoreline area—Policies.~~**

22 Development within conservancy shoreline areas shall be consistent with the following policies:

- 23 A. ~~Natural ecological processes should be protected and renewable resources managed so that~~
24 ~~ecological functions and the resource base are maintained. Nonrenewable resources should only be~~
25 ~~consumed in a manner compatible with conservation of other resources and other appropriate uses.~~
- 26 B. ~~Permitted uses should be limited to those compatible with each other and with conservation of~~
27 ~~shoreline ecological processes and resources.~~
- 28 C. ~~Shorelines should be protected from harmful concentrations of people, livestock, buildings, or~~
29 ~~structures.~~
- 30 D. ~~Opportunities for ecological restoration should be pursued, prioritizing those areas with the greatest~~
31 ~~potential to restore ecosystem-wide processes and functions.~~
- 32 E. ~~Outstanding recreational or scenic values should be protected from incompatible development.~~

33 **~~23.30.094 Conservancy shoreline area—Permitted uses.~~**

34 The following uses may be permitted subject to the applicable policies and regulations of this program:

- 35 A. ~~Single family and duplex residential development.~~
- 36 B. ~~Low intensity water-oriented recreation; provided, that facilities do not require substantive~~
37 ~~alterations to topography, such as public forest preserves, wildlife reserves, natural systems~~
38 ~~education, and/or interpretive areas, trails, trailheads, with associated restroom facilities and~~

1 parking areas for no more than 30 vehicles, and buildings for interpretive facilities not exceeding
2 2,000 square feet, subject to the criteria in WCC 23.100.100.

3 ~~C. Agricultural and forest practices.~~

4 **~~23.30.095 Conservancy shoreline area — Conditional uses.~~**

5 The following uses may be permitted as conditional uses subject to the applicable policies and
6 regulations of this program:

7 ~~A. All other residential development.~~

8 ~~B. Low intensity water-oriented commercial limited to resort, bed and breakfast, campgrounds and
9 similar facilities. Low intensity non-water-oriented commercial uses limited to resort, bed and
10 breakfast, campgrounds and similar facilities may be permitted as a conditional use, subject to the
11 criteria in WCC 23.100.050(B)(1)(d).~~

12 ~~C. Dams, diversions and tailrace structures for hydroelectric power generation.~~

13 ~~D. Institutional development and essential public facilities, where there is no feasible location outside
14 the shoreline.~~

15 ~~E. Regional utility development not serving adjacent uses such as sewage trunk lines, desalinization
16 facilities, solid waste transfer and disposal sites, oil pipelines and gas pipelines other than local
17 distribution, provided there is no feasible location outside the shoreline.~~

18 ~~F. Sewage outfalls and treatment plants, over water communication or power lines, fuel pipelines, or
19 other types of hazardous materials pipelines, provided there is no feasible location outside of the
20 shoreline.~~

21 ~~G. Surface mining.~~

22 **~~23.30.096 Conservancy shoreline area — Prohibited uses.~~**

23 The following uses are prohibited:

24 ~~A. All other industrial and port development.~~

25 ~~B. Transportation facilities not serving a specific approved use.~~

26 **~~23.30.100 Natural shoreline area.~~**

27 **~~23.30.101 Natural shoreline area — Purpose.~~**

28 The purpose of the natural shoreline area is to ensure long-term preservation of shorelines inside or
29 outside urban growth areas that are ecologically intact.

30 **~~23.30.102 Natural shoreline area — Designation criteria.~~**

31 The natural shoreline area is applied to shoreline areas where any of the following characteristics apply:

32 ~~A. The majority of natural ecological shoreline functions and/or processes are retained, often
33 evidenced by the shoreline configuration and the presence of native vegetation. Generally, but not
34 necessarily, they include ecologically intact shorelines that are free of structural shoreline
35 modifications, structures, and intensive human uses.~~

36 ~~B. Forested areas that generally include native vegetation with diverse plant communities, multiple
37 canopy layers, and the presence of large woody debris available for recruitment to adjacent water
38 bodies.~~

- ~~C. Valuable functions are provided for the larger aquatic and terrestrial environments, which could be lost or significantly reduced by human development.~~
- ~~D. Ecosystems or geologic types that are of particular scientific and educational interest are represented.~~
- ~~E. Largely undisturbed areas of wetlands, estuaries, unstable bluffs, coastal dunes, and spits are present.~~
- ~~F. New development, extractive uses, or physical modifications cannot be supported without significant adverse impacts to ecological functions and/or processes or risk to human safety.~~

~~23.30.103 Natural shoreline area—Policies.~~

~~Development within natural shoreline areas shall be consistent with the following policies:~~

- ~~A. Preservation of the area's ecological functions, natural features and overall character must receive priority over any other potential use. Uses should not degrade shoreline ecological functions or processes or the natural character of the shoreline area. New development or significant vegetation removal that would reduce the capability of the shoreline to perform a full range of ecological functions or processes should not be permitted.~~
- ~~B. Private and/or public enjoyment of natural shoreline areas should be encouraged and facilitated through low intensity recreational, scientific, historical, cultural, and educational research uses; provided, that no significant ecological impact on the area will result.~~
- ~~C. Agricultural and forestry uses of a very low intensity nature may be consistent with the natural shoreline area when such use is subject to appropriate limitations or conditions to assure that the use does not expand or alter practices in a manner inconsistent with the purpose of the designation.~~
- ~~D. The following uses should not be permitted in the natural shoreline area:~~
 - ~~1. Commercial uses.~~
 - ~~2. Industrial uses.~~
 - ~~3. Non-water-oriented recreation.~~
 - ~~4. Roads, utility corridors, and parking areas that can be located outside of natural shoreline areas.~~

~~23.30.104 Natural shoreline area—Permitted uses.~~

~~The following uses may be permitted subject to the applicable policies and regulations of this program:~~

- ~~A. Low intensity water-oriented recreation; provided, that facilities do not require substantive alterations to topography, such as public forest preserves, wildlife reserves, natural systems education, and/or interpretive areas, trails, trailheads, with associated restroom facilities and parking areas for no more than 10 vehicles, and buildings for interpretive facilities not exceeding 500 square feet, subject to the criteria in WCC 23.100.100.~~
- ~~B. Low intensity agricultural.~~

~~23.30.105 Natural shoreline area—Conditional uses.~~

~~The following uses may be permitted as conditional uses subject to the applicable policies and regulations of this program:~~

- ~~A. Single family residential use and development is only permitted on existing lots of record and where there is no feasible location outside the shoreline. Further subdivision is not permitted.~~

B. ~~Forest practices; provided, that it meets the conditions of the State Forest Practices Act and its implementing rules and is conducted in a manner consistent with the purpose of this environment designation.~~

~~23.30.106 Natural shoreline area — Prohibited uses.~~

~~The following uses are prohibited:~~

~~A. All other residential.~~

~~B. Commercial.~~

~~C. Industrial and port development.~~

~~D. Non-water-oriented recreation.~~

~~E. Institutional.~~

~~F. Transportation facilities not serving a specific approved recreational development.~~

~~G. Utility development not serving a specific approved use.~~

~~H. Surface mining.~~

~~23.30.110 Aquatic shoreline area.~~

~~23.30.111 Aquatic shoreline area — Purpose.~~

~~The purpose of the aquatic shoreline area is to protect, restore, and manage the characteristics and resources of the areas waterward of the ordinary high water mark.~~

~~23.30.112 Aquatic shoreline area — Designation criteria.~~

~~The aquatic shoreline area is defined as the area waterward of the ordinary high water mark of all streams, rivers, marine water bodies, and lakes, constituting shorelines of the state together with their underlying lands and their water column.~~

~~23.30.113 Aquatic shoreline area — Policies.~~

~~Development within aquatic shoreline areas shall be consistent with the following policies:~~

~~A. New over-water structures should only be permitted for water-dependent uses, public access, or ecological restoration. The size of new over-water structures should be limited to the minimum necessary to support the structure's intended use. In order to reduce the impacts of shoreline development and increase effective use of water resources, multiple use of over-water facilities should be encouraged.~~

~~B. All developments and uses on navigable waters or their beds should be located and designed to minimize interference with surface navigation, to consider impacts to public views, and to allow for the safe, unobstructed passage of fish and wildlife, particularly those species dependent on migration.~~

~~C. Uses that adversely impact the ecological functions of critical saltwater and freshwater habitats should not be permitted except where necessary to achieve the objectives of RCW 90.58.020, and then only when all potential impacts are mitigated as necessary to assure maintenance of shoreline ecological functions and processes.~~

~~D. Shoreline uses and modifications should be designed and managed to prevent degradation of water quality and alteration of natural conditions.~~

1 **~~23.30.114 Aquatic shoreline area — Permitted uses.~~**
2 ~~Permitted uses consist of the water dependent uses permitted in abutting upland shoreline area~~
3 ~~designations, subject to the exceptions listed in WCC 23.30.116.~~

4 **~~23.30.115 Aquatic shoreline area — Conditional uses.~~**
5 ~~Conditional uses consist of those water dependent conditional uses designated in abutting upland~~
6 ~~shoreline area designations.~~

7 **~~23.30.116 Aquatic shoreline area — Prohibited uses.~~**
8 ~~The following uses are prohibited:~~
9 ~~A. Residential.~~
10 ~~B. Non water dependent commercial, industrial and port development.~~
11 ~~C. Institutional.~~
12 ~~D. Agricultural.~~

13 **~~23.30.120 Cherry Point management area.~~**
14 ~~The policies, regulations and standards, etc., applicable to the Cherry Point management area are found~~
15 ~~in WCC 23.100.170, except as otherwise specified therein.~~

Chapter 23.40 Shorelines of Statewide Significance

23.40.010 Adoption of policy.

In accordance with RCW 90.58.020, the following management and administrative policies are hereby adopted for all shorelines of statewide significance in unincorporated Whatcom County, as defined in RCW 90.58.030(2)(e) and identified in WCC 23.40.020. Consistent with the policy contained in RCW 90.58.020, preference shall be given to the uses that are consistent with the statewide interest in such shorelines. These are uses that:

- A. Recognize and protect the statewide interest over local interest.
- B. Preserve the natural character of the shoreline.
- C. Result in long-term over short-term benefit.
- D. Protect the resources and ecology of the shoreline.
- E. Increase public access to publicly owned areas of the shoreline.
- F. Increase recreational opportunities for the public in the shoreline.
- G. Provide for any other element as defined in RCW 90.58.100 deemed appropriate or necessary.

Uses that are not consistent with these policies should not be permitted on shorelines of statewide significance.

Comment [MD41]: Moved to CompPlan.

23.40.020 Designation of shorelines of statewide significance.

In accordance with the criteria of RCW 90.58.030(2)(e), the legislature designated the following shorelines of unincorporated Whatcom County, including the shorelands and associated wetlands as therein defined, as having statewide significance:

D. Lakes:

- 1. Lake Whatcom;
- 2. Ross Lake; and
- 3. Baker Lake.

E. Rivers:

- 1. Nooksack River: its Mainstem downstream to Bellingham Bay, its North Fork to the mouth of Glacier Creek and its South Fork to the mouth of Hutchinson Creek.
- 2. Skagit River: upstream of the Whatcom-Skagit County line to the point where the mean annual flow is measured at 1,000 feet per second or more, approximately, at the confluence of Newhalem Creek.

F. Marine:

- 1. Birch Bay from Birch Point to Point Whitehorn.
- 2. All other marine waters, water columns, and bedlands waterward of extreme low tide.

23.40.030 Policies for shorelines of statewide significance.

The statewide interest should be recognized and protected over the local interest in shorelines of statewide significance. To ensure that statewide interests are protected over local interests, the county

1 shall review all development proposals within shorelines of statewide significance for consistency with
2 RCW 90.58.030 and the following policies:

3 A. Redevelopment of shorelines should be encouraged where it restores or enhances shoreline
4 ecological functions and processes impaired by prior development activities.

5 B. The Washington Departments of Fish and Wildlife and Ecology, the Lummi Nation, the Nooksack
6 Tribe, and other resources agencies should be consulted for development proposals that could
7 affect anadromous fisheries.

8 C. Where commercial timber cutting takes place pursuant to WCC 23.90.110 and RCW 90.58.150,
9 reforestation should take place as soon as possible.

10 D. Activities that use shoreline resources on a sustained yield or non-consuming basis and that are
11 compatible with other appropriate uses should be given priority over uses not meeting these
12 criteria.

13 E. The range of options for shoreline use should be preserved to the maximum possible extent for
14 succeeding generations. Development that consumes valuable, scarce or irreplaceable natural
15 resources should not be permitted if alternative sites are available.

16 F. Potential short term economic gains or convenience should be measured against potential long-
17 term and/or costly impairment of natural features.

18 G. Protection or enhancement of aesthetic values should be actively promoted in design review of new
19 or expanding development.

20 H. Resources and ecological systems of shorelines of statewide significance should be protected.
21 Shorelands and submerged lands should be protected to accommodate current and projected
22 demand for economic resources of statewide importance such as commercial shellfish beds.

23 I. Those limited shorelines containing unique, scarce and/or sensitive resources should be protected
24 to the maximum extent feasible.

25 J. Erosion and sedimentation from development sites should be controlled to minimize adverse
26 impacts on ecosystem processes. If site conditions preclude effective erosion and sediment control,
27 excavations, land clearing, or other activities likely to result in significant erosion should be severely
28 limited.

29 K. Public access development in extremely sensitive areas should be restricted or prohibited. All forms
30 of recreation or access development should be designed to protect the resource base upon which
31 such uses in general depend.

32 L. Public and private developments should be encouraged to provide trails, viewpoints, water access
33 points and shoreline-related recreation opportunities whenever possible. Such development is
34 recognized as a high priority use.

35 M. Development not requiring a waterside or shoreline location should be located inland so that lawful
36 public enjoyment of shorelines is enhanced.

37 N. Lodging and related facilities should be located inland and provide for appropriate means of access
38 to the shoreline.

Comment [MD42]: Moved to CompPlan.

Chapter 23.390 General Regulations

~~23.90.010 Applicability.~~

All use and development activities on shorelines shall be subject to all of the following general policies and regulations in addition to the applicable use policies and regulations of Chapter 23.100 WCC; provided, that all use and development that is to be located within the Cherry Point management area, as defined in Chapter 23.110 WCC, shall be subject to the policies and regulations found in WCC 23.100.170 and shall not be subject to the policies and regulations found in this chapter and Chapter 23.100 WCC unless otherwise specified.

~~23.90.020 Land use.~~

The following land use policies delineate the use preferences of the Act and this program and are intended to support the goals and objectives of the program:

~~A. Policies.~~

- ~~1. Single family residences should be given preference for location on shorelines in those limited instances when an alteration of the shorelines is authorized (RCW 90.58.020). Single family residences occupied prior to January 1, 1992, and their appurtenant structures should be protected against damage or loss caused by shoreline erosion; provided, that measures to protect single family residences should be designed to minimize harm to the shoreline environment.~~
- ~~2. Shoreline uses that are water dependent or water related should be given preference (RCW 90.58.020). Such uses should be located, designed, and maintained in a manner that minimizes adverse impacts to shoreline ecological functions and/or processes. Non water-oriented development may be allowed; provided, that existing water dependent uses are not displaced and the future supply of sites for water dependent or water related uses is not compromised.~~
- ~~3. Adequate space should be reserved on shorelines to meet the current and projected demand for water dependent uses, in conjunction with areas provided in cities, towns and areas under tribal jurisdiction.~~

~~B. Regulations.~~

- ~~1. Single family residential uses shall be allowed on all shorelines not subject to a preference for commercial or industrial water dependent uses and shall be located, designed, and used in accordance with applicable policies and regulations of this program.~~
- ~~2. Resource uses such as agriculture, forestry and mining activities shall be carried out in a manner consistent with the applicable policies and regulations of this program.~~
- ~~3. Restoration of ecological functions and processes shall be allowed on all shorelines and shall be located, designed and implemented in accordance with applicable policies and regulations of this program.~~

Comment [AP43]: This chapter has been moved forward as it contains the general regulations and the others more specific regulations. All policies, with exception of regulations and those noted as duplicative, have been moved to the CompPlan.

Comment [DN44]: Moved to 23.10 Applicability and slightly reworded

Comment [AP45]: Removed. This provision is more appropriate as a policy, which is already captured in the CompPlan. Implementing regulations are included in the Residential Shoreline Use and Modification Section (WCC 23.40.160).

Comment [AP46]: Removed for clarity and simplicity. This is established in the use table and the applicable use and modification sections.

Comment [DN47]: Moved to WCC 23.40.170 (Restoration and Enhancement)

4. Shoreline uses and developments that are water dependent shall be given priority. Permit conditions may limit the range of uses or sites developed for such uses. Interim non-water dependent uses authorized as a conditional use may be allowed to respond to short term market conditions; provided, that permit conditions are placed on such uses to provide for a specific timetable or review process to ensure water dependent use of the development in the long term.
5. Shoreline uses and developments should be located, designed, and managed so that other appropriate uses are neither subjected to substantial or unnecessary adverse impacts, nor deprived of reasonable, lawful use of navigable waters, other publicly owned shorelines, or private property.
6. Navigable waters should be kept free of obstructions for the general benefit of the region, state, and nation. No use or development shall be allowed to effectively exclude other appropriate uses from navigable waters.
7. Shoreline uses and developments should be located in a manner so that shoreline stabilization is not likely to become necessary in the future.

23.90.030-30.010 Ecological Protection and critical areas.

A. Ecological protection of shoreline environments shall be achieved through compliance with the applicable provisions of WCC Chapter 16.16 (Critical Areas) and (B) and (C) of this subsection.

A. Policies.

1. Shoreline use and development should be carried out in a manner that prevents or mitigates adverse impacts so that the resulting ecological condition does not become worse than the current condition. This means assuring no net loss of ecological functions and processes and protecting critical areas designated in Chapter 16.16 WCC, in a manner consistent with all relevant constitutional and other legal limitations on the regulation of private property. Permitted uses shall be designed and conducted to minimize, insofar as practical, any resultant damage to the ecology and environment (RCW 90.58.020). Shoreline ecological functions that should be protected include, but are not limited to, fish and wildlife habitat, food chain support, and water temperature maintenance. Shoreline processes that should be protected include, but are not limited to, water flow; littoral drift; erosion and accretion; infiltration; ground water recharge and discharge; sediment delivery, transport, and storage; large woody debris recruitment; organic matter input; nutrient and pathogen removal; and stream channel formation/maintenance.
2. In assessing the potential for net loss of ecological functions or processes, project-specific and cumulative impacts should be considered.
3. Development standards for density, frontage, setbacks, impervious surface, shoreline stabilization, vegetation conservation, buffers, critical areas, and water quality should protect existing shoreline ecological functions and processes. During permit review, the administrator should consider the expected impacts associated with proposed shoreline development when assessing compliance with this policy.

Comment [DN48]: These provisions were moved to WCC 23.40.030 (General Shoreline Use and Modifications) since they are applicable to that section. These were also reviewed as policies for the CompPlan.

1 ~~B. Regulations.~~

2 ~~A. An assessment of the existing ecological functions and/or processes provided by topographic,~~

3 ~~physical, and vegetation characteristics of the site shall accompany development proposals. Such~~

4 ~~assessments shall include the following general information:~~

5 ~~1. Impacts of the proposed use/development on ecological processes with clear designation of~~

6 ~~existing and proposed routes for water flow, wildlife movement, and other features.~~

7 ~~—Infrastructure requirements such as parking, services, lighting, and other features, together with~~

8 ~~the effects of those infrastructure improvements on shoreline ecological functions and/or~~

9 ~~processes.~~

10 B. Development, use, and activities within the shoreline jurisdiction shall avoid and minimize adverse

11 impacts, and any unavoidable impacts shall be mitigated to meet no net loss of ecological function

12 and ecosystem-wide processes pursuant to WAC 173-26-186.

13 C. To provide for flexibility in the administration of the ecological protection provisions of this

14 program, buffer modification and alternative mitigation approaches as provided for in WCC 16.16

15 may be approved within shorelines where such approaches provide increased protection of

16 shoreline ecological functions and processes over the standard provisions of this program and are

17 scientifically supported. Use of WCC 16.16.261 (Alternative Mitigation Plans) and 16.16.262

18 (Watershed-Based Management Plans) within shoreline jurisdiction shall require a Shoreline

19 Conditional Use Permit.

20 ~~B. Mitigation Sequencing. To comply with the policies of subsection A of this section, a shoreline~~

21 ~~permit applicant or project proponent shall demonstrate that all reasonable efforts have been taken~~

22 ~~to provide sufficient mitigation such that the activity does not have significant adverse impacts.~~

23 ~~Mitigation shall occur in the following prioritized order:~~

24 ~~C. Avoiding the adverse impact altogether by not taking a certain action or parts of an action, or~~

25 ~~moving the action.~~

26 ~~D. Minimizing adverse impacts by limiting the degree or magnitude of the action and its~~

27 ~~implementation by using appropriate technology and engineering, or by taking affirmative steps to~~

28 ~~avoid or reduce adverse impacts.~~

29 ~~E. Rectifying the adverse impact by repairing, rehabilitating, or restoring the affected environment.~~

30 ~~F. Reducing or eliminating the adverse impact over time by preservation and maintenance operations~~

31 ~~during the life of action.~~

32 ~~G. Compensating for the adverse impact by replacing, enhancing, or providing similar substitute~~

33 ~~resources or environments and monitoring the adverse impact and the mitigation project and taking~~

34 ~~appropriate corrective measures. Where appropriate, new development shall use clustering to~~

35 ~~minimize adverse impacts on shoreline ecological functions and processes.~~

36 ~~H. Accessory uses that do not require a shoreline location shall be sited away from the land/water~~

37 ~~interface and landward of the principal use and, unless otherwise specified.~~

38 ~~I. Because of its incorporation by reference herein under WCC 23.10.060(A), the provisions of the~~

39 ~~Whatcom County critical areas ordinance, Chapter 16.16 WCC, shall apply to any use, alteration, or~~

40 ~~development within shoreline jurisdiction whether or not a shoreline permit or written statement of~~

Comment [AP49]: Moved from Site Planning section (WCC 23.30.090). Note: Per Scoping Document, Item #5a., removed "provided, that proposals for single-family residences shall be exempt from this requirement."

Comment [CES50]: Covered by CAO

Comment [DOE-Req51]: Required Change – This change maintains the existing requirement for a CUP for use of select alternative mitigation approaches outlined within the CAO. This change is necessary due to the fact that the impacts from such future proposals using these provisions cannot be reasonably identified at the time of the amendment consistent with the SMP Guidelines at 173-26-201(3)(d)(i)(E)(iii). The CUP requirement maintains the flexibility sought by the proposed language without prohibiting the use of these CAO provisions.

Comment [CES52]: Covered by CAO

Comment [CES53]: Moved to 23.40.030 (General Shoreline Use and Modification Regulations)

exemption is required. Unless otherwise stated, no development shall be constructed, located, extended, modified, converted, or altered, or land divided without full compliance with Chapter 16.16 WCC and the program; provided, that alteration for a water-oriented use may be allowed in accordance with WCC 16.16.225(B)(3). Within shoreline jurisdiction, the regulations of Chapter 16.16 WCC shall be liberally construed together with the program to give full effect to the objectives and purposes of the provisions of the program and Act. Unless otherwise stated, critical area buffers shall be protected and/or enhanced pursuant to this program and Chapter 16.16 WCC.

— Accessory uses that do not require a shoreline location shall be sited away from the land/water interface and landward of the principal use and, unless otherwise specified,

Comment [CES54]: Covered by CAO

~~J. Use of motor vehicles including unlicensed off-road vehicles is permitted only on roads or trails specifically designated for such use. Motor vehicle use, except for vessels and float planes, is prohibited waterward of the ordinary high water mark, on tidelands, public or private beaches, wetlands and/or their associated buffers, except as necessary for public health and safety or permitted maintenance activities associated with approved developments or as otherwise permitted.~~

Comment [CES55]: Moved to 23.40.030
General Shoreline Use and Modification Regulations

K. Buildings, fencing, walls, hedges, and similar features shall be designed, located, and constructed in a manner that does not preclude or significantly interfere with wildlife movement to/ or from important habitat areas consistent with the applicable provisions of Chapter 16.16 WCC this program; provided, that the administrator/Director may exempt security fencing associated with residential, industrial, and/or commercial developments from this requirement on a case-by-case basis.

Comment [CES56]: Moved to 23.40.030
General Shoreline Use and Modification Regulations

L. To provide for flexibility in the administration of the ecological protection provisions of this program, alternative mitigation approaches as provided for in WCC 16.16.2610(E) may be approved within shorelines as a conditional use where such approaches provide increased protection of shoreline ecological functions and processes over the standard provisions of this program and are scientifically supported.

M. The cumulative effects of individual development proposals shall be identified and evaluated to assure that no net loss standards are achieved. Whenever the administrator issues a determination or recommendation and/or conditions of approval on a proposal, which will result in the denial or substantial alteration of a proposed action, such determinations will be provided in writing stating the relationship(s) between the ecological factors, the proposed action and the condition(s).

Comment [CES57]: Covered by CAO

23.30.020 Critical Areas

— Because of its incorporation by reference under WCC 23.10.065, the provisions of the Whatcom County critical areas regulations, Chapter 16.16 WCC, shall apply to any use, alteration or development within shoreline jurisdiction whether or not a shoreline permit or written statement of exemption is required. Unless otherwise stated, no development shall be constructed, located, extended, modified, converted, or altered, or land divided, without full compliance with Chapter 16.16 WCC and this program; provided, that alteration for a water-oriented use may be allowed in accordance with WCC 16.16.225. Within shoreline jurisdiction, the regulations of

~~Chapter 16.16 WCC shall be liberally construed together with the program to give full effect to the objectives and purposes of the provisions of the program and Act.~~

Comment [CES58]: Covered by CAO

23.90.04030.0320 Water Quality and Quantity.

Comment [AP59]: Incorporated reference to stormwater regulations and removed redundant regs from this section.

~~A. Policies.~~

~~B. The location, construction, operation, and maintenance of all shoreline uses and developments should maintain or enhance the quantity and quality of surface and ground water over the long term.~~

~~C. Shoreline use and development should minimize the need for chemical fertilizers, pesticides or other similar chemical treatments to prevent contamination of surface and ground water and/or soils, and adverse effects on shoreline ecological functions and values.~~

~~D. Appropriate buffers along all wetlands, streams, lakes, and marine water bodies should be provided and maintained in a manner that avoids the need for chemical treatment.~~

~~E. Regulations.~~

~~F.A. Shoreline use and development shall incorporate measures to protect and maintain surface and ground water quantity and quality in accordance with all applicable laws, including compliance with Whatcom County stormwater and drainage regulations in WCC 20.80.630 through 20.80.635.~~

~~1. Development shall meet minimum requirements 1 – 9 of the current stormwater manual, as applicable. Deviations from these standards may be approved where it can be demonstrated that off-site facilities would provide better treatment, or where common retention, detention, and/or water quality facilities meeting such standards have been approved as part of a comprehensive stormwater management plan.~~

~~2. Best management practices (BMPs) for control of erosion and sedimentation shall be implemented for all development in shorelines through an approved temporary erosion and sediment control (TESC) plan or administrative conditions.~~

~~B. To avoid water quality degradation by malfunctioning or failing septic systems located within shoreline jurisdiction, on-site sewage systems shall be located and designed to meet all applicable water quality, utility, and health standards. The owner must be in compliance with WCC 24.05.160, (Operation and Maintenance).~~

~~G.C. Septic tanks and drainfields are prohibited where public sewer is reasonably available.~~

Comment [DN60]: Relocated from the Utilities section since this applies universally.

~~H.D. All materials that may come in contact with water shall be constructed of materials, such as untreated wood, concrete, approved plastic composites, or steel, that will not adversely affect water quality or aquatic plants or animals. Materials used for decking or other structural components shall be approved by applicable state agencies for contact with water to avoid discharge of pollutants from wave splash, rain, or runoff. Wood treated with creosote, copper chromium arsenic, or pentachlorophenol is prohibited in or above shoreline water-bodies.~~

~~E. Stormwater infiltration systems shall be employed to mimic the natural infiltration and ground water interflow processes where appropriate. Outfalls (including stormwater and sewer outfalls) and discharge pipes shall not be located in critical saltwater habitats or areas where outfall or discharge~~

Comment [AP61]: Removed to reduce redundancy. Already captured in stormwater regulations (WCC 20.80.630).

will adversely affect critical saltwater habitat, unless the applicant can show that all of the following can be met:

1. There is no feasible alternative location for the outfall or pipe;
2. The outfall or pipe is placed below the surface of the beach or bed of the waterbody, except at the point of discharge;
3. The discharge point(s) on the outfall or discharge pipe is located so the discharges, including nutrients and flow, do not adversely affect critical saltwater habitats; and
4. For public sewage outfalls:
 1. The outfall discharges waterward of the intertidal zone.
 2. The disturbed area will be revegetated with native vegetation.

F. The use of existing outfalls shall be maximized to limit the need for additional outfalls, provided the existing outfall meets the standards of this section, or unless an alternatives analysis demonstrates the dispersal is less impacting to the shoreline environment.

Comment [AP62]: Added to address potential impacts from stormwater and sewer outfalls

23.05030.0430 Views and Aesthetics.

A. Policies.

- a. Shoreline use and development activities should be designed and operated to minimize obstructions of the public's visual access to the water and shoreline.
- b. Shoreline use and development should not significantly detract from shoreline scenic and aesthetic qualities that are derived from natural or cultural features, such as shoreforms, vegetative cover and historic sites/structures.
- c. Aesthetic objectives should be implemented through regulations and criteria for site planning, maximum height, setbacks, siting of buildings and accessories, screening, vegetation conservation, architectural standards, sign control regulations, appropriate development siting, designation of view corridors and maintenance of natural vegetative buffers.
- d. Clearing, thinning, and/or limbing for limited view corridors should only be allowed where it does not adversely impact ecological and/or aesthetic values, and/or slope stability. Vegetation conservation should be preferred over the creation or maintenance of views from property on the shoreline to protect shoreline ecological functions and aesthetics.

E. Regulations.

- A. When the two are in conflict, protection and/or enhancement of critical areas and their associated buffers shall be preferred over provisions for new visual access except where otherwise allowed by this program, when the two are in conflict.
- B. The following standards shall apply to developments and uses within the jurisdiction of this program:
 - B. To protect views of the shoreline from existing structures, setbacks may be modified pursuant to WCC 23.409.020(D) (Shoreline Bulk Provisions, Setbacks)
 - C. To minimize impacts to views from the water, the Director may require the planting of vegetation to mitigate the impacts.

1 ~~G.D.~~ Where commercial, industrial, mixed use, multifamily, ~~and/or multi-lot-unit~~ developments are
2 proposed, primary structures shall provide for reasonable view corridors between buildings.

3 ~~D.E.~~ Buildings shall incorporate architectural and/or landscape features that reduce scale or bulk, such as
4 setbacks, vegetation, pitched roofs, offsets, angled facets, and recesses.

5 ~~E.F.~~ Building surfaces on or adjacent to the water shall employ materials that minimize reflected light.

6 ~~F.G.~~ Building mechanical equipment shall be incorporated into building architectural features, such as
7 pitched roofs, to the maximum extent possible. Where mechanical equipment cannot be
8 incorporated into architectural features, a visual screen shall be provided consistent with building
9 exterior materials that obstructs views of such equipment.

10 ~~G.H.~~ Any other design standards included in community plans or regulations adopted by Whatcom
11 County shall apply.

12 ~~H.I.~~ Fences, walls, other than retaining walls, hedges, and other similar accessory structures, excluding
13 those associated with agricultural uses, and retaining walls necessary to protect existing primary
14 structures from erosion, landslides or other geologic hazards, shall be limited to four feet in height
15 between the ordinary high water mark and structures, and within shoreline view areas as defined in
16 WCC Chapter 23.4460 (Definitions); provided, that, within shoreline view areas, the
17 ~~administrator~~ Director may approve a greater height where a fence or other feature is parallel to the
18 right-of-way and does not extend above a line of sight between the ordinary high water mark and a
19 point three and one-half feet above the centerline of the road.

20 ~~I.~~ Where permitted, fences, walls, hedges and other similar structures shall be limited to four feet in
21 height within critical area buffers. Outside of critical area buffers, fences shall be limited to six feet
22 in height.

23 ~~J.~~ Fences, walls, hedges, or ~~private~~ accessory structures on public property shall not be permitted to
24 obscure shoreline views within shoreline view areas as defined in WCC Chapter 23.4460 or from
25 existing residences on adjacent property, or views from the water, unless specific findings are made
26 that the proposed view obstruction is justified by overriding considerations of the public interest.

27 ~~K.~~ Interior and exterior lighting shall be designed and operated to avoid illuminating nearby properties
28 or public areas; prevent glare on adjacent properties, public areas, or roadways; to avoid infringing
29 on the use and enjoyment of such areas; and to prevent hazards. Methods of controlling spillover
30 light include, but are not limited to, limits on height of structure, limits on light levels of fixtures,
31 light shields, setbacks, buffer areas, and screening.

32 ~~J.L.~~ Where shoreline setbacks or buffers are allowed to be reduced per this program, the proposed use
33 or development shall not be permitted to substantially obscure shoreline views within shoreline
34 view areas as defined in WCC Chapter 23.60 (Definitions) or from existing residences on adjacent
35 property.

36 ~~M.~~ Limbing, clearing, and/or thinning for limited view corridors shall only be allowed pursuant to WCC
37 16.16.235(B)(5) (Activities Allowed with Notification), except that view corridors are not permitted
38 in the Natural shoreline environment.

39 ~~K.~~ Stairs and walkways located within the shoreline or critical area buffers shall not exceed four feet in
40 width; provided, that where ADA requirements apply, such facilities may be increased to five feet in

Comment [AP63]: Added for clarity per Scoping Document, Item #17e.

Comment [DN64]: Moved to Bulk Provisions since this provision does not address Views and Aesthetics

Comment [DN65]: Moved from the former Site Planning section

Comment [AP66]: Added per Scoping Document, Item #18c.

width. Stairways shall conform to the existing topography to the extent feasible and minimize impervious surfaces.

Comment [T67]: Removed for clarity. This is fully captured in the Shoreline Bulk Provisions.

23.90.06030.0540 Vegetation Conservation Management.

1. Pursuant to WCC 16.16.710, shorelines are designated as Fish & Wildlife Habitat Conservation Areas. Within these areas and their buffers it is important to protect and enhance vegetation to provide ecological and habitat functions as well as human health and safety. Vegetation management practices consist of retaining or improving vegetated areas to protect the integrity, functions, and values of the affected critical area (shoreline) while allowing the shoreline buffer to be modified to accommodate allowed uses when consistent with the Act and this program.

2. Vegetation management within the shoreline buffer shall adhere to the applicable regulations of WCC Chapter 16.16 (Critical Areas). In addition:

1. Vegetation clearing within shoreline jurisdiction shall be limited to the minimum necessary to accommodate approved shoreline development.

1-2. ~~Design of structures~~ Shoreline development shall conform to natural contours and minimize disturbance to soils and native vegetation, as feasible. Feasible shall include incorporation of trails or stairs from parking areas on steep slopes, and other design elements to lessen the need to alter natural contours and minimize soil and native vegetation disturbance. Foundations shall be tiered with earth retention incorporated into the structural design.

Comment [DN68]: Moved and modified from former Site Planning section.

2-3. Where compliance with subsection (B)(1) of this section is not feasible or required, new All shoreline developments shall be required to develop and implement a vegetation management plan. When required, vegetation management plans shall be prepared by a qualified professional and shall be consistent with the requirements in WCC 16.16.260(BG) and (CH); provided, that the administrator-Director may establish prescriptive standards for vegetation conservation and management as an alternative to requiring a specific plan for a development. Vegetation management plans shall describe actions that will be implemented to ensure that buffer areas provide ecological functions equivalent to a dense native vegetation community to the extent possible given the area that is feasibly available. Required vegetation shall be maintained over the life of the use and/or development by means of a conservation easement or similar legal instrument recorded with the Whatcom County auditor.

3. Policies.

- a. Where new developments and/or uses are proposed, native shoreline vegetation should be conserved to maintain shoreline ecological functions and/or processes and mitigate the direct, indirect and/or cumulative impacts of shoreline development, wherever feasible. Important functions of shoreline vegetation include, but are not limited to:
- i. Providing shade necessary to maintain water temperatures required by salmonids, forage fish, and other aquatic biota.
 - ii. Regulating microclimate in riparian and nearshore areas.
 - iii. Providing organic inputs necessary for aquatic life, including providing food in the form of various insects and other benthic macroinvertebrates.

- iv. ~~Stabilizing banks, minimizing erosion and sedimentation, and reducing the occurrence/severity of landslides.~~
 - v. ~~Reducing fine sediment input into the aquatic environment by minimizing erosion, aiding infiltration, and retaining runoff.~~
 - vi. ~~Improving water quality through filtration and vegetative uptake of nutrients and pollutants.~~
 - vii. ~~Providing a source of large woody debris to moderate flows, create hydraulic roughness, form pools, and increase aquatic diversity for salmonids and other species.~~
 - viii. ~~Providing habitat for wildlife, including connectivity for travel and migration corridors.~~
4. ~~B. Regulations.~~
1. ~~Shoreline developments shall comply with the vegetation conservation policies of this program through compliance with the critical area standards of WCC 16.16.335, 16.16.360, 16.16.630 and 16.16.740 for protection and maintenance of critical area and buffer vegetation.~~
 3. ~~Nonconforming lots that do not provide sufficient area to meet the standard dimensional requirements for buffers and setbacks as provided for in WCC 23.50.070(N) and are not located within a landslide, alluvial fan, or riverine and coastal erosion hazard areas, as defined in WCC 16.16.310, may employ the following standards in lieu of the vegetation management provisions of subsection (B)(2) of this section:~~
 - a. ~~An inner management zone shall extend perpendicularly from the shoreline ordinary high water mark or critical area edge a distance equal to 50 percent of the buffer dimension established for nonconforming lots in WCC 23.50.070(N). In the inner management zone:~~
 - i. ~~Lawn or turf is prohibited due to its limited functional benefits and need for chemical and fertilizer applications. Understory consisting of native groundcover and shrubs shall be provided at a sufficient density to prevent erosion, stabilize soils, and intercept surface runoff.~~
 - ii. ~~Native trees shall be provided at a sufficient density and species composition to mimic natural vegetative conditions for purposes of creating shade, attenuating water temperature, stabilizing soils, and providing large woody debris and other organic inputs critical for aquatic resources.~~
 - b. ~~An outer management zone shall extend from the outer boundaries of the inner management zone to the edge of the critical area buffer. Within the outer management zone:~~
 - i. ~~Vegetation management shall consist of the requirements of subsection (B)(3)(a) of this section; provided, that on slopes of 25 percent or less, lawn, turf, ornamental vegetation or gardens may be allowed on up to 10 percent of the area or 500 square feet, whichever is greater.~~
 - ii. ~~Lawn or turf shall be prohibited on slopes greater than 25 percent.~~
 4. ~~Vegetation clearing shall be limited to the minimum necessary to accommodate approved shoreline development.~~

5. Removal of noxious weeds and/or invasive species shall be incorporated in vegetation management plans, as necessary, to facilitate establishment of a stable community of native plants.
6. Clearing, pruning and revegetation of buffer areas, except landslide hazard areas and buffers and riverine and coastal erosion hazard areas and buffers, may be conducted in accordance with the regulations in WCC 16.16.235(5).
7. Selective vegetation clearing and pruning may be allowed in landslide hazard areas and/or riverine and coastal erosion hazard areas and/or their buffers pursuant to an approved vegetation management plan designed to improve overall slope or bank stability. The plan shall be prepared by a qualified professional and reviewed by a licensed geologist or geotechnical engineer.
8. Vegetation conservation standards shall not apply retroactively to existing uses and developments, such as existing agricultural practices.
9. Vegetation conservation standards do not apply to the removal of hazard trees pursuant to WCC 16.16.230(F).
10. Unless otherwise stated, the vegetation conservation regulations of this program do not apply to commercial forest practices as defined by this program when such activities are covered under the Washington State Forest Practices Act (Chapter 76.09 RCW), except where such activities are associated with a conversion to other uses or other forest practice activities over which local governments have authority. For the purposes of this program, preparatory work associated with the conversion of land to non-forestry uses and/or developments shall not be considered a forest practice and shall be reviewed in accordance with the provisions for the proposed non-forestry use, the general provisions of this program, and Chapter 16.16 WCC, and shall be limited to the minimum necessary to accommodate an approved use.

Comment [CES69]: Moved up.

Comment [AP70]: Moved to Forest Practices section (WCC 23.40.100).

Comment [AP71]: Section rewritten in conjunction with the LNTPO & WA State DAHP for greater clarity and streamlining.

23.90.07030.0650 Archaeological, Historic, and Cultural Resources.

A. Project Approval Requirements.

1. Upon receipt of an application for a permit, exemption, or other approval for a proposed project, the County shall determine whether the project lies within 500 feet of a site known to contain a cultural resource based on the Washington State Department of Archaeology & Historic Preservation's (DAHP) Inventory of Cultural Resources.
2. If the project meets this criterion, a cultural resources survey and report meeting the requirements of subsection (B) shall be required.
3. Whatcom County shall provide the cultural resource report to DAHP—and if Native American cultural resources are addressed, to the Lummi Nation Tribal Historic Preservation Office, the Nooksack Tribe, and/or other affected Native American Tribes—for a fifteen (15) day review and comment opportunity. Said review period may run concurrently with other required public review periods, such as for SEPA.
4. Based upon consultation with DAHP and the affected Tribe(s), the Director may approve the report or reject or request revision of the conclusions reached and/or management

1 recommendations when the assessment is inaccurate or does not fully address the cultural
2 resource management concerns involved.

- 3 5. If the cultural resource report identifies the presence of a cultural resource, any permit issued
4 shall be conditioned on meeting the approved report's management recommendations.
5 6. Regardless of whether any cultural resources are identified or not, any activities are still subject
6 to the state and federal regulations, including those regarding inadvertent discoveries (RCWs
7 68.50.645, 27.44.055, and 68.60.055).
8 7. Final cultural resource reports shall be filed with DAHP prior to the County's issuance of a
9 permit, exemption, or other approval by the applicant or his/her agent. The project's cultural
10 resource professional shall also uploading their reports and site forms to WISAARD, the state's
11 digital repository for architectural and archaeological resources and reports maintained by
12 DAHP.
13 8. Any costs associated with a cultural resource review shall be borne by the applicant.

14 B. Cultural Resources Report Standards.

- 15 1. Cultural resources reports shall meet the most recent "Washington State Standards for Cultural
16 Resource Reporting" issued by DAHP ([https://dahp.wa.gov/project-review/washington-state-](https://dahp.wa.gov/project-review/washington-state-standards-for-cultural-resource-reporting)
17 standards-for-cultural-resource-reporting)
18 2. Cultural resources reports addressing archaeological resources shall be conducted by a
19 professional archaeologist that meets the Secretary of the Interior Professional Qualification
20 Standards (36 CFR Part 61). Cultural resources reports addressing historic resources shall be
21 conducted by a qualified historic preservation professional.
22 3. If the cultural resource assessment identifies the presence of a cultural resource, the report
23 must provide management recommendations that, at a minimum, conform to DAHP's most
24 current management standards. Such recommendations will depend on the resource identified,
25 but may include but are not limited to:
26 a. Inadvertent Discovery Plan;
27 b. On-site monitoring by a qualified professional and/or a Tribal representative;
28 c. Avoidance, by redesigning the project; or
29 d. When impacts cannot be avoided, obtaining a Cultural Resource Permit (see RCWs 27.44
30 and 27.53; <https://dahp.wa.gov/archaeology/archaeological-permitting>, and
31 <https://apps.leg.wa.gov/WAC/default.aspx?cite=25-48-060>).

32 G. ~~A. Policies.~~

- 33 1. ~~The county should work with tribal, state, federal and local governments as appropriate to~~
34 ~~maintain an inventory of all known significant local historic, cultural and archaeological sites in~~
35 ~~observance of applicable state and federal laws protecting such information from general public~~
36 ~~disclosure. As appropriate, such sites should be protected, preserved and/or restored for study,~~
37 ~~education and/or public enjoyment to the maximum possible extent.~~
38 2. ~~Site development plans should incorporate provisions for historic, cultural and archaeological~~
39 ~~site preservation, restoration and education with open space or recreation areas whenever~~
40 ~~compatible and possible.~~

Comment [PDS72]: Policies moved to the C/P.

3. Cooperation among involved private and public parties is encouraged to achieve the archaeological, historical and cultural element goals and objectives of this program.
4. Owners of property containing identified historic, cultural or archaeological sites are encouraged to make development plans known well in advance of application, so that appropriate agencies such as the Lummi Nation, Nooksack Tribe, Washington State Department of Archaeology and Historic Preservation, and others may have ample time to assess the site and make arrangements to preserve historical, cultural and archaeological values as applicable.
5. Private and public owners of historic sites should be encouraged to provide public access and educational opportunities in a manner consistent with long term protection of both historic values and shoreline ecological functions.
6. Historic, cultural and archaeological site development should be planned and carried out so as to prevent impacts to the resource. Impacts to neighboring properties and other shore uses should be limited to temporary or reasonable levels.
7. If development is proposed adjacent to an identified historic, cultural or archaeological site, then the proposed development should be designed and operated so as to be compatible with continued protection of the historic, cultural or archaeological site.
8. The cultural resource provisions of this program are consistent with Chapters 27.44 and 27.53 RCW and WAC 25-48-060. In accordance with state law, all applicants are subject to these requirements.

H. Regulations.

A. Known Archaeological, Historic, and Cultural Resources.

- i. Upon receipt of application for a shoreline permit or request for a statement of exemption for development on properties within 500 feet of a site known to contain an historic, cultural, or archaeological resource(s), the county shall require a cultural resource site assessment; provided, that the provisions of this section may be waived if the administrator determines that the proposed development activities do not include any ground disturbing activities and will not impact a known historic, cultural, or archaeological site. The site assessment shall be conducted by a professional archaeologist or historic preservation professional, as applicable, to determine the presence of significant historic or archaeological resources. The fee for the services of the professional archaeologist or historic preservation professional shall be paid by the landowner or responsible. The applicant shall submit a minimum of five copies of the site assessment to the administrator for distribution to the applicable parties for review.
- ii. If the cultural resource site assessment identifies the presence of significant historic or archaeological resources, a cultural resource management plan (CRMP) shall be prepared by a professional archaeologist or historic preservation professional, as applicable. The fee for the services of the professional archaeologist or historic preservation professional shall be paid by the landowner or responsible party. In the preparation of such plans, the professional archaeologist or historic preservation professional shall solicit comments from the Washington State Department of Archaeology and Historic Preservation, the Lummi Nation Tribal Historic Preservation Office, and Nooksack Tribe. Comments received shall be incorporated into the

conclusions and recommended conditions of the CRMP to the maximum extent practicable. The applicant shall submit a minimum of five copies of the CRMP to the administrator for distribution to the applicable parties for review.

a. A CRMP shall contain the following minimum elements:

- i. The purpose of the project; and
- ii. A site plan for proposed on-site development; and
- iii. Depth and location of all ground-disturbing activities including, but not limited to, utilities, driveways, clearing, and grading; and
- iv. An examination of project on-site design alternatives; and
- v. An explanation of why the proposed activity requires a location on, or access across and/or through, a significant historic or archaeological resource; and
- vi. A description of the historic/archaeological resources affected by the proposal; and
- vii. An assessment of the historic/archaeological resource and an analysis of the potential adverse impacts as a result of the activity; and
- viii. An analysis of how these impacts have been avoided, or w
- ix. Where avoidance is not possible, how these impacts have been mitigated/minimized; and
- x. A recommendation of appropriate mitigation measures, which may include but are not limited to the following:
 - A. Recording the site with the State Department of Archaeology and Historic Preservation, or listing the site in the National Register of Historic Places, Washington Heritage Register, as applicable, or any locally developed historic registry formally adopted by the Whatcom County council;
 - B. Preservation in place;
 - C. Re-interment, in the case of grave sites;
 - D. Covering an archaeological site with a nonstructural surface to discourage pilferage (e.g., maintained grass or pavement);
 - E. Excavation and recovery of archaeological resources;
 - F. Inventorying prior to covering of archaeological resources with structures or development; and
 - G. Monitoring of construction excavation.
- xi. An outline of actions to be taken by the property owner, developer, archaeologist, or historic preservation professional, as applicable, in the event that an inadvertent discovery of historic, cultural, or archaeological sites or artifacts occurs during site development, which includes the following:
 - A. A statement that work on that portion of the development site shall be stopped immediately and the find reported as soon as possible to the administrator and other appropriate governments and agencies.
 - B. Contact information for applicable parties, agencies, and governments including the county administrator, the Washington State Department of Archaeology and

- 1 Historic Preservation, Lummi Nation Tribal Historic Preservation Office, Nooksack
2 Tribe, professional archaeologist or historic preservation professional; and in the
3 event of inadvertent discovery of human remains, additional contact information
4 for the Whatcom County Sheriff's office, Whatcom County Medical Examiner,
5 and/or Lummi Repatriation Office.
- 6 C. ~~Proposed measures to stabilize, contain, or otherwise protect the area of~~
7 ~~inadvertent discovery until a site investigation and/or site assessment is~~
8 ~~conducted.~~
- 9 xii. ~~Where provision of public access for the purpose of public education related to a~~
10 ~~private or publicly owned building or structure of historic significance is desired by the~~
11 ~~property owner, a public access management plan shall be developed in consultation~~
12 ~~with the Washington State Department of Archaeology and Historic Preservation,~~
13 ~~Lummi Nation Tribal Historic Preservation Office, Nooksack Tribe, and/or other~~
14 ~~agencies, as appropriate, to address the following:~~
- 15 A. ~~The type and/or level of public access that is consistent with the long term~~
16 ~~protection of both historic resource values and shoreline ecological functions and~~
17 ~~processes; and~~
- 18 B. ~~Site and resource specific conditions and/or improvements including the~~
19 ~~following, as applicable:~~
- 20 (1) ~~Hours of operation;~~
21 (2) ~~Interpretive and/or directional signage;~~
22 (3) ~~Lighting;~~
23 (4) ~~Pedestrian access, and/or~~
24 (5) ~~Traffic and parking.~~
- 25 xiii. ~~Where provision of public access for purposes of public education related to an~~
26 ~~archaeological or cultural resource site is desired by the property owner, the~~
27 ~~Washington State Department of Archaeology and Historic Preservation, Lummi~~
28 ~~Nation Tribal Historic Preservation Office, Nooksack Tribe, and/or other agencies, as~~
29 ~~appropriate, shall be in agreement prior to providing public access to the site. An~~
30 ~~access and resource management plan shall be developed in consultation with the~~
31 ~~Washington State Department of Archaeology and Historic Preservation, the Lummi~~
32 ~~Nation Tribal Historic Preservation Office, and the Nooksack Tribe.~~
- 33 b. ~~The recommendations and conclusions of the CRMP shall be used to assist the administrator~~
34 ~~in making final administrative decisions concerning the presence and extent of historic/~~
35 ~~archaeological resources and appropriate mitigating measures. The administrator shall~~
36 ~~consult with the Washington State Department of Archaeology and Historic Preservation,~~
37 ~~Lummi Nation Tribal Historic Preservation Office, and Nooksack Tribe prior to approval of~~
38 ~~the CRMP.~~

- 1 ~~c. The administrator may reject or request revision of the conclusions reached in a CRMP~~
2 ~~when the administrator can demonstrate that the assessment is inaccurate or does not fully~~
3 ~~address the historic/archaeological resource management concerns involved.~~
- 4 ~~d. Upon receipt of a complete development permit application in an area of known historic/~~
5 ~~archaeological resources, the county shall notify and request a recommendation from~~
6 ~~appropriate agencies such as the Washington State Department of Archaeology and Historic~~
7 ~~Preservation, the Lummi Nation Tribal Historic Preservation Office, and Nooksack Tribe.~~
8 ~~Recommendations of such agencies and other affected persons shall be duly considered and~~
9 ~~adhered to whenever possible and reasonable. Notification shall include the following~~
10 ~~information:~~
- 11 ~~i. The date of application, the date of notice of completion for the application, and the~~
12 ~~date of the notice of application;~~
- 13 ~~ii. A site map including the street address, tax parcel number, township, range, and section~~
14 ~~of the proposed project area;~~
- 15 ~~iii. A description of the proposed project action and a list of the project permits included in~~
16 ~~the application, and, if applicable, a list of any studies requested by the cCounty;~~
- 17 ~~iv. The identification of other permits not included in the application to the extent known~~
18 ~~by the cCounty;~~
- 19 ~~v. The identification of existing environmental documents that evaluate the proposed~~
20 ~~project and, if not otherwise stated on the document providing notice of application,~~
21 ~~the location where the application and any studies can be reviewed;~~
- 22 ~~vi. Any other information determined appropriate by the Ccounty;~~
- 23 ~~vii. A statement indicating those development regulations that will be used for project~~
24 ~~mitigation or a determination of consistency if they have been identified at the time of~~
25 ~~notice;~~
- 26 ~~viii. A statement of the limits of the comment period and the right of each agency to~~
27 ~~comment on the application within a 15-day time period, request a copy of the decision~~
28 ~~once made, and to appeal a decision when allowed by law.~~
- 29 ~~e. In granting shoreline permits or statements of exemption for such development, the~~
30 ~~cCounty may attach conditions to provide sufficient time and/or conditions for consultation~~
31 ~~with the Washington State Department of Archaeology and Historic Preservation, Lummi~~
32 ~~Nation Tribal Historic Preservation Office, and Nooksack Tribe, and to assure that historic/~~
33 ~~archaeological resources are properly protected, or for appropriate agencies to contact~~
34 ~~property owners regarding purchase or other long-term arrangements. Provision for the~~
35 ~~protection and preservation of historic/archaeological sites shall be incorporated to the~~
36 ~~maximum extent practicable. Permit or other requirements administered by the~~
37 ~~Washington State Department of Archaeology and Historic Preservation pursuant to~~
38 ~~Chapters 27.44 and 27.53 RCW may apply in addition.~~

1 ~~B. Inadvertent Discovery.~~

- 2 1. ~~Whenever historic, cultural, or archaeological sites or artifacts are discovered in the process of~~
3 ~~development on shorelines, work on that portion of the development site shall be stopped~~
4 ~~immediately, the site secured, and the find reported as soon as possible to the administrator.~~
5 ~~Upon notification of such find, the property owner shall notify the Washington State~~
6 ~~Department of Archaeology and Historic Preservation, Lummi Nation Tribal Historic Preservation~~
7 ~~Office, and Nooksack Tribe, and the administrator, shall conduct a site investigation to~~
8 ~~determine the significance of the discovery. Based upon the findings of the site investigation~~
9 ~~and consultation with the Washington State Department of Archaeology and Historic~~
10 ~~Preservation, Lummi Nation Tribal Historic Preservation Office, and Nooksack Tribe, the~~
11 ~~administrator may require that an immediate site assessment be conducted or may allow~~
12 ~~stopped work to resume.~~
13 2. ~~If a site assessment is required, the area of inadvertent discovery shall be stabilized, contained,~~
14 ~~or otherwise protected until the site assessment and/or CRMP is completed. The site~~
15 ~~assessment shall be prepared pursuant to subsection (B)(1)(a) of this section to determine the~~
16 ~~significance of the discovery and the extent of damage to the resource and shall be distributed~~
17 ~~to the Washington State Department of Archaeology and Historic Preservation, the Lummi~~
18 ~~Nation Tribal Historic Preservation Office, and Nooksack Tribe for a 15-day review period or, in~~
19 ~~the case of inadvertent discovery of human remains, a 30-day review period to determine the~~
20 ~~significance of the discovery. If the site has been determined not to be significant by the above-~~
21 ~~listed agencies or governments, or if the above-listed agencies or governments have failed to~~
22 ~~respond within the applicable review period following receipt of the site assessment, such~~
23 ~~stopped work may resume.~~
24 3. ~~Upon receipt of a positive determination of a site's significance, the administrator may invoke~~
25 ~~the provisions of subsections (B)(1)(b) through (d) of this section for a cultural resource~~
26 ~~management plan, if such action is reasonable and necessary to implement related SMP~~
27 ~~objectives.~~

28 ~~C. The requirements of subsection (B)(1) of this section do not apply where an applicant/project~~
29 ~~proponent has obtained an approved archeological excavation and removal permit from the~~
30 ~~Washington State Department of Archaeology and Historic Preservation pursuant to WAC 25-48-~~
31 ~~060; provided, that the applicant must adhere to the requirements of said approved permit.~~

32 **23.90.08030.0760 Public Access.**

33 ~~a. Policies.~~

- 34 i. ~~Use and development that provide an opportunity for substantial numbers of the people to~~
35 ~~enjoy the shorelines of the state are a preferred use.~~
36 ii. ~~Physical or visual access to shorelines should be incorporated in all new development when the~~
37 ~~development would either generate a demand for one or more forms of such access, and/or~~
38 ~~would impair existing legal access opportunities or rights. Public health and safety concerns~~
39 ~~should also be adequately addressed and maintenance of shoreline ecological functions and/or~~

Comment [AP73]: Removed several provisions below that are beyond WAC requirements.

processes should be assured. As required by the governing principles, all such conditions should be consistent with all relevant constitutional and other legal limitations on regulation of private property.

- iii. ~~Public access should be provided for water-oriented uses and non-water dependent uses and developments that increase public use of the shorelines and public aquatic lands, or that would impair existing, legal access opportunities.~~
- iv. ~~Non-water related uses or activities located on the shoreline should provide public access as a public benefit.~~
- v. ~~Public access area and/or facility requirements should be commensurate with the scale and character of the development and should be reasonable, effective and fair to all affected parties including but not limited to the land owner and the public.~~
- vi. ~~Public access design should provide for public safety and minimize potential impacts to private property, individual privacy, and shoreline ecological functions and processes.~~
- vii. ~~Shoreline development by public entities, such as local governments, port districts, state agencies, and public utility districts, should provide public access measures as part of each development project, unless such access is shown to be incompatible due to reasons of safety, security, or impact to the shoreline.~~

b. ~~Regulations.~~

A. ~~In the review of~~ All shoreline substantial development, shoreline conditional use permits, or developments of more than four residential lots or dwelling units, ~~consideration of shall provide~~ public access ~~shall be required, subject to the test stated in subsection (A)(2) of this section.~~ When appropriate, provisions for adequate public access shall be incorporated into such proposals, including land division. An applicant shall not be required to provide public access if the decision-maker determines that one or more of the following conditions apply unless the applicant/proponent demonstrates that one or more of the following provisions apply:

- 1. ~~Unavoidable health or safety hazards to the public exist that cannot be prevented by any practical means;~~
- 2. ~~Inherent security requirements of the use cannot be satisfied through the application of alternative design features or other solutions;~~
- 3. ~~1. The cost of providing the access, easement, alternative amenity, or mitigating the impacts of public access is unreasonably disproportionate to the total long-term cost of the proposed development;~~
- 4. ~~Significant environmental impacts will result from the public access that cannot be mitigated;~~
- ~~Significant undue and unavoidable conflict between any access provisions and the proposed use and/or adjacent uses would occur and cannot be mitigated.~~
- ~~The parcel is separated from the water by an existing developed road or an additional parcel that serves to create a distinct break in connectivity to the shoreline.~~
- ~~Other reasonable and safe opportunities for public access to the shoreline are located within one-quarter mile of the proposed development site.~~

Comment [CES74]: Deleted, as WAC 173-26-221 does not list cost.

Comment [DOE-Req75]: Required Change – This change deletes this new exception to consideration of public access as it is overly prescriptive and inconsistent with the SMP Guidelines at WAC 173-26-221(4). Direct connectivity is not a requirement to accomplish proportionate public access. Public access includes the ability of the general public to reach, touch and enjoy the water's edge, travel on the waters of the state, and to view the water from adjacent locations [WAC 173-26-211(4)(a)]. Visual access to the shoreline is not necessarily precluded due to the presence of a developed road or additional parcel between the subject development and the shoreline.

Comment [DOE-Req76]: Required Change – This change deletes this new exception to consideration of public access as it is inconsistent with the SMP Guidelines at WAC 173-26-211(4). Increased development within shoreline areas can provide a nexus for the need for increased locations and forms of public access proportionate to such impacts.

2. ~~The proposed development has already been considered as site is part of a larger development project that has previously provided public access as part of the development permitting process.~~

3. ~~The proposed development is for the subdivision of property into four or fewer parcels.~~

4. ~~The proposed development consists of only agricultural activities.~~

5. ~~Provision of public access on the site would pose a health or safety risk to the public due to the nature of the proposed use or activity or the location of public access, or would be infeasible due to security requirements associated with the proposed development.~~

6. ~~Provision of public access at the proposed development site would result in a net loss of shoreline ecological function that cannot be effectively mitigated or avoided, or would pose a risk to threatened and/or endangered species listed under the Endangered Species Act.~~

5-7. ~~The proposal consists solely of a new or expanded utility crossing through shoreline jurisdiction, serving development located outside shoreline jurisdiction, provided that no adverse impacts to existing public access result.~~

~~B. When provisions for public access are required as a condition of project approval, the administrator shall prepare written findings, pursuant to Chapter 23.60 WCC, demonstrating consistency with the principles of nexus and proportionality and the test stated in subsection (A)(2) of this section and WCC 23.50.080(A).~~

~~C.B. Prior to deciding public access is not required pursuant to subsection (B)(1)(a) through (e) of this section, the county must determine that all reasonable alternatives have been exhausted; including, but not limited to:~~

- ~~1. Regulating access by such means as maintaining a gate and/or limiting hours of use;~~
- ~~2. Designing separation of uses and activities (e.g., fences, terracing, use of one-way glazing, hedges, landscaping, etc.); and~~
- ~~3. Providing for access at a site geographically separated from the proposal such as a street end, vista, tideland, or trail system.~~

~~D. Public access shall not be required for the following uses except as determined on a case-by-case basis in conjunction with the provisions of subsection A of this section and this subsection B:~~

- ~~1. Single family residential development of four or fewer lots.~~
- ~~2. Dredging.~~
- ~~3. Forest practices.~~
- ~~4. Landfill and excavation.~~
- ~~5. Mining.~~
- ~~6. Private docks serving four or fewer dwelling units.~~
- ~~7. Instream structures.~~
- ~~8. Shoreline stabilization.~~
- ~~9. Ecological restoration or enhancement activities not associated with development when the purpose of the project would be undermined.~~
- ~~10. Agriculture.~~

Comment [DOE-Req77]: Required Change – This change is necessary to ensure consistency with the SMP Guidelines at WAC 173-26-221(4) and clarifies the applicability of this exemption only if it had previously been analyzed through a broader development review such as a Planned Unit Development or other similar process.

Comment [CES78]: Combined existing text w/ WAC 173-26 -221 text.

Comment [DOE-Req79]: Required Change – Utility development is not specifically exempted from the requirement to consider public access in the SMP Guidelines. The proposed change modifies this new exemption to require public access considerations if impacts to existing forms of public access provide such a nexus.

Comment [DOE-Req80]: Section restored. Required Change – This additional language added to the end of 23.60.060.A restores existing language proposed for deletion. The change is necessary for consistency with the SMP Guidelines at 173-26-221(4)(d)(B) which requires consideration of alternative methods of providing access when potential conflicts are identified with traditional forms of access.

- 1 | B. Public access shall consist of a dedication of land or a physical improvement in the form of a
2 | walkway, trail, bikeway, corridor, viewpoint, park, deck, observation tower, pier, boat launching
3 | ramp, dock or pier area, or other area serving as a means ~~of to~~ view and/or physically approach ~~to~~
4 | public waters, and may include interpretive centers and displays.
- 5 | C. Where public access planning as described in WAC 173-26-221(4)(c) demonstrates that a more
6 | effective public access system can be achieved through alternate means, such as focusing public
7 | access at the most desirable locations, the County may institute master program provisions for
8 | public access based on that approach in lieu of uniform site-by-site public access requirements.
- 9 | D. Where there is an irreconcilable conflict between water-dependent shoreline uses or physical public
10 | access and the maintenance of views from adjacent properties, the water-dependent uses and
11 | physical public access shall have priority.
- 12 | E. Alternate off-site provision of public access to shorelines may be used upon approval, as a means of
13 | offsetting identifiable on-site impacts. If public access is demonstrated to be infeasible or
14 | inappropriate on site due to significant interference to operations or hazards to life and property,
15 | alternative visual access opportunities ~~may be provided at a location not directly adjacent to the~~
16 | ~~water~~ (such as a viewpoint, observation tower, or other areas serving as a means to view public
17 | waters (such as an interpretive center and displays explaining maritime history and industry) may be
18 | provided at a location not directly adjacent to the water; provided, that visual access to the water is
19 | provided.
- 20 | F. Public access provided by shoreline street ends, public utilities, and rights-of-way shall not be
21 | diminished (RCW 35.79.035 and 36.87.130).
- 22 | ~~F.G.~~ Shoreline development by public entities shall include public access measures as part of each
23 | development project.
- 24 | H. Development shall be located, designed, and managed so that impacts on public use of the
25 | shoreline are minimized.
- 26 | I. Public access shall incorporate the following location and design criteria:
- 27 | 1. Where open space is provided along the shoreline, and public access can be provided in a
28 | manner that will not adversely impact shoreline ecological functions and/or processes, a public
29 | pedestrian access walkway parallel to the ordinary high water mark of the property is preferred.
30 | The walkway shall be buffered from sensitive ecological features and provide limited and
31 | controlled access to sensitive features and the water's edge where appropriate. Fencing may be
32 | provided to control damage to plants and other sensitive ecological features and where
33 | appropriate. Trails shall be constructed of permeable materials and limited to five feet in width
34 | to reduce impacts to ecologically sensitive resources.
- 35 | 2. Public access shall be located adjacent to other public areas, accesses and connecting trails,
36 | connected to the nearest public street; and include provisions for differently-abled persons
37 | where feasible.
- 38 | 3. Where views of the water or shoreline are available and physical access to the water's edge is
39 | not present or appropriate, a public viewing area shall be provided.

Comment [CES81]: Language from WAC

Comment [AP82]: Added for consistency with WAC 173-26-221(4)(d)

Comment [DN83]: Moved from the Site Planning section.

Comment [DOE-Req84]: Section resotred. Required Change – This change restores existing standards necessary for meaningful implementation of the public access requirements as required by the SMP Guidelines at WAC 173-26-222(4)(d)(iii).

4. Design shall minimize intrusions on privacy by avoiding locations adjacent to windows and/or outdoor private open spaces or by screening or other separation techniques.
 5. Design shall provide for the safety of users, including the control of offensive conduct through public visibility of the public access area, or through provisions for oversight. The administrator may authorize a public access to be temporarily closed in order to develop a program to address offensive conduct. If offensive conduct cannot be reasonably controlled, alternative facilities may be approved through a permit revision.
 6. Public amenities appropriate to the use of a public access area such as benches, picnic tables and sufficient public parking to serve the users shall be provided.
 7. Commercial developments that attract a substantial number of persons and developments by government/public entities may be required to provide public restrooms, facilities for disposal of animal waste and other appropriate public facilities.
 8. The minimum width of public access easements shall be 10 feet, unless the administrator determines that undue hardship would result. In such cases, easement widths may be reduced only to the extent necessary to relieve the hardship.
 9. The requirement for public access on a specific site may be fulfilled by:
 - a. Participation in a public access plan incorporated in the program; or
 - b. Provision of facilities specified in a permit approval.
 10. Required public access sites shall be fully developed and available for public use at the time of occupancy of the use or activity or in accordance with other provisions for guaranteeing installation through a monetary performance assurance.
 11. Public access facilities shall be maintained over the life of the use or development. Future actions by successors in interest or other parties shall not diminish the usefulness or value of required public access areas and associated improvements.
 12. Public access provisions shall run with the land and be recorded via a legal instrument such as an easement, or as a dedication on the face of a plat or short plat. Such legal instruments shall be recorded with the county auditor's office prior to the time of building permit approval, occupancy or plat recordation, whichever comes first.
 13. Maintenance of the public access facility shall be the responsibility of the owner unless otherwise accepted by a public or nonprofit agency through a formal agreement recorded with the county auditor's office.
 14. Public access facilities shall be available to the public 24 hours per day unless specific exceptions are granted though the shoreline permit process subject to the provisions of subsection (B)(1) of this section.
 15. The standard state-approved logo or other approved signs that indicate the public's right of access and hours of access shall be installed and maintained by the owner. Such signs shall be posted in conspicuous locations at public access sites.
 16. Incentives for public access improvements such as density or bulk and dimensional bonuses shall be considered through applicable provisions of zoning and subdivision regulations.
- ~~23.290.090 Site planning.~~

Comment [DN85]: All non-repetitive regulations have been moved, so this section is no longer necessary.

Policies.

Development and use should be designed in a manner that directs land alteration to the least sensitive portions of the site to maximize vegetation conservation; minimize impervious surfaces and runoff; protect riparian, nearshore and wetland habitats; protect wildlife and habitats; protect archaeological, historic and cultural resources; and preserve aesthetic values. This may be accomplished by minimizing the project footprint, the use of clustering and other appropriate design approaches.

Low impact and sustainable development practices such as rain gardens, and pervious surfacing methods including, but not limited to, porous paving blocks, porous concrete and other similar materials should be incorporated in developments where site conditions allow to maintain shoreline ecological functions and processes. Topographic modification, vegetation clearing, use of impervious surfaces and alteration of natural drainage or other features should be limited to the minimum necessary to accommodate approved uses and development. An engineering geologist should be consulted prior to using infiltration practices on shore bluffs.

Accessory development or use that does not require a shoreline location should be located outside of shoreline jurisdiction unless such development is required to serve approved water-oriented uses and/or developments. When sited within shoreline jurisdiction, uses and/or developments such as parking, service buildings or areas, access roads, utilities, signs and storage of materials should be located inland away from the land/water interface and landward of water-oriented developments and/or other approved uses.

Development should be located, designed, and managed so that impacts on shoreline or upland uses are minimized through bulk and scale restrictions, setbacks, buffers, and control of proximity impacts such as noise or light and glare.

Shoreline uses should not deprive other uses of reasonable access to navigable waters. Public recreation activities such as fishing, clam digging, swimming, boating, and wading, and water-related recreation should be preserved and enhanced. The rights of treaty tribes to resources within their usual and accustomed areas should be accommodated.

Regulations.

Where appropriate new development shall use clustering to minimize adverse impacts on shoreline ecological functions and processes.

An assessment of the existing ecological functions and/or processes provided by topographic, physical and vegetation characteristics of the site shall accompany development proposals; provided, that proposals for single-family residences shall be exempt from this requirement.

Such assessments shall include the following general information:

Impacts of the proposed use/development on ecological processes with clear designation of existing and proposed routes for water flow, wildlife movement and other features.

Infrastructure requirements such as parking, services, lighting and other features, together with the effects of those infrastructure improvements on shoreline ecological functions and/or processes.

Comment [DN86]: Moved to Ecological Protection and Critical Areas Section (WCC 23.30.020).

Vehicle and pedestrian circulation systems shall be designed to minimize clearing, grading and alteration of topography and natural features. Roadway and driveway alignment shall follow the natural contours of the site and minimize width to the maximum extent feasible. Elevated walkways should be utilized to cross wetlands.

Impervious surfacing for parking lot/space areas shall be minimized through the use of alternative surfaces where feasible, consistent with the May 2005 Low Impact Development Technical Guidance Manual for Puget Sound.

Utilities shall be located within roadway and driveway corridors and rights-of-way wherever feasible.

Design of structures should conform to natural contours and minimize disturbance to soils and native vegetation. Foundations shall be tiered with earth retention incorporated into the structure.

Stormwater infiltration systems shall be employed to mimic the natural infiltration and ground water interflow processes where appropriate.

Fencing, walls, hedges and similar features shall be designed in a manner that does not preclude or significantly interfere with wildlife movement to/from important habitat areas.

Accessory uses that do not require a shoreline location shall be sited away from the land/water interface and landward of the principal use and, unless otherwise specified, shall observe critical area regulations and buffers in Chapter 16.16 WCC.

Development shall be located, designed, and managed so that impacts on public use of the shoreline are minimized.

Public recreation activities such as fishing, clam digging, swimming, boating, and wading, and water-related recreation shall be protected through specific provisions to avoid impacts, or provide access as applicable.

Interior and exterior lighting shall be designed and operated to avoid illuminating nearby properties or public areas, prevent glare on adjacent properties, public areas or roadways to avoid infringing on the use and enjoyment of such areas, and to prevent hazards. Methods of controlling spillover light include, but are not limited to, limits on height of structure, limits on light levels of fixtures, light shields, setbacks, buffer areas and screening.

All facilities shall be located and designed to avoid impediments to navigation and to avoid depriving other properties of reasonable access to navigable waters. Review and approval by the U.S. Coast Guard may be required as a condition of issuance of building or development permits to assure compliance. All in-water structures shall be marked and lighted in compliance with U.S. Coast Guard regulations.

All shoreline use and development shall provide setbacks from adjacent properties in accordance with WCC Table 23.90.130(C). Setbacks shall be of adequate width to attenuate proximity impacts such as noise, light and glare, and may address scale and aesthetic impacts.

Fencing or landscape areas may be required to provide a visual screen.

Comment [DN87]: Moved to Transportation Section for Shoreline Uses and Modifications (WCC 23.40.190).

Comment [CES88]: Moved to Utilities section.

Comment [DN89]: Moved to 23.30.040 Vegetation Management.

Comment [DN90]: Moved to Water Quality section

Comment [AP91]: Removed to reduce redundancy. This is fully captured in the General Regulation provisions for Ecological Protection and Critical Areas (WCC 23.30.020).

Comment [DN92]: Moved to Ecological protection and critical areas section.

Comment [DN93]: Moved to the Public Access section

Comment [DN94]: This is more applicable as a policy rather than a regulation and is already included as a policy above under former subsection (A)(5).

Comment [DN95]: Moved to Views and Aesthetics 23.30.030

Comment [DN96]: Moved to both the Boating facilities and the Moorage sections.

Comment [DN97]: This is more of a policy rather than a regulation and is already included above under former subsection (A)(4). Dimensional standards already implement such a policy so this additional regulation is not necessary.

Chapter ~~23.100~~23.40 Shoreline Use and Modification Regulations

Comment [AP98]: This chapter has been moved from later in the document (previously number 23.100).

~~23.100~~23.40.010 Shoreline Use and Development Modification.

- A. All uses and modifications in shoreline areas shall be subject to the policies and regulations of this program.
- B. Table 1. Shoreline Use by Environment Designation generally sets forth the permissible uses within the respective shoreline environment designations in the county. It should be read in close conjunction with the definitions in Chapter 23.60 (Definitions) and the other provisions in this program. The contents of Table 1 provisions are subject to limitations, conditions, and exceptions listed under of each of the categories of this chapter. Such text modifies the requirements of Table 14, and in the event there is a conflict between the use(s) identified in Table 23.100.010 Table 14 and the policies or regulations, the policies and regulations shall prevailapply.
- C. Shoreline use and development shall be classified by the administratorDirector and regulated under one or more of the following applicable sections of WCC Chapter 23.10023.40 (Shoreline Use and Modification Regulations). Unless otherwise stated, all use and development shall also comply with all of the general policies and regulations of Chapter 23.90 WCC and, if applicable, the policies of Chapter 23.40 WCC. A proposed development may contain different types of uses and/or modifications, and may be classified under and be subject to multiple categories (e.g., a marina may fall under and be subject to Marinas, Moorage, Commercial, and Industrial, depending on what is proposed).
- D. ~~(b) In the Aquatic;~~ shoreline environment designation, only water-dependent uses shall be allowedonly, subject to the use and development regulations of the abutting upland shoreline areaenvironment designation.

Comment [CES109]: Moved from Industrial and Port

(*) Subject to exceptions.

(a) In the event that there is a conflict between the use(s) identified in Table 23.1040.010 and the policies or regulations in Chapters 23.230, 23.390, or 23.4100 WCC, the policies and regulations shall apply.

(b) Aquatic: Water dependent use only, subject to the use and development regulations of the abutting upland shoreline area designation.

23.4100.020 Shoreline Bulk Provisions – Buffers, Setbacks, Height, Open Space and Impervious Surface Coverage.

~~A. Policies. Standards for density, setbacks, height, and other provisions should ensure no net loss of shoreline ecological functions and/or processes and preserve the existing character of the shoreline consistent with the purpose of the shoreline area designation.~~

~~B. Regulations.~~

A. ~~Table 2. Bulk Regulations for Shoreline Development.~~ Table of Bulk Regulations. ~~WCC Table 23.90.130(C)~~ establishes the minimum required dimensional requirements for development, uses, and activities including all structures and substantial alteration of natural topography. Dimensional standards relating to critical areas are governed by the provisions of WCC Chapter 16.16. Dimensional standards specified in this program shall not exceed the geographic limit of the Act's jurisdiction. Additional standards may be established in WCC, Chapter ~~23.100~~ 23.40 (Shoreline Use and Modification Policies and Regulations).

B. Where the bulk provisions of other County regulations (e.g., Title 20, Zoning) differ, the stricter shall apply.

~~A.C.~~ All measurements except height and area shall be measured outward on the horizontal plane and in the direction that results in the greatest dimension from property lines, or from other features specified.

A. ~~Except as otherwise stated, the Whatcom County Comprehensive Plan, zoning regulations, critical areas regulations, flood control regulations, subdivision regulations, health regulations and other adopted regulatory provisions apply within shoreline jurisdiction. In the event the provisions of this program conflict with provisions of other county regulations, the more protective of shoreline resources shall prevail.~~

B. ~~All use and development activities shall conform to all applicable plans, policies, standards, guidelines and regulations of other agencies with jurisdiction in shoreline areas.~~

D. Setbacks.

1. Setbacks shall be pursuant to Table 2; except as allowed by subsection (D)(2).

2. **Common-Line Setback for Single-Family Residences.** For the purpose of accommodating views to be adequate and similar, but not necessarily equivalent, for new residences while protecting predominant shoreline views of the water from legally existing primary residences in developed residential areas, the shoreline buffer (setback) may be modified for primary residential structures in the Urban, Shoreline Residential, and Rural environments (only), consistent with the following. The presence of nearby shacks, sheds, or dilapidated structures does not constitute the existence of a residence, nor can such structures be used to determine a common-line setback.

a. Where there are legally established single-family residential primary structures within 150 feet on both sides of the proposed residence, the setback shall be determined as the greater of either:

i. A common line drawn between the nearest corners of the foundation closest to the sideyard property line of the proposed residence to each adjacent residence, or

Comment [AP110]: Moved from the General Regulations section (previously WCC 23.90.130).

Formatted: Indent: Left: 0", Numbered + Level: 4 + Numbering Style: A, B, C, ... + Start at: 1 + Alignment: Left + Aligned at: 0.25" + Indent at: 0.5"

Formatted: Indent: Left: 0.25", Numbered + Level: 5 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 2.5" + Indent at: 2.75"

Comment [CES111]: Incorporated from former Appendix F of Title 23.

Formatted: Indent: Left: 0.25", Space After: 0 pt, Numbered + Level: 5 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 2.5" + Indent at: 2.75"

Comment [DOE-Req112]: Required Change. – This change restores the existing language to apply the common-line setback provisions only to existing structures within 50-feet of a proposed residence. The amendment record contains no justification to extend this distance to 150-feet, which is most cases is two to three times the width of most existing lots where view these provisions would apply. The No Net Loss analysis related to this change does not take into consideration the increase in applicability if these setback reductions county-wide by increasing the distance from 50-feet to 100-feet.

- ii. A common line calculated by the average of both adjacent residences' existing setbacks.
- b. Where there is a legally established single-family residential primary structure within 150 feet on only one side of the proposed residence, the common line setback shall be determined as the greater of either:
 - i. A common line drawn between nearest corner of the foundation closest to the sideyard property line of the proposed residence to the adjacent residence and the nearest point of the standard buffer on the adjacent vacant lot, or
 - ii. A common line calculated by the average of the adjacent residence's setback and the standard buffer for the adjacent vacant lot.
- c. When the use of a common-line setback is allowed, compliance with buffer width reduction and mitigation pursuant to WCC 23.30.010 (Ecological Protection) shall be required.
- d. In no case shall development be located waterward of the common-line setback or a minimum of 50 feet from the ordinary high water mark, unless approved to be closer as part of a constrained lot review WCC 23.40.170(B).
- e. The lot shall not be subject to landslide hazard areas, or riverine or coastal erosion hazard areas or associated buffers (see WCC 16.16.310).

Comment [DOE-Req113]: Required Change – This change restores the existing language to apply the common-line setback provisions only to existing structures within 50-feet of a proposed residence. The amendment record contains no justification to extend this distance to 150-feet, which is most cases is two to three times the width of most existing lots where view these provisions would apply. The No Net Loss analysis related to this change does not take into consideration the increase in applicability if these setback reductions county-wide by increasing the distance from 50-feet to 100-feet.

- 3. Sideyard setbacks shall be measured from all property lines that intersect the shore side of a lot or tract; provided, that for development not requiring a wider shoreline buffer, five feet of the total required sideyard setbacks may be provided on one side and the balance on the other side.
- 1. and provided further, that, for a single family residence or duplex on a nonconforming lot that does not provide sufficient area to meet the standard dimensional requirements for buffers and setbacks, the nonconforming provisions of WCC 23.50.070 apply.

Comment [DOE-Req114]: Required Change – This change is necessary for consistency with the referenced constrained lot provisions found at WCC 23.40.170.c.4. This section states that consideration shall be given to view impacts in accordance with the common-line setback standards of 23.40.020.d.2. The change eliminates an endless loop to where the two provisions continue to refer to one another without resolve, and clarifies that new residential development should not be allowed waterward of existing development through either process.

Comment [CES115]: Shouldn't this be "is not"?

B-E. Height. Table 2 23.90.130(C) establishes the maximum allowed building height for all primary and accessory structures within the shoreline jurisdiction. Height is measured according to the definition in WCC 23.60.080(7)110; provided, that:

Comment [DOE-Req116]: Required Change – This change adds the same standard found in the constrained lot provisions at 23.40.170.B.5. In no case should the common line setback be used that would place a single-family residence within a hazardous area.

- 1. provided further, that, pursuant to RCW 90.58.320, and except as allowed by subsections (2 - 4) of this section, no permit may be issued for any new or expanded building or structure more than 35 feet above average grade level that will obstruct the view of a substantial number of residences on or adjoining such shorelines except where the program does not prohibit such development and only when overriding considerations of the public interest will be served. The applicant/proponent shall be responsible for providing sufficient information to the administrator to determine that such development will not obstruct the view of a substantial number of residences on or adjoining such shorelines whether this standard is met.
- 2. In the Urban Resort shorelines designation only, commercial and multifamily unit residential development more than 100 feet from the ordinary high water mark may exceed the standard height limit, up to a maximum height of 75 feet when approved with through a shoreline conditional use permit, up to a maximum height of 75 feet; provided, that specific location design and other conditions may be imposed to meet the policies and regulations of this program;

Comment [DN117]: Now covered by nonconforming lot section (23.50.030)

3. In the Urban Resort shoreline environment designation, lodging developments over 35 feet in height may be allowed. However, due to the potential for adverse impacts upon adjacent uses and the community from such development, special consideration must be given to the following factors during review of such proposals:

- a. Urban services, including sanitary sewers, public water supply, fire protection, storm drainage, and police protection, must be provided at adequate levels to protect the public health, safety, and welfare.
- b. Circulation, parking areas, and outdoor storage or loading areas should be adequate in size and designed so that the public safety and local aesthetic values are not diminished. Such areas should be screened from open space areas by landscaping, fences or similar structures, or grade separation.
- c. Recreational needs of building clientele must be provided for through on-site recreation facilities and access to shorelines. The variety and number of on-site recreation facilities should increase proportionately as density increases.

4. In the Cherry Point Management Area, cranes, gantries, mobile conveyors, light standards, and similar equipment necessary for the functions of water-dependent uses or the servicing of vessels may extend above the applicable maximum height limit provided in Table 1, provided that such structures shall be designed to minimize view obstruction.

5. Residential accessory structures that are not waterward of the primary structure may be built to the maximum height for the environment designation.

Comment [CES118]: Moved from 23.40.040 (Commercial)

Comment [CES119]: Added to accommodate equipment necessary for operations of permitted uses.

Comment [CES120]: Moved up from below

F. **Open Space.** Open space shall be provided for certain types of development, use, or activities. The amount of open space, as a percentage of lot coverage, shall be as provided in Table 2, below.

G.G. **Uses Allowed in Buffers and Setbacks.** The following development activities are not subject to ~~allowed~~ in buffers and setbacks; provided, that they are constructed and maintained in a manner that minimizes adverse impacts on shoreline functions and processes; and provided further, that they comply with all the applicable regulations in WCC Chapter 16.16, including mitigation:

1. Those portions of approved private water-dependent development or public water-oriented development that require a location waterward of the ordinary high water mark of streams, rivers, lakes, ponds, marine shorelines, associated wetlands, and/or within their associated buffers.
2. Accessory and uUnderground utilities.
3. Necessary power poles and transmission towers are not subject to height limits but shall not be higher than necessary to achieve the intended purpose.
4. Modifications to existing development that are necessary to comply with environmental requirements of any state or federal agency, when otherwise consistent with this program; provided, that the decision maker determines that the facility cannot meet the dimensional standard and accomplish the purpose for which it is intended and the facility is located, designed, and constructed to meet specified dimensional standards to the maximum extent feasible, and the modification is in conformance with the provisions of Chapter WCC 23.50.070 (Nonconforming Uses, Structures, and Lots) ~~for nonconforming development and uses.~~

5. Roads, railways, and other essential public facilities that must cross shorelines and are necessary to access approved water-dependent development.
6. Stairs and walkways no greater than four feet in width and no higher than ~~nor~~ 18 inches in height above grade, except for railings; provided, that where ADA requirements apply, such facilities may be increased to five feet in width and the height requirement may be waived to provide for site-specific ADA compliance. Stairways shall conform to the existing topography to the extent feasible and minimize impervious surfaces.
7. Shared moorages ~~shall not be subject to sideyard setbacks~~ when located on or adjacent to a property line shared in common by the project proponents and where appropriate easements or other legal instruments have been executed providing for ingress and egress to the facility.
8. Retaining walls or similar slope stabilization structures, when associated with an approved shoreline use or development consistent with the provisions of this program and demonstrated to be necessary for the approved use or development through a geotechnical analysis.
9. Where permitted, fences, walls other than those allowed by 23.70.020(G)(8) above retaining walls, hedges and other similar structures shall be limited to four feet in height within shoreline setbacks and six feet in height outside of shoreline setbacks; provided, that the Director may exempt security fencing from this requirement as required by federal or state regulations.
10. Signs.
 - a. On publicly owned park properties, interpretive, wayfinding, and park identification signs.
 - b. Signage required by state or federal security requirements.
11. Passive recreation facilities that are part of a non-motorized trail system or environmental education program, including walkways, wildlife viewing structures, or public education trails; provided, that all the criteria in WCC 23.40.160(A)(6) (Recreation) are met.
12. ~~Residential accessory structures that are not waterward of the primary structure may be built to the maximum height for the designation.~~ Accessory structures, as allowed by 16.16.720(G)(4) Habitat Conservation Areas—Use and Modification. When located in the shoreline jurisdiction, residential water-oriented recreational accessory structures—such as a boat equipment storage shed, an small uncovered boat storage rack, a fire pit, and a pathway leading to the shoreline—may be permitted in an HCA buffer; provided,
 - a. Such structures are located as far from the shoreline as feasible and on previously-impacted buffer areas;
 - b. The maximum area, inclusive of existing lawfully-established accessory structures, ~~They~~ shall be limited to 10% of the buffer's area or 500 square feet, whichever is less;
 - c. No more than 20% of the linear length of shoreline is occupied by a building or structure;
 - d. Individual structures shall be limited to a total footprint area of 100-square feet and 10-feet in height; and
 - e. The shoreline is 75% or at ratios outlined in WCC 16.16.760, whichever is greater, planted (or replanted) with native vegetation to a minimum depth of 15 feet landward from the ordinary high water mark.

Comment [AP121]: Revised per Parks comment (Scoping Document Items #13b, 13c, and 14a)

Comment [AP122]: Added per Scoping Document, Item #17e.

Comment [AP123]: Added for clarity per Scoping Document, Item #17e.

Comment [AP124]: Added per Scoping Document, Item #16b.

Comment [AP125]: Revised per Scoping Document, Item #13d.

f. This provision shall not apply to residential developments authorized using the constrained lot provisions of WCC 23.40.150(B).

13. Residential structures which share a common wall with the primary structure shall be considered an extension of the primary structure (i.e., an attached garage) and may be built to the maximum height for the designation.

14. Height limits contained in this program for accessory structures in the Rural, Resource, or Conservancy shoreline environments, accessory structures that are 150 feet or greater from the OHWM of the Nooksack or Sumas Rivers may be built to the maximum height for the designation. shall not apply within shoreline jurisdiction of the Nooksack and Sumas Rivers beyond 150 feet from the OHWM.

Comment [DOE-Req126]: Required Changes – These changes are required for consistency with the SMP Guidelines governing principle that SMP regulations must be designed to achieve no net loss of ecological functions (WAC 173-26-186(8)). The changes add appropriate sideboards to allow a limited and predictable list of common residential developments that may be located within regulated buffers. The changes include more emphasis on the required mitigation sequence including avoidance, minimization and mitigation of impacts to buffers [WAC 173-26-201(2)(e)]

Footnotes:

(1) = Water dependent development shall have a buffer of zero feet. Unless specifically exempted from setback requirements in WCC 23.40.020, minimum required setbacks for permanent freestanding signs are 50 feet from the OWHM where not subject to critical areas or buffers. Other non-water dependent uses that may be allowed within the shoreline buffer are identified in WCC 23.40.020(G).

(2) = Roof overhangs or other architectural features shall not project further than 18 inches into the side setbacks.

(3) = A side setback of 5 feet applies to residential decks and accessory structures 15 feet tall or less.

(4) = Maximum height for accessory structures is 15 feet, except as provided in WCC 23.40.020(E).

(5) = Maximum height is as shown, except as provided in WCC 23.40.020(E).

(6) = Add five feet of setback for each five feet of height over 15 feet.

(7) = See WCC 23.40.200 (Signs) for additional allowances and restrictions.

(8) = Maximum allowable development density shall be calculated pursuant to the applicable underlying zone district, per WCC Title 20; provided, that maximum allowable density in dwelling units/acre shall not exceed the density ratios identified above. Density shall be calculated based on the total area of the parent parcel including those areas located outside of shoreline jurisdiction. Submerged lands and/or tidelands within the boundaries of any waterfront parcel that are located waterward of the ordinary high water mark shall not be used in density calculations.

(9) = Where the maximum total impervious surface percentage does not allow 2,500 square feet of total impervious surface area, 2,500 square feet shall be allowed.

(a/b) = "a" Applies to structures within 100 feet of OHWM or wetland edge;

"b" Applies to structures more than 100 feet from OHWM or wetland edge.

(c/d) = "c" Applies to development that includes overnight lodging;

"d" Applies to development that does not include overnight lodging.

(e/f) = "e" Applies to structures not more than 35 feet high;

"f" Applies to structures more than 35 feet high.

g = Height limit may be increased to 75 feet via conditional use permit — see WCC 23.00.120(B)(5).

* = Add five feet of setback for each five feet of height over 15 feet.

* = Maximum height for accessory buildings is 15 feet.

~~** = See WCC 23.100.140(B)(10) through (14).~~

~~* = Roof overhangs or other architectural features shall not project further than 18 inches into the side yard setbacks.~~

~~◇ = Maximum allowable development density shall be calculated pursuant to the applicable underlying zone district, per WCC Title 20; provided, that maximum allowable density in dwelling units/acre shall not exceed the density ratios identified above. Density shall be calculated based on the total area of the parent parcel including those areas located outside of shoreline jurisdiction. Submerged lands and/or tidelands within the boundaries of any waterfront parcel that are located waterward of the ordinary high water mark shall not be used in density calculations.~~

~~◇◇ = Where the maximum total impervious surface percentage does not allow 2,500 square feet of total impervious surface area, 2,500 square feet shall be allowed.~~

N/A = Not applicable.

1 **23.40.030 General Shoreline Use and Modification Regulations**

2 A. Proposed uses and developments shall limit the number and extent of shoreline modifications.

Comment [CES127]: From WAC 173-26-231(2)(b)

3 B. Shoreline uses and developments that are water-dependent shall be given priority. Permit
4 conditions may limit the range of uses or sites developed for such uses.

5 ~~B.C.~~ Interim non-water-dependent uses authorized as a shoreline conditional use may be allowed to
6 respond to short-term market conditions; provided, that permit conditions are placed on such uses
7 to provide for a specific timetable or review process to ensure water-dependent use of the
8 development in the long term.

9 ~~C.D.~~ Shoreline uses and developments shall be located, designed, and managed so that other
10 appropriate uses are neither subjected to substantial or unnecessary adverse impacts, nor deprived
11 of reasonable, lawful use of navigable waters, other publicly owned shorelines, or private property.

12 ~~D.E.~~ Navigable waters shall be kept free of obstructions for the general benefit of the region, state, and
13 nation. No use or development shall be allowed to effectively exclude other appropriate uses from
14 navigable waters.

15 F. Shoreline uses and developments shall be located in a manner so that shoreline stabilization is not
16 likely to become necessary in the future.

Comment [DN128]: Moved from the General Regulations section since this pertains specifically to uses and mods.

17 G. Accessory uses and structures that do not require a shoreline location shall be sited away from the
18 land/water interface and not placed waterward of the principal use unless otherwise allowed by this
19 Program.

20 ~~E.H.~~ Nothing in the policies or regulations may be construed as to impinge on tribal treaty rights
21 exercised within usual and accustomed areas.

Comment [DOE-Req129]: Recommended Change – The added language clarifies that there are exceptions to this general regulation (See 16.16.720.G.4)

22 I. No flood control works or instream structures shoreline use or development may commence without
23 the proponent/developer having obtained all applicable federal, state, and local permits and
24 approvals, including but not limited to a Hydraulic Permit Application (HPA) from the State
25 Department of Fish and Wildlife.

Comment [CES130]: Moved from 23.90.030 Ecological Protection

Comment [AP131]: Moved from Aquaculture section.

26 J. Use of motor vehicles including unlicensed off-road vehicles is permitted only on roads or trails
27 specifically designated for such use. Motor vehicle use, except for vessels and float planes, is
28 prohibited waterward of the ordinary high water mark, on tidelands, public or private beaches,
29 wetlands and/or their associated buffers; except as necessary for public health and safety or
30 permitted maintenance activities associated with approved developments or as otherwise
31 permitted.

Comment [AP132]: Moved and revised to apply more universally.

32 K. Buildings, fencing, walls, hedges, and similar features shall be designed, located, and constructed in
33 a manner that does not preclude or significantly interfere with wildlife movement to or from
34 important habitat areas consistent with the applicable provisions of this program; provided, that the
35 Director may exempt security fencing associated with residential, industrial, and/or commercial
36 developments from this requirement on a case-by-case basis.

Comment [CES133]: Moved from 23.90.030 30.010 Ecological Protection

37 **23.4100.030-040 Agriculture.**

38 A. Policies.

Comment [CES134]: Moved from 23.90.030 30.010 Ecological Protection

1. This program recognizes the importance of agriculture in Whatcom County and supports its continued economic viability. This program allows for ongoing agricultural activities and should protect agricultural lands from conflicting uses such as intensive or unrelated residential, industrial or commercial uses, while also maintaining shoreline ecological functions and processes.
2. Agricultural uses and development in support of agricultural uses should be conducted in such a manner as to assure no net loss of shoreline ecological functions and processes and avoid substantial adverse impacts on other shoreline resources and values.
3. Conversion of agricultural uses to other uses should comply with all policies and regulations for nonagricultural uses.

B. Regulations.

A. General.

1. Agricultural activities within shorelines are governed by the critical areas regulations in WCC Chapter 16.16, including the conservation program on agricultural lands (CPAL) provided for in therein WCC 16.16.290.
2. Accessory uses and buildings shall observe critical area buffer requirements as defined in (see WCC Chapter 16.16); except that utility development associated with an approved agriculture activity or development may encroach on critical area buffers where it can be demonstrated that the proposed utility development is essential to the agriculture activity or development and that such development complies with the general provisions of WCC Chapter 16.16; such utilities shall be placed underground where feasible.
3. Intentional discharge of any manure storage facility into ground or surface water is prohibited.
4. Feedlots are prohibited in critical areas and their buffers as defined in (see WCC Chapter 16.16).
5. Conversion of agricultural uses to other uses shall comply with the provisions of WCC Chapter 16.16 and this program for the proposed use.

B. Regulations for Specific Shoreline Environment Designations.

1. In the Natural shoreline environment, only low-intensity agricultural activities are permitted; provided, that the use does not expand or alter agricultural practices in a manner inconsistent with the purpose of this designation.

C. Shoreline Area Regulations.

1. Urban. Agricultural activities are permitted subject to policies and regulations of this program, except that new liquid manure storage facilities and liquid manure spreading are not permitted.
2. Urban Resort. New agricultural activities are prohibited.
3. Urban Conservancy. Agricultural activities are permitted subject to policies and regulations of this program, except that new animal feeding operations/concentrated animal feeding operations (AFO/CAFOs) are not permitted.
4. Shoreline Residential. Agricultural activities are permitted subject to policies and regulations of this program, except that new liquid manure storage facilities and liquid manure spreading are not permitted.
5. Rural. Agricultural activities are permitted subject to policies and regulations of this program.

6. ~~Resource. Agricultural activities are permitted subject to policies and regulations of this program.~~
7. ~~Conservancy. Agricultural activities are permitted subject to policies and regulations of this program.~~
8. ~~Natural. Low intensity agricultural activities are permitted subject to policies and regulations of this program; provided, that the use does not expand or alter agricultural practices in a manner inconsistent with the purpose of this designation. All other agricultural activities are prohibited.~~
- ~~Aquatic. New agricultural activities are prohibited. Farming of fin fish, shellfish and management of other aquatic products are subject to the policies and regulations for aquaculture under WCC 23.100.030.~~

Comment [CES135]: Addressed in use table now.

23.4100.040-050 Aquaculture.

Comment [CES136]: Most amendments shown herein are to make this section consistent w/ WAC 173-26-241(3)(b)

Aquaculture in shoreline areas shall be subject to the policies and regulations of this section and Chapter 23.90 WCC.

Nothing in these policies or regulations may be construed as to impinge on tribal treaty rights exercised within usual and accustomed areas. See also the policy in subsection (A)(8) of this section and the regulation in subsection (B)(1)(u) of this section.

Comment [AP137]: Moved to Use and Mods General Regs

A. Policies.

- A. ~~Aquaculture is a water dependent use and, when consistent with control of pollution and avoidance of adverse impacts to the environment and preservation of habitat for resident native species, is a preferred use of the shoreline (WAC 173-26-241(3)(b)).~~
- B. ~~Potential locations for aquaculture activities are relatively restricted because of specific requirements related to water quality, temperature, oxygen content, currents, adjacent land use, wind protection, commercial navigation, and salinity. The technology associated with some forms of aquaculture is still experimental and in formative states. Therefore, some latitude should be given when implementing the regulations of this section; provided, that potential impacts on existing uses and shoreline ecological functions and processes should be given due consideration.~~
- C. ~~Preference should be given to those forms of aquaculture that involve lesser environmental and visual impacts and lesser impacts to native plant and animal species. In general, projects that require no structures, submerged structures or intertidal structures are preferred over those that involve substantial floating structures. Projects that involve little or no substrate modification are preferred over those that involve substantial modification. Projects that involve little or no supplemental food sources, pesticides, herbicides or antibiotic application are preferred over those that involve such practices.~~
- D. ~~Community restoration projects associated with aquaculture should be reviewed and permitted in a timely manner.~~
- E. ~~Aquaculture activities should be designed, located and operated in a manner that supports long-term beneficial use of the shoreline and protects and maintains shoreline ecological functions~~

and processes. Aquaculture should not be permitted where it would result in a net loss of shoreline ecological functions; adversely affect the quality or extent of habitat for native species including eelgrass, kelp, and other macroalgae; adversely impact other habitat conservation areas; or interfere with navigation or other water-dependent uses.

F. Aquaculture that involves significant risk of cumulative adverse effects on water quality, sediment quality, benthic and pelagic organisms, and/or wild fish populations through potential contribution of antibiotic resistant bacteria, or escapement of nonnative species, or other adverse effects on ESA-listed species should not be permitted.

G. The county should actively seek substantive comment on any shoreline permit application for aquaculture from all appropriate federal, state and local agencies; the Lummi Nation, Nooksack Tribe, and other affected tribes; and the general public regarding potential adverse impacts. Comments of nearby residents or property owners directly affected by a proposal should be considered and evaluated, especially in regard to use compatibility and aesthetics.

H. The rights of treaty tribes to aquatic resources within their usual and accustomed areas should be addressed through the permit review process. Direct coordination between the applicant/proponent and the tribe should be encouraged.

I. Consideration should be given to both the potential beneficial impacts and potential adverse impacts that aquaculture development might have on the physical environment; on other existing and approved land and water uses, including navigation; and on the aesthetic qualities of a project area.

J. Legally established aquaculture enterprises, including authorized experimental projects, should be protected from incompatible uses that may seek to locate nearby. Use or developments that have a high probability of damaging or destroying an existing aquaculture operation may be denied.

K. Experimental aquaculture projects in water bodies should be limited in scale and should be approved for a limited period of time. Experimental aquaculture means an aquaculture activity that uses methods or technologies that are unprecedented or unproven in the state of Washington.

B. Regulations.

A. General Site Design and Operation.

1. Aquaculture activities proposed within Shorelines of Statewide Significance shall be subject to, first, the policies contained in Chapter 23.40 WCC, Shorelines of Statewide Significance, and, second, the policies and regulations contained in this section.

2.1 Aquaculture that involves little or no substrate modification shall be given preference over those that involve substantial modification. The applicant/proponent shall demonstrate that the degree of proposed substrate modification is the minimum necessary for feasible aquaculture operations at the site.

3.2 The installation of submerged structures, intertidal structures, and floating structures shall be allowed only when the applicant/proponent demonstrates that no alternative method of operation is feasible.

Comment [CES138]: Covered by general use & mod regs.

1 4.3. Aquaculture proposals that involve substantial substrate modification or sedimentation through
2 dredging, trenching, digging, mechanical clam harvesting, or other similar mechanisms, shall not
3 be permitted in areas where the proposal would adversely impact ~~existing kelp beds or other~~
4 ~~macroalgae, eelgrass beds, critical saltwater habitat, or other fish and wildlife habitat~~
5 conservation areas.

6 5.4. Aquaculture activities, ~~which that~~ would have a significant adverse impact on natural, dynamic
7 shoreline processes or ~~which that~~ would result in a net loss of shoreline ecological functions,
8 shall be prohibited.

9 6. ~~Aquaculture uses and facilities shall be located at least 600 feet from any national wildlife refuge~~
10 ~~lands, except that:~~

- 11 i. ~~Projects involving substantial substrate modification and/or fish net pens, if authorized,~~
12 ~~shall be located 1,500 feet or more from such areas.~~
- 13 ii. ~~Lesser distances may be authorized by permit if it is demonstrated by the~~
14 ~~applicant/proponent that the wildlife resource will be protected and if the change is~~
15 ~~supported by the WDFW, the Lummi Nation and/or Nooksack Tribe.~~
- 16 iii. ~~Greater distances may be required if supported by the reviewing resource agencies and/or~~
17 ~~where there is sound evidence demonstrating that a greater distance is required.~~

18 7.5. Unless otherwise provided in the shoreline permit issued by the County, repeated introduction
19 of an approved organism in the same location shall require approval by the County only at the
20 time the initial aquaculture use permit is issued. Introduction, for purposes of this section, shall
21 mean the placing of any aquatic organism in any area within the waters of Whatcom County
22 regardless of whether it is a native or resident organism within the county and regardless of
23 whether it is being transferred from within or without the waters of Whatcom County.

24 8.6. The rights of treaty tribes to aquatic resources within their usual and accustomed areas shall be
25 addressed through direct coordination between the applicant/proponent and the affected
26 tribe(s) through the permit review process.

27 B. Site Design and Operation.

- 28 1. Aquaculture ~~practices~~ shall be designed to minimize use of artificial substances and shall use
29 chemical compounds that are least persistent and have the least impact on plants and animals.
- 30 2. Aquaculture structures and equipment shall be of sound construction and shall be so
31 maintained. Abandoned or unsafe structures and/or equipment shall be removed or repaired
32 promptly by the owner, including when a business ceases operations. Where any structure
33 might constitute a potential hazard to the public in the future, the County shall require the
34 posting of a bond commensurate with the cost of removal or repair. The County may abate an
35 abandoned or unsafe structure, following notice to the owner, if the owner fails to respond in
36 30 days and may impose a lien on the related shoreline property or other assets in an amount
37 equal to the cost of the abatement. Bonding requirements shall not duplicate requirements of
38 other agencies.
- 39 3. All floating and submerged aquaculture structures and facilities in navigable waters shall be
40 marked in accordance with U.S. Coast Guard requirements.

Comment [AP139]: Removed, since these rules are identified in Ecology's guidance as an "obsolete net pen recommendation."

Local governments should use caution relying on other recommendations of the 1986 interim net pen guidelines and related environmental impact statement (Washington Department of Fisheries, 1990). The interim guidelines document is largely out of date. Ecology has reviewed the original rationale for the 1986 guidelines and found many recommendations are obsolete, unnecessary or inadequate given today's operations (Appendix 4).

4. Predator control shall not involve the killing or harassment of birds or mammals. Approved controls include, but are not limited to, double netting for seals, overhead netting for birds, and three-foot-high fencing or netting for otters. The use of other nonlethal, non-abusive predator control measures shall be contingent upon receipt of written approval from the National Marine Fisheries Service and/or the U.S. Fish and Wildlife Service, as required.
5. Aquaculture wastes shall be disposed of in a manner that will ensure strict compliance with all applicable governmental waste disposal standards, including but not limited to the Federal Clean Water Act, Section 401, and the Washington State Water Pollution Control Act (Chapter 90.48 RCW). No garbage, wastes, or debris shall be allowed to accumulate at the site of any aquaculture operation.
6. No processing of any aquaculture product, except for the sorting or culling of the cultured organisms and the washing or removal of surface materials or organisms after harvest, shall occur in or over the water unless specifically approved by permit. All other processing and processing facilities shall be located on land and shall be subject to the policies of the Whatcom County Comprehensive Plan Chapter 11 (Shorelines) and regulations of WCC ~~23.40.100~~ 23.40.120 (Industrial and Port Development), in addition to the regulations in this section.
7. For aquaculture projects using over-water structures, storage of necessary tools and apparatus waterward of the ordinary high water mark shall be limited to containers of not more than three feet in height, as measured from the surface of the raft or dock; provided, that in locations where the visual impact of the proposed aquaculture structures will be minimal, the County may authorize storage containers of greater height. In such cases, the burden of proof shall be on the applicant/proponent. Materials ~~which that~~ are not necessary for the immediate and regular operation of the facility shall not be stored waterward of the ordinary high water mark.
8. The County shall reserve the right to require aquaculture operations to carry liability insurance in an amount commensurate with the risk of injury or damage to any person or property as a result of the project. Insurance requirements shall not be required to duplicate requirements of other agencies.
9. Where aquaculture activities are authorized to use ~~public~~ County facilities, such as boat launches or docks, the County shall reserve the right to require the applicant/proponent to pay a portion of the cost of maintenance and any required improvements commensurate with the use of such facilities.

C. Additional Standards for Net Pens.

1. Fish net pens and rafts shall meet the following criteria in addition to the other applicable regulations of this section:
 - a. Fish net pens shall meet, at a minimum, state-approved administrative guidelines for the management of net pen cultures. In the event there is a conflict in requirements, the more restrictive requirement shall prevail.

- b. Fish net pens shall not occupy more than two surface acres of water area, excluding booming and anchoring requirements. Anchors that minimize disturbance to substrate, such as helical anchors, shall be employed. Such operations shall not use chemicals or antibiotics.
- c. Aquaculture proposals that include net pens or rafts shall not be located closer than one nautical mile to any other aquaculture facility that includes net pens or rafts; provided, that a lesser distance may be authorized if the applicant/proponent can demonstrate that the proposal will be consistent with the environmental and aesthetic policies and objectives of the Whatcom County Comprehensive Plan Chapter 11 (Shorelines). If a lesser distance is requested, the burden of proof shall be on the applicant/proponent to demonstrate that the cumulative impacts of existing and proposed operations would not be contrary to the policies of the Comprehensive Plan and regulations of this program.
- d. Net cleaning activities shall be conducted on a frequent enough basis so as not to violate state water quality standards. When feasible, the cleaning of nets and other apparatus shall be accomplished by air drying, spray washing, or hand washing.
- e. In the event of a significant fish kill at the site of a net pen facility, the fin fish aquaculture operator shall submit a timely report to the Whatcom County Health Department, Environmental Health division, and the Whatcom County Planning and Development Services Department stating the cause of death and shall detail remedial action(s) to be implemented to prevent reoccurrence.

2. ~~Commercial salmon net pen facilities shall not be located in Whatcom County waters, except for limited nonprofit penned cultivation of wild salmon stocks during a limited portion of their lifecycle to enhance restoration of native stocks when such activities involve minimal supplemental feeding and no use of chemicals or antibiotics.~~ shall not be considered commercial salmon net pen facilities and may be permitted.

Comment [AP140]: This prohibition is already covered by the Use Table, so it has been removed from the text here. The language for the exception to the prohibition remains.

D. Additional Standards for Commercial Geoduck Aquaculture.

1. Commercial geoduck aquaculture shall only be allowed where sediments, topography, land, and water access support geoduck aquaculture operations without significant clearing or grading.
2. Shoreline conditional use permits are required for new commercial geoduck aquaculture and existing aquaculture being converted to commercial geoduck aquaculture. However, ~~shoreline conditional use permits must take into account that commercial geoduck operators have a right to harvest geoduck once planted~~ and all subsequent cycles of planting and harvest shall not require a new shoreline conditional use permit.
3. A substantial development permit is not required for the planting, growing, and harvesting of farm-raised geoduck clams unless a specific project or practice causes substantial interference with normal public use of the surface waters.
4. A single shoreline conditional use permit application may be submitted for multiple sites within an inlet, bay, or other defined feature, provided the sites are all under control of the same applicant and under the County's shoreline permitting jurisdiction.

Comment [AP141]: Updated per Periodic Review Checklist, Item 2011.b, and Scoping Document, Item #1f.

Comment [AP142]: Revised language for clarity.

1 | E. Additional Standards for Experimental Aquaculture.

- 2 | 1. If uncertainty exists regarding potential impacts of a proposed aquaculture activity, and for all
3 | experimental aquaculture activities, baseline and periodic operational monitoring by a County-
4 | approved consultant (unless otherwise provided for) may be required, at the
5 | applicant's/proponent's expense, and shall continue until adequate information is available to
6 | determine the success of the project and/or the magnitude of any probable significant adverse
7 | environmental impacts. Permits for such activities shall include specific performance measures
8 | and provisions for adjustment or termination of the project at any time if monitoring indicates
9 | significant adverse environmental impacts that cannot be adequately mitigated.
- 10 | 2. Aquaculture developments, not including net pens, approved on an experimental basis shall not
11 | exceed five acres in area (except land-based projects and anchorage for floating systems) and
12 | three years in duration; provided, that the County may issue a new permit to continue an
13 | experimental project as many times as is deemed ~~necessary and~~ appropriate.
- 14 | 3. ~~New~~ Aquatic species that are not previously cultivated in Washington State shall not be
15 | introduced into Whatcom County salt ~~waters~~ or freshwaters without prior written approval of
16 | the Director of the Washington State Department of Fish and Wildlife and the Director of the
17 | Washington Department of Health. In saltwaters, the County shall not issue permits for projects
18 | that include the introduction of such organisms until it has also received written comment from
19 | the Marine Resources Committee, the Lummi Nation, and the Nooksack Tribe; provided, that
20 | such comment is received in a timely manner. This regulation does not apply to Pacific, Olympia,
21 | Kumamoto, Belon, or Virginica oysters; Manila, Butter, or Littleneck clams; or geoduck clams.

22 | B.F. Supplemental Application Requirements – General Aquaculture.

- 23 | 1. In addition to the minimum application requirements specified in WCC Title 22 (Land Use and
24 | Development), Applications for aquaculture use or development shall include in their
25 | applications all information necessary to conduct a thorough evaluation of the proposed
26 | aquaculture activity, including but not limited to the following:
 - 27 | a. A site plan map including:
 - 28 | i. The perimeter of the proposed aquaculture operations area.
 - 29 | ii. Existing bathymetry depths based on mean lower low water (MLLW datum).
 - 30 | iii. Adjacent upland use, vegetation, presence of structures, docks, bulkheads and other
31 | modifications. If there are shore stabilization structures, provide the beach elevation at
32 | the toe of the structure and the top of the structure (MLLW datum).
 - 33 | iv. Areas where specific substrate modification will take place or structures will be
34 | constructed or installed.
 - 35 | v. Access provisions for barges or track equipment.
 - 36 | vi. Location of storage or processing structures or facilities.
 - 37 | b. A baseline description of existing conditions, including best available information on:
 - 38 | i. Water quality.
 - 39 | ii. Tidal variations.
 - 40 | iii. Prevailing storm wind conditions.

Comment [CES143]: All general application requirements have been moved into one general section. Subsections have items specific to that to Pic.

- iv. Current flows.
 - v. Flushing rates.
 - vi. Littoral drift.
 - vii. Areas of differing substrate composition.
 - viii. Areas of aquatic, intertidal, and upland vegetation complexes. A vegetation habitat survey must be conducted. WDFW must be contacted prior to the survey to ensure it is conducted according to their most current eelgrass/macroalgae survey guidelines.
 - ix. Existing shoreline or water uses and structures.
 - x. Aquatic and benthic organisms. Information must include an assessment of aquatic species, including forage fish, and spawning and other lifecycle use of, or adjacent to, the site.
 - ~~xi. A vegetation habitat survey must be conducted. The WDFW must be contacted prior to the survey to ensure it is conducted according to the most current WDFW eelgrass/macroalgae survey guidelines.~~
 - ~~xii. Assessment of aquatic species, including forage fish, and spawning and other lifecycle use of, or adjacent to, the site.~~
- Further baseline studies including surveys and sampling may be required depending upon the adequacy of available information, existing conditions, and the nature of the proposal.
- c. A detailed description of the project proposal including:
 - i. Species to be reared.
 - ii. Substrate modification or vegetation removal.
 - iii. Planting, harvest and processing location, method and timing, including work proposal and construction techniques proposed (list all hand tools, machinery used (such as track hoes, trucks or barges), type of work, frequency, and duration.
 - d. Anticipated use of any feed, pesticides, herbicides, antibiotics, vaccines, growth stimulants, antifouling agents, or other chemicals, and an assessment of predicted impacts. Approvals for the use of ~~No such materials shall be used until approval is obtained from all appropriate state and federal agencies, including but not limited to the U.S. Food and Drug Administration, and the Washington State Departments of Ecology, Fish and Wildlife, and Agriculture, as required, and proof thereof is submitted to the County. Compounds with the least persistence shall be used.~~ An annual report of antibiotic use shall be submitted to the Whatcom County Department of Health, Environmental Health division. The report shall indicate the type and amount of antibiotics used during the previous calendar year. Actual usage data for all chemicals and antibiotics shall be maintained for review by County inspectors at all times.
 - e. Number of employees/workers necessary for the project, including average and peak employment.
 - f. Methods of waste disposal and predator control.
 - g. Methods to address pollutant loading, including biological oxygen demand (BOD).

- h. Assessment of potential impacts on shoreline ecological functions and processes addressing the baseline conditions identified, including but not limited to indirect and cumulative effects.
- i. A visual impact analysis ~~For floating culture facilities or other structures, if required by the County may require a visual impact analysis.~~ (See the Department of Ecology's "Aquaculture Siting Study" 1986 for general approach.) Depending on the size and complexity of the proposal, such analysis may be prepared by the applicant/proponent, without professional assistance; provided, that it includes an adequate assessment of impacts.
- j. Information demonstrating that the site has natural potential for the type(s) of aquaculture proposed, due to necessary substrate or other conditions, as well as water quality suitable for the type(s) of aquaculture proposed.
- k. Information demonstrating that the proposed aquaculture activities will not result in a net loss of shoreline ecological functions or processes or adversely affect habitat conservation areas ~~as defined by~~ (see WCC Chapter 16.16 (Critical Areas)).
- l. Information demonstrating that the proposed aquaculture activities will not substantially and materially conflict with areas devoted to established uses of the aquatic environment. Such uses include but are not limited to navigation, moorage, sport or commercial fishing, log rafting, underwater utilities, and scientific research. Existing public opportunities for gathering wild stock aquatic resources on public lands shall be addressed in any application for aquaculture on public tidelands or bedlands. Compensation for loss of public access to public aquatic resources may be required.
- m. Other pertinent information deemed necessary by the ~~administrator~~ Director.
2. Applications for aquaculture activities must demonstrate that the proposed activity will be compatible with surrounding existing and planned uses.
- a. Aquaculture activities shall comply with all applicable noise, air, and water quality standards. All projects shall be designed, operated and maintained to minimize odor and noise.
- b. ~~Aquaculture activities shall be restricted to reasonable hours and/or days of operation when necessary to minimize substantial, adverse impacts from noise, light, and/or glare on nearby residents, other sensitive uses, or critical habitat.~~
- c. ~~Aquaculture facilities shall not significantly impact introduce incompatible visual elements or substantially degrade the aesthetic qualities of the shoreline. Aquaculture structures and equipment, except navigation aids, shall be designed, operated and maintained to blend into their surroundings through the use of appropriate colors and materials.~~

G. Supplemental Application Requirements – Commercial Geoduck Aquaculture.

1. In addition to the general application requirements of WCC Title 22 (Land Use and Development), subsection F, above, and chapter 173-27 WAC, applications for new geoduck aquaculture use or development shall include all information necessary to conduct a thorough evaluation of the proposed activity, including but not limited to the following:

Comment [CES144]: Amended based on public comment (TSF07)

- a. A narrative description and timeline for all anticipated geoduck planting and harvesting activities if not already contained in the federal or state permit application or comparable information mentioned above;
- b. A baseline ecological survey of the proposed site to allow consideration of the ecological effects if not already contained in the federal or state permit application or comparable information mentioned above; and
- c. Management practices that address impacts from mooring, parking, noise, lights, litter, and other activities associated with geoduck planting and harvesting operations.

Comment [AP145]: Updated per Periodic Review Checklist, Item 2011.b, and Scoping Document, Item #1f.

H. Regulations for Specific Shoreline Environment Designations.

1. In the Urban Resort, Shoreline Residential, and Rural shoreline environments, proposals containing net pen facilities shall be located no closer than 1,500 feet from the OHWM of this environment, unless a specific lesser distance is determined to be appropriate based upon a visual impact analysis. Other types of floating culture facilities may be located within 1,500 feet of the OHWM but in such cases a visual analysis shall be mandatory.
- 4-2. In the Natural shoreline environment, aquaculture activities that do not require structures, facilities, or mechanized harvest practices and that will not result in the alteration of natural systems or features are permitted.

C. ~~Shoreline Area Regulations.~~

- ~~A. Urban. Aquaculture activities are permitted subject to policies and regulations of this program.~~
- ~~B. Urban Resort. Aquaculture activities are permitted subject to policies and regulations of this program. Proposals containing net pen facilities shall be located no closer than 1,500 feet from the OHWM of this environment, unless a specific lesser distance is determined to be appropriate based upon a visual impact analysis. Other types of floating culture facilities may be located within 1,500 feet of the OHWM but in such cases a visual analysis shall be mandatory.~~
- ~~C. Urban Conservancy. Aquaculture activities are permitted subject to policies and regulations of this program.~~
- ~~D. Shoreline Residential. Aquaculture activities are permitted subject to policies and regulations of this program. Proposals containing net pen facilities shall be located no closer than 1,500 feet from the OHWM of this environment, unless a specific lesser distance is determined to be appropriate based upon a visual impact analysis. Other types of floating culture facilities may be located within 1,500 feet of the OHWM but in such cases a visual analysis shall be mandatory.~~
- ~~E. Rural. Aquaculture activities are permitted subject to policies and regulations of this program. Proposals containing net pen facilities shall be located no closer than 1,500 feet from the OHWM of this environment, unless a specific lesser distance is determined to be appropriate based upon a visual impact analysis.~~
- ~~F. Resource. Aquaculture activities are permitted subject to policies and regulations of this program.~~
- ~~G. Conservancy. Aquaculture activities are permitted subject to policies and regulations of this program.~~

Comment [AP146]: Reorganized and revised for clarity.

Comment [CES147]: The below are addressed in the use table or above now.

H. ~~Natural Aquaculture activities that do not require structures, facilities or mechanized harvest practices and that will not result in the alteration of natural systems or features are permitted subject to policies and regulations of this program.~~

23.4100.050060 Boating Facilities—Marinas and Launch Ramps.

A. ~~Policies.~~

A. ~~Boating facilities, including marinas and launch ramps, are water dependent uses and should be given priority for shoreline location. Boating facilities should also contribute to public access and enjoyment of waters of the state. Shorelines particularly suitable for marinas and launch ramps are limited and should be identified and reserved to prevent irreversible commitment for other uses having less stringent site requirements.~~

B. ~~Regional needs for marina and boat launch facilities should be carefully considered in reviewing new proposals as well as in allocating shorelines for such development. Such facilities should be coordinated with park and recreation plans and, where feasible, collocated with port or other compatible water dependent uses. Review of such facilities should be coordinated with recreation providers, including cities, adjacent counties, port districts, the Whatcom County parks and recreation department, the Washington State Parks and Recreation Commission, and the Washington State Department of Natural Resources to avoid unnecessary duplication and to efficiently provide recreational resources while minimizing adverse impacts to shoreline ecological functions and processes.~~

C. ~~Upland boat storage is preferred over new in water moorage. Mooring buoys are preferred over docks and piers. Boating facilities that minimize the amount of shoreline modification are preferred.~~

D. ~~Boating facilities should provide physical and visual public shoreline access and provide for multiple use, including water related use, to the extent compatible with shoreline ecological functions and processes and adjacent shoreline use.~~

E. ~~Accessory uses at marinas or launch ramps should be limited to water oriented uses, or uses that provide physical or visual shoreline access for substantial numbers of the general public.~~

F. ~~New or expanding boating facilities including marinas, launch ramps, and accessory uses should only be sited where suitable environmental conditions are present and should avoid critical saltwater habitat including kelp beds, eelgrass beds, spawning and holding areas for forage fish (such as herring, surf smelt and sandlance); subsistence, commercial and recreational shellfish beds; mudflats, intertidal habitats with vascular plants; and areas with which priority species have a primary association.~~

G. ~~Boating facilities should be located and designed to avoid adverse effects upon coastal, riverine, and nearshore processes such as erosion, littoral or riparian transport, and accretion, and should, where feasible, enhance degraded, scarce, and/or valuable shore features including accretion shoreforms.~~

- H. Launch ramps are preferred over marinas on accretion shores because associated impacts are often reversible and such structures will not normally interfere with littoral drift and accretion unless offshore defense structures or dredging are also required.
- I. Nonregulatory methods to protect, enhance, and restore shoreline ecological functions and processes and other shoreline resources should be encouraged during the design, development and operation of boating facilities. Nonregulatory methods may include public facility and resource planning, education, voluntary protection and enhancement projects, or incentive programs.
- J. Boating facilities should be located, designed and operated so that other appropriate water dependent uses are not adversely affected.
- K. Location and design of boating facilities should not unduly obstruct navigable waters and should avoid adverse effects to recreational opportunities such as fishing, shellfish gathering, pleasure boating, commercial aquaculture, swimming, beach walking, picnicking and shoreline viewing.
- L. Boating facilities should be located, designed, constructed and maintained to avoid adverse proximity impacts such as noise, light and glare; aesthetic impacts to adjacent land uses; and impacts to public visual access to the shoreline.

Regulations:

A. Marinas and Launch Ramps – General.

1. Boating facilities, including marinas and launch ramp development, in shoreline areas shall be subject to the policies and regulations of this section and Chapter 23.90 WCC. This section applies to marinas and public boat launches, though the moorage structures of such facilities shall also comply with WCC 23.40.150 (Moorage Structures). For Docks, moorage structures serving four or fewer single family residences users, only are subject to the policies and regulations of WCC 23.40.150-100.090, (Moorage Moorage Structures) applies — Docks, piers, and mooring buoys.
2. Accessory uses shall be limited to those that are water-dependent, related to boating, and necessary for facility operation, or which provide physical or visual shoreline access to substantial numbers of the general public. Accessory uses shall be consistent in scale and intensity with the marina and/or launch ramp and surrounding uses.
3. All developments shall provide boater education addressing boater impacts on water quality and other shoreline resources, boater safety, and requirements for boater use of sewage pump-outs.

B. Marinas – Location Standards.

1. When marina sites are considered, sufficient evidence must be presented to show there is a regional demand and existing marinas are inadequate and cannot be expanded to meet regional demand.
2. Marinas shall be sited to prevent any restrictions in the use of commercial and recreational shellfish beds or commercial aquaculture operations. The specific distance shall be determined in conjunction with the Washington State Department of Health, the Washington State

Comment [CES148]: Moved from below

Department of Ecology, and other agencies with expertise. Criteria for determining the specific distance may include:

- a. The size and depth of the waterbody;
- b. Tidal flushing action in the project area;
- c. Size of the marina and projected intensity of use;
- d. Whether fuel will be handled or stored;
- e. Location of a sewer hook-up; and
- f. Expected or planned changes in adjacent land uses that could result in additional water quality impacts or sanitary treatment requirements.

3. Marinas shall be allowed only on stable shoreline areas where water depth is adequate to eliminate or minimize the need for channel dredging (for construction or maintenance), soil disposal, filling, beach enhancement, and other harbor and channel maintenance activities.
4. Marinas shall be located only in areas where there is adequate water mixing and flushing and shall be designed so as not to reduce or negatively influence flushing characteristics.
5. Fixed breakwaters are discouraged.
6. Marinas shall be clearly separated from beaches commonly used for swimming and shall provide signage and protection measures to ensure the safety of swimmers.
7. Marinas shall not be located at or along:
 - a. Significant littoral drift cells, including resource material areas, such as feeder bluffs and accretion beaches, barrier beaches, points, sand spits and hooks; or
 - b. Wetlands, marshes, bogs, swamps and lagoons; or
 - c. Mud flats and salt marshes; or
 - d. Fish and shellfish spawning and rearing areas.
8. Solid structures shall not be permitted to extend without openings from the shore to zero tide level (mean lower low water, or MLLW), but shall stop short to allow sufficient shallow fringe water for fish passage.

C. Marinas – Site Design.

1. Proposals for marinas shall include public launch facilities unless the applicant can demonstrate that providing such facilities is not feasible.
2. Marinas shall be designed, constructed, and maintained to:
 - a. Provide thorough flushing of all enclosed water areas and shall not restrict the movement of aquatic life requiring shallow water;
 - b. Minimize interference with geo-hydraulic processes and disruption of existing shore forms;
 - c. Be aesthetically compatible with existing shoreline features and uses;
 - d. Avoid adverse proximity impacts such as noise, light, and glare;
 - e. Include vegetative screening for parking, and upland storage areas and facilities consistent with landscaping standards prescribed in WCC 20.80.300, et seq. (Landscaping); and,
 - f. Include public restrooms, accessory parking, or other recreational uses according to the scale of the facility.

Comment [CES149]: Moved from below

3. Short-term loading/unloading areas and hand-launch storage areas may be located at ramps or near berthing areas and should be constructed of pervious material.
4. Public access, both visual and physical; such as viewpoints or walkways, shall be an integral part of all marina design and development commensurate with the particular proposal and must meet the standards of WCC 23.30.0760 (Public Access).
5. Innovative construction techniques and construction methods of foreshore marinas may be allowed when demonstrated to the satisfaction of the Director that the design will prevent degradation of fish migration, critical saltwater habitat, and/or shellfish resources.

D. Operations and Management.

1. The discharge of sewage and/or toxic material from boats and/or shore installations is prohibited. The responsibility for the adequate and approved collection and disposal of marina-originated sewage, solid waste, and petroleum waste is that of the marina operator. An emergency spill kit and use instructions shall be provided for tenants in an easy-to-access area and be accessible twenty-four (24) hours a day.
2. Commercial fish or shellfish processing and the discharge or discarding of unused bait, scrapfish, or viscera shall be prohibited.
3. Swimming shall be prohibited within marina facilities unless the swimming area is adequately separated, protected, and posted.
4. If dredging at marina entrances changes the littoral drift processes and adversely affects adjacent shores, the marina operator shall be required to periodically replenish these shores with the appropriate quantity and quality of aggregate as determined by a geohydraulic study, paid for by the operator or owner and completed to the satisfaction of the Director.
5. Temporary vacant moorage spaces shall be made available for "transient moorage" (less than two-week stay) when at least one of the following applies:
 - a. The marina is owned, operated, or franchised by a governmental agency for use by the public;
 - b. The marina provides more than three thousand (3,000) lineal feet of moorage; or
 - c. The marina is part of a mixed-use development which includes restaurants or other water-enjoyment uses.
6. Marina operators shall execute a lease, contract, or deed that establishes permission to use a slip for a stated period of time and that establishes conditions for use of the slip, including the requirement that all boats meet applicable sanitation regulations.
7. Marinas shall meet the following before occupancy:
 - a. Marinas that dispense fuel shall have adequate facilities and post procedures for fuel handling and storage to prevent/minimize accidental spillage.
 - b. Marinas shall have facilities, equipment, such as emergency spill kits, and post procedures for containment, recovery, and mitigation of spilled petroleum, sewage, and toxic products.
 - c. Marina operators shall post signs where they are readily visible to all marina users describing regulations:
 - i. Pertaining to handling and disposal of waste, wastewater, toxic materials, and recycling;

Comment [CES150]: Moved from below

- ii. Prohibiting the discharge of marine toilets (i.e., no untreated sewage discharge);
- iii. Prohibiting the disposal of fish and shellfish cleaning wastes; and
- iv. Describing best management practices (BMPs) for boat maintenance and repairs on site.
- d. Garbage or litter receptacles shall be provided and maintained by the marina operator at several locations convenient to users in sufficient numbers to properly store all solid waste generated on site.
- e. Marina docks shall be equipped with adequate lifesaving equipment, such as:
 - i. Life rings, hooks, ropes and ladders, or equivalent, on the end of fingers; and/or
 - ii. One ladder (per side) either every one hundred (100) linear feet of the dock, or every six (6) slips whichever is greater. This regulation does not apply to a float which is less than one hundred (100) feet from a shoreline; or
 - iii. At least one ladder to serve a float with six (6) or more slips and is one hundred (100) linear feet in length or less.

E. Additional Standards for Boat Launches.

1. Boat launches are prohibited in:
 - a. Significant littoral drift cells, including resource material areas such as feeder bluffs and accretion beaches, points, spits and hooks;
 - b. Wetlands, marshes, bogs, swamps, and lagoons;
 - c. Mud flats and salt marshes; and
 - d. Fish spawning and rearing areas and commercial or recreational shellfish areas.
2. Launch ramps shall be:
 - a. Located on stable shorelines where water depths are adequate to eliminate or minimize the need for:
 - i. Offshore or foreshore channel construction dredging; or
 - ii. Maintenance dredging; or
 - iii. Spoil disposal; or
 - iv. Filling; or
 - v. Beach enhancement; or
 - vi. Other harbor and channel maintenance activities.
 - b. Located in areas where there is adequate water mixing and flushing.
 - c. Designed so as not to negatively influence flushing characteristics.
3. Innovative or hinged boat launches may be permitted on marine accretion shoreforms, provided that continual grading is not required. When grading is permitted it must not adversely affect ecological functions and ecosystem-wide processes. Accessory facilities shall be located out of critical areas.
4. Boat launches may be allowed on stable banks where current deflectors or other stabilization structures will not be necessary.
5. Boat launches shall not be permitted where the upland within twenty-five (25) feet of the OHWM has a slope that exceeds twenty-five percent (25%) grade and/or where substantial cutting, grading, filing, or defense works is necessary.

Comment [CES151]: Moved from below

6. Boat launches, minor accessory buildings, and haul-out facilities shall be designed to be in character and scale with the surrounding shoreline.
7. Boat launches shall be built from flexible, hinge-segmented pads that can adapt to changes in beach profiles, unless a solid structure is demonstrated to be more appropriate for the intended level of use.
8. Boat launches shall be placed and kept near flush with the foreshore slope to minimize the interruption of geo-hydraulic processes and impacts to critical saltwater habitats.
9. Marine rails for boat launching shall be located the minimum distance necessary above existing grade to minimize impact on littoral drift and navigation along the shoreline.
10. Boat launch facilities shall be clearly separated from beaches commonly used for swimming and shall provide signage and protection measures to ensure the safety of swimmers.

F. Additional Standards for Live-Aboard Vessels.

1. Live-aboard vessels are only allowed in marinas and only as follows:
 - a. Vessels must be for residential use only;
 - b. Slips occupied by live-aboard vessels shall not exceed 10 percent of the total slips in the marina;
 - c. Vessels shall be owner-occupied; and
 - d. Vessels must be operational for cruising.
2. Live-aboard vessels must comply with all marine regulations, policies, and procedures of the U.S. Coast Guard, and any other federal and state government agencies that pertain to health, safety and/or environmental protection. Proof of seaworthiness of the vessel and the adequacy of the mooring arrangement must be provided and laws governing all the citizens of Whatcom County must be obeyed.

A.G. Additional Standards for Boat Storage.

1. Marinas shall provide dry upland boat storage with a launch mechanism to protect shoreline ecological functions and processes, efficiently use shoreline space, and minimize consumption of public water surface area unless:
 - a. No suitable upland locations exist for such facilities; or
 - b. It can be demonstrated that wet moorage would result in fewer impacts to ecological functions and processes; or
 - c. It can be demonstrated that wet moorage would enhance public use of the shoreline.
2. Dry moorage and other storage areas shall be located away from the shoreline and be landscaped pursuant to WCC 20.80.300, et seq. (Landscaping) with native vegetation to provide a visual and noise buffer for adjoining dissimilar uses or scenic areas.

B.H. Additional Standards for Parking and Vehicle Access.

1. Parking facilities shall meet County zoning design and location standards; provided, that at a minimum, one vehicle space shall be maintained for every four moorage spaces and for every 400 square feet of interior floor space devoted to accessory retail sales or service use. Bicycle parking shall be provided commensurate with the anticipated demand.

Comment [AP152]: Added per Scoping Document, Item #17].

From WAC 332-30-171:

(b) Upon the effective date of this rule, the ten percent limit can be changed by local government, through amendments to the local shoreline master program and/or issuance of a shoreline substantial development conditional use permit, if all of the following conditions are met:

- (i) Methods to handle the upland disposal and best management practices for the increased waste associated with residential use are expressly addressed and required; and*
- (ii) Specific locations for residential use slips do not adversely impact habitat or interfere with water-dependent uses.*

The County can opt to set a different limit, though 10 percent is in line with DNR regulations.

Per the Port of Bellingham Harbor Rules, Regulations, and Rates Handbook – 2019, at Squalicum Harbor there are currently 100 designated Live-aboard licenses and 50 Live-aboard licenses at Blaine Harbor. However, it is unclear what percentage of slips these numbers represent. May want to confirm that a proposed regulation here will not conflict with the Port's current regulations.

Blaine Harbor – 629 slips total (~8% live-aboard)
Squalicum Harbor – 1,400+ slips total (~7% live-aboard)

As such, the proposed provision should not conflict with the Port's regulations.

2. ~~Public or quasi-public~~ Launch ramps shall provide trailer spaces, at least 10 feet by 40 feet, commensurate with projected demand.
3. Parking ~~that does not require a shoreline location in order to carry out its functions~~ shall:
 - a. Be sited away from the land/water interface unless no feasible alternative location exists outside of the shoreline;
 - b. Be planted or landscaped pursuant to WCC 20.80.300, et seq. (Landscaping) preferably with native vegetation, to provide a visual and noise buffer for adjoining dissimilar uses or scenic areas; and
 - c. Observe critical area buffers in Chapter 16.16 WCC; and
 - d. Be designed to incorporate low impact development practices, such as pervious surfaces, and bioswales, ~~to the extent feasible~~ pursuant to WCC 20.80.630, et seq. (Stormwater and drainage).

Comment [AP153]: Removed since there's already have a section that says the CAO applies in the shoreline jurisdiction.

C.I. Supplemental Application Requirements. In addition to the general application requirements of WCC Title 22 (Land Use and Development), applications for marinas or launch ramps shall include all information necessary to conduct a thorough evaluation of the proposed activity, including but not limited to the following:

1. ~~Applications for new boating facilities, including marinas and launch ramps, shall be approved only if enhanced public access to public waters outweighs the potential adverse impacts of the use. Applications shall b~~ Provide a level of service needs analysis that documents the market demand for such facilities, including:
 - a. The total amount of moorage proposed;
 - b. The proposed supply, as compared to the existing supply within the service range of the proposed facility, including vacancies or waiting lists at existing facilities;
 - c. The expected service population and boat ownership characteristics of the population;
 - d. Existing approved facilities or pending applications within the service area of the proposed new facility.
2. ~~New marinas with in water moorage and expansion of in water moorage facilities in existing marinas shall be approved only when:~~
3. ~~Opportunities for upland storage sufficient to meet the demand for moorage are not available on site; and~~
4. ~~Expansion of upland storage at other existing marinas is not feasible.~~
5. ~~2. Applications shall d~~ Document that a preferred method of providing moorage facilities is not feasible. Review of proposals involving public aquatic lands may be required to include an analysis of other alternative sites not controlled by the applicant/proponent.
6. ~~3. Applications for launch ramps shall Provide a critical area assessment report pursuant to WCC 16.16 (Critical Areas), including contain:~~
7. ~~A habitat survey.~~
8. ~~4. A slope bathymetry map.~~
9. ~~5. Evaluation of effects on littoral drift.~~

Comment [CES154]: Moved, as this is an approval criterion, not an application requirement.

Comment [DN155]: Moved to application requirements

10.6. ~~Applications for marinas, launch ramps, and accessory uses shall include~~ Provide an assessment of existing water-dependent uses in the vicinity including, but not limited to, navigation, fishing, shellfish harvest, pleasure boating, swimming, beach walking, picnicking, and shoreline viewing, and ~~shall~~ document potential impacts and mitigating measures. Impacts on these resources shall be considered in review of proposals and specific conditions to avoid or minimize impacts may be imposed.

11.7. ~~A Marina and launch ramp proposals may be required to prepare a~~ Provide a visual assessment of views from surrounding residential properties, public viewpoints, and the view of the shore from the water surface, ~~if required~~.

D. ~~Tabular Regulations—Setbacks, Height and Open Space for Marinas and Launch Ramp Development. Minimum required setbacks from shorelines and side property lines, maximum height limits, and open space requirements are contained in WCC 23.90.130, Shoreline bulk provisions—Buffers, setbacks, height, open space, and impervious surface coverage.~~

J. ~~Regulations for Specific Shoreline Environment Designations.~~

1. ~~In the Natural shoreline area environment, m~~Marinas or launch ramps are prohibited; except that primitive ramps to facilitate hand launching of small craft are permitted if materials and design are compatible with the site.

2. ~~In the Aquatic shoreline area environment, covered over-water structures may be permitted only where vessel construction or repair work is to be the primary activity and covered work areas are demonstrated to be the minimum necessary over water.~~

2. ~~Site Design and Operation.~~

a. ~~Marinas or launch ramps shall not be permitted on the following marine shores unless it can be demonstrated that interference with littoral drift and/or degradation or loss of shoreline ecological functions and processes, especially those vital to maintenance of nearshore habitat, will not occur. Such areas include:~~

b. ~~Feeder bluffs exceptional.~~

c. ~~High energy input driftways.~~

d. ~~Marinas or launch ramps shall not be permitted within the following marine shoreline habitats because of their scarcity, biological productivity, and sensitivity unless no alternative location is feasible, the project would result in a net enhancement of shoreline ecological functions, and the proposal is otherwise consistent with this program:~~

e. ~~Marshes, estuaries and other wetlands;~~

f. ~~Tidal pools on rock shores;~~

g. ~~Kelp beds, eelgrass beds, spawning and holding areas for forage fish (such as herring, surf smelt and sand lance);~~

h. ~~Subsistence, commercial and recreational shellfish beds; and~~

i. ~~Other critical saltwater habitats.~~

j. ~~Marinas or launch ramps shall not be permitted on the following marine accretion shoreforms unless it can be demonstrated that no other alternative location is feasible, the project would result in a net enhancement of shoreline ecological functions, and the~~

Comment [AP156]: Carried over from removed 'Shoreline Area Regulations.'

- proposal is otherwise consistent with this program. Hoists are preferred over dredged marinas or launch ramps at such locations:
- k. Open points;
 - l. Spits and hooks;
 - m. Tombolos;
 - n. Open bay barrier beaches;
 - o. Accretional pocket beaches.
- b. Foreshore marinas or launch ramps may be permitted on low erosion rate marine feeder bluffs or on low energy input erosional driftways if the proposal is otherwise consistent with this program. Foreshore marinas or launch ramps are prohibited on accretional lake shores because these natural features are uncommon on lakes and are highly valuable for recreation.
- c. Backshore marinas and launch ramps may be permitted on closed accretional points, closed accretional bluff and bay barrier beaches, or low energy input driftways, except where wetlands are present or it can be demonstrated that a foreshore location would result in fewer impacts to shoreline ecological functions and processes, natural features and uses.
- d. Marinas or launch ramps may be permitted on low bank lake shores where backshore wetlands are protected, or where wetlands are not present, if most of the beach and backshore are preserved in a natural condition for public or quasi-public recreation.
- e. Marinas shall not be permitted in low gradient, broad meander stream channel reaches, except where located on outer, concave bends or straight, moderately eroding or stable banks, so that dredging and/or shore protection will not be necessary.
- f. Marina basins or structures shall not be permitted on river point bars or other accretional beaches. A limited number of launch ramps may be permitted on accretion shoreforms; provided, that any necessary grading will not adversely affect shoreline ecological functions or fluvial processes, and any accessory facilities are located out of the floodway.
- g. Marinas shall not be permitted in areas of active channel migration, where channel dredging will be required, if a flood hazard will be created, or if valuable shoreline ecological functions and processes will be degraded.
- h. Launch ramps may be located immediately downstream of accretion shoreforms, or on other non-erosional banks, where no or a minimum number of current deflectors will be necessary.
- i. Floating piers shall be required in rivers and streams unless it can be demonstrated that fixed piers will result in substantially less impact on geohydraulic processes and flood hazards can be minimized or mitigated.
- j. Where foreshore marinas are permitted:
- i. Open pile or floating breakwater designs shall be used unless it can be demonstrated that riprap or other solid construction would not result in any greater net impacts to shoreline ecological functions or processes or shore features.
 - ii. Solid structures shall not be permitted to extend without openings from the shore to zero tide level (mean lower low water, or MLLW), but shall stop short to allow sufficient shallow fringe water for fish passage.

- 1 k. Foreshore and backshore marinas shall be designed to allow the maximum possible circulation
2 and flushing of all enclosed water areas.
- 3 — New or expanding marinas with dredged entrances that adversely affect littoral drift to the
4 detriment of other shores and their users shall be required to periodically replenish such shores
5 with the requisite quantity and quality of aggregate as determined by professional coastal
6 geologic engineering studies.
- 7 l. All facilities shall be located and designed to avoid impediments to navigation and to avoid
8 depriving other properties of reasonable access to navigable waters. Review and approval by
9 the U.S. Coast Guard may be required as a condition of issuance of building or development
10 permits to assure compliance. All in-water structures shall be marked and lighted in compliance
11 with U.S. Coast Guard regulations.
- 12 m. Design and other standards for physical improvement of docks and piers are found in
13 WCC 23.100.090, Moorage — Docks, piers and mooring buoys.
- 14 E. Public Access.
- 15 — New launch ramps shall be approved only if they provide public access to public waters, which
16 are not adequately served by existing access facilities, or if use of existing facilities is
17 documented to exceed the designed capacity. Prior to providing ramps at a new location,
18 documentation shall be provided demonstrating that expansion of existing launch facilities
19 would not be adequate to meet demand.
- 20 a. Public access areas shall provide space and facilities for physical and/or visual access to water
21 bodies, including feasible types of public shore recreation.
- 22 b. Marinas and boat launches shall provide public access for as many water-dependent
23 recreational uses as possible, commensurate with the scale of the proposal. Features for such
24 access could include, but are not limited to, docks and piers, pedestrian bridges to offshore
25 structures, fishing platforms, artificial pocket beaches, and underwater diving and viewing
26 platforms.
- 27 3. Site Considerations.
- 28 a. Marinas, launch ramps, and accessory uses shall be designed so that lawfully existing or planned
29 public shoreline access is not unnecessarily blocked, obstructed nor made dangerous.
- 30 b. Public launch ramps and/or marina entrances shall not be located near beaches commonly used
31 for swimming, valuable fishing and shellfish harvest areas, or sea lanes used for commercial
32 navigation unless no alternative location exists, and mitigation is provided to minimize impacts
33 to such areas and protect the public health, safety and welfare.
- 34 c. Marinas and accessory uses shall be located only where adequate utility services are available,
35 or where they can be provided concurrent with the development.
- 36 d. Marinas, launch ramps, and accessory uses shall be located where water depths are adequate to
37 avoid the need for dredging and minimize potential loss of shoreline ecological functions or
38 processes.

e. Marinas, launch ramps, and accessory uses shall be located and designed with the minimum necessary shoreline stabilization to adequately protect facilities, users, and watercraft from floods, abnormally high tides, and/or destructive storms.

4. Boat Storage.

3. Marinas shall provide dry upland boat storage with a launch mechanism to protect shoreline ecological functions and processes, efficiently use shoreline space, and minimize consumption of public water surface area unless:

i. No suitable upland locations exist for such facilities; or

ii. It can be demonstrated that wet moorage would result in fewer impacts to ecological functions and processes; or

iii. It can be demonstrated that wet moorage would enhance public use of the shoreline.

4. Dry moorage and other storage areas shall be located away from the shoreline and be landscaped with native vegetation to provide a visual and noise buffer for adjoining dissimilar uses or scenic areas.

— New covered moorage for boat storage is prohibited.

5. Covered over-water structures may be permitted only where vessel construction or repair work is to be the primary activity and covered work areas are demonstrated to be the minimum necessary over water.

5. Waste Disposal.

1. Marinas shall provide pump out, holding, and/or treatment facilities for sewage contained on boats or vessels.

2. Discharge of solid waste or sewage into a water body is prohibited. Marinas and boat launch ramps shall provide adequate restroom and sewage disposal facilities in compliance with applicable health regulations.

3. Garbage or litter receptacles shall be provided and maintained by the operator at several locations convenient to users.

4. Disposal or discarding of fish or shellfish cleaning wastes, scrap fish, viscera, or unused bait into water or in other than designated garbage receptacles is prohibited.

5. Marina operators shall post all regulations pertaining to handling, disposal, and reporting of waste, sewage, fuel, oil, or toxic materials where all users may easily read them.

1. Oil Product Handling, Spills, and Wastes. Fail-safe facilities and procedures for receiving, storing, dispensing, and disposing of oil or hazardous products, as well as a spill response plan for oil and other products, shall be required of new marinas and expansion or substantial alteration of existing marinas. Compliance with federal or state law may fulfill this requirement. Handling of fuels, chemicals or other toxic materials must be in compliance with all applicable federal and state water quality laws as well as health, safety and engineering requirements. Rules for spill prevention and response, including reporting requirements, shall be posted on site.

6. Parking and Vehicle Access.

1. Parking facilities shall meet County zoning standards; provided, that at a minimum, one vehicle space shall be maintained for every four moorage spaces and for every 400 square feet of

- interior floor space devoted to accessory retail sales or service use. Bicycle parking shall be provided commensurate with the anticipated demand.
2. Public or quasi public launch ramps shall provide trailer spaces, at least 10 feet by 40 feet, commensurate with projected demand.
3. Parking that does not require a shoreline location in order to carry out its functions shall:
- e. Be sited away from the land/water interface unless no feasible alternative location exists outside of the shoreline;
 - f. Be planted or landscaped preferably with native vegetation, to provide a visual and noise buffer for adjoining dissimilar uses or scenic areas;
 - g. Observe critical area buffers in Chapter 16.16 WCC; and
 - h. Be designed to incorporate low impact development practices, such as pervious surfaces, and bioswales, to the extent feasible.
- a. Connecting roads between marinas and public streets shall have all weather surfacing, and be satisfactory to the County Engineer in terms of width, safety, alignment, sight distance, grade and intersection controls.
7. Launch Ramp Design.
- a. Preferred ramp designs, in order of priority, are:
 - i. Open grid designs with minimum coverage of beach substrate.
 - ii. Seasonal ramps that can be removed and stored upland.
 - iii. Structures with segmented pads and flexible connections that leave space for natural beach substrate and can adapt to changes in beach profile.
 - b. Ramps shall be placed and maintained near flush with the foreshore slope.
8. Accessory Uses.
- a. Accessory uses at marinas or launch ramps shall be limited to those water oriented uses, or uses that provide physical or visual shoreline access for substantial numbers of the general public. Accessory development includes, but is not limited to, parking, open air storage, waste storage and treatment, stormwater management facilities, utility, and upland transportation development.
 - b. Water oriented accessory uses reasonably related to marina operation may be located over water or at the water's edge by conditional use if an over water or water's edge location is essential to the operation of the use or if opportunities are provided for public access for a substantial number of persons.
- a. Application Requirements.
12. Applications for new boating facilities, including marinas and launch ramps, shall be approved only if enhanced public access to public waters outweighs the potential adverse impacts of the use. Applications shall be accompanied by supporting application materials that documents the market demand for such facilities, including:
- i. The total amount of moorage proposed;
 - ii. The proposed supply, as compared to the existing supply within the service range of the proposed facility, including vacancies or waiting lists at existing facilities;

- iii. ~~The expected service population and boat ownership characteristics of the population;~~
- iv. ~~Existing approved facilities or pending applications within the service area of the proposed new facility.~~
13. ~~New marinas with in-water moorage and expansion of in-water moorage facilities in existing marinas shall be approved only when:~~
14. ~~Opportunities for upland storage sufficient to meet the demand for moorage are not available on site; and~~
15. ~~Expansion of upland storage at other existing marinas is not feasible.~~
16. ~~Applications shall document that a preferred method of providing moorage facilities is not feasible. Review of proposals involving public aquatic lands may be required to include an analysis of other alternative sites not controlled by the applicant/proponent.~~
17. ~~Applications for launch ramps shall contain:~~
- (A) ~~A habitat survey.~~
- (B) ~~A slope bathymetry map.~~
- (C) ~~Evaluation of effects on littoral drift.~~
18. ~~Applications for marinas, launch ramps, and accessory uses shall include An assessment of existing water dependent uses in the vicinity including, but not limited to, navigation, fishing, shellfish harvest, pleasure boating, swimming, beach walking, picnicking and shoreline viewing and document potential impacts and mitigating measures. Impacts on these resources shall be considered in review of proposals and specific conditions to avoid or minimize impacts may be imposed.~~
19. ~~Marina and launch ramp proposals may be required to prepare a visual assessment of views from surrounding residential properties, public viewpoints and the view of the shore from the water surface.~~
9. ~~Tabular Regulations — Setbacks, Height and Open Space for Marinas and Launch Ramp Development. Minimum required setbacks from shorelines and side property lines, maximum height limits, and open space requirements are contained in WCC 23.90.130, Shoreline bulk provisions — Buffers, setbacks, height, open space, and impervious surface coverage.~~
- C. ~~Shoreline Area Regulations.~~
1. ~~Urban. Marinas and launch ramps are permitted subject to policies and regulations of this program.~~
2. ~~Urban Resort. Marinas and launch ramps are permitted subject to policies and regulations of this program.~~
3. ~~Urban Conservancy. Launch ramps are permitted subject to policies and regulations of this program. Marinas may be permitted as a conditional use.~~
4. ~~Shoreline Residential. Marinas and launch ramps are permitted subject to policies and regulations of this program.~~
5. ~~Rural. Marinas and launch ramps are permitted subject to policies and regulations of this program.~~

Comment [CES157]: Moved above and reorganized.

- ~~6. Resource. Marinas and launch ramps are permitted subject to policies and regulations of this program.~~
- ~~7. Conservancy. Launch ramps are permitted subject to policies and regulations of this program. Marinas may be permitted as a conditional use.~~
- ~~8. Natural. Marinas or launch ramps are prohibited; except that primitive ramps to facilitate hand launching of small craft are permitted if materials and design are compatible with the site.~~
- ~~9. Aquatic.~~
 - a. ~~Marinas and launch ramps are permitted subject to the use and development regulations of the abutting upland shoreline area designation.~~

~~23.100.060~~ **23.40.070 Commercial Uses.**

~~Commercial development in shoreline areas shall be subject to the policies and regulations of this section and Chapter 23.90 WCC.~~

~~A. Policies.~~

- ~~A. In securing shoreline locations for commercial use, preference should be given first to water-dependent commercial uses, then to water-related and water-enjoyment commercial uses.~~
- ~~B. Restoration of impaired shoreline ecological functions and processes should be encouraged as part of commercial development.~~
- ~~C. Commercial development should ensure visual compatibility with adjacent noncommercial properties.~~
- ~~D. Commercial uses located in the shoreline should provide public access in accordance with constitutional or other legal limitations unless such improvements are demonstrated to be infeasible or present hazards to life and property.~~

~~B. Regulations.~~

~~—General.~~

- A. ~~Allowed Use. Commercial uses that result in no net loss of shoreline ecological functions and processes are allowed subject to the policies and regulations of WCC 23.90.030 and the specific criteria below:~~ Prior to approval of an application, the Director shall review a proposal for design, layout, and operation of the use and determine whether the proposed use is water-dependent, water-related, water-enjoyment, or a non-water-oriented commercial use.
 1. ~~Water-dependent commercial uses shall be given first preference over non-water dependent water-related and water-enjoyment commercial uses. Prior to approval of water-dependent uses, the administrator shall review a proposal for design, layout and operation of the use and shall make specific findings that the use qualifies as a water-dependent use.~~
 2. ~~Water-related commercial uses may shall not be approved if they displace existing water-dependent uses. Prior to approval of a water-related commercial use, the administrator shall review a proposal for design, layout and operation of the use and shall make specific findings that the use qualifies as a water-related use.~~
 3. ~~Water-enjoyment commercial uses may shall be not be approved if they displace existing water-dependent or water-related uses or if they occupy space designated for water-dependent or~~

Comment [CES158]: Amended to be consistent w/ WAC 173-26-241(3)(d)

1 water-related use identified in a substantial development permit or other approval. ~~Prior to~~
2 ~~approval of water enjoyment uses, the administrator shall review a proposal for design, layout~~
3 ~~and operation of the use and shall make specific findings that the use qualifies as a water-~~
4 ~~enjoyment use.~~

- 5 4. ~~Non-water oriented commercial uses may be permitted as a conditional use where located on a~~
6 ~~site physically separated from the shoreline by another property in separate ownership or a~~
7 ~~public right of way such that access for water-oriented use is precluded; provided, that such~~
8 ~~conditions were lawfully established prior to the effective date of this program. All other non-~~
9 ~~water-oriented commercial uses are prohibited in the shoreline unless the use provides~~
10 ~~significant public benefit with respect to the objectives of the Act and is the proposed use:~~
11 a. ~~Is part of a mixed use project that includes a water-oriented use; or~~
12 b. ~~Is on a site where navigability is severely limited; or,~~
13 c. ~~Does not occupy space designated for water-dependent or water-related use identified in a~~
14 ~~project permit approval; or,~~
15 b.d. ~~In areas designated for commercial use and the site is physically separated from the~~
16 ~~shoreline by another property or public right of way.~~

- 17 5. ~~When permitted, non-w~~Water-oriented commercial uses shall provide public access in
18 accordance with the provisions of WCC 23.30.060 (Public Access).

- 19 5.6. ~~Non-water oriented commercial uses shall provide public access and/or restoration as follows:~~

- 20 a. ~~Non-water oriented commercial uses shall provide p~~Public access shall be in the form of
21 unrestricted open space. The administrator shall determine the amount of access in
22 accordance with the provisions of WCC 23.90.080 on a case-by-case basis.
23 b. If no water-oriented commercial uses are located on or adjacent to the water as part of a
24 mixed use development, 80% of the shoreline and associated buffers shall be preserved or
25 restored to provide shoreline ecological functions that approximate the functions provided
26 by the site in natural conditions.
27 c. The requirements ~~in subsections (B)(1)(e)(i) and (ii) of this section may be modified when:~~
28 i. The site is designated as a public access area by a shoreline public access plan, in which
29 case public access consistent with that plan element shall be provided; or
30 ii. Specific findings are made demonstrating that the size of the parcel and the presence of
31 adjacent uses preclude restoration of shoreline ecological functions. Where on-site
32 restoration is infeasible, equivalent off-site restoration shall be provided ~~consistent with~~
33 ~~the policies and regulations of this program.~~
34 d. Where restoration is proposed, buffers shall be designed as appropriate to protect shoreline
35 resources based on a ~~site-specific restoration plan assessment and may differ from the~~
36 ~~standard critical area buffer dimensions provided in Chapter 16.16WCC; provided, that the~~
37 ~~building envelope for the proposed non-water oriented use shall be based on current site~~
38 ~~conditions.~~

Comment [AP159]: Language revised for greater clarity and consistency with the use table.

Comment [CES160]: Added to be consistent w/ WAC 173-26-241(3)(d)

i. ~~The requirements of this subsection (B)(1)(e) shall not apply to those non water-oriented commercial uses located on a site physically separated from the shoreline where access to the land/water interface is precluded.~~

~~6.7.~~ If water-oriented commercial uses are located on or adjacent to the water, the remaining undeveloped water frontage that is not devoted to water-dependent use shall be preserved in a substantially undeveloped condition until such time that an appropriate water-dependent use has been identified for the area. If the site has been previously altered by past development, the balance of the site may be reserved for future water-related use.

B. Site Design and Operation.

1. Commercial recreation-oriented uses, including commercial resorts and ~~rental~~ campgrounds, shall provide adequate access to water areas for their patrons or shall provide adequate on-site outdoor recreation facilities so that such resorts or campgrounds will neither be dependent on nor place undue burdens upon public access and recreational facilities.

2. ~~New and expanded c~~Commercial development shall install or establish access roads of sufficient capacity and with appropriate improvements to provide vehicular and pedestrian access to the site. Utilities shall be adequate to serve the demands of the proposed uses.

3. Over-Water Structures.

a. Only those portions of water-dependent commercial uses that require over-water facilities such as boat fuel stations shall be permitted to locate waterward of the OHWM, provided they are located on floats, piling, or other open-work structures.

b. Non-water-dependent commercial uses shall not be allowed over water except in limited instances where they are appurtenant to existing structures and necessary in support of water-dependent uses.

4. Marine rails shall be located the minimum distance necessary above existing grade to minimize impact on littoral drift and navigation along the shoreline.

~~4. Building Height.~~

a. ~~As mandated by the Act (RCW 90.58.320), no permit may be issued for any new or expanded building or structure of more than 35 feet above average grade level on shorelines that will obstruct the view of a substantial number of residences on areas adjoining such shorelines, except where this program does not prohibit such development and only when overriding considerations of the public interest will be served.~~

b. ~~Lodging developments over 35 feet in height may be allowed in resort communities within the Urban Resort shoreline area designation, subject to the requirements of WCC 23.90.130(5). However, due to the potential for adverse impact upon adjacent uses and the community from such development, special consideration must be given to the following factors during review of such proposals:~~

i. ~~Urban services, including sanitary sewers, public water supply, fire protection, storm drainage, and police protection, must be provided at adequate levels to protect the public health, safety, and welfare.~~

Comment [PDS161]: Already covered by 23.40.020(E)(1).

- 1 ii. Circulation, parking areas, and outdoor storage or loading areas should be adequate in
2 size and designed so that the public safety and local aesthetic values are not diminished.
3 Such areas should be screened from open space areas by landscaping, fences or similar
4 structures, or grade separation.
5 iii. Recreational needs of building clientele must be provided for through several on-site
6 recreation facilities and access to shorelines. The variety and number of on-site
7 recreation facilities should increase proportionately as density increases.

Comment [PDS162]: Moved to 23.40.020(E)(1).

8 C. Tabular Regulations—Setbacks, Height and Open Space for Commercial Development. Minimum
9 required setbacks from shorelines and side property lines, maximum height limits and open space
10 requirements are contained in WCC 23.90.130, Shoreline bulk provisions—Buffers, setbacks, height,
11 open space and impervious surface coverage.

12 C. Regulations for Specific Shoreline Environment Designations.

- 13 1. In the Conservancy and Urban Conservancy shoreline environments, only low intensity
14 commercial use and development—either water-oriented or non-water-oriented, and limited to
15 resort, campground, and similar facilities—may be permitted as a shoreline conditional use.
16 Non-water-oriented uses are subject to the criteria for such uses of this section.
17 2. In the Urban Resort shoreline environment, water-oriented resort-oriented commercial use and
18 developments are permitted. Non-water-oriented commercial uses and developments may be
19 permitted as a shoreline conditional use subject to the criteria for such uses in this section.
20 Commercial uses in this shoreline environment are permitted either by themselves or as part of
21 a structure or development also containing residential uses.
22 3. In the Resource shoreline environment, water-oriented commercial use and development
23 related to natural resource products predominantly produced on site is permitted. Non-water-
24 oriented commercial related to natural resource products predominantly produced on site may
25 be permitted as a shoreline conditional use subject to the criteria for such uses in this section.

26 1. Shoreline Area Regulations.

Comment [CES163]: Addressed in use table now.

27 Urban. Water-oriented commercial use and development is permitted subject to policies and
28 regulations of this program. Non water-oriented commercial may be permitted as a conditional use
29 subject to the criteria for such uses in subsection (B)(1)(d) of this section.

30 Urban Resort. Water-oriented resort-oriented commercial use and development is permitted subject to
31 policies and regulations of this program. Non water-oriented commercial may be permitted as a
32 conditional use subject to the criteria for such uses in subsection (B)(1)(d) of this section. Commercial
33 uses allowed in this designation are permitted either by themselves or as part of a structure or
34 development also containing residential uses, subject to policies and regulations of this program.

35 Urban Conservancy. Low intensity water-oriented commercial use and development limited to resort,
36 bed and breakfast, campgrounds and similar facilities may be permitted as a conditional use. Low
37 intensity non water-oriented commercial limited to resort, bed and breakfast, campgrounds and similar

1 facilities may be permitted as a conditional use subject to the criteria for such uses in subsection
2 (B)(1)(d) of this section.

3 ~~Shoreline Residential. Water-oriented commercial use and development is permitted subject to policies~~
4 ~~and regulations of this program. Non-water-oriented commercial may be permitted as a conditional use~~
5 ~~subject to the criteria for such uses in subsection (B)(1)(d) of this section.~~

6 ~~Rural. Water-oriented commercial use and development is permitted subject to policies and regulations~~
7 ~~of this program. Non-water-oriented commercial may be permitted as a conditional use subject to the~~
8 ~~criteria for such uses in subsection (B)(1)(d) of this section.~~

9 ~~Resource. Water-oriented commercial use and development related to natural resource products~~
10 ~~predominantly produced on site is permitted subject to policies and regulations of this program. Non-~~
11 ~~water-oriented commercial related to natural resource products predominantly produced on site may~~
12 ~~be permitted as a conditional use subject to the criteria for such uses in subsection (B)(1)(d) of this~~
13 ~~section.~~

14 ~~Conservancy. Low intensity water-oriented commercial use and development limited to resort, bed and~~
15 ~~breakfast, campgrounds and similar facilities may be permitted as a conditional use. Low intensity non-~~
16 ~~water-oriented commercial limited to resort, bed and breakfast, campgrounds and similar facilities may~~
17 ~~be permitted as a conditional use subject to the criteria for such uses in subsection (B)(1)(d) of this~~
18 ~~section.~~

19 ~~Natural. Commercial use and development is prohibited.~~

20 ~~—Aquatic. Commercial use and development is prohibited, except that water dependent uses and~~
21 ~~appurtenant structures may be permitted subject to the use and development regulations of the~~
22 ~~abutting upland shoreline area designation.~~

23 **23.4100.070-080 Dredging and Dredge Material Disposal.**

24 **A. Policies.**

- 25 1. ~~Dredging should be permitted for water dependent uses of economic importance to the region~~
26 ~~and/or essential public facilities only when necessary and when alternatives are infeasible or~~
27 ~~less consistent with this program.~~
- 28 2. ~~Dredging to provide water oriented recreation should not be permitted.~~
- 29 3. ~~Minor dredging as part of ecological restoration or enhancement, beach nourishment, public~~
30 ~~access or public recreation should be permitted if consistent with this program.~~
- 31 4. ~~New development should be sited and designed to avoid or, where avoidance is not possible, to~~
32 ~~minimize the need for new maintenance dredging.~~
- 33 5. ~~Dredging of bottom materials for the primary purpose of obtaining material for landfill,~~
34 ~~construction, or beach nourishment should not be permitted.~~
- 35 6. ~~Spoil disposal on land away from the shoreline is generally preferred over open water disposal.~~

Comment [AP164]: This section has been moved from the General Regulations section (previously WCC 23.90.120). Added to title for clarity of section contents and consistency with WAC 173-26-231.

1 7. Long-term cooperative management programs that rely primarily on natural processes, and
2 involve land owners and applicable local, state and federal agencies and tribes, should be
3 pursued to prevent or minimize conditions which make dredging necessary.

4 ~~B. Regulations.~~

5 A. General.

6 ~~8.1.~~ Dredging shall only be permitted for the following activities:

- 7 a. Development of approved ~~wet moorages, harbors, ports and~~ water-dependent uses of
8 economic importance to the region and/or essential public facilities industries of economic
9 importance to the region only when there are no feasible alternatives.
- 10 ~~b. Development of essential public facilities when there are no feasible alternatives.~~
- 11 ~~c. b.~~ Maintenance dredging for the purpose of restoring a lawfully established development or
12 the previously permitted or authorized hydraulic capacity of streams.
- 13 ~~d. c.~~ Maintenance of irrigation reservoirs, drains, canals, or ditches for agricultural purposes.
- 14 ~~e. d.~~ Establishing, expanding, relocating, or reconfiguring navigation channels where necessary to
15 assure safe and efficient accommodation of existing navigational uses. Maintenance
16 dredging of established navigation channels and basins shall be restricted to maintaining
17 previously dredged and/or existing authorized location, depth, and width.
- 18 ~~f. e.~~ Removal of gravel for flood management purposes consistent with an adopted flood hazard
19 reduction plan and only after a biological and geomorphological study demonstrates that
20 extraction has a long-term benefit to flood hazard reduction, does not result in a net loss of
21 shoreline ecological functions and processes, and is part of a comprehensive flood
22 management solution.
- 23 ~~g. f.~~ Restoration or enhancement of shoreline ecological functions and processes benefiting
24 water quality and/or fish and wildlife habitat.
- 25 ~~h. g.~~ Minor in-water trenching to allow the installation of necessary underground pipes or cables
26 if no alternative, including boring, is feasible, and:
27 i. Impacts to fish and wildlife habitat are avoided to the maximum extent possible.
28 ii. The utility installation shall not increase or decrease the natural rate, extent, or
29 opportunity of channel migration.
30 iii. Appropriate best management practices are employed to prevent water quality
31 impacts or other environmental degradation.
- 32 h. Dredging for the purpose of obtaining ~~landfill~~ material is prohibited, except that:
33 i. ~~L~~ Limited bar scalping of gravel in streams is permitted subject to policies of the
34 Whatcom County Comprehensive Plan and regulations for mining under
35 WCC 23.100.08023.40.140 (Mining), and WCC Title 20 (Zoning).
- 36 ~~i. ii.~~ Dredging to obtain fill for restoration projects is permitted for approved
37 MTCA/CERCLA projects and may be approved as a shoreline conditional use for other
38 restoration projects.

9.2. The physical alignment and ecological functions and processes of streams, lakes, or marine shorelines shall be maintained, except to improve hydraulic function, water quality, fish or wildlife habitat, or fish passage.

3. ~~Limitations on~~ To protect public safety and compatibility with surrounding uses, dredge or disposal operations may be ~~conditioned~~ imposed to reduce proximity impacts, protect the public safety and assure compatibility with the interests of other shoreline users. Conditions may include limits on periods and hours of operation, and type of machinery, and may require provision of landscaped buffers, strips and/or fencing to address noise and visual impacts at land disposal or transfer sites.

10.4. Regular maintenance of an approved barge landing site shall not be considered dredging.

A. B. Additional Standards for Spoil Dredge Material Disposal.

1. Any dredge material disposal shall be used as part of a program to restore or enhance shoreline ecological functions and processes, unless found to be infeasible.

1-2. Dredge material Spoil disposal on uplands away from the within shoreline jurisdiction is permitted only under the following conditions:

- a. Shoreline ecological functions and processes will be preserved, including protection of surface and ground water.
- b. Erosion, sedimentation, floodwaters, or runoff will not increase adverse impacts to shoreline ecological functions and processes or property.
- c. Sites will be adequately screened from view of local residents or passersby on public rights-of-way.

3. Disposal of dredge material on shorelands or wetlands within a river's channel migration zone shall be discouraged. In the limited instances where it is allowed for restoration or enhancement of shoreline ecological functions and processes, such disposal shall require a shoreline conditional use permit.

4. Dredge material Spoil disposal is prohibited on marine shorelines between the line of extreme low tide and below the ordinary high water mark, on lake shorelines or beds, and in streams; except that:

- a. ~~d~~Dredge spoil material may be used in approved projects for the restoration or enhancement of shoreline ecological functions and processes, such as beach nourishment.
- b. Spoil disposal in open waters may be approved only in accordance with the Puget Sound Dredged Disposal Analysis (PSDDA) evaluation procedures for managing in-water disposal of dredged material; when approved by applicable agencies, which may include the U.S. Army Corps of Engineers pursuant to Section 10 (Rivers and Harbors Act) and Section 404 (Clean Water Act) permits, and Washington State Department of Fish and Wildlife hydraulic project approval (HPA); and when found to meet the following conditions:
 - e. Land disposal is infeasible, less consistent with this program, or prohibited by law.
 - d. Nearshore disposal as part of a program to restore or enhance shoreline ecological functions and processes is not feasible.

Comment [CES165]: This provision applies to upland areas within shoreline jurisdiction, away from the OHWM. Revised language for greater clarity.

Comment [DN166]: This language is pulled directly from WAC 173-26-231. Revised language to clarify that restoration and enhancement is the only instance in which this would be permitted.

- 1 e. ~~Offshore habitat will be protected, restored, or enhanced.~~
2 f. ~~Adverse effects on water quality or biologic resources from contaminated materials will be~~
3 ~~mitigated.~~
4 g. ~~Shifting and dispersal of spoil will be minimal.~~
5 ~~Water quality will not be adversely affected.~~
6 h.b. Dredge material disposal at an open water disposal site approved through the auspices of
7 the Dredged Material Management Program (RCW 79.105.500) is allowed and shall not
8 require a shoreline permit.

Comment [CES167]: Don't need this, since it doesn't need a shoreline permit

9 C. Supplemental Application Requirements.

10 ~~B.D.~~ In addition to the minimum application requirements specified in ~~WCC 23.60.050~~ WCC Title 22
11 (Land Use and Development), applications for dredging and material disposal use or development
12 shall include all information necessary to conduct a thorough evaluation of the proposed activity,
13 including but not limited to the following::

Comment [AP168]: Added per Periodic Review Checklist, Item 2019.b, and Scoping Document Item #2i.

- 14 a. A description of the purpose of the proposed dredging and an analysis of compliance with
15 the policies and regulations of this program and WCC Title 20 (Zoning).
16 b. A detailed description of the existing physical character, shoreline geomorphology, and
17 biological resources provided by the area proposed to be dredged, including:
18 i. A site plan map outlining the perimeter of the proposed dredge area. The map must also
19 include the existing bathymetry depths based on mean lower low water (MLLW) and
20 have data points at a minimum of two-foot depth increments.
21 ii. A habitat survey must be conducted and WDFW must be contacted to ensure the survey
22 is conducted according to the most recent WDFW eelgrass/macroalgae survey
23 guidelines.
24 iii. Information on stability of bedlands adjacent to proposed dredging and spoils disposal
25 areas.
26 c. A detailed description of the physical, chemical and biological characteristics of the dredge
27 spoils to be removed.
28 i. Physical analysis of material to be dredged: material composition and amount, grain
29 size, organic materials present, source of material, etc.
30 ii. Chemical analysis of material to be dredged: volatile solids, chemical oxygen demand
31 (COD), grease and oil content, mercury, lead and zinc content, etc.
32 iii. Biological analysis of material to be dredged.
33 d. A description of the method of materials removal, including facilities for settlement and
34 movement.
35 i. Dredging procedure: length of time it will take to complete dredging, method of
36 dredging and amount of materials removed.
37 ii. Frequency and quantity of project maintenance dredging.
38 e. Detailed plans for dredge spoil disposal, including specific land disposal sites and relevant
39 information on the disposal site, including but not limited to:
40 i. Spoils disposal area:

- (A) Physical characteristics including location, topography, existing drainage patterns, surface and ground water;
 - (B) Size and capacity of disposal site;
 - (C) Means of transportation to the disposal site;
 - (D) Proposed dewatering and stabilization of spoils;
 - (E) Methods of controlling erosion and sedimentation; and
 - (F) Future use of the site and conformance with land use policies and regulations.
- ii. Total initial spoils volume.
 - iii. Plan for disposal of maintenance spoils for at least a 50-year period.
- f. Hydraulic modeling studies sufficient to identify existing geohydraulic patterns and probable effects of dredging.

E. Regulations for Specific Shoreline Environment Designations.

- 2.1. In the Natural shoreline area environment, dredging is prohibited except that dredging is permitted as an essential element of an approved shore restoration or enhancement plan, subject to policies and regulations of this program.
2. In the Aquatic shoreline area environment:
 - a. Dredging may be permitted as a shoreline conditional use subject to the use and development regulations of the abutting upland shoreline area environment designation.
 - b. Dredging for a mutually designated reach of river with a provided, that the conditional use permit requirement may be waived upon county County and Ecology approval of a sediment management plan component for a mutually designated reach of river is permitted subject to the use and development regulations of the abutting upland shoreline area environment designation.
 - c. Maintenance dredging pursuant to WAC 173-27-140 is permitted subject to the policies of and regulations of this program without a conditional use permit, provided the original constructed bottom contours have been established and documented in a prior shoreline permit or authorization.

Comment [AP169]: Carried over from removed 'Shoreline Area Regulations.'

C. Shoreline Area Regulations.

- A. Urban. Dredging may be permitted as a conditional use subject to policies and regulations of this program.
- B. Urban Resort. Dredging may be permitted as a conditional use subject to policies and regulations of this program.
- C. Urban Conservancy. Dredging may be permitted as a conditional use subject to policies and regulations of this program.
- D. Shoreline Residential. Dredging may be permitted as a conditional use subject to policies and regulations of this program.

- 1 E. ~~Rural. Dredging may be permitted as a conditional use subject to policies and regulations of this~~
2 ~~program.~~
- 3 F. ~~Resource. Dredging may be permitted as a conditional use subject to policies and regulations of~~
4 ~~this program.~~
- 5 G. ~~Conservancy. Dredging may be permitted as a conditional use subject to policies and regulations~~
6 ~~of this program.~~
- 7 H. ~~Natural. Dredging is prohibited except that dredging is permitted as an essential element of an~~
8 ~~approved shore restoration or enhancement plan, subject to policies and regulations of this~~
9 ~~program.~~
- 10 I. ~~Aquatic. Dredging may be permitted as a conditional use subject to the use and development~~
11 ~~regulations of the abutting upland shoreline area designation; provided, that the conditional use~~
12 ~~permit requirement may be waived upon county and Ecology approval of a sediment~~
13 ~~management plan component for a mutually designated reach of river. Maintenance dredging~~
14 ~~pursuant to WCC 23.60.022(B) is permitted subject to the policies and regulations of this~~
15 ~~program without a conditional use permit, provided the original constructed bottom contours~~
16 ~~have been established and documented in a prior shoreline permit or authorization.~~

17 **23.100.11023.40.090 Landfill and Excavation.**

18 **A. Policies.**

- 19 A. ~~Landfill and excavation should only be permitted to the minimum extent necessary to~~
20 ~~accommodate an approved shoreline use or development and with assurance of no net loss of~~
21 ~~shoreline ecological functions and processes. Enhancement and voluntary restoration of~~
22 ~~landforms and habitat are encouraged.~~
- 23 B. ~~Landfill in water bodies, floodways, and/or wetlands should not be permitted for creation of~~
24 ~~new uplands, unless it is part of an approved ecological restoration activity. Landfill should be~~
25 ~~permitted in limited instances to restore uplands where recent erosion has rapidly reduced~~
26 ~~upland area, to build beaches and protective berms for shore stabilization or recreation, to~~
27 ~~restore or enhance degraded shoreline ecological functions and processes, or to moderately~~
28 ~~elevate low uplands to make such uplands more suitable for purposes consistent with this~~
29 ~~program.~~
- 30 C. ~~Fill should not be allowed where shore stabilization works would be required to maintain the~~
31 ~~materials placed.~~
- 32 D. ~~Landfills and excavation should be located and developed so that water quality, hydrologic and~~
33 ~~runoff patterns are not altered.~~
- 34 E. ~~The predicted economic benefits of landfills and excavation should be weighed against long-~~
35 ~~term cumulative impacts on ecological processes and functions.~~

36 **A. Regulations.**

Comment [CES170]: Addressed by use table now.

Comment [AP171]: This section is re-located from the General Regulations section (previously WCC 23.90.100) and revised to distinguish between fill and dredge material disposal, dredging, excavation, or mining.

- 1 A. General.
- 2 1. ~~Landfill~~ and excavation shall be avoided to the extent feasible, and shall be minimized to the
- 3 maximum extent practicable and allowed only along with approved shoreline use and
- 4 development activities that are consistent with this program. Where necessary, fill in shoreline
- 5 jurisdiction shall be located, designed, and constructed to protect shoreline ecological functions
- 6 and ecosystem-wide processes, including channel migration.
- 7 ~~1-2. Excavation waterward of the OHWM or within wetlands shall be considered dredging or gravel~~
- 8 ~~bar scalping mining~~ for purposes of this program.
- 9 3. Fill materials shall only be clean sand, gravel, soil, rock, or similar material. Use of polluted
- 10 dredge spoils or other solid or dangerous wastes is prohibited.
- 11 ~~2-4. Landfill and excavation within wetlands or waterward of the ordinary high water mark shall~~
- 12 only be permitted through a shoreline conditional use permit in limited instances for the
- 13 following purposes ~~only~~, with due consideration given to specific site conditions, and only along
- 14 with approved shoreline use and development activities ~~that are consistent with this program:~~
- 15 a. ~~Port development for~~ Water-dependent uses where other upland alternatives or structural
- 16 solutions, including pile or pier supports, are infeasible.
- 17 b. Expansion or alteration of transportation facilities of statewide significance currently located
- 18 on the shoreline where alternatives to fill are infeasible.
- 19 c. Ecological restoration, mitigation, or enhancement such as beach nourishment, habitat
- 20 creation, or bank restoration when consistent with an approved restoration plan.
- 21 d. Cleanup and disposal of contaminated sediments as part of an interagency environmental
- 22 clean-up plan.
- 23 e. Public access.
- 24 d. ~~Maintenance of lawfully established development.~~
- 25 e. ~~Development of shore stabilization projects, flood control, and instream structures.~~
- 26 f. ~~Except for landfill for county approved ecological restoration, fill and excavation waterward~~
- 27 ~~of the OHWM or in a wetland may only be authorized as a conditional use.~~
- 28 5. Fill shall not be used to create land to serve residential development.
- 29 ~~3-6. Landfills or excavation shall not be located where shore stabilization will be necessary to~~
- 30 ~~protect materials placed or removed. Disturbed areas shall be immediately stabilized and~~
- 31 ~~revegetated, as applicable.~~
- 32 ~~4. On marine shores, fill may be permitted in the foreshore where located at drift sector ends in~~
- 33 ~~low energy driftways, or on erosional pocket beaches for restoration and enhancement~~
- 34 ~~programs where the effect of the landfill's interruption of the littoral process can be mitigated.~~
- 35 ~~5-7. Landfills, beach nourishment, and excavation shall be designed to blend physically and visually~~
- 36 ~~with existing topography whenever possible, so as not to interfere with long-term appropriate~~
- 37 ~~use including lawful access and enjoyment of scenery.~~
- 38 6. Perimeter banks shall generally be sloped no steeper than one foot vertical for every three feet
- 39 horizontal unless a specific engineering analysis has been provided, and the administrator
- 40 determines that the landfill blends physically and visually with existing topography.

Comment [CES172]: Added pursuant to WAC 173-26-231(3)(c)

Comment [CES173]: By definition, excavation in water is considered dredging and is covered in that section.

Comment [CES174]: Updated to comply with WAC 173-26-231(3)(c)

Comment [CES175]: Amended to be consistent w/ WAC 173-26-231(3)(c)

7-8. Fill shall be designed to avoid water quality impacts in accordance with local, state and federal regulations. A temporary erosion and sediment control (TESC) plan shall be ~~provided~~ required for all proposed ~~landfill~~ and excavation activities.

23.4010.090100 Flood Hazard Reduction Control Works and Instream Structures.

~~c.~~ Flood control works and instream structures in shoreline areas shall be subject to the policies and regulations of this section and Chapter 23.90 WCC.

~~A.~~ Policies.

~~A.~~ Purpose and Need.

~~b.~~ New or expanding development or uses in the shoreline, including subdivision of land, that would likely require structural flood control works within a stream, channel migration zone, or floodway should not be allowed.

~~c.~~ Flood control works and instream structures should be planned and designed to be compatible with appropriate multiple uses of stream resources over the long term, especially in shorelines of statewide significance.

~~d.~~ Flood control works should only be allowed in the shoreline if they are necessary to protect existing development and where nonstructural flood hazard reduction measures are infeasible.

~~e.~~ Flood control works to protect existing development should be permitted only when the primary use being protected is consistent with this program, and the works can be developed in a manner that is compatible with multiple use of streams and associated resources for the long term, including shoreline ecological functions, fish and wildlife management, and recreation.

~~A.~~ Design Considerations.

~~f.~~ Flood control works should incorporate native vegetation to enhance ecological functions, create a more natural appearance, improve ecological processes, and provide more flexibility for long-term shoreline management. Such features include vegetated berms; vegetative stabilization including brush matting and buffer strips; and retention of existing trees, shrubs and grasses on stream banks.

~~g.~~ Flood control works and instream structures should be located, designed, constructed and maintained so their resultant effects on geohydraulic shoreline processes will not cause significant damage to other properties or valuable shoreline resources, and so that the physical integrity of the shoreline process corridor is maintained.

~~h.~~ To minimize flood damages and to maintain natural resources associated with streams, overflow corridors and other alternatives to traditional bank levees, revetments and/or dams should be considered. Setback levees and similar measures should be employed where they will result in lower flood peaks and velocities, and more effective conservation of resources than with high bank levees.

~~i.~~ Recognizing the large number of physical variables to be considered in properly locating and designing flood control works and instream structures, such as dams and weirs, and the high probability that poorly located and inadequately designed works will fail and/or adversely affect

properties and shore features, such works should be sited and designed consistent with appropriate engineering principles and WCC Title 17.

j. Nonstructural and nonregulatory methods to protect, enhance, and restore shoreline ecological functions and processes and other shoreline resources should be encouraged as an alternative to structural flood control works and instream structures. Nonregulatory and nonstructural methods may include public facility and resource planning, land or easement acquisition, education, voluntary protection and enhancement projects, or incentive programs.

k. Design of flood control works should incorporate continued long-term multiple use of shoreline resources by all appropriate user groups.

~~l.a. Design of flood control works should provide access to public shorelines whenever possible, unless it is demonstrated that public access would cause unavoidable public health and safety hazards, security problems, unmitigatable ecological impacts, unavoidable conflicts with proposed uses, or unreasonable cost. At a minimum, flood control works should not decrease public access or use potential of shorelines.~~

A. Coordination.

m. In cooperation with other applicable agencies and persons, the county should continue to develop long-term, comprehensive flood hazard management plans, such as the Lower Nooksack River Comprehensive Flood Hazard Management Plan, to prevent needless flood damage, maintain the natural hydraulic capacity of floodways, and conserve valuable, limited resources such as fish, water, soil, and recreation and scenic areas.

n. Planning and design of flood control works and instream structures should be consistent with and incorporate elements from applicable watershed management plans, restoration plans and/or surface water management plans.

24A. Regulations.

A. Purpose and Need-General.

1. **Applicability.** This section applies to actions taken to reduce flood damage or hazard and to uses, development, and shoreline modifications that may increase flood hazards. Flood hazard reduction measures may consist of nonstructural measures, such as setbacks, land use controls, wetland restoration, dike removal, use relocation, biotechnical measures, and stormwater management programs, and of structural measures, such as dikes, levees, revetments, floodwalls, channel realignment, and elevation of structures consistent with the National Flood Insurance Program. Additional relevant critical area provisions are in WAC 173-26-221(2).
2. Development in floodplains should not significantly or cumulatively increase flood hazard or be inconsistent with a comprehensive flood hazard management plan adopted pursuant to chapter 86.12 RCW, provided the plan has been adopted after 1994 and approved by the Department of Ecology.
3. New development or new uses in shoreline jurisdiction should not be established when it would be reasonably foreseeable that the development or use would require structural flood hazard reduction measures within the channel migration zone or floodway.

Comment [CES176]: Language from WAC 173-26-221(3)(a).

4. The following uses and activities may be appropriate and/or necessary within the channel migration zone or floodway:
- a. Actions that protect or restore the ecosystem-wide processes or ecological functions.
 - b. Forest practices in compliance with the Washington State Forest Practices Act and its implementing rules.
 - c. Existing and ongoing agricultural practices, provided that no new restrictions to channel movement occur.
 - d. Mining when conducted in a manner consistent with the environment designation and with the provisions of Chapter 23.40.140 (Mining).
 - e. Bridges, utility lines, flood Hazard Reduction works, and other public utility and transportation structures where no other feasible alternative exists or the alternative would result in unreasonable and disproportionate cost. Where such structures are allowed, mitigation shall address impacted functions and processes in the affected section of watershed or drift cell.
 - f. Repair and maintenance of an existing legal use, provided that such actions do not cause significant ecological impacts or increase flood hazards to other uses.
 - g. Development with a primary purpose of protecting or restoring ecological functions and ecosystem-wide processes.
 - h. Modifications or additions to an existing nonagricultural legal use, provided that channel migration is not further limited and that the new development includes appropriate protection of ecological functions.
 - i. Measures to reduce shoreline erosion, provided that it is demonstrated that the erosion rate exceeds that which would normally occur in a natural condition, that the measure does not interfere with fluvial hydrological and geomorphological processes normally acting in natural conditions, and that the measure includes appropriate mitigation of impacts to ecological functions associated with the river or stream.
- 4-5. Structural flood hazard reduction control works shall be permitted only when it is demonstrated by engineering and scientific evaluations that:
- a. They are necessary to protect health/safety and/or existing development;
 - b. Nonstructural flood hazard reduction measures are infeasible; and
 - c. Measures are consistent with an adopted comprehensive flood hazard management plan that evaluates cumulative impacts to the watershed system, or otherwise approved by Whatcom County Public Works' River and Flood Division.
- 2-6. Place new structural flood hazard reduction measures landward of the associated wetlands, and designated vegetation conservation areas, except for actions that increase ecological functions, such as wetland restoration, or as noted below. Provided that such flood hazard reduction projects be authorized if it is determined that no other alternative to reduce flood hazard to existing development is feasible. The need for, and analysis of feasible alternatives to, structural improvements shall be documented through an geotechnical analysis performed by a qualified professional.

Comment [CES177]: Updated text from WAC 173-26-221((3)(c))

Comment [DOE-Req178]: Required Change – There is nothing within the SMP Flood Hazard Reduction Guidelines (WAC 173-26 221(3) that allow a local government entity to override when new structural flood hazard reduction measures should be allowed within shoreline jurisdiction.

Comment [RCE179]: Updated text from WAC 173-26-221((3)(c))

3.7. ~~New flood hazard reduction control~~ works are prohibited on estuarine shores, on point and channel bars, and in salmon and trout spawning areas, except for the purpose of fish or wildlife habitat enhancement or restoration.

4.8. ~~Revetments shall only be permitted for public projects, and shall not be placed waterward of the OHWM, except for weirs and current deflectors where necessary to protect bridges and roads.~~

5. ~~Revetments and levees shall be designed consistent with appropriate engineering standards and WCC Title 17. Height shall be limited to the minimum required to protect the adjacent lands from the designed flood and demonstrated through hydraulic modeling that the height will not adversely impact shoreline ecological functions and processes.~~

9. Weirs and current deflectors are permitted only when necessary to protect public bridges, roads, and levees.

6.10. ~~Channelization projects that damage fish and wildlife resources, degrade recreation and aesthetic resources, or result in high flood stages and velocities shall not be permitted when feasible alternatives are available.~~

7.11. ~~Flood hazard reduction control~~ works and instream structures shall be constructed and maintained in a manner that does not degrade the quality of affected waters. The County may require reasonable conditions such as setbacks, buffers, or storage basins to achieve this objective.

8.12. Flood hazard reduction works should shall provide access to public shorelines whenever possible, unless it is demonstrated that public access would cause unavoidable public health and safety hazards, security problems, unmitigatable ecological impacts, unavoidable conflicts with proposed uses, or unreasonable cost. At a minimum, flood hazard reduction works should not decrease public access or use potential of shorelines.

Comment [DOE-Req180]: Required Change – The consideration for public access associated with new flood hazard reduction measures is a requirement of the SMP Guidelines at WAC 173-26-221(3)(c)(iv).

Comment [CES181]: Moved from above.

B. Site Design and Operation.

1. The County shall require professionally engineered design of any proposed flood hazard reduction control works or instream structure.

2. The design of all dams and the suitability of the proposed site for dam construction shall be certified by a professional engineer licensed in the state of Washington. The professional design shall include a maintenance schedule.

3. For all dams that are not regulated by either the Federal Energy Regulatory Commission licensing procedures, or the State Department of Ecology reservoir permit requirements, a maintenance agreement and construction bond for 150% of the cost of the structure shall be filed with the director of the Public Works Department prior to construction. The maintenance agreement shall specify who is responsible for maintenance, shall incorporate the maintenance schedule specified by the design engineer, shall require annual inspections by a civil engineer licensed in the state of Washington and shall stipulate abandonment procedures which shall include, where appropriate, provisions for site restoration.

4. Natural instream features such as snags, uprooted trees, or stumps should be left in place unless it can be demonstrated that they are actually causing bank erosion or higher flood stages.

5. Flood ~~hazard reduction control~~ works and instream structures shall allow for normal groundwater movement and surface runoff.
6. Flood ~~hazard reduction control~~ works and instream structures shall preserve valuable recreation resources and aesthetic values such as point and channel bars, islands, and braided banks.
- 6.7. ~~New~~ Structural flood ~~hazard reduction control~~ works shall be placed landward of associated wetlands, and designated habitat conservation areas, except for works that improve ecological functions, such as wetland restoration.
- 7.8. Where flood ~~hazard reduction control~~ works are necessary, they shall be set back at convex (inside) bends to allow streams to maintain point bars and associated aquatic habitat through normal accretion. Levees that have already cut off point bars should be relocated where feasible to lower flood stages and current velocities.
- 8.9. Where levees are necessary to protect floodway fringe areas, they shall be located and designed to protect shoreline ecological functions and processes. Such works should be located near the tangent to outside meander bends so that the stream can maintain normal meander progression and ~~utilize~~ use most of its natural flood water storage capacity.
- 9.10. No motor vehicles, appliances, other similar structures or parts thereof; nor structure demolition debris; nor any other solid waste shall be used for flood ~~hazard reduction control~~ works.
11. Cut-and-fill slopes and back-filled areas shall be stabilized with brush matting and buffer strips and revegetated with native grasses, shrubs, or trees to prevent loss of shoreline ecological functions and processes.
- A. ~~Shoreline Area Regulations.~~
1. ~~Urban. Flood control works and instream structures are permitted subject to policies and regulations of this program.~~
2. ~~Urban Resort. Flood control works and instream structures are permitted subject to policies and regulations of this program.~~
3. ~~Urban Conservancy. Flood control works and instream structures are permitted subject to policies and regulations of this program; provided, that channelization or dams for flood control are prohibited.~~
4. ~~Shoreline Residential. Flood control works and instream structures are permitted subject to policies and regulations of this program.~~
5. ~~Rural. Flood control works and instream structures are permitted subject to policies and regulations of this program; provided, that channelization or dams for flood control may be permitted as a conditional use.~~
6. ~~Resource. Flood control works and instream structures are permitted subject to policies and regulations of this program; provided, that channelization or dams for flood control may be permitted as a conditional use.~~
7. ~~Conservancy. Flood control works and instream structures are permitted subject to policies and regulations; provided, that channelization or dams for flood control are prohibited.~~

Comment [CES182]: Covered by use table now.

- 1 ~~8. Natural. Flood control works and instream structures are prohibited except for normal~~
2 ~~maintenance and repair.~~
3 ~~9. Aquatic. Flood control works and instream structures are permitted subject to the use and~~
4 ~~development regulations of the abutting upland shoreline area designation.~~

5 **23.4100.090-110 Forest Practices.**

6 ~~A. Policies.~~

- 7 ~~A. Forest lands should be reserved for long-term forest management and such other uses as are~~
8 ~~compatible with the dominant use. Other more intensive and incompatible uses tending to~~
9 ~~impair the dominant use should be discouraged from locating on forest lands.~~
10 ~~B. Forest practices should maintain high levels of water quality, as well as surface and ground~~
11 ~~water movement patterns.~~
12 ~~C. Forest practices should minimize damage to wetlands, fish and wildlife species and habitats,~~
13 ~~especially aquatic habitats.~~
14 ~~D. Extreme caution must be observed whenever chemicals are to be used along shorelines; such~~
15 ~~use should be avoided altogether if possible.~~
16 ~~E. Forest practices should maintain or improve the quality of soils and minimize erosion.~~
17 ~~F. Where slopes are extremely steep or soils are subject to sliding, rapid erosion or high water~~
18 ~~table, special practices should be employed to minimize damage to shoreland and water~~
19 ~~features, and adjacent properties.~~

20 ~~B. Regulations.~~

21 ~~A. General.~~

- 22 1. All forest practices undertaken on shorelines shall comply with the applicable policies and
23 provisions of the Forest Practices Act, Chapter 76.09 RCW as amended, and any regulations
24 adopted pursuant thereto (WAC Title 222), as administered by the Department of Natural
25 Resources.
26 2. Unless otherwise stated, the vegetation conservation management regulations of this program
27 do not apply to commercial forest practices as defined by this program when such activities are
28 covered under the Washington State Forest Practices Act (Chapter 76.09 RCW), except where
29 such activities are associated with a conversion to other uses or other forest practice activities
30 over which local governments have authority. For the purposes of this program, preparatory
31 work associated with the conversion of land to non-forestry uses and/or developments shall not
32 be considered a forest practice and shall be reviewed in accordance with the provisions for the
33 proposed non-forestry use, the general provisions of this program, and WCC
34 Chapter 16.16 (Critical Areas), and shall be limited to the minimum necessary to accommodate
35 an approved use.
36 3. A forest practice that only involves timber cutting is not a development under the Act and does
37 not require a shoreline substantial development permit or a shoreline exemption. A forest
38 practice that includes activities other than timber cutting may be a development under the act
39 and may require a substantial development permit, as required by WAC 222-50-020.

Comment [AP183]: This section has been moved from the General Regulations section (previously WCC 23.90.110).

Comment [CES184]: Revised section per Scoping Document, Item #17g.

Comment [AP185]: Moved from Vegetation Management section (WCC 23.30.040).

Comment [CES186]: Added per Periodic Review Checklist, Item 2017.e, and Scoping Document Item #2b. This has also been addressed in the definitions section.

1 4. ~~For the purposes of this program, preparatory work associated with the~~ Any conversion of land
2 to ~~a non-forestry uses and/or development~~ use not compatible with forestry shall not be
3 considered forest practices and shall be reviewed in accordance with the provisions for the
4 proposed non-forestry use, the general provisions of this program, including vegetation
5 conservation, and shall be ~~must~~:

6 a. ~~Comply with the applicable policies and regulations of this program;~~

7 b. ~~Limited the conversion to the minimum necessary, while complying with the purpose of the~~
8 ~~shoreline environment designation, general policies and regulations, and specific shoreline~~
9 ~~use and modification policies and regulations on the subject property;~~

10 a-c. ~~Ensure no net loss of shoreline ecological functions or significant adverse impacts to other~~
11 ~~shoreline uses, resources, and values provided for in RCW 90.58.020, such as navigation,~~
12 ~~recreation, and public access.~~

13 1. ~~Forest practices roads are prohibited on marine or lake shores where slopes exceed 35~~
14 ~~percent except when necessary to obtain access to road networks on land outside the Act's~~
15 ~~jurisdiction.~~

16 2. ~~Cutting of more than 30 percent of the merchantable trees over a 10-year period within 50~~
17 ~~feet of the bank rim on feeder bluffs and landslide hazard areas is prohibited. Only selective~~
18 ~~thinning methods that minimize erosion potential shall be employed.~~

19 5. ~~Per RCW 90.58.150, W~~with respect to timber situated within shoreline jurisdiction along
20 shorelines of statewide significance, only selective commercial timber cutting may be permitted
21 so that no more than 30 percent of the merchantable timber may be harvested in any 10-year
22 period; ~~provided that:~~

23 a. ~~Other timber harvesting methods may be permitted as a conditional use permit in those~~
24 ~~limited instances where topography, soil conditions, or silviculture practices necessary for~~
25 ~~regeneration render selective logging ecologically detrimental; and~~

26 b. ~~Timber removal that is to the minimum necessary for the conversion of land for other uses~~
27 ~~may be permitted.~~

28 A. ~~Shoreline Area Regulations.~~

29 3. ~~Urban. Forest practices are prohibited.~~

30 4. ~~Urban Resort. Forest practices are prohibited.~~

31 5. ~~Urban Conservancy. Forest practices are prohibited.~~

32 6. ~~Shoreline Residential. Forest practices are prohibited.~~

33 7. ~~Rural. Forest practices are permitted subject to policies and regulations of this program and~~
34 ~~critical areas buffer regulations.~~

35 8. ~~Resource. Forest practices are permitted subject to policies and regulations of this program and~~
36 ~~critical areas buffer regulations.~~

37 9. ~~Conservancy. Forest practices are permitted subject to policies and regulations of this program~~
38 ~~and critical areas buffer regulations.~~

Comment [CES187]: Addressed by use table now.

1 **23.100.170-40.120 Industrial and Port Development.**

2 ~~a. Industrial and port development in shoreline areas outside of the Cherry Point management area~~
3 ~~shall be subject to the policies and regulations of this section and Chapter 23.90 WCC.~~

4 **Cherry Point Management Area.** All industrial and port development in shorelines within the Cherry
5 Point management area as defined in Chapter 23.110 WCC shall be subject to the policies and
6 regulations found in WCC 23.100.170 instead of the policies and regulations of this section, unless
7 otherwise specified therein.

8 ~~A. Policies.~~

9 ~~A. Shoreline sites particularly suitable for development such as deep water harbors with access to~~
10 ~~adequate rail, highway and utility systems should be reserved for water dependent or water-~~
11 ~~related industrial and port development.~~

12 ~~B. In order to provide adequate shoreline for future water dependent and water related uses,~~
13 ~~industrial or port development at deep water sites should be limited to those uses that produce~~
14 ~~the greatest long-term economic base. Industrial and port development that is consistent with~~
15 ~~this program should be protected from encroachment or interference by incompatible uses with~~
16 ~~less stringent siting requirements, such as residential or commercial uses. Mixed use~~
17 ~~development, including non-water dependent uses, should only be allowed when they include~~
18 ~~and support water dependent uses.~~

19 ~~C. Regional needs for port facilities should be carefully considered in reviewing new port proposals~~
20 ~~and in allocating shorelines for such development. Such reviews or allocations should be~~
21 ~~coordinated with port districts, adjacent counties and cities, and the state. Existing, officially~~
22 ~~designated State Harbor Areas should be used for new port development to the maximum~~
23 ~~extent whenever possible.~~

24 ~~D. Multiple use of industrial and port facilities is encouraged to limit duplicative facilities and~~
25 ~~reduce adverse impacts. Multiple use should be implemented in the following manner:~~

26 ~~b. Cooperative use of piers, cargo handling, storage, parking and other accessory facilities~~
27 ~~among private or public entities should be required in industrial or port facilities whenever~~
28 ~~feasible. New facilities for water dependent uses should be allowed only after assessment of~~
29 ~~the potential for shared use of existing facilities.~~

30 ~~c. Industrial and port developments should provide opportunities for physical and/or visual~~
31 ~~public shoreline access in accordance with the public access policies, including recreational~~
32 ~~use of undeveloped shorelines not needed for port or industry operations; provided, that~~
33 ~~such uses are safely compatible with facility operations.~~

34 ~~A. Industrial and port development in the shoreline should be located and designed to avoid~~
35 ~~significant adverse impacts to other shoreline uses, resources, and values, including shoreline~~
36 ~~geomorphic processes, water quality, fish and wildlife habitat, commercial aquaculture, and the~~
37 ~~aquatic food chain.~~

38 ~~B. Restoration of impaired shoreline ecological functions and processes should be encouraged as~~
39 ~~part of industrial and port development.~~

Comment [P/C188]: P/C voted 9-0 to make 23.40.125 a subset of these rules, so that 23.40.120 applies to all industrial and port development and 23.40.125 are additional rules for the CPMA; and to remove redundancies.

- 1 ~~B. Regulations.~~
2 A. ~~Purpose and Need~~General.
- 3 1. ~~Water dependent industrial and port uses designed, developed and operated consistent with~~
4 ~~the policies and regulations of this program shall be given preference over all other uses on the~~
5 ~~shoreline.~~
- 6 1. Prior to approval of an application ~~water dependent industrial or port uses~~, the
7 ~~administrator~~Director shall review a proposal for design, layout, and operation of the proposed
8 use and shall ~~determine whether~~make specific findings that the use ~~qualifies as a~~is water-
9 dependent, water-related, water-enjoyment or non-water-oriented industrial and port use.
- 10 2. All harbor areas, established pursuant to Article XV of the Washington State Constitution, that
11 have reasonable commercial navigational accessibility and necessary support facilities such as
12 transportation shall be reserved for water-dependent and water-related uses that are
13 associated with commercial navigation unless a specific finding is made in the permit review
14 process that adequate shoreline is reserved for navigation use elsewhere in the affected harbor
15 area.
- 16 3. Industrial and port uses that result in no net loss of shoreline ecological functions and processes
17 are allowed subject to the policies and regulations of WCC 23.90.030 and the specific criteria
18 below:
- 19 a. Water-dependent industrial and port uses shall be given first preference over non-
20 waterdependent, water-related and water-enjoyment industrial and port uses. Prior to
21 approval of water dependent industrial or port uses, the administrator shall review a
22 proposal for design, layout and operation of the proposed use and shall make specific
23 findings that the use qualifies as a water dependent use.
- 24 a.b. Water-related industrial and port uses shall be given second preference over non-water
25 dependent industrial and port uses.
- 26 b.c. Water-related industrial and port uses may not be approved if they displace existing water-
27 dependent uses. Prior to approval of water-related industrial or port uses, the administrator
28 shall review a proposal for design, layout and operation of the proposed use and shall make
29 specific findings that the use qualifies as a water-related use.
- 30 e.d. Water-enjoyment industrial and port uses may not be approved if they displace existing
31 water-dependent or water-related uses or if they occupy space designated for water-
32 dependent or water-related use identified in a substantial development permit or other
33 approval. Prior to approval of water-enjoyment industrial or port uses, the administrator
34 shall review a proposal for design, layout and operation of the proposed use and shall make
35 specific findings that the use qualifies as a water-enjoyment use.
- 36 d.e. Non-water oriented industrial and port uses may be permitted where located on a site
37 physically separated from the shoreline by another property in separate ownership or a
38 public right of way such that access for water-oriented use is precluded. All other non-
39 water-oriented industrial and port uses are prohibited in the shoreline, except for those

Comment [CES189]: To be consistent w/ WAC 173-26-241(3)(f)

identified above; provided that ~~unless~~ the use provides significant public benefit with respect to the objectives of the Act and the following is:

- i. The proposal is ~~P~~part of a mixed use project that includes a water-oriented use; or
- ii. The ~~p~~proposal is on a site where navigability is severely limited; ~~or~~
- iii. The proposal does not occupy space designated for water-dependent or water-related use identified in a project permit approval.

f. Water-oriented industrial and port uses shall provide public access in accordance with the provisions of WCC 23.30.060 (Public Access).

e.g. When permitted, ~~n~~Non-water-oriented industrial and port uses shall provide public access and/or restoration as follows:

- i. ~~Non water oriented industrial and port uses shall provide p~~Public access shall be in the form of unrestricted open space. The administrator shall determine the amount of required access in accordance with the provisions of WCC 23.30.080 on a case-by-case basis.
- ii. If no water-oriented uses are located on or adjacent to the water as part of a mixed use development, 80% of the shoreline and associated buffers shall be restored to provide shoreline ecological functions that approximate the functions provided by the site in natural conditions.
- iii. The requirements in subsections (B)(1)(c)(v)(A) and (B) of this section may be modified when:
 - (A) The site is designated as a public access area by a shoreline public access plan, in which case public access consistent with that plan element shall be provided; or
 - (B) Specific findings are made demonstrating that the size of the parcel and the presence of adjacent uses preclude restoration of shoreline ecological functions. Where on-site restoration is infeasible, equivalent off-site restoration shall be provided consistent with the policies and regulations of this program.
- iv. Buffers shall be designed as appropriate to protect shoreline resources based on a site-specific restoration assessment plan, and may differ from the standard critical area buffer dimensions provided in Chapter 16.16 WCC; provided, that the building envelope for the proposed non-water-oriented use shall be based on current site conditions.
- v. If water-oriented uses are located on or adjacent to the water, the remaining undeveloped water frontage that is not devoted to water-dependent use shall be preserved in a substantially unaltered condition. If the site has been previously altered by past development, the balance of the site may be reserved for future water-related use.
- vi. The requirements of this section shall not apply to those non-water-oriented industrial or port uses located on a site physically separated from the shoreline where access to the land/water interface is precluded; provided, that such conditions were lawfully established prior to the effective date of this program.

Comment [AP190]: Updated per Commercial example.

Comment [CES191]: To be consistent w/ WAC 173-26-241(3)(f)

Comment [CES192]: Updated for clarity.

Comment [AP193]: Updated per Commercial example.

1 ~~f.h.~~ Interim use of facilities approved and/or permitted for water-dependent use for non-water-
2 dependent uses may be approved by a shoreline conditional use permit under the following
3 conditions:

- 4 i. A specific occupancy plan has been approved that allows interim uses for a specific
5 period while the market for water-dependent uses is being developed, and the
6 proposed interim use is consistent with the occupancy plan.
 - 7 ii. The period of interim lease or commitment of the space shall not exceed five years. At
8 the end of five years, a new application for interim use shall be submitted.
 - 9 iii. A good faith effort to obtain water-dependent uses has been made and suitable tenants
10 were not found. The period of the search for water-dependent uses, the notice of
11 availability, listing or advertising employed, and any inquiries received shall be
12 documented.
 - 13 iv. No permanent improvements will be made to the space that requires more than five
14 years of occupancy to repay the investment. No permanent improvements will be made
15 that will reduce the suitability of the space for water-dependent use.
- 16 4. Required setback areas shall not be used for storage of industrial equipment or materials, or
17 waste disposal, but may be used for outdoor recreation. Portions of such setbacks may be used
18 for motor vehicle parking if design of such facilities is consistent with this program and critical
19 area regulations in WCC Chapter 16.16.
- 20 5. Disposal or storage of solid or other industrial wastes is not permitted on shorelines; except that
21 liquid waste treatment facilities may be permitted as a shoreline conditional use if it is
22 demonstrated that a shoreline location is required or where it is demonstrated that an
23 alternative site outside of the shoreline is not feasible; and further excepted, that land
24 application of waters used in the processing of fruits and vegetables within the shoreline is
25 permitted as a shoreline conditional use.
- 26 6. Marine rafts shall be located the minimum distance necessary above existing grade to minimize
27 impact on littoral drift and navigation along the shoreline.
- 28 ~~b. Minimum required setbacks from shorelines and side property lines, maximum height limits~~
29 ~~and open space requirements are contained in WCC 23.90.130, Shoreline bulk provisions —~~
30 ~~Buffers, setbacks, height, open space and impervious surface coverage.~~

31 A.B. Additional Standards for Log Rafts and Storage.

- 32 1. Storage of logs is prohibited in water-bodies, except where an upland location is not feasible;
33 provided, that no ~~new~~ log storage may be allowed in marine or estuarine waters or tidelands.
- 34 2. Log rafting shall be allowed in cases where overland transportation of logs would produce
35 unacceptable transportation impacts, or for transportation of logs from islands or from other
36 locations in Puget Sound. Areas for assembly and disassembly of log rafts shall meet all
37 standards below for log storage.
- 38 3. Offshore log storage shall only be allowed on a temporary basis, and should be located where
39 natural tidal or current flushing and water circulation are adequate to disperse polluting wastes.
- 40 4. Log rafting or storage operations are required to implement the following, whenever applicable:

- 1 ~~b.a.~~ Logs shall not be dumped, stored, or rafted where grounding will occur.
- 2 ~~e.b.~~ Easy let-down devices shall be provided for placing logs in water.
- 3 ~~d.c.~~ Bark and wood debris controls and disposal shall be implemented at log dumps, raft building
- 4 areas, and mill-side handling zones. Accumulations of bark and other debris on the land and
- 5 docks around dump sites shall be fully contained and kept out of the water.
- 6 ~~e.d.~~ Where water depths will permit the floating of bundled logs, they shall be secured in
- 7 bundles on land before being placed in the water. Bundles shall not be broken again except
- 8 on land or at mill sites.
- 9 5. Impervious pavement is required for log yards where the wet season water table is less than
- 10 four feet below surface level in order to reduce waste buildup and impacts on ground ~~water~~ and
- 11 surface water.
- 12 6. Stormwater management facilities shall be provided to protect the quality of affected waters.
- 13 7. Log storage facilities shall be located upland and properly sited to avoid fish and wildlife habitat
- 14 conservation areas.
- 15 8. Log storage facilities must be sited to avoid and minimize the need for dredging in order to
- 16 accommodate ~~new~~ barging activities at the site.
- 17 9. Log storage facilities shall be located in existing developed areas to the greatest extent feasible.
- 18 If a ~~new~~ log storage facility is proposed along an undeveloped shoreline, an alternatives analysis
- 19 shall be required.
- 20 10. A berm must be located around the outer edge of the upland sort surface using rocks, or other
- 21 suitable materials to prevent loss of wood debris into the water.
- 22 11. Log booming shall only be allowed offshore in sub-tidal waters in order to maintain unimpeded
- 23 nearshore migration corridors for juvenile salmonids and to minimize shading impacts from log
- 24 rafts. Log booming activities include the placement in or removal of logs and log bundles from
- 25 the water, and the assembly and disassembly of rafts for water-borne transportation.
- 26 12. A debris management plan describing the removal and disposal of wood waste must be
- 27 developed and submitted to the County. Debris monitoring reports shall be provided, ~~when~~ if
- 28 stipulated.
- 29 13. Existing in-water log storage and log booming facilities in critical habitats ~~utilized~~ used by
- 30 threatened or endangered species classified under ESA shall be reevaluated if use is
- 31 discontinued for two years or more, or if substantial repair or reconstruction is required. The
- 32 evaluation shall include an alternatives analysis in order to determine if logs can be stored
- 33 upland and out of the water, or if the site should be used for other purposes that would have
- 34 lesser impacts on ESA-listed species. The alternatives analysis shall include evaluation of the
- 35 potential for moving all, or portions of, log storage and booming to uplands.

36 ~~B. Hydropower Development.~~

- 37 ~~b. Hydropower facilities shall be located, designed, and operated to minimize impacts to fish and~~
- 38 ~~wildlife resources including spawning, nesting, and rearing habitat, and migratory routes, and~~
- 39 ~~critical areas. Mitigation measures to achieve no net loss of shoreline ecological functions and~~
- 40 ~~processes shall be implemented in accordance with WCC.~~

Comment [CES194]: Moved to Utilities section

- ~~c. Hydropower facilities shall be located, designed, and operated to protect and minimize impacts to geohydraulic processes; waterfalls; erosion and accretion shoreforms; agricultural land; scenic vistas; recreation sites; and sites having significant historical, cultural, scientific, or educational value.~~
- ~~d. Hydropower facilities shall accommodate public access to, and multiple use of, the shoreline.~~
- ~~e. For all dams that are not regulated by either the Federal Energy Regulatory Commission licensing procedures, or the State Department of Ecology reservoir permit requirements, a maintenance agreement and construction bond for 150 percent of the cost of the structure shall be filed with the director of the Public Works Department prior to construction. The maintenance agreement shall specify who is responsible for maintenance, shall incorporate the maintenance schedule specified by the design engineer, shall require annual inspections by a civil engineer licensed in the state of Washington and shall stipulate abandonment procedures which shall include, where appropriate, provisions for site restoration.~~
- ~~f. The design of all dams and the suitability of the proposed site for dam construction shall be certified by a professional engineer licensed in the state of Washington. The professional design shall include a maintenance schedule.~~

C. Regulations for Specific Shoreline Environment Designations.

1. In the Rural shoreline environment, permitted water-oriented port development and industrial facilities are limited to those used for processing, manufacturing, and storage of finished or semi-finished goods.
2. In the Resource shoreline environment, water-oriented facilities for the processing, manufacturing, and storage of natural resource products are permitted. Other water-oriented industrial or port use and development may be permitted as a shoreline conditional use. Non-water-oriented oriented facilities for the processing, manufacturing, and storage of natural resource products may be permitted as a shoreline conditional use subject to the criteria for such uses in this section.
3. In the Aquatic shoreline environment, water-dependent industrial or port use and development are permitted, subject to the use and development regulations of the abutting upland shoreline environment designation.
4. In the Cherry Point Management Area, WCC 23.40.125 shall also apply. Where this section differs from WCC 23.40.125, the regulation(s) of that section shall govern.

~~A. Shoreline Area Regulations.~~

- ~~1. Urban. Water oriented industrial and port use and development are permitted subject to policies and regulations of this program. Non water oriented industrial or port use and development may be permitted as a conditional use, subject to criteria for such uses in subsection (B)(1)(c)(iv) of this section. Dams, diversion, and tailrace structures and accessory development for hydroelectric power generation may be permitted as a conditional use.~~
- ~~2. Urban Resort. Port development limited to passenger terminals is permitted. All other industrial or port use and development is prohibited.~~

Comment [CES195]: Moved from 'Shoreline Area Regulations.'

3. ~~Urban Conservancy. Industrial or port use and development are prohibited, except that dams, diversion, and tailrace structures and accessory development for hydroelectric power generation may be permitted as a conditional use.~~
4. ~~Shoreline Residential. Industrial or port use and development are prohibited, except that dams, diversion, and tailrace structures and accessory development for hydroelectric power generation may be permitted as a conditional use.~~
5. ~~Rural.~~
 - a. ~~Water-oriented port development and industrial facilities for processing, manufacturing, and storage of finished or semi-finished goods are permitted.~~
 - b. ~~Non-water-oriented industrial or port use and development may be permitted as a conditional use, subject to criteria for such uses in subsection (B)(1)(c)(iv) of this section.~~
 - c. ~~Dams, diversion and tailrace structures and accessory development for hydroelectric power generation may be permitted as a conditional use.~~
6. ~~Resource.~~
 - a. ~~Water-oriented facilities for processing, manufacturing, and storage of natural resource products are permitted subject to the policies and regulations of this program.~~
 - b. ~~Non-water-oriented facilities for processing, manufacturing and storage of natural resource products, subject to criteria for such uses in subsection (B)(1)(c)(iv) of this section, and other water-oriented industrial or port use and development may be permitted as a conditional use.~~
 - c. ~~Dams, diversion and tailrace structures and accessory development for hydroelectric power generation may be permitted as a conditional use.~~
 - d. ~~Other non-water-oriented industrial or port use and development are prohibited.~~
7. ~~Conservancy. Industrial or port use and development are prohibited, except that dams, diversion, and tailrace structures and accessory development for hydroelectric power generation may be permitted as a conditional use.~~
8. ~~Natural. Industrial or port use and development are prohibited.~~
9. ~~Aquatic. Water-dependent industrial or port use and development are permitted, subject to the use and development regulations of the abutting upland shoreline area designation. Log storage may be permitted as a conditional use.~~

23.4100.210-125 Cherry Point Management Area.

A. ~~Policies.~~

B. ~~Purpose and Intent.~~

C. ~~The purpose of the Cherry Point management area is to provide a regulatory framework that recognizes and balances the special port, industrial and natural resource needs associated with the development of this marine resource. This section identifies policies and regulations for water-dependent industrial activities that apply in addition to specific other elements of this program as referenced herein.~~

Comment [AP196]: Moved from 23.40.220.

- 1 D. ~~Washington State natural resource agencies and Whatcom County have identified certain portions~~
2 ~~of the Cherry Point management area as providing herring spawning habitat and other key habitat~~
3 ~~characteristics that warrant special consideration due to their importance to regional fisheries and~~
4 ~~other elements of the aquatic environment.~~
- 5 E. ~~Development of the Cherry Point major port/industrial urban growth area will accommodate uses~~
6 ~~that require marine access for marine cargo transfer, including oil and other materials. For this~~
7 ~~reason, water dependent terminal facilities are encouraged as the preferred use in the Cherry Point~~
8 ~~management area. Due to the environmental sensitivity of the area, it is the policy of Whatcom~~
9 ~~County to limit the number of piers to one pier, in addition to those in operation or approved as of~~
10 ~~January 1, 1998.~~
- 11 F. ~~Whatcom County should consider participation with local, state, and federal agencies, tribal~~
12 ~~governments and other stakeholders in the development of a plan to address integrated~~
13 ~~management of the uplands and public aquatic lands within the Cherry Point management area. The~~
14 ~~development of such a plan could provide a forum and process for addressing aquatic resources by~~
15 ~~all stakeholders. Elements of the plan could be adopted as future amendments to this program as~~
16 ~~appropriate.~~
- 17 G. ~~All development that is to be located within the Cherry Point management area, as defined in~~
18 ~~Chapter 23.110 WCC, shall be subject to the policies and regulations found in this section, and shall~~
19 ~~not be subject to the policies and regulations found in WCC 23.100.010 through 23.100.160, nor~~
20 ~~Chapter 23.90 WCC, unless otherwise referenced in this section. The policies and regulations found~~
21 ~~in this section are applicable only within the geographic boundaries of the Cherry Point~~
22 ~~management area and do not apply elsewhere in the county. In the event that the provisions of this~~
23 ~~section conflict with other applicable referenced provisions of this program, the policies and~~
24 ~~regulations that are most protective of shoreline resources shall prevail.~~
- 25 H. ~~Water Dependent Industrial Development. Only water dependent facilities that serve industrial~~
26 ~~facilities should be allowed in the Cherry Point management area. Industry within the major~~
27 ~~port/industrial urban growth area, as designated in the County Comprehensive Plan, which is not~~
28 ~~water dependent should locate away from shoreline jurisdiction.~~
- 29 I. ~~Multiple Use Facilities. Facilities that allow for multiple use of piers, cargo handling, storage, parking~~
30 ~~and other accessory facilities are encouraged.~~
- 31 J. ~~Public Access.~~
- 32 K. ~~Where appropriate, industrial and port development within the Cherry Point management area~~
33 ~~should provide public beach and shoreline access in a manner that does not cause interference with~~
34 ~~facility operations or present hazards to life and property. This may be accomplished through~~
35 ~~individual action or by joint, coordinated action with other developers and landowners, for example,~~
36 ~~by setting aside a common public access area.~~
- 37 L. ~~Special emphasis should be given to providing public beach and shoreline access for recreational~~
38 ~~opportunities including but not limited to crabbing, small craft launching, surf fishing, picnicking,~~
39 ~~clamming, and beach walking.~~

1 ~~M. Public access within the Cherry Point management area should be consistent with the Whatcom~~
2 ~~County Parks and Recreation Open Space Plan.~~

3 ~~N. Shoreline Ecological Functions and Processes. In recognition of the diverse and vital ecological~~
4 ~~resources in the Cherry Point management area, consideration of probable effects of all~~
5 ~~development proposals on shoreline ecological functions and processes should be assessed with the~~
6 ~~other long term statewide interests. New port development that requires dredge and fill should not~~
7 ~~be permitted in the Cherry Point management area due to potential adverse effects on ecological~~
8 ~~functions, including fish and shellfish habitat and geohydraulic processes.~~

9 ~~O. Aesthetics. All development should be designed to avoid or minimize negative visual impacts on the~~
10 ~~scenic character of the area and to ensure visual compatibility with adjacent nonindustrial zoned~~
11 ~~properties.~~

12 ~~P. Site Development. All development should be constructed and operated in a manner that, while~~
13 ~~permitting water dependent uses, also protects shoreline resources, their ecological functions and~~
14 ~~processes, and that incorporates the following:~~

15 ~~Q. Low impact development approaches to avoid or minimize adverse impact to topography,~~
16 ~~vegetation, water quality, fish and wildlife habitat, and other natural site conditions;~~

17 ~~R. Adequate temporary and permanent management measures to control erosion and sediment~~
18 ~~impacts during construction and operation; and~~

19 ~~S. Adequate stormwater management facilities.~~

20 ~~T. Regulations.~~

21 A. All uses and modifications within the Cherry Point Management Area shall be subject to the
22 regulations found in this section (as well as those of Title 20, Zoning), and not those of WCC
23 23.40.120 (Industrial and Port Development). Where this section differs from WCC 23.40.120, the
24 regulation(s) of this section shall govern.

25 A.B. Allowed Uses.

26 1. Water-dependent industrial and port uses are allowed within the Cherry Point management
27 area only upon finding; provided, that specific findings are made in a shoreline substantial
28 development permit or conditional use permit that:

29 a. Policies for optimum implementation of the statewide interest have been achieved through
30 protection of shoreline ecological functions and processes;

31 b. The long-term statewide benefits of the development have been considered with the
32 potential adverse impacts on ecological functions; and

33 c. Proposed mitigation measures to achieve no net loss of ecological functions and processes
34 are incorporated in the proposal.

35 2. Fuel Uses – Shoreline Permits and Requirements:

36 a. Existing legal fossil or renewable fuel refinery operations or existing legal fossil or renewable
37 fuel transshipment facilities [as of XXX effective date] are considered permitted shoreline
38 substantial developments.

39 b. Expansions of existing legal fossil-fuel refineries or expansions of existing legal fossil-fuel
40 transshipment facilities shall require a shoreline conditional use permit.

Comment [CES197]: To do: need to add date once it's finalized.

c. New or expansion of existing legal renewable fuel refinery or renewable fuel transshipment facility shall require a shoreline conditional use permit.

Comment [DN198]: Added per Council's pending draft fossil fuel amendments.

~~2-3.~~ Water-related and water-enjoyment uses are allowed only as part of public access and public recreation development, subject to the ~~findings criteria~~ in subsection (B)(1)(a) of this section.

~~3-4.~~ Accessory development uses, which does not require a shoreline location in order to carry out ~~its~~ their support functions, shall be sited away from the land/water interface and landward of the principal use. Accessory ~~development uses~~ shall observe critical area buffers in WCC Chapter 16.16. Accessory ~~development uses~~ includes, but ~~are~~ is not limited to, parking, warehousing, open air storage, waste storage and treatment, stormwater control facilities, utility and land transport ~~development~~.

~~4-5.~~ Road, railway and utility facilities serving approved waterfront facilities related to water-dependent uses that are located and designed to minimize shoreline alteration are permitted.

6. Waste water disposal/treatment facilities for storage or disposal of industrial or domestic waste water are prohibited, except that elements such as conveyances and outfalls shall be allowed if alternate inland sites have been demonstrated to be infeasible. Waste water conveyance systems for ships at berth shall be permitted.

~~5-7.~~ Liquid manure storage facilities and spreading and animal feeding operations and confined animal feeding operations shall be prohibited.

~~B-C.~~ **Public Access.**

1. Public access shall be provided in accordance with WCC 23.930.0780 (Public Access) unless it is demonstrated that public access poses significant interference with facility operations or hazards to life or property.
2. If public access meeting the criteria above is demonstrated to be infeasible or inappropriate, alternative access may be provided in accordance with WCC 23.930.0780 at a location not directly adjacent to the water such as a viewpoint, observation tower, or other areas serving as a means to view public waters. Such facilities may include interpretive centers and displays that explain maritime history and industry; provided, that visual access to the water is also provided.
3. As an alternative to on-site public access facilities, public access may be provided in accordance with a public access plan adopted as an element of the Whatcom County Parks and Recreation Open Space Plan.

~~C-D.~~ **Critical Areas.** In addition to meeting the provisions of WCC 23.30.01090-030, (Ecological Protection) ~~and critical areas~~, development and alteration shall not be located or expanded within critical areas designated pursuant to WCC Chapter 16.16 except where the site is approved for water-dependent use, and the following are met:

1. Mitigation to achieve no net loss of ecological functions and processes shall be conducted in accordance with WCC 23.930.0130 (Ecological Protection).
2. Development and alteration shall not be allowed in wetlands in the backshore area. Upland development shall demonstrate that changes in local hydrology will not decrease the viability of the wetland environment nor degrade the existing water quality within the wetland.

- 1 3. The minimum required setback from the OHWM for all industrial and port facilities, including
2 development components, which do not require a water's edge or water surface location shall
3 be 150 feet; provided, that bluffs and banks greater than 10 feet in height and sloping greater
4 than 30 percent and wetland shorelines shall have such setbacks measured from the crest of the
5 bank or the edge of the wetland in addition to the OHWM.
- 6 4. Development and alteration other than recreation development for public and quasi-public
7 shoreline access is prohibited on the accretion shoreforms identified on the map in Appendix C
8 of this title, ~~subject to the regulations in this section and consistent with the conservancy and~~
9 ~~aquatic shoreline area designation policies and regulations of Chapters 23.90 and 23.100 WCC;~~
10 provided, that lawfully established uses or developments may be maintained subject to the
11 provisions of WCC ~~23.50.070~~ Chapter 23.50 (Nonconforming Uses, Structures, and Lots).

12 D.E. Location and Design.

13 1. Piers.

14 a. Due to the environmental sensitivity of the area, Whatcom County shall limit the number of
15 piers to ~~one pier, in addition to~~ those in operation as of January 1, 1998.

16 ~~a.b.~~ Piers shall be designed to accommodate only the necessary and intrinsic activities
17 associated with the movement of material and cargo from land to water and water to land.
18 The length of piers shall not extend beyond that which is necessary to accommodate the
19 draft of the vessels intending to use the facility.

20 ~~b.c.~~ Piers shall be designed to minimize interference in the intertidal zone and adverse impacts
21 to fish and wildlife habitats.

22 ~~c.d.~~ Piers shall be designed to minimize impacts on steep shoreline bluffs.

23 ~~d.e.~~ All pilings in contact with water shall be constructed of materials such as concrete, steel, or
24 other materials that will not adversely affect water quality or aquatic plants or animals.
25 Materials used for decking or other structural components shall be approved by applicable
26 state agencies for contact with water to avoid discharge of pollutants from wave splash,
27 rain, or runoff. Wood treated with creosote, copper chromium arsenic or
28 pentachlorophenol is prohibited; provided, that replacement of existing wood pilings with
29 chemically treated wood is allowed for maintenance purposes where use of a different
30 material such as steel or concrete would result in unreasonable or unsafe structural
31 complications; further provided, that where such replacement exceeds 20 percent of the
32 existing pilings over a 10-year period, such pilings shall conform to the standard
33 construction provisions of this section.

34 ~~e.f.~~ All piers on piling structures shall have a minimum vertical clearance of one foot above
35 extreme high water.

36 ~~f.g.~~ Bulk storage of gasoline, oil and other petroleum products for any use or purpose is not
37 allowed on piers, except for temporary storage under emergency situations, including oil
38 spill cleanup. Bulk storage means non-portable storage in fixed tanks. Secondary
39 containment shall be provided for portable containers.

Comment [CES199]: Deleted per Council's pending draft fossil fuel amendments.

g-h. All piers shall be located and designed to avoid impediments to navigation and to avoid depriving other properties of reasonable access to navigable waters. All piers shall be marked with navigational aids and approved for compliance with U.S. Coast Guard regulations.

2. Dredging.

a. Dredging to accommodate water access to, or construction of, new development is prohibited. New development shall be located and designed to avoid the need for dredging. Dredging for existing development shall be the minimum necessary and shall minimize interference in the intertidal zone and impacts to fish and wildlife habitats.

~~b. Dredging operations, including spoil disposal, shall be conducted in accordance with policies and regulations in WCC 23.90.120, (B)(4) and (5), Dredging.~~

~~c. Dredging is prohibited in the accretion shoreform and backshore wetland areas described in Appendix C of this title.~~

3. ~~Landfill~~ is prohibited, except for the minimum necessary to access piers or other structures that provide access to the water. Pier design should accommodate the connection between the pier and uplands by employing a pile-supported structure to the point of intersection with stable upland soils. ~~Limited landfill may be allowed for pier access that does not extend further toward the OHWM than existing topography. Any fill or excavation waterward of the OHWM requires a shoreline conditional use permit.~~

4. Excavation/Stabilization.

a. Excavation/stabilization of bluffs is prohibited, except for the minimum necessary to access piers or other structures that provide access to the water; provided, that active feeder bluffs shall not be altered if alteration will adversely affect the existing littoral drift process. ~~New development shall avoid, rather than modify, feeder bluffs.~~

b. Excavation/stabilization is prohibited on accretion shoreforms and in wetlands in the backshore area.

5. ~~Shoreline stabilization defense works~~ shall be regulated in accordance with WCC ~~23.100.130~~ 23.40.190 and be consistent with the conservancy and aquatic shoreline ~~area~~ environment regulations of that section.

~~E.F.~~ Adjacent Use.

1. ~~New or expanded p~~Port or industrial development adjacent to properties which are zoned for nonindustrial purposes shall provide setbacks of adequate width, to attenuate proximity impacts such as noise, light and glare; and may address scale and aesthetic impacts. Fencing or landscape areas may be required to provide a visual screen.

2. Exterior lighting shall be designed and operated to avoid illuminating nearby properties zoned for non-port or non-industrial purposes so as to not unreasonably infringe on the use and enjoyment of such property, and to prevent hazards for public traffic. Methods of controlling illumination of nearby properties include, but are not limited to, limits on height of structure, limits on light levels of fixtures, light shields and screening.

3. The minimum setback from side property lines which intersect the OHWM for industrial and port development shall be 60 feet; provided, that:
 - i. The side yard setback shall not apply to utility or security structures such as poles, meters, fences, guard houses, power vaults or transformers; and
 - ii. The side yard setbacks for parcels adjoining the NW and SE boundaries of the Cherry Point management area shall be administered in accordance with WCC 20.68.550 (Buffer Area).
4. Required setbacks shall not be used for storage of industrial equipment or materials, or for waste disposal, but may be used for public access or outdoor recreation.

F.G. Oil and Hazardous Materials.

1. Release of oil or hazardous materials on shorelines is prohibited.
2. A management plan shall be developed for new-permitted or conditionally permitted development for the safe handling of cargo, fuels, bilge water, and toxic or hazardous materials to prevent them from entering aquatic waters, surface or ground water. Specific provisions shall address prompt and effective clean-up of spills that may occur. Management plans shall be coordinated with state or federal spill response plans. Where a spill management/response plan has been approved by the state, said plan may be used to satisfy the requirements of this section.
3. Necessary spill containment facilities associated with existing development may be permitted within shoreline jurisdiction where there are no feasible alternatives.
- ~~4. Recreational Development. All recreational development shall comply with the policies and regulations of WCC 23.100.100 and be consistent with the conservancy and aquatic shoreline area regulations of that section.~~
- ~~5. Archaeological, Historic and Cultural Resource Management. All development associated with archaeological, historic or cultural site activities shall comply with the policies and regulations of WCC 23.90.070.~~

23.40.130 Land Division

A. ~~Additional Standards for Residential Divisions~~General.

1. Land divisions, including boundary line adjustments, shall not be allowed in a configuration that will require significant vegetation removal or shoreline modification or result in a net loss of shoreline ecological functions and processes at the time of development of the subdivision and/or use of each new parcel.
- ~~1-2. All new subland divisions shall provide for vegetation conservation to mitigate cumulative impacts of intensification of use within or adjacent to the shoreline that shall include compliance with vegetation conservation requirements of WCC 23.30.05023.30.040, together with replanting and control of invasive species within setbacks and open space to assure establishment and continuation of a vegetation community characteristic of a native climax community.~~
- ~~2. Residential lots created through land division in the shoreline shall only be permitted when the following standards are met:~~

Comment [CES200]: Moved from Residential section, as there are more than just residential land divisions (e.g., commercial, industrial, etc.)

- 1 3. Land division may not be approved in cases when it can be reasonably foreseeable that the
2 development or use would require structural flood hazard reduction measures within a channel
3 migration zone or floodway during the life of the development or use.
- 4 4. ~~New~~ Land division shall assure that the lots created will not require shoreline stabilization in
5 order for reasonable development to occur. ~~New~~ Land division that would require shoreline
6 stabilization is prohibited.
- 7 ~~5. New or expanded subdivisions and all multiunit residential developments shall provide a~~
8 ~~community recreation and/or open space area for the benefit of all residents or property~~
9 ~~owners in the development; provided, that such provisions shall not apply to lot line~~
10 ~~adjustment, lot consolidation, and subdivision of land into four or fewer lots.~~
- 11 ~~6.5. New or amended sub~~Land divisions of four or fewer lots adjacent to the shoreline shall provide
12 common access to the shoreline for all lots, consistent with, ~~except those for lot line~~
13 ~~adjustment and lot consolidation purposes, shall provide public access as provided for in~~
14 WCC 23.930.0780 (Public Access) and this section.
- 15 ~~7.6. All new sub~~land divisions shall record a prohibition on ~~new~~ private docks on the face of the plat.
16 An area for shared moorage may be approved if it meets all requirements for shared moorage in
17 WCC 23.40.150400.099 (Moorage), including demonstration that ~~public and private~~ marinas and
18 ~~other boating facilities~~ launch ramps are not sufficient to meet the moorage needs of the
19 subdivision.
- 20 ~~8.7. Subdividing tidelands for sale or lease in connection with individual building lots is prohibited.~~
- 21 ~~9.8. Substandard shoreline lots unsuitable for development of a primary permitted use under the~~
22 ~~WCC Official Zoning Ordinance (Title 20 (Zoning)) and this program shall not be subdivided.~~
- 23 ~~10.9. Land divisions of more than four lots and, including subdivision of land for more than~~
24 ~~four parcels, shall incorporate public access to publicly owned shorelines or public water~~
25 ~~bodies shorelines of the state as provided for in WCC 23.390.0780 unless the site is designated in~~
26 a shoreline public access plan for a greater component of public access or public access is
27 demonstrated to be infeasible or inappropriate. The amount and configuration of public access
28 shall depend on the proposed use(s) and the following criteria:
- 29 a. Subdivisions ~~within the shoreline~~ that have views of water areas shall provide a public
30 pedestrian viewing area.
- 31 b. Subdivisions adjacent to ~~public waterways, waters of the state and marine waters~~ shall
32 provide access to a point ~~that abutts~~ the water that will provide visual access, and shall
33 provide physical access to public waterways, public marine waters, and public tidelands that
34 are physically accessible at low tide or low water.
- 35 c. Subdivisions subject to requirements for dedication of land to provide open space or
36 mitigate recreation demands of the development shall dedicate such land on or adjacent to
37 public waterways or marine shorelines, as applicable, unless the ecological sensitivity of
38 such land precludes public access. Portions of the area dedicated may be fenced or
39 otherwise restricted to limit public access to ecologically sensitive areas.

Comment [CES201]: Covered elsewhere.

~~11.10.~~ Clustering and other low-impact development techniques may be required where appropriate to minimize physical and visual impacts on shorelines.

~~23.4100.120-140~~ Mining.

Mining in shoreline areas shall be subject to the policies and regulations of this section and Chapter 23.90 WCC.

A. Policies.

- ~~A. Mining should not be located on shorelines where unavoidable adverse impacts on other users or resources together equal or outweigh the benefits from mining.~~
- ~~B. Mining should not interfere with public recreation on the shoreline.~~
- ~~C. Mining should be located and operated so as to provide long term protection of water quality, fish and wildlife, and fish and wildlife habitat.~~
- ~~D. Mining, particularly surface or strip mining, should provide for timely restoration of disturbed areas to a biologically productive, semi-natural, or other useful condition through a reclamation process consistent with regulations administered by the Department of Natural Resources and other applicable county standards.~~
- ~~E. Mining of marine and lake shores or accretional shoreforms, such as point bars, that have a high value for recreation or as fish or wildlife habitat should generally not be permitted.~~
- ~~F. Mining should only be permitted on accretion point and channel bars where appropriate studies and detailed operation plans demonstrate that:
 - ~~a. Fish habitat, upland habitat and water quality will not be significantly impacted; and~~
 - ~~b. The operation will not adversely affect geohydraulic processes, channel alignment, nor increase bank erosion or flood damages.~~~~
- ~~G. Mining operations should be located, designed, and managed so that other appropriate uses are not subjected to substantial or unnecessary adverse impacts from noise, dust or other effects of the operation. The operator may be required to implement measures such as buffers, limited hours, or other mitigating measures for the purpose of minimizing adverse proximity impacts.~~

~~B. Regulations.~~

A. General.

- ~~1. The removal of gravel for flood management purposes shall be regulated in accordance with the policies-regulations for underof WCC 23.100.06023.40.100 (Flood Hazard Reduction Control Works and Instream Structures) as well as this section.~~
- ~~1.2. New m~~ Mining and associated activities shall be designed and conducted to result in no net loss of shoreline ecological functions and processes in accordance with WCC ~~23.90.03023.30.010~~ (Ecological Protection). Mining should not be approved where it could interfere with shoreline ecological functions or processes or cause irreparable damage to shoreline resources or features such as accretion shoreforms. Application of this standard shall include avoidance and mitigation of adverse impacts during the course of mining and reclamation. The determination of whether there will be no net loss of ecological function shall be based on an evaluation of the reclamation plan required for the site and shall consider impacts on ecological functions during

Comment [DN202]: Removed sections which are not required by the WAC and provided only WAC specific requirements, except for the retained section on scalping, below.

operation. Preference shall be given to mining proposals that result in the creation, restoration, or enhancement of habitat for priority species.

3. Permit requirements for mining should be coordinated with the requirements of RCW Chapters 78.44 (Surface Mining) and 77.55 (Construction Projects in State Waters).
4. The proposed subsequent use of mined property shall be consistent with the provisions of the environment designation in which the property is located. Reclamation of disturbed shoreline areas shall provide appropriate ecological functions consistent with the setting.
5. Pursuant to RCW 90.48.615, motorized or gravity siphon aquatic mining or discharge of effluent from such activity to any waters of the state that has been designated under the endangered species act as critical habitat, or would impact critical habitat for salmon, steelhead, or bull trout is prohibited. This section does not apply to:
 - a. Aquatic mining using nonmotorized methods, such as gold panning, if the nonmotorized method does not involve use of a gravity siphon suction dredge;
 - b. Mining operations where no part of the operation or discharge of effluent from the operation is to waters of the state;
 - c. Surface mining operations regulated by the State Department of Natural Resources under Title 78 RCW;
 - d. Metals mining and milling operations as defined in chapter 78.56 RCW; or
 - e. Activities related to an industrial facility, dredging related to navigability, or activities subject to a clean water act section 404 individual permit.
- a. Mining shall not be permitted in critical areas except as a part of an approved flood control program or in conjunction with a habitat restoration or enhancement plan; provided, that such activities may be permitted where demonstrated to be water dependent. A determination of water dependency shall be based on evaluation of geologic factors such as the distribution and availability of mineral resources for that jurisdiction, as well as evaluation of need for such mineral resources, economic, transportation, and land use factors. This showing may rely on analysis or studies prepared for purposes of GMA designations, be integrated with any relevant environmental review conducted under SEPA (Chapter 43.21C RCW), or otherwise be shown in a manner consistent with RCW 90.58.100(1) and WAC 173-26-201(2)(a).
- b. Application for permits for mining operations shall be accompanied by operation plans, reclamation plans and analysis of environmental impacts in accordance with WCC 20.73.700. Such information shall provide sufficient documentation to make a determination as to whether the project will result in net loss of shoreline ecological functions and processes during the course of mining and after reclamation. Creation, restoration, or enhancement of habitat for priority species and the future productivity of the site may be considered in determining no net loss of ecological functions.
- c. The applicant/proponent must show that mining is dependent on a shoreline location, and that demand cannot reasonably be accommodated in operations outside shoreline jurisdiction. Information required to meet this criterion shall evaluate geologic factors such as the

Comment [CES203]: From RCW 90.48.615.

Comment [AP204]: Covered by CAO.

distribution and availability of mineral resources as well as evaluation of need for such mineral resources, economic, transportation, and land use factors.

d. Where a lawfully established mining operation has resulted in the creation of a lake(s) greater than 20 acres and such lake(s) is subject to the provisions of the shoreline management program and the Act, such lake(s) shall be given a resource shoreline area designation. Notwithstanding any other applicable regulations, such mining operations shall be permitted to continue and may be expanded subject to approval of a shoreline conditional use permit.

e. Reclamation Plan.

i. A reclamation plan that complies with the format and detailed minimum standards of Chapter 78.44 RCW shall be included with any shoreline permit application for mining.

ii. A reclamation plan that is inconsistent with this program or the Act shall constitute sufficient grounds for denial of a shoreline permit; provided, that the applicant/proponent shall be given reasonable opportunity to revise the plan.

f. Overburden.

i. Overburden or other mining spoil or non-putrescible solid wastes shall be disposed of in an appropriate manner to protect shoreline ecological functions and processes, other uses, and aesthetic values.

ii. Disposal of overburden or mining spoil on shorelines shall comply with landfill policies and regulations of WCC 23.90.100.

g. Surface Oil, Coal Bed or Gas Drilling. As provided in the Act (RCW 90.58.160), surface drilling for oil or gas is prohibited in the waters of Puget Sound north to the Canadian boundary and the Strait of Juan de Fuca waterward from OHWM and on all lands within 1,000 feet landward therefrom. Coal bed drilling is also prohibited.

B. Marine and Lake Shores.

a. Mining of, including but not limited to, sand, gravel, cobbles, or boulders from any marine or lake shore is prohibited.

b. Mining of quarry rock may be permitted as a conditional use; provided, that shore processes and resources are not adversely affected.

B. Additional Standards for Rivers and Streams.

1. Mining waterward of the ordinary high-water mark of a river shall not be permitted unless:

a. Removal of specified quantities of sand and gravel or other materials at specific locations will not adversely affect the natural processes of gravel transportation for the river system as a whole; and

b. The mining and any associated permitted activities will not have significant adverse impacts to habitat for priority species nor cause a net loss of ecological functions of the shoreline.

a-c. The determinations required by this section shall be made consistent with RCW 90.58.100(1) and WAC 173-26-201(2)(a). Such evaluation of impacts should be appropriately integrated with relevant environmental review requirements of SEPA (chapter 43.21C RCW) and the SEPA rules (chapter 197-11 WAC).

d. In considering renewal, extension, or reauthorization of gravel bar and other in-channel mining operations in locations where they have previously been conducted, the County shall require compliance with this subsection to the extent that no such review has previously been conducted. Where there has been prior review, the County shall review previous determinations comparable to the requirements of this section to assure compliance with this section under current site conditions.

Comment [AP205]: Updated for consistency with WAC 173-26-241(3)(h).

~~b.e.~~ The provisions of this section do not apply to dredging of authorized navigation channels when conducted in accordance with WCC 23.40.080 (Dredging and Dredge Material Disposal).

2. Mining within any designated channel migration zone (CMZ) may be approved as shall require a shoreline conditional use.

~~4.3.~~ Scalping of accretional point bars may be permitted as a shoreline conditional use for flood hazard reduction control purposes and or market demands commercial purposes under the following conditions:

- a. Removal of specified quantities of sand and gravel or other materials at specific locations will not adversely affect the natural processes of gravel transportation for the river system as a whole. Specific studies accompanying the application shall demonstrate that no adverse flood, erosion, or other environmental impacts occur either upstream or downstream of extraction sites. Mining extraction amounts, rates, timing, and locations shall be based on a scientifically determined sediment budget adjusted periodically according to data provided by a regular monitoring plan.
- b. Aggregate washing and ponding of waste water are prohibited in floodways.
- c. Storage within the FEMA floodway is prohibited in the shoreline during the flood season (November 1st through March 1st); provided, that temporary stockpiling is permitted during working hours if all such materials are removed from the floodway at the end of each day's operation.
- d. All applicable permits and approvals, including, but not limited to, hydraulic project approval (HPA) from the Department of Fish and Wildlife and a Whatcom County flood permit, shall be obtained and all applicable provisions attached thereto shall be adhered to.

~~c.~~ Open pit mining may be permitted in a floodplain; provided, that all of the following criteria are met:

- ~~i.~~ All pits and other operations should be located outside of the channel migration zone.
- ~~ii.~~ All pits of each operation should be located and excavated to a depth so as to function as a self-flushing chain of lakes whenever the pits are overtopped by floods in order to prevent eutrophication and fish entrapment.
- ~~iii.~~ The entire operation should be sized and designed so that neither additional bank erosion, catastrophic changes in channel location, nor adverse impact to fish resources or water quality will likely result in the long term.

Comment [DN206]: Not specifically required by the WAC. Proposed for removal.

- iv. ~~The scale and mode of operation will not have adverse impacts on fish resources, water quality, and recreation resources, nor adversely impact a stream's natural capacity to erode, shift, accrete, and/or flood.~~
- v. ~~All equipment, works and structures are designed to withstand flooding without becoming a hazard in themselves nor causing adverse effects on shore features, without the necessity for shore stabilization structures.~~
- vi. ~~All structures or equipment which are not flood-proof shall be located outside of the 100-year floodplain during the flood season (November 1st through March 1st); provided, that such equipment is permitted during daily operations.~~

C. Regulations for Specific Shoreline Environment Designations

1. In the Aquatic shoreline environment mining is prohibited, except that accretional bar scalping in streams may be permitted as a shoreline conditional use; provided, that upon approval by the County and Ecology of a sediment management plan component for a mutually designated reach of river, including incorporating the findings of a programmatic environmental impact statement, the shoreline conditional use requirement will no longer be in effect unless mutually agreed to in said management plan.

D. Shoreline Area Regulations:

~~Urban. Mining is prohibited.~~

~~Urban Resort. Mining is prohibited.~~

~~Urban Conservancy. Mining is prohibited.~~

~~Shoreline Residential. Mining is prohibited.~~

~~Rural. Mining may be permitted as a conditional use subject to policies and regulations of this program.~~

~~Resource. Mining may be permitted as a conditional use subject to policies and regulations of this program.~~

~~Conservancy. Mining may be permitted as a conditional use subject to policies and regulations of this program.~~

~~Natural. Mining is prohibited.~~

1. Aquatic. Mining is prohibited, except that accretional bar scalping in streams may be permitted as a conditional use subject to policies and regulations of this program; provided, that upon approval by the county and Ecology of a sediment management plan component for a mutually designated reach of river, including incorporating the findings of a programmatic environmental impact statement, the conditional use requirement will no longer be in effect unless mutually agreed to in said management plan.

Comment [CES207]: Moved from removed 'Shoreline Area Regulations.'

Comment [CES208]: Addressed in the use table now.

23.4100.130-150 Moorage Structures—Docks, Piers and Mooring Buoys.

A. Policies.

- ~~A. Moorage associated with a single family residence is considered a water dependent use; provided, that it is designed and used as a facility to access watercraft, and other moorage facilities are not available or feasible. Moorage for water related and water enjoyment uses or shared moorage for multifamily use should be allowed as part of a mixed use development or where it provides public access.~~
- ~~B. New moorage, excluding docks accessory to single family residences, should be permitted only when the applicant/proponent has demonstrated that a specific need exists to support the intended water dependent or public access use.~~
- ~~C. As an alternative to continued proliferation of individual private moorage, mooring buoys are preferred over docks or floats. Shared moorage facilities are preferred over single user moorage where feasible, especially where water use conflicts exist or are predictable. New subdivisions of more than two lots and new multifamily development of more than two dwelling units should provide shared moorage.~~
- ~~D. Docks, piers and mooring buoys, including those accessory to single family residences, should avoid locations where they will adversely impact shoreline ecological functions or processes, including currents and littoral drift.~~
- ~~E. Moorage should be spaced and oriented in a manner that minimizes hazards and obstructions to public navigation rights and corollary rights thereto such as, but not limited to, fishing, swimming and pleasure boating, as well as private riparian rights of adjacent land owners.~~
- ~~F. Moorage should be restricted to the minimum size necessary to meet the needs of the proposed use. The length, width and height of piers and docks should be no greater than that required for safety and practicality for the primary use.~~
- ~~G. Pile supports are preferred over fills because piles do not displace water surface and intertidal or aquatic habitat and are removable and thus more flexible in terms of long term use patterns. Floats may be less desirable than pile structures where aquatic habitat or littoral drift are significant.~~
- ~~H. The use of buoys for small craft moorage is preferred over pile or float structures because of lesser long term impact on shore features and users; moorage buoys should be placed as close to shore as possible to minimize obstruction to navigation.~~
- ~~I. Shoreline resources and water quality should be protected from overuse by boaters living on vessels (live aboards). Boaters living on vessels are restricted to established marinas with facilities to address waste handling and other sanitary services.~~
- ~~J. Vessels should be restricted from extended mooring on waters of the state unless authorization is obtained from the DNR and impacts to navigation and public access are mitigated.~~
- ~~K. Piers and docks should be constructed of materials that will not adversely affect water quality or aquatic plants and animals in the long term.~~
- ~~L. New pier and dock development should be designed so as not to interfere with lawful public access to or use of shorelines. Developers of new piers and shared moorage should be encouraged to~~

Comment [AP209]: Revised per Scoping Document, Items #11a and 11b and includes a general overhaul to include more specifications.

provide physical or visual public access to shorelines whenever safe and compatible with the primary use and shore features.

~~B. Regulations.~~

A. General.

1. This section applies to all moorage structures. Marinas and boat launches are regulated pursuant to Moorage including docks, piers and mooring buoys in shoreline areas shall be subject to the policies and regulations of this section and Chapter 23.90 WCC. Shared moorage with more than four berths and Boat launching facilities are regulated under WCC 23.40.060100-040; (~~Boating Facilities~~—Marinas and Launch Ramps).
2. No pier or dock shall be used for a residence.
3. Public access facilities shall be regulated pursuant to WCC 23.30.0760 (Public Access).
4. Commercial moorage shall be permitted only for water-dependent uses, and only if the applicant/proponent demonstrates that existing facilities in the vicinity, including marinas and shared moorage, are not adequate or feasible for the proposed water-dependent use.
5. Commercial covered moorage may be permitted only where vessel construction or repair work is to be the primary activity and covered work areas are demonstrated to be the minimum necessary over water, including demonstration that adequate upland sites are not feasible.
6. Moorage structures shall not be permitted within the following shoreline habitats because of their scarcity, biological productivity, and sensitivity:
 - a. Feeder bluffs and accretion shoreforms;
 - b. Marshes and other wetlands;
 - c. Kelp and eelgrass beds; and,
 - d. Areas of high energy or shallow sloping bottoms (<2% gradient) in the marine environment.
7. Moorage structures shall not be permitted within the following shoreline habitats because of their scarcity, biological productivity, and sensitivity unless no alternative location is feasible, the project would result in a net enhancement of shoreline ecological functions, and the proposal is otherwise consistent with this program:
 - a. Estuaries;
 - b. Tidal pools on rock shores;
 - c. Spawning and holding areas for forage fish (such as herring, surf smelt and sandlance);
 - d. Subsistence, commercial and recreational shellfish beds; and
 - e. Other critical saltwater or freshwater habitats.
8. Other than for day use, all vessels mooring on waters of the state must obtain a lease or permission from the State Department of Natural Resources, except as allowed by applicable state regulations.
9. ~~No moorage shall impact the rights of navigation or public access, unless mitigated.~~
10. When there is not a moorage structure, marine rails are permissible, but shall be supported with as few piles as practicable.

~~B. Dimensional Standards—Freshwater.~~

Comment [CES210]: Revised per Scoping Document, Item #8c. This language is carried over from an existing regulation in the Boating Facilities section of the SMP related to marinas and boat launches.

Comment [CES211]: Added per DOE recommendation.

- 1 | 1. Freshwater – New overwater Moorage structures in freshwater environments may be
2 permitted, subject to the following:
3

	Design and Dimensional Standards
<u>Maximum Area: surface coverage, including all attached float decking, platform lifts, covered moorage, ramps, ells, and fingers</u>	<ul style="list-style-type: none"> • 480 sq. ft. for an individual use dock or pier • 700 sq. ft. for a shared moorage facility used by 2 residential property owners • 1,000 sq. ft. for a shared moorage facility used by 3 or more residential property owners • Public and commercial moorage structures shall be limited to the minimum area needed to accommodate the intended use. • These area limitations shall include platform lifts • Where a pier or dock cannot reasonably be constructed under the area limitation above to obtain a moorage depth of 5.5 feet measured below ordinary high water mark, an additional 4 sq. ft. of area may be added for each additional foot of pier or dock length needed to reach 5.5 feet of water depth at the waterward end of the pier or dock; provided, that all other area dimensions, such as maximum width and length, have been minimized.
<u>Maximum Width</u>	<ul style="list-style-type: none"> • For moorage structures accessory to a residential use: <ul style="list-style-type: none"> ◦ 4 feet for pier or dock walkway or ramp ◦ 6 feet for ells ◦ 2 feet for fingers ◦ 6 feet for float decking • Public and marina moorage structures shall be a maximum of 6 feet for all elements unless a need for a larger size is demonstrated
<u>Height</u>	<ul style="list-style-type: none"> • Minimum of 1.5 feet above ordinary high water to bottom of pier stringers, except the floating section of a dock and float decking attached to a pier
<u>Maximum Length</u> <ul style="list-style-type: none"> ◦ Marine Rails ◦ Floats ◦ Overall Dock Length 	<ul style="list-style-type: none"> • 20 feet waterward from the ordinary high water mark • 20 feet per user (e.g. single user – 20 feet, 2-users – 40 feet, etc.)for float decking • Minimum necessary to obtain a moorage depth of 5.5 feet measured below ordinary high watermark at the waterward end of the dock.
<u>Decking for piers, docks, walkways, platform lifts, ells, and fingers</u>	<ul style="list-style-type: none"> • Floats 6 feet wide or less must have at least 30% of the deck surface covered in functional grating • Floats greater than 6 feet wide must have at least 50% of the deck surface covered in functional grating • All other dock components must have 100% of the deck surface covered in functional grating • The open area of functional grating must be at least 60% • Replacement of more than 33% or 250 sq. ft., whichever is greater, of decking or replacement of decking substructure requires installation of functional grating in the replaced portion only

C. ~~Dimensional Standards – Marine:~~

1-2. Marine – ~~New overwater~~ Moorage structures in marine environments may be permitted, subject to the following; provided that port, industrial, and commercial piers and floats shall be the minimum area, length, and width necessary for the intended use:

	Design and Dimensional Standards
<u>Maximum Area: surface coverage, including all components</u>	<ul style="list-style-type: none"> • 480 sq. ft. for an individual use dock or pier • 700 sq. ft. for a shared moorage facility used by 2 residential property owners • 1,000 sq. ft. for a shared moorage facility used by 3 or more residential property owners

Comment [CES212]: Standards updated to meet the requirements of the Army Corps of Engineers' Regional General Permit 6 (RGP-6): Structures in Inland Marine Waters of Washington State, updated 2/12/20.

	<ul style="list-style-type: none"> Where a pier or dock cannot reasonably be constructed under the area limitation above to obtain a moorage depth of -9.5 feet mean low low water as measured at the waterward end of the dock, an additional 4 sq. ft. of area may be added for each additional foot of pier or dock length needed to reach -9.5 feet mean low low water as measured at the waterward end of the pier or dock; provided, that all other area dimensions, such as maximum width and length, have been minimized
Maximum Width	<ul style="list-style-type: none"> For moorage structures accessory to a residential use: <ul style="list-style-type: none"> 4 feet for single use or 6 feet for joint use for pier or dock walkway or ramp 6 feet for ellis 2 feet for fingers 8 feet for float decking For a joint use structure pier – 86 feet Public and marina moorage structures shall be a maximum of 6 feet for all elements unless a need for a larger size is demonstrated Maximize height over the bed to improve light transmission The bottom of the pier must be at least six feet above the bed at the landward end
Height	
Maximum Length	<ul style="list-style-type: none"> Marine Rails – 20 feet Floats – 30 feet per user (e.g., single-user – 30 feet, 2-users – 60 feet, etc) Overall Dock Length – Minimum necessary to obtain a moorage depth of -9.5 feet mean low low water as measured at the waterward end of the dock .
Decking	<ul style="list-style-type: none"> Floats must have at least 50% of the deck surface covered in functional grating. Piers, stairs, ramps, and platform lifts must have 100% of the deck surface covered in functional grating Grating openings should be oriented lengthwise in the eastwest direction to the maximum extent practicable. Grating must not be covered (on the surface or underneath) with any items (e.g., kayaks, planters, sheds, lawn chairs, etc.) except utility boxes. Grating must be either multi-directional grating with a minimum of 40% open space or square grating with a minimum of 60% open space. Provide documentation to show amount of % open area. Replacement of more than 10% or 48 sq. ft. of decking or replacement of decking substructure requires installation of functional grating in the replaced portion only

Comment [DOE-Req213]: Required Change – This change removes the ambiguous reference to an 8-foot maximum associated with joint use structures. After consultation with Whatcom County PDS staff, these changes clarify the original intent that the 8-foot width maximum applied to joint-use residential moorage structures. Staff also suggested limiting the maximum width of such structures to 6-feet.

Comment [CES214]: Revised based on USACE standards.

C. Construction Standards for ~~Overwater~~ Moorage Structures.

- Piers and docks shall be the minimum size necessary to meet the needs of the proposed water-dependent use, ~~and shall observe the following criteria:~~
- ~~Piers and docks~~ Moorage structures shall be constructed of materials that will not adversely affect water quality or aquatic plants and animals over the long term. Materials used for submerged portions of a pier or dock, decking and other components that may come in contact with water shall be approved by applicable state agencies for use in water to avoid discharge of pollutants from wave splash, rain or runoff. Wood treated with creosote, pentachlorophenol or other similarly toxic materials is prohibited. Piers and docks in lakes providing a public water supply shall be constructed of untreated materials, such as untreated wood, approved plastic composites, concrete or steel.
- Piers and docks shall use pile supports unless engineering studies demonstrate that pile supports are insufficient to ensure public safety. Riprapped or bulkheaded fills may be approved

1 | for public projects only and only as a shoreline conditional use and only when demonstrated
2 | that no feasible alternative is available. Mitigation shall be provided to ensure no net loss of
3 | shoreline ecological functions and processes.

- 4 | 4. Approaches to piers and docks shall use piers or other structures to span the entire upper
5 | foreshore to the point of intersection with stable upland soils and shall be design to avoid
6 | interference with littoral drift or wave refraction. Limited fill or excavation may be allowed
7 | landward of the OHWM to match the upland with the elevation of the pier or dock.

- 8 | 5. Pile diameter shall be the minimum necessary and pile spacing shall be the maximum feasible to
9 | minimize shading and avoid a "wall" effect that would block or baffle wave patterns, currents,
10 | littoral drift, or movement of aquatic life forms, or result in structure damage from driftwood
11 | impact or entrapment. Piles supporting a new pier must be spaced no closer than 20 feet apart.

- 12 | ~~5-6.~~ Offshore and foreshore pile structures shall allow for continuity of hydraulic energy patterns,
13 | unless specifically designed to reduce wave impact on shores.

- 14 | 7. Floatation for the float shall be fully enclosed and contained in a shell (e.g., polystyrene tubs not
15 | shrink wrapped or sprayed coatings) that prevents breakup or loss of the floatation material into
16 | the water and is not readily subject to damage by ultraviolet radiation and/or abrasion caused
17 | by rubbing against piling and/or waterborne debris.

- 18 | 8. Floatation components shall be installed under the solid portions of the float, not under the
19 | grating.

- 20 | 9. If the project includes the replacement of existing piling, they should be either partially cut with
21 | a new piling secured directly on top, fully extracted, or cut 2 feet below the mudline. If treated
22 | piling are fully extracted or cut, the holes or piles must be capped with clean, appropriate
23 | material.

- 24 | ~~6-10.~~ A maximum of two moorage pilings may be installed to accommodate the moorage of
25 | boats exceeding the length of the floats.

- 26 | 11. Overhead wiring or plumbing is not permitted on moorage structures.

- 27 | 12. Moorage facilities shall be marked with reflectors, or otherwise identified to prevent
28 | unnecessarily hazardous conditions for water surface users during the day or night. Exterior
29 | finish shall be generally non-reflective.

- 30 | 13. Moorage facilities shall be constructed and maintained so that no part of a facility creates
31 | hazardous conditions nor damages other shore property or natural features during predictable
32 | flood conditions. Floats shall be securely anchored.

- 33 | 14. Water supply, sewage disposal and disposal of nonhazardous materials associated with activities
34 | on docks and piers shall conform to applicable health standards.

- 35 | 15. No private or shared moorage may be constructed to within 200 feet of OHWM on the opposite
36 | shore of any lake or semi-enclosed body of water such as a bay, cove, or natural channel. This
37 | restriction shall not apply within marinas, dredged canal systems or approved marina-home
38 | developments.

- 39 | 16. Storage of fuel, oils, and other toxic materials is prohibited on docks and piers except portable
40 | containers when provided with secondary containment.

Comment [AP215]: Added per Scoping Document, Item #5e. This provision is consistent with WAC requirements to require a CUP for any fill waterward of the OHWM.

Comment [CES216]: Updated to meet the requirements of the Army Corps of Engineers' Regional General Permit 6 (RGP-6): Structures in Inland Marine Waters of Washington State, updated 2/12/20.

17. The width of landings, stairways, or steps must not exceed 4 feet for single-use and 6 feet for joint-use.
18. Additional standards for marine moorage structures:
- a. Floats may be held in place with lines anchored with a helical screw or “duckbill” embedded anchor, piles with stoppers and/or float support/stub piles. (1) For a single-user float, a maximum of 4 piles (not including stub piles) or embedded anchors may be installed. (2) For a joint-use float, a maximum of 8 piles (not including stub piles) or embedded anchors may be installed. (3) If embedded anchors need to be utilized, the anchor lines shall not rest on the substrate at any time; each must contain a mid-line float. (4) Only if the substrate prohibits use of piles or embedded anchors may a Corps-approved alternative be used. (5) If a concrete anchor or other Corps-approved alternative is needed to hold the float, calculations showing that it will hold without dragging or breaking during storm events are required. This analysis should include the size of the float and the dry weight and dimensions of the anchor.
 - b. If the float is positioned perpendicular to the ramp, a small access float may be installed to accommodate tidal movement of the ramp. The access float cannot be larger than 6 feet wide and 10 feet long.
 - c. No floats may be installed in the Upper Shore Zone (area landward of +5 MLLW).
 - d. Float Stops:
 - i. To suspend the float above the substrate at all tides, float stops should be installed on piles anchoring floats. This method is preferred over (d)(ii) and(d)(iii) because float stops are less impacting to the marine environment.
 - ii. If float stops attached to piles are not feasible (provide explanation) then up to four 10-inch diameter stub piles may be installed.
 - iii. Float “feet” attached to the float are an option if the substrate consists of coarse material as described in the column to the right
19. Additional standards for marine mooring buoys:
- a. Mooring buoys shall be placed at a distance specified by the Washington Department of Fish and Wildlife, the Washington Department of Natural Resources, and the U.S. Coast Guard to balance the goals of avoiding nearshore habitat and minimizing obstruction to navigation. Anchors and other design features shall meet Washington Department of Fish and Wildlife standards.
 - b. The location (latitude/longitude) of the anchor for the buoy must be identified on the project drawings.
 - c. Anchor lines must not rest or drag on the substrate, and a midline float must be installed to prevent this.
 - d. Anchors should be helical screw or another type of embedded anchor. Only if the substrate prohibits use of embedded anchors may alternative anchors (i.e., concrete block) be used. If an embedded anchor cannot be used and a concrete anchor is needed, calculations showing that the anchor will hold without dragging or breaking during storm events is required. This

analysis should include the size of the vessel and the dry weight and dimensions of the anchor.

- e. No other moorage structures may be anchored within a 117-foot radius (with the proposed buoy in the center of the 117-foot radius circle, which would result in a concentration of no more than one per acre) of the proposed buoy.
- f. New mooring buoys may not be installed in any waterbody the Washington State Department of Health has designated as "threatened" or "closed" to shellfish harvesting due to the number of boats moored there.

- ~~D. Private recreational moorage for individual lots is permitted in existing subdivisions approved on or before January 28, 1993, only where shared moorage has not already been developed. Prior to development of a new dock for a single residential lot, the applicant/proponent shall demonstrate that:~~
- ~~E. Existing facilities in the vicinity, including marinas and shared moorage, are not adequate or feasible for use;~~
- ~~F. On marine shorelines, alternative moorage, such as mooring buoys or a dock sized to accommodate a tender to provide access in conjunction with a mooring buoy, are not adequate or feasible; and~~
- ~~G. The applicant/proponent has contacted abutting property owners and none have indicated a willingness to share an existing dock or develop a shared moorage in conjunction with the applicant/proponent.~~
- ~~H. If allowed, only one private dock shall be permitted on a shoreline residential lot.~~
- ~~I. Shared moorage shall be required in accordance with the following to prevent the proliferation of moorage facilities:~~
- ~~J. Shared moorage shall be provided for all new residential developments of more than two dwelling units. New subdivisions shall contain a restriction on the face of the plat prohibiting individual docks. A site for shared moorage should be owned in undivided interest by property owners within the subdivision. Shared moorage facilities shall be available to property owners in the subdivision for community access and may be required to provide public access depending on the scale of the facility. If shared moorage is provided, the applicant/proponent shall file at the time of plat recordation a legally enforceable joint use agreement or other legal instrument that, at minimum, addresses the following:~~
- ~~K. Apportionment of construction and maintenance expenses;~~
- ~~L. Easements and liability agreements; and~~
- ~~M. Use restrictions.~~
- ~~N. On marine shorelines a dock or pier may be approved only if it is not feasible to provide mooring buoys with an adequate landing area or a dock sized to accommodate tenders.~~
- ~~O. Where a multifamily residential development, camping club or subdivision development provides shared moorage, space for the number of waterfront lots or dwelling units may be provided with an additional provision for sites without water frontage up to a ratio of 1.25 moorage spaces per total lots or units.~~

Comment [CES217]: Added to meet the requirements of the Army Corps of Engineers' Regional General Permit 6 (RGP-6): Structures in Inland Marine Waters of Washington State, updated 2/12/20.

1 P. ~~Prior to issuing a permit for shared moorage, a proponent shall file with the Whatcom County~~
2 ~~auditor a legally enforceable joint use agreement that, at minimum, addresses the following:~~
3 Q. ~~Apportionment of construction and maintenance expenses;~~
4 R. ~~Easements and liability agreements; and~~
5 S. ~~Use restrictions.~~
6 T. ~~Commercial docks shall be permitted only for water dependent uses, and only if the~~
7 ~~applicant/proponent demonstrates that existing facilities in the vicinity, including marinas and~~
8 ~~shared moorage, are not adequate or feasible for the proposed water dependent use.~~
9 U. ~~Private moorage for float planes may be permitted as a conditional use where construction will not~~
10 ~~adversely affect shoreline functions or processes, including wildlife use. Ecological restoration may~~
11 ~~be required to compensate for the greater intensity of activity associated with the use.~~
12 V. ~~If allowed under the provisions of this program, only one private dock with one accessory float, one~~
13 ~~boat lift, and one covered moorage accessory to a permitted moorage, shall be permitted on a~~
14 ~~shoreline lot owned for residential or private recreational use.~~
15 W. ~~Docks with or without a float shall be the minimum size required to provide for moorage. Single-~~
16 ~~family docks and floats shall not exceed 40 feet in length measured perpendicularly from the OHWM~~
17 ~~nor exceed three feet in height above the extreme high water level. Shared moorage may extend to~~
18 ~~80 feet in length if demonstrated to be necessary to provide adequate moorage. In the case of pile~~
19 ~~docks at marine or river locations, the height shall be limited to that which may be reasonably~~
20 ~~necessary to accommodate landing and moorage of watercraft. Commercial docks shall be the~~
21 ~~minimum length necessary to serve the type of vessel served.~~
22 X. ~~Private docks up to 60 feet in length or shared moorage up to 100 feet in length measured~~
23 ~~perpendicularly from the OHWM, including floats, may be permitted by the administrator in shallow~~
24 ~~areas where a dock sized to accommodate a tender to provide access to a mooring buoy is not~~
25 ~~feasible and where existing docks on adjacent properties presently extend out as far as that which is~~
26 ~~proposed, and where such added length is necessary in order to allow a reasonable use of the dock,~~
27 ~~as determined based upon adjacent uses; and where the extension in dock length will not adversely~~
28 ~~affect ecological processes and functions, provided the required dock length is the minimum~~
29 ~~necessary to achieve such purposes. Docks that cannot reasonably meet this standard may request a~~
30 ~~review under the variance provisions of this program.~~
31 Y. ~~Moorage shall be designed to avoid the need for maintenance dredging. The moorage of a boat~~
32 ~~larger than provided for in the original moorage design shall not be grounds for approval of d~~
33 Z. ~~In order to minimize impacts on nearshore areas and avoid reduction in ambient light level:~~
34 AA. ~~The width of piers, docks and floats shall be the minimum necessary and shall not exceed four feet~~
35 ~~in width, except where specific information on use patterns justifies a greater width. Marine floats~~
36 ~~shall not exceed eight feet in width nor 40 feet in length and freshwater floats shall not exceed six~~
37 ~~feet in width and 20 feet in length unless authorized by a variance. Exceptionally large vessels or~~
38 ~~vessels that require a relatively deep draft may be required to use a buoy, other alternative mooring~~
39 ~~scheme, or to moor in a marina. Materials that will allow light to pass through the deck may be~~
40 ~~required where width exceeds four feet.~~

1 ~~BB. Dock surfaces designed to allow maximum light penetration shall be used on walkways or~~
2 ~~gangplanks in nearshore areas.~~

3 ~~CC. Piers, docks and floats shall be located along a north/south orientation to the maximum extent~~
4 ~~feasible.~~

5 ~~DD. Private docks shall not encroach into the required sideyard setbacks for residential development~~
6 ~~(both onshore and offshore); provided, that a shared moorage may be located adjacent to or upon a~~
7 ~~side property line of the affected properties upon filing of an easement agreement or other legal~~
8 ~~instrument by the affected property owners.~~

9 ~~EE. Dock and Pier Design.~~

10 ~~FF. Moorage buoys shall be placed at a distance specified by the Washington Department of Fish and~~
11 ~~Wildlife, the Washington Department of Natural Resources, and the U.S. Coast Guard to balance the~~
12 ~~goals of avoiding nearshore habitat and minimizing obstruction to navigation. Anchors and other~~
13 ~~design features shall meet Washington Department of Fish and Wildlife standards.~~

14 ~~GG. A covered moorage accessory to a single family pier or dock, not accessory to a marina, shall have~~
15 ~~no walls other than an open structural framework to support a roof and shall not cover more than~~
16 ~~200 square feet nor exceed 15 feet in height above OHWM. Roof materials shall be translucent, or~~
17 ~~at least 50 percent clear skylights.~~

18 ~~HH. Commercial covered moorage may be permitted only where vessel construction or repair work is to~~
19 ~~be the primary activity and covered work areas are demonstrated to be the minimum necessary~~
20 ~~over water, including demonstration that adequate upland sites are not feasible.~~

21 ~~II. No private or shared moorage may be constructed to within 200 feet of OHWM on the opposite~~
22 ~~shore of any lake or semi-enclosed body of water such as a bay, cove, or natural channel. This~~
23 ~~restriction shall not apply within marinas, dredged canal systems or approved marina-home~~
24 ~~developments.~~

25 ~~JJ. If a dock is provided with railing, such railing shall not exceed 36 inches in height and shall be an~~
26 ~~open framework that does not unreasonably interfere with shoreline views of adjoining properties~~
27 ~~or lawful use of water surface~~

28 ~~KK. Water supply, sewage disposal and disposal of nonhazardous materials associated with activities on~~
29 ~~docks and piers shall conform to applicable health standards.~~

30 ~~LL. Moorage facilities shall be marked with reflectors, or otherwise identified to prevent unnecessarily~~
31 ~~hazardous conditions for water surface users during the day or night. Exterior finish shall be~~
32 ~~generally non-reflective.~~

33 ~~MM. Moorage facilities shall be constructed and maintained so that no part of a facility creates~~
34 ~~hazardous conditions nor damages other shore property or natural features during predictable flood~~
35 ~~conditions. Floats shall be securely anchored.~~

36 ~~NN. No pier or dock shall be used for a residence.~~

37 ~~OO. Storage of fuel, oils, and other toxic materials is prohibited on docks and piers except portable~~
38 ~~containers when provided with secondary containment.~~

39 ~~PP. Public access facilities shall be provided in accordance with policies and regulations in~~
40 ~~WCC 23.90.080.~~

1 D. Additional Standards for Individual use docks and piersMoorage.

Comment [CES218]: Updated to meet current state and federal regs & guidance

- 2 1. An individual use dock may consist of one pier, one float or platform lift, one boat lift, and one
- 3 covered moorage.
- 4 2. When allowed under the provisions of this program, only one private dock shall be permitted as
- 5 an accessory use to a primary use.
- 6 3. Private recreational moorage for individual lots is permitted in subdivisions approved on or
- 7 before January 28, 1993, only where shared moorage has not already been developed.
- 8 4. Prior to development of a new dock for a single residential lot, the applicant/proponent shall
- 9 demonstrate that:
 - 10 a. Existing facilities in the vicinity, including marinas and shared moorage, are not adequate or
 - 11 feasible for use;
 - 12 b. Alternative moorage, such as mooring buoys or a dock or marine rail system sized to
 - 13 accommodate a tender to provide access in conjunction with a mooring buoy, are not
 - 14 adequate or feasible; and
 - 15 c. The applicant/proponent has contacted abutting property owners and none have indicated
 - 16 a willingness to share an existing dock or develop a shared moorage in conjunction with the
 - 17 applicant/proponent.
- 18 5. Private moorage for float planes may be permitted as a shoreline conditional use where
- 19 construction will not adversely affect shoreline functions or processes, including wildlife use.
- 20 Ecological restoration may be required to compensate for the greater intensity of activity
- 21 associated with the use.
- 22 6. Private docks shall not encroach into the required sideyard setbacks for residential development
- 23 (both onshore and offshore).
- 24 4-7. Covered moorage accessory to a single-family pier or dock shall have no walls other than an
- 25 open structural framework to support a roof and shall not cover more than 200 square feet nor
- 26 exceed 15 feet in height above OHWM. Roof materials shall be translucent, or at least 50
- 27 percent clear skylights.

28 E. Additional Standards for Shared Moorage.

- 29 1. When allowed under the provisions of this program, a shared moorage dock may be permitted
- 30 for multiple users. Such docks may consist of one pier and multiple floats or platform lifts, boat
- 31 lifts, and covered moorages, not to exceed the number of authorized users nor the total
- 32 maximum area allowed per WCC 23.40.140(B).
- 33 2. Shared moorage shall be required in accordance with the following to prevent the proliferation
- 34 of moorage facilities:
 - 35 a. Shared moorage shall be provided for all residential developments of more than two
 - 36 dwelling units.
 - 37 b. Subdivisions shall contain a restriction on the face of the plat prohibiting individual docks.
 - 38 c. Shared moorage facilities shall be available to property owners in the subdivision for
 - 39 community access and may be required to provide public access depending on the scale of

the facility. A site for shared moorage should be owned in undivided interest by property owners within the subdivision.

- d. If shared moorage is provided, the applicant/proponent shall file at the time of plat recordation a legally enforceable joint use agreement or other legal instrument that, at minimum, addresses the following:
- i. Apportionment of construction and maintenance expenses;
 - ii. Easements and liability agreements; and
 - iii. Use restrictions.
- e. On marine shorelines a dock or pier may be approved only if it is not feasible to provide mooring buoys with an adequate landing area or a dock or marine rail system sized to accommodate tenders.
- f. Where a new multifamily residential, camping club, or subdivision development proposes to provide shared moorage, space for the number of waterfront lots or dwelling units may be provided with an additional provision for sites without water frontage up to a ratio of 1.25 moorage spaces per total lots or units. This provision does not apply to existing developments.

3. Shared moorage shall be limited to the amount of moorage needed to serve lots with water frontage; provided, that a limited number of upland lots may also be accommodated. Applications for shared moorage shall demonstrate that mooring buoys are not feasible prior to approval of dock moorage. Shared moorage currently leased or proposed to be leased to upland property owners shall be reviewed as a marina.
4. Shared moorage may be located adjacent to or upon a side property line of the affected properties upon filing of an easement agreement or other legal instrument by the affected property owners.

C. Shoreline Area Regulations.

- A. Urban. Private and shared moorage are permitted subject to policies and regulations of this program. Public, commercial and industrial moorage, including expansion of existing piers, and covered moorage or floatplane moorage accessory to a permitted moorage may be permitted as a conditional use.
- B. Urban Resort. Private, shared and public moorage, and covered moorage or floatplane moorage accessory to a permitted moorage, may be permitted as a conditional use subject to the policies and regulations of this program. Commercial moorage is prohibited, except piers serving small passenger vessels may be permitted as a conditional use. Industrial moorage is prohibited.
- C. Urban Conservancy. Private and shared moorage on non-marine shorelines are permitted subject to policies and regulations of this program. Private and shared moorage on marine shorelines, other than constructed marinas or canals, may be permitted as a conditional use. Public and commercial moorage, including the expansion of existing piers, and floatplane moorage accessory to a permitted moorage may be permitted as a conditional use. Industrial and covered moorage are prohibited.

Comment [CES219]: Addressed by use table now.

- ~~D.— Shoreline Residential. Private and shared moorage are permitted subject to policies and regulations of this program. Public and commercial moorage, including expansion of existing piers, and covered moorage or floatplane moorage accessory to a permitted moorage may be permitted as a conditional use. Industrial moorage is prohibited.~~
- ~~E.— Rural. Private and shared moorage are permitted subject to policies and regulations of this program. Public, industrial and commercial moorage, including expansion of existing piers, and floatplane moorage accessory to a permitted moorage may be permitted as a conditional use. Covered moorage is prohibited.~~
- ~~F.— Resource. Private and shared moorage are permitted subject to policies and regulations of this program. Public, industrial and commercial moorage, including expansion of existing piers, and floatplane moorage accessory to a permitted moorage may be permitted as a conditional use. Covered moorage is prohibited.~~
- ~~G.— Conservancy. Private and shared moorage on nonmarine shorelines are permitted subject to policies and regulations of this program. Private and shared moorage on marine shorelines, other than constructed marinas or canals, may be permitted as a conditional use. Public and commercial moorage, including the expansion of existing piers, and floatplane moorage accessory to a permitted moorage may be permitted as a conditional use. Industrial and covered moorages are prohibited.~~
- ~~H.— Natural. Moorage is prohibited, except public access, interpretive or nature observation facilities that are compatible with the area's physical and visual character may be conditionally permitted subject to policies and regulations of this program. Covered and floatplane moorage are prohibited.~~
- ~~I.— Aquatic. Moorage is permitted, subject to the use and development regulations of the abutting upland shoreline area designation. Unless authorized by WA DNR or its designees, extended moorage longer than 60 consecutive days in one location shall be considered an obstruction which interferes with the normal public use of the surface of the waters of the state, and is prohibited.~~

23.4100.140-160 Recreation.

Shoreline recreation shall be subject to the policies and regulations of this section and Chapter 23.90 WCC.

A.— Policies.

A.— Shoreline recreational development should be given priority for shoreline location to the extent that the use facilitates the public's ability to reach, touch, and enjoy the water's edge, to travel on the waters of the state, and to view the water and the shoreline. Where appropriate, such facilities should be dispersed along the shoreline in a manner that supports more frequent recreational access and aesthetic enjoyment of the shoreline for a substantial number of people.

B.— Recreational developments should facilitate appropriate use of shoreline resources while conserving them. These resources include, but are not limited to: accretion shoreforms, wetlands, soils, ground water, surface water, native plant and animal life, and shore processes.

- ~~C. Recreational development requiring extensive structures, utilities and roads and/or substantial modifications of topography or vegetation removal should not be located or expanded in areas where damage to persons, property, and/or shoreline functions and processes is likely to occur.~~
- ~~D. Recreational developments and plans should provide the regional population a varied and balanced choice of recreation experiences in appropriate locations. Public agencies and private developers should coordinate their plans and activities to provide a wide variety of recreational opportunities without needlessly duplicating facilities.~~
- ~~E. Trail links between shoreline parks and public access points should be encouraged for walking, horseback or bicycle riding and other non-motorized vehicle access where appropriate. The Whatcom County Comprehensive Park and Recreation Open Space Plan should be considered in design and approval of public trail systems.~~
- ~~F. Access to natural character recreational areas, including but not limited to beaches and fishing streams, should be a combination of linear shoreline trails or easements and small parking or access tracts to minimize user concentration on small portions of the shoreline.~~
- ~~G. Recreation facilities should incorporate public education regarding shoreline ecological functions and processes, the role of human actions on the environment and the importance of public involvement in shorelines management. Opportunities incorporating educational and interpretive information should be pursued in design and operation of recreation facilities and nature trails.~~
- ~~H. Reasonable physical or visual public access to shorelines should be provided and integrated with recreational developments in accordance with WCC 23.90.080.~~
- ~~I. Recreation development should be located only where utility and road capability is adequate, or may be provided without significant damage to shore features commensurate with the number and concentration of anticipated users.~~
- ~~J. Cooperative efforts among public and private persons toward the acquisition and/or development of suitable recreation sites or facilities should be explored to assure long-term availability of sufficient public sites to meet local recreation needs.~~
- ~~B. Regulations. Where significant adverse impacts are adequately mitigated, recreational development is a priority use for shoreline location, subject to the following:~~
- A. General.
1. Water-related and water-enjoyment uses ~~do shall~~ not displace water-dependent uses ~~and are consistent with existing water-related and water-enjoyment uses.~~
 2. Activities provided by recreational facilities must bear a substantial relationship to the shoreline, or provide physical or visual access to the shoreline. Facilities for water-dependent recreation such as fishing, clam digging, swimming, boating, and wading, and water-related recreation such as picnicking, hiking, and walking should be located near the shoreline, while non-water-related recreation facilities shall be located inland.
 3. Recreation areas or facilities ~~on the shoreline~~ shall provide physical or visual public access consistent with the criteria of WCC 23.30.06090.080 (Public Access).
 4. Recreational facilities with large grass areas, such as golf courses and playing fields, and facilities with extensive impervious surfaces shall incorporate means to prevent erosion, control the

1 amount of runoff, and prevent harmful concentrations of chemicals and sediment from entering
2 waterbodies in accordance with the ~~policies and~~ regulations of WCC 23.390.0340 (Water Quality
3 and Quantity).

4 5. Recreational use of motor vehicles including unlicensed off-road vehicles is permitted only on
5 roads or trails specifically designated for such use. Such use is prohibited on tidelands,
6 backshore beaches, streams, or wetlands; except as necessary for public health and safety or
7 maintenance.

8 6. Trails shall meet the requirements of WCC Chapter 16.16 (Critical Areas).

9 B. Regulations for Specific Shoreline Environment Designations.

10 1. In the Urban Conservancy shoreline environment, low intensity water-oriented recreational use
11 and development is permitted subject to the following criteria:

- 12 a. Structures will not result in more than 10 percent building coverage or 4,000 square feet,
13 whichever is greater, and total impervious surface will not exceed 20 percent, or 10,000
14 square feet, whichever is greater.
- 15 b. Alteration of topography shall be limited to the minimum necessary to accommodate
16 allowed development, and generally less than 30 inches.
- 17 c. Use of areas or facilities will not result in use patterns that lead to degradation of shoreline
18 ecological functions.

19 2. In the Resource shoreline environment, low intensity water-oriented recreational use and
20 development is permitted; provided, that no designated agricultural or forest resource lands of
21 long-term significance are displaced.

22 3. In the Conservancy shoreline environment, low intensity water-oriented recreational use and
23 development is permitted subject to the following criteria:

- 24 a. Structures on sites of one acre or less will not result in more than 10 percent building
25 coverage or 2,000 square feet, whichever is greater, and total impervious surface will not
26 exceed 20 percent or 5,000 square feet, whichever is greater.
- 27 b. Structures on sites greater than one acre will not result in more than five percent building
28 coverage or 2,000 square feet, whichever is greater, and total impervious surface will not
29 exceed 10 percent or 10,000 square feet, whichever is greater.
- 30 c. Alteration of topography shall be limited to the minimum necessary to accommodate
31 allowed development, and generally less than 30 inches.
- 32 d. Use of areas or facilities will not result in use patterns that lead to degradation of shoreline
33 ecological functions.

34 4. In the Natural shoreline environment, low intensity water-oriented recreational use and
35 development consisting of primitive trails or primitive campsites is permitted subject to the
36 following criteria:

- 37 a. Essential minor structures such as trails, stairs, small picnic areas, primitive roads,
38 viewpoints, restrooms, interpretive facilities, or development that will not adversely affect
39 shoreline ecological functions and processes are permitted.
- 40 b. Any necessary landscaping shall use native or similar self-maintaining vegetation.

c. Recreational development requiring extensive structures or substantial alterations to topography or native vegetation is prohibited.

5. In the Aquatic shoreline area environment, water-oriented recreational use and development is permitted, subject to the use and development regulations of the abutting upland shoreline area environment designation; provided, that underwater parks may be permitted as a shoreline conditional use.

Comment [AP220]: Carried over from removed 'Shoreline Area Regulations.'

A. Shoreline Area Regulations.

Comment [CES221]: Addressed in use table now.

1. ~~Urban. Water-oriented recreational use and development is permitted subject to policies and regulations of this program.~~
2. ~~Urban Resort. Water-oriented recreational use and development is permitted subject to policies and regulations of this program.~~
3. ~~Urban Conservancy. Low intensity water-oriented recreational use and development is permitted subject to policies and regulations of this program and the following criteria:~~
 - a. ~~Structures will not result in more than 10 percent building coverage or 4,000 square feet, whichever is greater, and total impervious surface will not exceed 20 percent, or 10,000 square feet, whichever is greater.~~
 - b. ~~Alteration of topography shall be limited to the minimum necessary to accommodate allowed development, and generally less than 30 inches.~~
 - c. ~~Use of areas or facilities will not result in use patterns that lead to degradation of shoreline ecological functions.~~
4. ~~Shoreline Residential. Water-oriented recreational use and development is permitted subject to policies and regulations of this program.~~
5. ~~Rural. Water-oriented recreational use and development is permitted subject to policies and regulations of this program.~~
6. ~~Resource. Low intensity water-oriented recreational use and development is permitted subject to policies and regulations of this program; provided, that no designated agricultural or forest resource lands of long term significance are displaced.~~
7. ~~Conservancy. Low intensity water-oriented recreational use and development is permitted subject to policies and regulations of this program and the following criteria:~~
 - a. ~~Structures on sites of one acre or less will not result in more than 10 percent building coverage or 2,000 square feet, whichever is greater, and total impervious surface will not exceed 20 percent or 5,000 square feet, whichever is greater.~~
 - b. ~~Structures on sites greater than one acre will not result in more than five percent building coverage or 2,000 square feet, whichever is greater, and total impervious surface will not exceed 10 percent or 10,000 square feet, whichever is greater.~~
 - c. ~~Alteration of topography shall be limited to the minimum necessary to accommodate allowed development, and generally less than 30 inches.~~
 - d. ~~Use of areas or facilities will not result in use patterns that lead to degradation of shoreline ecological functions.~~

1 ~~8. Natural. Low intensity water oriented recreational use and development consisting of primitive~~
2 ~~trails or primitive campsites is permitted subject to policies and regulations of this program and~~
3 ~~the following criteria:~~

4 ~~a. Essential minor structures such as trails, stairs, small picnic areas, primitive roads,~~
5 ~~viewpoints, restrooms, interpretive facilities, or development that will not adversely affect~~
6 ~~shoreline ecological functions and processes are permitted, subject to policies and~~
7 ~~regulations of this program.~~

8 ~~b. Any necessary landscaping shall use native or similar self-maintaining vegetation.~~

9 ~~c. Recreational development requiring extensive structures or substantial alterations to~~
10 ~~topography or native vegetation is prohibited.~~

11 ~~9. Aquatic. Water oriented recreational use and development is permitted, subject to the use and~~
12 ~~development regulations of the abutting upland shoreline area designation; provided, that~~
13 ~~underwater parks may be permitted as a conditional use.~~

14 **~~23.4100.150-170 Residential.~~**

15 ~~Residential development in shoreline areas shall be subject to the policies and regulations of this section~~
16 ~~and Chapter 23.90 WCC. This section applies to rResidential development, uses, and activities. as~~
17 ~~defined in WCC Chapter 23.110 includes multifamily development and the The creation of new~~
18 ~~residential lots through land division is regulated pursuant to WCC 23.40.130 (Land Division).~~

19 ~~B. Policies.~~

20 ~~A. Single family residences are designated in Chapter 90.58 RCW as a priority use in those limited~~
21 ~~instances when authorization is given for alterations of the natural condition of shorelines of the~~
22 ~~state.~~

23 ~~B. New residential development is encouraged to cluster dwelling units together to reduce physical~~
24 ~~and visual impacts on shorelines and to reduce utility and road costs. Planned unit developments~~
25 ~~that include common open space and recreation facilities, or a variety of dwelling sizes and types,~~
26 ~~are encouraged at suitable locations as a preferable alternative to extensive single lot subdivisions~~
27 ~~on shorelines. Planned unit developments (Chapter 20.85 WCC) may also include a limited number~~
28 ~~of neighborhood commercial business uses where consistent with the applicable zoning regulations.~~

29 ~~C. Allowable density of new residential development should comply with applicable comprehensive~~
30 ~~plan goals and policies, zoning restrictions, and shoreline area designation standards. The density~~
31 ~~per acre of development should be appropriate to local natural and cultural features.~~

32 ~~D. Structures or development for uses accessory to residential use should preserve shoreline open~~
33 ~~space, be visually and physically compatible with adjacent cultural and shoreline features, be~~
34 ~~reasonable in size and purpose, and result in no net loss of shoreline ecological functions and~~
35 ~~processes.~~

36 ~~E. Buildings greater than 35 feet above average grade level that will obstruct the views of a substantial~~
37 ~~number of residences on areas adjoining such shorelines are limited by the Act (RCW 90.58.320) to~~
38 ~~those cases where this program does not prohibit such development and then only when overriding~~
39 ~~considerations of the public interest will be served. This program provides opportunities for~~

buildings greater than 35 feet in height in limited areas where consistent with development objectives and the goals and policies of this program.

F. ~~New residential development should be planned and built in accordance with the policies and regulations in WCC 23.90.030 and to minimize the need for shoreline stabilization and flood hazard reduction measures.~~

G. ~~Measures to conserve native vegetation along shorelines should be required for all residential development. Vegetation conservation may include avoidance or minimization of clearing or grading, restoration of areas of native vegetation, and/or control of invasive or nonnative vegetation.~~

H. ~~Whenever possible, nonregulatory methods to protect, enhance, and restore shoreline ecological functions and other shoreline resources should be encouraged for residential development. Such methods may include resource management planning, low impact development techniques, voluntary protection and enhancement projects, education, or incentive programs.~~

I. ~~New multiunit residential development, including subdivision of land for more than four parcels, should provide substantial shore space for development residents and the public, unless public access is infeasible due to incompatible uses, safety, impacts to shoreline ecology or legal limitations.~~

J. ~~Development should provide open space corridors between structures, and along site boundaries, so as to provide space for outdoor recreation, preserve views, and minimize use conflicts.~~

K. ~~Recreation oriented residential development in the shoreline should be located only where substantial recreation opportunities are provided on site, and where nearby property owners and other appropriate uses will not be adversely affected.~~

C. ~~Regulations.~~

A. General.

1. ~~New~~ Over-water residence ~~cestral structures~~, including floating homes, are prohibited.

1-2. ~~New~~ Residential development may not be approved in cases when it can be reasonably foreseeable that the development or use would require structural flood hazard reduction measures within a channel migration zone or floodway during the life of the development or use.

3. ~~New~~ Residential development shall assure through a geotechnical analysis that the development will not require shoreline stabilization for the life of structure (100 years). Prior to approval, geotechnical analysis of the site and shoreline characteristics shall demonstrate that shoreline stabilization is unlikely to be necessary; setbacks from steep slopes, bluffs, landslide hazard areas, seismic hazard areas, riparian and marine shoreline erosion areas shall be sufficient to protect structures during the life of the structure (100 years); and impacts to adjacent, downslope or down-current properties are not likely to occur. The greater setback resulting from this regulation or WCC 23.90.130 23.40.020 (Shoreline Bulk Provisions) shall apply.

2. Clustering and low impact development techniques may be required where appropriate to minimize physical and visual impacts on shorelines in accordance with policies and regulations of WCC 23.90.090.

Comment [CES222]: Moved to land division

4. Residential structures, accessory uses, and related facilities shall be designed and located so as to minimize view obstructions to and from shorelines and waterbodies.

5. Utilities shall be located within roadway and driveway corridors and rights-of-way wherever feasible.

Comment [CES223]: Moved from Site Planning section. Required to meet WAC 173-26-241(3)(l).

B. Standards for Single-Family Residential Use on Constrained Lots.

Comment [CES224]: Moved from old nonconforming section.

1. Legally existing lots with a depth (the distance from the ordinary high water mark to the inside edge of the frontage setback) that would not allow for compliance with the reduced standard buffer may be allowed without a shoreline variance when the following criteria are met:

2. The lot is vacant or existing structures are removed; provided an existing primary single family residential structure may be enlarged, consistent to WCC 23.50.020, to the maximum building area allowed in (3) below.

3. The building area lying landward of the shoreline buffer and interior to required side yard setbacks shall not exceed 2,500 square feet or less. The building area means the proposed residence, normal appurtenances (except drainfields), and any proposed residential accessory structures the entire area that will be disturbed to construct the home, sidewalks and similar structures (except the single path allowed for shoreline access), parking areas, normal appurtenances (except drainfields). Additionally, and another 500 square feet of low-impact development (LID) landscaping, including any lawn, turf, ornamental vegetation, or gardens is allowed, provided that it is set back as far as feasible from the shoreline.

4. In no case shall the proposed residence be located waterward of the common-line setback as determined in applicable sections of Consideration shall be given to view impacts in accordance with WCC 23.40.020(D)(2) (Common-Line Setback).

5. The lot is not subject to landslide hazard areas, alluvial fan hazard areas, or riverine and coastal erosion hazard areas or associated buffers as defined in (see WCC 16.16.310);

6. The nonconforming lot was created prior to the effective date of this program (August 8, 2008);

7. Appropriate measures are taken to mitigate all adverse impacts, including but not limited to locating the building area and landscaping allowance residence in the least environmentally damaging location relative to the shoreline and any critical areas and their buffers; and provided, that;

8. All administrative reductions to side yard and/or frontage setbacks are pursued. Such reductions may be approved administratively without a zoning variance, when doing so will not create a hazardous condition or a condition that is inconsistent with this program and WCC Title 20.

9. There is no opportunity to consolidate lots under common ownership that will alleviate the nonconformity;

10. The shoreline jurisdiction shoreline area outside of the approved development is retained if fully functional, and/or enhanced with native trees, shrubs and groundcovers through development of a mitigation plan, including monitoring and maintenance contingencies per WCC 16.16.260(G) optimized to provide the maximum shoreline ecological functions and ecosystem wide functions;

Comment [DOE-Req225]: Required Change – It is unclear what the term “optimized” means but this change restores the exiting requirement that the remaining buffer areas are enhanced with trees, shrubs and groundcovers and maintained in perpetuity.

11. Development may not take place waterward of the ordinary high water mark; and

12. Accessory utilities ~~Facilities such as a conventional drainfield system may be allowed within critical areas or their buffers, subject to specific criteria in Chapter 16.16 WCC.~~

C. Additional Standards for Multifamily Residential Development.

1. ~~Due to the potential for adverse impact upon adjacent uses and the community from such high-rise and multiunit buildings that exceed 35 feet in height, the County must find proposals for such buildings to be consistent with this program and the Act, particularly as related to RCW 90.58.320, and the following factors:~~

Comment [CES226]: Already addressed by 23.40.020(C)(2)

2. ~~1.~~ Open space areas and setbacks shall be required along shorelines and between buildings ~~wherever feasible~~. These areas should be large enough so that ~~local~~ views are not extensively blocked, and building residents have privacy and ample space for outdoor recreation and circulation. The amount of open space shall increase proportionately as density and/or height increase. In general, a view corridor must be maintained across 30 percent of the average parcel width with additional width provided for the percentage increase above 35 feet to a maximum of 50 percent of the lot width. The increased area within a view corridor due to increased height must be devoted to landscaping or other open space.

3. ~~Urban services, including sanitary sewers, public water supply, fire protection, stormwater drainage, and police protection shall be provided at adequate levels to protect the public health, safety, and welfare.~~

Comment [CES227]: Covered by Title 20.

4. ~~2.~~ Circulation, parking areas, and outdoor storage or loading areas shall be adequate in size and designed so that the public safety and local aesthetic values are not diminished. Such areas shall be screened where appropriate from open space areas by landscaping, fences or other similar structures, or grade separation.

3. ~~New multiunit m~~ Multifamily development ~~with more than four units and, including subdivision of land for more than four parcels,~~ shall incorporate public access to ~~publicly owned shorelines or public waterbodies~~ waters of the state as provided for in WCC 23.390.0780 (Public Access) unless the site is designated in a shoreline public access plan for a greater component of public access or public access is demonstrated to be infeasible or inappropriate. ~~The amount and configuration of public access shall depend on the proposed use(s) and the following criteria:~~

Comment [DOE-Req228]: Required Change – This change restores the existing language that requires consideration for all multifamily development. There is nothing in the public access standards of the SMP Guidelines that exempt multifamily developments under a certain unit size [WAC 173-26-221(4)]

- a. ~~Multifamily development that have views of water areas shall provide a public pedestrian viewing area.~~
- b. ~~Multifamily development adjacent to waters of the state shall provide access to a point abutting the water that will provide visual access, and shall provide physical access to public waterways, public marine waters, and public tidelands that are physically accessible at low tide or low water.~~
- c. ~~Multifamily development subject to requirements for dedication of land to provide open space or mitigate recreation demands of the development shall dedicate such land on or adjacent to public waterways or marine shorelines, as applicable, unless the ecological sensitivity of such land precludes public access. Portions of the area dedicated may be fenced or otherwise restricted to limit public access to ecologically sensitive areas.~~

Comment [CES229]: Mimicking the public access requirements for land divisions.

5.4. Recreational needs of building residents shall be provided through on-site recreation facilities and access to shorelines. The variety and number of on-site recreation facilities should increase proportionately as density increases. ~~Where appropriate, public access should be provided and integrated with the development.~~

A. ~~Location and Design.~~

1. ~~As mandated by the Act (RCW 90.58.320), no shoreline permit may be issued for any new or expanded building or structure of more than 35 feet above average grade level on shorelines that will obstruct the view of a substantial number of residences on areas adjoining such shorelines, except where this program does not prohibit such development and only when overriding considerations of the public interest will be served.~~
2. ~~Minimum required setbacks from shorelines and side property lines, maximum height limits and open space requirements are contained in WCC 23.90.130, Shoreline bulk provisions – Buffers, setbacks, height, open space and impervious surface coverage.~~

B.D. Additional Standards for Accessory Uses and Development.

1. ~~Accessory development common to residences includes, but is not limited to, recreational moorage (mooring buoys, docks and floats), garages and shops, parking areas, water craft storage, shoreline stabilization, fences, cabanas, tennis courts, swimming pools, saunas, antennas, decks, walkways and landscaping.~~
- 2.1. ~~Shoreline permits shall be required for accessory development that does not meet the intent and definition of an appurtenance as defined in WCC 23.110.010(16).~~
2. ~~Such Non-water dependent accessory uses development shall not be located are prohibited in required shoreline setbacks; except, as provided in WCC Chapter 16.16 (Critical Areas).~~
3. ~~Non-water dependent development uses and shall be prohibited over the water, unless clearly water dependent such as moorage (mooring buoys, docks and floats) for recreational or personal use.~~
4. ~~For projects involving two or more dwelling units, only shared moorage consisting of mooring buoys, or shared moorage and/or floats, is permitted. Individual private docks are prohibited. Shared moorage may be approved if it meets all requirements in WCC 23.100.090.~~
- 5.4. ~~Private recreational docks and floats for individual lots are permitted in existing subdivisions which were approved on or before January 28, 1993, only where shared moorage has not already been developed and subject to the policies and regulations in WCC 23.100.090. For docks and piers, see WCC 23.40.150 (Moorage Structures).~~

E. Regulations for Specific Shoreline Environment Designations.

1. In the Natural shoreline environment, residential development is prohibited, except that one single-family residence per legal lot may be permitted as a shoreline conditional use where there is no feasible location outside of the shoreline.

D. ~~Shoreline Area Regulations.~~

- A. ~~Urban. Residential development is permitted subject to policies and regulations of this program.~~

Comment [CES230]: Deleted throughout, as every use has to meet the general setbacks.

Comment [DN231]: Deleted, as this is a definition and is covered there.

Comment [AP232]: Moved from 'Shoreline Area Regulations.'

Comment [CES233]: Addressed in use table now.

- ~~B. Urban Resort. Residential development is permitted subject to policies and regulations of this program.~~
- ~~C. Urban Conservancy. Single family and duplex development is permitted subject to policies and regulations of this program. Subdivision of property shall not be allowed in a configuration that will require significant vegetation removal or shoreline modification or result in a net loss of shoreline ecological functions and processes at the time of development of the subdivision and/or use of each new parcel. All other residential development may be permitted as a conditional use.~~
- ~~D. Shoreline Residential. Residential development is permitted subject to policies and regulations of this program.~~
- ~~E. Rural. Residential development is permitted subject to policies and regulations of this program.~~
- ~~F. Resource. Residential development limited to farm related residences or one residence and one accessory dwelling unit is permitted per existing parcel where there is no feasible location outside of the shoreline.~~
- ~~G. Conservancy. Single family and duplex development is permitted subject to policies and regulations of this program. Subdivision of property shall not be allowed in a configuration that will require significant vegetation removal or shoreline modification or result in a net loss of shoreline ecological functions and processes at the time of development of the subdivision and/or use of each new parcel. All other residential development may be permitted as a conditional use.~~
- ~~H. Natural. Residential development is prohibited, except that one single family residence per existing lot of record may be permitted as a conditional use where there is no feasible location outside of the shoreline.~~
- ~~I. Aquatic. Residential development is prohibited.~~

23.4100.160-180 Restoration and Enhancement.

- ~~c. Restoration in shoreline areas shall be subject to the policies and regulations of this section and Chapter 23.90 WCC.~~
- ~~A. Policies.~~
- ~~1. This program recognizes the importance of restoration of shoreline ecological functions and processes and encourages cooperative restoration efforts and programs between local, state, and federal public agencies, tribes, nonprofit organizations, and landowners to address shorelines with impaired ecological functions and/or processes.~~
 - ~~2. Restoration actions should restore shoreline ecological functions and processes as well as shoreline features and should be targeted towards meeting the needs of sensitive and/or locally important plant, fish and wildlife species as well as the biological recovery goals for early Chinook and bull trout populations, and other salmonid species and populations.~~
 - ~~3. Restoration should be integrated with other parallel natural resource management efforts such as the WRIA 1 Salmonid Recovery Plan and the WRIA 1 Watershed Management Plan.~~
 - ~~4. Priority should be given to restoration actions that:~~

- ~~2. Create dynamic and sustainable ecosystems.~~
- ~~3. Restore connectivity between stream/river channels, floodplains and hyporheic zones.~~
- ~~4. Restore natural channel forming geomorphologic processes.~~
- ~~5. Mitigate peak flows and associated impacts caused by high stormwater runoff volume.~~
- ~~6. Reduce sediment input to streams and rivers and associated impacts.~~
- ~~7. Improve water quality.~~
- ~~8. Restore native vegetation and natural hydrologic functions of degraded and former wetlands.~~
- ~~9. Replant native vegetation in riparian areas to restore functions.~~
- ~~10. Restore nearshore ecosystem processes, such as sediment transport and delivery and tidal currents that create and sustain habitat.~~
- ~~11. Restore pocket estuaries that support salmon life histories, including feeding and growth, refuge, osmoregulation, and migration.~~
- ~~12. Address contamination along industrial shoreline regions.~~

~~A. Regulations- General.~~

1. Restoration of ecological functions and processes shall be allowed on all shorelines and shall be located, designed, and implemented in accordance with applicable policies and regulations of this program.
2. Restoration shall be carried out in accordance with an approved shoreline restoration plan, County Resolution 2007-011, and in accordance with the policies and regulations of this program.
3. The County may grant relief from shoreline master program development standards and use regulations resulting from shoreline restoration projects within urban growth areas consistent with criteria and procedures in WAC 173-27-215.

Comment [DN234]: Moved from General Regulations section (WCC 23.30)

~~1. Shoreline Area Regulations.~~

- ~~a. Urban. Restoration activities are permitted subject to policies and regulations of this program.~~
- ~~b. Urban Resort. Restoration activities are permitted subject to policies and regulations of this program.~~
- ~~c. Urban Conservancy. Restoration activities are permitted subject to policies and regulations of this program.~~
- ~~d. Shoreline Residential. Restoration activities are permitted subject to policies and regulations of this program.~~
- ~~e. Rural. Restoration activities are permitted subject to policies and regulations of this program.~~
- ~~f. Resource. Restoration activities are permitted subject to policies and regulations of this program.~~
- ~~g. Conservancy. Restoration activities are permitted subject to policies and regulations of this program.~~
- ~~h. Natural. Restoration activities are permitted subject to policies and regulations of this program.~~
- ~~i. Aquatic. Restoration activities are permitted subject to policies and regulations of this program.~~

Comment [AP235]: Added per Periodic Review Checklist, Item 2009.a, and Scoping Document, Item #2f.

Comment [CES236]: Addressed in use table now.

1 **23.4100.170-190 Shoreline Stabilization.**

2 **A. General.**

- 3 1. All development shall be located and designed to avoid the need for future shoreline
4 stabilization to the extent feasible.
- 5 2. Shoreline stabilization measures shall comply with the principals and standards of WAC 173-26-
6 231(3)(a) (Shoreline Stabilization).
- 7 3. Shoreline stabilization structures shall not result in a net loss of shoreline ecological functions. If
8 shoreline stabilization is necessary pursuant to a geotechnical analysis, the method, either hard
9 or soft, may be required to provide mitigation.
- 10 4. When authorized consistent with these provisions, shoreline stabilization measures shall be
11 designed in accordance with WDFW's Integrated Streambank Protection Guidelines or WDFW's
12 Marine Shoreline Design Guidelines, whichever is relevant to the particular environment.
- 13 4.5. Alternatives for shoreline stabilization shall be based on the following order of preference:
- 14 a. No action, increase building setbacks, relocate structures;
- 15 a-b. Nonstructural shoreline stabilization, including building setbacks, relocation of structures to
16 be protected, and groundwater management;
- 17 b-c. Other soft shoreline stabilization treatment;
- 18 d. Hybrid shoreline stabilization;
- 19 e. Hard shoreline stabilization.
- 20 6. Soft shoreline stabilization treatment shall be used unless demonstrated through a geotechnical
21 analysis not to be sufficient to protect primary structures, dwellings, or businesses.
- 22 7. Hard shoreline stabilization measures shall not be allowed except when necessity is
23 demonstrated in the following manner:
- 24 a. To protect legally existing primary structures:
- 25 i. New or enlarged structural shoreline stabilization measures for the existing primary
26 structure, including residences and their primary appurtenant structures or uses, shall
27 not be allowed unless there is conclusive evidence, documented by a geotechnical
28 analysis, that the lawfully established, primary structure will be damaged within three
29 years from shoreline erosion caused by tidal actions, currents, or waves. Where a
30 geotechnical analysis confirms a need to prevent potential damage to a primary
31 structure, but the need is not as immediate as three years, the analysis may still be used
32 to justify more immediate authorization for shoreline stabilization using soft treatment.
- 33 ii. Normal sloughing, erosion of steep bluffs, or shoreline erosion itself, without a scientific
34 or geotechnical analysis, is not demonstration of need.
- 35 b. In support of water-dependent development when all of the following apply:
- 36 i. The erosion is not being caused by upland conditions, such as the loss of vegetation and
37 drainage;
- 38 ii. Nonstructural shoreline stabilization, planting vegetation, or installing on-site drainage
39 improvements are not feasible or not sufficient;

Comment [CES237]: Added per DOE recommendation.

Comment [CES238]: Added per DOE recommendation.

- 1 iii. The need to protect primary structures from damage due to erosion is demonstrated
2 through a geotechnical report;
- 3 c. In support of non-water-dependent development, including single-family residences, when
4 all of the following apply:
- 5 i. The erosion is not being caused by upland conditions, such as the loss of vegetation and
6 drainage;
- 7 ii. Nonstructural measures, such as placing the development further from the shoreline,
8 planting vegetation, or installing on-site drainage improvements, are not feasible or not
9 sufficient;
- 10 iii. The need to protect the primary structures from damage due to erosion is
11 demonstrated through a geotechnical report. The damage must be caused by natural
12 processes, such as tidal action, currents and waves;
- 13 d. To protect projects for the restoration of ecological functions or hazardous substance
14 remediation projects pursuant to Chapter 70.105D RCW when nonstructural measures,
15 planting vegetation, or installing on-site drainage improvements are not feasible or
16 sufficient.
- 17 8. When hard shoreline stabilization measures are demonstrated to be necessary, they must:
- 18 a. Limit the size of stabilization measures to the minimum necessary; and
- 19 b. Assure no net loss of shoreline ecological functions; and
- 20 9. Publicly financed or subsidized shoreline erosion control measures shall provide appropriate
21 public access to the shoreline except where such access is determined to be infeasible because
22 of incompatible uses, safety, security, or harm to ecological functions.
- 23 10. Bioengineering approaches or other soft treatment shoreline stabilization that provide
24 restoration of shoreline ecological functions may be permitted waterward of the OHWM.
- 25 11. Shoreline stabilization on streams should be located and designed to fit the physical character
26 and hydraulic energy potential of a specific shoreline reach, which may differ substantially from
27 adjacent reaches. Hard shoreline stabilization methods are prohibited in jurisdictional shoreline
28 streams on estuarine shores, in wetlands, and in salmon spawning areas, except for the purpose
29 of fish or wildlife habitat enhancement or restoration.
- 30 12. Revetments are prohibited, except for use in water-dependent and public infrastructure
31 projects, which may be permitted as conditional use.
- 32 13. Gabions are prohibited along marine shorelines, but may be permitted as a conditional use
33 along freshwater shorelines.
- 34 14. Shore stabilization should not be developed for the purpose of filling shorelines. Shoreline
35 stabilization measures shall not be for the purpose of creating dry land, leveling or extending
36 property, creating or preserving residential lawns, yards, or landscaping, and shall not be
37 allowed except when otherwise allowed in this program.
- 38 15. Minimize disturbance pertaining to beach access by avoiding trails that may be subject to loss or
39 damage by erosionrequire hard stabilization.

Comment [CES239]: Amended to comply with WAC 173-26-231(3)(a)(iii)(E).

~~Bluff stabilization walls shall be prohibited unless proven necessary through a geotechnical report.~~

Comment [CES240]: Deleted since all stabilization requires a geotech report.

16. Placement of shoreline stabilization methods shall follow the natural contour of the existing shoreline, be parallel to and at or above the OHWM.

17. When determined to be necessary pursuant to this section ~~Bulkheads and other similar hard structures are shoreline stabilization prohibited on marine feeder bluffs or on marine or lake accretion shoreforms, shall require a except as a conditional use permit where exposure to storm waves and driftwood battering seriously threaten other similar existing structures and no feasible alternatives exist. Such bulkheads shall be set back a minimum of 20 feet landward from the OHWM.~~

a. Shoreline stabilization on marine feeder bluffs may require additional mitigation measures, including those necessary to offset the loss of sediment supply.

b. Shoreline stabilization on accretion shoreforms shall be set back a minimum of 20 feet landward from the OHWM.

Comment [CES241]: Moved from below and modified based on discussion w/ DOE.

18. Shoreline stabilization must be designed by a professional engineer licensed in the state of Washington with demonstrated experience in hydraulic activities of shorelines. Alternatively, soft treatment shoreline stabilization may be designed by a habitat biologist or a professional with demonstrated expertise in designing soft treatment shoreline stabilization.

19. Depending on the degree of hard or soft elements to the project, the County, WDFW, and/or U.S. Army Corps of Engineers may require varying degrees of mitigation or other permit conditions.

20. Shoreline stabilization, as applied in this section, is generally distinguished from shoreline restoration activities. However, specific shoreline stabilization elements of restoration activities shall be guided by this section.

21. Use of shoreline armoring to protect a lot where no primary structure presently exists shall be prohibited.

22. Shoreline stabilization structures shall not be constructed with waste materials such as demolition debris, derelict vessels, tires, concrete or any other materials which might have adverse toxic or visual impacts on shoreline areas.

B. Additional Standards for Replacement or Repair of Existing Shoreline Stabilization.

1. ~~Damaged structural stabilization may be repaired up to 50% of the linear length within a 5-year period. Repair area that exceeds 50% shall be considered a replacement. Stabilization repair applications shall consider cumulative approvals of each successive application within a five-year period.~~

Comment [CES242]: DOE recommended we have a threshold to distinguish between repair & replacement. How much has to be left to be considered replair? Language from SMP Handbook chapter 15, pg. 35-36.

2. Any replacement of, additions to, or increases in the dimensions of existing shoreline stabilization measures shall be considered as a new structure.

3. An existing stabilization structure may be replaced with a similar structure if there is a demonstrated need, through a geotechnical report, to protect principal uses or structures from erosion caused by currents, tidal action or waves.

1 4. If the OHWM has been re-established, the replacement structure must be located at or near the
2 new OHWM.

3 5. Alternative or soft treatment stabilization shall be considered prior to in-kind replacement
4 through an alternatives analysis.

5 6. The replacement structure shall:

6 a. Be designed, located, sized and constructed to assure no net loss of ecological functions.

7 b. Perform the same stabilization function of the existing structure and not require additions
8 to or increases in size.

9 c. Not encroach waterward of the OHWM or existing structure unless the residence was
10 occupied prior to January 1, 1992, and there are overriding safety or environmental
11 concerns. In such cases, the replacement structure shall abut the existing shoreline
12 stabilization structure.

13 7. When possible or as an element of mitigation sequencing, failing, harmful, unnecessary, or
14 ineffective structures should be removed, and shoreline ecological functions and processes
15 should be restored using nonstructural or soft and/or long-term stabilization measures.

16 C. Supplemental Application Materials Requirements.

17 2.1 Geotechnical reports required pursuant to this section shall address the need for shoreline
18 stabilization and shall include the following:

19 a. A scaled site plan showing:

- 20 i. The location of existing and proposed shore stabilization, structures, fill, and vegetation,
21 with dimensions indicating distances to the OHWM; and
22 ii. Existing site topography, preferably with two-foot contours.

23 b. A description of the processes affecting the site, and surrounding areas that influence or
24 could be influenced by the site, including areas in which stream processes, lake or marine
25 geomorphic processes affect the site, including, but not limited to:

- 26 i. Soil erosion, deposition, or accretion;
27 ii. Evidence of past or potential channel migration;
28 iii. Evidence of past or potential erosion due to tidal action and/or waves;
29 iv. Littoral drift; and
30 v. An estimate of shoreline erosion rates.

31 c. A description and analysis of the urgency and risk associated with the specific site
32 characteristics, an alternative analysis addressing the order of preference as specified in
33 subsection (A)(4), and demonstrated need as specified in subsection (A)(7).

34 d. A discussion and analysis demonstrating conformance with the standards enumerated in
35 WCC Chapter 16.16 (Critical Areas).

36 D. Regulations for Specific Shoreline Environment Designations.

37 1. In the Urban Conservancy and Conservancy shoreline environments, breakwaters and jetties
38 may be permitted as a shoreline conditional use if accessory to a water-dependent use and
39 littoral sediment transport is not significantly disrupted.

Comment [CES243]: Added at DOE's recommendation.

2. In the Natural shoreline area environment, shoreline stabilization is prohibited; except that using bioengineering approaches may be permitted when necessary to restore an eroding accretion shoreform or to retard erosion elsewhere.

3. In the Aquatic shoreline environment:

- a. Bioengineering approaches are permitted on tidelands and shorelands when necessary to restore an eroding accretion shoreform or to retard erosion elsewhere.
- b. Drift sills, breakwaters, and jetties may be permitted as a shoreline conditional use if such development is permitted in the abutting upland shoreline environment designation.
- c. Bulkheads or revetments are prohibited except for an approved water-dependent development.

Comment [AP244]: Moved from 'Shoreline Area Regulations.'

Shore stabilization in shoreline areas shall be subject to the policies and regulations of this section and Chapter 23.90 WCC.

A. Policies.

- 1. ~~Alternatives to structures for shore protection should be used whenever possible. Such alternatives may include no action (allow the shoreline to retreat naturally), increased building setbacks, building relocation, drainage controls, and bioengineering, including vegetative stabilization, and beach nourishment.~~
- 2. ~~New or expanded structural shore stabilization for new primary structures should be avoided. Instead, structures should be located and designed to avoid the need for future shoreline stabilization where feasible. Land subdivisions should be designed to assure that future development of the created lots will not require structural shore stabilization for reasonable development to occur.~~
- 3. ~~New or expanded structural shore stabilization should only be permitted where demonstrated to be necessary to protect an existing primary structure that is in danger of loss or substantial damage, and where mitigation of impacts would not cause a net loss of shoreline ecological functions and processes.~~
- 4. ~~New or expanded structural shore stabilization for enhancement, restoration, or hazardous substance remediation projects should only be allowed when nonstructural measures, vegetation planting, or on-site drainage improvements would be insufficient to achieve enhancement, restoration or remediation objectives.~~
- 5. ~~Shore stabilization on streams should be located and designed to fit the physical character and hydraulic energy potential of a specific shoreline reach, which may differ substantially from adjacent reaches.~~
- 6. ~~Shore stabilization should not be permitted to unnecessarily interfere with public access to public shorelines, nor with other appropriate shoreline uses including, but not limited to, navigation, seafood harvest, or private recreation.~~
- 7. ~~Provisions for multiple use, restoration, and/or public shore access should be incorporated into the location, design and maintenance of shore stabilization for public or quasi-public developments~~

whenever safely compatible with the primary purpose. Shore stabilization on publicly owned shorelines should not be allowed to decrease long-term public use of the shoreline.

~~8. Shore stabilization should be developed in a coordinated manner among affected property owners and public agencies for a whole drift sector (net shore drift cell) or reach where feasible, particularly those that cross jurisdictional boundaries, to address ecological and geohydraulic processes, sediment conveyance and beach management issues. Where beach erosion threatens existing development, a comprehensive program for shoreline management should be established.~~

~~9. In addition to conformance with the regulations in this section, nonregulatory methods to protect, enhance, and restore shoreline ecological functions and other shoreline resources should be encouraged for shore stabilization. Nonregulatory methods may include public facility and resource planning, technical assistance, education, voluntary enhancement and restoration projects, or other incentive programs.~~

~~10. Shore stabilization should be located, designed, and maintained to protect and maintain shoreline ecological functions, ongoing shore processes, and the integrity of shore features. Ongoing stream, lake or marine processes and the probable effects of proposed shore stabilization on other properties and shore features should be considered. Shore stabilization should not be developed for the purpose of filling shorelines.~~

~~11. Failing, harmful, unnecessary, or ineffective structures should be removed, and shoreline ecological functions and processes should be restored using nonstructural methods or less harmful long-term stabilization measures.~~

~~12. Structural shoreline stabilization measures should only be used when more natural, flexible, nonstructural methods such as vegetative stabilization, beach nourishment and bioengineering have been determined infeasible. Alternatives for shoreline stabilization should be based on the following hierarchy of preference:~~

~~a. No action (allow the shoreline to retreat naturally), increase building setbacks, and relocate structures.~~

~~b. Flexible defense works constructed of natural materials including soft shore protection, bioengineering, including beach nourishment, protective berms, or vegetative stabilization.~~

~~c. Rigid works constructed of artificial materials such as riprap or concrete.~~

~~Materials used for construction of shoreline stabilization should be selected for long-term durability, ease of maintenance, compatibility with local shore features, including aesthetic values and flexibility for future uses.~~

~~13. Larger works such as jetties, breakwaters, weirs or groin systems should be permitted only for water dependent uses when the benefits to the region outweigh resource losses from such works, and only where mitigated to provide no net loss of shoreline ecological functions and processes.~~

~~14. Alternative structures, including floating, portable or submerged breakwater structures, or several smaller discontinuous structures, should be considered where physical conditions make such alternatives with less impact feasible.~~

~~B. Regulations.~~

~~1. Allowed Use.~~

- a. ~~New or expanded structural shore stabilization for existing primary structures, including roads, railroads, public facilities, etc., is prohibited unless there is conclusive evidence documented by a geotechnical analysis that there is a significant possibility that the structure will be damaged within three years as a result of shoreline erosion caused by stream processes, tidal action or waves, and only when significant adverse impacts are mitigated to ensure no net loss of shoreline ecological functions and/or processes. Where a geotechnical analysis confirms a need to prevent potential damage to a primary structure, but the need is not as immediate as three years, the analysis may still be used to justify more immediate authorization for shoreline stabilization using bioengineering approaches.~~
- b. ~~New shore stabilization for new development is prohibited unless it can be demonstrated that the proposed use cannot be developed without shore protection, and a geotechnical analysis documents that alternative solutions are not feasible or do not provide sufficient protection. The need for shore stabilization shall be considered in the determination of whether to approve new water dependent uses. Proposed designs for new or expanded shore stabilization shall be designed in accordance with applicable Department of Ecology and Department of Fish and Wildlife guidelines and certified by a qualified professional.~~
- c. ~~Shoreline stabilization is prohibited for new non-water oriented development; provided, that such stabilization may be approved as a conditional use where a geotechnical analysis demonstrates that shore stabilization is necessary to facilitate reasonable use of a property and documents that alternative solutions, including location outside of the shoreline, are not feasible or do not provide sufficient protection, and where ongoing monitoring, maintenance and mitigation for impacts to shoreline ecological functions and processes are provided.~~
- d. ~~Where shore stabilization is allowed, it shall consist of "soft," flexible, and/or natural materials or other bioengineered approaches unless a geotechnical analysis demonstrates that such measures are infeasible.~~
- e. ~~Replacement of an existing shore stabilization structure with a similar structure is permitted if there is a demonstrated need to protect primary uses, structures or public facilities including roads, bridges, railways, and utility systems from erosion caused by stream undercutting or tidal action; provided, that the existing shore stabilization structure is removed from the shoreline as part of the replacement activity. A geotechnical analysis may be required to document that alternative solutions such as those listed in subsections (A)(12)(a) and (b) of this section are not feasible or do not provide sufficient protection. Existing shoreline stabilization structures that are being replaced shall be removed from the shoreline unless removal of such structures will cause significant damage to shoreline ecological functions or processes. Replacement walls, bulkheads or revetments shall not encroach waterward of the ordinary high water mark or the existing shore defense structure unless the primary use being protected is a residence that was occupied prior to January 1, 1992, and there are overriding safety or environmental concerns. In such cases, the replacement structure shall abut the existing shoreline stabilization structure.~~

- 1 f. Groins are prohibited except as a component of a professionally designed community or
2 public beach management program that encompasses an entire drift sector or reach for
3 which alternatives are infeasible, or where installed to protect or restore shoreline
4 ecological functions or processes.
- 5 g. Jetties and breakwaters are prohibited except as an integral component of a professionally
6 designed harbor, marina, or port. Where permitted, floating, portable or submerged
7 breakwater structures, or smaller discontinuous structures, are preferred where physical
8 conditions make such alternatives with less impact feasible. Defense works that
9 substantially reduce or block littoral drift and cause erosion of downdrift shores, shall not be
10 allowed unless an adequate long-term professionally engineered beach nourishment
11 program is established and maintained.
- 12 h. New or expanded shore stabilization may be permitted to protect projects with the primary
13 purpose of enhancing or restoring ecological functions, or projects for hazardous substance
14 remediation pursuant to Chapter 70.105D RCW when nonstructural approaches, such as
15 vegetation planting, and/or on-site drainage improvements are not feasible or do not
16 provide sufficient protection.
- 17 i. Proposed designs for new or expanded shore stabilization shall be designed and certified by
18 a qualified professional.
- 19 j. No motor vehicles, appliances, other similar structures nor parts thereof, nor structure
20 demolition debris, nor any other solid waste shall be used for shore stabilization.
- 21 k. The size of shore stabilization measures shall be limited to the minimum necessary to
22 provide protection for the primary structure or use it is intended to protect.
- 23 2. Marine Shorelines and Lakes. In those limited cases where a proposed bulkhead meets the
24 criteria in this section for a shoreline permit or the exemption criteria under WCC 23.60.022,
25 and to assure that such bulkheads will be consistent with the provisions of this program, the
26 administrator shall review the proposed design as it relates to local physical conditions and issue
27 written findings that the location and design meet all criteria of this program, subject to the
28 following:
- 29 ~~a. Bulkheads and other similar hard structures are prohibited on marine or lake accretion~~
30 ~~shoreforms, except as a conditional use where exposure to storm waves and driftwood~~
31 ~~battering seriously threaten other similar existing structures and no feasible alternatives~~
32 ~~exist. Such bulkheads shall be set back a minimum of 20 feet landward from the OHWM.~~
- 33 b. Bulkheads and other similar hard structures are prohibited on marine feeder bluff and
34 estuarine shores, and on wetland and rock shores; provided, that such structures may be
35 permitted as a conditional use where valuable primary structure(s) are at risk and no
36 feasible alternatives exist and where ongoing monitoring, maintenance and mitigation for
37 impacts to shoreline ecological functions and processes are provided.
- 38 c. Bulkheads and other similar hard structures shall be located within one foot of the bank toe,
39 and shall generally parallel the shoreline.

Comment [CES245]: Moved above.

- 1 d. Bulkheads and other similar hard structures shall be designed and constructed with gravel
2 backfill and weep holes so that natural downward movement of surface or ground water
3 may continue without ponding or saturation.
- 4 e. Bulkheads exposed to significant wave action shall be designed to dissipate wave energy
5 and scouring.
- 6 f. Walls, revetments or other similar hard structures within 10 feet of the OHWM shall be
7 considered bulkheads; provided, that on accretion shoreforms walls or revetments or other
8 similar hard structures within 20 feet of the OHWM shall be considered bulkheads.
- 9 3. Shore Stabilization on Streams. In those limited cases where a proposed bulkhead, revetment or
10 other similar structure meets the criteria in this section for a shoreline permit or an exemption
11 under WCC 23.60.022, and to assure that such revetment or similar structure will be consistent
12 with this program, the administrator shall review the proposed design for consistency with state
13 guidelines for stream bank protection as it relates to local physical conditions and issue written
14 findings that the location and design meet all criteria of this program, subject to the following:
- 15 a. Revetments or similar hard structures are prohibited on estuarine shores, in wetlands, on
16 point and channel bars, and in salmon and trout spawning areas, except for the purpose of
17 fish or wildlife habitat enhancement or restoration.
- 18 b. Revetments or similar hard structures shall be placed landward of associated wetlands
19 unless it can be demonstrated that placement waterward of such features would not
20 adversely affect ecological functions.
- 21 c. A geotechnical analysis of stream geomorphology both upstream and downstream shall be
22 performed to assess the physical character and hydraulic energy potential of the specific
23 stream reach and adjacent reaches upstream or down, and assure that the physical integrity
24 of the stream corridor is maintained, that stream processes are not adversely affected, and
25 that the revetment will not cause significant damage to other properties or valuable
26 shoreline resources. In addition:
- 27 i. Revetments or similar structures shall not be developed on the low, innermost channel
28 banks in a stream except to protect public works, railways and existing commercial
29 farmsteads.
- 30 ii. Where revetments or similar structures are proposed, analysis shall assure that localized
31 shore stabilization will be effective, as compared to more extensive cooperative
32 measures to address reach scale processes. Revetments shall be set back at convex
33 (inside) bends to allow streams to maintain point bars and associated aquatic habitat
34 through normal accretion. Where revetments or similar structures have already cut off
35 point bars from the stream, consideration should be given to their relocation.
- 36 iii. Revetments shall be designed in accordance with WDFW streambank protection
37 guidelines.
- 38 d. Cut and fill slopes and backfilled areas shall be stabilized with brush matting and buffer
39 strips and revegetated with native grasses, shrubs and/or trees so that there is no net loss of
40 ecological functions.

- e. ~~All forms of shore stabilization shall be constructed and maintained in a manner that does not degrade the quality of affected waters. The county may require reasonable conditions to achieve this objective such as setbacks, buffers, or storage basins.~~
- f. ~~Shore stabilization shall allow for normal ground water movement and surface runoff.~~
- g. ~~Selection of materials for projects shall be in conformance with applicable engineering standards.~~
4. ~~Viewpoints and Public Access.~~
- a. ~~Where appropriate, larger public or private shore stabilization projects shall be required to maintain, replace or enhance existing public access opportunities by incorporating physical or visual access areas and/or facilities into the design of the project.~~
- b. ~~Publicly financed or subsidized shoreline stabilization shall not restrict appropriate public access to the shoreline and shall provide new public access except where such access is determined to be infeasible because of incompatible uses, safety, security, or harm to shoreline ecological functions.~~
5. ~~Application Materials. Geotechnical reports required pursuant to this section shall address the need for shoreline stabilization and shall include the following:~~
- a. ~~A scaled site plan showing:~~
- i. ~~The location of existing and proposed shore stabilization, structures, fill, and vegetation, with dimensions indicating distances to the OHWM; and~~
- ii. ~~Existing site topography, preferably with two foot contours.~~
- b. ~~A description of the processes affecting the site, and surrounding areas that influence or could be influenced by the site, including areas in which stream processes, lake or marine geomorphic processes affect the site, including, but not limited to:~~
- i. ~~Soil erosion, deposition, or accretion;~~
- ii. ~~Evidence of past or potential channel migration;~~
- iii. ~~Evidence of past or potential erosion due to tidal action and/or waves;~~
- iv. ~~Littoral drift; and~~
- v. ~~An estimate of shoreline erosion rates.~~
- c. ~~A description and analysis of the urgency and risk associated with the specific site characteristics.~~
- d. ~~A discussion and analysis demonstrating conformance with the standards enumerated in Chapter 16.16 WCC.~~
- C. ~~Shoreline Area Regulations.~~
1. ~~Urban.~~
- a. ~~Bulkheads, revetments, and bioengineering approaches are permitted subject to policies and regulations of this program.~~
- b. ~~Groins, breakwaters and jetties may be permitted as a conditional use.~~
- c. ~~Gabions are prohibited.~~
2. ~~Urban Resort.~~
